T-1296	<b>BGP - Concrete Plant Recertification Test Batch</b>  <b>From:</b> Webcor Construction LP Claude Titche <b>To:</b> Turner Construction Company PHIL MILITELLO <b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto  <b>REQUEST:</b> The 4th review comment to SUBM TG0600-095 (document enclosed as reference) states after plant recertification a "test batch" will be prepared and tested for accuracy. Attached is SCCI's concrete supplier (CEMEX) responses to the submittal review comments.  Regarding the test batch, is it acceptable to either:  1) Have an Owner's representative perform a plant visit during production operations to observe batching tolerance during normal business hours?  or  2) Neither perform the test barch nor plant visit?	Closed	03/31/2014	04/10/2014	04/02/2014	Potentially	<input type="checkbox"/>
			<b>ANSWER:</b> Accept Suggestion: <input type="checkbox"/> After further discussion with Bob Foley of CEMEX, we are satisfied with the corrective actions CEMEX has already taken. The proposed plant visit and batch constituent verification are not required.				
T-1297	<b>SSS - EoS Bent Plate at Knock-out Slab GL11-12</b>  <b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO <b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton  <b>REQUEST:</b> See attached CD RFI # 378 SK1 & SK2: The knock-out slab extends 1 1/4" onto the flange as shown. Confirm that is acceptable or provide alternate direction.	Closed	03/31/2014	04/10/2014	04/11/2014	Potentially	<input type="checkbox"/>
			<b>ANSWER:</b> Accept Suggestion: <input type="checkbox"/> Move the East-West direction W21x50 beams to GLs D.8 and E.2 so that the slab will overhang the beam flange.

T-1298	SSS - Lift Eyes on Ground Cast Nodes	Closed	03/31/2014	04/10/2014	04/09/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer		<b>To:</b> Turner Construction Company PHIL MILITELLO		<b>Answered By:</b> Adamson Associates, Inc. George Metzger			
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b>		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>			
The contract drawings indicate that lift eyes will be provided for shop handling:				George Metzger 4/9/2014			
"Provide picking eye(s) as required for the handling of the cast node in the foundry AND the shop of the steel fabricator. Picking eye(s) to be located withing the interior of the casting's nozzle(s)"				Taping holes at the back side of the cast node for erection is a means and methods issue.			
The lift eyes that were cast into the back side of the ground level cast nodes have now been machined off by Bradken, leaving only the lift eyes inside the nozzles. In order to safely handle these castings, new lift features need to be added to the back side to replace those that were machined off.				Stacy Wilson 4/9/2014			
OIW notes that if the castings are picked using only the lift eyes inside the nozzle, the center of gravity causes the castings to rotate into an unworkable position. Some other manner of rigging must be employed in order to manipulate the castings into positions required for shop fabrication work. CastConnex noted exactly the same issue in their Release 1 Pre Shipping Inspection Summary, even noting that the improvised and awkward handling was causing damage to the castings:				To note, the referenced Cast Connex report was in regards to the roof nodes, not the ground floor nodes. In addition, the contract drawings never called for eyes on the backside of the ground floor nodes, therefore at the contractor's option, the addition of drilled and tapped holes shall come at no cost to the TJPA.			
"The lifting lugs are located inside the nozzle-end on these parts making the machined nodes difficult to manipulate. Often the parts have to be lifted using straps thru the pin hole causing some broken edges on the radius of the pin hole."							
To facilitate handling the cast nodes in the shop in a way that is safe and that avoids damaging the castings, OIW proposes that drilled and tapped holes be added. The attached sketches (2773-SK-401 and 2773-SK-402) show a proposed arrangment of these holes. Note that the proposed locations are in areas that will not be visable in the final product, and also are in areas of minimal stress. OIW requests that the engineer of record							
review the attached drawings and determine if the proposed modifications to the cast node are acceptable.

REQUEST:			SUGGESTION:		ANSWER:		
Please review and confirm the items below regarding the TG0701-075 SSS - Structural Steel Shop DWG (CS3) GL 12-13 approval comments:  1) Drawing 2669 ~ the noted beam is not sloping per S1-4004. Confirm the drawing is correct as submitted and no action is required.  2) Drawing 2707 ~ the noted beam is not sloping per S1-4015 (S1-4004 is not the correct drawing reference). Confirm the drawing is correct as submitted and no action is required.  3) Drawings 2706, 2710, 2713AB ~ the 3 1/16" dimensions are necessary as the beam webs vary in thickness. The 3" dimension on the angles has been used at the thickest beam web. Confirm the drawings are correct as submitted and no action is required.  4) Drawings 3792, 3793 & 3794, 4933, 4935, 4994, 4995, 4998 ~ The top cope on the right end is correct as shown. The Approver's reference to a 2" flange is incorrect as the TPG1 on Grid 13 has a 3 1/2" thick flange per S1-4200. We have limited the clearance at the top to 1/4" be able to fit the number of bolts per S1-5010. Confirm the drawings are correct as submitted and no action is required.					Accept Suggestion: <input type="checkbox"/> 1) Confirmed. 2) Confirmed. 3) Confirmed. Note that there is another comment on sheet 2706 for which the sheet needs to resubmitted for record. 4) Confirmed. 5) Confirmed.

From: Webcor Construction LP Claude Titche To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
During backfill activities in Geothermal Field 11 inclement weather occurred and as a result isolated areas of bay mud/clay are deemed unsuitable. Per field walk on 04-07-2014 with Arup these soft areas are found unacceptable to place mud lab. What are the procedures required to satisfy and meet an acceptable substrate for the mud slab.?					Accept Suggestion: <input type="checkbox"/>		
					ARUP Response:		
					Remove disturbed material from the top of undisturbed soil in geofield 11. The geothermal trenches are okay as is. Arup will review the condition on Monday, 04-14-14 to confirm that the mudslab is ready to pour.

From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> See attached CD RFI # 387 SK1 to SK6 for items 1 to 15: 1) Supply all clouded dimensions on SK1 thru SK6. 2) [Issue has been resolved, no further action necessary] 3) Supply the top of concrete elevation for the (4) posts. 4) This detail shows horizontal HSS beam but the beam is not shown here or on S1-2202. Please clarify. 5) This detail does not allow for any horizontal adjustment for concrete +/- location variances. Please review and advise. 6) [This item is to be resolved by Skanska] 7) Confirm these posts are continuous from 1/S1-7400 (SK1) to here. 8) Clarify the noted landing steel and supply the member sizes, elevations & dimensions. 9) The minimum distance between the center of post and the W10x22 must be 1'-1 3/4 in order to connect per 3/S15012 and 1/S1-5010. Supply alternate connection details if the dimension is less. This is a typical occurrence on all stairs. 10) Confirm all stair landing beams are centered on the posts or supply offset dimensions. 11) Supply a connection detail. 12) The noted 2 braces per 1/S1-7600 will span across the slab opening. Confirm that is acceptable or give direction. 13) Do the posts starting above the Lower Concourse Level in detail 2/S1-7400 (SK2) extend to the underside of the HSS beams? Please clarify. 14) Clarify what supports the noted steel. 15) Supply a corner connection detail.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) Refer to attached sketch SKS-0347 for missing dimensions.  3) Refer to 1/A1-7004 for top of concrete elevations.  4) Detail 4/S1-7600 does not apply and is incorrectly called out at the highlighted location.  5) The statement "this detail does not allow any adjustment for concrete +/- location variances" is not entirely clear. Up to a 1" gap is allowed between the end of steel beam and concrete wall therefore there should be enough tolerance for placing steel as long as concrete walls are constructed within tolerances. If the intent of the question was different, please clarify, or alternatively add this item to the next structural coordination meeting agenda for further discussion.  7) Confirmed. The guide rail posts are continuous in between floor levels.  8) Detail 3/S1-7004 was updated in IFC Main Package dated 3/31/2014. See attached sketch SKS-0347 that shows the updated framing.  9) Provide shear plate connection per 1/S1-5011 at the W10 stair beams typically for such instances.  10) Confirmed. Refer to latest architectural issued A1-7XXX series sheets for correct post locations.  11) Provide connection detail per 3/S1-7600 except, The W10 beam connects to the HSS post per 3/S1-5012.  12) Provide full depth stiffeners on both sides of the beam web in lieu of the braces per detail 1/S1-7600.  13) Yes. See attached sketch SKS-0347 that shows the HSS posts.  14) Detail 6/S1-7004 was updated in IFC Main Package dated 3/31/2014. See attached sketch SKS-0347 that shows the updated framing.

T-1313	SSS - Deck Support Detail at Column	Closed	04/09/2014	04/19/2014	04/21/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer			<b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> Please reference detail 1/S1-5001. The L3x3x12ga deck support angle is shown coping into the web of the girder. At the majority of the conditions where this may occur the girders have thick and wide flanges. After the angle is coped as detailed we will have very little material to work with and it is unlikely to have much structural integrity.  Please see attached alternative sketch. In this condition the angle is lapped on top of the girder and connected with fillet welds. The depth of the girder has no impact on the detail. This is a common detail in the metal decking industry.  Please confirm the proposed column angle support sketch is acceptable.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Alternative deck support detail shown in the RFI can be used at the Contractor's option.

**Co-Author:** Skanska USA Civil West California DisRyan Clayton

**REQUEST:**

See attached CD RFI # 388 SK1 to SK6 for items 1 to 6:

- 1) Supply all clouded dimensions on SK1 thru SK6.
- 2) Confirm all landings have 1/4" checker plate.
- 3) Please clarify which stringers go up and which stringers go down and add stair to landing connection references as was done on S1-7004.
- 4) How are the (3) W10x22's supported/connected?
- 5) How are the noted (2) W10x22's supported/connected?
- 6) The noted 6" dimension does not work with detail 3/S1-7601 which shows the stringer attaching at the toe of the beam flange. Please clarify.

**SUGGESTION:****ANSWER:****Accept Suggestion:** ☐

1) Refer to attached sketches SKS-346 and SKS-349 for missing dimensions. SKS-349 shows how the stair landing beams that are perpendicular to the stringers can be located based on architectural drawings.

2) Refer to Specification "Steel Stairs and Railings 05 51 00" under 2.2 Materials -B Checker Plate Treads and Landings.

3) See attached sketch SKS-0346 for clarification of stringer direction. Also refer to architectural drawings A1-7005 and A1-7104.

4) The W10 beams frame into CMU walls and are shown on S1-7005 that was updated in IFC Main Package dated 3/31/2013. See attached sketch SKS-0346.

5) See response to 4).

6) Move the W16 beam closer to the edge of slab for detail 3/S1-7601 to work at the location.

**Co-Author:** Skanska USA Civil West California DisRyan Clayton

**REQUEST:**

See attached CD RFI # 386 SK1:

The gusset plate per 6 & 9/S1-4206 fouls the WT/pretensioned rod connection per 3/S1-5050 & S1-5052.

Please advise.

**SUGGESTION:****ANSWER:****Accept Suggestion:** ☐

There is no fouling. 24" dimension between the bottom of Steel Beam and the top of WT section per Detail 3/S1-5050 does not apply at BRB frame connections, see note 2 in detail 3/S1-5050. Where BRB gussets are present, the distance between the bottom of gusset plate and the WT section is 12" as indicated in Details 4 & 8/S1-4206.

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Grace requires that there be a minimum 8" clear horizontal plane to allow for the waterproofing membrane transition. Dewatering sleeve #38 is located on the edge of a sloped mat slab depression. Please confirm it is acceptable to lower the flat the mud slab to provide a sufficient horizontal plane to accommodate waterproofing. Sides of depressions will be sloped at 45deg.					The TJPA Representative does not object to the Contractor's proposal to adjusting the mud slab as described at Dewatering sleeve #38 to suit the waterproofing manufacturer's requirements.

From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:				
See attached CD RFI # 383 SK1 to SK3 for items 1 to 3: Drawings A1-2502 (SK1), A1-2892 (SK2), A1-2951 (SK4), and 1/A1-2951 (SK5) show a valley. A valley is not shown on S1-2502 and S1-2602 and it is not clear what the intent is for the structural framing: 1) In order to keep the diagonal brace framing along Grid H in one plane (shown in blue), it is necessary to introduce a valley as indicated by the red line. If not, twisting will be introduced into the framing and connection details 3/S15025 at Grid 1.4 and 1/S1-5018 at Grid 2. Per Note 6 on S1-2602 the beams are canted to match the slope of TPG1 on Grid 2 but the BU-40 on Grid 1 is horizontal. This will result in the beams having to twist. To avoid this a valley as shown on the architectural drawings is required. Please confirm a valley as indicated by the red line is required or clarify/supply the top of steel elevations between grids 1-2. 2) If a valley is introduced, all beams crossing the red valley line will need to be broken-back/bent beams. Please supply a detail showing the splice at the bend lines. 3) If the valley is to occur, please clarify the location of the valley as drawings A1-2502 (SK1) and A1-2892 (SK2) show conflicting information. The same condition shown here also occurs between Grids 1-2/B-D, 32.4-33.5/B-D & 32.433.5/F-H. The same condition except opposite shown here occurs between Grids 1-2/F-H on the roof park level. 4) It is not clear on S1-2606/S1-2607 where the east-west slopes start east of Grid 31.7. Please clarify the framing.			ANSWER: Accept Suggestion: <input type="checkbox"/> 1.) A valley is not required. See specific comments for Bus Deck and Roof Park Levels below:  At Bus Deck Level, an additional top of steel elevation is provided within the deck zone bounded by Gridlines 1&2 and E.6&H. Top of Steel at Gridline 2/G can be calculated as 55' 10 3/8" by linear interpolation using the top of steel information provided at Gridlines 2/E.6 (at column face) and 2/H. At GL 1.4/G top of steel can be assumed the same as 2/G therefore the diaphragm truss is in single plane. Metal deck will need to be slightly warped at other parts of this zone, where two way slopes are present. Ultimately, thickness of the structural topping slab can be adjusted locally to achieve the slab slopes per architectural drawings.  At the Roof Level, following info is provided for the deck zone bounded by Gridlines 1&2 and E.6&H. East-west running beams are to be set perpendicular to TPG1. These beams will land on the Gridline 1 slightly rotated however rotation is small resulting in an approximately +/- 1/8" vertical deviation at the tips of the east west running beams' flanges with respect to the GL 1 beam. Metal deck will be slightly warped at this zone. Per our estimations, metal deck steel beam gap/clash is in +/- 1/16" range which can be addressed by small amount of warping in the metal deck.  2.) See response to (1).  3.) A valley is not required. Information provided in item 1 is applicable to the locations noted in this question at the Bus Deck and Roof Levels.  4.) In Sheet S1-2607, East-West slope starts at GL 32.4 as indicated Sheet S1-2607 (between gridlines 32.4/D4 & 32.4/E.6). As indicated in item 1, metal deck will be slightly warped in this area where two way slopes are present.

<b>From:</b> Webcor Construction LP <b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton		<b>To:</b> Turner Construction Company PHIL MILITELLO		<b>Answered By:</b> Adamson Associates, Inc. George Metzger			
<b>REQUEST:</b> See attached CD RFI # 383.1 SK1 to SK6 for items 1 to 10: The noted (2) skewed W40x277 form part of the bracing system and must remain in the same as the other braces.  This means that the noted W40x149 & W36x231 will not align with the top of the W40x297 on Grid 1. 1) Please advise how to make the moment weld for the for the W40x149 to the W40x297 with the flanges not aligned.  2) Please supply a detail showing how the deck will be supported at the (2) lowered beams. 3) Due to the beams not being aligned, confirm it is acceptable to connect these beams with shear plates per 1/S1-5011 4) Confirm it is typically acceptable to lower the beams to align the corner of the flange with the top of the supporting beams as some connections are moment connections. 5) Review all items on SK2 and confirm they meet the design intent. 6) The noted (2) skewed W40x277 form part of the bracing system and must remain in the same as the other braces. This means that the (4) noted beams will not align with the top of the W40x297 on Grid 33.5. Please supply a detail showing how the deck will be supported at the (4) lowered beams. 7) Confirm the T/Steel elevation at this location is EL. 55'-8 9/16 based on the north/south slope to keep the diagonal bracing in the same plane. 8) Confirm the noted (2) beams will be canted to match the other beams based on the slope on TPG1 on Grid 2. 9) Review all items on SK5 and confirm they meet the design intent. 10) This is to confirm the response in RFI SK515 item 4: All beams within the blue boundaries on SK6 will slope as needed the have the top of beams flush with the top of the supporting beams per the noted T/Steel elevations. The east/west beams between Grids 32.4-33.2 will be canted to match the canted beams west of Grid 32.4. The east/west beams between Grids 33.2-33.5 will be canted to match the slope of the beams on Grid 33.2. Please confirm.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1). The W40x149 (0.83" thick flange) may be lowered so that the complete penetration weld can be made for the top flange because W40 x 297 has a 1.65" thick flange. For the bottom flange weld, a plate might need to be added in order to achieve the complete penetration weld.  2). The T/STL for W40 x 149 is not necessarily controlled by the diagonal brace, as the type G drag connection detail (1C/S1-5018) has called for shim plates as required.  W 36 does not need to support the metal deck.  3). Yes, the E/W beams between Grids 1 & 2 may be changed to a single shear plate connection as shown on 1/S1-5011 with the following 2 conditions:  a) Type X bolts should be used for W21 and W24 beams.  b). One row of bottom flange bracing should be provided for the W21 and W24 beams between Grid 1.4 & 2 per detail 8/S1-5015.  4). Confirmed  5). Confirmed.  6). See responses #1 & 2  7). Confirmed  8). Confirmed  9). Confirmed, Also see response to items 1 & 2.  10). Confirmed.

<b>From:</b> Webcor Construction LP      Stephanie Azzolino <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> Bus Deck Level drawings S1-2502 thru S1-2507 indicate an S8 type slab, as per metal deck schedule 2/S1-5000, S8 is a 10" structural slab with 4" second pour topping slab. Sheet note #6 on S1-2502 indicates "shear studs are to extend a minimum of 2" into the second pour UON. See detail 9/S1-9004 for perimeter EoS conditions" (S1-9004 has not been provided).  Drawings A1-2892 thru 2987 show a 1" topping slab typically between 10' north of GL D and 10' south of GL F. The slab outside of that region is typically shown as structural slab only.  Confirm that decking drawings will be modeled as per the information provided on the structural contract drawings unless otherwise directed.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Confirmed. Note that the 4" second pour topping slab is part of the structural slab and studs are to be extended 2" into this 4" topping slab as shown on 4/S1-5003. Studs do not extend into the architectural topping slab. Also, the correct detail reference for perimeter EOS condition is 9/S1-5004.				
T-1324	SSS - BRB Clevis Plate Detail	Closed	04/14/2014	04/24/2014	04/24/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Stephanie Azzolino <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> Skanska is the process of incorporating the AAN BRB Shop Drawings from Star Seismic into the Tekla model.  During the integration process we have identified a deviation from certain dimensions shown in the contract documents. Specifically, the 2" dimension shown from edge of clevis to top of concrete at the ground level connection and the 5" dimension shown from edge of clevis to the bottom flange of W section above.  Below, is a table showing the "As Detailed" dimensions at each BRB.  Please confirm that the 2" & 5" dimensions shown on S1-4206 are not controlling dimensions and the lengths of the BRB's from WP-WP as designed, detailed and approved, control.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Provided dimensional deviations from contract documents are acceptable at all locations except for BRBs at GL 4-5/F; 28-29/D.4, 29-30/D4 and 30-31/D.4.  At GL 4-5/F, provide bottom clearance between 2" and 3" (2" ideal) and a top clearance between 5" and 6" (5" ideal).  At East Building BRBs (28-29/D.4, 29-30/D4 and 30-31/D.4), it is not clear from the RFI that the contractor understood the design intent at the bottom clevis plates. At the bottom, 2" clearance to the clevis plate applies from the top of the finished floor (not the top of structural concrete slab) since these braces are exposed. See BRB elevations (S1-4150) and the corresponding detail (1/S1-4206) for this info. Note that the finished floor at this location slopes down to East and this information shall be coordinated per

T-1324.1	<b>SSS - BRB Clevis Plate Detail</b>  <b>From:</b> Webcor Construction LP <b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton  <b>REQUEST:</b>  Skanska has incorporated the response to RFI T-1324 into the drawings and made the necessary adjustments, while maintaining the required stiffness factor, at gridlines 28-29/D.4, 29-30/D4 and 30-31/D.4. These adjustments have been submitted under submittal package TG0701-415.4.  However, after discussions with Star Seismic, at GL 4-5/F the stiffness factor plays a limiting role into modifying the length of the brace. Please see the attached stiffness and over strength analysis, provided by Star Seismic, and confirm that the brace lengths may stay the same as previously approved in TG0701-415.2.	<b>Closed</b>  <b>To:</b> Turner Construction Company PHIL MILITELLO  <b>SUGGESTION:</b>	<b>05/08/2014</b>	<b>05/18/2014</b>	<b>05/21/2014</b>	<b>Potentially</b>	<input type="checkbox"/>
			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> GL 4-5/F dimensions shall be as indicated in RFI T-1324. It is acceptable to have a stiffness ratio of 11% as shown in the calculation submitted by the Contractor. We also note that there may also be other ways to achieve the required pin-to-pin dimension and the required stiffness multiplier called out on the contract drawings. Also, it is not clear why the yield zone length is reduced by 16" whereas the pin-to-pin dimension is reduced by 6" in the calculation. With a longer yield zone length a lower stiffness multiplier can be achieved.				
T-1325	<b>BGP - Partition Wall Details From ASI 110</b>  <b>From:</b> Shimmick Construction Company, Inc. Please reference SI-2251 rev 6, SI-3401 rev 7and S1-3411 rev 3.				1. End support for beam B132 (22" wide beam) to follow detail 1/S1-3411 as shown on plan 1/S1-2251; corbel width to be 2'-0". For end support of beam B142, see SKS-0344 attached.			
1. Clouded area of attached SI-2251 shows beam types: B125, B132, B141 and B142. B125 is a 24" wide beam, B132 is a 22" wide beam, B141 is a 48" wide beam and B142 is a 30" wide beam. SI-3411 DI & DI0 depict the beam support embed. These two (2) details are for a 24" wide beam and a 48" wide beam only. Please provide details for 22" and 30" wide beams.				2. Rods to be provided with matching nuts as required Specification 03 20 00, Section 2.3.F. Welding of plate washer to L8x8 is not required.			
2. See attached SI-3411 DI & DI0. Embed details call out 1-1/4" threaded rod F1554 GR55 w/ 2-1/2" x 2-1/2" x 1/2"

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please reference RFI #T-0440 and #T-0440.1 responses and the attached Contract Drawings S1-3410, SI -2203, and SI-2204.				Bottom embed plate at B1 members not required. Additional supporting member to be included as part of Phase 2 scope. Top embed plate at B1 to be placed with 8" min coverage and align with top embed at supporting concrete girders.			
The detail for the glass guardrail embed depicted in 7/SI-3410 calls for a 3/8"x7" embed with an 8" minimum coverage for the top embed and a 6 1/2" minimum coverage for the bottom embed. The guardrail embeds located at B1 beams on the east side of openings between GL 11/12 and D.8/E.2 (SI-2203) and GL 18/19 and B/C (SI-2204) will not have minimum sufficient coverage due to the 18" beam depth of BI beams (see attached photo).							
Please provide a detail for glass gaurdrail embeds at the B1 beams. Please note, these specific embeds have been fabricated and are onsite

REQUEST: See attached CD RFI # 389 SK1 to SK7 for items 1 to 12: 1) The noted W16x26 beams are centered below the concrete wall on S1-2303. Confirm the lower beam may be moved below the stair post or supply an alternate solution. 2) The noted W16x26 beam is centered below the concrete wall on S1-2303. Confirm it may be moved below the stair post or supply an alternate solution. 3) Supply all clouded dimensions on SK2 thru SK7. 4) Confirm equal spacing. 5) It appears the noted stair stringer connects to the HSS post. Please supply the missing connection detail. 6) The plan shows a moment connection but detail 3/S1-5012 does not. Please clarify the intent for the beam to post connections at (8) locations. 7) 9/S1-7601 is not the correct detail because it shows an HSS beam and we have a W21x50 at this location. Please clarify and note that detail 3/S1-7601 will not work as the edge of slab is 7" from beam center. 8) This dimension is 7" per S1-2403. Confirm 7" is correct. 9) Confirm the "CB" notation should be removed. 10) The minimum distance between the center of post and the W10x22 must be 1'-1 3/4 in order to connect per 3/S1-5012 and 1/S1-5010. Supply alternate connection details if the dimension is less. This is a typical occurrence on all stairs. 11) The red dimensions match the dimensions shown in detail 3/S1-7006 (SK3). Please clarify the discrepancy in dimensions. 12) 9/S1-7601 is not the correct detail because it shows an HSS beam and we have a W21x50 at this location. Please clarify and note that detail 3/S1-7601 will not work as the edge of slab is 6" from beam center.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Not acceptable. Provide a W16x26 beam centered on the two HSS posts as shown in the attached sketch SKS-0350. Provide shear plate connections per 1/S1-5011 at the ends of this beam. The W16x26 beam will be added on the structural drawings in the next ASI.  2) See response to 1).  3) Refer to architectural drawings A1-7006, A1-7501, A1-7502 and 3/A1-7506 for the stringer and landing beam locations.  4) Align the intermediate W10 beams to the stringers.  5) Correct detail reference at the 8 locations should be 6/S1-5012.  7) Detail at the highlighted location is similar to 3/S1-7601 except the stringer shall be welded to the bent plate at the edge of slab and not the WT.  8) Confirmed.  9) Confirmed.  10) Provide shear plate connection per 1/S1-5011 at the W10 stair beams typically at such locations where double angle connection is not possible.  11) Refer to architectural drawing A1-7006 for correct post locations.  12) See response to 7).

	<p>2-3, 3-4, 8-9 &amp; 9-9.9 (16 locations).</p> <p>Item #1 added a 3/8" bent plate to support the upper level deck and can be applied at two locations between grid 2-3 as indicated on SK1. At the other 14 locations the step is similar to item #2 of T-1339 which added an 18 gauge Z closure. At grid 12-14 the perpendicular support beam is located within 1'-9" of the step, at the 14 locations listed above the support beam varies from 2'-0" to 6'-0" and at two locations at grid 2-3 no support beam is provided. Refer to SK3 for clarification.</p> <p>Please confirm the 18 gauge Z is sufficient to carry the load of the deck at the 14 locations or provide an alternative detail.</p>						
T-1339.2	SSS - Deck Support Steel at Step in Slab	Closed	06/18/2014	06/28/2014	07/09/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company PHIL MILITELLO		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
The response to RFI T-1399.1 indicated the zee closure was incorrectly shown on SK-3 and shall be supported on the lower beam, not on top of the deck. We agree the closure would be best supported on the lower beam, however the closure was placed on top of the deck so that the lower deck could bear 3" on the beam as is required for a type 3 deck as per 2/S1-5000.				Option 1 is not acceptable.			
SSK-0355 revises the closure so that the bottom leg is underneath the lower deck and the top leg is above the upper deck. This creates several problems for installation. The most significant being that the closure now needs to be installed before the deck. Typically closures are installed after the deck so that the deck can be used as a working platform. SSK-0355 would require the installation of the closure on open iron, which while possible is not a safe working practice.				Option 2 is acceptable. The 3" minimum bearing requirement may be waived and a bearing of 1-3/4" is acceptable at locations where detail B on SK-1 is applicable.			
Option 1: As a proposed solution to the issues indicated

	<p>above, we propose to increase the beam size at the step from a W12x14 to W12x26 which has a 6-1/2" wide flange. We would also revise the zee shaped closure to a cee shaped closure with the top leg placed underneath the upper deck (see detail A SK-1). Also at locations where a WT will be added, a W12x14 will only be left with about 1-3/4" of exposed beam flange for bearing, instead of the required 3", increasing this to W14x26 will provide the required bearing (see detail B SK-1).</p> <p>Option 2: As an alternative, at locations where the top deck spans less than 3' the top deck load will be primarily supported by the upper WF beam. As detailed in SK-2 the zee plate will only act as a closure with minimal deck support and can be installed after the deck if allowed to bear on top of the lower deck. Note: this alternative does not provide a solution of the 1-3/4" bearing issue on detail B SK-1.</p> <p>Please confirm if option 1 or 2 is acceptable.</p>						
T-1340	BGP - Mechanical Room B2228 Pier/Wall Location	Closed	04/18/2014	04/28/2014	04/30/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche		To: Turner Construction Company PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please see attached drawing showing the location of the west wall in the IDF Room B2228 located in the Area 3 mechanical rooms. Typical pier width dimensions for the mechanical rooms are 24" and are not typically dimensioned out in the plans. Based on scaling, the pier in the northwest corner of Room B2228 is 16"x28". However, this pier was labeled as a 16"x24" pier in the rebar shop drawings (see Submittal TG0600-301.2) and as a result the dowels for the west wall were placed 4" to the west to align with the pier edge.		The west wall of IDF Room B2228 at the B2 level cannot be moved 4" to the west to align with the 16x24 pier due to Building Code Accessibility and Egress requirements for the adjoining room at Phase 2 build-out.					
Please confirm that this new location is acceptable.

T-1341	BGP - Plumbing Opening in Mechanical Room B2203	Closed	04/18/2014	04/28/2014	04/28/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titche			<b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> Please see attached drawing for clarification regarding dimension of the plumbing opening above the door in Room B2203. In AI-9215, the door opening and distance between piers is scaled to be 3' -5" and was submitted as a 3 '-5" opening per approved submittal TG0600-102. However in A1-9217 a plumbing opening with a dimensioned width of 3' -11" is shown to span the distance between the piers. If the 3 '-11 " opening dimension is correct as shown, the blockout would cut into the piers. Please confirm the dimension of the plumbing opening and whether or not it is intended to cut into the piers. Please note that the pier dowels have already been installed with the 3'-5" span per approved submittal TG0600-102.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The 3'-5" width dimension for the door opening in between piers, described in this RFI, is correct. For updated plumbing opening above the door at Stair 203 (Room B2203), refer to the attached SKA-3142 and SKA-3143.		
<hr/>							
T-1342	BGP - Partition Wall Thickness Above Door Openings	Closed	04/21/2014	05/01/2014	05/01/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titche			<b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> Both the Architectural and Structural Drawings of the partition walls show the plan view at the base of the wall and do not indicate the thickness of the wall above the door openings. Please clarify wall thickness above door openings in partition walls.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> For door openings in Reinforced Concrete and CMU partition walls, the wall above the doorway is the same thickness as the adjacent run of wall. To clarify, for example, where the wall is 10" thick CMU and there are 1'-4" thick piers on both sides of the doorway, the wall above the doorway will be 10" thick CMU.

T-1348.1	BGP - SFPUC Electric Room Copper Mesh	Closed	05/29/2014	06/08/2014	06/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché		To: Turner Construction Company PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please reference plan sheet EI-3212.				1) The #6 mesh is to be interconnected to the grounding grid in several locations. Where the #4/0 grid crosses or contacts the mesh, it could be directly connected. Additional connections to the #4/0 grid are required from remote parts of the mesh. These interconnections shall be made with #1 bare CU connections.			
1) Note 4 on plan sheet EI-3212 states, "Cadweld main #4/0 grid to #6 mesh with #1 stranded Cu conductor (typical). Refer to Detail 1/EI-3212." Detail 1/EI-3212 does not show a #1 copper conductor connecting the grid to the mesh. Please confirm the 4/0 grounding grid is to be connected directly to the grounding mesh.				2) The Detail 5/ E1-3212 did not convey a numbered note for this connection. Similar to the response to question 1, this connection refers to additional bond points (using #1 bare CU conductors) between the #4/0 ground grid and the grounding mesh.			
2) Please see the attached Detail 5/EI-3212. Please identify which part of the grounding grid system the highlighted portion belongs to and provide the proper wire size.				3) Yes, the callout refers to using #2 AWG bare CU to the battery racks. The pigtail in Detail 4/E1-3212 is also required to be #2 AWG bare CU to the battery rack.			
3) Detail 5/EI/3212 designates the embedded conductors going to the battery rack as #2. Please confirm this means #2 AWG copper conductors. In addition, no designation is provided on Detail 4/EI-3212 at the pigtail which appears to be for the battery rack in B1289. Please confirm this is pigtail is to be #2 A WG conductor as well.

T-1348.2	BGP - SFPUC Electric Room Copper Mesh	Closed	06/09/2014	06/09/2014	06/17/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titcher		<b>To:</b> Turner Construction Company PHIL MILITELLO		<b>Answered By:</b> Turner Construction Company Judith Long			
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> The response to RFI T-1348.1 stated the #6 mesh shown on EI-3212/Detail 1 is to be interconnected to the grounding grid at "several locations" and that the #4/0 grid could be "directly connected" where it crosses or contacts the mesh. This response also stated that all other connections are to be #1bare CU connections.  1) Please provide the exact quantity of connections which are required from the #4/0 grid to the #6 mesh.  2) Please provide the interval distance between required direct connections from the #4/0 grid to the #6 mesh.  3) Plan sheet shows six (6) total #1 "remote connections" in each room. Please confirm this is the proper quantity required.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger: 6/13/14 Per TJPA( Guy HOLLINS ) direction, this RFI shall be redirected to the TJPA to forward to SFPUC for response.  Matt Ho 6/17/14: 1) RESPONSE: Referring to Details 4 and 5 on Sheet E1-3212 for the West and East Switchgear Rooms, we count 16 locations in the West room and 17 locations in the East room that offer an opportunity to connect the #6 mesh to the #4/0 grid. These locations include all interconnections of the #4/0 grid to ground riser conductors, grid cross connections, grid to pigtails (for equipment grounds), and grid to ground test bar connections.  2) RESPONSE: As noted above, the recommended connections to the mesh do not need to be evenly spaced. The connections can be made by including the mesh in the various connections to the #4/0 grid.  3) RESPONSE: The quantity noted should be adequate.  Response by: Matt Ho, SFPUC dated 6/17/14

REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
See attached CD RFI # 401 SK1 & SK2:			The 2 - 3/4" clearance between the W12x65 beam and the W24x68 beam shown on 1A/S1-5021 may be increased and the bearing assembly may be lowered so that the bearing pads clear the W40x327 flange. Adjust the hanger length accordingly. A minimum clear horizontal clearance of 3/4" shall be provided between the pads and adjacent structure.				
The Scougal Rubber Bearing Pads (Package Number TG0701-95.1) foul the flange of the W40x327 as shown.							
Please provide a solution.

<p>See attached submittal sheet D2.28 and sheet E1-2204. Response comment to Submittal Package TG0600-121.1 on sheet D2.28 between gridlines 12-13 B-C, calls out "conduits are now embedded in the lower concourse slab". Per the TG0600-121.1 submittal review comment meeting held on 4/30/14, please confirm that embedded conduits FE045,FE051,FE052,FE058 incorporated on sheet E1-2204 dated 03/31/14 will continue to be surface mounted and blockout will be left in place for penetrating the slab.</p>					<p>1. Embedded conduits:</p> <p>WSP Response: WSP does not object to the proposal of surface mounting conduits and retaining the slab blockout in these specific referenced zones. For other areas where embedded conduits are indicated, WSP recommends the embedment in this phase.</p>		
<p>Please confirm attached sketch SKA-3148 showing the coupler setting out dimensions for the future corridor wall at B1 level, GL 10, B-C as reviewed with AAI in our slab edge workshop held April 30, 2014</p>					<p>2. SKA-3148 showing coupler setting out dimensions for future corridor walls at B1 Level, GL10/B-C:</p> <p>AAI Response: Confirmed.</p>		
<p>Please confirm rebar for Lower Concourse Floor drains marked "Future" are to be trimmed as detailed on 1/S1-3501 but not blocked out.</p>					<p>3. Future Floor Drains:</p> <p>WSP/MDS Response: It is confirmed that the lower concourse floor drains marked "Future" will be trimmed as detailed on 1/S1-3501 but not blocked out.</p>		
<p>For door openings not dimensioned on architectural slab, floor or wall plans, please confirm it is acceptable to size door rough openings in the lower concourse partition walls to be 4.5" larger than doors scheduled on sheets A1-9700, A1-9701, A1-9702. If not please provide a door jamb detail for these openings.</p>					<p>TT Response: The reinforcement for the Lower Concourse slab at Floor Drains marked as "Future" are to follow detail 1/S1-3501. It is acceptable to trim bars.</p>		
<p>Please confirm that Lower Concourse telecom penetrations shown on slab edge plans A1-2841 through A1-2851 to be 4" x 90 GRS elbows with a factory 30" radius as shown on 6/TE1-8014.</p>					<p>4. Door Rough Opening:</p> <p>AAI Response: As stated in workshop meeting April 30th, 2014, AAI cannot provide rough opening dimensions, as the rough openings may vary between manufacturers. It was agreed that WO will check on specified door manufacturers for the appropriate door rough opening requirements and provide this information to sub-contractor.</p>		
					<p>5. B1 Level Telcom Conduit Penetrations on slab edge plans:</p> <p>SMW response: 4"x 90 GRS Elbow with factory 36" min - 42" desired radius cast into concrete beam as shown on 6/TE1-8014.</p>

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
See attached RFI T-1362 Response.				WOJV received 5/19/14			
The response to RFI T-1362 states that 4"x90 elbows with factory 36" min - 42" radius are to be cast into concrete beam as shown on 6/TE1-8014. This contradicts with the 30" radius called out on sheet 6/TE1-8014 and 30" radius confirmed in the comprehensive layout drawings, TG0600-121.1. Please confirm if the 30" radius elbows currently installed per TG0600-121.1 will need to be swapped out for 4"x90 GRS ELBOW with Factory 36" min - 42", as stated in the response to RFI T-1362.				SM&W Response: NO, 30" bend radius is not confirmed or approved, the minimum bend radius shall be 10 times conduit trade size (internal diameter), this means SM&W will accept commercially available factory bends of minimum 36", with 42" preferred.		See attached updated detail TSK-0040, which supersedes TE1-8014	
T-1363	BGP - Vehicle Ramp Beam Support Embeds - Threaded Rod, PL Washer and Nut	Closed	05/05/2014	05/15/2014	05/08/2014	Potentially	<input type="checkbox"/>

T-1365	SSS - Train Box Column Cap Plate Hole	Closed	05/06/2014	05/16/2014	05/16/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer			<b>To:</b> Turner Construction Company PHIL MILITELLO				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> With reference to the Train Box Column cap plate, our machine shop has drilled (1) non-standard hole in (1) p395 cap plate due to a broken tool. See attached inspection report and photos. The hole is dimensionally in the correct position but has an internal spiral cut. The minimum diameter is 1-9/16" (1.563) and the max diameter is 1-49/64" (1.770).  Please confirm if one of the following is acceptable: Option 1 - Proceed with the as-built condition, no further action required. Option 2 - Reem out the hole to 1-13/16 and use a 1-1/2" bolt. AISC Table J3.3 page 16.1-121 allows oversize hole in slip critical connections, a hardened washer will be installed over the oversized hole. (see attached) Option 3 - Drill the hole to 1-13/16 and use a 1-3/4" diameter bolt.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Both option 2 and option 3 are acceptable. This approval does not set a precedent, evaluation will be made case by case for similar issues in future.	

---

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	Refer to attached CD RFI 410.1 SK1:  1) The response in RFI T-1366 (SK 551, CD 410) does not address rectangular slab openings where one side is less than 2'-0 and the other side is over 2'-0. See the example slab openings and clarify the perimeter steel requirement for all rectangular slab openings where one side is over 2'-0 and the other side is less than 2'-0. 2) The noted slab openings along with other slab openings shown on the Architectural Slab Edge Plans are NOT shown on S1-2302 and other structural plans. Confirm the slab openings on the Architectural Slab Edge Plans supersede the structural plans with updated structural drawings to follow.				1) The 2' dimension limit stated in the response to RFI T-1366 is the larger of the dimensions of the rectangular openings. So for a rectangular opening where one side is over 2' and the other side is less than 2', detail 12/S1-5003 shall apply.  2) Confirmed.		
T-1366.2	SSS - Slab Opening Clarifications	Closed	07/01/2014	07/11/2014	07/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:  Following up on RFIs T-1366 and T-1366.1, please find attached table and exhibits of small slab openings with at least one side that is 2'-0" long.  For each of the minor slab openings included in the following table, please confirm that the direction provided in the aforementioned RFI response is to install framing channels per 12/S1-5003. In some cases, the slab openings are only between 8"-12" wide. Otherwise, please indicate that it is acceptable to provide rebar as shown in SKS-0354 per RFI T1366 instead.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>  Provide perimeter steel per response to RFI 1366.1 around openings where the side of the opening that is perpendicular to the deck span is greater than 2'.  For openings highlighted in green, the perimeter steel per detail 12/S1-5003 is not shown on floor plans because 12/S1-5003 is a typical detail. We disagree with the claim that the perimeter steel for these openings constitutes a change order.  Some of the openings highlighted in red are shown on both architectural and structural drawings. These openings are noted in the schedule shown on attached sketch SKS-0369. Other openings that are missing from the structural drawings will be added in a future ASI.

T-1367	SSS - IFRM Prime Coat Requirement	Closed	05/06/2014	05/16/2014	05/12/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer		<b>To:</b> Turner Construction Company PHIL MILITELLO		<b>Answered By:</b> Turner Construction Comp Stacy Wilson			
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> Specification section 07 81 23 (Intumescent Fire Resistive Materials), issued with Field Order 00027, lists three acceptable basis of design manufacturers for IFRM systems. Additionally, specification section 07 81 23, 1.7.C.2 states that the intumescent fire protection system is to be from a single source, indicating that the prime coat Skanska shop applies must be from the same manufacturer as the subsequent coats that are field applied.  Per the monthly schedule delivered to TJPA, the IFRM contractor is not to be selected until 10/16/14.  Skanska requires direction as to which of the three approved basis of design manufacturers will be used on subsequent coats in order to obtain a recommendation from that intumescent coating manufacturer as to the appropriate primer to be utilized.  Alternatively, priming of IFRM steel can be removed from Skanska's scope and added to the scope of the IFRM contractor. This will result in a cost increase.  Please provide direction.		<b>SUGGESTION:</b>		<b>ANSWER:</b> Accept Suggestion: <input type="checkbox"/> TJPA has rejected this RFI per 01 10 40 1.6 C 2 c.

T-1369	SSS - Weld Electrode Subcomponents	Closed	05/07/2014	05/17/2014	05/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company PHIL MILITELLO		Answered By: Turner Construction Company Jack Adams			

Co-Author: Skanska USA Civil West California DisRyan Clayton

**REQUEST:**

During a Quality Control review, performed by Thompson Metal Fab for compliance with the "Buy America" clause of the Contract, a question was noted regarding the proposed use of ESAB Spoolarc F9A4-ENi4 Submerged Arc Welding (SAW) Electrode for the welding of the HPS70W steel in the Train Box Columns. The attached letter from ESAB, dated April 22, 2014, describes the process that ESAB employs in the manufacture of the referenced product. It notes the fact that the tensile and yield properties of the specific filler metal alloy required to meet the Contract specifications of 90XX are not offered or produced by any mills within the United States. The alloy is provided as a "Greenrod" and is acquired outside of the States. The cold drawing, proprietary processing and packaging of the product is done, by ESAB, wholly within the United States and uses, other than the alloy itself, domestically produced and acquired materials. The Certificate of Conformance from ESAB states that the product is manufactured in the United States (attached).

An inquiry was made, by Skanska, to Lincoln Electric regarding a similar product classification that met the Contract requirement (F9A4-ENi5). Lincoln Electric advised Skanska that they also receive "Greenrod" and strip from sources outside of the United States for this product.

A subsequent Quality Control review by The Herrick Corporation revealed a similar condition for the use of the Lincoln Electric product Outershield XLH-70, AWS classification E70T-1C-H8, FCAW process weld electrode.

Once again, Lincoln has indicated that "Greenrod" for weld electrode products may not be domestically available and may be sourced from throughout the world. However, the manufacturing process, like ESAB, is done wholly within the United States. The Certificate of Conformance from Lincoln also states that the product is manufactured in the United States (see attached certificate and letter dated 04/28/2014).

The CFR Part 661.5 of the Clause gives the following definitions:

c) The steel and iron requirements apply to all construction materials made primarily of steel or iron and used in

**SUGGESTION:****ANSWER:**

Accept Suggestion: ☐

The Contract Documents are clear, and Buy America requirements can reasonably be derived from a review of the Contract Documents. RFI are not an appropriate request to the TJPA for interpretation if products meet Buy America Certification.

The Contractor shall submit the Buy America Certification and the Prime Contractor is responsible for ensuring that lower tier subcontractors are in compliance.

T-1373	BGP - Modifying Slump Limits for Mix 1557205	Closed	05/07/2014	05/17/2014	05/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please reference attached letter dated 5/2/2014, authored by Robert Foley, CEMEX QC Manager.				Acceptable for Mix 1557205.			
On March 20, 2014 the column mix was modified to increase average compressive strength due to low test results for laboratory cured cylinders. The changes that were made to mix #1557205 to increase strength are having an effect on the slump variability. SCCI and CEMEX propose the design slump range be increased to 6 to 9 inches. Is this proposed change acceptable?

T-1378	BGP - SFPUC Electrical Room Grounding	Closed	05/09/2014	05/19/2014	05/09/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Shimmick Construction Company, Inc. Sylvia Hartanto			<b>To:</b> Webcor/Obayashi Joint Ventu Spencer Sayles			<b>Answered By:</b> Webcor/Obayashi Joint Vt Spencer Sayles	
<b>Co-Author:</b>							
<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b>		
Please reference RFI T-1227.1 - SFPUC Plate Grounding.					<b>Accept Suggestion:</b> <input type="checkbox"/>		
Please confirm the SFPUC Transformer mounting plate is to be installed by a future contractor and SCCI is only to stub the grounding conductor into each corner of the Electrical Room( see Note 1 on Plate Sheet EI-2203).					It is confirmed that SFPUC Transformer mounting plate in transformer vault room elevated slabs will be supplied and installed by future contractors. However, SCCI BGP base bid scope needs to be increased from the corner of the three electrical rooms originally bid in BGP. This increase shall be priced and coordinated as described in RFI 1227.1 sketch in order for grounding conductors to be embedded in the structural Concourse slab. Grounding conductors must be extended from the corner of each Electrical Room to each future pad location and stubbed up so that transformer mounting plates can be connected by future electrical contractor. Please provide a sketch and product detail of how BGP electrical intends to implement this grounding extension so that SFPUC review can proceed as described on new sheets E1-3208, E1-3209 and E1-3210		
If SCCI is to install this SFPUC Transformer mounting plate, provide the specifications, including but not limited to material type, size and thickness.					IFC drawings (dated 3.31.2014) issued in Field Order 27 contain updated electrical drawings. BGP contractor should review these drawings for any modifications to Electrical scope bid during TG06. This is to include Grounding and embedded conduit for F-15 EJB conduit. New electrical scope other than that described above is not currently requested at this time.		
<hr/>							
T-1378.1	BGP - SFPUC Electrical Room Grounding	Closed	05/30/2014	06/09/2014	06/09/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titche			<b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b>		
Please provide a drawing which shows the dimensioned locations of the SFPUC Transformer plates so the grounding tails can be stubbed out of the slab at the correct locations.					<b>Accept Suggestion:</b> <input type="checkbox"/>		
					Refer to attached SKA-3477 which shows updated dimensions of SFPUC transformer plate locations at vault rooms# B1323 and B1324.

T-1379	BGP - Pit and Pile Discrepancy at GL 27/E	Closed	05/12/2014	05/22/2014	05/14/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titche <b>To:</b> Turner Construction Company PHIL MILITELLO <b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Please reference attached contract drawings sheet S1-2026.  The mat slab pit located at Gridline 27 and E has a width of 2'-6". The pile located within this specific pit (see marked up S1-2026 is a 36" pile as detailed. Please provide new dimensions for the pit incorporating the 36" pile.			<b>SUGGESTION:</b>  <b>ANSWER:</b> Accept Suggestion: <input type="checkbox"/> Accommodation of temporary conditions such as trestle piles and bridge piers is the responsibility of the contractor. For the trestle pile at Grid 26.7, the contractor is free to propose to the Design Team that the pit be temporarily widened to minimize the complexity of a blockout. Contractor shall include means and detailing of restoring the pit to its planned dimension.				
T-1379.1	BGP - Pit and Pile Discrepancy at GL 27-E	Void	05/21/2014	05/31/2014		Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titche <b>To:</b> Turner Construction Company PHIL MILITELLO <b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto			<b>Answered By:</b>				
<b>REQUEST:</b> SCCI is in receipt of RFI T-1379. SCCI disagrees with the response provided in the aforementioned RFI.  S1-2026 illustrates a 30" wide pile in a 30" wide pit at gridline 27/E. However, Submittal #TG0300- 284.4, which was reviewed and approved by the design team, shows the previously mentioned trestle pile as a 36" wide pile. It has also been confirmed in the field this pile is 36" wide pile.  Please provide applicable details (similar to D4 on SI-3009 & D2 on SI-3007) for permanent elements in the mat slab construction, including but not limited to galvanized sleeves and structural steel reinforcing, for the pit at GL 27/E which contains a 36" wide pile, not 30" as shown on the design drawing S 1-2026.			<b>SUGGESTION:</b>  <b>ANSWER:</b> Accept Suggestion: <input type="checkbox"/>				
T-1379.2	BGP - Pit and Pile Discrepancy at GL 27/E	Closed	06/10/2014	06/20/2014	06/12/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titche <b>To:</b> Turner Construction Company PHIL MILITELLO <b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto			<b>Answered By:</b> Adamson Associates, Inc. George Metzger

T-1380.1	SSS - Field Weld Access at Deck Support Angles	Closed	06/10/2014	06/20/2014	06/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:				
After reviewing the response to T-1380 there are several items of concern:			ANSWER:				
A.			Accept Suggestion: <input type="checkbox"/>				
Access from the underside will not always be possible. At certain locations the perimeter wall bracing and rebracing that will remain in place during the deck installation on operation at Ground Level is in close proximity to the transfer girder and will restrict the mobility of a scissor lift required for a welder to reach the work point from the lower concourse slab, approximately 30' below.			1. Confirmed.				
B.			2. Confirmed.				
To provide an effective weld from the underside, the deck lower flange is required to overhang the toe of the angle. In order to achieve this, shifting the deck may result in the loss of bearing at other locations. If the deck can't be shifted a 12ga minimum flashing plate will be required, see details 3 & 4 on SK1.							
C.							
Effective concrete placement will be an issue if adequate clearance from the top of deck flange to bottom of girder flange is not established.							
To move forward we propose the following:							
1.							
Where d<7" we will use stock angle sizes up to 8x4x1/2" (LLV) welded to the toe of the flange, see detail 1.							
2.							
Where d>7" but <15" we will use an overhead 1/8" fillet from the underside as per the response to T-1380 (where accessible), see detail 2. This will allow a minimum of 4" clearance from top of deck flange to underside of flange for placement of concrete.							
Where the bottom flange does not overhang the toe of the angle and shifting the deck creates a loss of bearing at another location, a 12ga min flashing will be welded to the angle and deck bottom flange, see detail 3 & 4.							
Please confirm items 1 & 2 are acceptable.							
T-1381	SSS - CVN Testing For Secondary Material	Closed	05/12/2014	05/22/2014	05/23/2014	Potentially	<input type="checkbox"/>

<b>REQUEST:</b> The response to RFI T-1034 indicates that secondary steel components (stiffeners, connection plates, continuity plates, etc.) are to be CVN tested in accordance with their respective ASTM specification. In the CS05 (TG0701-077) and CS07 (TG0701-079) submittal packages, Skanska's detailer inadvertently tagged the spandrel shear plates and web reinforcement plates at the Bus Deck level to receive CVN, Frequency P testing. These same components were not tagged for CVN testing in the CS1, CS2, CS3, CS4, and CS6 packages and the drawings were approved with no comment on the CVN requirements.  For the subject material, the governing ASTM 572 specification indicates that supplementary CVN, Frequency P testing is not required unless specifically indicated in the contract documents. In accordance with the response to RFI T-1034, Skanska has proceeded without CVN-P testing for the following secondary components: (Note that the material listed has been ordered without Frequency P testing.) Bus Deck Spandrel Plates Bus Deck Web Reinforcement Plates Bus Deck Drag Connection Plates Roof Level Fabricated Nodes (as per submittal package TG0701-097.1) Other secondary materials (stiffeners, connection plates, continuity plates, etc.)  In preparation for the resubmittal of CS05 and CS07 drawing packages, Skanska will remove the CVN remarks for these components to conform to the RFI T-1034 response, the ASTM specifications, and the previously approved packages.  Please confirm concurrence.		<b>SUGGESTION:</b>		<b>ANSWER:</b> Confirmed.		<b>Accept Suggestion:</b> <input type="checkbox"/>

REQUEST:		SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>			
<p>During a recent structural issues coordination meeting, Skanska raised a concern regarding a submittal response received with package TG0701-29. Specifically, Skanska flagged a comment that indicated our temporary erection aids at the exterior moment frame columns needed to be located 36" below the moment frame beam to column connection at the bus deck level and also 36" away from the weld joint between the column and cast node/transfer girder at ground level. See attached drawings for ease of reference.</p>			Confirmed.				
<p>As discussed during the meeting, please confirm that this is not mandatory; and, if Skanska opts to leave the lugs as shown on the attached documents, it is acceptable.</p>

REQUEST: See attached CD RFI # 414 SK1 & SK2: The connections for the W16x26 beams foul the connection for the W40x149 per 1/S1-5019. Confirm it is acceptable to reduce the 1'-11 dimension to 1'-6 and supply shear plate connections for the W16x26 beams per 1/S1-5011 as shown. If not, supply a new detail.			SUGGESTION:	ANSWER: Confirmed.	Accept Suggestion: <input type="checkbox"/>		
T-1389	SSS - Stud Comment Clarification on Decking Drawings	Closed	05/13/2014	05/23/2014	05/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: With reference to the Linden Steel decking drawings the reviewer's comment references general note DK-5 - Distribute steel studs uniformly over beam span unless otherwise noted on drawings. Maximum spacing of ¾ inch headed studs shall not exceed 24" on center (one stud every 2 feet) unless otherwise noted.  As per note 1 on 1/S1-5000 - "See general notes for headed stud size and maximum spacing. Number of studs is indicated on the framing plan." Linden has modeled their drawings as per note 1, referring to the general notes for size and spacing requirements and the framing plans for stud quantities indicated on each member as per the Steel Beam Legend on S1-2302.  If a stud quantity is not indicated on a beam member, no studs are provided. Please confirm this interpretation is correct. If additional studs are required on members that are not currently identified please provide revised drawings identifying beams and quantities required.			SUGGESTION:	ANSWER: While the maximum stud spacing requirement of 24" noted in General Note DK-5 is the design intent, we understand that the Note 1 on 1/S1-5000 is somewhat conflicting. We agree to handle the 24' spacing requirement on a case by case basis, by marking on the shop drawings where this requirement is to be enforced to minimize the impact. We will re-submit the metal deck shop drawings for clarification.	Accept Suggestion: <input type="checkbox"/>

<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> According to Note 1 on 1/S1-5000, the number of headed studs is indicated on the framing plans. As per the steel beam legend on the framing plans, the number of studs is indicated in (*) following the beam designation (see SK1). It has come to our attention that the design team requires studs on certain members that currently do not show a stud quantity.  Please provide a document that shows which members, not identified as requiring studs on the framing plans, shall have studs installed so that we may incorporate into our decking shop drawing submittal packages.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Refer to attached sketches SKS-0361 through SKS-0367 that show updated plans with additional shear studs (clouded) on beams.

	<p>Sheet S1-2302 indicates that the 2 northern 72"x40" CBM beams east of Grid 1.4 are sloping and references Section 1/S1-3700 which indicates that the CBM beams are level. The 2 southern 72 "x40" CBM beams east of Grid 1.4 are not indicated as sloping and reference Section 1 /S1- 5023 that indicates that the beams are sloping. Please clarify the details for the welded couplers and #11 bars for the 72"x40" CBM beams at east side of TR1 .4. Section 2/S1-7605 indicates 17-#11 bars top and bottom, one added set of 17-#11 bars 3" below the top bars, and 4-#11 side bars. The details shown in Sections 1/SI-5023 and 9/SI-3700 indicate that the top and bottom 17-# 11 bars are connected to the transfer girder by welded couplers or bars. Please verify that only the top and bottom #11 bars connect to the transfer girder by welded couplers or bars.</p>						
	<p>As noted on the plan, along Grid 1.4 , top of slab is at 20.23 north of Grid E and at 21.21 south of Grid E. As noted on the plan, along Grid 1 (top of concrete wall), top of slab is at 20.03 north of Grid E and 21.00 south of Grid E. The 72x40 concrete beams are to have a slope per elevation noted on plan.</p>

T-1412	SSS - Pipe Wall Thickness Tolerance	Closed	05/23/2014	06/02/2014	05/28/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer			<b>To:</b> Turner Construction Company PHIL MILITELLO				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Per conversation during "Transbay structural issues review" meeting on 5-20-2014, the wall thickness tolerance of spec 05 15 22 was discussed. Per design team, this tolerance is intended to apply to the ends where the pipe would be welded, and a less restrictive tolerance would be acceptable throughout the length of the pipe, provided that the wall thickness is greater than nominal, not less.  The manufacturer of the spun-cast pipe has produced all product to date with dimensions that meet the 05 15 22 spec for 12" at each end. Throughout the remainder of the pipe, the wall thickness is greater than nominal (typically by about 0.090"), and in all cases falling within the tolerance of API-5L.  See attached depiction ofthe pipe tolerances.  Please confirm that wall thickness tolerance noted in spec 05 15 22 is intended to apply to the ends only, and that the wall thickness throughout the remainder of the pipe may be greater by as much as is allowed by API5L, but shall be no less than the nominal wall thickness.			<b>SUGGESTION:</b>		<b>ANSWER:</b> Confirmed.		
			<b>Accept Suggestion:</b> <input type="checkbox"/>

REQUEST:			SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>		
This is a follow-up RFI to RFI SK 399 (CD 296) See attached CD RFI # 296.1 SK1 to SK7 for items 1 to 18:			1). See the response noted on the attached sketch RFI 296.1 SK1				
1) 2/S1-9101 shows the framing at 14'-2 C/C UON but no start location for the steel is supplied. Please supply location dimensions for the vertical HSS4x4 hangers per 2/S1-9101.			2). See the response noted on the attached sketch RFI 296.1 SK2				
2) Supply missing clouded dimensions (10) locations.			3). See the response noted on the attached sketch RFI 296.1 SK2				
3) Supply elevation to top of 3/8" galvanized.			4). See the response noted on the attached sketch RFI 296.1 SK3				
4) Supply missing clouded dimensions (12) locations.			5). See the response noted on the attached sketch RFI 296.1 SK3				
5) Supply elevation to top of 3/8" galvanized plate.			6). Yes, the reference shall be to Detail 3/S1-9101. (TT)				
6) Clarify how detail 2/S1-9101 applies at the noted location. Should the reference be to detail 3/S1-9101?			7). See the response noted on the attached sketch RFI 296.1 SK4				
7) Supply (5) clouded dimensions.			8). See A/SKS-356 attached (TT)				
8) Supply a connection detail.			9). Confirmed, also see the comment on RFI 296.1 SK5				
9) Confirm the brace connection is as shown in detail 3/S1-9101 (SK5).			10). See detail 3 on A1-8551 (AAI)				
10) Supply a detail for the bottom of the HSS4x4 posts.			11). See B/SKS-356 attached (TT)				
11) Supply a connection detail for the HSS4x4 posts to horizontal HSS4x4.			12). See the response noted on the attached RFI 296.1 SK4				
12) Supply elevation to underside of posts.			13). ¼" fillet weld both sides (TT)				
13) Supply the weld for PL3/8" to HSS4x4.			14). See the response noted on the attached sketch RFI 296.1 SK5				
14) Supply this dimension for each HSS4x4 post.			15). The detail works as shown. It is a means and methods issue, it just means that the connection cannot be shop fabricated as the work requires contractor's coordinate during construction. If the deck span parallel to the brace angle, field weld the brace angle to the L4x4. (TT)				
15) This detail will not work as it is not known at the detailing stage where the deck flutes will be. The detail also does not work when the deck spans parallel with the brace. Please confirm it is acceptable to proceed per the information in RFI T-1067.2 (SK 230.2, CD 181.2).							
16) Supply the thickness and welding for the stiffeners.							
17) Supply elevation to establish stiffener locations.							
18) Supply a connection for the HSS4x4 to the PL3/8".

<b>REQUEST:</b> The responses to the following items were not sufficient for Candraft to proceed. 7) The response notes one of the requested dimensions as "VARIES". Please provide criteria for this varying dimension. 12) Detail 3/A1-8551 does not provide the bottom of the HSS post elevations. Please supply the elevation at each post. 13) Per the structural details only the 1/2" plate is to be galvanized. Confirm this is correct and supply weld required for PL3/8" to HSS4x4. 14) Supply the requested missing dimension as shown at each post. 17) Please supply the elevations for the stiffeners in the columns. 18b) Please provide the size, radius, hole location and dimension on the 1/2" x 8" plate. Note: See response sketches SK1 through SK7		<b>SUGGESTION:</b>		<b>ANSWER:</b> Accept Suggestion: <input type="checkbox"/> Please see OCS configuration in 1/A1-8550. Notice the OCS path relative to the beam (16'-4 1/2" from GL C.3 in CD RFI 296.1 SK4) is not a constant offset in plan and changes locations traveling east to west. From this, the HSS structure supporting the OCS assembly from above will also have an offset dimension from the beam that is not constant and will vary.  12) The bottom of HSS post elevation will vary because the bottom elevation is dependent upon the elevation of the OCS Universal Spacer Bar which is dependent upon the ultimate constructed sloping grade below (concrete). The OCS Universal Spacer Bar shall be 18'-0" above the built finish grade and the dimension between the bottom elevation of the supporting post and the Universal Spacer Bar is given on detail 3/A1-8151.  13) All should be hot dip galvanized as noted in the CDs. The weld shall be 1/4" double sided fillet weld. Please note that the connection plate shall be centered to the work point of the diagonal angles.  14) Same response as in item #12.  17) CL of plate is determined by SFMTA OVS. See response to item #14 on attached CD RFI 296.1 SK5.  18b) Plate size, thickness and hole location are provided in 6/S1-9101. SFMTA must provide size of plate hole, as the cable tensioner components are provided by SFMTA. TJPA shall assist with the SFMTA contact if required.  The Design Team suggests that the OCS connectors be field installed to accommodate the final coordination with the SFMTA

From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company PHIL MILITELLO				
Co-Author: Skanska USA Civil West California DisRyan Clayton			Answered By:Webcor Construction LP Gregory Kemerer				
REQUEST: This is a follow-up to RFI T-1417.1 (SK 399.3A, CD 296.3)  Skanska: The responses to items 7, 12, 14 & 17 require further clarification. Please review the items below. Item 7 ~ the response and reference to A1-8550 does not provide the requested dimensions. Please provide the dimensions to locate the posts. Item 12 ~ the response tells us that the Universal Spacer Bar is to be 18'-0 above the ultimate constructed sloping grade with the bottom of the post being +/- 4" above that per 3/A1-8151. Several unknowns remain: a) What does "ultimate constructed sloping grade" mean? b) The top of slab information on drawings S1-2306, A1-2306 & A1-2866 is not clear c) What does the +/- 4" in detail 3/A1-8151 mean? Item 14 ~ same as item 12 Item 17 ~ same as item 12			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Item 7 - information has been provided. Skanska should review with WOJV and TJPA.  Item 12 -  a) It means field dimension must be determined from the constructed grading by the CM/GC and coordinated between trade subcontractors and the SFMTA (the transportation agency). The design team cannot provide the as-built field dimensions that are required for this item.  b) The reviewer should be using civil (grading) information - not structural information. Refer to sheets L1-3306, L1-3307, C1-4007 and C1-4009.  c) This dimension is incorrect - It is 1'-0" +/-4". This will be corrected in VE Round #4 submission.  Item 14 - This question is the same as in Item 12, so the response is the same.  Item 17 - This question is the same as in Item 12, so the response is the same.

T-1423	SSS - Girder Flashing Max Gap Dimension	Closed	05/27/2014	06/06/2014	06/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: With reference to details 6, 7 & 9/S1-5000, a 9" max dimension is shown from the edge of the girder flashing to the edge of the deck with a 1-1/2" minimum bearing onto the girder, indicating the flashing gauge is to match the gauge of the deck. Based on the preceding, most locations would require 18 gauge flashing with the max gap between beam and deck being 7-1/2".  Please confirm it is acceptable to increase the max gap to 9" as the deck flutes are at 12" centers and at some locations this gap will exceed 7-1/2". To accommodate the increased gap, the decker is proposing to use 16 gauge flashing at all locations, connecting the flashing to the beam with 3/4" diameter puddle welds at 12" OC and connecting the side lap with button punches at 12" OC or top seam welds at 24" OC.  See attached SK1 for clarifications.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed that the gap may be increased from 7 1/2" to 9" where 16 gauge closure sheet is used.

5000 is not required. See SK1 & SK2 for reference.							
T-1425.1	SSS - Edge of Slab Angle at Seismic Joint GL10 & 20	Closed	06/30/2014	07/10/2014	07/09/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company PHIL MILITELLO	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
See attached CD RFI # 433.1 SK1 & SK2 for items 1 & 2:				1). Confirmed. However, the requirement for the closure plate and other misc. steel per Detail 9/S1-5000 noted in TT's previous responses to RFI 1425.0 may be waived to negate SKANSKA's claim of added scope. If the closure plate is not provided by SKANSKA, the concrete contractor shall provide proper forming/shoring for supporting wet weight of the concrete while pouring slab concrete. How to support the wet weight of the concrete when placing the slab is the contractor's means and methods.			
1) Confirm the outline of top of slab/edge plate at grids B & H at the expansion joints.							
2) Confirm the edge plate support detail at the 1/1/4" connection plate is acceptable as shown or supply an alternate detail.							
3) The 10" on SK2 indicates top of roof floor slab. Confirm the bent plate will stop at top of slab OR is an additional 8" required to the concrete key location.				2). Confirmed, also see the response to comment #1.			
4) For detail 9/S1-5000 now required at the Seismic joints, verify the 8'-0 Max spacing for the angles can be increased to 8'-6 in order to line up with the back span beam spacing per design.				3). It is W/O's option to stop the vertical leg of the closure plate at the top of slab (additional forming is required to retain the concrete while placing the slab), or stop the vertical leg of the closure plate at the concrete key location (additional forming not required).			
				4). Confirmed that the outrigger spacing may be increased to 8'-6" to be in line with the back span beam spacing.

T-1430	BGP - Lower Concourse E/W Bottom Deck Bar at GL 9 MFB	Closed	05/30/2014	06/09/2014	06/04/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titché <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> Please confirm per field conversation between structural EOR and Gerdau that it is acceptable to install the concourse slab bottom East-West reinforcing at GL 9 per the attached sketch.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Proposal is acceptable provided:  1. Tail of slab bottom bar is fully developed within the confined joint  2. Tail of slab bottom bar runs over the top of the lowest MFB longitudinal bar and is no longer located below it  3. Field bends conform to ACI minimum radii limitations  4. Within the joint, bottom MFB bars are brought to their lowest possible position above (and in contact with) the MFB exterior hoop bottom legs  5. All hooks of MFB vertical ties shall be made to fully engage the MFB longitudinal reinforcing outside the joint and at the sides of the joint  6. Proposal is implemented at all Grid 9 columns where the overpour results in slab bottom reinforcing being out of tolerance (3/4 clear plus 1/2" tolerance)  It is also acceptable to cut the bottom slab bars at the face of the MFB-column joint and splice in an equivalent z-bar.				
T-1431	SSS - PE403 & PE404 Missing Connection Detail at Posts	Closed	05/30/2014	06/09/2014	06/12/2014	Potentially	<input type="checkbox"/>

<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> Reference: RFI T-0620 For constructability purposes, the shearwalls require horizontal construction joints at the same elevations as the foundation wall construction joints. All vertical reinforcing has been detailed with HRC mechanical couplers with the exception of the 3rd lift of the shear wall column located adjacent to the knockout wall. Please confirm that it is acceptable to splice the verticals in the shear wall column with a Dayton Superior Barlock D250SCA coupler		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Acceptable provided that the coupler is a Type II coupler, such as Dayton Superior Barlock L-Series. The coupler proposed in the RFI does not qualify. The contractor shall plan for the installation of the coupler by taking into account the length of the coupler, the length of the reinforcing stub to be spliced, and the available clearance. The coupler may need to be preinstalled with the stub or a blockout created depending on the proximity of the obstruction to the planned construction joint. The detailer shall account for the increase in effective bar diameter at the mechanical coupler with respect to ties and clear cover.

T-1443	Re-Install Dewatering Well Pump #34 per Field Coordination	Closed	06/06/2014	06/16/2014	06/12/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
<p>On Thursday, May 22, 2014, there was slurry intrusion through dewatering well #34, from the Transbay Tower Project. After the Transbay Tower Project placed a lean mix to plug the slurry intrusion, only water has come out of the well at a pressurized rate, not yet experienced on this project prior to the event.</p> <p>The water in this well has been confirmed acceptable by the SFPUC to discharge into the City's combined sewer system, on 6/5/14. A plug has been placed in this well in order to keep the jobsite from flooding due to the volume of water pushing through the well. We want to replace the dewatering pump in this well, but are concerned that we may end up dewatering the Transbay Tower Project and possibly draw the water table on their project outside of the requirements of our specification.</p> <p>1) Please confirm that it is acceptable to re-install the dewatering pump in well #34.</p> <p>2) Please let us know if there are certain steps or durations that you want us to pump in an effort for ARUP to monitor the water table on Transbay Tower's Project and/or other adjacent properties.</p> <p>3) Please confirm that in performing this activity, we are not held to the requirement of Spec Section 31 56 13-13.F.1. in regards to "The performance of the shoring wall shall be such that the groundwater levels around the excavation are maintained within 3 feet from the pre-excavation levels" since there is the potential of us drawing their groundwater through our well.</p>					<p>1. It is acceptable to reinstall the dewatering pump in well #34.</p> <p>2. Access has been provided to the global analyzer. Please watch carefully the affects from dewatering in wells P-03DS and P-6MS. These have currently not shown any change in the piezometric elevation since May 22.</p> <p>3. The specification will not be relaxed at this time.</p>

T-1468	SCS - WPS Qualification - Lenton Weldable Couplers	Closed	06/23/2014	07/03/2014	07/03/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: The Lenton welding information provides guidance for qualification of processes; however there are inconsistencies when trying to fulfill AWS D1.1 (2010) requirements. The materials used for manufacturing weldable couplers size #9-11 are Grade 1030/1035. These grades of material are not listed in AWS D1.1 (2010) Table 3. 1, although Grade 1030 is listed in AWS B 2.1 Table D.1 as a Group 2 material (table attached). In order to move forward with welding the Lenton weldable couplers to the Transfer Girders, TMF proposes that FCA W Grade 70 filler material to be used manufacturer ESAB 7100 Ultra, Classification E71 T-9, AWS Specification AWS 5.20"D". One mockup of the actual coupler welded to a Group 2 plate and macro etched would be provided as a supplement.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please confirm this is acceptable.		Acceptable.

<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> Please reference the attached drawings, S1-3010 and S1-3206. The continuous plate and rebar clouded in the attached drawings is conflicting. Please provide a minimum clearance between the rebar and continuous plate.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> To clear the reinforcement, reduce the steel plate width from 3 inches to 2 inches at the highlighted location. For the similar plate on the opposite side of the joint, reduce 3 inch width to 2 inches for symmetry.	
T-1470	BGP - Steel Jacket at Column GL1.4/D.4	Closed	06/24/2014	07/04/2014	06/25/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titché			<b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b>							
<b>REQUEST:</b> Reference attached drawings. The column at Gridlines 1.4/D.4 requires steel jacketing as called out in AAI comment in Submittal Package TG0600-141 sheet G101.0. During the TG0600-141 coordination meeting held on 6/18/14 it was confirmed that the typical sleeve detail as shown on 3/A1-9208 will apply. Sheet A1-2102 implies a one-sided sleeve on the south face of column, sheet A1-9214 implies a two piece sleeve, and sheet 3/A1-9208 shows the typical detail with no modifications. Please confirm a detail specific to this location showing how the jacket is to be wrapped and interfaced with adjacent partition walls.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The column at gridlines 1.4/D.4 requires 6'-0" high steel jacket all around the column with ring plate base, post-installed studs at the Mat Slab. The concrete wall located at 2 sides of column terminates 3/8" before the steel jacket face, 3/8" before and above the ring plate base, and 3/8" before the concrete column face (above steel jacket). Please refer to dwg sheets 3/A1-9208 for detail plan and 2/A1-9213 for section.	
T-1471	BGP - Seismic Joint Bottom Embed Plate at Pits	Closed	06/24/2014	07/04/2014	07/07/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titché			<b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> Please reference attached Contract Drawings and photos.  The east face of the north pit along GL 35 is scaled at 6'-8" from face of CDSM wall (S1-2027 attached). The as-built dimension ranges from 5'-0" to 5'-11" (S1-2027). Also, the center pit is scaled at 5'-8" to face of CDSM wall while the as-built is 5'-3" (S1-2027).			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The embed plate for the center pit at GL 35/E: It is acceptable to reduce the plate to 5'-7" minimum length to accommodate the edge of pit and clamping detail. Provide grout for vertical transition of WPM.  The embed plate for the north pit at GL 35/B-C.3: The vertical surface of the mud slab should be adjusted to reflect what is depicted on engineering drawings

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>Detail 4 on S1-3010 includes a scaled dimension of 5'-0" from face of CDSM wall to the inside face of the west half of the seismic embed (See S1-3010 attached). Therefore, the bottom embed plate will need to extend 2'-6" beyond the 5' dimension per Detail 7 of AI -8881 (attached).</p> <p>Since the as-built dimensions of the edge of pits range from 5'-0" to 5'-11" from face of CDSM wall, the bottom embed plate will overhang the pit depression 2'-6" to 1'-7". The plate could be reduced up to 1'-11" (2'-6" minus the 8" for clamping detail) to accommodate the edge of pits and allow for waterproofing clamping detail. Is this acceptable?</p> <p>Please provide further details at locations where encroaching pits do not allow for sufficient room for bottom embed plate and clamping assembly.</p>						
T-1471.1	BGP - Seismic Joint Bottom Embed Plate at Pits	Closed	07/28/2014	08/07/2014	08/06/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche		To: Turner Construction Company PHIL MILITELLO		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
<p>Further to the response to 1471 please find attached embed plate layout with cross-sections at the pit locations. It will be necessary at the pit locations to also infill and adjust the mud slab vertical/sloped face in order to accommodate the embed plate and clamping detail of the SJ embed.</p> <p>Please confirm if this is acceptable.</p> <p>Note: all infill material used is to be approved by the WPM manufacturer</p>				<p>AAI Response:</p> <p>The dimensions provided in SK-1, SK-2, and SK-3 for the SJ bottom embed plate are confirmed. The high strength grout or concrete infill should be compatible with the WPM and should be approved by the WPM manufacturer.</p> <p>TT Response:</p> <p>The proposed dowels are sufficient to keep in place the 2" minimum high strength grout or concrete infill during construction.</p>			
		WOJV 8/1/14: Confirmed, proceed with work.

T-1473	BGP - Lower Concourse Service Corridor Dimensions on West Wall	Closed	06/25/2014	07/05/2014	07/02/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titché <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> Please reference RFI T-0576 regarding the offset of the West Foundation Walls to account for the CDSM Encroachment. The west wall (GL 1) was offset 3 1/8" to the east while the southwest wall (GL XI-1) was offset 1 7/8" to the northeast. Currently there are no dimensions explicitly shown in the contract drawings for the width of the service corridor that runs along the very western edge of the Lower Concourse in Area 1 and 3. However there is a dimension shown on A1-3006 & A1-7004 that shows the eastern face of the service corridor at 5' to the west of GL 1.4 which translates into a service corridor width of 9' -8 7/8". Is it the designers intent to offset the service corridor walls similar to the foundation walls to maintain the 10' corridor width, or is it the designers intent to shrink the width of the service corridor and keep the interior walls in place? Please provide dimensions for the service corridor width.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The location of interior walls of rooms along the west and southwest service corridors shall be maintained. The service corridor widths shall be reduced by 3 1/8" on the west and 1 7/8" on the southwest.		
<hr/>

T-1475	BGP - Plumbing Penetration Sizes in Concourse Area 8	Void	06/27/2014	07/07/2014		Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titche <b>To:</b> Turner Construction Company PHIL MILITELLO <b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto			<b>Answered By:</b>				
<b>REQUEST:</b> SCCI is in receipt of response to Submittal TG0600-122 for Comprehensive Layout Drawings at the Lower Concourse A8-9 on 6/20/2014. On this submittal response, it was noted on pg D2.33: "For future washroom wall layout and plumbing penetrations- Refer to forthcoming Confirming RFI."  RFI T-1410 revised the plumbing penetrations in this area. Please provide concourse blackout sizes for these penetrations (including "future plbg").  Sketch is based on A1-2844			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> Accept Suggestion: <input type="checkbox"/>				
T-1476	SCS - Concrete Form Support Using CDSM Piles	Closed	06/30/2014	07/10/2014	07/09/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titche <b>To:</b> Turner Construction Company PHIL MILITELLO <b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Shimmick is planning to use a similar form system for the fourth lift of the foundation wall to that used on the second wall lift. However, the second wall lift form system is a cantilever system and is supported by 1 row of anchors, excerpting significant force on the wall lift below. Shimmick proposes to add a tie to the top of the forms and connect to the CDSM soldier piles in addition to using the third lift anchor to provide better support. The soldier piles extend above the ground level and this added tie would not affect the waterproofing (installed by others). See the attached marked up drawings for reference  Please confirm it is acceptable for the fourth lift form system to tie to the CDSM soldier piles.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> Accept Suggestion: <input type="checkbox"/> This is acceptable. We recommend that the shoring designer be notified and given a chance to comment on this approach.

T-1478	SSS - Paint Boundaries at Roof Level Beams	Closed	06/30/2014	07/10/2014	07/11/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer			<b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> 1. At the Roof Level EBF Link beams, the AESS fabricated roof nodes weld to the underside of the built-up beam protected zone as indicated in the sketch attached. Based the thickness of the SFRM coating and the profile of the node-to-flange weld, the coating boundary line between the protected zone paint and AESS primer is proposed at an elevation 3" below the bottom flange. This will allow for a clear delineation between the two coatings by avoiding the weld area, as well as allow for compatibility between the SFRM coating and prime coat. Please confirm this is acceptable.  2. The same elevation for the AESS to SFRM boundary is proposed at the Roof Level Brace beams; however, rather than the protected zone paint, the area above the AESS primer will be bare steel to receive SFRM by others. Please confirm it is acceptable to terminate the AESS paint 3" below the bottom flange of the Roof Level Brace beams.			<b>SUGGESTION:</b>			<b>ANSWER:</b> 1. This question is a means and methods coordination between trades which the CM/GC shall coordinate. We take no exception to the suggested method. However the ultimate approach selected shall meet the approval by the AHJ.  2. Same response as above. <b>Accept Suggestion:</b> <input type="checkbox"/>

T-1487	SSS - Shear Plate Weld Connection Clarification	Closed	07/02/2014	07/12/2014	07/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: For roof level shear plate connection details at GL11D & GL11F, S1-2603 refers to 3/S1-5013. This detail calls for a 3sided PJP weld at the shear plates, with a t-1/8 bevel (t=shear plate thickness). The shear plate located at the center of the web has a thickness of 2 ½", which results in a 2 3/8" bevel. The column web at this location has a thickness of 1 ¼"; the stiffener plates top and bottom have a thickness of ½". A 2 3/8" PJP weld will greatly distort the ½" stiffener plates. The weld size should not exceed the thickness of the thinnest member. Also, Detail 3/S1-5013 refers to Connection Detail 4/S1-5013 which in turn refers to Shear Connection Detail 3/S1-5013. Since both sides of the shear plate are accessible (note 1), is a ½" fillet both sides as shown in 3/S1-5011 acceptable for this location?			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Double sided 1/2" fillet welds are acceptable at the top and bottom stiffener plates as indicated in the RFI. Also, reduce the weld size at the column web from 2-3/8" PJP welding to double sided 1/2" fillet welds.

	<p>pins for the basket columns, a Type 2(M) drag connection, are to be galvanized to class A or Class B-1 per ASTM A153. After reading this note, and looking through all of the applicable details, Skanska interpreted all of the remaining drag connection pins to be provided as bare steel. In the response to the submittal package TG0701-60.1 SSS - PIN Drawings (Central Zone), drawing A9312, a Type 2 (N2) drag connection at GL 11, was marked to receive a galvanized coating. Similar pin connections occur at GL 21 &amp; GL 22 (Type 2-P) and GL 28 (Type 2-N2). Does the design team want these pins galvanized too? If so, please provide the standard required.</p>						<p>protection/finish of remaining pins (other than the Basket column pins) is not correct. AESS elements documented to receive IFRM should receive IFRM in all instances (pins are included), both as fire protection method and as a corrosion prevention measure.</p> <p>The Design Team as the TJPA Representative will offer this as Contractor's Option; to hot dip galvanize ALL the remaining pins (other than the Basket column pins), or apply the intumescent coating system over non-galvanized steel, in either option, the tolerances required for installation of pins is a means and methods solution the responsibility of the contractor</p>
T-1490	BGP - IDF Room B1545 on Concourse Level	Closed	07/03/2014	07/13/2014	07/08/2014	Potentially	<input type="checkbox"/>

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Per contract drawing S1-3205, the removable W14x61 steel corbel and WT8X28.5 angles it connects with are to be fabricated with a 2" vertical slotted hole.					1.) Not acceptable.		
In order to eliminate the lead time of field measured fabrication of the corbels after concrete formwork removal from the SJ assembly, the contractor is proposing either or preferably both of the following modifications:					2.) The beam portion of the corbel may be coated for corrosion protection rather than galvanized. Refer to specification section 09 97 13, part 3.6, item E for acceptable coating types.		
1. Change the slotted hole from vertical to horizontal (east to west) direction on the angles and or the steel corbels							
2. Change the finish of the removable W14X61 steel corbel only from galvanized to primed steel (all other embedded metals would remain galvanized per the contract drawing).							
Please confirm if either of these proposals would be acceptable?

<b>REQUEST:</b> ASI 112 added "UON, see general note DK-5 for added studs on beams" on partial stair plan drawings S1-7002 & S1-7003. It is unclear what beams require studs on these plans. Please provide stud quantities for each beam as per the steel beam legend on S1-2302 so Skanska can provide accurate pricing for this ASI.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Refer to attached sketches SKS-0371 through SKS-0373 that show updated plans with additional shear studs (clouded) on beams.		
T-1509	SCS - Lower Concourse Partition Walls Drawing Conflicts	Closed	07/14/2014	07/24/2014	07/18/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titcher <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b> 1. There is a conflicting detail on Sheet No A1-2202 and S1-2202. A1-2202 shows the wall on grid line B.8-1.4 as a concrete wall but on S1-2202, the same wall is shown as a concrete masonry wall. Please verify  2. There is a conflicting detail on Sheet No A1-2202 and S1-2202 and corresponding details on A1-3008 and B/A1-9241. The dimensions of the concrete walls on grid line F-3 are different. Doors have different locations. Please verify  3. There is a conflicting detail on Sheet No A1-2202 (and corresponding details on A1-3001 and B/A1-9235) and S1-2202. The architectural drawings show a concrete wall along grid line 3, there is no wall in S1-2202. Please verify  4. There is a conflicting detail on Sheet No A1-2203 (and corresponding detail on A1-2250) and S1-2203. The scaled dimensions of the concrete wall on grid line K.1-7.5 are different. Please verify. Please also provide Sheet A1-7405 with actual dimensions.  5. There is a conflicting detail on Sheet No A1-2203 (and corresponding details on A1-3002 and E/A1-9236) and S1-2203. In S1-2203, grid line B.6-11 there are two gaps in the concrete wall, there is only one gap in the same wall in A1-2203. Please verify  6. There is a conflicting detail on Sheet No A1-2204 (and corresponding details 2/A1-3008 and A1-9240) and S1-			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1. The wall along GL B.8 was updated with the Addendum #3 drawings (issued 04/24/2014) as a concrete partition wall.  2. Follow architectural drawings for layout and dimensioning of concrete partition wall door openings along GL F.3.  3. Follow architectural drawings for layout of concrete partition wall along GL 3 between GL A-B.  4. Follow architectural drawings for layout and dimensioning of concrete partition wall along GL K.1 near GL 7.5.  5. Follow architectural drawings for layout of concrete partition wall and openings along GL 11 near GL B.6.  6. Follow architectural drawings for layout and dimensioning of concrete partition wall and door opening near GL C.3/15 and GL B.1/15.  7. Follow architectural drawings for layout and dimensioning of concrete partition wall door opening along GL 21 near GL G.5.

T-1512	BGP - Mechanical Pump Room B2761 Electrical Sump Feeds	Closed	07/15/2014	07/25/2014	07/28/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titché <b>To:</b> Turner Construction Company PHIL MILITELLO <b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Plan Sheet EI-2027 shows two(2) sump controllers in Mechanical Pump Room B2761, one for SE-B2- D-1,2 and the other for SPG-B2-D-1,2. There will be 2" conduits from these controllers to two of the three sump pits in the mechanical room for the pump leads. Plan Sheet EI-2027 indicates the two(2) eastern-most pits get the pump lead conduits( see attached), however Detail 4 on Plan Sheet PI-3006 identifies the western-most pit as "SPG" and the middle pit as "SE"( see attached).  Please confirm: 1) Detail 4 on plan sheet P1-3006 is correct. 2) The pump lead conduits from SE-B2-D-1,2 will lead to the pit identified as "SE" on plan sheet P1-3006. 3) The pump lead conduits from SPG-B2-D-1,2 will lead to the pit identified as "SPG" on plan sheet P1-3006.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1. Detail 4 on plan sheet P1-3006 is correct.  2. This is correct.  3. This is correct.				
T-1513	SSS - Corner Drag Beam Framing at Bus Deck Level	Closed	07/15/2014	07/25/2014	07/28/2014	Potentially	<input type="checkbox"/>

T-1518	BGP - Partition Wall Pilaster Ties	Closed	07/15/2014	07/25/2014	07/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: As discussed onsite with the SEOR, please confirm the following for partition walls:  1. All isolated pilasters have ties over their entire height  2. All pilasters thicker than the adjacent integral wall have ties over their entire height- Please note that this is added scope to TG06 Contract  3. Pilaster that are the same thickness as the adjacent integral wall require ties only for the lengths defined in Note 3 of Detail 9/SI-9050  4. Where ties are present at a pilaster base, the ties are not required to penetrate the supporting slab or foundation.  5. Ties may be built up from stirrups and hairpins containing 135 hooks.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed, noting disagreement that ties are added scope.

T-1532.1	SSS - Deck Support Angle at Column Base Plate	Closed	07/31/2014	08/10/2014	08/18/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Webcor Construction LP Gregory Kemerer				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b>		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>			
This is a follow-up to the response of RFI T-1532.				Welding the deck support angle to the base plate is acceptable if the welding is made only in the zones marked on attached sketch SKS-0396. The gage angle welded to the base plate will provide adequate deck support. Using Hilti pins to attach the angle to the base plate is not acceptable. We disagree with the claim that overhead welding at the deck support angle constitutes a "cost increase". Detail 8/S1-3705 which shows deck support angle detail at the transfer girder flanges was part of bid documents. The only exception to this detail at the column base plates is that the angle is being welded to the base plate and not the transfer girder flange. Also, refer to details on A1-9317 for slab edge detail at the column base plates.			
As per the response, restricting welding to only the girder flange creates several issues: 1. See detail 17 on SK1 - an additional 4" would be required on the vertical leg of the angle to allow welding to the girder flange. This creates a 12" vertical leg, welded at the bottom toe to the girder and supporting a 13" concrete slab. Our decker does not believe this is adequate support. This occurs at 9 locations.  2. See detail 5 & 17 on SK1 - overhead welding will be required from the underside to weld to the girder flange. Detail 5 occurs at 67 locations and 17 occurs at 9 locations. Our decker will incur additional labor and equipment costs for this work.  If welding to the base plate is prohibited, an alternative solution which will have lower additional cost impact is to use Hilti pins to attach the gauge angle to base plate or girder flange. See attached product data and application details. See attached SK2 for clarification.  Please confirm if welding to the column base plate is prohibited, Skanska can use Hilti pins as per SK2.							

T-1532.2	SSS - Deck Support Angle at Column Base Plate	Closed	08/25/2014	09/04/2014	09/15/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b>		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>			
This is a follow-up to the response of RFI T-1532.1				1.) We believe that deck support during construction is a means and methods issue, however in our opinion, the simplest solution is running angles parallel to the transfer girder, from one perpendicular beam to another, around the column base plates. This will also help to provide the 1" separation needed from the column base plate in detail A1-9317.  2.) As indicated in the design drawings there are no elements around the base plate that require welding to the base plate. Any accidental welding in the field to			
As per the response to the above RFI, direction to drawing A1-9317 (which was provided as part of FO 27) indicates a deck closure/support angle separated 1" from the column base plate, with no structural information provided. As a detail for deck support around the column base plate is not provided in the structural drawings and Skanska's proposals have been rejected in previous RFI responses, this remains an open issue. We require a detail in order to proceed							

T-1532.3	SSS - Deck Support Angle at Column Base Plate	Closed	10/07/2014	10/17/2014	10/17/2014	Potentially <input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer		<b>To:</b> Turner Construction Company PHIL MILITELLO		<b>Answered By:</b> Adamson Associates, Inc. George Metzger		
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton						
<b>REQUEST:</b> Please provide a structural detail indicating the designer's requirements for the deck support/closure angle around the column base plate to top of transfer girder connection on all sides of the base plate.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>		
				Our response to RFI 1532.2 stands. This RFI is written in a misleading manner. In the 10/02/2014 meeting, we have reiterated that temporary shoring of slab is a means and methods issue. This RFI does not include any new information over the .2 version therefore refer to .2 version which already provided a direction as part of question 1. What was stated in the 10/02/2014 meeting was SER agrees to look at the proposal of the contractor to help resolve the issue however the RFI question is identical to the first question in RFI 1532.2 therefore no further action taken.

<b>REQUEST:</b> See attached CD RFI # 505 SK1 for items 1 to 6: 1) Supply the elevation of the (4) HSS12x6x1/4. 2a) Supply a connection detail. 3) Supply a connection detail. 4) Supply missing dimension. 6) The noted slab edge detail is referenced but no slab information is shown. Please clarify.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) T/steel of the four HSS12x6 beams is 101'-5".  2a) HSS8x6x1/4 beams noted in SK1 in the RFI are not required and shall be removed. See attached sketch SKS-0387 for updated framing layout. Note that HSS outriggers have been moved from detail 3/S1-7003 to 4/S1-7003 as shown in the attached sketch. A HSS 8x6x1/4 beam has also been added at the west edge of PE201 in detail 4/S1-7003.  3) See response to 2a).  4) Refer to details 4/A1-7861, 2/7862 and 4/A1-7864 to determine the extents of the HSS8x6 outrigger beam.  6) The slab edge detail is incorrectly called out. Detail 9/S1-5000 does not apply at the highlighted location.				
T-1536	SCS - Concrete Cover & Tolerance on Foundation Wall Terminator Rebar	Closed	07/24/2014	08/03/2014	08/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b> Drawing SI-3201 and other similar foundation wall sections call out a 2" concrete cover on the terminators of the foundation wall vertical rebar. These vertical bars have no adjustability because one end is a terminator and the other end is a male coupler end. The elevation of the top of terminator will be dependent on the coupler elevation above the Lift 3 Foundation Wall. The ground floor slab is 10" thick and sloped along the top of foundation wall.  To allow for maximum deviation to accommodate for the slope of the slab, tolerances in rebar fabrication and location from the previous wall lifts and the final wall lift: 1. Shimmick proposes to change the concrete cover from 2" to 5" and increase the tolerance to 2.5". Please confirm this is acceptable. 2. If the proposal is not acceptable, please provide a concrete cover and tolerance that is acceptable.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Standard ACI tolerance shall apply on concrete cover, increasing the cover and deviation of the tolerance is not acceptable. These proposed modifications to the cover and tolerances would be acceptable only if contractor provides additional U bars over the moment frame beam top rebar with size and spacing matching the size and spacing of stirrups in Zone 1 of Detail 6/S1-3600 at no cost to the owner. The U bars would span between the top corner bars of the moment frame beam have vertical legs that are equal to embedment length per 1/S1-3001. No additional U bars is required between the beams.

	<p><b>REQUEST:</b></p> <p>Please reference Detail 2, Sheet S 1-3205.</p> <p>Please clarify the following deformed bar questions:</p> <p>1. 1" diameter deformed bar is a non-standard diameter for deformed bar. This will require the bar to be specially manufactured which could take up to 4 weeks to procure. 3/4" diameter deformed bar is the largest standard size readily available. Is it acceptable to use 3/4" diameter in lieu of 1" diameter deformed bar?</p> <p>2. The detail depicts a head on the end of the deformed bar. Headed deformed bar is also non-standard (see attached Nelson Stud Deformed Bar Product Data) and currently found to be unattainable. Is it the intent of the engineer to include a headed deformed bar anchor? Is it acceptable to use a standard A 108 bar per ASTM A496 as detailed in the attached product data?</p> <p>3. If the 3/4" diameter deformed bar is unacceptable, is it acceptable to use 1" (#8) welded rebar in lieu of the 1" deformed bar? Furthermore, will the rebar require headed reinforcement?</p>	<p><b>SUGGESTION:</b></p>			<p><b>ANSWER:</b>      <b>Accept Suggestion:</b> <input type="checkbox"/></p> <p>1). See response to #3</p> <p>2). The detail was drawn graphically incorrect, see response to #3</p> <p>3). Using 1" (#8) welded rebars is acceptable as long as ASTM A706 bars are used. Submit weld detail with the seismic joint shop drawings for review.</p>

	north pits as depicted in S1-2027. Is it the engineer's intent to end the slab halfway up the pit? If not, please provide details of protection slab location at the seismic joint at the center and north pits.					the embed plates are shortened in accordance with RFI-1471, the protection slab will terminate at the vertical face of mud slab.	
T-1549	BGP - 3rd Wall Lift Vertical Unistrut Spacing Tolerance	Closed	07/25/2014	08/04/2014	07/29/2014	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Claude Titche Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto	To: Turner Construction Company PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
	REQUEST: Vertical Unistrut embedded in the 3rd wall lift is spaced at 10' O.C. per plan drawing AI -6231. Due to locations of wall bulkheads, form work panel ribs, and other embedded items, the contractor requests a tolerance of plus/minus 4" off the 10' O.C. spacing. Please confirm if this is acceptable and if not, please provide an acceptable lateral tolerance.	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed. It is acceptable to have +/- 4" off the 10'-0" spacing of the vertical Unistrut at the Lower Concourse foundation walls.				
T-1550	SSS - PE203 Connection Clarifications	Closed	07/25/2014	08/04/2014	08/11/2014	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Gregory Kemerer Co-Author: Skanska USA Civil West California DisRyan Clayton	To: Turner Construction Company PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
	REQUEST: See attached CD RFI # 512 SK1 for items 1 & 2:  1) Please confirm the noted connection (similar to RFI T-1105, SK 240.1, CD 183.1) is acceptable or supply a new detail.  2) The connection per 1/S1-7630 (shown in item 1) and the connection per 1/S1-7600 foul each other at this location. Please supply a solution.	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Connection as shown on SK1 in the RFI is acceptable. Provide a 1/2" stiffener plate perpendicular to the 5/8" plate and centered on the HSS beam similar to that shown in attached sketch SKS-0386. Provide 1/4" double sided fillet welds for the stiffener plate at the beam flange and the 5/8" plate.  2) Provide connection per attached sketch SKS-0386 at the highlighted location

T-1551	SSS - SE201 & SE202 Connection Clarification at HSS Posts	Closed	07/25/2014	08/04/2014	08/07/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO <b>Answered By:</b> Adamson Associates, Inc. George Metzger							
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> See attached CD RFI # 516 SK1 to SK3: The L8x4x1/2 is insufficient for the HSS10x10 posts in SE201 & SE202. Please supply an alternate detail.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The detail is applicable as is. The base plate to match the size of the post as indicated in the detail, and the L8 embed angle is large enough to weld the pipe section onto (pipe to embed angle weld).			
T-1552	BGP - Pit Rebar in South Pit at GL 35	Closed	07/25/2014	08/04/2014	07/29/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Claude Titcher <b>To:</b> Turner Construction Company PHIL MILITELLO <b>Answered By:</b> Adamson Associates, Inc. George Metzger							
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> Please reference Contract Drawings SI-2027, SI-3010, SI-3004, and the attached drawings.  Sheet S1-2027 depicts the east edge of the south pit 2'-5" west of GL 35. As-built location of east edge of south pit is 1'-0" west of GL 35. The south pit at GL 35 has typical pit rebar per Detail 4, S1-3004. Typically, the pit rebar extends 4' beyond the edge of pit and 4' in height (see attached drawing SI- 3010). At the as-built location of the pit, pit rebar will extend into the seismic joint gap by approximately 14" as depicted in the attached drawing. Please provide alternate pit rebar detail for the south pit at GL 35.  Please note, pit rebar for all pits in Area 16 have been fabricated.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The condition is analogous to the pits shown to the north, detailed in Sections 7/S1-3010 and 1/S1-3007. Contract documents instruct the contractor to verify field dimensions, coordinate the drawings, and apply similar detailing. It is acceptable to apply the aforementioned details or for the contractor to provide an alternative equivalent detail for acceptance through the RFI process.  It is possible that pit has been placed too far east. Contractor to verify plan location of pit and the ability to comply with contract documents for the 5'-0" minimum clearance requirement between the bottom edge of sump and nearest face of waterproofing.

T-1553	SSS - SE201 & SE202 Roof Level Framing Clarifications	Closed	07/25/2014	08/04/2014	08/07/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> See attached CD RFI # 524 SK1 for items 1 to 4: 1) These (2) beams have been located on center of the HSS10x10 posts above per 1/S1-7102. This results in the beams being 1'-0 from the edge of wall as shown but 8/S1-7631 indicates 10". Confirm 1'-0 is acceptable. 2) Detail 11/S1-7631 does not indicate that slab edge plate per 8/S1-5000 is required. Confirm that is the intent. 3) 6/S1-7631 is shown at the west side of the slab openings but it is not clear if slab edge plate per 8/S1-5000 is required. Clarify the slab edge requirement on the east and west sides of the openings. 4) Depending on the response to item 3, supply a connection detail for the HSS beam.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) Framing plan shown on SK1 in the RFI is not current. See sketch SKS-0383 submitted with response to RFI T-1544 for current framing layout. The two noted beams are centered on the WF columns. Dimensions to locate WF columns are shown on attached sketch SKA-3923.  2) Confirmed. Edge plate per 8/S1-5000 is not required at the highlighted locations as there is no slab on either side of the concrete walls as shown in 11/S1-7631.  3) See attached sketch SKS-0388 showing updated details 6/S1-7631 and 10/S1-7631. Details 6/S1-7631 and 10/S1-7631 apply at the west and east edges of the opening, respectively. As shown in the details slab edge plate per 8/S1-5000 is required.  4) The HSS beam connects to a WF column. See attached sketch SKS-0389 HSS beam to WF column connection detail.  Note that all the sketches attached with this RFI were already issued by the design team as part of the Roof Restaurant IFC package (5/31/2014). W/O to coordinate issuance of drawings to the sub-contractors				
T-1553.1	SSS - SE201 & SE202 Stud Length Requirement and Dimension Clarification	Closed	08/25/2014	09/04/2014	09/08/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> See attached CD RFI # 524.1 SK1 for items 1 & 2: 1) Please update the stud length requirements to suit the revised wall thicknesses/beam locations. 2) This 5" dimension is shown as 1'-9 3/4 on SKS-0383 in RFI T-1544 (SK 712, CD 522). Please clarify which dimension is correct.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) Sheets S1-7102 and S1-7631 have been updated and issued with Roof Park Restaurant IFC package on 5/31/2014. Refer to attached sketches SKS-0410 and SKS-0411 that show updated wall thicknesses and stud lengths.  2) See response to 1).

T-1553.2	SSS - SE201 & SE202 Roof Level Framing Clarifications	Closed	09/22/2014	10/02/2014	10/01/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> See attached CD RFI # 524.2 SK1 for items 1 to 3: 1) This dimension is 11" per 10/A1-2969. Please confirm that is correct or supply the dimensions at the (2) hi-lited clouds to locate the slab opening. 2) It is not clear where the noted beam is located. This dimension is not shown anywhere except RFI T-1544 (SK 712, CD 522) SKS-0411, which shows the beam off-set 1'-5 3/4 from the edge of the opening but this detail appears to place the beam below the wall whose thickness is not known. Please supply the location for the beam. 3) The wall is shown as 1'-6 thick in detail 10/A1-2969. If that is the case the 6" long studs will extend outside the concrete. Please clarify.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) Refer to revised A1-2969 issued in ASI No.0127 dated 09/12/14 for revised information.  2) The beam shall be located 1' - 9 3/4" from the edge of slab as shown on S1-2602 submitted with Roof Park Restaurant IFC package on 5/31/2014. CMU knee wall thickness is 8" and is called on S1-2701 submitted with Roof Park Restaurant IFC package on 5/31/2014. Detail 10/S1-7631 does not apply at this CMU wall. Refer to typical detail 11/S1-5003 that shows detail for beam supporting CMU wall.  3) Refer to revised A1-2969 issued in ASI No.0127 dated 09/12/14 for revised information.  We agree with the reason for RFI request "Verification", disagree with others. We categorize this as called out on contract documents.		
T-1553.3	SSS - SE201 & SE202 Roof Level Framing Clarifications	Closed	10/13/2014	10/23/2014	10/28/2014	Potentially	<input type="checkbox"/>

T-1559	SSS - TPG1 Stiffener Connection Clarification at GL 3	Closed	07/25/2014	08/04/2014	08/05/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Webcor Construction LP Gregory Kemerer				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 529 SK1 & SK2 for items 1a & 1b:  1a) The typical connection for the TPG1 to the perimeter BU Beam is per 6/S1-5010 as shown on SK2 but at this location a pull-out shear plate is shown. Supply thickness, bolt and weld information for the shear plate connection if that is the connection to be used at the noted location. 1b) The stiffener will foul the bolts for the top plate per 7/S1-5032 if the connection per 6/S1-5010 is used. Please provide a solution.			SUGGESTION:  ANSWER: Accept Suggestion: <input type="checkbox"/> 1.) Detail 6/S1-5010 is to be applied at this location.  2.) For the 8 bolts on the same side as the stiffener: Move 4 bolts 1.5 inches to east and move the other 4 bolts 1.5 inches to west. This modification will increase the spacing between the central bolts from 4.5 inches to 7.5 inches and reduce edge distance from 4.5 inches to 3 inches (each side).

REQUEST: Detail 10/S1-4202 shows the protected zone signage attached directly to both sides of the beam. The response to submittal package TG0701-37A includes a note directing the contractor to remove the signage before SFRM application, and then reattaching it after the SFRM is applied (See SK1). Please confirm this note is to be ignored.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Contract documents indicate paint and signage for protected zone. It has been previously established that the paint may be applied directly to the beam before the application of SFRM. This should serve to designate the protected zone during erection and over the life of the building. The signage is intended to be an exterior alert, over the life of the building, and must be visible from the exterior. Therefore, the signage must be outside of the SFRM. The contract documents do not specifically indicate that the signage be present before the application of SFRM as the contract documents generally show the final condition. It would, however, behoove the contractor to have the signage present at all stages of construction, before and after application of SFRM, in order to mitigate the risk of accidental damage to the part, which would be very expensive to replace.		
T-1563	SSS - Erection Access Confirmation at TPG1	Closed	07/29/2014	08/08/2014	08/18/2014	Potentially	<input type="checkbox"/>

REQUEST: There is a 3 7/16" gap between the flanges of the TPG1 and W40x264. The north end of the W40x264 is connected to the W40x297 per 1/S1-5010 and the south end is connected to the BU-40x28 per 1/S1-8001 including a field moment weld at the top and bottom flange of the W40x264.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> It is not acceptable to move W-1 awning connection CP1D from its current location. However, it is acceptable to move the W40x264 beam 6" away from TPG1 to allow access for field erection.

Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 525.1 SK1 for items 1 to 3: 1) The WT22x167.5 fouls the continuity plates. Please provide a detail showing the solution. 2) Supply hole size for 2 1/2" dia. pretensioned rod thru the continuity plates 3) The WT22x167.5 fouls the continuity plates. Please provide a detail showing the solution.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Provide continuity plates on each side of the WT22x167.5 and on each side of the MF column web (total 4 plates) at the locations highlighted in the RFI.  2) For the pretension rods at this location, provide oversize holes per AISC 360-10 Table J3.3 at the continuity plates.  3) Apply response to item 1.		
<hr/>							
T-1566.2	SSS - Pretension Rod Connection Clarification at Second Level GL 3	Closed	10/01/2014	10/11/2014	10/09/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: This is a follow-up RFI to RFI T-1566.1 (SK 715.1, CD 525.1) 1) As an alternative to response #1 and #3, is it acceptable to provide a one-piece continuity plate (one each side of MF column web), and slot the WT22x167.5 to clear the one-piece continuity plate? 2) If yes to #1 above, is a weld required at the slotted WT/one-piece continuity plate joint? 3) If yes to #2 above, is a minimum sized fillet acceptable?			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Not acceptable. Alternatively, continuity plates between the WT and the column flange on the no beam side can be omitted. Also, do not weld the remaining continuity plates to the WT section therefore welding would be required on two sides, namely, to the column flange on the beam side and column web between the beam flange and the WT. Extend the continuity plates as close to the WT as possible.

REQUEST: Please reference attached CEMEX Letter and product data sheet for the Salt River brand Fly-ash, product data sheet for Headwaters brand Fly-ash and product comparison spreadsheet.  If needed, due to a shortage in supply of the Headwaters brand fly-ash, please confirm it is acceptable to substitute Salt River brand fly-ash for use in all TG06.0 cast-in-place mix designs.  If Salt River Fly-ash is acceptable, will the design team require trial batches?			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Based on the assertion contained within the Cemex letter, that the proposed substitution will result in equivalent performance to the previously approved mix designs, the design team does not object to the proposed substitution or require additional trial batches. Should the proposed substitution be placed in elements whose strength is evaluated on predictive methods, the performance of the mix shall be tracked separately.		
T-1568	BGP - Pile Location Discrepancy at GL E/34.5 - Zone 4	Closed	07/29/2014	08/08/2014	08/12/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: SCCI is in receipt of RFI response T-0741. RFI response T-0741 references RFI response T-0264.3, which states: " ... Note that a pile in this location will require the pile to be cut off at a lower elevation than the typical detail, which will involve a larger block-out..."  1. Please provide an elevation, referenced in the above mentioned RPI response, which the pile will be cut.  RFI response T-0264.3 also states: " ... the mat shall be re-braced at the block-out by TG03 ... "  2. Please provide a detailed description of this required re-brace and how it will effect TG06 formwork, rebar, etc.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Per the RFI attachments, the bridge pier appears to be completely contained between the shallow eastern sump and the deeper sump immediately west. As such, the cutoff elevation for the bridge pier may be the same as for blockouts at the typical top of mat slab elevation. Detail 4/S1-3009 will apply to the blockout in the north-south direction except that diagonal trim bars are not required. For the east-west direction, Detail 4 would not apply but may be modified such that the #5 at 8" infill cap bars lap with the pit wall reinforcing on the west side and lap with embedded dowels of same size and spacing on the east side. The resultant depth of blockout will be approximately 30". The (6) additional #11 bars shown on 1/S1-2065 may be relocated adjacent to the pier below the shallow east sump. Additional reinforcing beyond the (6) #11's mentioned is not required above the bottom of the mat. Additional reinforcing per Detail 7/S1-3009 is required at the bottom of the pit.  Temporary blockouts are the responsibility of the contractor and the suggestion above is but one acceptable way to accommodate the change in pier

Sylvia Hartanto  <b>REQUEST:</b> Please reference RPI response T-1568, attached photo of bridge pier/sleeve at Grid Lines 34.5/E and attached sketch.  SCCI is in receipt of RFI response T-1568. The bridge pier in question is not fully contained within the sumps pits referenced in RPI response T-1568 (see photo attached). The galvanized pile sleeve encroaches into the Eastern most sump pit approximately 5/8".  In order to facilitate the installation of this sump pit the provided contract details will need to be modified. The pile will need to be cut off at a lower elevation than the typical detail, which will require a larger block-out. The typical contract rebar details will need to be altered, as well as the typical waterproofing details.  1. Please confirm the attached sketch showing revised rebar and formwork details is acceptable. 2. In order to install a deeper blockout, the galvanized sleeve will be cut down to 4" above bottom Of blockout. This cut will remove the sleeve flange. Please confirm this is acceptable.  All waterproofing detail revisions will be performed per Grace's recommendation and referenced mat slab "Ready-to-Pour" sign-off document for Mat Slab 16	Closed	08/28/2014	09/07/2014	09/02/2014	Potentially	<input type="checkbox"/>
<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Item 1 is confirmed.  Item 2 is not acceptable. Submit a proposal for providing a flange on the sleeve, field repair of galvanizing, and any waterproofing details that are proposed to be modified.

T-1575	SSS - Locations for W-3 Support Beams on Ground Level	Closed	07/31/2014	08/10/2014	08/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 538 SK1: D/S1-6058 appears to be the plan of the W-3 system at the Ground Level but dimensions to locate the beams noted thus * on S1-2307 (SK2) are not provided. Please provide locations for the beams hi-lited on SK2.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
			All necessary dimensions have been provided to locate the base plates, therefore the supporting beams are located accordingly. See details B/S1-6058 and C/S1-6059 for dimensioning.				
T-1576	SSS - Comment on W16 Elevation at GL19.9	Closed	07/31/2014	08/10/2014	08/15/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 536 SK1: The noted W16 beam has been lowered in order for the decking for the low slab to continue from Grid G thru to the W44x230 as shown in 9/S1-3703. The (2) W16 beams on the east side of Grid 19.9 are flush with the top of TR19.9. Confirm that is acceptable at Grid G & C or clarify the framing in this area.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
			Confirmed				
T-1577	SSS - E510-E512 Missing Connection & Support	Closed	07/31/2014	08/10/2014	08/15/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 542 SK1: 1) Supply a connection detail for the low W30 to the W40 on both ends. 2) The noted W12x14 beams have no support at the noted locations as the W30x99 is below at -2'-10 1/2. Supply a support/connection detail.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
			1) Provide connection per 1/S1-7604 at the low W30 beam that frames into the W40 beams at its two ends. 2) See attached sketch SKS-0393 showing the support for W12 beams at the knock-out slab.				

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
T-1578	SSS - Pipe Grade Requirement	Closed	07/31/2014	08/10/2014	08/06/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: At Gridline 21 & 22 between D & F, S1-2505 shows two pipes 16 X 1.031, that are to be supplied as API 5L GR X52. Herrick has been unable to locate this grade of material that stays within the Buy America requirement. Please advise.		SUGGESTION: Herrick has found two pipes that are certified to API 5L GR X42 but meet the mechanical properties for API 5L X52 (Please see attached Mill Certification). Please confirm this material is acceptable.		ANSWER: Accept Suggestion: <input type="checkbox"/> Suggestion acceptable for the two pipes indicated in the RFI.			
T-1579	BGP - Seismic Joint Stepped Embed Clarifications	Closed	08/01/2014	08/11/2014	08/19/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please reference Contract Drawing S1-3010 and Submittal TG0600-051 .1.  Please clarify the following:  1. Sheet 8.01 of Submittal TG0600-05 I.1 calls for a M30x4-1/2" stud welded to the embed. Due to the unavailability ofM30x4-1/2" studs, please confirm it is acceptable to fillet welding M30x4-1/2" long cut pieces of fully threaded rod.  2. Submittal TG0600-051.1 requested design to determine bar lengths for the hooked #6 welded rebar. Please provide missing lengths for the hooked welded #6 rebar.  3. Please clarify the ( . 11 7) at the double flare bevel weld on the hooked #6 rebar and the deformed #6 bar. It is SCCI's understanding the 3/8" is the weld size and the 5 is the weld length. What is the (.117) referring to?  4. See attached SI-3010. The east embed top vertical leg appears to be welded to the horizontal leg with a square bevel and convex weld with a fillet on the other side. Typically, a square bevel has a given dimension that depicts the gap between plates. As no dimension is given and the other side is a fillet weld, it appears to be a flat fillet laid down on the joint, with no gap. Please confirm this is the design intent.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1). The headed studs, their weld attachment forming a part of clamping assembly are a part of assembly designed by seismic joint supplier. Changing of the clamping assembly shall be approved by the supplier.  2). The hook #6 shall be 36" long (length without hook) same length as the 3/4" deformed bar anchors.  3). The double flare weld is 3/8" with 0.117" effective throat.  4). Gap of the square groove weld shall be per AWS prequalified weld joint detail. The gap size depending on the weld process used.

T-1580	SSS - Stiffener Fouling 2" Plate at GL21G	Closed	08/04/2014	08/14/2014	08/26/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
See attached CD RFI # 541 SK1: With the actual location of MFB11 relative to TR21 as shown, the PL2 1/2" x 14 x 2'-6 will foul the vertical stiffeners. Confirm it is acceptable to locate the PL 2 1/2" as shown and terminate the vertical stiffener plates 1" below MFB11 as shown. If not, please clarify detail 8/S1-3702 at Grid G/21.				1) The 2 1/2" x 14" plate should locate as close to the 2" holes as possible, say changing the 1 1/4" clearance to 1/2" clearance.  2) The vertical stiffeners does not need to keep 1' clear from the bottom of MFB. They can be extended into MFB 11, just short of 2 1/2" plate.

T-1581	SSS - Inaccessible Welds at Corner GL Cast Nodes	Closed	08/04/2014	08/14/2014	08/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
See attached CD RFI # 474 SK1 to SK6 for item 1 to 10:				1). The CP weld noted may be achieved by weld a backup bar/angle prior to setting the column.			
1-							
8) Several of the shop and field welds required at the ground level corner cast nodes are inaccessible once the cast node is set in position. Please see items 1 through 8 on SK1 through SK8 for clarification and provide direction.				2). The CP weld noted may be achieved by weld a backup bar/angle prior to setting the column. The back-gouge and 5/16" reinforcing fillet may be deleted.			
9) Supply the welding for the north flange plates of the BU column to the node.				3). The double bevel weld may be changed to single bevel weld from the east side.			
10) The welds required at this external corner create an unweldable condition, See SK5 & SK6 for clarification. Please provide direction.				4). The CP weld noted may be achieved by weld a backup bar prior to setting the column. The back-gouge and 5/16" reinforcing fillet may be deleted.			
				5). See response #4			
				6). See response #4			
				7). Backup bar may be installed prior to fitting the transfer girder to the cast node. The back-gouge and 5/16" reinforcing fillet may be deleted.			
				8). Cannot see when the weld cannot be made. The vertical stiffener may be installed after the 2" PP weld is completed.			
				9). The weld info is called out as CP weld with back gouge and 5/16 reinforcement weld, which is questioned in item 4 above.			
				10). Weld access hole per AWS D1.1.

T-1581.1	SSS - Inaccessible Welds at Corner GL Cast Nodes	Closed	09/08/2014	09/18/2014	09/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: This is a follow up to RFI T-1581:  1-7) Confirm the backing bar may be left in place. 8) The "vertical stiffener" referenced in the response is the transfer girder web as per section 5B. This weld is inaccessible once the node is set in place. Confirm this section of 2" PJP can be omitted. 9) The weld detail requested was the vertical edge of the built-up column flange to node, not the column field weld indicated in item #4 as referenced in the response. Please provide weld detail or confirm weld is not required. 10a & b) Confirm access holes as per SK4 are acceptable.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 1-7). Confirmed.  8) Confirmed.  9). Use 1/2" fillet weld.  10.a & 10.b). Confirmed.  TT: We disagree with the Reason for RFI noted and think this is a Clarification for Constructability Issues.				
T-1582	BGP - Geothermal and Temperature Probe Manifold Sleeve Detail	Open	08/04/2014	08/14/2014		Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company PHIL MILITELLO			Answered By:				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: The CDSM wall has significant variation at the geothermal and temperature probe sleeve locations.  Please confirm the front flange and nelson stud at the manifold sleeve can be removed, as shown in the attached shop drawings. This would allow the sleeve to be cut to take the CDSM encroachment into consideration while still installing the sleeve flush to the face of the wall.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/>

T-1584	SCS - Wall Construction Joint - Moment Frame Beam Conflict	Closed	08/04/2014	08/14/2014	08/18/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titcher <b>To:</b> Turner Construction Company PHIL MILITELLO <b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> See attached diagram of a wall lift construction joint overlay on the ground floor plan. Per Specification Section 03 30 02 - 3.2, Foundation wall and ground floor construction joints shall align with the location of joint below in TG06 and will not impair the strength of the structure. A conflict occurs at the noted areas of the attached diagram, where the wall joint placed according to specification, will intersect at a moment frame beam. SCCI proposes to move wall construction joints in order to avoid conflicting with the moment frame beams.  Please confirm shifting construction joints to not align with the construction joints below is acceptable and provide permissible parameters to assign new construction joints for SCCI to reflect upon and modify the construction joint layout. A conceptual sketch is attached reflecting the proposed shift in vertical construction joint.			<b>SUGGESTION:</b>  <b>ANSWER:</b> Accept Suggestion: <input type="checkbox"/> The foundation wall construction joints cannot run through Ground Level MFB's. The best option to avoid this situation is to jog Foundation Wall construction joints around the MFB's as proposed. The recommended location for the offset is the horizontal Foundation Wall construction joint immediately below the MFB's. The Design Team will evaluate contractor proposed construction joints during submittal review of the Ground Level construction joint layout that shall include any modifications to the previously reviewed and approved Foundation Wall construction joint layouts.				
T-1586	SSS - Telecom Vault - ToS Elevation	Closed	08/04/2014	08/14/2014	08/13/2014	Potentially	<input type="checkbox"/>

T-1590	SCS - Concrete Form Support Kicked To Temp Bridge	Closed	08/04/2014	08/14/2014	08/09/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titché			<b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang							
<b>REQUEST:</b> A unique support system is necessary for the foundation wall under the temporary bridges (First, Fremont, Beale). Shimmick proposes that in these areas, the form work will kick to support brackets mounted to the underside of the bridges to provide better support. Without this, the form system will be a cantilever system supported by 1 row of anchors which will exert a significant force on the wall lift below.  Please confirm it is acceptable for the fourth lift form system to be supported by the bridge underside.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The bridge is designed by a WOJV subcontractor. WOJV shall respond to this RFI.	
<hr/>							
T-1591	SCS - Pendulum Bearing Test Results	Closed	08/05/2014	08/15/2014	08/15/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titché			<b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang							
<b>REQUEST:</b> Per Specification Section 03 20 02-1.4-A-7, "test results for [pendulum] bearings with similar size" are to be submitted for approval. Per Mageba, they have test data on pendulum bearings (isolators) with similar sizes which they believe have been tested under more severe conditions than the ones required for this project. See attached email correspondence with Mageba for further explanation and more specific details in regards to their test and how the results apply to satisfy the requirements in the specifications. The referenced Annex documents in the email are also attached. Only a sample of the data has been included for preliminary approval; full test data will be submitted once this data is confirmed acceptable.  Please confirm that the mentioned test reports could serve as evidence of the proper functioning of mageba pendulum bearings, as well as the fulfillment for the requirements in the specifications.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Reports from past test data can serve as a basis to waive the testing requirement. However, the information provided with this RFI is not sufficient to waive the testing requirement. The test data provided in the RFI seems to belong to a bearing of similar size but it does not seem to meet vertical load carrying requirements outlined in the specifications. It is also not clear whether it meets the horizontal force requirements (friction coefficient) outlined in the specifications or not.  To waive the testing requirement:  - Provide specifications for the product that is intended to be used in this project that meets the design requirements outlined in the contract documents.  - Provide test data for a bearing that is comparable in size and performance to those intended to be used in this project tested with conditions that are comparable to the design requirements.

T-1591.1	SCS - Pendulum Bearing Test Results	Closed	09/10/2014	09/20/2014	09/25/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titcher <b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang		<b>To:</b> Turner Construction Company PHIL MILITELLO		<b>Answered By:</b> Adamson Associates, Inc. George Metzger			
<b>REQUEST:</b> RFI T-1591 response noted two requirements to waive the testing requirements.  1. Provide specifications for the product that is intended to be used in the project that meets the design requirements outlined in the contract documents. See attached preliminary Pendulum Bearing product information and drawing.  2. Provide test data for a bearing that is comparable in size and performance to those intended to be used in this project tested with conditions that are comparable to the design requirements. Please see attached additional performance test results from other bearings of comparable size and performance. Also reference T-1591 for previously submitted test results.  Please confirm that the mentioned test reports could serve as evidence of the proper functioning of mageba pendulum bearings, as well as the fulfillment for the testing requirements in the specifications.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Confirmed that the information provided can be considered sufficient to fulfill testing requirement. Note that per Section 3.2.D of specification 03 20 02: "Pendulum bearing dimensions shall fit within the columns they are installed at. Anchors for the bearings shall not interfere with the column reinforcement." In current design, PM8.89 does not seem to satisfy this requirement for the 34 in diameter columns at Gridline 34.8. Verify this requirement is satisfied for all pendulum bearings.			
T-1592	SSS - PE201 Splice Location Clarifications for Weld Access	Closed	08/06/2014	08/16/2014	08/22/2014	Potentially	<input type="checkbox"/>

Co-Author:							
REQUEST: See attached RFI T-1602.  Per response to RFI T-1602 please confirm the following.  1.) Please confirm PG&E has approved both the gas meter room and the use of a 4" sleeve and routing/elbow to pull plastic tubing as reflected in this project design. 2.) Confirm the sleeve through the perimeter structural and shoring wall is an 8" (or larger) sleeve. 3.) What are the required structural and architectural details for suspending a concrete encased gas main from the structural lid/deck for the entire run between perimeter wall and gas meter room?			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1. PG&E has reviewed three options proposed by the design team for routing the incoming gas service into the gas meter room. There are two options that locate the gas piping above the trainbox lid and under the sidewalk that are being coordinated to determine the final design solution which will then be submitted to PG&E for approval. The third option to penetrate the foundation wall and steel beam will not be pursued further. 2. Based on the options reviewed with PG&E no sleeve will be required through the foundation wall. The gas piping will be installed above the trainbox lid under the sidewalk. Coordinated details will be provided in a future drawing issue. 3. A suspended concrete encased gas main will not be required for the two preferred options described above.	
T-1603	SSS - Transfer Girder Flange Shop Splices	Closed	08/12/2014	08/22/2014	08/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: It has been understood that, due to the availability of mill run plate size and length, it would be necessary to splice some of the top and bottom flange components of several of the Transfer Girders in order to achieve the overall length required. The Contract provisions and AWS D1.1 Structural Code require that all splices made by welding are to be shown on the shop drawings. However, the location of the shop splice(s) was not shown on the shop drawings that were issued for fabrication to Thompson Metal Fab. TMF has fabricated flanges that have been spliced by full penetration welds. The welds have been inspected and have been accepted in accordance with the provisions of the AWS D1.1 Structural Code for static load criteria. The locations of the splices in the transfer girder components and the affected flanges are shown in the attached documentation.  Girder A626 - top and bottom flange			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed that the as-built shop splices shown in Appendix B and proposed splice locations in Appendix C are acceptable.

REQUEST: See attached CD RFI # 560 SK1 for items 1 & 2:  1) The CJP weld cannot be applied at the sharp edges of the 2 3/4" thick (2) plates and the 3" thick connection plate. Verify it is acceptable to shape the edges of plates as shown.  2) Confirm the solution in item 1 can be applied to similar conditions e.g. 4/S1-6006 and 3&5/S1-6005.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 1. It is acceptable to shape the edges of the plates at shown.  2. Confirmed.				
T-1606	SSS - Type Drag Connection Geometry at Bus Level Cast Node 29A-01 and 29B-01	Closed	08/12/2014	08/22/2014	08/19/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Please refer to attached SK RFI 744 SK01. The shear plates at drag connection type 1-A at cast node 29B-01 and 29A-01 land on the edge of the welding pad. This condition does not make allowance for as-cast tolerances on the welding pad edge and may impact our ability to achieve effective weld size. Please advise.  Skanska acknowledges the response to SK RFI 004.1 (T-0738) and 004.2 (T-0738.1). Following these RFIs, Skanska increased shear plate spacing to give a 1/8" gap on the inside of each shear plate for erection clearance. Even had this gap not been added, Skanska would still flag this issue for designers review as 1/8" still does not allow for as-cast tolerances at these locations.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The information provided in the RFI is not sufficient to provide a single solution at this time. Consider following solutions, which depend on the actual size of the pad:  1-) If the as cast dimensions of the pad allow the shear plate to land on the pad, no action needed. Since the contractor has opted to machine the pads, the rounded edges of the pads will likely be removed to create a wider weldable pad surface.  2-) Once the as cast dimensions of the pad are determined and if the plates do not fit in the pad, the ends of the plates can be tapered 0.25" with 1:2.5 ratio (e.g., 0.25"x 0.625" taper) at the outside faces of the plates.  Lastly, the contractor plans to use 1/8" gap on each side of the shear plate per the RFI. Considering that these are slip critical connections, a smaller gap might be considered by the contractor which can decrease the out to out connection width. To achieve slip critical, shim plates are needed if there is a 1/8" gap between the connection plate and beam web.

T-1622	BGP - Top of Vertical Wall Interface with Ground Level MFB	Closed	08/18/2014	08/28/2014	08/22/2014	Potentially	<input type="checkbox"/>
<div><div><div>From: Webcor Construction LP</div><div>Claude Titché</div></div><div>To: Turner Construction Company PHIL MILITELLO</div><div>Answered By: Adamson Associates, Inc. George Metzger</div></div> <div>Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto</div>							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
The current design indicates the top of the # 11 vertical wall reinforcing terminating with a terminator maintaining 2" concrete clear cover above the bar as seen in Section 1 on S-3201 .				Confirmed, provided that the resulting clear cover to the Foundation Wall Vertical Reinforcing Terminator is within the parameters of the RFI T-1622 response including the supplemental U-bars. We disagree that a potential clash is anything other than insufficient means and methods.			
A # 11 555 t-head is 11/ 16" thick and a #11 Lenton Terminator is 11/16" thick. The Ground Moment Frame Beams appear in Section 5 of S1-3600. The concrete clear cover indicated over the stirrup is 2 3/4".							
Due to the designed concrete clear cover called for, the thicknesses of the different terminator products and the allowable tolerance in fabrication and placement per ACI a conflict with the two interfacing componets is expected to occur at the top bars of the MFB.							
Please confirm if the tenninator on the vertical bar can terminate below the ground level MFB top bars to avoid the expected conflict similiar to that allowed between the column and concourse MFB as indicated within RFI T-0917.							
Should this proposed solution not be acceptable please provide direction how to proceed.

T-1625	SCS - Embedded Column Inner Vertical Bars at Foundation Walls	Closed	08/19/2014	08/29/2014	08/22/2014	Potentially	<input type="checkbox"/>
<p><b>From:</b> Webcor Construction LP Claude Titcher  <b>To:</b> Turner Construction Company PHIL MILITELLO  <b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang</p>			<p><b>ANSWERED By:</b> Adamson Associates, Inc. George Metzger</p>				
<p><b>REQUEST:</b> See attached marked up contract drawings.</p> <p>The TG0600 rebar subcontractor is using HRC 420 friction welded standard couplers at the top end of the 3rd lift foundation walls and embedded columns C21, C33, C34 vertical bars. The inner set of embedded column vertical bars are indicated in sections as having a 90 degree SH tail at the top of bar. It isn't possible to install the bar with the 90 tail into the 3rd lift HRC 420 standard coupler as the tail of the bar needs to spin circular to engage the threads into the coupler with the final tail orientation dictated by torquing of the bar into the coupler. A possible solution to this issue is to utilize the HRC 555 Forged head in lieu of the 90 degree tail. The top of the inner vertical bar 555 head could be held 4" below the top of the outer vertical bar 555 head for concrete encapsulation.</p> <p>Please confirm that the proposed solution is acceptable for the typical embedded column in foundation walls.</p>			<p><b>SUGGESTION:</b></p> <p><b>ANSWER:</b>      <b>Accept Suggestion:</b> <input type="checkbox"/></p> <p>Proposed solution is acceptable for Embedded Columns C21, C33, C34 and C23. Coordinate head elevation with requirements of framing coming into the joint. Indicate target head elevations on submittals for review.</p> <p>REVISED RESPONSE:</p> <p>Proposed solution is not acceptable, hooks shall be provided as shown in construction drawings. This is a means and methods issue. The work between the two sub-contractors shall be coordinated by the general contractor.</p>

T-1626	BGP - Column 101E and 101F Concrete Elevation	Closed	08/20/2014	08/30/2014	08/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company PHIL MILITELLO			Answered By:Webcor Construction LP Adib Sassine				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Column 101E and 101F was poured 1 ft below shoring elevation.				Proposed using concourse slab mix to pour back both columns is unacceptable.			
Is it acceptable to use concourse slab concrete mix 1558218 to pour back the remaining top foot concurrently with concourse deck D201?				Pour the remaining 1 ft of concrete at both columns 101E and 101F the same mix as the concrete columns with the following options as discussed with Sean McNeil:			
				Option 1: Pour both columns separately under separate IR.			
				Option 2: Or pour both columns at the same time as the concrete deck D201 provided you allow 2 hours for the concrete to set and then you pour the deck with the scheduled concrete mix. This will require a separate IR to track this condition at both columns. Include special instruction in the IR to ensure consolidation of both columns are inspected separately as well as paying close attention not to disturb the concrete of poured column sections when consolidating. Prep the top of concrete column surface to achieve the required amplitude as required per previous column pour cold joint condition.

T-1627	SCS - Bridge Blockout CIDH Piles	Closed	08/21/2014	08/31/2014	09/05/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche		To: Turner Construction Company PHIL MILITELLO		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST: Please provide details for blockout(s) at the concrete roadway section as shown in the attached sketch. A Blockout will be necessary to allow the CIDH pier(s) to be removed from the ground level, pulled up through the deck, after the concrete bridge(s) section has reached design strength. Once the CIDH piers have been removed the circular section will need to have rebar installed, concrete poured back, and waterproofing repaired prior to receiving infill pursuant to contract documents; 10 sets of CIDH piers, per temporary structure, will require Blockouts at First, Fremont, and Beal street.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1. Reference RFI T-0470 and RFI T-0807. Temporary blockouts are the contractor's responsibility. Refer to General Notes GR-4, GR-5, and GR-9.  2. Refer to attached conceptual detail representing an acceptable method of restoring a temporary opening to contract final condition at the roadway slabs. It does not relieve the contractor from the obligation of verifying the suitability of the detail to actual field conditions and construction loading.  3. Should the contractor elect not to shore the temporary condition, the contractor shall submit a statement or supporting calculations justifying the unshored condition under construction loads signed by a licensed professional engineer. Should the contractor elect to use conceptually different detailing, the detailing and any required supporting calculations shall be submitted for review.  4. The final choice of detailing shall be explicitly indicated on the deck reinforcing submittals for each unique blockout case for coordination with surrounding reinforcing.			

T-1628	SSS - Weld Columns to TG-33.2	Closed	08/25/2014	09/04/2014	09/24/2014	Potentially	<input type="checkbox"/>

T-1636	SSS - Exit Mezzanine Framing and Connection Clarifications at North Exit	Closed	08/25/2014	09/04/2014	09/08/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company PHIL MILITELLO				
Co-Author: Skanska USA Civil West California DisRyan Clayton			Answered By:Adamson Associates, Inc. George Metzger				
REQUEST:			SUGGESTION:				
See attached CD RFI # 555 SK1 for items 1 to 9: 1) Supply/confirm all clouded dimensions (9 clouds total). 2) Verify dimension. 3) Connection per 9/S1-5028 will not work at the noted location. Supply an alternate detail. 4) Confirm off-center connection per 9/S1-5028 is acceptable or supply an alternate detail. 5) Confirm the noted dimensions may vary to match the W-3 supporting beam locations above. 6) Confirm the orientation for the MC4. 7) Confirm the vertical hanger is interrupted at the upper beam. Please clarify. 8) Clarify where the MC4x13.8 is located and supply a connection to the W12 & CMU wall. 9) Supply the elevation for the W12x40 at the landing and depending on the elevation, supply a connection detail at each end.			ANSWER: Accept Suggestion: <input type="checkbox"/> 1. See attached sketch SKS-0406 for requested dimensions and for updated slab edge drawing, refer to SKA-4081 and 6/A1-7011 issued with ASI-118.  2. Confirmed.  3. Move the W12x40 beam northwards so that the 2L6x6 clears the W33x118 flange by 1". The EOS of the mezzanine floor will also move with W12x40.  4. Move the W12x40 beam so that it aligns with the W44x230 beam above. The EOS of the mezzanine floor will also move with W12x40.  5. Confirmed.  6. Confirmed.  7. Provide 1 hanger on each side of the slab step on both sides of the slab as shown in attached sketches SKS-0404 and SKS-0405.  8. The MC4x13.8 channel may be waived at the highlighted location. In lieu of the MC4x13.8, provide a W12x40 beam as shown in sketch SKS-0405  9. Provide a W6x25 beam in lieu of the W12x40 beam at the upper slab as shown in sketch SKS-0405.

T-1637	SSS - North Exit Mezzanine Clarifications	Closed	08/25/2014	09/04/2014	09/11/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer			<b>To:</b> Turner Construction Company PHIL MILITELLO				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> See attached CD RFI # 561 SK1 to SK4 for items 1 to 20: 1) Confirm all dimensions shown in a green rectangle box. 2) The noted W12x40 appears to be shown as one continuous beam from west of Grid 22 to east of grid 24. Supply splice locations and a splice detail. 3) Confirm the CMU wall aligns with the west edge of the slab opening or supply more information. 4) Confirm it is acceptable to locate the MC4's 1" from edge of slab openings. 5) It is not clear where the MC4 is located. Is it backed against the CMU wall? Please provide more information and connection details. 6) The location of the hangers are not correct at the locations noted as a red rectangle box based on the concrete beam locations per RFI T-1010 (SK 287, CD 230). Confirm the updated dimensions are correct. 7) Confirm connection is per 9/S1-5028. 8) Supply a connection detail. 9) Supply a connection detail for MC4 to MC4. 10) Confirm all W12x40's and all MC4x13.8's are located vertically per 4/S1-5032 (SK3). If not, supply more information. 11) The location of the hangers are not correct at the locations noted as a red rectangle box based on the concrete beam locations per RFI T-1010 (SK 287, CD 230). Confirm the updated dimensions are correct. 12) Confirm the CMU wall aligns with the east edge of the slab opening or supply more information. 13) Confirm dimension to edge of slab. 14) Confirm MC4 is located 1" west from the edge of slab or supply more information. 15) Confirm the underside of the slab is typically at the top of the bottom flange of the W12x40's or supply more information. 16) Supply a connection detail for the MC4 to the W12x40.  17) Supply a connection detail for the MC4 to the CMU wall. 18) Please supply dimensions for hooked deformed bars. 19) Confirm stud spacing to avoid the bending radius. 20) Confirm 1 1/4" I/S cold bending radius.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>	
			1. For confirmation of dimensions highlighted in green on CD RFI 561 SK1, A1-2854 should be read in conjunction with A1-3020, A1-7010 and structural details.  a. 12'-0" is confirmed  b. 2'-8 5/8" - should be 2'-0 5/8", refer to A1-2854 issued with ASI-118.  c. 11'-6" - should be 11'-2", refer to A1-2854 issued with ASI 118.  d. 11 5/8" is confirmed.  e. 19'5 3/4" - is acceptable  2. Refer to response to RFI T-1073 for clarification on W12 beam splice locations and detail.  3. Wall below is 3" offset from EOS. Refer to Detail 5/A-0024.  4. MC4s shall be 2" (clear) away from the slab openings.  5. The MC4 channel may be waived at the highlighted locations.  6. Confirmed.  7. Confirmed.  8. Move the W12x40 and 2L6x6 hanger northwards so that the W12x40 beam is 1" offset from the W40 beam at the ground level.  9. Refer to response to RFI T-1073 for MC4 to MC4 connection detail clarification.  10. Confirmed.  11. See attached sketch SKS-0414 for correct hanger locations.

T-1648	SSS - Deck Support Angle at Drum Café Roof	Closed	08/26/2014	09/05/2014	08/29/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> See attached CD RFI # 584 SK1: Supply the size, length and spacing for the expansion anchors shown on SK1.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Expansion anchors shall be 3/4" dia Hilti Kwik Bolt TZ anchors with 4 3/4" embedment spaced at 18" on center and at 4" from each end. Provide a L6x4x3/8" (LLV) angle in lieu of the L3x3x1/4 shown on 1/S1-3281A.		
T-1649	SSS - Review Comments on Embed Angles	Closed	08/26/2014	09/05/2014	09/08/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> See attached CD RFI # 589 SK1 for items 1 & 2: 1) 5" long studs are correct per detail 1/S1-7600. Confirm no further action is required. (The same applies to drawing 9519 & 9526). 2) 3 3/4" is correct to place the pipe collar on the centerline of the HSS8x8 post per 1/S1-7600 above as shown. Confirm no further action is required.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) Detail 1/S1-7600 applies to HSS posts landing on composite decks. For HSS posts landing on concrete slabs details 11/S1-7600 and 12/S1-7602 are applicable. Details 11/S1-7600 and 12/S1-7602 call out 8" long studs.  2) Embed Angle A9516 is noted in two locations, 3 on Train Platform (drawing EM46) & 2 on Bus Deck Levels (drawing EM47). The Corrected dimension applies to embeds at the Train Platform level (see drawing EM46). Skanska to confirm if Embed A9516 is designed for both levels.		
T-1650	SCS - Requesting Approval for Precast Panels in Lieu of Cast-In-Place	Closed	08/27/2014	09/06/2014	09/15/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titcher <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang							
<b>REQUEST:</b> See attached Exhibits A through D as a possible means of precast installation method. Using a precast yard facility in lieu of concrete cast in place will reduce the construction duration for the scallop, perimeter, and sky light elliptical wall operations since production can start prior to the construction start date. Precasting concrete elements also results in a better final product. Quality advantages of using a precast yard facility over cast in place methods are improved formwork design, curing procedures, temperature control, and form striping methods since work			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> In concept, the proposed P/C scheme will work structurally. However, we would point out that the support of the panel on the steel beam shall be detailed to allow for in/out and up/down adjustments. The detail shall also accommodate the nature camber in the steel beam. Structural calculations and shop drawings shall be submitted for review. The calculations and shop drawings shall be stamped and sealed by a California Structural Engineer.

	<p>space, formwork weight, formwork relocation and reassembly, and hoisting equipment restrictions are greatly reduced if not eliminated.</p> <p>shimmick requests approval from the engineer to allow precast manufactured panels in lieu of the cast in place walls shown on S1-2752 &amp; S1-3282 scallop walls, S1-2602 stair well, S1-2603 elliptical skylight, S1-2604 light column opening, S1-2606 stair shaft, and S1-2607 elevator shaft.</p> <p>Please confirm that the concept drawing is acceptable as well.</p>						
T-1651	SCS - Concrete Anchor Inserts at Temp Bridges	Closed	08/27/2014	09/06/2014			
From: Webcor Construction LP Claude Titcher		To: Balfour Beatty Infrastructure, I Danny Walsh		Answered By:		Potentially <input type="checkbox"/>	
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
See attached photo and concept sketch.							
<p>A unique support system is necessary for the foundation wall under the temporary bridges (First, Fremont, and Beale). A top tie is required to avoid the significant forces caused by a cantilever system supported by 1 row of anchors. In the attached photo, a concrete ledge can be seen along the CDSM wall under the temporary bridges. SCCI proposes to utilize these concrete ledges to install anchors for tie points.</p> <p>Please confirm it is acceptable to install anchors into the concrete ledges underneath the temporary bridges and provide rebar layout and concrete strength information for the concrete.</p>

T-1652	BGP - B45 Beam Proposed Move Between GL 20.1 and 21	Closed	08/28/2014	09/07/2014	09/02/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titché			<b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> Due to trestle pile conflict with Beam B45 between GL 20.1 and 21 at two locations, SCCI proposes that two B45 Beams be moved per attached drawings.  Please confirm that this is acceptable.			<b>SUGGESTION:</b>			<b>ANSWER:</b> Confirmed. <b>Accept Suggestion:</b> <input type="checkbox"/>	
<hr/>							
T-1653	SCS - Partition Wall Elevation	Closed	08/28/2014	09/07/2014	09/04/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titché			<b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang							
<b>REQUEST:</b> On sheet A1-2203 and A1-3002, at the Transformer Vaults Room located about GL 11, Section detail A/A1-9236, regarding the elevation of the top of the partition walls.  1. Is the gap between the top of the wall and the Ground Level slab constant along the wall? This would mean that the top of wall would slope with the ground level. Please confirm. 2. Please clarify how to obtain the elevation of the top of the partition walls. Note: The elevations obtained through those two methods below conflict. a.Should be obtained using the ground slab elevation points on plan S1-2303 and a constant slope between two consecutive elevation points? -OR-. b.Scale the elevation from the section detail in AI AI-9236? 3. Please confirm if the above answers are applicable to all similar partition walls.			<b>SUGGESTION:</b>			<b>ANSWER:</b> 1. Confirmed. The Top of the wall slopes with the ground level structural slab and the joint gap is constant.  2. The elevations of the top of the partition walls (which extend to U/S ground floor slab) is determined from the elevations on the slab edge drawings together with structural slab design, framing design and details on the structural drawings. Scaling the elevations from section details is not acceptable.  3. The above answers are applicable to similar partition walls. <b>Accept Suggestion:</b> <input type="checkbox"/>

<b>From:</b> Webcor Construction LP Claude Titcher <b>To:</b> Turner Construction Company PHIL MILITELLO <b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> ASI 121 issued new wall CJ locations. Reference sheet AI-2203, Detail I/AI-3008 and B/AI-9240.  A. On the south wall of the room at GL 13-B.2 there is a construction joint (see plan attached indicated as location "A") running through one of the MEP blocks outs. That creates a cantilever section below the beams cutout and above the MEP block out. Is that acceptable? If not, where should the CJ be relocated?  B. On the same wall there is a construction joint ( see plan attached indicated as location "B"), the distance between the MEP block and the construction joint is 5' 5/8", which is not enough to place diagonal trim bars on the comers of the MEP block out that are closer to the construction joint. Please provide detail for this location.  C. In the same wall, the construction joints are not shown in the area cover by the spall plate, do the CJ's start at the top of the wall plates? Please confirm intent and provide further direction.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> A. Omit wall CJ running through Mech opening.  B. Wall CJ to be moved 1'-0" west of Electrical opening.  C. Wall CJs are continuous behind steel plates and are shown as hidden lines.  For updated A1-9240, refer to SKA-4094.

T-1660	SCS - ST201 Thickened foundation wall	Closed	09/04/2014	09/14/2014	09/12/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Stephanie Azzolino <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang							
<b>REQUEST:</b> The contract drawings do not provide a section view for the foundation wall at Stair Tower 201. S1-2302 calls out the foundation wall as a uniform 3' thickness. S1-3201 provides a typical foundation wall section, shown with uniform thickness. Shimmick has been provided with updated sketches that call out a thickened foundation wall of 4' 3 1/2" at Stair Tower 201 as opposed to the uniform 3' thickness.  1) Please confirm that, at Stair Tower 201 between Grid Line D and E.6, the foundation wall will be thickened to 4' 3 1/2" per the sketches provided.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Per Section 2/SKS-0401 the very top of the foundation wall is integral with a haunch that supports the stair floor slab and HSS stair column. Below the South Wx column, a rectangular pilaster of the same thickness as the corbel extends down to the top of the grade beam as shown in Sections 3/SKS-400. Below the north Wx column, the bottom of corbel is below the grade beam resulting in a short similar pilaster. The extent of the corbel, the required elevations, and the south Wx pilaster are shown in Section 1/SKS-401. The western face of the pilaster is located at 3'-3-1/2" west of Grid 1 as shown on SKS-0398.		
T-1661	SCS - ST201 Wall thicknesses A1-2960 with SKS 0398	Closed	09/04/2014	09/14/2014	09/12/2014	Potentially	<input type="checkbox"/>

	<p>typical vertical bars used for the foundation walls are #11 rebar and the added bar length is 19'-6" (LTS + W + W + LTS + W = 102" + 1 0" + 10 + 102" + 10"). Depending on the location of the penetration, the added bar would have to extend LTS + W beyond the opening, which in the 10" opening case is 9'-4" (102" + 10").This is not possible considering the foundation walls under TG07.2 scope of work are between 8' to 12'.</p> <p>Additionally these additional vertical bars will potentially conflict with moment frame beam rebar at ground level by adding to the rebar congestion. See attached marked up drawings for example conflict.</p> <p>1. Please provide an alternative to the current wall opening detail for the foundation wall.</p> <p>2. Please provide an alternative detail for cases where additional vertical bars conflicting with moment frame beam rebar.</p>						
	<p>calculated length of additional reinforcing exceeds the wall height, additional reinforcing may be terminated with a hook or a head. In order to avoid congestion and potential conflict with intersecting elements, the additional vertical reinforcing may be placed in an interior layer and aligned with the uninterrupted vertical bars.</p>						
T-1667	SCS - Foundation Wall Conduit Penetration Locations	Closed	09/08/2014	09/18/2014	09/08/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche		To: Turner Construction Company PHIL MILITELLO		Answered By:Webcor Construction LP Claude Titche			
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference drawings: A1-2862 to A1-2871, E1-2862 to E1-2871 and E1-3208 to E1-3210.						See attached drawings for electrical conduit penetration locations.	
Please see attached marked up drawings noting atypical set of conduit penetrations. A1-2862 provides a lateral distance relative to a grid line to set of conduits; however 3/E1-3208 details the set of conduits as not aligned. On top of this, the referenced drawings do not provide an elevation for the conduit penetrations. SCCO requires the locations of these penetrations to proceed with foundation wall rebar detailing.							
Please provide information on the location of the electrical conduit foundation wall penetrations.

T-1669	SSS - Insufficient Cope for Erection Clearance	Closed	09/09/2014	09/19/2014	09/15/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Please refer to beams highlighted in S1-2503 (attached) and work with this RFI.  The 7" cope shown in 2/S1-5017 is not sufficient for erection clearance. The connections on the other end of these beams dictate that the beams cannot be dropped vertically into position during erection (Please refer to attached SK RFI 813 SK1 and SK RFI 813 SK2). Beams have either a gravity moment connection (per 1/S1-8003) at odd gridlines or a shear plate connection (per 1/S1-8000) at even gridlines. These beams connect into the bus deck perimeter beams which must be installed first in our erection sequence due to the constraints of knife/pin connections at either end at the bus deck level cast nodes.  Please advise.			SUGGESTION: We propose increasing the 7" bottom flange cope to 9.5" for both scenarios. We have modelled both cases and can erect the beams with a cope of this size.		ANSWER: Accept Suggestion: <input type="checkbox"/>		
			Suggestion acceptable.

T-1672	SSS - Stiffener Interference at Ground Level GL 24	Closed	09/09/2014	09/19/2014	09/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
See attached CD RFI # 595 SK1: Confirm the beam location dimensions per S1-6050 & RFI T-1573 shown in red may be adjusted as shown in blue in order to connect the noted W44x230's to the 2" stiffener plate below the column flange. If not, supply an alternate solution.				Moving the beams as shown on SK1 in the RFI to utilize transfer girder stiffeners by omitting the shear plates is acceptable with the following condition: Provide (5)- 1 1/2" diameter A490-X bolts (single vertical row) at the connection on the west ends of the two W44x230 beams. Minimum bolt edge distances Leh and Lev shall be 3" and 4" respectively and bolt spacing shall be 4 1/2". Note that only the WF beams are allowed to be moved. Steel above the WF beam supporting the W-3 system shall be located per locations on S1-6050 and details on S1-8004.			
				TT: We agree with the reason for RFI request "Alternate Proposal", disagree with "Engineering Conflict". We categorize this RFI as request for substitution and no cost clarification considering the omitted shear plates.

T-1673	SSS - Structural Steel Additional Seismic Requirements	Closed	09/09/2014	09/19/2014	09/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Per Project Specification 'Structural Steel-Additional Seismic Requirements' 05-12-10-7, Section 2.3 - Source Quality Assurance, Part C - Non-Destructive Testing of Welded Joints, #1 states 'Non-destructive testing shall be conducted at locations required by AWS D1.8 and AISC 341 Appendix Q5.2. Frequency of testing shall be as required by AISC 341 Appendix Q5.2 and Table 2-1 (please see attached).				TT's recommendations are listed below. The final decision rests with TJPA/Turner.			
AISC 341 Appendix Q5.2, Part g - 'Reduction of Percentage of Ultrasonic Testing and Part h - 'Reduction of Percentage of Magnetic Particle Testing specifies a formula for reduction of percentage of weld testing UT and MT (please see attached).				. No reduction in Ultrasonic Testing is permitted for DCW (AISC 341, Section J6.2g)			
XKT has welded each type of weld joint we will see for the 130 Moment Columns. XKT's repair percentages have been well below the required limit of 5%, to demonstrate the quality of our welders.				. No reduction is permitted for Magnetic Particle Testing or Liquid Penetrant Testing of Extra Smooth surface or weld access holes.			
Per this section of specifications, the amount of UT and MT testing is permitted to be reduced if approved by the engineer of record.				. No reduction in CJP weld splice of steel plates			
To facilitate production and project schedule, XKT is requesting the engineer of record to implement this reduction to be performed by ISI QA Inspection Services.				. No reduction in Ultrasonic Testing of the plate material in the designated region of the link beam			
				. For non-DCW, the reduction of rate of Ultrasonic Testing may follow AISC 360, N5.5e, based on Risk Categories IV.			
				. For non-DCW, the reduction of rate of Magnetic Particle Testing may follow AISC 341, Section J6.2h.			
				The reason for the RFI should be revised to Request for substitution (TT category vii).			
				Jack Adams 9/19/2014 RESPONSE: XKT welding (by Trade Subcontractor fab shop XKT) of Moment Columns and weld repair percentages may be below the required limit of 5%, to demonstrate the quality of our welders. However; the amount of NDE (UT and MT testing) will not be permitted to be reduced at this time as this is a contractual decision of the Owner, not EOR.

T-1679	SSS - TR29 Bolted Connection Clarifications	Closed	09/09/2014	09/19/2014	09/19/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> See attached CD RFI # 604 SK1 & SK2 for items 1 & 2: 1) Condition at Transfer Girders with 4" thick flange: It is not possible to fit in the number of bolts as requested in 1/S1-5010 with the 4" thick Transfer Girder flange even with minimizing the end distance on the angles to 1 1/4" as shown. This condition occurs at W40x183, W36x135, W33x118, W30x108, W30x90 & W21x44 on S1-2606 & S1-2607. Confirm it is acceptable to reduce the number of bolts by one or supply an alternate connection. 2) Condition at Transfer Girders with 3" thick flange: It is not possible to fit in the number of bolts as requested in 1/S1-5010 with the 3" thick Transfer Girder flange unless we minimize the end distance on the angles to 1 1/4" as shown. This condition occurs at W40x183, W36x135, W33x118, W30x108, W30x90 & W21x44 on S1-2606 & S1-2607. Confirm this is acceptable or supply an alternate connection.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) Double angle connection detail at gravity beams framing into transfer girders is per 12/S1-5010 which calls out N-1 bolts, where N is the number of bolts per schedule on 1/S1-5010. Connection detail as shown on SK2 in the RFI is incorrect. Also note that the reference to S1-2606 and S1-2607 in item 1 is incorrect as transfer girders are at ground level.  2) See response to 1).  We disagree with the reasons for RFI request "Engineering Conflict", "Alternate Proposal" and "Verification". We categorize this as "Called out in contract documents".				
T-1680	SSS - ST301 Post Location Discrepancy	Closed	09/09/2014	09/19/2014	09/11/2014	Potentially	<input type="checkbox"/>

T-1687	SSS - Light Column Pipe Ring Bending Radius at EL 12ft	Closed	09/10/2014	09/20/2014	09/18/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: The light column ring at EL. 12'-0" is specified as 6'-11 3/4" diameter (measured from center of pipe), from 14" diameter pipe with a wall thickness of 1.97". Refer to section C on S1-6006.  The minimum achievable bending radius for a pipe this size and wall thickness is 42". This exceeds the actual designed radius by 1/8". We are requesting permission to change the diameter of this ring to 7' which will allow the minimum bending radius to be achieved. The difference in ring member size will be accommodated in the connection plates which join the ring to the cast nodes.  Please confirm acceptance for this proposal			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>  We confirm that changing the ring diameter from 6'-11 3/4" to 7' in order to accommodate the minimum achievable bending radius is acceptable. When accommodating the difference in the connection plates, ensure minimum distances (ie edge of bolt hole to edge of plate) are adhered to.  We agree with the reason for the request, stating that it is a substitution request.	
T-1688	SSS - Connection Clarification at GL 21.5	Closed	09/10/2014	09/20/2014	09/19/2014	Potentially	<input type="checkbox"/>

SFPUC ES-2107. Both vertical and horizontal spacing changes from the ES drawing trench sections as the conduits enter the wall penetrations.							
T-1696	SCS - Scallop and Fin Wall Rebar Connection	Closed	09/15/2014	09/25/2014	09/25/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Per S1-3282 detail 7 and section B sows continuous horizontal bars 3-#4 rebar each face and 2-#10 rebar in the fin wall with tails embedded into the scallop wall.			The top bars (2-#10s) are already shown as lapping with hooked #5s at the scallop wall therefore they are not shown continuous and do not require any change. Use of lap splice or for savers for the skin (#4s) and bottom bars (#5s) are acceptable at the Contractor's option.				
Shimmick requests approval to have the option of a lap splice for the scallop wall to fin wall connection and or the use of Dayton Form Savers at the location. See attachment A.							
T-1697	SCS - Request To Use Snap Ties for Roof Top	Closed	09/15/2014	09/25/2014	10/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Per specification section 03 10 01 Part 2 - Products 7. H. Snap-Off Ties: Use for concrete walls below grade and walls which will not remain exposed to view and are not scheduled for architectural finishes.			The Design Team does not object to the use of Snap-Off ties only at skylight wall locations. At Roof Park level perimeter parapet wall including Scallop walls, removable form ties may be used, provided they comply with 03 10 01 2.2 B.7.g - "Removable Ties". Perimeter wall and scallop concrete walls shall be prepared TO receive elastomeric coating finish.				
Drawing A 1-8608 shows the scallop and perimeter walls and A 1-8402 shows the skylight walls not being visible from the sides because of the fascia details and the earth backfill. These walls are not called out as architectural walls on the architectural drawings.							
Please confirm that typical snap ties are acceptable at perimeter wall, scallop wall, and sky light wall

T-1698	SCS - Wall Opening Detail Conflicts for Horizontal and Diagonal Bars	Closed	09/15/2014	09/25/2014	09/18/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company PHIL MILITELLO		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please reference detail 4/S1-3207 and RFI T-1666 about foundation wall opening conflicts. Since submitting RFI T-1666, more concerns regarding 4/SI-3207 have been brought to our attention.				Per General Note GR-11, the contractor shall apply contract details to similar conditions. It is acceptable for review of contractor's adaption of details to similar conditions to occur in submittal review or through the RFI process. Note that this RFI does not make reference to any specific condition where the typical detail cannot be similarly applied. Neither, does it contain suggestions for application of the detail to the conditions the contractor may have in mind.			
One of the concerns mentioned in RFI T-1666 was the case of additional vertical bars potentially conflicting with moment frame beam rebar. This issue can also occur with the diagonal cross bars and additional horizontal rebar.				Responding to the RFI in a general sense, the first issue raised is the potential for diagonal trim bars to conflict with MFB reinforcing. As with openings near the tops of walls, typically trim reinforcing is bent parallel with the top of the wall or trim reinforcing on either side of the top of the opening is combined in one piece of reinforcing. Either approach is acceptable when necessary to avoid the MFB's or tops of walls.			
1. Please provide an alternative detail for cases where either additional horizontal bars and diagonal cross bars conflict with moment frame beam rebar.				The second issue raised is the potential for horizontal additional reinforcing to interfere with the MFB's. The horizontal reinforcing is a smaller diameter than the MFB longitudinal reinforcing and the conflict is not obvious to us. If the contractor encounters a conflict, the spacing requirements of Detail 4/S1-3207 may waived in favor of providing the number of required bars over the specified spacing. It is also permissible for added horizontal bars to be placed in interior layers where the previous method is not achievable.			
Due to the length of additional horizontal bars, wall openings near foundation wall CJs will cause the constructability issue of requiring rebar to be built out further to proceed with concrete pours.				The third issue raised is that additional horizontal bars may extend past Foundation Wall CJ's. This is no different than typical wall horizontal reinforcing. The contractor shall either build their forms around the			
2. Please confirm that the alternate wall opening detail (requested in RFI T-1666) for additional vertical bar lengths can also be applied to additional horizontal bars.

T-1701	SSS - Insufficient Cope for Erection Clearance	Closed	09/15/2014	09/25/2014	09/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Please refer to beams highlighted in S1-2503 (SK1) and work with this RFI.  The 1' 11 1/2" cope is not sufficient for erection clearance as shown on A4644, A4645 (SK2, SK3). The Type 4 (V) drag connection on the other end of the beam limits the position in which the beam can be erected (See SK4, SK5). The beam needs to be erected from below and positioned through the shear plate on the moment frame column. As you slowly lift the back side that is currently coped, a 1/4" clash transpires between the top flange of W40x327 and the shear plates on the bus deck casting.  Please advise.			SUGGESTION: We propose increasing the 1' 11 1/2" top flange cope to 2' 0 1/2", please confirm this is acceptable.		ANSWER: Accept Suggestion: <input type="checkbox"/> Increased cope dimension proposed in the RFI is acceptable.  TT: We disagree with the reason for RFI request, erection is a means and methods issue. We categorize this RFI as clarification for Issues on means and methods.		
T-1702	SSS - Weld Terminations on Moment Frame Column Shafts	Closed	09/15/2014	09/25/2014	09/26/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Please see Section 5.17.1- Figure 5.2 from the AWS D1.1 Structural Welding Code (See SK1). In the sketch, proper terminations are shown for both a CJP weld and fillet weld as they approach an access hole.  The moment frame column shafts have been designed with a varying thickness of web. These web splice locations require an access hole to account for the different weld details between the web and flange, with generally a CJP weld being performed on one side and a fillet on the other (See SK2).  The shaft drawings that have been detailed show an access hole that conforms to 5.17.1 - Figure 5.2. Note, however the shaft drawings do not show the weld termination detail. It is industry standard for the modeler to exclude these details as it is up to the fabricator/inspector to understand that welds should always be terminated as per the section of the AWS code they fall under, unless the design engineer specifies otherwise.  Currently, the TJPA shop inspection staff has directed our			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1.) First question is not entirely clear since CJP and fillet welds are not terminated similarly per AWS D1.1. Per Figure 5.17 of AWS D1.1, fillet welds are not returned whereas CJP welds are terminated smoothly within the weld access hole envelope and shall not create any stress risers.  2.) For weld access holes in the SFRS, refer to specification 05 12 10, section 2.2.C.c, which requires compliance with ANSI/AISC 360 as a minimum, which is compatible with AWS D1.1, Section 5.17.  TT: We disagree with the reason for RFI request "Engineering Conflict". We categorize this RFI as called out in contract documents.  Jack Adams 9/26/2014 RESPONSE: Contrary to the RFI question, the TJPA shop inspection staff does not direct fabricators. These NDE Inspectors either accept or reject welds based on

<b>REQUEST:</b> Reference attached pilaster rebar detail.  Please confirm the attached sketch detailing pilaster rebar is to be incorporated for installation of wall dowel formsavers in Lower Concourse Decks D201-D204, D218-D236.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> TT has no objection to layout of pilaster vertical reinforcement as shown on attachment of RFI.			
<b>T-1706</b>	<b>BGP - Construction Joint in Vehicle and Bike Ramp Walls</b>	<b>Closed</b>	<b>09/16/2014</b>	<b>09/26/2014</b>	<b>09/26/2014</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Claude Titche		<b>To:</b> Turner Construction Company PHIL MILITELLO		<b>Answered By:</b> Adamson Associates, Inc. George Metzger			
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> Spec section 03 30 20-16-3.2 states that the maximum spacing for interior walls and ramp slab is 60 feet. In the response to the Area 1-4 and Area 5 Comprehensive Drawings, TT indicated that no movement joints were required in the Vehicle and Bicycle Ramps below the ramp.  To facilitate construction, please confirm:  1) The bicycle ramp and associated ramp walls can be poured monolithically from the start of the walls to the wall perpendicular to the ramp walls under the slab(See attached). Due to access issues, SCCI has to use lost formwork (styrofoam) for the underside of ramp formwork. SCCI will use this same form work for the inside of wall form.  2) The maximum joint spacing for the Ramp and Ramp Walls can be increased to 90 feet as no movement joints are required below the vehicle or bike ramps.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1. TT takes no exception to use of lost formwork at underside of ramp.  2. Confirmed.

REQUEST: Detail 4/S1-3010 indicates the threading of the (3) #8 Horizontal Rebar through various closed loops of reinforcing created by the mat reinforcing intersecting welded joint reinforcing directly below the top clamp assembly on the west side of the seismic joint. Please confirm the following that has been discussed with the Design Team's Structural Field Representative and included in the attached sketch:  1) The topmost #8's below the top clamp assembly may			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed.		

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>be a continuous #5 in lieu.</p> <p>2) The middle and bottom #8's below the top clamp assembly contained within the U-bar need not be continuous but may be placed end to end with a 0" splice. Each segment of #8 shall be positioned as indicated in detail 4/S 1-3010 and shall continuously engage no fewer than ( 4) #8 U-bars. 0" splices shall be located midway between adjacent U-Bars.</p>						
T-1710	SCS - Roof Scallop Wall Construction Joint Relocation	Closed	09/19/2014	09/29/2014	09/26/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP <b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang		Stephanie Azzolino <b>To:</b> Turner Construction Company PHIL MILITELLO	<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Per drawing SI-3282 detail 4 and 5 the base of the scallop wall requires a chamfered starter wall that transitions from a 1 to 1 angle, 3 to 2 angle, and a 4 to 1 angle throughout the geometry of the scallops. Shimmick requests approval to relocate the construction joint from the wall to the deck and pour the full height of the wall including the deck beneath. See attachment "A" for clarification. This change would only occur at the scallops and detail 2 "Typical walls at the roof north & south edges" would not change.		<b>SUGGESTION:</b>	<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Contractor's proposal is acceptable in concept however moving the construction joint to the slab will result in long rebar dowels which will likely require splicing via laps or form saver couplers. The contractor should consider those detailing issues and submit the modified rebar detailing via shop drawings for review.				
Please confirm the joint location is acceptable.

T-1711	SCS - Roof Shear Key and Pylon Rebar Epoxy Connection	Closed	09/19/2014	09/29/2014	09/29/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Stephanie Azzolino <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang							
<b>REQUEST:</b> Per S1-3282 detail 9 "SHEAR KEY AT ROOF" calls for vertical #4 rebar dowels to be cast with the structural deck. Per S1-3281 detail 7 "SIGNAGE PYLON FOOTING DETAIL" calls for vertical #5 rebar dowels to be cast with structural deck. For constructability reasons it is essential that Shimmick's operations maintain open access for roof top small cranes and man lifts for all trades. Per specification section 03 20 02 Part 2.3 F. 3. Adhesive for dowels in existing concrete b. HIT-RE 500_SD injectable adhesive by HIL TI, Inc., is an approved method. The minimum embedment depth requirement for #4 rebar is 2.75 inches and the concrete thickness requirement is 4 inches at the shear keys. The minimum embedment depth requirement for #5 rebar is 3.125 inches and the concrete thickness requirement is 4.375 inches for the signage pylon. The roof deck is 7" with 3" tall flutes leaving a clear space of 4 inches. Shimmick's solution for the 4.375 inch concrete thickness requirement is to pour an additional .5 inches of concrete at the concrete deck where the pylons will be installed. See drawing attachment "A" and product data attachment "B" on page 4 for rebar drill and epoxy requirements.  Shimmick requests approval for the shear keys and the pylons be drill and epoxy rebar doweled connections after the roof top deck has been poured and larger operations have been completed.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Request not acceptable, follow the details provided in the construction drawings. Alternatively, contractor may consider using form saver couplers at no cost to the owner.	
<hr/>							
T-1712	BGP - Bike Ramp Blockout for Steel Column at GL 5-G.7	Closed	09/19/2014	09/29/2014	10/01/2014	Potentially	<input type="checkbox"/>

T-1714	SCS - Roof Seismic Joint Gap 22" or 24"	Closed	09/22/2014	10/02/2014	09/22/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titché		<b>To:</b> Turner Construction Company PHIL MILITELLO		<b>Answered By:</b> Webcor Construction LP Claude Titché			
<b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang							
<b>REQUEST:</b> The roof top seismic joint shown on sheets AI-2603, AI-8897 detail 2 and AI-8898 detail 1 section elevation shows the gap between the cast in place walls at line 10 and at line 20 to be 24 inches. A1- 8613 detail 1 is a section view of the seismic joint for the exterior wall for line 10 & 20 shows the gap between the cast in place wall at line 10 and at line 20 to be 22 inches.  Please clarify if the gap between the cast in place walls at the seismic joints needs to be 24 inches or 22 inches.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> See attached SKA-3963 and SKA-3818, to be issued in forthcoming ASI-124.			
<hr/>							
T-1715	SCS - Foundation Wall Mix Design	Closed	09/22/2014	10/02/2014	09/23/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titché		<b>To:</b> Turner Construction Company PHIL MILITELLO		<b>Answered By:</b> Adamson Associates, Inc. George Metzger			
<b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang							
<b>REQUEST:</b> The answer to QBD 18 for the TG07.2 Trade Package, which asked ifthe "slab and beam mix can be used for the fourth wall lift", was "Confirmed. The slab and beam mix can be used for the fourth wall lift." Submittal TG0702-118 submitted the slab and beam mix and included the foundation wall as one of the usage locations. The review comment stated "Mix design for Foundations Walls shall be as approved in Submittal TG0600-203.I. Omission of SRA is not acceptable" which is the Foundation Wall mix.  Please confirm if the Submittal Response to use the Foundation Wall Mix is superseding the answer to QBD 18 which confirmed the use of the Slab and Beam Mix design on the fourth lift foundation wall.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The number of Foundation Wall lifts changes with the contractor's means and methods. See RFI T-1467, issued after QBD 18, which increases the number of Foundation Wall lifts by one. In as far as QBD 18 confirms that it is acceptable to pour the Ground Floor slab and beams with the topmost Foundation Wall lift using the approved slab and beam mix, the QBD 18 response remains accurate.  Similarly, it remains unchanged that the approved Foundation Wall mix design shall continue to be used below the topmost wall construction joint.  Regarding reviewer comments on Submittal TG0600-203.1: Submittal makes no reference to lift numbers and simply states "Foundation Wall", for which an approved submittal already exists and for which the present submittal could not replace and meet Specification.

T-1717	SSS - Missing Weld Details at GL Cast Node	Closed	09/22/2014	10/02/2014	10/03/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 619 SK1 & SK2 for items 1 to 3: 1) All welds shown in red are from details on drawing S1-4351. Confirm they are acceptable where shown or supply the missing welds. 2) Provide weld for W14 to cast node. 3) All welds shown in red are from details on drawing S1-4351. Confirm they are acceptable where shown or supply the missing welds.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1). Confirmed.  2). Use CJP weld.  3). Confirmed.  Reason for RFI is "shown in Contract Documents".		
<hr/>							
T-1718	SSS - LC Beam Flange Location Verification at EOS	Closed	09/22/2014	10/02/2014	10/03/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached sketches CD RFI 607 SK1 & SK2 and confirm acceptable the beam flange will protrude past the curved edge of slab by 5/16".			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The 4' -6" dimension locating the W44x230 beam ends at GL 23 shall be reduced to 4' so that the beam flanges will be entirely inside the EOS. This applies to a total of (4) W44x230 beams around the opening.  TT: We agree with the reason for RFI request "Verification". We categorize this as no cost clarification and change to be issued in future bulletin.		
<hr/>							
T-1719	SSS - LC Connection Verifications at Skewed Beams	Closed	09/22/2014	10/02/2014	10/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached sketches CD RFI 608 SK1 & SK2 and verify / confirm proposed connections for skewed beams.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed.  TT: We agree with the reason for RFI request "Verification". We categorize this as no cost clarification.

T-1720	SSS - W12 Connection Clarifications at Roof Level GL 31.7-33.2	Closed	09/22/2014	10/02/2014	10/06/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 613 SK1: Confirm the locations for the W12x305's may be modified as shown as hi-lited in order to connect the beams to the stiffeners in detail 1/S1-4205 with bolts per 1/S1-5011.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> W12x305 beams highlighted in the RFI may be waived. Please provide the proper credit for the deletion of this work. TT: We agree with the reason for RFI request "Verification". We categorize this as change to be issued in future bulletin.		
<hr/>							
T-1721	SSS - MF Beam Connection Clarification GL 24	Closed	09/22/2014	10/02/2014	10/06/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 617 SK1 & SK2: The radius is to be 1'-1 per 7/S1-5027 but due to the flange thickness of the MF beam on Grid 24, the maximum radius on the plate is 1'-0 1/2. Confirm the connection is acceptable as shown or supply an alternate solution.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed. TT: We agree with the reason for RFI request "Verification". We categorize this as no cost clarification.		
<hr/>							
T-1722	SSS - PE403 & PE404 Conflicting Approval Information From CS7 Package	Closed	09/22/2014	10/02/2014	10/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 620 SK1: The dimension between the edge of slab and center of beam on drawing 3490 Section A-A & B-B and drawing 4151 Section A-A in Package Number: TG0701-079.1 has been changed from 7" to 5". This does not agree with the latest issued drawings as shown on attached SK1, which shows the edge of slab to center of beam as 7" on the north, east and south sides. Note that drawings 3486, 3492, 3493, 4095, 9044 & 9083 in the same area have not been marked at approval.  Please confirm that the drawings are correct as submitted and no further action is required.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Edge of slab revised to coordinate with steel submittal, refer to SKA-4183.

T-1726	SCS - Roof Seismic Connection Details	Closed	09/22/2014	10/02/2014	09/25/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Stephanie Azzolino <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang							
<b>REQUEST:</b> After reviewing the seismic joint details on sheets AI-2603, AI-8897 detail 2, AI-8898 detail 1, and AI-8613 detail 1 it is Shimmick's understanding that the seismic joint system only requires a vertical wall corner embedded angle at building lines B 10 & 20 and H 10 & 20. All other means of attachment for the seismic joint will be drill anchors at a later date.  Please confirm.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Refer to detail 1/A1-8613 (SKA-3963) of ASI-0124 for revised detail of seismic joint at Roof Park concrete parapet walls - embed has been changed to expansion anchors. Seismic Joint assemblies shall be installed to meet the performance requirements and per manufacturer's assembly instructions as specified in Specification Section 07 09 13.		
T-1727	SCS - Roof Sensors, Sky Light Drain, and Hose Bib Deck Connection	Closed	09/22/2014	10/02/2014	10/13/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Stephanie Azzolino <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Webcor Construction LP    Claude Titche				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang							
<b>REQUEST:</b> Drawing L-2602 to 2627 shows moisture sensors, skylight one trench drain, and hose bibs. The drawings do not show the details for these items and whether or not they require a rebar or embedded anchor connection to the roof top structural deck.  Please provide details and whether or not they require a cast in place connection to the roof top deck.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 10/9/2014:  For moisture sensor, refer to 32 84 00.  For Skylight One Trench Drain, refer to A1-8404.  For Hosebibs, refer to plumbing drawings and schedules.		
T-1728	SCS - Roof Top Pylon Rebar Connection	Closed	09/22/2014	10/02/2014	09/30/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Stephanie Azzolino <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang							
<b>REQUEST:</b> S1-3281 detail 4 shows the roof top security pole with a bolted connection to the structural deck. Yet all security and lighting references on A1-2602 to A1-2607 and E1-2602 to E1-2607 are shown as pylons which is consistent with detail 7 that was added per addendum 5 issue for construction.  Please identify where detail 4 is used on the A1-2602 to A1-2607 roof park level plan sheets.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> ) Both details 4/S1-3281 and 7/S1-3281 are used at the Roof Park Level. For the purposes of these details, the terms "pylon" and "pole" are synonymous. Detail 4/S1-3281 is correctly titled: "Roof Park Security Pole and Mast Light Foundation" and detail 7/S1-3281 is correctly titled "Signage Pylon Footing Detail". The locations of Security/Mast-Light pylons and Signage pylons are called out on the Architectural Plans A1-2602 thru A1-2607 and Landscape Drawings L1-2602

T-1733	SCS - Bus Deck Embeds - Hose Bibb Location at Gride Line 10-13	Closed	09/23/2014	10/03/2014	09/29/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titche <b>To:</b> Turner Construction Company PHIL MILITELLO <b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Please see attached marked up drawings.  Drawing PI-2503 notes a hose bibb type HB-4 which leads directly to a 3/4" CW pipe through the bus deck level. However, this sleeve is not displayed in drawing AI-2893, the corresponding drawing for embed location dimensions. Drawing AI-2883 notes a similar sleeve within the same column cover through the second floor level with location dimensions.  Please confirm that the noted AI-2883 sleeve dimensions may be used for the noted bus deck sleeve with missing dimensions. If not, please provide the dimensions for the noted bus deck sleeve with missing dimensions.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> For Hose Bibb HB-4, a 3/4" CW connection with a sleeve size of 3" is noted. Refer to P1-0051 rev 4 'Pipe Sleeve Schedule'. Only 4" or larger sleeves are called out and located on the slab edge drawings. On A1-2883, the sleeve on the second level is not the same sleeve and should not be used for any bus deck related information.				
T-1733.1	SCS - Bus Deck Embeds: Hose Bibb HB-4 at GL 10-13	Closed	10/06/2014	10/16/2014	10/13/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titche <b>To:</b> Turner Construction Company PHIL MILITELLO <b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang			<b>Answered By:</b> Webcor Construction LP Claude Titche				
<b>REQUEST:</b> Please reference RFI T-1733 and also attached marked up drawings.  Drawing PI-2503 notes a hose bibb type HB-4 which leads directly to a 3/4" CW pipe through the bus deck level. However as this is a 3", this sleeve is not displayed in drawing AI-2893 which does not locate sleeves smaller than 4".  Please provide the dimensions for locating the noted bus deck sleeve.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 10/10/2014:  Bus deck sleeve for HB-4 at GL 11 F can be located within the column cover at 1'-6" west of GL 11 and 1'-3" south of GL F. Note that this information will not be reflected on the slab edge drawing as only 4" diameter sleeves or larger are located in the slab edge drawings.

T-1735	<p>Specification Section 03 33 00 - 2.2 A. 3. furnish sizes required by joint pattern indicated on Drawings. Per A1-2603 stair structure 301/roof park landform the wall elevations are called out on A1-8645. A1-8645 detail 3 and 4 shows the high density overlay plywood layout as being vertical. Both detail 3 and 4 refer you to section 2 and section 2 refers you to elevation 1. Elevation 1 shows the high density overlay plywood layout as being horizontal. Shimmick intends to use full height aluminum gang panels skinned with the high density overlay plywood running vertical.</p> <p>Please confirm that markings from vertical plywood joints (as shown in 3/A1-8645) is the correct interpretation.</p> <p><b>SCS - Roof Architectural Stair 301 Joint Chamfer</b></p> <p><b>From:</b> Webcor Construction LP      Stephanie Azzolino      <b>To:</b> Turner Construction Company PHIL MILITELLO</p> <p><b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang</p> <p><b>REQUEST:</b></p> <p>A1-8645 shows horizontal and vertical lines between plywood sheets bolder than what is created by plywood alone. Specification Section 03 33 00 - 2.2 B Chamfer Strips: calls for 3/4" chamfer to be "used for horizontal joints between pours" Shimmick is assuming that the vertical lines are chamfer strips as well. Vertical chamfer strips would provide a weakened plane and help confine any vertical shrinkage cracks to the chamfer location.</p> <p>1. Please confirm only vertical 3/4" chamfer strips at the plywood joints is being depicted by the wall elevations on A1-8645. 2. Please provide additional direction if anything is required at the vertical and horizontal joints.</p>	Closed	09/24/2014	10/04/2014	09/29/2014	Potentially	<input type="checkbox"/>
			<p><b>Answered By:</b> Adamson Associates, Inc. George Metzger</p> <p><b>ANSWER:</b>      <b>Accept Suggestion:</b> <input type="checkbox"/></p> <p>The assumption stated in the RFI that only vertical joints are shown in detail 1/A1-8645 is incorrect. The cast-in-place architectural concrete wall layout shown in detail 1 on A1-8645 clearly shows both horizontal and vertical joints. Typical formwork details are indicated in 1/A1-8645, which is detail 5/A1-8648 showing the panel joints, reveal and tie hole concept.</p> <p>Use drawing chamfer strips dimension in lieu of sizes in Specification Section 03 33 00 2.2 B.</p>

Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:			SUGGESTION:		ANSWER:		
03 30 02 - 3.2 JOINTS IN CONCRETE A. 3. "Maximum construction joint spacing in foundation wall, ground floor concrete slab, and interior walls is 60 feet." This statement does not make reference to roof top earth retaining non-architectural walls. S1-2602 through 7 and A1-2602 through 7 does not identify joint locations for the perimeter/scallop, seismic, sky light, and stair/elevator walls.					Accept Suggestion: <input type="checkbox"/>		
Please provide maximum length of walls for roof top earth retailing non-architectural walls.					Refer to detail 1/S1-4205 and building elevations starting with Sheet S1-4002 for the required wall joints and locations around the EBF link beams. Between two link beams, a single pour is acceptable at the north and south elevations (longer than 60 feet). For West and East End concrete wall joint locations, please refer to SKA-3653-R1 and SKA-3658-R1. Please submit final joint location layout submittal for final confirmation.		
T-1738	SCS - Construction Joint Relocation at Roof Seismic Walls	Closed	09/24/2014	10/04/2014	10/07/2014	Potentially	<input type="checkbox"/>

T-1740	SCS - Confirming Construction Joint Increased Spacing	Closed	09/24/2014	10/04/2014	10/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:			SUGGESTION:		ANSWER:		
Please reference specification section 03 30 02 3.2.A.3, RFI #T-1104, and rejected submittal number TG0702-503.0, in reference to Ground Level CJ layout.					Accept Suggestion: <input type="checkbox"/>		
The specification calls out 60' maximum CJ spacing in the ground floor concrete slab. RFI #T-1104 permitted TG 06.0 to use a maximum CJ spacing of 96'. The rejected submittal includes comments suggesting to reduce the number of pours in Comment #2 on Sheet CJ-000, specifically in the metal deck section. Further comments would require a 97' 6" span at First and Fremont Streets and a potential 120' span between GL 19 and Wall 421. In order to match both suggestions, TG 07.2 would need to also increase CJ spacing beyond the specified 60', similar to TG 06.0.					1) Confirmed		
1) Please confirm the ground floor 60' CJ spacing requirement only applies to the formed MFB/slab section and not the metal deck section.					2) Confirmed to allow submittal comments		
2) Shimmick requests permission to increase CJ spacing in the formed MFB/slab sections beyond the specified 60' to 120' to allow for CJs per the submittal's comments. If this proposed limit is unacceptable, please provide a maximum for use at Ground Level.					3) Confirmed		
3) Please confirm there is no maximum construction joint spacing for slabs on metal deck.							
T-1741	SCS - Upgrading Ground Level Mix Designs	Closed	09/24/2014	10/04/2014	10/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:			SUGGESTION:		ANSWER:		
Please reference Sheets S1-2302 through S1-2307, Spec Section 03 30 02 2.1.					Accept Suggestion: <input type="checkbox"/>		
Between any single set of grid lines, the ground level features multiple mix designs. The ground level pandecking slabs S1, S3, and S10 have a 4,000 psi mix design. Between grid lines 16-17, 24-25, and 27-29, the pandecking slabs S11 and S12 have a 8,000 psi mix. Formed MFB/slab decks RCS 2 and RCS 16 have a 5,000 psi mix design. Currently each mix design would require					1) Contractor proposed increase in concrete strength acceptable at the locations indicated.		
					2) Contractor proposed increase in concrete strength acceptable at the locations indicated.		
					Incorporate changes to corresponding CJ submittal.

	<p>separation by CJs. Shimmick plans to pour a continuous deck from north foundation wall to south foundation wall.</p> <p>1) Typical: Shimmick suggests to replace all the 4,000 psi pandecking mix on the ground level with the 5000 psi RCS mix to match the formed MFB/slab deck. Please confirm this is acceptable.</p> <p>2) Shimmick suggests to replace the 5,000 psi RCS mix on the ground level formed MFB/slab deck between GL 16-17, 24-25, and 27-29 with the 8,000 psi S11/S12 mix to match the pandeck. Please confirm this is acceptable.</p> <p>An attachment demonstrates the change in the mix layout on ground level. Final CJ location is pending submittal approval.</p>						
T-1742	SCS - ST201 Slope of Grade Beams	Closed	09/25/2014	10/05/2014	10/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Company PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Please see attached SKA-4052 (per RFI #T-1661), SKS-0398 & SKS-0400 (confirmed in RFI #T-1661and 1658), and Markup A1-2960A (per email from TT on 8/8). SKS-0400 visually shows the grade beams sloping but does not provide the exact percent of slope. Cross referencing the available sheets provides conflicting slopes for each beam.			1) Slopes of GB1 and GB2 are the same as that of the RCS3 slab which is 1.2%. GB3 and GB4 shall have a slope of 28%.				
			2) T/beam at the west ends for GB1 and GB2 shall be 19'-2". T/beam for GB2 on 1/S1-7001 will be updated in a future ASI.				
			3) Grade break for GB3 and GB4 occurs at the east face of the foundation wall.				
			4) Top elevation of GB3 and GB4 at east face of the foundation wall is 15'-7".				
			5) Top elevation of GB3 and GB4 at GL 1.4 can be determined from information provided in 1) and 4).				
The grade beams GBI and GB2 (see SKS-0398 for naming) are indicated on Mark up A1-2960A as "Constant Slope: Projection of Ground Level Slab". SKA-4052 calls out a single west-east slab slope of 1.2%. However, SKS-0398 provides two unique end of beam top elevations for GB1 and GB2, suggesting that the beams have two different slopes. The grade beams GB3 and GB4 (see SKS-0398 for naming) are indicated on Mark up A1-2960A as "Slope to Foundation Wall", where the grade break occurs at the west face of the foundation wall at EL + 15' 7". 3/SKS-0400 visually indicates the grade break at the east face of the foundation wall. No elevation on the east			Note that markup A1-2960 has been superseded by drawings submitted with ASI 127 on 9/12/2014.

T-1744	<b>SSS - Approval Comment Clarification at Cruciform Column GL 5</b>	Closed	09/25/2014	10/05/2014	10/01/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> See attached CD RFI # 628 SK1: Columns A1777 & A1778 occur on Grid 5 and according to Note 3 in detail 4/S1-5011, the connection as shown and submitted is correct. Confirm it is the intent of the approval comment on drawings 1777 & 1778 to revise the connection at columns A1777 & A1778.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Shop drawing review comments are correct, shop drawings do not show the correct connection detail. Typically, detail 4/S1-5011 applies where "H" is greater than or equal to "D", where, "H" and "D" are as shown in the detail. Detail 5/S1-5011 applies where "H" is less than "D". At the two locations in the submittal where the comments were made, "H" is less than "D" therefore detail 5/S1-5011 shall apply at these locations. In addition, as indicated in Note 3 in detail 4/S1-5011, there are locations where detail 5/S1-5011 replaces detail 4/S1-5011 regardless of the relative values of H and D.				
T-1745	<b>BGP - Elevator Sill Support Angle Conflict</b>	Closed	09/25/2014	10/05/2014	10/05/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titche <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> Please find attached drawings and picture. During the installation of Elevator Sill Support Angle at GL4.2/D.4, it was noticed there is a portion of L6x4x3/8 embed per detail 4/AI -7576 that will not be able to be installed due to the conflict with horizontal bracing member (see picture).  Please confirm that it will be acceptable to discontinue the Elevator Sill Support Angle at the conflict location. The embed will be discontinuous within 6" proximity of the bracing member.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Omission of the conflicting section of angle is not acceptable for the final condition. It is within the contractor's means and methods to propose alternate detailing for review, if an alternate detail is required to accommodate their temporary works. Any alternate detailing shall be suitably equivalent for the purpose indicated in the contract drawings.				
T-1746	<b>BGP - Bar Layering Issues at Beam Intersection</b>	Closed	09/26/2014	10/06/2014	10/01/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titche <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> Please verify that per detail 1/S1-3600, the call out for 1 ½" - 2" clear between top and 2nd layer bars is a minimum distance between bars.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Grid 3 and Grid X MFB layering is per Elevations 1/S1-3603 and 2/S1-3653, respectively. The plan geometry of the intersection is per Detail 4/S1-3307. The specified bar clearance referenced in the RFI as 1-1/2

T-1748	SSS - Conflicting Instructions at Second Level Beam GL 1.4	Closed	09/26/2014	10/06/2014	10/02/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 632 SK1: The comment conflicts with the instructions issued with RFI T-1427 (SK 605 , CD 433) item 2, which requested a new beam to support the unsupported deck. Which instruction is correct?			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Instruction for adding a new beam per response to RFI T-1427 is correct. However, the W12x14 beam (A12285 in the submittal) shall be moment connected to the W16x26 beam (A11323). Member A12286 should also be moment connected to the A11323. There will be no connection between A12285 and the moment frame beam. Stop beam A12285 1" away from the moment frame flange edge. So essentially the high slab is supported by a cantilevered W12x14 beam.		
<hr/>							
T-1749	SSS - PE502 & PE503 Conflicting Connection Details	Closed	09/26/2014	10/06/2014	10/06/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 633 SK1 for items 1 to 4: 1) Confirm the various types of base plates per RFI T-0941.1 (SK 193.2, CD 146.1) may be applied here depending on the beam flange widths. 2) The beam to beam connections per 1/S1-5010 & 1/S1-5013 and the post connection with stiffener plates per 10/S1-7630 cannot both be applied as they will foul each other. Supply a new connection detail at (6) locations. 3) The beam to beam connections per S1-5019 and the post connection with stiffener plates per 10/S1-7630 cannot both be applied as they will foul each other. Supply a new connection detail. 4) The beam to beam connections per 1/S1-5010 and the post connection with stiffener plates per 10/S1-7630 cannot both be applied as they foul each other. Supply a new detail at (11) locations.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1). Confirmed.  2). Use the welded detail per 10/S1-7630 that was called out on the contract document.  3). Use the welded detail per 10/S1-7630 that was called out on the contract document.  4). Use the welded detail per 10/S1-7630 that was called out on the contract document.

	1) The connection per 9/S1-5032 fouls the stiffener plates per 10 & 11/S1-7630. Provide a solution. 2) Confirm the shear plate per 1/S1-5013 may be pulled out as shown to be able to erect the beam as the other end of the beam has a double angle connection per 1/S1-5010 between the stiffeners per 10 & 11/S1/7630. 3) Confirm the stiffener plate per 10/S1-7630 may be located as shown to substitute as a shear plate per 1/S1-5011 or supply an alternate connection detail. 4) Confirm the shear plate per 1/S1-5013 may be pulled out as shown to be able to erect the beam as the other end of the beam has the same connection. 5) Confirm stiffener plates per 10/S1-7630 are not required at the noted locations. 6) Confirm stiffener plates per 10/S1-7630 are not required at the noted locations.						
T-1750	SSS - Added Splice Due to Crane Capacity	Closed	09/26/2014	10/06/2014	10/06/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Information Requested: Please verify it is acceptable to add an additional shop splice to the Built Up Members as shown in the attached sketches due to crane capacity.  THC crane capacity is 40 Ton. By adding the additional splice we can build the members in two pieces allowing the Subarc welding to be completed inside along with all secondary fit up. When this is complete THC will move them outside and splice the two pieces together.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> New splices requested by the contractor at the locations indicated in the RFI are acceptable.  TT: We agree with the reason for RFI request "Verification".

T-1751	SSS - Upper Basket Column Pipes at Gridline 1	Closed	09/26/2014	10/06/2014	10/08/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> Upper basket column pipes located at gridline 1/G and 1/C are shown to be concrete filled to top of pipe in S1-4018 Rev 4. Details shown in B/S1-4018 require a 2" diameter vent hole in the roof level cast nodes. Roof level cast nodes at these locations are 72-36 and 72-37 and according to machining drawing CN-0127 Rev 4 (issued 12/19/13), neither of these cast nodes have vent or grout holes.  Currently, pipes are detailed with (2) - 5/8" vent holes approx. 7" from the top of the pipe so the pipes could be filled to this point. Please confirm currently detailed pipe vent holes can remain as is or provide new vent hole details for the pipe and/or cast nodes.  Please note cast nodes 72-36 and 72-37 have already been released to Oregon Iron Works by Bradken.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Bus Deck Level Basket Column pipes at Gridlines G/1, C/1, F.7/33.5 and C.3/33.5 do not require concrete infill or vent holes for fire protection nor structural purposes.	
<hr/>							
T-1752	SSS - Missing Stiffeners Clarification	Closed	09/26/2014	10/06/2014	10/13/2014	Potentially	<input type="checkbox"/>

T-1755	SCS - Electrical Conduit in Foundation Wall	Closed	09/29/2014	10/09/2014	10/19/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			ANSWER:				
Reference: ES-2107(Dated: 04/24/14) , A1-3010(Dated: 07/18/14)			Accept Suggestion: <input type="checkbox"/>				
Detail A & B on ES-2107 provides the section view for PG&E 12 KV Main Service coming into North Electrical Room (B1289) but A1-3010 doesn't refer to an Elevation view identifying these sleeves in the walls. Please confirm the section views and the elevation of the bottom of the conduits in Detail A&B/ES-2107 are correct.			1. The section views and elevations of the bottom of the conduits on details A & B on ES-2107 are confirmed. Refer to response to RFI T-1695 which includes updated ES-2107.				
Reference : A1-9244(Dated: 07/18/14), ES-2107 to ES-2111(Dated: 04/24/14)			2. Center to center vertical spacing between 2" and 6" electrical conduits is confirmed. Refer to response to RFI T-1695.				
Detail D/A1-9244 specifies center to center vertical spacing between 2" and 6" electrical conduits as 1'-5"(See attached). Please confirm this spacing is applicable to all the section details in ES-2107 to ES-2111 entering the building, if not please provide the center to center vertical spacing between 2' and 6" conduits called out in ES-2107 to ES-2111.			SFPUC Note: Detail A on ES-2107 issued with RFI T-1695 has a dimension between the bottom of the 6" conduit and the top of the 2" conduit. When the assumed ODs of the PVC 40 conduits are considered, the conduit centerline dimension becomes 1'-5".				
Reference: ES-2107 to ES-2111(Dated: 04/24/14)			3. Section views showing elevations of electrical conduits entering the building (penetrating the foundation wall) on ES-2107 (refer to RFI T-1695 which includes updated ES-2107) to ES-2111 are confirmed.				
The section view on ES-2107 to ES-2111 calls out the bottom of the conduit elevations for 2" and 6" conduits. Please confirm these elevations are accurate for all the ES drawings.							
T-1756	BGP - Area 3 Concourse Rebar- Displacement of Top Added Bar Due to Congestion	Closed	09/29/2014	10/09/2014	10/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:			ANSWER:				
Per the attached picture, please verify that is acceptable that a 2nd layer was created for top added bars due to congestion at beam and column intersection. This occurs between GL-3 & GL- 4 at GL-K.3.			Accept Suggestion: <input type="checkbox"/>				
SUGGESTION:			It is acceptable for the (3) beam bars indicated to be placed in a second layer. The layering, however, shall not interfere with the specified 1-1/2" clearance between MFB top bar layers. To this end, beam top second layers shall be introduced below the level of MFB add reinforcing as they typically have been. In the photograph attached to the RFI it appears that

T-1765	SSS - Tapered Slab at Bus Deck Perimeter	Closed	10/01/2014	10/11/2014	10/13/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Webcor Construction LP Gregory Kemerer				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> 1)The perimeter Bus Level slab tapers from a 14" slab to 10" at the edge of slab, with the perimeter beam requiring 9" studs as per 9/S1-5004. Please confirm it is acceptable to provide two 9" studs on the framing steel to account for the sloping slab, see attached SK1 & 2 for clarification. 2)At the Bus Deck level node the slab tapers from a 14" slab to 6" at the edge of slab. Please confirm it is acceptable to provide 6" studs on the framing steel to account for the sloping slab, see attached SK1 for clarification.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1-) The first pour for the perimeter slab will be 9 inches thick at the outer edge (see detail 1/S1-8000) therefore the stud length shall be accordingly. It is acceptable to have two studs at the tapering slab that are the same length as the ones at the spandrel beams.  2-) Acceptable to locally provide 6" studs. Indicate these studs clearly in the shop drawings.			
<hr/>							
T-1766	SSS - DCW Backing Bar on Moment Frame Columns	Closed	10/01/2014	10/11/2014	10/13/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Webcor Construction LP Gregory Kemerer				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> Section 05.12.10 Structural Steel - Additional Seismic Requirements, 2.2 Fabrication Section C.2.A.1 (See SK1) states, "connections in which backing is not removed: backing shall be attached to the member or plate that does not have its surface prepared for the groove weld. Attachment shall be by either a 5/16" fillet weld or 3/16" groove weld along the complete bar length on the side of the bar opposite the groove weld"  On shop drawing A1723 (See SK 2, SK3), section cut B & C show two continuity plates that are with-in approx. 2 1/2" of each other with a CJP DCW marked as the weld detail. In these conditions there is insufficient access to provide a continuous weld along the backside of the backing bar.  Please confirm that in situations where there is insufficient access between the two continuity plates, the backing bar can be tac welded within the weld zone and left in place on one of the plates. The other plate will have the backing bar attached as per the aforementioned specification.  However, on CS1 columns A1723, A1731, A1759 and A1760 the backing bar was tact welded within the weld zone in cases where the continuity plates were in close proximity. Please confirm these columns are acceptable. *Note - the typical continuity plates that are spaced		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The moment frame beam continuity plates are per detail 5/S1-4202. At the contractor's request, a double sided CJP welded was accepted (see RFI T-0959) in lieu of the welding shown in this detail. Therefore, the continuity plate that lines up with the moment frame beam flange shall follow this detail, with or without a nearby second continuity plate. Where there is a second continuity plate nearby and there is insufficient access to it, it is acceptable to weld the its backing bar using tac welding and leave it in place as proposed in the RFI. Note that the spec section referred in the RFI is triggered when backing bar is not removed and does not apply to the seismic moment frame condition since the standard detail require backgouging and reinforcing fillet weld, or alternatively, double sided CJP welding.  Provide additional information for the CS1 columns listed in the RFI. It is not clear if a) backing bars for both continuity plates were tac welded, or b) one was tac welded and the other one was fabricated per Specification Section 2.2.C.2.A.1, or c) one was tac welded and the other was fabricated with double sided CJP.

properly have a double bevel prep and therefore will not be affected.							
T-1767	SSS - Weld Clearance Hole Size at Moment Frame Column Cruciform	Closed	10/01/2014	10/11/2014	10/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company PHIL MILITELLO	Answered By: Webcor Construction LP Gregory Kemerer				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>			
Several Moment Frame Columns have cruciform sections that weld over column web splice joints. The splice joint provides a transition from thick web to thin web. In a majority of these cases, the cruciform web as detailed has a 1" radius cutout to clear the column web splice joint. The 1" radius cutout is insufficient to adequately clear the tapered double bevel splice joint and provide space for runoff tabs necessary for the CJP weld.			Confirmed				
Please confirm it is acceptable to provide a weld clearance hole in the cruciform section wide enough to clear the bevels of the column web splice joint plus 1" on each side of the bevel for weld runoff tabs. See attached sketch. If confirmed, this information needs to be shown on detail drawings.

T-1768	SSS - SLRS Bracing Connection Confirmations GL 22-24	Closed	10/01/2014	10/11/2014	10/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 618 SK1:  The following is a summary of consequences for the varying slopes on Grids 22, 23 & 24 as the diagonal bracing will no longer be in the same plane similar to the issues in RFI's T-1322, T-1322.2 & T-1513 (SK 515, 515.1 & 515.2, CD 382, 382.1 & 382.2.):  1) The two ends of the W40x297's will not be flush with the connection ends due to varying slope between Grid 22 to the slope on Grid 23. Please provide a detail to address this issue.  2) The 1 3/4" gusset plates per 1A/S1-5018 will have two beams coming in at compound angles. Please provide a solution.  3) A shim plate will be required on top of the W40x277 & W40x297's to lift the 1 3/4" gusset above the flange of the W40x362's.  4) Shims beveled in both directions, varying in thickness at each corner will be required on top and bottom of the W40x362's as the flanges are not parallel to the flanges of the W40x277 & W40x297's.  5) The holes for the 1 1/2" A490-X-SC bolts will require oversize holes as the surfaces of the flanges and the 1 3/4" gusset plate are not parallel.  Confirm this is the design intent.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Detail 1/S1-5018 calls for shim plates as required. We believe that shim plates with beveled in both direction will address the questions raised in this RFI. However, it is acceptable to both TT and AAI to slope the Grid 23 the same way as Grids 22 and 24 to avoid slope in two directions if it is no additional cost to TJPA.	
T-1769	SCS - Foundation Wall Embeds: Plumbing at GL 6-10	Closed	10/01/2014	10/11/2014	10/01/2014	Potentially	<input type="checkbox"/>

Please provide the diameter for noted natural gas pipe.							
T-1770	BGP - C30 Column at GL 4/J	Closed	10/02/2014	10/12/2014	10/06/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche		To: Turner Construction Company PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: The C30 Column at GL 4/J was installed 4" West of the planned location along the correct Bicycle Ramp Alignment (See attached As-Built comparison)  Please confirm this as-built location is acceptable.		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/> The column moving 4-7/8" to the west is acceptable. Note that the RCW wall will have to extend to the adjusted column (no joint below the ramp as noted on submittal TG-600-129.1). CMU wall (type 10) will have to be adjusted 1" to the south to align the north face of the wall to the corner of the column.  Agreed, there are no structural concerns with the slight adjustment of the column. Note, there is a beam framing into the column at the vehicle/bike ramp level. The contractor should coordinate the increase in beam length (and subsequent reinforcement updates) per the adjustment

<b>REQUEST:</b> Detail 4 on plan sheet S1-3207 provides the trim detail for wall penetrations. Note 1 states that wall penetrations not shown in the structural drawings are not allowed unless approved by the SEOR.  1) Please confirm the geothermal sleeves may be installed in the foundation walls as shown in the Architectural drawings. 2) Currently the Geothermal Sleeves conflict with the foundation walls at two locations, GL 13(See attached photo). Please confirm two(2) bars at each location (one in the front curtain and one in the back curtain) can be abandoned to facilitate the installation of the Geothermal Sleeves.			<b>SUGGESTION:</b>  <b>ANSWER:</b> Accept Suggestion: <input type="checkbox"/> 1-) Confirmed. Typical wall opening details will apply for all penetrations. Also, refer to RFI responses T-1666 and T-1698 for relevant information.  2-) At this particular location, it is acceptable to abandon the four rebar shown in the photograph. In future, contractor shall ensure conflicts of this nature to be avoided with proper coordination between trade packages.

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<div><div>REQUEST:</div><div>As-built survey of Anchor Bolts (see transmittal 140-11479 on Constructware) identified 39 AB groups out of AISC tolerance between grid lines 7 - 18. There are three typical conditions that should be corrected in the shop prior to start of erection as follows:<div><div>1. AB rod clashes with the base plate hole. Proposed solution: enlarge hole as indicated in the attached sketches.</div><div>2. Due to out of position anchor rods the plate washer clashes with the fillet weld. Proposed solution: reduce size of the washer to avoid conflict with the fillet weld.</div><div>3. For larger rod diameters the nut underneath the base plate clashes with the fillet weld. Note: nuts in these locations do not come with a plate washer per design. Proposed solution: Add ¼" washers (shims) underneath the nut to clear the fillet weld.</div></div>Attached sketches provide locations and details for the above. Please confirm the above corrections are acceptable.</div><div>This RFI has been re-written by W/O for clarification. Please see Skanska's original RFI which is attached.</div></div>	<div><div>SUGGESTION:</div></div>					
	<div><div>ANSWER:</div><div>Accept Suggestion: <input type="checkbox"/></div><div>1). For the case that anchor rod clashes with base plate hole, enlarging the hole as proposed is acceptable.</div><div>2). For the case that plate washer clashes with the fillet welds, clarify where the clash occurs as there is no washer above the base plate and below the 2" horizontal bearing plate. Washers are only used at the top of the horizontal bearing plate.</div><div>3). For the caste that nut underneath the base plate clashes with the fillet welds, clarify the location of the fillet welds as there is no fillet weld at the bottom of the base plate. The only weld at the bottom of the base plate is the complete penetration weld of the shear key.</div><div>The reason for the RFI is noted as Field Conflict. We categorize this as Request for corrective field work.</div></div>						
T-1773.1	SSS - AB Analysis - TB Column Base Plates	Closed	10/20/2014	10/20/2014	10/22/2014	Potentially	<input type="checkbox"/>

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Refer to sheets A1-7401 and C1-5007.		Arup's response:					
Based on workpoint elevations shown in Sheet A1-7401 the horizontal bearing edge of the vehicle and bicycle ramps appear to slope down gradually from West to East: 22.0' to 19.66' for the vehicle ramp and 17.96' to 15.66 for the bicycle ramp.		The foundation wall corbels which support the vehicle and bicycle ramps shall be level. Please see attached SK-C-0003, SK-C-0004, SK-C-0005, SK-C-0006 and SK-C-0007 for elevations and extent of corbels.					
However, the ramp section on Civil detail 7/C1-5007 shows one elevation of 19.00' for the section cut through the vehicle ramp and no cut through the bicycle ramp.		TT's response:					
Please confirm if the foundation wall corbels elevations are as shown on A1-7401 or if they are to be level as appears to be detailed in Civil drawings.		Corbel elevations and extent along foundation wall per updated civil and architectural drawings.					
		Concrete Beam below ramp slab as called out on S1/S1-2251, to be updated to 36"x58". Provide reinforcement as called out on 1/S1-2251 (7-#10 top and bottom).					
		AAI's response:					
		Refer to attached SKA-4271 for updated information related to the concrete corbel elevation for the Vehicle

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>1) The construction Joints in the trainbox walls do not line up with gridlines. Is it acceptable to align the fourth lift foundation wall construction joints with gridlines? Note that ground level slabs will also follow this layout as shown in the attached sketch.</p> <p>2) WOJV believes that the formed and metal deck concrete at ground level GL 10-11 needs to be placed before pouring any other metal decks above this level. Please confirm this is correct. If required to place more east/west concrete at ground level prior to placing decks above, please provide requirements.</p> <p>3) Please provide the required cure time of ground floor concrete before the placing of concrete in metal decks above ground level can be poured.</p> <p>4) Once the ground level concrete reaches required strength is it acceptable to pour the 2nd level, bus deck level (1st 10" thick slab only), and roof level consecutively with no cure time requirement between deck pours?</p>				<p>foundation wall mix in accordance with RFI T-1715 response shall have aligned vertical joints. The foundation wall within the projection of, and poured with, the Ground Floor slab and beams above this joint utilizing the slab and beam mix design need not have joints aligning with the foundation wall below. Note that many formed Ground Floor concrete construction joints cannot be located on the Gridlines due to MFB's. In the West Throat, construction joint location will be governed by where it would fall across intersecting formed framing members. Also refer to RFI-T-1740, T-1584, and Submittal TG0702-503 comments.</p> <p>2). It is recommended that the entire ground floor slab for each wing be casted before pouring the above grade floor slab. It is to ensure that the ground floor slab can act as a floor diaphragm to distribute the seismic force induced from the upper floors (transmitted thru the longitudinal BRB frames and basket column frames) to the train box walls.</p> <p>3). It depends on how soon the floor is poured and how much risk (for seismic event) is tolerable. Each wing works as an independent structure (because they are separated by seismic joints) and its longitudinal seismic force will need to be transferred to the train box wall at the ground level. Without a complete load path, structural failure might occur in an earthquake event. It is recommended that the construction team to discuss this with TJPA and propose a construction sequence for us to review.</p> <p>4). See response to item 3).</p>

T-1793	SCS - Exposed Concrete Roof Perimeter Wall Per ASI 0124	Closed	10/07/2014	10/17/2014	10/10/2014	Potentially	<input type="checkbox"/>
<div>From: Webcor Construction LP Claude TitcherTo: Turner Construction Company PHIL MILITELLOAnswered By: Adamson Associates, Inc. George Metzger</div>							
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
RFI # T-1697 requested confirmation for the use of snap ties for perimeter wall, scallop wall, and sky light wall locations. TJPA answer: "The Design Team does not object to the use of Snap-off ties only at skylight wall locations." Spec 031001 - 2.2 B. 7. h. allows the use of snap ties for walls that will not be exposed. Architectural drawings AI-5002 and AI-8604 -through 8613 shows the roof level perimeter walls and seismic walls as not being exposed due to the GFRC fascia prior to ASI 0124. Questions:  1. Please confirm that per ASI 0124 the concrete roof perimeter walls/scallops will now be required to meet the specification requirements for exposed concrete walls.  2. Please confirm that the concrete roof perimeter walls/scallops will not need to meet requirements for cast-in-place architectural concrete.			1. The Roof Park Level concrete perimeter wall and scallops will have exposed face and as such, it is different than concealed concrete walls.  2. The Roof Park Level concrete perimeter wall not need to meet requirements for cast-in-place architectural concrete specification, however, the Design Team hereby request a dedicated meeting with the contractor to review the constructability and technical issues of this work. Final determination of the appearance and finish of the wall should result from the meeting's agreement.

T-1801	BGP - D201&202 RCS-1 & RCS-7 Reinforcing Steel Field Change Confirmation	Closed	10/09/2014	10/19/2014	10/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please confirm the following:				All items confirmed.			
1. Arrangement of RCS-1 top reinforcing hooks at the west foundation wall may be per the attached sketch.							
2. Matching hooks may be spliced to RCS-7 top reinforcing above the knockout wall to conform to Detail 4/S1-3204.							
3. Minimum splice length for RCS7 hooks is acceptable at 76" based on a 23" embedment of the typical bar into the foundation wall.							
4. RCS-7 hooks may be omitted where congestion results in inadequate clear spacing. All such locations will be reviewed by the Structural Field Representative before inspection.							
5. Top formsaver in Detail 4/S1-3204 may be relocated immediately below the top reinforcing of B60 to reduce top steel congestion in RCS-7.							
<hr/>							
T-1802	BGP - Area 16- East Wall Vertical Reinforcing- CDSM Encroachment	Closed	10/09/2014	10/19/2014	10/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Portions of the East Wall have CDSM encroachments -per RFI T-1372 and approved submittals require 6" spacing of vertical reinforcing.				Confirmed.			
The original call out was for 17 Verts each face between GL C & C.3 and between GL G & G.2 (at 6" OC). We installed 13 each face in both sections (at 8" OC)- see attached drawing. Please confirm it is acceptable for the 8" spacing to remain and there is no further action needed.

T-1810	SSS - Grouting Train Box Column Base Plates	Closed	10/13/2014	10/13/2014	10/16/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> Structural Steel specification part 3.3E, requires the column base plates to be grouted immediately after plumbing the first tier of columns.  Skanska's erection plans prepared by our structural engineer indicate that the grouting of the columns shall be done after erecting the EBF columns and tie-in steel at the bus deck and prior to setting the ancillary bus deck fill-in steel. See EP3.0 and EP3.1 attached for reference. This is done to allow for flexibility when plumbing and aligning the EBF steel.  Please confirm that Skanska has the option to follow the EP3.0 notes for the timing of the column grouting operation.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> This is a "means and method" issue. The proposal by the contractor to delay the grouting is acceptable, as long as it will not cause any safety issue.  Reason for RFI: Clarification of issue of means and methods

T-1822	BGP - Seismic Joint Vertical Wall Reinforcing	Closed	10/15/2014	10/25/2014	10/29/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
The configuration of welded reinforcing on the train box side of the seismic joint is installed as if there were an adjacent horizontal trough similar to the horizontal leg of the joint at the mat slab. There is no such trough on the walls. To accommodate the existing vertical west embed please see the following:			Items 1-6 and sketches are confirmed.				
1. An additional #7 hook will be added to the foundation wall that will engage the welded angled bar and the welded deformed anchor - See Sketch #1			Subsequent segments of the trainbox side of the seismic joint shall have welded reinforcing that mirrors that of the east side, except it will be permitted to have 48" long straight welded bars in lieu of hooks per Sketch #1.				
2. As necessary to provide 2" clear to the waterproofing or as is required to place foundation wall reinforcing, the welded angled hook may be field bent. Bending will be controlled as to not stress the bar end weld and bend radius will not be less than ACI minimum. See Sketch #1			The contractor has omitted the last leg of joint plate terminating at Grid A on the western edge of the joint in the first vertical segment. This is acceptable. The contractor may include this plate in subsequent segments or omit and form at their discretion.				
3. Termination of north and south foundation wall horizontal reinforcing shall be hooked. Hooks shall be oriented per the attached sketch. See Sketch # 1.							
4. The interior leg of 5/8" plate terminating at Grid A may be omitted and replaced with a formed edge-See Sketch # 1, reference AI-8881 detail 5.							
5. Please confirm that the South East Termination Bars can be installed per attached Sketch #2 .							
6. Please confirm that the North East Comer of the East Wall: Within the projection of the seismic joint toward the eastern CDSM wall, the interior foundation wall cross ties were not installed. Please confirm that this field condition is acceptable and that a uniformly detailed east foundation wall will resume in the second lift per the attached sketch #3.							
S1-3010 does not depict detail of terminated horizontal bars along North and South wall and Seismic Joint embed. Please approve the following sketches.

T-1823	BGP - Upturned Beam Conflict at GL 21	Closed	10/16/2014	10/26/2014	10/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: various attached drawings.				1) Confirmed that it is acceptable to pour the upturned beam portion separately.			
Sheet S1-2205 shows an upturned beam at GL 21. Due to a conflict with the internal bracing system please confirm it is acceptable to pour the upturned beam portion separately following the D221 pour with a horizontal cold joint between D221 and the upturned beam.				2) Confirmed that it is acceptable to use couplers to facilitate anchor bolt installation in this specific location.			
Skanska's Anchor Bolt Layout Plan TG0702-070.4 sheet AB14 detail 18 shows the upturned beam column anchor bolts embedded 4'-0 1/2" into concrete. Detail 5 on S1-3621 shows the height of a typical upturned beam at 3'-3" above top of Lower Concourse concrete. This results in the anchor bolts being embedded through the upturned beam and the Lower Concourse. Please confirm it is acceptable to utilize couplers as seen in attached SKA to facilitate anchor bolt installation in this specified location.							
<hr/>							
T-1824	SSS - Column Base Plate Grout Pads	Closed	10/16/2014	10/16/2014	10/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Skanska and their construction engineer, Hassett have evaluated several options for setting and securing the train box columns in position until the grouting operation has been complete. Based on Hassett's calculations the only feasible option to adequately stabilize the column is to utilize shim packs at each corner of the base plate.		Webcor expects Skanska to have these pads poured by early next week to allow the grout to be cured and achieve 8,000 PSI at 7 day break.		The proposed procedure is acceptable in concept. Contractor and Sub-contractor, WOJV, Skanska and their construction engineer, shall confirm the grout pad is adequate for supporting the construction loads imposed and confirm that this meets all safety regulations.			
Due to the congestion of rebar at the base plate block-out, there is currently insufficient room to set shim packs on a flat surface, therefore Skanska propose to pour 10"x10" grout pads at each corner to achieve the required uniformed surface for shim packs, see attached SK-5.0 for clarification.				Reasons for RFI: Verification for issues on means and methods.			
Skanska propose to use TG07.2's Dayton Superior grout, previously approved in submittal TG0702-500.

T-1835	BGP - Removal Sequence of Internal Bracing System Within Zone 4	Closed	10/21/2014	10/31/2014	10/23/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Further to last Monday's (10/13/14) meeting with TJPA, Arup, Turner and WOJV where the removal sequence of the internal bracing system within the Zone 4 East end Diaphragm was discussed, please confirm the following is acceptable:			TT's response:				
Remove the walers which are connected together in a sequence referred to as the observation method where one waler on the north and one on the south as well as the two cross lot struts attached to the walers would be de-stressed and removed at any one time. Once the first pair of cross lot struts have been de-stressed and removed and little or no movement has been recorded on the WOJV installed survey points or the Arup inclinometer's over the following 24 hours after de-stressing, the contractor can then proceed and begin de-stressing and removing the next pair of walers and struts to the east. This removal method would then be repeated until only four cross lot struts at that particular level remain; which are numbers ST-65 to 68.			The contractor shall submit necessary structural calculations in a Submittal to justify the proposed re-shoring procedure will not overload the train box structure, e.g., eliminating walers might cause the punching shear failure of the wall at the strut locations; it might also cause overstressing (in bending) of the train box wall.				
If acceptable, please specify 1) the movement tolerance for a given waler removed, 2) the observation period for analyzing movement, and 3) the acceptable means for monitoring for movement (survey, inclinometer, or both).			In addition, if any stress induced to a train box structure element as a permanent stress (e.g., vertical bending of the wall) that is additive to the stresses that the train box will experience during its service life (including effects of earthquakes), this stress shall be kept minimum (say not more than 10% of the capacity of the train box structure element).				
			Reason for RFI: Clarifications on means and methods issue.				
			Arup Response:				
			We take no exceptions.				
			The movement tolerances are those in the specifications.				
			We take no exceptions to the proposed monitoring duration.				
			Arup can produce manual inclinometer readings after each waler segment is distressed. Installation of targets on the inside face of the shoring wall and monitoring these targets during this activity is recommended.

It is the understanding of the Code that this</p>				<p>1). Based on the data provided by W/O to date (see the attached), it appears that they will meet AWS D1.8 requirement. However it is contractor's responsibility to obtain the complete test data to confirm. Since the data was originally requested by OIW, it is their own risk if they decide to proceed without the complete data.</p> <p>2). The CVN test requirement specified in the contract document may not be altered.</p> <p>Carlos de Oliveira 10/22/2014</p> <p>RESPONSE:</p> <p>Section A3.3 of AISC 341 stipulates a minimum CVN of 20 ft-lb at 70 °F for base metals of heavy sections of structural steel in the SFRS. Note that the casting specification for the Transbay project requires the castings to exhibit a minimum CVN toughness of 25 ft-lb conducted at 70 °F, which exceeds the aforementioned requirements of the code.</p> <p>AISC 341 also stipulates CVN requirements for weld filler metals.</p> <p>The code requirements for the CVN of base metals is less stringent than the code requirements for weld filler metals. This is due to the fact that weld metal is less ductile than rolled (or cast) steel base metal and because welds have significant residual stresses locked into them during welding.</p>

<b>REQUEST:</b> <p>The AWS D1.8 Structural Welding Code - Seismic Supplement, and the Contract specifications, require that either:</p> <p>1) Each lot of weld electrodes (filler metals) used to make demand critical welds (DCW) must be tested in accordance with AWS D1.8 Annex A</p> <p>2) Filler metals may be exempt from individual lot testing, provided the electrode manufacturer perform three (3) separate lot tests in accordance with Section 6.3.8.1</p> <p>Additionally, the testing specified shall be not more than the Lowest Anticipated Service Temperature (L.A.S.T.) plus 20 degrees F (AWS D1.8 Section 6.3.6).</p>		<b>SUGGESTION:</b>		<b>ANSWER:</b>			<b>Accept Suggestion:</b> <input type="checkbox"/>
<p>In contrast, cast steel is an isotropic, highly ductile material. Also, castings are stress relieved following repair welding, which relieves the majority of residual stresses in the repair welds and brings the mechanical properties of the repair weld to within the requirements of those of the base metal. As such, castings are effectively homogenous from a mechanical properties perspective, and weld repaired areas of the casting are effectively part of the casting base metal.</p> <p>We are therefore of the opinion that it not necessary to apply the CVN requirements for welds (demand critical or otherwise) to casting weld repairs, the latter of which would more appropriately be regarded and treated in the same way as base metal.</p> <p>It is noteworthy, however, that while the mechanical properties of the stress relieved weld repaired areas of the castings match or exceed those of the virgin cast steel base metal, the chemistry of the casting local to the weld repair will be slightly outside of the ASTM standard for the cast steel base metal.</p>

<b>REQUEST:</b> See attached sketch. This RFI is related to RFI T-1467.  Ground level moment frame beams tie into the foundation wall. Due to level shoring towers, the moment frame beams will be step in elevation. The level moment frame beams will be interfacing with the sloped 4th lift foundation wall causing issues in alignment and constructability in the remaining foundation wall. SCCI proposes to have the top of 4th lift be 3'-11" below top of slab. This method will clear the alignment issues, provide a starter wall edge and will result in a 1"±1/4" encroachment of 4th lift wall into the moment frame beam.  Please confirm it is acceptable for the 4th lift encroach into the moment frame beam by 1"± 1/4"			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The proposed encroachment is acceptable provided that:  1. The specified placement elevation of intersecting reinforcing is not affected.  2. In the event of a wall overpour, all wall concrete interfering with the specified placement of intersecting reinforcing will be removed.  3. In order to meet the intent of contract specified clear cover (to intersecting reinforcing), the encroaching wall lip within the projection of intersecting framing shall have a roughened chamfer bushed down to the soffit of the intersecting framing.

<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b>		<b>SUGGESTION:</b>		<b>ANSWER:</b>			<b>Accept Suggestion:</b> <input type="checkbox"/>
Please confirm it is acceptable to substitute HRC-555 T-Heads in lieu of standard hooks at 4-ft deep East-West Beams where they frame into Moment Frame Beams in Areas 11-16. Please reference the attached drawing for example.				1. HRC 555 T-Heads may be used for beam long bottom bar end conditions in lieu of hooks where beam long bottom bars are placed above the bottom bars of the supporting member.			
				2. HRC 555 T-Heads shall be staggered.			
				3. HRC 555 T-Head bars may be spliced to beam long bottom bars where the detailer has verified, on a case by case basis, that the resulting clear spacing does violate ACI clear spacing requirements and does not hinder concrete placement and consolidation. In this determination, consideration shall be given to the presence of beam short bottom bars. As a reduction in clear spacing will occur with the introduction of splices, the detailer will verify the clear spacing and determine the appropriate splice category per Detail 1/S3001.			
				4. Splices, when used, shall begin at the face of the supporting member.			
				5. Splices, when used, shall be alternated in single spans.			
				6. Splices shall not be used in continuous spans.			
				7. Splices shall not be used that overlap bundled bars.			
				8. RFI response may be used in beams other than 48" deep beams.			
				9. Contractor is responsible for evaluation and the selective implementation of the proposal for conformance with ACI and contract document clear spacing and lap requirements.

T-1844	<b>SST - Checkered Plate Stair Tread Clearance</b>  <b>From:</b> Webcor Construction LP <b>Co-Author:</b> Olson and Co. Steel  <b>REQUEST:</b> Q1: Architectural design for the setup of checkered plate treads shows the vertical bent lip fitting up tight with the bottom of tread's riser. As illustrated in the attached sketch, the vertical bend of the lip creates a natural radius that will clash with the riser if you were to create this tight fit. Please advise if it's acceptable to back-off the riser portion of the tread by 3/8" to create a gap that clears the lip radius.	<b>Closed</b>  <b>To:</b> Turner Construction Company  <b>SUGGESTION:</b>	<b>10/28/2014</b>  <b>ANSWER:</b>	<b>10/28/2014</b>  <b>Accept Suggestion:</b>	<b>10/30/2014</b>  <input type="checkbox"/>	<b>Potentially</b>  <b>Answered By:</b> Adamson Associates, Inc. T-1845	SST - Floating Stair Connection Issue at Stair 401	Open	10/28/2014	11/07/2014		Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:				
Co-Author: Olson and Co. Steel Avel Solomon							
REQUEST:			SUGGESTION:		ANSWER:		
Q1: Per the stair layout dimensions provided on 2/A1-7012, stair 401 nosing location at landing elevation 39'-9" will go 7" past the supporting column and beam per 3/S1-7009. As a result, the designed conneciton called out 10/S1-7601 will not work. The cantilevered beam has no purpose in this scenario. Please see included sketch and advise.					Accept Suggestion: <input type="checkbox"/>		
T-1846	SST - Cantilevered Support Beam Length at Stair 403	Open	10/28/2014	10/28/2014		Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:				
Co-Author: Olson and Co. Steel Avel Solomon							
REQUEST:			SUGGESTION:		ANSWER:		
Q1: PER STAIR SETUP DIMENSION ON 5/A1-7011, THERE IS A 2'-4" OFFSET BETWEEN LANDING SUPPORT BEAM AND FIRST TREAD. THIS CREATES THE NEED FOR A 2'-10½" CANTILEVERED BEAM. 10/S1-7601 SPECIFIES 2'-0" MAX . PLEASE ADVISE SEE INCLUDED LAYOUT FOR MORE INFORMATION.					Accept Suggestion: <input type="checkbox"/>		
T-1847	SST - Ground Level Stair Landing at Curb & Built Up Slab	Open	10/28/2014	11/07/2014		Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By:				
Co-Author: Olson and Co. Steel Avel Solomon							
REQUEST:			SUGGESTION:		ANSWER:		
Q1: PER S1-2204, THERE ARE B8 (36" DEEP) CONCRETE BEAMS AT THE NORTH AND SOUTH SIDES OF THE STAIR 403 LOWER CONCOURSE OPENING. THEN THERE IS A B4 (30" DEEP) CONCRETE BEAM AT THE EAST OPENING. THIS CREATES A 6" STEP ON THE UNDERSIDE WHERE THESE THREE BEAMS INTERSECT. THERE ARE (2) HSS6X6 LANDING SUPPORT BEAMS CONNECTING TO THE CONCRETE UNDERSIDE WITH AN EMBED HERE PER 11/S1-7600. BECAUSE OF THE STEP, THE EMBED DETAIL WILL NOT WORK. PLEASE REFER TO INCLUDED SKETCH AND ADVISE ON A SOLUTION.					Accept Suggestion: <input type="checkbox"/>

T-1859	SCS - Vertical Trim Bar Termination	Open	10/30/2014	11/09/2014		Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titcher			<b>To:</b> Turner Construction Company PHIL MILITELLO		<b>Answered By:</b>		
<b>Co-Author:</b> Shimmick Construction Company, Inc. Henry Chiang							
<b>REQUEST:</b> Please reference drawing 4/S1-3207, RFI T-1666, RFI T-1698 and see attached spreadsheet listing out the length of trim bar to be embedded into poured spans of 3rd lift for relevant openings.  The foundation wall penetration detail 4/S1-3207 requires vertical trim bar of LTS + W above and below the opening. RFI T-1666 and RFI T-1695 responses have noted that a hook or head may be used to terminate trim bars where bar length exceeds height of wall. However the third lift will require embedded trim bars for all foundation wall openings where this detail is applied. seer proposes to terminate trim bars with hooks at the bottom of the 4th lift, similar to RFI T- 1666's response for the top of wall.  Please confirm if terminating trim bars with hooks at the bottom of the 4th lift is acceptable or provide parameters for cases where this would be acceptable.			<b>SUGGESTION:</b>		<b>ANSWER:</b> Accept Suggestion: <input type="checkbox"/>

T-509	<b>BGP - Orientation of Protection Board</b>  <b>From:</b> Webcor Construction LP      Kody Cooper <b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon  <b>REQUEST:</b> Reference Specification: 07 12 10 - 3.2.D  This section states "Install Protection board on vertical surfaces with long dimension vertical and the polyethylene film side facing the soil/cement surfaces." Per the manufacturer's installation instructions, "the protection board will be installed length wise for easier handling during the fastening procedure." SCCI suggests installing the protection board length wise per the manufacturer's instructions. Is this acceptable?	<b>Closed</b>  <b>To:</b> Turner Construction Company Gary Krutsch	<b>04/23/2013</b>	<b>05/03/2013</b>	<b>04/26/2013</b>	<b>Potentially</b>	<input type="checkbox"/>
			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Install the protection board as specified. It is not intended for protection, but to serve as a substrate for the waterproofing assembly.  Protection board is 4' x 8'. When installed vertically, the edges of the boards will be butted and fastened at each pile. This will provide a line of fasteners on the edge of each board and help accommodate the board to pile misalignment. When installed horizontally, the board will be fastened on the intermediate pile which will complicate the installation if the piles are twisted or misaligned.  The board should not be fastened to the CDSM. It should only be fastened to the steel soldier piles.

	C. Misc Roadway Maintenance; D. Does not include Roadway Grinding or Hot Asphalt Application.					It is envisaged that the scope may include pothole patching; "cutback or coldpatch" at bridging and plating, handicap ramps, and sidewalk repairs; and misc. roadway maintenance. Usually, roadway grinding and hot asphalt application, which are typically utilized for larger paving areas, and possibly permanent installations, will not be necessitated by temporary pavement work. However, without the opportunity to review the traffic control plan as stipulated in 1.2.A of the same section, we cannot preclude the need at this time.	
TG05.2R-0001	Bass Electric - Switch Board AIC Rating	Closed	03/29/2011	03/29/2011	03/29/2011	Potentially	<input type="checkbox"/>

From: Webcor Construction LP David Hungerford To: Turner Construction Company Kevin Chiu			Answered By: Webcor Construction LP Tim Maxwell				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
The proposal checklist in Attachment 2 specifies "NonDiscrimination in Contracts and Benefits (section 00 04 70)" but the only mention of this section is in the Specifications' table of contents where the title and information are struck through/crossed out. What do the submitters need to include in proposals to satisfy the checklist requirement?					Accept Suggestion: <input type="checkbox"/> Inclusion of form is a misprint. Section 00 04 70 was deleted under Rev. 2 of the contract Specifications. The form is no longer required and will not be included in RFP reviews.		
TG4.2R-0001	AWSS Experience Requirement	Closed	01/24/2011	02/03/2011	01/28/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Daphne Faulkner			Answered By: Webcor Construction LP Joanne Filipas				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference BOE Specifications Section 02723, Part 3  There was discussion at the Pre-Bid Meeting that an upcoming addendum may change the experience requirements to do the AWSS work, above the usual DPW requirements currently in the specifications. This has the potential to rule out perfectly competent bidders and reduce the pool of bidders. Shaw Pipeline hopes there will not be a change from the specifications in this regard					Accept Suggestion: <input type="checkbox"/> There will be no change to requirements currently carried in bid documents.		
TG4.2R-0002	AWSS Fittings Procurement Schedule	Closed	01/24/2011	02/03/2011	01/25/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Daphne Faulkner			Answered By: Webcor/Obayashi Joint Vt Richard Buellesbach				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
The foundry that fabricates the fittings recently quoted Shaw Pipeline Inc. 18-20 weeks to procure fittings. Assuming this timeframe will be similar at the time of contract award, the current schedule will not be achievable. Will an extension of time be granted, equal to the time taken to get the fittings?					Accept Suggestion: <input type="checkbox"/> The response to this QBD will require input from all parties involved. W/O will not be providing a preliminary answer at this time

TRANSWORLD 021	Instructions on new Barricade Wall	Closed	03/21/2011	03/22/2011	03/28/2011	Potentially	<input type="checkbox"/>
From: Transworld Construction, Inc. Erik Liu		To: Webcor Construction LP David Hungerford	Answered By:Webcor Construction LP David Hungerford				
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Please provide instructions on what barricade wall is desired in lieu of the plywood wall. The storm this past weekend is a clear indication that a solid material wall should not be used as a visual baricade. The storm blew down that wall. Please issue instructions on how we are to proceed. At present, A-frame barricades, caution tape, and safety cones are up.		Due to field directives to mitigate the problem, this RFI is null and void.					
TRANSWORLD 022	Electrical work for the existing conduit protruding from the soil from the basemen	Closed	03/29/2011	03/29/2011	03/29/2011	Potentially	<input type="checkbox"/>

REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
There is one existing conduit on the south side of the wall protruding from the soil coming from the basement wall. The electrical conduit is approximately 6 feet east from the western transformer vault vent opening. Attached you can see the pictures of this conduit that is currently sticking out below the scaffolding planking. Please provide instructions on electrial work.		This RFI is superseded by Transworld RFI 022.2, forwarded as T-0031.1.

Regarding the grouting work scheduled for tomorrow to fill the voids per W/O RFI #T-0045 ... the grouting contractor is requesting to use the grout mix design as indicated in the following sheet. Apparently this matter was raised with Mr. Doug Jacobson who knows that this substitution request!RFI is on the way. The attached sheet is a specification program from another project not related to the Transbay Project. Our contractor's recommendation is to use this same grout mix design. Please advise if the use of this grout mix design is acceptable.				VOID RFI. Work was already compelted and this RFI no longer applies. See confirmation attached.

We need direction for the electrical installation inside the new concrete stem wall. We are planning on installing the formwork for the south-side of the wall starting Wednesday morning. As such, we need to install the electrical conduits and boxes tomorrow, Tuesday, at the latest to meet our schedule. Please provide detailed information on the entire conduit run and the elevation of the boxes. It is our understanding that we are completing abandoning the originally anticipated electrical lighting work as anticipated in our contract documents.				The question stated "It is our understanding that we are completing abandoning the originally anticipated electrical lighting work as anticipated in our contract documents." However there are no electrical drawings in the contract documents. This RFI was recieved at 4:28pm, the day before the wall was to be closed up, and requests an answer by tomorrow, which is not enough time to review. Due to the timing of this RFI, it was not submitted to the design team, but instead a meeting was held with URS in the field for direction. For record, see the attached inspection report and email for what is to be done.

REQUEST:			SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>		
Reference: C/S-5000, B/A-6000, attached sketches, and referenced RFI's			Can't find answer in Constructware.				
Field verified measurements and layout for the location of the structural steel does not coordinate with the stucco inset locations as shown on detail C/S-5000. In addition framing around the perimeter of the wall (aluminum panel locations) had to be modified due to assembly and installation methods. (See attached pictures and sketches. This RFI addresses three framing issues. All issues have been discussed in the weekly 301 Mission Wall subcontractor meeting with URS, Turner, Transworld, TJPA and Webcor-Obayashi.							
1.) In two of the four stucco slot locations, field conditions show that a portion of the base plate conflicts with the stucco slot. This base plate encroaches into the stucco panel per dimensions shown on the attached sketch. Please advise.							
2.) The structural steel had been relocated to CL of the wall (per RFI T-0098) and therefore studs around the steel per B/A-6000 could not be set per plan. Transworld has installed hat channel metal framing to the face of the structural steel tube using fasteners into the structural steel as per RFI T-0106 as well as modified the boxed framing per attached sketches around the perimeter of the wall. Sizes of metal framing were used to align with adjacent framing per plan. This work is currently installed, please confirm framing modifications per attached marked up details are acceptable.							
3.) Blocking a the top of the wall at the north side (between the framing and 8"x 8" tube steel) was not installed, as there was no room between the framing and steel. Framing was attached directly to the tube steel. See attached.							
Please confirm that the framing modifications in item 2 and 3 are acceptable and provide direction at the base plate conflict per item 1.

REQUEST:			ANSWER:				
Reference Sheet U-2008 and Trinet RFI 63			Accept Suggestion: <input type="checkbox"/>				
During our potholing on Minna St. for the proposed AT&T vault in the sidewalk (Stn. 3+72), we encountered an existing subsurface foundation and slurry shoring wall. The top of the subsurface foundation is at a depth of approximately 4' from the top of the sidewalk and is in conflict with the installation of the proposed AT&T vault. Installation of the proposed AT&T vault in accordance with the plans will require partial demolition of the existing foundation wall encountered. Please advise.			As determined during a site visit on 1/10/11 with W/O, Turner, AECOM and Tishman Speyer, the exposed wall is an abandoned sidewalk basement wall. Remove and dispose of existing abandoned sidewalk basement wall as required (approx. 1.5 feet in depth) to construct proposed AT&T vault.

U-0077	Fire Hydrant Installation at Minna St Stn. 0+90	Closed	01/12/2011	01/22/2011	01/14/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-3107					Accept Suggestion: <input type="checkbox"/>		
With reference to the fire hydrant at Minna St. Stn. 0+90, (northeast corner of Second St. and Minna St.) General Note #5 on sheet U-3107 directs Trinet to "replace in place existing fire hydrant."					As discussed on site with Daniel Helminiak (SFPUC Inspector) and those mentioned above, the proposed construction sequencing of the fire hydrant at Minna St. STA 0+90 is acceptable.		
Per on site field discussions with Eric Zagol from AECOM, Robert Friend from Trinet and Mario Saldana from W/O, it was determined that the existing hydrant would remain in place until after the new water main connections are performed by CDD crews. After which the existing hydrant will be removed and new hydrant and lateral piping will be installed and tested.					Coordinate with Daniel Helminiak (or assigned SFPUC Inspector) and the SFWD to ensure the fire hydrant is properly decommissioned by SFWD and SFFD following main connections by SFWD and prior to abandonment of the existing main in Minna Street by SFWD prior to fire hydrant installation by Trinet. Coordinate with SFPUC inspector to ensure SFWD and SFFD installs a black hydrant "donut" on the existing fire hydrant and new fire hydrant prior to the new fire hydrant being placed in service. Coordinate the removal of the "donut" once new fire hydrant is in service.		
Please confirm if this is acceptable. An expedited response is requested.							
U-0078	6in and 4in Service Laterals to 2 Shaw Alley	Closed	01/12/2011	01/22/2011	01/14/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-2008					Accept Suggestion: <input type="checkbox"/>		
The existing 4" water service found at Stn. 5+37 has been confirmed abandoned by SFWD personnel through on site investigations. Since the service is determined to be inactive, Trinet intends to not provide service from the new main for this 4" service as discussed in the field, with Eric Zagol from AECOM, Mario Saldana from W/O, Dan Helminick from SFWD and Robert Friend from Trinet. In addition, Dan Helminick from SFWD requested to have the service tee installed in the new 8" main which was to provide service for this 4" lateral removed and straight pipe installed. Please confirm if this is acceptable.					Existing 4" water service at STA 5+37. Subsurface utility investigations should have been performed and submitted prior to installation of water main to determine status of existing lateral in accordance with U-3108 General Note No. 3. It is acceptable to remove the 8"x8"x4" tee installed and replace with straight pipe per the request of SFPUC SFWD inspector.		
The 6" water service lateral found at Stn. 5+30 has been confirmed as an active fire service to 2 Shaw Alley by SFWD personnel through on site investigations. Trinet					Provide 6" water service later at STA 5+30 per contract documents.		
					AECOM suggests that there is no change in contract price to perform this work.

REQUEST:		SUGGESTION:	ANSWER:            Accept Suggestion: <input type="checkbox"/>				
Reference Sheet U-3123 and attached detail			It is AECOM's understanding that Trinet encounter an existing PG&E electrical duct (4-4") crossing the water alignment feeding 301 Mission property and not an AT&T duct as referenced above. It is also AECOM's understanding that Trinet encountered an existing PG&E electrical duct (8-3") parallel to the water alignment which is ultimately to be abandoned by PG&E and demolished by Trinet. Both PG&E ducts are shown in the plans. Per sequencing shown on U-1123, the water line should be constructed after PG&E completes their work on Fremont Street.				
During Trinet's installation of the temporary water line in Fremont St., Trinet encountered an existing AT&T duct that was in direct conflict with the temporary water line. Trinet was directed by Eugene Chu of SFWD/SFPUC to run the temporary water line over the existing AT&T duct using 45 degree bends. This resulted in less cover for the piping than what is required by the Water Department. Due to the lack of cover, Trinet was directed to install a 1/2in steel plate beneath the concrete base along the trench as depicted in the attached detail. The plate was approximately 2ft wide by 6ft long and extended to the limits of the installed 45 degree bends. Please provide confirmation that this is acceptable.			Given the fact that the PG&E duct parallel (8-3") has not been abandoned by PG&E, and given the fact the option to go under the existing 4-4" PG&E duct per plans is not feasible because the existing 8-3" PG&E duct is not demolished, and given the fact that the new water main is a temporary condition, the above mentioned installation proposal is acceptable.				
			AECOM suggests no additional cost to contract price to perform this work.

U-0080	Proposed Design Change for MH #501	Closed	01/17/2011	01/27/2011	01/28/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Michelle Smith			<b>Answered By:</b> AECOM Technical Service Eric Zagol				
<b>Co-Author:</b>							
<b>REQUEST:</b> Reference Sheet U-2021 and attached drawings  Trinet proposes to change the design of sewer manhole #501 from a Modified Box Manhole (per SF Standard Plan #87,184) to a Precast Concrete Manhole (per SF Standard Plan #87,181 - see attached drawing). The proposal includes the installation of a temporary 24" PVC pipe stub, extending south from the manhole and connected to the brick sewer per SF Standard Plan #87,197.  The proposed manhole design will facilitate construction around the many utilities identified in the excavation - see RFI # U-0021 (Trinet RFI 04). It is also the preferred manhole design for 24in pipe per the SF Standard Drawings, especially since the brick sewer on the south side will later be abandoned and plugged (in the manhole) by the owner. This plan will also facilitate the later abandonment of the outlet to the south, as the owner will just have to plug the 24in outlet pipe and not a 3x5 brick sewer.  Please consider. An expedited response is requested.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> CCSF DPW Standard Plan #87,181 referenced specifies a 4 ft diameter precast concrete manhole. Three (3) 24-inch pipes connecting to a 4 ft diameter manhole at invert elevation as proposed by contractor may yield an unstable structure and is not approved. A larger diameter precast concrete manhole may be acceptable however the alternative would need to be submitted as a substitution for CCSF SFDPW approval.  As per the response to RFI U-0021, please provide a mark up of U-3021 indicating the size, and horizontal and vertical location of the utilities identified in the excavation for review.				
U-0080.1	Proposed Design Change for MH #501	Closed	02/09/2011	02/18/2011	02/22/2011	Potentially	<input type="checkbox"/>

<b>Co-Author:</b>							
<b>REQUEST:</b> Reference Sheet U-2021, RFI #U-0080, and attached drawings  In response to the Engineer's concerns with the number and size of pipes in Trinet's original revised detail for MH 501 (RFI#U-0080), Trinet has changed their proposed installation drawing to include a 5' I.D. cast-in-place MH base. The lower precast section of the MH will be 5' I.D., with a precast reducer section transitioning from 60" to 48" I.D. placed above. Attached is the revised drawing for MH 501 and shop drawings for the precast MH sections. The design was discussed with Cliff Wong from the SF Bureau of Engineering, Hydraulics Department, and he did not have a problem with a 5' I.D. manhole.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>  02/22/2011 - Kevin Chiu  A Change Request (CR) may be issued for the accepted substitution of the 5-foot diameter precast concrete manhole in lieu of the cast in place Modified Box Manhole.  ----- 02/18/2011 - Eric Zagol  The proposed design change for sewer manhole #501 from a Modified Box Manhole per SFDPW Standard

U-0081	<p>Water Main Alignment - Howard St STA18+72 and STA19+98</p> <p>From: Webcor Construction LP      Nhi Tran      To: Turner Construction Company Michelle Smith</p> <p>Co-Author:</p> <p><b>REQUEST:</b></p> <p>Reference Sheet U-3119 and attached drawing</p> <p>Please confirm that it is acceptable for M Squared to install the new 12in water line in a straight line as sketched on the attachment. Contract Drawings show the pipe offsetting between Sta 18+72 and Sta 19+98. Due to existing utilities discovered in potholes the 12in line will be installed 18ft from centerline.</p> <p>Also, please confirm the elevations of the water line can be raised dependant on the depths of the existing utilities</p> <p>Also, the referenced drawing has a discrepancy shown between the 12in water line bend station called out and the location shown in plan view. Please confirm that the first 45degree bend is located at 18+72, and not 18+27.</p>	Closed	01/19/2011	01/28/2011	01/24/2011	Potentially	<input type="checkbox"/>
			Answered By:	AECOM Technical Service	Eric Zagol		
			<b>ANSWER:</b>	Accept Suggestion:	<input type="checkbox"/>		
				1. Contract Drawings indicate an offset to avoid a bus island, as shown on the plans, that was to be constructed as part of the Transbay Temporary Terminal Project. AECOM received confirmation from Philip Sandri TJPA/PMPC that the bus island was deleted from the Transbay Terminal Project. It is acceptable to eliminate the offset and construct water main between STA 18+72 and STA 19+98 at 18ft from centerline.			
				2. Elevations of the water line can be raised dependant on the depth of the existing utilities. Minimum depth of cover shall be 18-inches below the bottom of the concrete base pavement section per DPW Order No. 176,707 or 28" which ever is greater.

REQUEST:			ANSWER:				
Reference Specifications Section 33 31 10, 1.4.E			Accept Suggestion: <input type="checkbox"/>				
Please clarify if TJPA or DPW is going to complete the inspection of the pipe as described in the referenced specification section.			For general materials, please follow the specification requirements regarding delivered materials in 01 16 00 1.6D.				
SUGGESTION:			For materials falling under specification section 33 31 31, section 1.4C determines that all piping is SUBJECT to inspection by TJPA and/or DPW. This means that all piping is to be made available upon delivery if TJPA/DPW deems it is necessary to inspect the material. Contractor to inform TJPA of all deliveries and assure the storage facility is accessible. TJPA will inform contractor if material will be inspected prior to installation. When TJPA determines that additional labor is needed to move materials around for inspection, please reference 1.4E, which states that contractor is to furnish labor as needed to assist TJPA with this effort.				
			There is no <i>“HOLD POINT”</i> for TJPA or SFWD to inspect materials at manufacturer or upon delivery. TJPA/DPW intends to inspect the materials deliveries of each subcontractor until such time as a confidence level is built that subcontractor and W/O are ensuring the proper amount of quality control through their own material inspections.				
			Per specification Section 01 14 00 1.4, W/O shall verify all dimensions in the field and shall check all field conditions continuously during construction, including materials. Any inspection of materials by TJPA, DPW, or any other agency does not alleviate the subcontractor or W/O of the responsibility of

Reference Sheet U-3118						Accept Suggestion: <input type="checkbox"/>	
Potholes on Beale Street at Sta 14+00, Sta 14+90 and Sta 16+25 reveal a 6in steel line that is unmarked and not shown on contract drawings. The line is 18ft south of the Howard St centerline. This is the proposed alignment for the new 12in water main. The pothole at Sta 14+00 also reveals a 3in steel conduit which is 16ft south of the Howard St centerline. Also there is a 6ft x 6ft wooden telecom duct bank that runs east to west on Howard Street at 15ft south of the Howard Street centerline. This location offers the closest window for the new 12in water line to the original alignment shown in the contract drawings.						Existing 6-inch steel pipe appears to be a 6-inch cast iron abandoned PG&E gas main. Confirm the "6ft x 6ft wooden telecom duct bank" is a 6-inch x 6-inch wooden duct bank and is abandoned.	
This would require the removal of the wooden duct bank and the removal of the abandoned manhole shown on U-3118 (Sta 14+96 ± 15ft from Howard St centerline)						Refer to RFI # U-0083.1	
Please confirm the alignment of the new 12in water main.

REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-3125 and attached sketch					Accept Suggestion: <input type="checkbox"/>		
The existing 4no. 4in AT&T lines on Beale Street at Sta 6+10 are not as shown on the contract drawings. See attached sketch. Contract drawings show the conduit crossing M Squared's trench for 6 or 7 feet, however the duct bank is in the trench for 37 feet due to the alignment and width of the duct bank. The conduits are covered with a 2 foot wide concrete cap and appear in the trench for the new 12in water main at Sta 6+12 before leaving the trench at Sta 5+75. M Squared cannot lay the pipe on top of the concrete cap as the pipe will not have the required coverage. Due to this M Squared is unable to install the new 12in water as shown. Juan with AT&T advised that M Squared remove the concrete cap from the conduits to allow for excavation of this portion of trench. With the cap removed it is more likely that the pipe will have the necessary minimum coverage.					Please proceed as per AT&T's suggestion.		
Please confirm that this is how M Squared is to proceed. An expedited reponse is requested.					Please coordinate with AT&T's representative Huan Hunynh and field representative Dave Olson for an onsite inspection by AT&T of the affected AT&T conduits prior to backfill.		
					Confirm minimum cover of 30-inches or 18-inches below concrete pavement base which ever is greater, is maintained.		
					Provide distance between top of water main and bottom of AT&T conduits for review.		
U-0086	Concrete Slab & Rail Ties at Howard STA 13+60	Closed	01/24/2011	02/03/2011	01/25/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Nhi Tran      To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-3117 and attached sketch					Accept Suggestion: <input type="checkbox"/>		
M Squared potholed at Howard Sta 13+60. The pothole revealed a 15in thick concrete slab which is in conflict with the proposed alignment of the new 12in water line. M Squared broke out a cross section of the slab and found nothing in it. There was also nothing underneath the slab for 5.5 feet. The southern edge of the slab is 4 feet north of the Howard Street center line. M Squared also discovered 6inch x 8inch x 4foot-6inch wooden rail ties.					As discussed during a site visit on 1/25/11 with Noel (M Squared) and Mario S. (W/O) the Contractor's proposed alignment of 18-inches south of alignment per Plans is in conflict with the existing sewer (limited separation).		
If M Squared has to remove the concrete slab to install the water line at the alignment shown there is a danger that					As discussed, pothole along Howard St. between Fremont St. and First St. to determine if 15-inch concrete slab is a local condition at the intersection of Howard and Fremont streets or if the slab extends to First St.

U-0090	46 Minna St 6in Fire Service Connection	Closed	02/01/2011	02/11/2011	02/03/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP                      Nhi Tran                      To: Turner Construction Company Michelle Smith			Answered By:Turner Construction Comp Kevin Chiu				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-3108 and attached sketch and photos					Accept Suggestion: <input type="checkbox"/>		
The original plan for connection of the 6in Fire Service Lateral @ 46 Minna St. was to leave the existing 6in gate valve (which is located at FOC) in place and connect the new 6in fire line to the downstream side of the old valve (See attached photo and sketch). This plan was proposed by SFWD inspectors, Tom Farhnam and Dan Helminiak, at a field meeting on 12/28/10. On Friday 1/28/11 the SFWD, plumbers when taking measurements for the tie-in, proposed a different plan. They want to extend the new 6in fire line beyond the curb and into the basement, and connect to the homeowners fire line inside the basement (under the sidewalk).					VOID.		
Note: This will require coordination with building owner to put a hole through their foundation. Layout and a detail would need to be provided for the wall penetration, as well a detail to plug the hole where the existing water line is entering the basement.					See RFI U-0093, 46 Minna 6in FS Water & 1in Copper Water Service Lateral at STA 5+17 Tie-In.		
Please provide direction on how to proceed.

	<p>SFWD has proposed the new tie-in pipe configuration.</p> <p>1. New 6in Fire Service Lateral Tie-in at 46 Minna St (See Attachment A)</p> <p>- Old existing fire service lateral is to be cut out of the existing water main up to the gate valve as shown in the sketch, and replaced with straight pipe. A new 10in hole is to be core drilled into the existing basement wall 22in east of the existing service lateral to incorporate the new 6in fire service lateral. SFWD will run the new 6in fire service lateral through the hole and Trinet is to provide Link Seals (see attached material information sheets) to seal the space between the new pipe and wall hole.</p> <p>2. New 1in Copper Service Lateral Tie-in at STA 5+17 (See Attachment B)</p> <p>- Old existing 1in plastic poly pipe is to be cut and plugged with non shrink grout. A new 2in hole is to be core drilled 4in east of the existing 1in service, to incorporate the new 1in copper service lateral. The space between the new pipe and wall hole will be sealed with non-shrink grout.</p> <p>Please advise if this is acceptable. An expedited response is requested.</p>			<p>2. Neatly remove existing fill material between the existing pipe and wall penetration to dislodge and free the existing pipe such that it can be removed by SFWD.</p> <p>3. SFWD to cut and remove existing pipe.</p> <p>4. Remove excess fill material to create flat even surface for link seal type pipe sleeve.</p> <p>5. SFWD to install and connect new service.</p> <p>6. Restore wall per SK-U-0005 attached.</p>			
				1-inch Water Service Renewal -			
				<p>1. Coordinate with SFWD for the shutdown of the existing domestic water service. Shutdown by SFWD.</p> <p>2. Neatly remove existing fill material between the existing pipe and wall penetration to dislodge and free the existing pipe such that it can be removed by SFWD.</p> <p>3. SFWD to cut and remove existing pipe.</p> <p>4. SFWD to install and connect new service.</p> <p>5. Fill void between pipe and exposed wall penetration with non-shrink grout.</p>

U-0096	PG&E Conflict with Sewer Installation at Natoma STA 9+50	Closed	02/09/2011	02/19/2011	02/14/2011	Yes	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Michelle Smith <b>Co-Author:</b>			<b>Answered By:</b> Turner Construction Company Kevin Chiu				
<b>REQUEST:</b> Reference Sheet U-3012 and attached drawing  On 02/07/2011, M Squared encountered what appeared to be a live PG&E duct bank during their sewer installation excavation on Natoma Street STA 9+50. Due to this conflict, M Squared was unable to continue excavating for the sewer (See attachment). On 02/09/2011, M Squared's Superintendant met with a PG&E Representative and PG&E Representative confirmed that the duct bank is live and is not due to be decommissioned for at least 3 months.  In order for M Squared to continue with the sewer installation, M Squared is proposing to: - install MH #305 and begin installing pipe west of MH #305 - perform a temporary connection from MH#305 to the existing 3' x 5' brick sewer  M Squared can then perform the remainder of the work once PG&E has decommissioned the duct bank.  M Squared estimates that the additional cost to perform the temporary tie-in would be approximately \$4,500.  Please confirm how you would like M Squared to proceed. M Squared requests an expedited response as they are currently stopped work and awaiting a response.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 02/14/2011 Kevin Chiu  See CR U-006 issued on 2/14/11  ----- 02/10/2011 Eric Zagol  Demolition and Construction Sequence shown on U-1112 and U-1120 lists per sequence order that the sewer work is to commence after PG&E has completed their Phase I work in Natoma and First St., all services cut over and existing duct bank is abandoned by PG&E. Given the fact that PG&E has experienced construction delays associated with their structures on First Street, the proposed sequence for sewer construction is acceptable.  Submit a temporary connection detail for review.  Coordinate with PG&E to abandon the existing 2-inch HP Gas along Natoma per U-1112 and U-1120 prior to demolition.  Coordinate with Verizon to abandon existing conduit (labeled "U" on base plans) prior to demolition per U-1112 and U-1120.

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-3012					Accept Suggestion: <input type="checkbox"/>		
Following on from M Squared's RFI #U-0096, M Squared has confirmed in the field that there is a grade conflict between the proposed sewer and the existing electrical duct bank on Natoma between STA 9+30 to 9+50. The conflict is between the bottom of the electrical duct bank and the top of the new 24" sewer pipe.					Demolition and Construction Sequence shown on U-1112 and U-1120 lists per sequence order that the sewer work is to commence after PG&E has completed their Phase I work in Natoma and First St., all services cut over and existing duct bank is abandoned by PG&E.		
The elevation of bottom of electrical duct bank is 11.5' The top of the 24" VCP sewer is 11.82'					Proceed per response to RFI U-0096.		
M Squared has also confirmed with PG&E that 3 of the 4 concrete encased conduits are occupied, 2 being occupied by 12KV lines. The duct bank is to be abandoned in the future but PG&E was unable to provide a schedule for this work.							
Please advise M Squared on how to proceed.							
U-0098	Potholing at Blackrock	Closed	02/10/2011	02/20/2011	02/10/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Nhi Tran      To: Turner Construction Company Michelle Smith			Answered By: Webcor Construction LP    Marina Rosso				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
M Squared is planning to pothole next week at Howard STA 9+40, First St STA 1+50 and First St STA 2+10 to confirm the alignment and depths of the new 12" water main on First St. from Howard to Natoma.					Accept Suggestion: <input type="checkbox"/>		
Guy Hollins from TJPA has advised M Squared that Blackrock is requesting additional potholing in the off-hours to determine locations of AT&T facilities in the area.					Can't find answer in Constructware		
Please provide M Squared information regarding the locations of the additional potholes requested, including the requested depths and sizes.

---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

**Co-Author:****REQUEST:**

Reference Sheet U-3021, attached sketch, and USA ticket

During excavation for CB#501, Trinet encountered what appears to be a PG&E vault (shown in plans as EMH 7712), PG&E Duct (Shown in plans as 1- 2" & 4-6" EP), 2- 2" steel conduits (not shown in plans), and a concrete shoring wall (not shown in plans).

- The 2-2" steel pipe is in conflict with Trinet's installation of CB#501, and will need to be relocated or abandoned to facilitate the installation of the catch basin. Trinet has done their due diligence (2nd and 3rd No Response follow ups) and these lines were not marked by the owner through USA (attached). Trinet requests direction on the relocation/abandonment of these utilities.

- Trinet proposes to move CB#501 two-feet north to avoid the conflict with the existing EMH 7712. Please advise if this is acceptable.

**SUGGESTION:****ANSWER:**

**Accept Suggestion:** ☐

Pending approval by the TJPA, a deductive CR will be issued.

-----  
---  
02/28/2011 - Eric Zagol

Following AECOM's review of the Transbay Transit Center Project 50% construction documents (rev. 12/20/10), further review of the Existing Terminal Ramps & Demolition Plans Project construction documents, and AECOM's understanding of the demolition of the existing Terminal "hump" structure and the timing of such demolition, CB#501 is no longer required.

Delete catch basin #501 and associated 10-inch sewer lateral.

**U-0102**      **First St. CB#206 in Conflict with (E) Subsurface Conc. Structure / Duct Bank**      **Closed**  
**From:** Webcor Construction LP      Nhi Tran      **To:** Turner Construction Company Michelle Smith

**02/23/2011**      **03/05/2011**      **03/04/2011**      **Potentially** ☐  
**Answered By:** Turner Construction Company Daphne Faulkner

**Co-Author:****REQUEST:**

Reference Sheet U-3009 and attached sketch and photo

During Trinet's excavation for replacement of CB#206 on the northwest corner of First St. and Minna St. (at STA 9+31), they encountered a concrete subsurface structure or concrete encased duct bank not indicated on the contract drawings. The existing catch basin is approximately 30in deep and is constructed on top of the existing concrete structure/duct bank (see attached drawing).

Trinet requests direction on the demolition of the existing catch basin and the installation of the new catch basin CB#206.

**SUGGESTION:****ANSWER:**

**Accept Suggestion:** ☐

Pending approval by the TJPA, a deductive CR will be issued.

-----  
03/04/2011 - Eric Zagol

As determined during a site visit on 3/3/11 with Trinet, AECOM and W/O; existing unforeseen conditions including an abandoned sub-sidewalk basement wall along Minna Street, an active sub-sidewalk basement wall for the 100 First St. property, and an abandoned telecommunications concrete duct along First Street create a situation where the installation of a new catch basin would require an extensive amount of unforeseen demotion.

U-0103	Natoma St. 4in Water Line Conflict with MH#306	Closed	02/24/2011	03/07/2011	02/24/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Nhi Tran      To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-1113 and U-3113					Accept Suggestion: <input type="checkbox"/>		
A 4-inch water line runs from east to west on the south side of Natoma from Sta 9+40 to Sta 10+95. At Sta 10+95, the 4-in water line 90degrees into the building at 400 Howard St. This building however, appears to be fed from the existing 8-inch line on 1st St between Howard and Natoma.					It is AECOM's understanding that the existing 4-inch lateral is "killed" (not supplying water) however the "killed" lateral may still be pressurized up to the lateral terminal point at the gate valves located on the south side of Natoma Street at Natoma Street STA 10+95.		
Is this 4-inch water lateral at Sta 10+95 on Natoma already abandoned? If not, can M Squared abandon it? It is currently in conflict with the proposed location of MH#306, and is also in conflict with the excavation and shoring for the new 30-inch sewer along Natoma (TG04.1).					Demolish 4-inch water as indicated on U-1112, U-1113 and U-1120.		
					Prior to demolition:		
					1. Coordinate with SFPUC inspector to confirm 4-inch lateral is "killed". 2. Coordinate with SFPUC inspector to confirm that the lateral is not pressurized and that the 4-inch gate valve at Natoma Street STA 9+40 (intersection with existing First Street 8-inch water main) is closed. 3. Coordinate with SFPUC inspector and install cap in First Street as shown on U-1120 at Natoma STA 9+55 +/-.		
U-0104	Natoma St. Temporary Sewer Connections at Sta 9+25 and Sta 7+20	Closed	02/24/2011	03/06/2011	03/01/2011	Yes	<input type="checkbox"/>
From: Webcor Construction LP      Nhi Tran      To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheets U-1112, U-1120, U-3012, and RFI#U-0096					Accept Suggestion: <input type="checkbox"/>		
In order for M Squared to install the new water main on Natoma Street between Sta 6+40 to Sta 10+00, the existing 3'x5' sewer must first be demolished. The 3'x5' sewer cannot be demolished until the new 24-inch VCP has been installed and connected to the existing sewer on First Street at Sta 9+59. Per sheets U-1112 and U-1120, the new 24-inch sewer is to be constructed after the demolition of the PG&E ducts. However, demolition of the PG&E ducts cannot be completed because PG&E has not completed their relocation work					Due to existing PG&E duct in conflict caused by PG&E's delay with First St. Phase I relocations, the two 12-inch temporary HDPE connections as proposed are acceptable as an interim condition until PG&E Phase I work is complete and the existing duct in conflict can be demolished per plans.		
Per RFI#U-0096 (M Squared RFI #009), as confirmed by					Daphne Faulkner - Pending approval by the TJPA, a CR will be issued.

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>PG&amp;E in the field on 02/09/2011, there is a live PG&amp;E duct bank in conflict with MH#305 and the new 24-inch VCP between MH#305 and MH#306, and not due to be decommissioned for at least three months.</p> <p>M Squared proposes to install a 12-inch HDPE pipe from Sta 9+25 to Sta 9+59, and perform a temporary connection to the existing 3'x5' sewer on First Street. Surveys carried out on the electric duct bank at Sta 9+30 on 02/08/11 shows that the bottom of the Duct Bank is approx. 10.8, meaning a 12-inch pipe will fit. In addition, M Squared proposes to perform a temporary connection (also 12-inch HDPE) at Sta 7+20 from the new MH#303 to the existing 3'x5' sewer. This would allow M Squared to demolish the 3'x5' sewer from Sta 7+02 to Sta 9+59, and allow M Squared to install the water from Sta 6+40 to Sta 10+00.</p> <p>M Squared estimates the cost for both of these connections is \$20,000.</p> <p>An expedited response is required to avoid impact to the installation of the water line</p>						
U-0105	Natoma St Duct Bank Conflict at Sta 12+92	Closed	02/24/2011	03/06/2011	03/01/2011	Yes	<input type="checkbox"/>
From: Webcor Construction LP                      Nhi Tran		To: Turner Construction Company Michelle Smith		Answered By: AECOM Technical Services Eric Zagol			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:            Accept Suggestion: <input type="checkbox"/>			
Reference Sheet U-1113, U-1122, U-3013 and attached drawing				Due to existing PG&E duct in conflict caused by PG&E's delay with Fremont St. Phase I relocations, the 12-inch temporary HDPE connection as proposed is acceptable as an interim condition until PG&E Phase I work is complete and the existing duct in conflict can be demolished per plans.			
A pothole on Natoma Street at Sta 12+92 confirmed that the duct bank shown on Sheet U-3013 is in conflict with the proposed 30-inch VCP sewer (see attached drawing).							
Per sheets U-1122 and U-1113, the new 30-inch sewer is to be constructed after the demolition of the PG&E ducts. However, demolition of the PG&E ducts cannot be completed because PG&E has not completed their relocation work. Per PG&E's new schedule this work is not scheduled to be completed until 06/31/2011. This would				Daphne Faulkner - Pending approval by the TJPA, a CR will be issued.

	<p>mean M Squared's work cannot start until after this.</p> <p>In order for M Squared to continue with their work, M Squared proposes the use of 12-inch HDPE pipe from Sta 12+80 to existing sewer at Sta 13+15 (proposed location of MH#602). Once PG&amp;E has completed their cutovers and the duct bank is abandoned, M Squared will demo the duct bank per specifications and complete the installation of the 30-inch VCP sewer from Sta 12+80 to MH#602.</p> <p>M Squared estimates the cost for this work is \$15,000.</p> <p>An expedited response is required to avoid impact to the installation of the sewer and water line</p>						
U-0106	First St Sewer MH#502 Adjustment to Avoid Conflict w/ (E) PG&E Duct	Closed	02/25/2011	03/07/2011	02/28/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP                      Nhi Tran		To: Turner Construction Company Michelle Smith	Answered By: AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER:				
Reference Sheet U-3021 and attached sketch			Accept Suggestion: <input type="checkbox"/>				
In order for Trinet to avoid a conflict with the existing PG&E duct along the west wall of their excavation, Trinet adjusted the south end of the MH#502 structure by 7 inches to the east (as shown in attached sketch). MH#502 is still aligned to incorporate the connection to the existing brick sewer, and the alignment of the new 24-inch VCP run is unaffected by this change. Trinet will adjust rebar as required to maintain the required spacing and clearances.			The sketch referenced above is based on CCSF DPW Standard #87,184 that shows the minimum reinforcing plan for the connection to the existing 3'x5' brick sewer. Provide reinforcing for connection to 3'x5' per CCSF DPW Standard.				
Please confirm if the adjustment of MH#502 is acceptable.			Confirm that the manhole is being constructed per CCSF DPW Standard #87,182 as shown in Detail 10 on U-5001.				
			Provide width of west wall and location of reinforcing steel at 3'x5' brick sewer connection and 24-inch VCP sewer connection for review.

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:            Accept Suggestion: <input type="checkbox"/>			
W/O would like to confirm that other than any standard permits required for any excavation in the city of San Francisco, there is no additional permit required by any city agency in order to perform work on the AWSS caps.				Per discussions with Michael Smith SFDPW BOE, there are no additional permits required for AWSS construction beyond the standard permits for constructing utilities within the public right-of-way.			
				Notify CCSF SFFD and SFPUC/SFWD through the TJPA's representative in advance the work to isolate work areas.

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:            Accept Suggestion: <input type="checkbox"/>			
Reference Sheet U-3021, U-3009, and attached sketch				Construct MH#502 at First St. STA 4+98 as shown on U-3021 to match the invert elevation of the existing 3'x5' brick sewer, elevation 6.77 as determined in the field by contractor.			
This RFI confirms modification discussed in the field by Trinet and discussed with the Design Engineer, SFDPW, and W/O personnel. Trinet's field survey shows the existing 3'x5' brick sewer on First Street to be approximately 11-inches lower than the grade depicted on the drawings. Trinet also checked the elevation of the existing SSMH (10-feet north of MH#501) and confirmed				Construct MH#501 at First St. STA 4+45 as shown on U-3021 with an invert elevation of 7.58 as determined by contractor.

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:            Accept Suggestion: <input type="checkbox"/>			
Reference drawing sheet U-3409 and attached sketch.				Per request to Jason Dunne (W/O) via email on 3/4/11 please provide the following information for review:			
During our excavation for the joint trench on the east end of Minna St. (STA 9+29) Trinet encountered the (E) 8" water main in Trinet's trench line, approximately 1 foot from our termination point. The existing alignment is different from what is shown in the contract drawings. The drawings do not show the water line crossing the joint trench. The alignment and grade of the water main changed in Trinet's excavation to avoid the adjacent catch basin. A 22.5 degree elbow is located in the center of the joint trench excavation. The elbow is rolled up to accommodate the grade change and there is a thrust block under the footing. Trinet does not believe that it would be safe to excavate under the water main for Trinet's duct bank without having the line shutoff. Extending the PG&E ducts to FOC will also place the connection point for PG&E's extension of the duct bank directly under the water main fittings and elbows. There is adequate clearance to install the 4" gas line above the water main and extend it out to FOC per contract. The top of the water main is 49" below FG at the south side of the joint trench, at the location of the gas line.				Horizontal (from a known point i.e. FOC along First St.) and vertical location of "top of water main". Horizontal (from a known point i.e. FOC along First St.) and vertical location of water line at "22.5 degree elbow". Determine if the water main is mechanically restrained with tie rods at each bend in questions. Approximate size of existing concrete thrust block at the "22.5 degree elbow".			
Trinet proposes to terminate the concrete encased duct bank approximately 5 ft. back from FOC. This would allow adequate room for Trinet to mandrel the ducts after the joint trench is installed without undermining the water main. PG&E could then extend their duct bank under the water main to connect to Trinet's water main. Please advise.

U-0114	PG&E Abandonment Schedule for Natoma St. at Second St.	Closed	03/09/2011	03/19/2011	05/07/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Nhi Tran      To: Turner Construction Company Gary Kruttsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			ANSWER:				
Reference Sheet U-1110 and U-2010			Accept Suggestion: <input type="checkbox"/>				
On 03/04/2011, M Squared met with a PG&E representative on site at Natoma and 2nd Street. The PG&E representative confirmed that none of their utilities had been abandoned in the area, and that the PG&E representative would be unable to provide a schedule for this abandonment.			Eric Zagol 3/18/2011 ***5/5/11 UPDATE***				
Per note 2 on sheet U-1110, the services for 77 Natoma and 83 Natoma were to be terminated by Feb 2011. To date, this work does not appear to be completed. In PG&E's letter to the TJPA regarding their schedule, there is no reference to work on Natoma Street at 2nd St.			77 Natoma and 83 Natoma services have been terminated, refer to USR Nos. 11 and 13 as executed by W/O, Turner and PG&E on 4/21/11.				
M Squared is unable to proceed with their sewer and water utility installation on Natoma St. west of shoring wall until PG&E has completed abandonment of their existing utilities.			As of 5/4/11, PG&E estimates that Natoma Street will be de-energized by 5/21/11. Coordinate USRs for the remaining electric ducts with Turner and PG&E.				
Please provide M Squared with an updated schedule for all PG&E's termination/abandonment work at 2nd and Natoma St.			***3/18/11 RESPONSE***				
			Per demolition and construction sequencing shown on sheet U-1110, water and sewer work shall commence after PG&E has completed their Phase I relocations in First St., Natoma St. and existing electric ducts are abandoned by PG&E.				
			PG&E services to 77 Natoma and 83 Natoma have been terminated as part of the Existing Terminal & Ramps Demolition Project. USRs for these services are currently being prepared by the TJPA's Representative (Turner). The USRs shall indicate the service conduits and cables that are abandoned subject to demolition as indicated in sheet U-1110.				
			To facilitate schedule, AECOM has requested PG&E to de-energize Natoma St. to the extent possible in an effort to re-sequence construction of the sewer. PG&E's response and schedule of abandonment is forthcoming.				
			As shown on U-3110 the water line could be constructed prior to PG&E abandoning their facilities. Pothole to confirm the water line can be constructed as shown on U-3110.

U-0121	AWSS Caps at Beale Street	Closed	03/31/2011	04/10/2011	04/06/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Colin Azevedo			<b>To:</b> Turner Construction Company Michelle Smith			<b>Answered By:</b> AECOM Technical Service Eric Zagol	
<b>Co-Author:</b>							
<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>		
1 - Current bid documents for Trade Group TG04.2R (AWSS system at Mission Street) call for capping of the AWSS system on Beale Street near the intersections with Howard Street and with Mission Street. Because of delays in the bid schedule for TG04.2R, the construction schedule dictates that these caps be completed well before the anticipated start of the TG04.2R field work. Please provide details so as to allow this capping work to be done in advance of the awarding of the TG04.2R scope of work.					Pothole the existing AWSS gate valve at the Beale at Mission street proposed cap location as shown on M-6 (Rev No. 1, 1/31/11) to determine if the existing gate valve has lugs. SFWD to inspect condition of gate valve once excavated, coordinate with SFWD inspector accordingly.		
2 - Please confirm whether the material required to do this work is available at the City of San Francisco.					Details for the capping work at Beale and Mission, and Beale and Howard will be provided following gate valve inspection.		
3 - Please provide direction as to how this scope of work should proceed.							
This capping is near critical path on the current construction schedule. An expedited response is requested.							
<hr/>

Co-Author:							
REQUEST:		SUGGESTION:	ANSWER:            Accept Suggestion: <input type="checkbox"/>				
While Excavating to install the water line on Natoma from the shoring wall to 2nd Street M Squared encountered an existing fire service going to 85 Natoma. This service is not shown on the drawings and is not in the specifications as one of the connections to be made to the new line. (See attached) Please advise on how to proceed.			SFPUC Customer Service Bureau data shows an active Domestic water, an active Fire water service, and 2 "killed" Domestic water services to 85 Natoma Street.  Coordinate with SFWD to confirm and locate the active Fire water line to 85 Natoma Street.  Provide information on location, size, and material for review.				
<hr/>							
U-0123.1	Fire Service @ 85 Natoma	Closed	04/11/2011	04/21/2011	04/18/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP                      Colin Azevedo		To: Turner Construction Company Michelle Smith	Answered By: Webcor Construction LP    Colin Azevedo				
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER:            Accept Suggestion: <input type="checkbox"/>				
Please note that on RFI #U-0123 the location of the fire service was incorrectly drawn. The fire service is actually located around Sta 2+35.  M Squared potholed at Sta 2+35 and discovered a 4" ductile iron pipe which is believe to be the active fire service for 85 Natoma Street.  Please advise.			Eric Zagol 4/15/2011: Per response to RFI U-0123, coordinate with SFWD Inspector to confirm the 4" DIP is the active fire water service to 85 Natoma Street.  Once confirmed, provide and install 8"x8"x4" tee and 4" gate valve.  Connection to existing 4" DIP fire service by SFWD. Excavate and shore for connection in accordance with the contract documents. Coordinate with SFWD Inspector for connection by SFWD.

U-0124	Conflict Between New 24" Sewer and existing AWSS Line on Beale	Closed	04/07/2011	04/17/2011	04/28/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Colin Azevedo      To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
M Squared has confirmed that the 14" AWSS Line shown on sheet U-3024 is in conflict with the proposed 24" VCP on Beale Street. The AWSS line is shown on the plan view but not on the elevation view on sheet U-3024. M Squared also shot the elevation of the existing sewer manhole. The elevation is 4.60, and not 4.70 as shown on the plans. The invert of the 14" AWSS is 6.2. (See attached) Please advise.					Accept Suggestion: <input type="checkbox"/>		
					Eric Zagol 4/26/2011: Construct temporary 2-10" VCP and new SMH as shown on revised U-3024 (rev 2 4/26/11) and SK-U-0018. Construct SMH #701 to allow for future 24" VCP connection as indicated.		
					Relocate AWSS line in Howard St., not included in package. Design forthcoming potentially to be included in TG04.2R.		
					Following relocation of the AWSS line, construct 24" VCP sewer per contract documents.		
U-0124.1	Conflict Between 24" Sewer and AWSS Line on Beale	Closed	07/07/2011	07/17/2011	03/27/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Colin Azevedo      To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Jeff Thiel				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Per the response to RFI#U-0124 a design to relocate the AWSS line @ Howard and Beale is forthcoming. Please advise the status of this design.			Eric Zagol 7/20/2011 Design is being performed by SFDPW BOE and will be tracked and issued via a forthcoming ASI. Schedule will be discussed with SFDPW BOE on 7/22/11. An update will be provided in the RUP OAC on 7/26/11.		Accept Suggestion: <input type="checkbox"/>		
					RFIs U-128.2 and U-124.1 were responded to in July of 2011 and provided temporary solutions to utility conflicts with a full resolution planned to come via future ASI. ASI 21, which addresses these issues, was uploaded to Constructware on 3/21/12 by Eric Zagol for design approval. A CR for this work will be issued in the near future.		
U-0125	Precast Catch Basin Bases	Closed	04/08/2011	04/18/2011	04/13/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Colin Azevedo      To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
In lieu of a cast in place base per CCSF DPW Standards, M Squared would like to propose the use of a precast catch basin. The catch basin barrel is attached to the precast base and it comes as one single unit. Before installing the precast catch basin base with barrel, M Squared will place a minimum 6" compacted level layer of crushed rock as the sub base. The proposed material					Accept Suggestion: <input type="checkbox"/>		
					Eric Zagol 4/12/2011 Precast catchbasin base is approved with conditions specified. The 5 foot catchbasin barrel shall be attached to the base section to form a monolith structure with the same dimensions, compressive strength and reinforcement as the CCSF DPW Standard cast in place base.

U-0127	Minna Street Sewer Manhole #201 in Crosswalk	Closed	04/11/2011	04/21/2011	04/13/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Colin Azevedo      To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				

## Co-Author:

## REQUEST:

Plan Sheet U-3007 shows MH#201 to be installed in the center of the crosswalk @ Minna and Second Street. The City of San Francisco typically avoids locating manholes in crosswalks, whenever possible, for ADA considerations.

Please advise if MH#201 should be installed outside of the crosswalk.

## SUGGESTION:

## ANSWER:

Accept Suggestion: ☐

Eric Zagol 4/13/2011: Sewer manhole location can not be adjusted due to an existing 8-inch Water and 4-inch HP Gas main. Construct manhole at the location per Plans.

In lieu of CCSF DPW Standard MH cover, provide an ADA complainant cover that meets the following specifications:

1. MATERIAL - The cast iron shall be in accordance with ASTM "Standard Specifications for Gray Cast Iron Castings" Designation A 48, Class 30. The tensile strength shall be considered the primary test for qualification.
2. FINISH- STANDARD FINISH SHALL BE RAW, AS CAST, AND YIELD A MINIMUM COEFFICIENT FOR FRICTION OF .6 OR BETTER IN WET OR DRY CONDITIONS.
3. CASTINGS - SHALL BE FREE OF BLOW HOLES, FLASHING, GRIND MARKS, AND OTHER SURFACE BLEMISHES.
4. Cover shall incorporate a "pic-hole" for lifting purposes.
5. ADA COMPLIANCY- CASTINGS SHALL HAVE HOLES NO GREATER THAN 1/2" IN THE DOMINANT DIRECTION OF MOTION, NO VERTICAL RISE OF GREATER THAN 1/4", IF THE RISE IS GREATER THAN 1/4" THE RISE/RUN RATIO NEEDS TO BE 1:2 AND THE MAXIMUM HEIGHT SHALL BE 1/2".
6. Cover shall BE MADE TO FIT EXISTING FRAMES OR be MACHINED to FIT EXISTING FRAMES PER SFDPW STANDARD PLAN 87,190.
7. Cover should be MADE of quality EQUAL TO OR GREATER than THE PRODUCTS MADE BY D&L Foundry or Equal, see attached product data sheet.

U-0131	Minna St PG&E Duct Bank Termination Points	Closed	04/19/2011	04/29/2011	04/22/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Colin Azevedo      To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
PG&E has confirmed Trinet is to terminate the PG&E duct back 3' outside the east and west walls of manhole 1319. Please confirm that the termination points of the PG&E duct bank as described will fulfill Trinet's scope of work and the future completion of the duct bank will be performed by PG&E.					Accept Suggestion: <input type="checkbox"/>		
Please note terminating the duct bank 3' outside the west wall of MH 1319 will leave the end of the ducts directly under the 24" high pressure water main. This may create an issue with future access for complete the duct bank by PG&E.					Eric Zagol 4/21/2011: 1 Joint Trench termination points at EMH 1319 and 1318 are as follows:		
					1319 East wall; PG&E would like the conduit capped and left 3 feet short of the vault with concrete encasement 15 feet short of the vault.		
					1319 West wall; PG&E would like the conduit capped and left 6 feet short (or 1-foot clear of existing 24-inch water, whichever is greater) of the vault with concrete encasement 15 feet short of the vault.		
					1318 North wall; PG&E would like the conduit capped and left 3 feet short of the vault with concrete encasement 15 feet short of the vault.		
Please advise.					The new termination points shall be considered as the limit of new conduit installation at EMH 1319 and 1318.

U-0132.1	Sewer Main Pressure Test	Closed	05/07/2011	05/17/2011	05/11/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Colin Azevedo			To: Turner Construction Company Gary Krutsch				
Co-Author:			Answered By: AECOM Technical Services Eric Zagol				
REQUEST:			ANSWER:				
Trinet has been advised by Mission Clay (the VCP manufacture) that the hydrostatic test described in the SF Standard Specification Section 319.02 is primarily for cast iron or ductile iron pipe and is not recommended for clay pipe. The National Institute of Clay Pipe and Mission Clay recommend a low pressure air test in accordance with ASTM C 828. See attached copy of ASTM C 828. Trinet proposes using this low pressure air test in lieu of the 10psi hydrostatic test called for in the standard specifications. The low pressure air test will allow test on pipe runs with no service laterals ie: MH501-502, 206-207, 203-204, 202-201. Please advise if this is acceptable.			Accept Suggestion: <input type="checkbox"/>				
With regards to the three remaining pipe runs that have lateral connections, please provide direction of how to plug the laterals if required to test the main lines.			=====UPDATE 5/23/2011=====				
			Kevin Chiu 5/23/2011 Below are links to devices for testing newly installed sewer pipes, specifically for main lines with active lateral connections that have been suggested within conversations between SFDPPW, SFPUC and AECOM				
			<a href="http://newsite.cherneind.com/pneumatic/Long_Test_Ball_MS2_Test_Ball/">http://newsite.cherneind.com/pneumatic/Long_Test_Ball_MS2_Test_Ball/</a>				
			<a href="http://www.munipipe.com/chemical_grouting.html">http://www.munipipe.com/chemical_grouting.html</a>				
			<a href="http://veoliaes-is.com/Services/Environmental-and-Waste-Management/Total-Sewer-Management/Chemical-Grouting">http://veoliaes-is.com/Services/Environmental-and-Waste-Management/Total-Sewer-Management/Chemical-Grouting</a>				
			Whether or not the contractors decide to utilize these devices is still up to them, as these are suggestions, not specifically required devices to be used for testing. It is the contractor's responsibility to perform testing on newly installed main lines, laterals, and manholes with their own means and methods while still protecting new and existing utilities.				
			=====				
			Eric Zagol 5/10/2011 ASTM C828 air test is an acceptable method to test sewer pipe in lieu of hydrostatic testing.

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
In response to RFI #U-0135, see attached piping plan, as requested in RFI response.					Accept Suggestion: <input type="checkbox"/>		
Once approved M Squared will coordinate with SFWD to perform the work.					Eric Zagol 5/10/2011 With the understanding that the 12" main, 12" GV, 6" service and 1" service are already installed, furnish and install 4" GV and DIP service and connect to 12" main per piping plan.		
**An expedited response is required as this is holding up all other water work on Natoma Street**							
U-0136	Existing Water Bypass @ Howard and Fremont	Closed	05/03/2011	05/13/2011	05/05/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Colin Azevedo      To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
While planning for the water tie in at Howard and Beale the Water Department discovered that there is an existing bypass line that will connect the existing water system (which is to be abandoned) to the new water system. This bypass is not shown on the plans. The Water department has requested that the existing bypass be excavated and plated so it can be cut and capped while they have the line shut down for the tie in on the new system at Howard and Beale the night of 05/04/2011.					Accept Suggestion: <input type="checkbox"/>		
Please advise.					Eric Zagol 5/4/2011 RFI is not accurate and locations are incorrect.		
					Based on a field meeting with W/O ,SFWD Inspector and AECOM on 5/3/11, SFWD identified an unforeseen existing bypass pipe and gate valve that connects the existing 8-inch main in Fremont Street (to remain) to the existing 8-inch main in Howard Street (to be abandoned). The existing 8-inch main in Howard Street will be abandoned once the new 12-inch main is Howard is active.		
					Once the new 12-inch main in Howard Street is placed into service and the existing main is abandoned, the existing bypass and gate valve from the existing 8-inch active Fremont main will be connected to the abandoned Howard Street main. To mitigate the situation the SFWD proposes to cut and cap the existing bypass such that the existing Fremont main is not connected the abandoned main in Howard Street.		
					Coordinate with SFWD to locate existing bypass and define the limits of excavation required to cap the existing bypass.		
					Excavate to expose bypass. Shore and plate per specifications. Restore per specifications.

U-0137	Verizon Ductbank conflict w/MH 701	Closed	05/03/2011	05/13/2011	05/10/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Colin Azevedo		To: Turner Construction Company Gary Krutsch		Answered By: AECOM Technical Service Eric Zagol			
Co-Author:		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>			
REQUEST: M Squared's sewer potholing on Beale (Sta 0+30) has indicated a conflict between an existing Verizon duct bank and MH# 701 on Howard Street. See attached drawing. The ductbank is approximately 18" wide x 18" deep. It is 2'4" to the top and it is slurry encased. Verizon underground locators have confirmed that this is live and serves Charles Schwabb building south of Howard on Beale Street. Please advise.				Eric Zagol    5/10/2011 Unforeseen condition, Verizon utility not shown in existing utility survey.			
				As suggested by Noel of (M Squared) during a site visit on 5/3/11 with W/O and AECOM, based on Noel's discussions with Mike Roybal (Verizon Field Engineer) and confirmed by AECOM based on follow up discussions with Mike Roybal (Verizon) and Pam Brown (Verizon), coordinate with Verizon and remove existing concrete encasement from existing duct to expose conduit in area of conflict. As directed in the field by Verizon, remove concrete encasement around duct from area in conflict to adjacent Verizon manhole. Move and support exposed Verizon conduit as required and directed by Verizon to construct manhole.			
				Coordinate with Mike Roybal (Verizon) at (415) 716-6736 such that a Verizon representative is present during the Verizon duct concrete encasement removal, moving and support install.			
				Restore Verizon duct to match existing concrete encasement following completion of sewer manhole.

U-0138	Temporary Telecom Pole Layout in Lot N and N'	Closed	05/09/2011	05/19/2011	05/10/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Joanne Filipas			To: Turner Construction Company Gary Krutsch				
Co-Author:			Answered By:AECOM Technical Service Eric Zagol				
REQUEST:			SUGGESTION:		ANSWER:		
Reference attached layout and submittal package#TG0406-014:					Accept Suggestion: <input type="checkbox"/>		
Due to the future use of lot N and N' prime, the temporary telecom poles must be relocated. The attached sketch indicates the proposed layout of these poles which has been coordinated with AECOM. Submittal Package#TG0406-014 has been submitted for formal approval of the pole locations.					Eric Zagol 5/10/2011 The pole alignment changes requested by CMGC along with additional requests from Telecommunications companies has required a pole and pole placement redesign. An ASI has been generated for the redesign with a CR forthcoming.		
Please confirm relocating the poles is acceptable.							
<hr/>							
U-0139	Existing Water Line on Beale in Conflict with New Sewer	Closed	05/09/2011	05/09/2011	05/10/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo			To: Turner Construction Company Gary Krutsch				
Co-Author:			Answered By:AECOM Technical Service Eric Zagol				
REQUEST:			SUGGESTION:		ANSWER:		
Today while trying to execute the USAR for the existing 12" water line on Beale Dan Helminiak with SFWD informed Webcor/Obayashi and M Squared that the existing water line will remain active until the water tie in at First and Natoma is completed and the existing 8" is capped at First and Howard as shown on sheet U-3116.					Accept Suggestion: <input type="checkbox"/>		
The water tie in and capping of the existing line on First Street is currently being delayed by separate issues and it is unclear when this work will be completed.					Eric Zagol 5/10/2011 Please clarify the question(s).		
Dan Helminiak suggested that the existing 8" water line running down Howard could be capped by the water department at one of the existing tees which would allow the decommissioning of the existing line on Beale.					Subject states "Existing Water Line on Beale in Conflict with New Sewer". Per U-1124 Demolition and Construction Sequence order, Beale Street sewer is to commence after existing water main in Beale Street is abandoned. Please clarify where and what the conflict is.		
Please advise.					Also, please confirm the following:		
					1. Is the new 12" main along Howard Street between First and Main streets active?		
					2. Is the new 12" main along Beale Street north of Howard Street active?		
					3. Is the new 12" main along Beale Street south of Mission Street active?		
<hr/>

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
In the response to our RFI # U-0016, Trinet was directed to connect the street lighting conduit on the west end of Minna into PG&E MH #1319 on 2nd St. At a field meeting on 5/10/11 with Eric Zagol and Robert Kawano, to discuss the alignment of the street lighting run for the relocated light on the west end of Minna, Eric advised that PG&E was contemplating a change in the connection point for this conduit run from MH 1319 to MH 1320. MH #1320 is located to the south of 1319 and further west towards the middle of 2nd St. Please confirm the connection point on 2nd St for the street lighting conduit.					Accept Suggestion: <input type="checkbox"/>		
					***5/26/11 UPDATE***		
					Supply point has been confirmed as PG&E EMH 1320. Coordinate connection location with PG&E Field Engineer.		
					Eric Zagol 5/19/2011 Related to Joint Trench changes and PG&E's de-energization of Minna Street after the response to RFI U-0016 was provided, PG&E has revised their electrical plans with respect to EMH 1319 and has indicated that the preferred location for new street light power would be EMH 1320.		
					In accordance with U-3201 Note 7, AECOM considers this RFI as the request to coordinate connections with BLHP and PG&E through the TJPA representative for new street light circuit connections. AECOM and the TJPA Representative are in the process of coordinating Street Light Service Orders with BLHP and PG&E. Once the Service Order is processed the final connection point will be provided.		
U-0142	Concrete Specifications for Sidewalk Replacement @ 555 Mission	Closed	05/16/2011	05/26/2011	05/18/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Colin Azevedo      To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Kevin Chiu				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
The sidewalk concrete @ 555 Mission (on Minna) is not the typical San Francisco sidewalk mix design. It is a colored concrete with what appears to be a sandblasted finish. Please provide the concrete specifications for repair and/or replacement of the sidewalk in this area.					Accept Suggestion: <input type="checkbox"/>		
					Kevin Chiu 5/18/2011 Sidewalks shall be constructed of a dark gray, Hi-con @ 5 lbs. per cubic yard carbon black based concrete finish, with 25 to 30 lbs. per 100 square feet of silicon carbide sparkle grains. The surface of the concrete shall be washed and rinsed using a stiff brush, and if necessary shall be sandblasted to remove the concrete surrounding the aggregate to minimum depth of 1/8 inch.		
U-0143	Demolition of PG&E Duct Bank Alongside (N) 18" Sewer Main on Minna	Closed	05/16/2011	05/26/2011	05/20/2011	Potentially	<input type="checkbox"/>

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
<hr/>							
From: Webcor Construction LP		Colin Azevedo	To: Turner Construction Company Gary Krutsch		Answered By: AECOM Technical Services Eric Zagol		
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>			
During excavation and shoring for installation of the 18" Sewer main along Minna St., between the (E) electrical vault @ Stn 1+80 (demolished) and (N) manhole # 201, Trinet was unable to save the entire length of the existing PG&E duct bank (currently abandoned), which runs along the south side of the sewer trench. Between stations Stn 0+95 and 1+25 (approx.) the duct bank had veered into the sewer trench and had to be demolished - see attached sketch. Please review and advise.				Eric Zagol 5/19/2011 U-1107 (rev 2 3/16/11) indicates that the existing 6-4" PG&E duct is to be protected in place.			
				2 of the 6 existing 4" conduits will be utilized by PG&E to provide temporary construction power to W/O Skids 1 and 2 along Minna Street.			
				Mandrel existing conduits east of STA 1+25 to STA 1+70 (where new conduit caps were to be installed per contract) to confirm that the existing conduits that were to be protected in place have no blockages.			
				Coordinate with PG&E as STA 0+95 is exposed to determine which 2 of existing 4" conduits will be utilized for temporary construction power.			
				Furnish and install 2-4" conduits concrete encased to replace those that were removed during sewer construction. Connect new conduits to existing that will remain to provide temporary construction power.			
<hr/>							
U-0143.1	(E) PG&E Duct Bank from EMH #1320 to Demolished EMH #1355	Closed	06/14/2011	06/24/2011	06/14/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Colin Azevedo	To: Turner Construction Company Gary Krutsch		Answered By: AECOM Technical Services Eric Zagol		
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>			
After further investigation of the existing PG&E duct bank between EMH #1320 and demolished EMH # 1355 (@ Anchor & Hope), Trinet found that there is only one unobstructed conduit between the two manholes. The unobstructed conduit is the one that already had a pull rope in place. Trinet had demolished a section of this conduit during excavation for sewer MH # 201 because it was in conflict with the shoring. Trinet replaced the damaged section (approx. 8 LF) on Saturday 6/1, and reconnected the pull rope in the conduit run. A sketch of the conduit run, depicting the section replaced, is attached. Please review and advise if one 4" conduit will be adequate from EMH #1320 to the west end of				Eric Zagol 6/14/2011 PG&E plans to use the existing conduit package to provide temp power to Skids 1 and 2. Mike Balmy of PG&E was notified and has confirmed that only 1-4" unobstructed conduit is required between EMH1320 and the cap at demolished EMH1355 for future temp power service.

U-0144	PGE Vault conflict with 24" VCP on Beale	Closed	05/17/2011	05/27/2011	05/20/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP                      Colin Azevedo		To: Turner Construction Company Gary Krutsch	Answered By: AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER:              Accept Suggestion: <input type="checkbox"/>				
PG&E confirmed the location of the inside of the east wall of PG&E manhole 1702 at Howard and Beale Street. Allowing for a 12" thick wall, the vault will be in conflict with the proposed alignment of the future 24" VCP, even with moving the alignment 1' further east as directed in RFI U-0124. The conflict could be avoided by moving the alignment another 6" further east. However this will cause a conflict between manhole #701 and the existing 14" AWSS. Additionally the Verizon duct bank conflict increases(RFI#U-0137). Please advise.			Eric Zagol    5/19/2011 As discussed in the field on 5/18/11 with Jason Dunne (W/O) and Noel McCarthy (MSquared) the exact location of the existing PG&E MH outside wall and the existing AWSS is currently unknown.				
			Adjust locations of MH#701, MH#702, MH#704 and sewer alignment east as required (~6" as mentioned) for the 24" VCP installation (new and future) to avoid the existing PG&E MH however not in conflict in conflict with the existing 14" AWSS line.				
			Note, the existing AWSS line will be abandoned North of Beale Street STA 1+10.				
			Confirm alignment (2-10" VCP and future 24" VCP) will clear existing AWSS valve at STA 0+70.				
<hr/>							
U-0144.1	PG&E Vault conflict with 24" VCP on Beale	Closed	06/30/2011	07/10/2011	07/01/2011	Potentially	<input type="checkbox"/>

U-0146.1	Proposed Pavement Reconstruction	Plan for Minna Street	Closed	05/27/2011	06/06/2011	05/27/2011	Potentially <input type="checkbox"/>
From: Webcor Construction LP		Colin Azevedo	To: Turner Construction Company Gary Krutsch		Answered By: AECOM Technical Service Eric Zagol		
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>			
Attached, please find a sketch detailing Trinet's revised pavement reconstruction plan for Minna St., between 1St to 2nd Streets, which incorporates Balfour Beatty's request that Trinet stop the new pavement section 5' north of centerline of the CDSM shoring wall (2' north of demarcation line).				*** 5/31/11 Revision ***			
				Restore entire width of Minna street using concrete road base and ACWS curb to curb in accordance with Contract drawings and DPW Order No. 176,707 (and latest revision 178,940) Section 11.			
				5/27/11 Response:			
				Please provide BBIs traffic control plan and construction logistics plan for Minna St. during pre-trenching and CDSM shoring wall construction.			
				AECOM's specific questions are as follows:			
				1. What portion of Minna St. will be maintained for vehicular traffic during pre-trenching and CDSM wall construction? Please provide dimensions from face of north curb along Minna St.			
				2. Is a traffic barrier (k-rail or other) planned to be installed along Minna St. during pre-trenching and CDSM wall construction? Provide location, dimension from face of north cur along Minna St.			
				3. If a traffic barrier is planned, what is the schedule for the installation?			
				4. Once pre-trenching is complete will any of the pretrenching trench area be restored and used for vehicular traffic?			
				5. Once the CDSM shoring wall is constructed will the traffic barrier move south and the vehicular area be widened? If so by how much? Please provide a dimension from the face of north curb along Minna St.			
				This information is critical in order to provide a responses to this RFI as well as RFI U-147 and U-148 in an effort to determine how RUP will restore Minna St.; crowned or sloped, and how the Minna St. restoration conforms to the future Transit Center Minna St. design.

From: Webcor Construction LP Colin Azevedo			To: Turner Construction Company Gary Krutsch				
Co-Author:			Answered By: AECOM Technical Service Eric Zagol				
REQUEST:			SUGGESTION:		ANSWER:		
Please find attached a revised (Rev2) pavement Reconstruction Cross Section drawing for Minna St., which details Trinets understanding of the Engineer's latest response to RFI#U-0146.1 and RFI#U-0147. Please confirm pavement reconstruction can proceed per the attached detail..					Accept Suggestion: <input type="checkbox"/>		
			Eric Zagol 6/7/2011 Street restoration detail is acceptable with the following corrections:				
			1. The southern extent (limit) of concrete base and ACWS between STA 2+30 and First Street shall be based on U-5101 Detail 6 and the limit of excavation required to do perform the Demolition and New utilities work in Minna Street. Conform to final saw cut lines as indicated in Detail 6.				
<hr/>							
U-0147	Existing Top-Of-Curb Grades @ Minna Driveways for 575 Mission Building	Closed	05/27/2011	06/06/2011	06/01/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo			To: Turner Construction Company Gary Krutsch				
Co-Author:			Answered By: AECOM Technical Service Eric Zagol				
REQUEST:			SUGGESTION:		ANSWER:		
The existing driveways entering the 575 Mission St building, are depressed between 2 ½" to 3" below the adjacent top-of-curb and sidewalk grades - see attached drawing depicting the driveways. This condition seems to be a consequence of repeated overlaying of Minna street, which has resulted in a curb height in many areas far less than the City standard of 6 inches. The street grade along the north side of Minna along the 575 Mission building ranges from 3 ½ to 4 ½ inches below top-of-curb grade.					Accept Suggestion: <input type="checkbox"/>		
Trinet has been directed in the field by Jason Chin, and by the Engineer in RFI #U-0146, to construct the new roadway with finish grade at curb line 6" below top-of-curb grade. This is consistent with City standard plan # 87,169. The new roadway grades will result in 3" to 3 ½" of exposed curb height at the driveways to 575 Mission, which is considerably deeper than the 1" called for in the San Francisco standard plans for driveway construction (plan # 87,171). It will also not be possible to raise the street grade at the driveways without impeding road runoff drainage and causing ponding.					Eric Zagol 5/31/2011 Restore pavement along existing curbs and driveways along the north side of Minna St. in accordance with Contract drawings and DPW Order No. 176,707 (and latest revision 178,940) Section 12 to match existing flow line elevations at curbs and driveways shown on U-1001. 6-inch curb and driveways along Minna St. will be reconstructed at a later date as part of the Transit Center Project.		
Please review and advise.

U-0148	Pavement Reconstruction Plan for West End of Minna Street - Stn 2+15 to 2nd St	Closed	05/27/2011	06/06/2011	06/07/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Colin Azevedo      To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Please provide a pavement reconstruction drawing, or typical cross section detail, for the west end of Minna St from Stn 2+15 to 2nd St. Trinet had planned to reconstruct the street in this area from curb to curb. We find however, that there is a grade difference of approximately 6 inches between top-of-curb on the north side of the street and the south side, with the south side being at the higher grade. The construction detail approved in RFI #U-0146 (Trinet #094) cannot be utilized in this area, because the street already has a cross slope of approx. 2% from south to north.					Accept Suggestion: <input type="checkbox"/> Eric Zagol    6/7/2011    See response to RFI 146.2		
U-0149	MH#701 Conflicts with existing utilities	Closed	05/27/2011	06/06/2011	06/09/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Colin Azevedo      To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
The 14" AWSS line west of MH#701 was found to be constructed thru the roof of the existing 3x5 sewer. Several bends were used in the AWSS line construction and these bends included lugs and tie rods. As a result of the presence of these tie rods and fittings we can now not move MH#701 any further west. To install the new 24" VCP in a straight line (perpendicular to MH wall), and in order to get by the existing PGE MH we will have to pour the pipe wall and 2" of the internal diameter of the pipe into the west wall of MH 701. Please advise on how to proceed.					Accept Suggestion: <input type="checkbox"/> Eric Zagol    6/8/2011    Deflect VCP pipe joints in accordance with ASTM C425 (max 1.8 degrees per joint) to allow for 6" of deflection to avoid the existing PG&E MH and connect to MH#701 as shown in the attached SK-U-0019.  Confirm in the field that 6" deflection will allow the 24" VCP to be clear of the MH wall.		
U-0149.1	MH#701 Conflicts with existing utilities	Closed	06/30/2011	07/10/2011	07/01/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Jonathan Flaming      To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Kevin Chiu				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
In response to RFI U-0149, please note the following:  M Squared confirms that 6inch deflection of the VCP will allow the 24inch pipe to be clear of the manhole wall.					Accept Suggestion: <input type="checkbox"/> Kevin Chiu    7/1/2011    RFI does not request additional information.

From: Webcor Construction LP      Colin Azevedo      To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Please see the attached detail from Trinet Construction Inc for their proposed solution to mitigate the incorrect installation of CB203 identified in Field Condition Report 40C.					Accept Suggestion: <input type="checkbox"/>		
Please advise if the proposed solution is acceptable.					Eric Zagol 6/1/2011 The proposed solution has been reviewed and approved by SFDPW BOE and is acceptable. Construct catch basin as shown in the Trinet proposed construction detail attached to CR40C. Construct the clean out on the cast iron trap such that it is accessible from above for maintenance via removal of the grate. Coordinate inspection during installation with DPW BCM inspector through the TJPA's Representative.		
U-0151	Additional Sewer Lateral Connection for 100 1st Street	Closed	06/02/2011	06/12/2011	06/08/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Colin Azevedo      To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Trinet has discovered an additional sewer lateral for the 100 1st Street building which was not connected to the new 24" sewer main - see attached sketch. The lateral is located at sta. 7+09 and services a single toilet and the rear of the building. This lateral was not shown on the plans and there was no vent in the sidewalk to indicate the existence of a lateral. Trinet potholed the lateral in the sidewalk and a 4" cast iron lateral, a 4" cast iron trap and a 4" cast iron vent pipe capped 2' below grade. Please confirm Trinet is to tie the lateral into the new 24" sewer main on Minna. Also, please advise what is to be done with existing cast iron trap and vent pipe assembly which are not up to current DPW standards.					Accept Suggestion: <input type="checkbox"/>		
					Eric Zagol 6/8/2011 In accordance with U-3000 General Note 12, contractor was to verify that there are no active sewer lateral connections to the existing sewer prior to sewer demolition.		
					Please provide the elevation of the existing sewer lateral and the location of existing 4" cast iron vent pipe for review.		
					Renewal of this lateral will be discussed with TJPA and 100 First St. property owner, final direction forthcoming.

U-0151.1	Additional Sewer Lateral Connection	Closed	06/29/2011	07/09/2011	07/05/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jonathan Flaming			To: Turner Construction Company Gary Krutsch			Answered By:AECOM Technical ServiceEric Zagol	
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
<p>This is a follow-up to the request by the Engineer in his response to W/O RFI #U-0151 (Trinet RFI #097) for additional information relating to the 2nd sewer lateral connection for the 100 1st St building. Trinet also clarifies the issue of the existing 4" trap on the line, which was raised in the original RFI.</p>					Eric Zagol 7/5/2011 In reference to RFI-151 and 151.1:		
<p>The sewer lateral is located @ Stn. 7+09 and the invert elevation of the 4" cast iron sewer lateral pipe at face-of-curb is 14.6'. The elevation for the top of the new concrete encased ductbank @ Stn 7+09 is 13.85'. The sewer lateral was therefore not in conflict with the new joint trench utilities.</p>					1. Reconnect existing lateral to new 24" Minna St. sewer in accordance with SFDPW Standard Plan 87,196.		
<p>With regards to the existing 4" trap on the line, Trinet checked with the SF Plumbing department which advised that a 4" cast iron trap was adequate for a 4" sewer lateral. The existing trap was therefore in compliance with the SF plumbing code. Trinet advised Jason Chin of this in the field and he agreed that the trap did not need to be replaced.</p>					2. Extend fresh air inlet and air inlet cover to existing sidewalk grade.		
<p>The 4" cast iron vent pipe for the trap did not extend to street level but was capped-off approximately 18" below grade. Per field discussions with Jason Chin, Trinet extended the trap vent piping to grade and installed a street vent frame &amp; cover in the sidewalk.</p>							
<hr/>							
U-0152	Alternate Manhole Testing Method	Closed	06/02/2011	06/12/2011	06/07/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo			To: Turner Construction Company Gary Krutsch			Answered By:AECOM Technical ServiceEric Zagol

U-0157	Pressure Testing for Sewer Manhole #'s 501 & 502 on 1st St.	Closed	06/28/2011	07/08/2011	07/08/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jonathan Flaming To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
<p>This RFI is a follow-up to discussions in the field with AECOM and the SFDPW Inspector and Trinet, regarding Trinet's inability to perform a pressure test on sewer manholes 501 &amp; 502 on 1st St. due to field conditions. MH #502 is constructed around the existing 3x5 brick sewer on one side (per SF Standard Plan #87,184) and Trinet has no means of plugging the brick sewer effectively to withstand a pressure test.</p> <p>In the case of sewer MH #501, the original design was similar to MH #502 and a pressure test would not have been possible. The revised design (see attached drawing) includes a temporary 24" corrugated PVC pipe stub extending south from the manhole and connecting to the existing 3x5 brick sewer. The inside of the temporary 24" pipe stub is also corrugated, and therefore cannot be sealed with an inflatable pipe plug, as would be required to perform a pressure test of the manhole structure.</p> <p>Please confirm that a pressure test will not be required for sewer manholes 501 &amp; 502 on 1st St.</p>					<p>Eric Zagol 7/8/2011 Confirmed. Pressure tests for sewer manholes #501 and #502 are not required due to the restrictive conditions.</p>

REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
<p>During our sewer work at 2nd and Natoma M Squared discovered that the Telecom Vault shown on the drawings is in fact significantly larger in the field than is shown on the plans. In order to be able to shore for MH#301 construction M Squared has had to move the location of MH four (4) feet east along Natoma. As a result the jack and bore alignment is now a few inches south of what is shown on the plans.</p> <p>Please confirm that these adjustments are acceptable.</p>					<p>Eric Zagol 7/20/2011 Adjustments proposed are acceptable.</p> <p>Since the adjustment pushes the MH and cover into the crosswalk path of travel, in lieu of CCSF DPW Standard MH cover, provide an ADA complainant cover that meets the following specifications:</p> <p>1. MATERIAL - The cast iron shall be in accordance with ASTM "Standard Specifications for Gray Cast Iron Castings" Designation A 48, Class 30. The tinsel strength shall be considered the primary test for qualification.</p> <p>2. FINISH- STANDARD FINISH SHALL BE RAW, AS</p>

REQUEST:			SUGGESTION:		ANSWER:		
M Squared potholed the location of the existing FM to the limits in the drawing provided in the response to RFI U-0160.1. M Squared located the FM within this pothole.					Accept Suggestion: <input type="checkbox"/>		
See attached pothole findings.					Unforeseen condition, location of existing Sludge FM in the field varied from that shown on the drawings. Refer to SK-U-0021 and SK-U-0022 attached showing the revised horizontal and vertical alignment to accommodate connection to Sludge FM as located in the field.		
Please direct M Squared how to proceed.							
U-0161	Unknown Concrete Structure in Investigative Trench	Closed	07/29/2011	08/08/2011	08/01/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
M Squared discovered an obstruction in the Beale Street investigative trench on station 2+55 approximately 25' west of centerline. The obstruction appears to be a 2'-3' thick concrete wall starting directly below the street base and extending down to an unknown depth. M Squared began demoing the obstruction yesterday believing it was part of a concrete encased PG&E trench. It is now known it is not part of any duct package. Please advise on how you would like to proceed.					Accept Suggestion: <input type="checkbox"/>		
					Eric Zagol 8/1/2011 Unknown non utility structure. A similar structure was found in AECOM's subsurface investigation trench at Beale Street Station 2+80.52 as shown in Specification Section 020630 Appendix A.		
					Protect in place. Non utility structures (i.e. walls) within zone of CDSM shoring wall and Transit Center footprint are to be removed by Buttress/Shoring/Excavation (BSE) contractor.		
U-0162	Manhole #602 Orientation	Closed	08/03/2011	08/13/2011	08/09/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jonathan Flaming To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
The PG&E manhole at Station 2+55 is actually further south than is shown on the drawings. As a result of this the new water main on Natoma Street was installed in a different alignment than shown on the drawings. In order to excavate and shore for the new Manhole #602, without damaging the new water main M Squared will have to install the manhole at a different alignment than what is shown on the plans. M Squared will maintain the correct internal manhole dimensions per DPW standard drawings.					Accept Suggestion: <input type="checkbox"/>		
					Eric Zagol 8/9/2011 Construct sewer MH #602 to avoid existing water main as shown in the sketch provided. Maintain internal manhole dimensions, wall thickness, and steel reinforcement per DPW Standard Plans #87,182.

U-0173	Valve control panel pick-up	Closed	09/24/2011	10/04/2011	10/05/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Colin Azevedo <b>To:</b> Turner Construction Company Steve Cunningham			<b>Answered By:</b> Turner Construction Company Jeff Thiel				
<b>Co-Author:</b>							
<b>REQUEST:</b> M Squared's supplier, Control Systems West, have been coordinating with SFWD regarding which of the City's panels will be used for the TG04.2 project. Tom Reid with SFWD has designated 3 panels to be used for this project. These panels are to be picked up at SFWD, transported to Control Systems West for testing, programming etc and then returned to the job for use at 3 of the valve locations. As the panels have been selected M Squared would like to begin the process of getting the panels to their supplier so they can begin the work.  Please provide the name and contact information for the person with whom M Squared can coordinate the pick up of the 3 units.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Jeff Thiel 9/26/2011 Contact Bill Gunn at (415) 706 0688 or W.Gunn@sfgwater.org  Per Section 01 10 40, Coordination, Article 1.6 C, this RFI does not fall under the acceptable uses for an RFI as it is not being used for an interpretation of the Contract Documents.  RFIs used for questions regarding coordination will be rejected in the future.		
U-0174	AWSS Antenna location at Location 1	Closed	09/27/2011	10/07/2011	10/11/2011	Potentially	<input type="checkbox"/>

REQUEST:			SUGGESTION:		ANSWER:		
Per the response to RFI #U-0176 a field meeting was attended by Michael Smith and M Squared. M Squared received direction to perform additional potholes further west of First St on Howard St. Please see attached pothole findings. Please advise how you would like to proceed.					Accept Suggestion: <input type="checkbox"/>		
					Michael Smith's (SFDPW) response, "Please refer to comments on attached sheet. SFDPW Response: This conflict between the existing AWSS line and utilities at the original design location are unforeseen field conditions due to incorrect information being furnished to the City. Thus the motorized gate valve vault is being relocated west of the original location. The contractor shall pothole 10-feet west of Pothole No. 1B and 10-feet east of Pothole No. 1A to verify that there is adequate clearance for installing a horizontal offset and motorized gate valve vault the approximate location of Pothole No. 1A. Please notify the engineer of the potholing schedule in order that we can request the major utilities to attempt to identify the 4-inch steel pipe running parallel on Howard Street." Signed and Dated 11/18/11 (see attached)

U-0176.2	AWSS Conflicts @ Location 7	Closed	01/18/2012	01/28/2012	02/16/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Colin Azevedo	To: Turner Construction Company Steve Cunningham		Answered By: Turner Construction Company Jeff Thiel		
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>			
Per response to RFI#U-0176.1 M Squared performed additional potholing at Location 7.				Jeff Thiel   2/15/2012 Michael Smith's (SFDPW) Response.			
Please see the attached pothole findings.				"Furnish and install horizontal offset as shown on the attached drawing in order to locate the proposed concrete valve vault with minimum 6-inches clearance to the existing electrical duct bank running on the North side of Howard Street. Adjust nipple lengths as required between elbows and to connect into the ends of the existing cast iron pipes. Concrete valve vault and placement of motorized gate valve shall otherwise be shown on drawings MA-22 and MA-25.			
Please advise how you would like to proceed.				Work for installation of new concrete valve vault and gate as show on Drawing MA-18 shall be deleted from the scope pending installation of the new valve vault as shown on the attached drawing."			
Note: The 4" Unknown Utility was confirmed to be an abandoned PG&E gas main. On 1/10/12 PG&E drilled the line and confirmed it to be abandoned.				Signed and dated 2/13/12.			
				Christina Young   2/15/2012 Pending TJPA approval, a CR will be issued.

U-0177	Ductbank Demo on Fremont St	Closed	10/04/2011	10/14/2011	10/10/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Steve Cunningham			Answered By: AECOM Technical Services Eric Zagol				

## Co-Author:

## REQUEST:

See attached sketch.

The duct bank shown on Fremont Street to be demolished is in fact underneath the curb and gutter and portion of the sidewalk on Fremont St.

In order for M Squared to remove this duct bank it will require us to close the west sidewalk on Fremont St, demo and remove the sidewalk, remove the ductbank and then replace the sidewalk.

Currently the east sidewalk is closed also due to BBI activity.

Please advise how you would like to proceed.

## SUGGESTION:

## ANSWER:

Accept Suggestion: ☐

Eric Zagol 10/6/2011 Coordinate with PG&E to confirm the duct indicated in the M2 sketch is PG&E's 6-6" duct from PG&E's EMH 7605.

Demolish and remove the 6-6" duct segment between STA ~2+40 (at the gutter) and the demarcation line south of shoring wall. The intent is to remove the segment within Natoma Street. The segment south of STA 2+40 (STA 2+40 to STA 1+85) can be abandoned in place.

Provide cap at STA 2+40 instead of STA 1+85 shown in the plans.

PG&E will break in and connect to the existing 6-6" duct at STA 1+85 as part of PG&E's Phase II relocations.

U-0178	Sludge line layout on Mission between Beale and Main	Closed	10/04/2011	10/04/2011	11/08/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Steve Cunningham			Answered By: AECOM Technical Services Eric Zagol				

## Co-Author:

## REQUEST:

Continued potholing on Mission Street between Beale and Main has revealed additional grade conflicts on the proposed alignment for the new 12" steel sludge line. Some of the utilities are not as shown on the drawings nor marked in the field by USAN. See attached sketches.

Please advise if M Squared is to continue potholing on Mission Street as it may be necessary to excavate the entire length of the trench between Beale and Main to locate and map all conflicts.

## SUGGESTION:

## ANSWER:

Accept Suggestion: ☐

Eric Zagol 11/7/2011 Modifications to the 12" Sludge FM are currently being evaluated under ASI-018. Revised plans and specifications forthcoming following redesign and execution of ASI-018.

From: Webcor Construction LP                      Colin Azevedo                      To: Turner Construction Company Steve Cunningham			Answered By: Turner Construction Company Jeff Thiel				
Co-Author:							
REQUEST:  Some of the existing utilities are not shown on the drawings and have been installed on top of the existing 12" AWSS line. Due to the proximity and volume of these utilities it is not possible to even hand excavate down to the existing AWSS line to verify its location and depth. Please see attached pothole information. Please advise.			SUGGESTION:  the following response received 10-17-2011 does provide direction in this matter: It shall be the contractor's responsibility per the Contract Documents to perform the required potholing in order to identify the existing AWSS facilities prior to actual excavation. Background utility information was provided by TJPA/consultatns and shall be verified in the field by contacting Underground Service Alert (USA). Direct conflicts oted during potholing shall be directed to the utility owner(s) for relocation/removal as required to perform the contract work. NOTE: email from Rick Buellesbach 10-18-2011 requests an answer to the question.			ANSWER:            Accept Suggestion: <input type="checkbox"/>  UPDATED RESPONSE (11/18/11) Michael Smith's (SFDPW) response, Refer to comments on attached sheet. These comments supercede response provided on 10/17/11. SFDPW Response: This conflict between the existing AWSS line and utilities are unforeseen field conditions due to incorrect information being furnished to the City. There are no design alternates at this location due to the necessity of removing the existing cross that was capped on the First Street side outlet to accommodate the utility relocation work for the proposed transit center. The engineer will contact the owners of the utilities in conflict with the AWSS facility for resolution." Dated 11/18/11 (see attached)

U-0180	Conflict with CB 305	Closed	10/10/2011	10/20/2011	10/17/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Steve Cunningham			Answered By: Webcor Construction LP Richard Buellesbach				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
While excavating to install CB305 M Squared encountered a large unknown concrete structure. The concrete structure is in conflict with CB305. CB305 cannot be installed as planned. See attached photo.					Accept Suggestion: <input type="checkbox"/>		
Tsu-Ling with AECOM and Alberto with SFDPW reviewed the situation in the field and agreed the solution was to salvage the existing CB where CB 305 was to be installed. This work was performed on 10/7/2011 under the inspection of SFDPW.					As determined during a site visit on 10/7/11 with M Squared, AECOM, SFDPW and W/O; the existing unforeseen condition, a large concrete structure, is in conflict with CB 305 and the installation of a new catch basin would require an extensive amount of unforeseen demotion.		
Please confirm.					In lieu of installing a new catch basin barrel to replace existing, modify the existing catch basin as follows:		
					1. Clean interior walls and bottom. 2. Apply 1/2" thick uniform layer of mortar on interior walls and bottom. 3. Install cast iron trap. 4. Install pipe culvert and connect to MH#305 as shown in Plans.		
					New culvert size and invert shall match existing culvert at catch basin. Use ductile iron pipe if depth of cover is less than 3 feet.		
U-0181	Unknown subsurface structure on Beale	Closed	10/13/2011	10/23/2011	10/24/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Steve Cunningham			Answered By: AECOM Technical Service Eric Zagol

REQUEST:			ANSWER:				
Please refer to drawing MA-15 and response to RFI U-0190.			Accept Suggestion: <input type="checkbox"/>				
As a result of differing site conditions between Sta 8+50 and 9+00, the new location of the HP fire hydrant shown on drawing MA-15 is to remain in the existing location per response to RFI U-0190.			Jeff Thiel 11/21/2012 Response per Michael Smith (SFDPW),				
Please provide a detail drawing showing the new hydrant lateral with all SFDPW requirements for HP hydrants in an areaway.			"Please find attached a sketch for changing the design for replacing the existing HP hydrant at the above location.				
			The existing hydrant is in an "areaway" since the property at this location has a basement that extends under the sidewalk.				
			The proposed new hydrant off the proposed 16" DI main will be replaced in this "areaway" structure. Please see attached sketch. The originally proposed hydrant lateral that bends 90-degrees as shown in the contract documents drawing MA-15 will be deleted from the work scope. There is no change in work for drawing MA-5. The attached drawing HPL-5142.1 is also shown on the AWSS standard drawings which are part of the contract work.				
			The contractor is cautioned to use extreme care in this area due to the basement below and to prevent issues with water leakage from the street/sidewalk."				
			See attached.

U-0191	Power Source at Location #1, #2 & #7	Closed	01/16/2012	01/26/2012	02/27/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Colin Azevedo      To: Turner Construction Company Steve Cunningham			Answered By: Webcor Construction LP    Jeff Heath				
Co-Author:							
REQUEST:			ANSWER:				
In order for the controller enclosures for the motorized gate valves at Location #1, #2 and #7 to be operational a power source will need to be provided at each enclosure location.			Accept Suggestion: <input type="checkbox"/>				
Please confirm that the owner has applied to PG&E for the power sources at these locations and advise on the status of these connections.			Revised Responce 2/27/2012				
SUGGESTION:			Jeff Thiel 2/23/2012 The TJPA has completed its application to SFPUC for power to AWSS facilities. The SFPUC has requested a minimum of four (4) weeks to make these connections. Sub contractor to coordinate meeting with SFPUC and PG&E prior to start of work.				
			Below is the MOP for coordinating power source connection as confirmed by Mathew Ho of the SFPUC.				
			1. Contractor to schedule coordination meeting with PG&E, PUC (Mathew Ho or Michael Mack) and Turner. Contractor to provide a construction schedule and set up Pre-con with PG&E (Per SFPUC request to inform them when Contractor expects to trench for electrical service and have the power pedestals installed)				
			2. Contractor to schedule PG&E trench inspection which is needed after contractor installs conduit but before closing the trench so that PG&E can prove the conduit via mandrel test (30days notice needed, Call PG&E inspection # 415-695-7519 and provide PM# located on drawing and provide PG&E job owner contact as Matt Herron)				
			3. PG&E to pull cables				
			4. Schedule a DBI inspection of the meter pedestal (Dave Green DBI 415-558-6654, forward PG&E a copy of the DBI green tag)				
			5. Once green tag is applied, PG&E to set up meter and then energize.				
			=====				
			Original Response 1/26/2012				
			The TJPA has completed its application to SFPUC for power to AWSS facilities. The SFPUC has requested a minimum of four (4) weeks to make these connections. Sub contractor to coordinate meeting with SFPUC and PG&E prior to start of work.

U-0191.1	Power Source at Location #1, #2 & #7	Closed	03/21/2012	03/31/2012	05/01/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP                      Colin Azevedo		To: Turner Construction Company Steve Cunningham		Answered By: Transbay PMPC		Cory Traylor	
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>			
Recent meeting on the AWSS project resulted in the response to RFI#U-0191 being revised to include a procedure to be followed once the controller cabinets were ready to accept power. However, what was sent in the revised response was a new scope of work followed by the mentioned procedure.				Cory Traylor 5/1/2012 In accordance with PG&E Greenbook standards and practices, power connections for motorized gate valve equipment shall be installed at the referenced locations per the attached PG&E sketches, directions and requested equipment requirements. Work not outlined in the attached documents shall take place per contract drawings.			
The contract drawings show M Squared's work beginning at pull boxes and going to the controllers. M Squared's interpretation of the drawings sent in the revised response to RFI#U-0191 is the scope of work that goes from the pull boxes to PG&E manholes. This is unclear because the PG&E drawings are not comparable with the contract drawings.				Final coordination for connections shall take place in the field per note 7 on drawings MA-29 and MA-31.			
Please clarify the intent and scope of the PG&E drawings. Please clarify how the PG&E drawings correlate with the contract drawings.				Connecting for power per the attached PG&E sketches/direction has been approved by SFDPW-Bureau of Engineering.			
U-0191.2	Amperes Interrupting Capacity (AIC) at AWSS Location #1 (Market St.)	Closed	05/23/2012	06/02/2012	06/21/2012	Potentially	<input type="checkbox"/>

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>			
Please refer to RFI U0191.1 and the attached drawings MA-1, MA-29 and MA-31.				Request 1. - Please see attached file for Location 1 labeled "555 Market St. AIC.pdf" letter.			
1. As per response to RFI U-0191.1, the SFDPW-Bureau of Engineering sketches and letter for the AIC only addresses the motorized gate valve number 21 at Location #7. As new power service will be required at gate valve number 2, Location 1, please provide an AIC letter for this location.				Request 2. - Please see attached PDF file "comments_transbay.pdf" containing comments from Matt Herron of PG&E clarifying the scope of work for the PG&E power connection points at locations #1 and #7.			
2. Please provide a conformed drawing of the the PG&E clarification sketches provided in RFI U-0191.1 by revising the drawing sheet MA-29 and MA-31, respectively. It is unclear from the PG&E sketches whether the scope from the original contract drawings (MA-29 and MA-31) have changed.				Also, please see information on location of manhole #5414 below per PG&E Matt Herron below;"The Vault 5414 is in the South Side, sidewalk of Market St. about 10' East of the West Property of 555 Market St. There are large vaults IFO 555 Market St. identified as 7300-P/7301-P/7302-P, Vault 5414 is roughly 30' West of those vaults."			
				Please contact Matt Herron of PG&E when sub-contractor is ready for a PG&E crew to mark the location for the core. Also, Please give Matt Herron

<p>REQUEST:</p> <p>M Squared has discovered that either SF Park or MUNI have installed what appear to be sensors in the street surface along Mission Street. See photo attached.</p> <p>They existing between Fremont and Beale in particular.</p> <p>As the AWSS line is installed along Mission St from 2nd to Main these sensors will be in conflict. Please confirm these sensors will be removed prior to trenching.</p>		<p>Jeff Thiel 4/12/2012 Per email conversation with Alex Demisch of the SFpark Project (SFMTA), any parking sensors found on Mission Street from 2nd Street to Main Street are inactive. SFPark's vendor plans to remove these parking sensors late April or early May of this year 2012. SFPark realizes TJPA plans to conduct AWSS construction work in the upcoming months and has asked if it was possible to for the TJPA sub-contractor, once AWSS construction begins, to separate the parking sensor equipment from other construction debris so that SFPark may dispose electronic waste properly if there are any parking sensors still remaining. However, if the parking sensors cannot be separated then SFPark understands they will end up being demolished from TJPA AWSS construction work.</p>

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Please refer to attached detail 3/U-5001.				Proposed modification is acceptable.			
Detail 3 on sheet U-5001 which shows the connection detail for 12" HDPE to existing 10" steel, uses a 10" steel to 12" sleet reducer and then using a 12" steel to 12" HDPE Coupling in order to connect new sludge main to existing sludge main.							
Our preference is to use a 10" steel to 10" HDPE coupling and then install a 10" HDPE to 12" HDPE Reducer. As the O.D of the existing sludge is unknown it will cause significant delay in the ordering of the 10" steel to 12" steel reducer as we will have to get the OD at the connection point and then order the material. Even with this piece of material, it will be extremely difficult to get a welder into the trench to weld the reducer on to the exiting pipe as a result of the amount of utilities which were discovered in potholing.							
The use of the 12" HDPE to 10" HDPE reducer eliminates the need for a welder in the trench.

**Co-Author:****REQUEST:**

Please refer to spec section 33 34 10-3.1 H

The method of HDPE pipe testing listed in the contract documents differ from the testing methods provided by the pipe manufacturer: The specifications call for the pipe to be filled 24hrs in advance and then the pipe pressurized to 115psi for a duration of 4hrs, The manufacturer's method involved filling the line with pressure for 3 hrs to allow expansion etc. in the pipe and then adding additional water, per Table 2 of the attached document. Once this additional water has been added the pressure can hold for the duration listed. Or alternatively allowing a 5% fluctuation in the pressure target for the test over 1 hour.

Please see attached pipe manufacturer's data attached and provide direction. M Squared believe that the testing method in the specifications is not suitable for HDPE due to its flexibility and would be more suited to steel pipe.

**SUGGESTION:****ANSWER:****Accept Suggestion:** ☐

Eric Zagol 7/3/2012 It is acceptable to perform HDPE Hydrostatic Testing per HDPE pipe manufacturer's recommendations. The test phase shall be performed based on the specified "Test Phase - Alternate 2" in manufacturer's data sheet for 3-hour test.

M Squared is requesting the use of jetting (as described in Section 703.08 of the City and County of San Francisco Standard Specifications) as a method to gain the necessary levels of compaction for the Sludge Line trenches.

**SUGGESTION:****ANSWER:****Accept Suggestion:** ☐

Zagol 7/5/2012 Flooding or water jetting is not an acceptable method of compaction for HDPE pipe trench backfill.

In limited areas, under and around adjacent utilities, consider using a low strength, low water content concrete fill material. Submit proposed alternate backfill material and mix design for review.

<b>REQUEST:</b> While excavating west of the gate valve vault location on Market Street M Squared's crew discovered an 8-inch cast iron water line sitting on top of the existing AWSS main to be removed. This 8-inch line also appears to be leaking slightly.  1. As a result of this line M Squared is unable to install the new AWSS with the necessary clearances. Aside from the clearance issues M Squared can no longer install the 14-inch reducer where it is required. M Squared will be able to relocate the reducer which will then require a longer spool piece.  Please advise how M Squared is to proceed.  2. This 8-inch line also has three concrete kickers on the pipe that make it impossible to install the pipe and fittings at this vault location. Please confirm that it is acceptable to remove these kickers temporarily, as they are already restrained with tie rods, for construction purposes. The			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 7/11/2012 Michael Smith's (SFDPW) response,  "-The Contractor shall request the SFPUC SFWD relocate their (E) 8" low pressure water piping in order to maintain a 12" clearance between their own two utilities.  -Please coordinate with SFWD prior to removing the (E) concrete thrust blocks on the SFWD line. Support SFWD line as required to prevent movement."  Signed and Dated 7/11/12 (See Attached)  Pending TJPA approval, a CR for additional cost is forthcoming.

U-0208.01	AWSS - Clearance Issues with Domestic Water Line on Market Street	Closed	07/24/2012	08/03/2012	08/03/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By:Turner Construction Comp Jeff Thiel			
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: Per the response to RFI # U-J0208, M Squared met with SFWD engineers on site to discuss the relocation of the domestic 8-inch line.  As a result of this coordination, SFWD agreed that relocating the 8-inch line was the best possible resolution to this issue. M Squared has excavated and shored for SFWD crews to perform the repairs.  As of 7/23/12 no relocation work has been performed by SFWD.  Please provide M Squared with a schedule for this relocation.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Jeff Thiel 8/2/2012 Per Dan Helminiak of the SFWD, the SFWD is scheduled to relocate the 8" water line on the morning of Monday 8/6/12.

<b>Co-Author:</b> M Squared Construction, Inc.      Aidan Foley							
<b>REQUEST:</b> See attached documents and photos.  M Squared has potholed this location for the AWSS valve vault. It has been confirmed that the gas line is abandoned and can be removed and that the 12" water is also abandoned.  In order for the vault to be constructed here M Squared will need to remove the abandoned 12" line; however, removing the 12" line will significantly weaken the live 8" line that runs on Anthony as the 90 degree bend on the 8" line is supported by a redwood block resting against the abandoned line.  Please advise on how M Squared is to proceed.			<b>SUGGESTION:</b> Have SFWD restrain the existing 90 degree bend so that the abandoned lines and redwood plug can be removed. UPon completion of the valve vault M Squared can our a new concrete kicker if required by SFWD.		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Jeff Thiel    7/30/2012 Response per Chi Yu of SFWD,  " The redwood plug is for the abandoned line to stop any residual water in the pipe and does not serve as a kicker. The live 8" main was built quite recently using a field-lok gasket restraint joint. No kicker is required. Remove the 12" and 8" abandoned lines together with the redwood plug. Provide adequate vertical support for the live 8" main."  See attached email from Chi Yu dated 7/30/12.

U-0210	AWSS - 12" Water Conflict at 1st and Mission Street	Closed	07/26/2012	08/05/2012	08/10/2012	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Turner Construction Comp Jeff Thiel				
<b>Co-Author:</b> M Squared Construction, Inc.      Aidan Foley							
<b>REQUEST:</b> While performing the preliminary excavation across 1st and Mission street Intersection, M Squared's crew exposed a 12" water line that is running on top of the AWSS line for approx half of the intersection. Due to other utilities being present we are unable to excavate down to the AWSS main.  M Squared met with SFWD crews on site and they have confirmed that the line is active, despite them agreeing with M Squared that the line sounded very hollow (an indication that it may be dead)  M Squared believes that despite the presence of many unknown utilities they will still be able to remove and replace the existing AWSS main if this 12" water line can be abandoned or relocated.  Please advise on how M Squared is to proceed.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Jeff Thiel    8/10/2012 Chi Yu's (SFWD) response,  "SFWD will cut and cap both ends of the 12" line that is on top of the AWSS Main and restore the 12" main at the same location after the new AWSS line is in place."  SFWD will require two weeks advance notice prior to starting this work.

U-0222	AWSS - Flanged Spools for Hydrants	Closed	01/31/2013	02/10/2013	02/06/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Robert Kjome <b>Co-Author:</b> M Squared Construction, Inc.      Aidan Foley			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Turner Construction Comp Jeff Thiel	
<b>REQUEST:</b> Reference Drawings: MA-14 & MA-15  Hydrant at Sta 6+30 Contract drawings show the 45deg bend being connected directly to the rolled down tee. However the hydrant lateral is much lower than the main and it will not be possible to connect them directly together.  Hydrant at Sta 9+00 Due to the changes per RFI U-190 M Squared are to install the new fire hydrant in the same location as the existing, in the breezeway. As a result the new hydrant lateral will be higher than the newly installed main (the grade of the main being dictated by various utility conflicts).  Please confirm M squared's suggested mediation is how M squared is to proceed			<b>SUGGESTION:</b> Hydrant at Sta 6+30 Suggestion - custom fabricate a HPW flanged x flanged spool for to connect to the tee and the 45deg bend.  Hydrant at Sta 9+00 Suggestion - In order to connect the tee to the 90deg bend a HPW flanged x flanged spool, custom fabricated will be necessary.			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Jeff Thiel   2/5/2013 Response per Michael Smith (SFDPW),  "-Hydrant at station 6+30 - Proceed as required due to unforeseen field conditions. -Hydrant at station 9+00 - Per field / phone conversations with M2, Pipe spool is no longer required at this location."  Signed and Dated 2/1/13. (See Attached)	

U-0223	AWSS - Electrical Service at 2nd Street Intersection	Closed	02/06/2013	02/16/2013	05/20/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Jackson Tukuafu <b>Co-Author:</b> M Squared Construction, Inc.      Aidan Foley			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Turner Construction Comp Jeff Thiel	
<b>REQUEST:</b> The contract drawings show M Squared replacing the existing 10" gate valve on Mission at 2nd St with a new 16" gate valve. Due to a PG&E conflict M Squared will have to now move the valve location north onto 2nd Street.  In moving the vault M Squared will now have to relocate the existing electrical service to the new vault location. M Squared will need the service disconnected so that all existing electrical cable and conduits can be removed.  Once the new vault has been constructed M Squared can reestablish the service to the new vault location. These were previously thought to be street lighting conduits as mentioned in RFI U-182.2 and will need to be removed for the construction of the new vault anyway.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Jeff Thiel   5/20/2013 Existing PG&E service has been disconnected and removed. See attached drawing for new routing of PG&E power service connection from existing PG&E connection point to a new PG&E meter enclosure.  Please provide pricing proposal for work associated with installing a new connection from PG&E connection point to new meter enclosure as show on the attached drawing. Do not proceed with this work until pricing has been agreed to.  Reconnection for service at this location has been acknowledged from SFPUC (via PG&E) to be about 5 to 6 weeks out.

	<p>The service is currently the responsibility of the SFPUC and PG&amp;E have indicated that any impact to the service needs to be handled by the SFPUC and not M Squared.</p> <p>Please advise on how to proceed</p>						
U-0223.1	AWSS - Electrical Service at 2nd Street	Closed	07/17/2013	07/27/2013	07/19/2013	Potentially	<input type="checkbox"/>
<b>From:</b> M Squared Construction, Inc. Aidan Foley		<b>To:</b> Turner Construction Company Gary Krutsch		<b>Answered By:</b> Turner Construction Comp; Jeff Thiel			
<b>Co-Author:</b>							
<b>REQUEST:</b> Reference: Attached Drawing  Per the response to RFI U-0223 a new electrical service, a new PGE meter pedestal, and a new drain line was to be installed at 2nd and Mission. However the drawing provided in the response showed the old AWSS vault location. See attached drawing prepared by M Squared showing the new vault location.  We have established conduit routes for both the new electrical service to PGE vault #1316 and also the drain line to the catch basin.  Please confrim that this acceptable.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Response per Michael Smith (SFDPW),  "The proposed drain line routing is acceptable provided that the line slopes to the catch basin per the specs. The proposed electrical conduit shall be acceptable provided that it's installation shall conform to PG&Es guidelines."  Signed and Dated (see attached)

U-0224	AWSS - Pipe Alignment between Fremont to Beale	Closed	02/06/2013	02/16/2013	02/11/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Turner Construction Company Jeff Thiel				
<b>Co-Author:</b> M Squared Construction, Inc. Aidan Foley							
<b>REQUEST:</b> The existing AWSS main on Mission Street between Fremont St & Beale St is running through three (3) PGE vaults.  By upsizing the AWSS main to 16" there is a possibility that the pipe will not fit back through the structures. By having PGE move/alter their facilities M Squared believes there will be significant project delays. M Squared will also inevitably have to install the new main within PGE structures, something the SFPUC prefers to avoid.  M Squared believes it is possible to shift the alignment of the new 16" main further north to avoid all of these PGE vaults. See attached potholing results from potholing further north than the existing main. M Squared does not know yet if additional fittings will be needed to shift the alignment north, and then realign it back south at Beale Street. This will not be known until the trench has been excavated.  Please confirm it is acceptable for the AWSS alignment to shift north as currently coordinated to avoid the delay impacts and vault conflicts.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Jeff Thiel 2/8/2013 Response per Michael Smith, (SFDPW)  "Shifting the proposed AWSS alignment North is acceptable provided that there are no utility conflicts and the gate valve frames/covers do not end up directly in the gutter due to potential flooding of the vaults."  Signed and Dated 2/8/13. (See Attached				

U-0225	AWSS - Lead Joint Clearances at Sta 6+30	Closed	02/08/2013	02/18/2013	02/13/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Turner Construction Company Jeff Thiel				
<b>Co-Author:</b> M Squared Construction, Inc. Stewart Mitchell							
<b>REQUEST:</b> Please refer to attached W/O Sketch SK-U-0225 and drawing MA-4.  The newly installed fire hydrant lateral at station 6+30 is to connect to the existing AWSS main; however, the existing main pipe is "oval" shaped and the new pipe is circular. As a result of the differing pipe shapes, the minimum clearances for inserting the "hokum" to draw the lead in when heated are not achieved. The minimum clearance around the pipe required is 1/4".  The existing fitting is part of a series of fittings needed to raise the fire hydrant lateral up in elevation to avoid a			<b>SUGGESTION:</b> Field conditions appear to indicate that where the existing laterals clear over the sewer, at the next joint there is a possibility of a full length pipe (12'-0") which takes you closer to the curb. There is a possibility to switch out the entire lateral to the fire hydrant.  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Jeff Thiel 2/13/2013 Response per Michael Smith (SFDPW),  "Due to the unforeseen conflict between the existing AT&T duct bank which was poured directly onto the AWSS Hydrant lateral pipe, blocking access to the next two downstream lead joints, the contractor shall locate a lead joint South of the conflicting duct bank that is readily accessible for their plumber to melt the existing lead joint. The contractor shall then furnish and install ductile iron pipe and fittings to this accessible location in order to connect to the existing cast iron line. The alternate is for AT&T to relocate				

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>conflict with an existing sewer line. Moreover, there is a duct bank over the sewer and it was poured over the next fitting only compounding the conflict.</p> <p>Please advise.</p>			<p>their duct bank in order that there is a minimum 12" clearance between the duct bank and the existing AWSS pipe.</p> <p>Should the duct bank not be relocated, and due to the fact that there will be a minimum amount of cast iron pipe remaining in the hydrant lateral run, the contractor shall provide a cost for removing the remainder of the cast iron hydrant lateral and for replacing with ductile iron pipe and fittings.</p> <p>Replacing this remaining section of cast iron pipe and hydrant will be an improvement to the SFWD's facilities."</p> <p>Signed and Dated (See Attached)</p>			
U-0225.1	<p><b>AWSS - Lead Joint Clearances at Sta 6+30: SFWD Decision to Replace Full Lateral Closed</b></p> <p><b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch</p> <p><b>Co-Author:</b> M Squared Construction, Inc. Aidan Foley</p> <p><b>REQUEST:</b></p> <p>As a result of several coordination efforts to discuss potential options, AT&amp;T has chosen not to relocate their duct bank that is in conflict with the hydrant lateral at Sta 6+30. Instead they have agreed to compensate M Squared for the costs to connect to the next most southern joint.</p> <p>1. Please confirm that this is acceptable, as the response to the previous RFI U-0225 mentioned the possibility of replacing the full lateral including the hydrant.</p> <p>2. Please advise whether the SFWD want to replace the full lateral. M Squared need to know so an agreement can be reached on materials etc.</p>				<p><b>03/11/2013 03/21/2013 03/28/2013 Potentially</b> <input type="checkbox"/></p> <p><b>Answered By:</b>Turner Construction Comp Jeff Thiel</p> <p><b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/></p> <p>Jeff Thiel 3/26/2013 Response per Michael Smith (SFDPW),</p> <p>"CCSF SFWD (Dan Helminiak 420-4521) will coordinate with contractor to provide funding / materials to replace the remaining cast iron portion of the hydrant lateral."</p> <p>Signed and Dated 3/19/13. U-0226	RFI#U-0226 - AWSS - PG&E Duct Bank at 1st Intersection	Closed	03/11/2013	03/21/2013	03/15/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> M Squared Construction, Inc. Aidan Foley			<b>Answered By:</b> Webcor/Obayashi Joint Venture Jackson Tukuafu				
<b>REQUEST:</b> Refer to drawing U-1002, U-2003, MA-15.  M Squared is unable to trench to the connection point as shown on the attached M Squared sketch SK-047.1 and SK-047.2 on First Street due to the presence of two (2) PG&E duct banks in the trench. One duct bank is deeper than the other and is sitting directly on top of the AWSS Pipe that is required to be removed.  Please provide direction to how M Squared will proceed.			<b>SUGGESTION:</b>  Suggestion #1 - Remove existing gate valve and connect to the existing pipe (see attached SK-047.1). Install an IBeam behind the 16" Tee on Mission Street as an alternative restraint system. Please note: In order to perform Suggestion #1 an AT&T duct bank will need to be moved west 2' so M Squared can drill for the I-Beam.  Suggestion #2 - If the AT&T duct bank cannot be moved install an offset from the 16" tee using 22deg bends to get back to original alignment. (see attached sketch SK-047.2)				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Jeff Thiel 3/12/2013 Response per Michael Smith (SFDPW)  " 1.) Proceed with suggestion No. 1.  2.) Should AT&T not be able to relocate their duct bank, proceed with suggestion No. 2. Replace 22.5 degree elbows with 11.25 degree elbows if fittings are available."  Signed and Dated 3/12/13. (See attached)  After further investigation while this RFI was being reviewed, it was found that the duct bank previously thought to be AT&T is owned by TCG. Do not proceed with either option until TCG has been notified of potential costs and has reviewed the proposed solutions.				

U-0226.1	AWSS - TCG Duct Bank at 1st Street Intersection	Closed	06/25/2013	07/05/2013	07/08/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> M Squared Construction, Inc. Aidan Foley			<b>Answered By:</b> Turner Construction Company Jeff Thiel				
<b>REQUEST:</b> Please refer to response for RFI U-0226.  As per response to RFI U-0226, M Squared is directed to "Remove the existing gate valve and connect to the existing pipe. Install an I-beam behind the 16" Tee...as an alternative restraint system" in order to avoid two PG&E duct banks in conflict with the AWSS. As a result of the I-Beam being installed at this location, a TCG duct bank would need to be moved 2-feet west.  TCG has determined that the duct bank would take several months to re-locate their duct bank. Therefore, TCG has opted to avoid the conflict by pursuing the suggested 22deg bends as an offset from the 16" tee in RFI U-0226.  Please confirm additional restraints are not required at the			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Response per Michael Smith (SFDPW),  "The thrust blocks for the two (2) 10" 22.5 degree elbows shall conform to the thrust blocks for 16" pipe as shown on the AWSS standard drawings. Include "crossed" rebar with J-hook ends over the elbows.  Schedule site visit to verify lack of access to (E) line north of proposed 10" connection location."  Signed and Dated, see attached.

U-0227	AWSS - 2nd Street AWSS Gate Valve Vault	Closed	04/16/2013	04/26/2013	04/22/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu		<b>To:</b> Turner Construction Company Gary Krutsch		<b>Answered By:</b> Turner Construction Comp Jeff Thiel			
<b>Co-Author:</b> M Squared Construction, Inc. Aidan Foley							
<b>REQUEST:</b> Refer to drawing MA-13, MA-3, MA-10  Due to the presence of several PGE duct banks and the steam line that runs along 2nd Street M Squared feels it will be significantly difficult to modify a precast valve vault to fit into the area designated for the vault. As a result, M Squared proposes to construct a cast in place valve vault as has previously installed and approved on Market Street.  1. Please confirm it is acceptable to install a cast in place vault at this location. 2. Please advise if rebar detail attached is acceptable for use.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Jeff Thiel 4/22/2013 Response per Michael Smith (SFDPW),  "-Due to the existing conflicting/surrounding utilities in the proximity of the AWSS vault location, a cast-in-place concrete valve vault would be acceptable.  -The rebar drawings will need to be stamped again by the structural engineer. Please note that this valve vault is for a 16" gate valve with bypass valve (Two actuators)."

U-0228	AWSS - Sidewalk Expansion Evaluation between First Street and Beale Street	Closed	05/31/2013	06/10/2013	10/18/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Turner Construction Company Gary Krutsch				
<b>Co-Author:</b> M Squared Construction, Inc. Aidan Foley							
<b>REQUEST:</b> Per the attached email it appears that the City's intent to is to move the curb lines south between First St & Fremont by 3' and also between Fremont & Beale Street by 4'.  First to Fremont St - In moving out the curb line by 3' the AWSS Line on this block will be pretty close to being under the new curb line, therefore making any maintenance of the AWSS line in the future very difficult. There would also be an impact to the gate valve location on the east side of the 1st and Mission intersection and the west side of Fremont & Mission due to the new curb coming south. It is possible a modified roof to the vault would be required as half of the vault would be in the street and another half would be in the sidewalk (judging from rough field measurements). The AWSS Fire hydrant would also need to be relocated as it would now be in the middle of a widened sidewalk, whereas the distance acceptable is 24" to 26" from FOC.  Fremont to Beale Street - The current alignment for the AWSS along Mission between Fremont & Beale is close to the curb on the north side (in order to avoid 3 PG&E utility vaults). By moving the curb 4' south the AWSS line will now be underneath the sidewalk on this block. Similar to above the gate valve vaults would be partially under the sidewalk here and modifications/relocations may be required.  Please advise if M Squared is to continue with the AWSS install per plan. Alternatively please provide direction on the conflicts that moving the sidewalk creates for the main.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Judy Long 10/16/2013 <b>RESPONSE:</b> - TJPA has not received confirmation from the SFPUC that the new AWSS service can be installed per the contract drawings. As discussed in our weekly coordination meeting after completing the paving in the intersection at First and Mission, M2 is directed to jump to the intersection at Main and Mission and proceed westward towards Beale Street.  - Submit RFI#U-0228.1 once work is complete in the Main Street intersection and request SFPUC's approval to proceed with the original AWSS alignment per contract drawings between Beale and First streets.

U-0230	AWSS - AWSS Vault at 2nd Street	Closed	07/18/2013	07/28/2013	07/19/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Jackson Tukuafu			<b>To:</b> Turner Construction Company Gary Krutsch				
<b>Co-Author:</b> M Squared Construction, Inc.      Aidan Foley			<b>Answered By:</b> Turner Construction Comp. Jeff Thiel				
<b>REQUEST:</b> Due to the grade of the 16" AWSS gate valve, combined with the valve actuators the roof of the AWSS valve vault at 2nd Street will not be under the surface of the street. Previous AWSS valve vaults have 2" AC/8" concrete street base on top of the roof of the vault.  If M Squared installs the vault roof and then covers it with 2" AC then there is a danger that future contractors will saw cut through the roof of the vault while cutting out their trenches.  Our suggestion is to pour the vault roof to the same grade as the current street surface on 2nd Street. There does not appear to be any room for adjustment here and we are unaware of any other options in this case.  Please confirm it is acceptable to construct the vault roof in this manner, with a concrete broom finish.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Response per Michael Smith (SFDPW),  "M Squared shall proceed with constructing the valve box cover in a manner such that the portion to be located in the parking strip shall be flush with the surrounding concrete. For the portion of the cover to be located in the paved traffic lane, reduce top surface by 2". Place a sheet of 10 gauge galvanized sheet steel on recessed area of concrete cover. When repaving street, extend A/C paving over vault to provide paving flush with concrete portion of cover/manhole lid.  Signed and dated. (see attached)

U-0241	<p>City standards call for the concrete to be poured with a 4inch slump, and that no traffic drive on the concrete for a period of 10 days. M Squared made the decision to add 2% calcium to the concrete mix to speed up the concrete setting process. M Squared used the same mix design as is used for the street base:</p> <ul style="list-style-type: none"><li>- Bode Concrete Mix Design 604 - sidewalk, curb and gutter and parking strip.</li><li>- Bode Concrete Mix Design 604CC - Street base</li></ul> <p>The only difference between the 2 concrete designs is the added 2% calcium.</p> <p>The concrete was poured with an 8inch slump in order to allow the crew enough time to satisfactorily finish the concrete to the required surface. M Squared acknowledge that this is out of spec, however the concrete still reached over 4000psi, when specs required only 3000psi. M Squared believes that this will be required in the future on other portions of Mission Street on account of Mission St. being MUNI's busiest route. SFMTA have asked that M Squared minimize lane closures where possible.</p> <p>Please confirm that this 8inch slump is acceptable on Bode Mix 604CC (attached).</p> <p><b>AWSS - Proposed Fire Hydrant Re-Location on Mission and Fremont Street</b></p> <p><b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company PHIL MILITELLO</p> <p><b>Co-Author:</b> M Squared Construction, Inc. Aidan Foley</p> <p><b>REQUEST:</b></p> <p>As per AWSS Coordination Meeting on 01/17/2014, the location of this fire hydrant near the intersection of Fremont and Mission is potentially going to need to be moved to accommodate the new sidewalk expansion. The purpose of the RFI is for Michael Smith with SFWD to analyze, consider and direct the feasibility of relocating the fire hydrant further north.</p> <p>If the hydrant is to be located somewhere other than is shown on the drawing please provide a detail for this work as additional fittings may need to be ordered.</p>	Closed	01/21/2014	01/31/2014	02/13/2014	Potentially	<input type="checkbox"/>
			<b>Answered By:</b> Turner Construction Comp Judith Long				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>				
			Per our site visit with M2 on 02/11/14, the proposed hydrant lateral shall be relocated to the west side of Fremont Street, north of Mission Street, barring any conflicting utilities. The hydrant shall be located immediately north of the replacement 10" gate valve. M2 shall verify the availability of a 10" hydrant tee with SFWD.

	<p>Due to the unforeseen utilities in place, M Squared cannot install the concrete vault around the gate valve at STA 16+40. In order to avoid delays to the project M Squared reached out to the engineer of record to bring this issue to his attention. See attached email chain.</p> <p>As it appears M Squared is directed to return to 1st Street and work east again; M Squared will be unable to build any structure around the gate valve at Sta 16+40. Due to the flip flop of the schedule we will not be able to tie in at this point for several months so we suggest the following:</p> <ul style="list-style-type: none"><li>- Install the gate valve at Sta 16+40 and direct bury the valve, leaving access to the gates with ductile risers and valve caps. FYI - these gates should not be opened anyway as the line will be out of commission during construction.</li><li>- Re-excavate this gate valve when M Squared installs the pipe from Fremont St heading east and tie in the pipe to it then. In the interim M Squared will drive a sheet pile behind the gate valve and support it with a 1.5ton concrete block. This will prevent any gate valve movement.</li><li>- As M Squared will be working their way from 1st St towards Beale Street, they should have several weeks in which to design some sort of modified manhole, custom sized vault in which to encase the valve.</li></ul> <p>Please advise if this is acceptable.</p>						
U-0245	AWSS - 1st Street Fire Hydrant Lateral Conflicts at Sta. 10+05	Closed	03/27/2014	04/06/2014	04/01/2014	Potentially	<input type="checkbox"/>

U-0248	<b>AWSS - Restraints at the Intersection of Mission and Fremont St.</b>	Open	06/04/2014	06/14/2014		Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP <b>Co-Author:</b> M Squared Construction, Inc.		Lynn Kowallis Aidan Foley		<b>To:</b> Turner Construction Company PHIL MILITELLO		<b>Answered By:</b>	
<b>REQUEST:</b> Please refer to drawing MA-16 and M Squared Sketch-TG04.2-072.1 and TG04.2-072.2.  Question #1 - Does every joint between the new GV west of Fremont Street, and the new 16"x10" tee in Fremont Street intersection need to be restrained with bell & stop collars? This distance is approx. 50ft. Question #2 - Currently there does not appear to be enough space to install the new 16" pipe WITH bell & stop collars through the utilities in the Fremont St intersection. There does appear to be space to install 16" pipe without the stop/bell collars on.  - Our suggestion would be to install the 16"x10" tee and restrain that tee on one joint heading east. Install piping across the Fremont St intersection without stop/bell collars, delete the 16" GV at that location (we believe we will not be able to fit one anyway), and tie off the last piece of pipe coming into the hydrant tee east of Fremont Street.  Please clarify if this is acceptable.		<b>SUGGESTION:</b>		<b>ANSWER:</b>		<b>Accept Suggestion:</b> <input type="checkbox"/>

<b>Co-Author:</b> M Squared Construction, Inc.		Aidan Foley					
<b>REQUEST:</b> See attached photos.  The location for the gate valve on Mission Street, east of Fremont Street is in conflict with the piping on the hydrant lateral. The valve cannot be placed any further west due to the street light and traffic signal conduits. Moving it further west would also put the vault within the new curb return that is planned as part of the previously discussed sidewalk expansions project on Mission Street.		<b>SUGGESTION:</b>  Relocate the hydrant lateral piping away from the vault location. Domestic fire hydrant location to remain the same.		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>  Relocate SFWD low pressure fire hydrant lateral piping as required to install new SFWD AWSS gate valve and valve vault. The contractor shall coordinate with SFWD and perform relocation work as approved by SFWD.  Michael B. Smith SFDPW/IDC/EME      dated: 9/18/14

U-0252	AWSS - 10inch Lead Joint on Fremont St	Closed	10/03/2014	10/13/2014	10/06/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Claude Titché		<b>To:</b> Turner Construction Company PHIL MILITELLO		<b>Answered By:</b> City and County of San Fr Michael Smith			
<b>Co-Author:</b> M Squared Construction, Inc.                      Aidan Foley							
<b>REQUEST:</b> See attached sketch.  The existing lead joint (outside contract scope) is leaking. It appears that the pressure of the string back pulling on the lead has caused the lead to leak.  Our crews have excavated further north and exposed more of the existing main to allow our plumber to repack the lead joint. In doing so we discovered ears on the existing pipe approx. 3ft north of the lead joint.  Our suggestion is to repack the lead joint and tie back the adaptor to the ears on the existing pipe. In eliminating the strong back we will be eliminating the pressure on the repacked joint.  Please confirm you are in agreement with our suggestion.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Please proceed as suggested above. Spare strong back shall be delivered to the San Francisco Water Department at the close of the project.

**Transbay Transit Center – San Francisco, CA**

**Noise and Vibration Mitigation Management Plan**

**Webcor/Obayashi**

**September 07, 2012**

## **GENERAL:**

The Webcor/Obayashi (W/O or CM/GC) Noise and Vibration Mitigation Management policy that will be implemented on the Transbay Transportation Center Project will be an overall project policy, with each Trade Subcontractor contributing their specific plan as they come on board to the project. The primary function of this plan is to comply with Specification Section 00 08 13, 00 08 13/APB, the San Francisco Noise Control Ordinance, regulations and requirements and section 01 35 65, Specific Project mitigation measures and monitoring requirements as applicable to the various phases of work.

When required by the specifications, W/O will ensure its Trade Subcontractors comply with this plan as well as the San Francisco Noise Control Ordinance.

To expedite the project or minimize impacts, W/O will ensure that its Trade Subcontractors apply for written waivers of some of the noise requirements by application to the TJPA in accordance with Section 00 08 13 Specific Project Requirements when required by the specifications or contract. Written waivers shall be uploaded to Constructware by CM/GC. It is anticipated that some Work may require multiple shifts or for other reasons need to be performed outside of typical weekday daytime construction hours. Trade Subcontractors shall minimize construction activities during evening, nighttime, weekend, and holiday periods and shall obtain specific permits before performing construction in noise sensitive areas during these periods.

Night noise permits requests shall be submitted to the TJPA at least 7 days in advance of work. Noise permit request shall include:

1. Name of person in charge of work and phone number
2. Hours to be worked
3. Narrative of scope of work including necessity of doing work at night, maps, and truck routes
4. List of noise/vibration/light making equipment including make and model
5. Mitigation and monitoring methods being used

W/O will ensure that its Trade Subcontractors provide noise inspections and testing of equipment to ensure that all equipment onsite is in good condition and effectively muffled per manufacturer's recommendation. If inspection or testing documents are requested by the TJPA, or any of its representatives, W/O will require its Trade Subcontractors to provide requested documentation in a timely manner. Trade Subcontractors shall provide inspection and testing documents to CM/GC prior to start of work and as the equipment is replaced. CM/GC shall upload documents to a file location within Constructware.

W/O will ensure that its Trade Subcontractors minimize use of vehicle backup alarms and demonstrate how backup alarms will be minimized by using mitigation measures such as designing the construction site with a circular flow pattern that minimizes backing up of trucks and other heavy equipment. Trade Subcontractors shall submit quarterly reports of measures to reduce back up alarms. W/O shall upload these reports to a specific location within Constructware.

W/O will ensure that all its Trade Subcontractors' equipment onsite is equipped with broadband back-up alarms that will automatically adjust based on the ambient noise during nighttime hours (between 8 p.m. and 7 a.m.) when ambient noise is low. If safety considerations and applicable regulations will not allow use of broadband back-up alarms, Contractor shall request an exemption in writing to the TJPA

Representative including the applicable safety regulations (Cal/OSHA, OSHA). Trade Subcontractors shall comply with the TJPA's request for broadband back-up alarms for all work between 8 p.m. and 7 a.m. If requested by the TJPA or its representative, Trade Subcontractors shall provide W/O with equipment specifications showing broadband back-up alarms for submission via Constructware.

Through W/O's requirement of the submittals outlined in this noise and vibration plan, W/O will verify Trade Subcontractors' construction operations are performed in such a manner to minimize noise.

W/O will verify that its Trade Subcontractors perform noise monitoring to demonstrate compliance with noise limits and endeavor to minimize construction activities during off hours except for those required and deemed acceptable per the Contract Documents. Trade Subcontractors shall submit monthly monitoring reports to W/O for submission via Constructware.

W/O will verify Trade Subcontractors haul routes to ensure that they minimize noise intrusion into residential areas, and control noise during nighttime hours.

W/O will require all Trade Subcontractors to use procedures and equipment, when it would be effective, that produce lower noise levels than normal when required by the specifications or contract. W/O will require the Trade Subcontractor to submit manufacturer special noise control kit information. If none is available, then the Trade Subcontractor needs to submit a statement of this. Upon receipt and review of the information, W/O and the Trade Subcontractor will identify the events when the noise control measures should be used based on the specifications.

W/O will require all Trade Subcontractors plans to include use of temporary barriers near noisy activities as required by the specifications or contract. Such barriers shall be located close enough to the noise source to achieve noise attenuation. As necessary and when it is shown it would be effective, Trade Subcontractors shall construct shed-like structures or complete buildings to contain the noise from nighttime activities.

W/O shall require haul route map, plan and storage location to be part of Trade Subcontractor's plan and included within its submittal.

#### VIBRATION CONTROL

Vibration limits are based upon the Federal Transit Administration's Planning and Environment Transit Noise and Vibration Impact Assessment guidelines. W/O will require all Trade Subcontractors' to limit or prohibit use of construction techniques that create high vibration levels when it affects adjacent properties.

If construction techniques that create high vibration levels are used, W/O will require all Trade Subcontractors' to comply with the following additional restrictions:

1. Provide advance notice to TJPA of any vibration intensive activities. Perform vibration intensive activities only during daytime hours between 7 a.m. and 8 p.m. unless otherwise allowed by special permit or variance, as required by the specifications or contract. Perform vibration monitoring during vibration intensive activities during daytime hours between 7 a.m. and 8 p.m. unless otherwise allowed by special permit or variance, as required by the specifications or contract. Recorded data should be part of the Trade Subcontractor Daily report. A summary shall be submitted monthly and uploaded to Constructware.

2. Investigate alternative construction methods and practices to reduce the impacts if present and implement alternative methods and practices as reasonable.
3. Provide a plan to measure vibration levels including but not limited to measurement locations, times and metrics. Plan shall also include contingency plan if operations exceed the limits. This plan shall be uploaded into Constructware by W/O.
4. Limit or prohibit use of construction techniques that create high vibration levels.

Trade Subcontractors shall be responsible for providing technical information, as required by the specifications, in their plan. Trade Subcontractor's plan shall be submitted via Constructware for Record Only.

**Transbay Transit Center – San Francisco, CA**

**Air Quality Plan**

Webcor/Obayashi

January 16, 2012

## **GENERAL PLAN:**

The Webcor/Obayashi (W/O) Air Quality Plan that will be implemented on the Transbay Transit Center Project will be an overall policy with each subcontractor contributing their specific plan as they come on board to the project. The primary function of this plan is to comply with the Bay Area Air Quality Management District regulations and requirements.

W/O will require its Trade Subcontractors to establish a plan that complies with all requirements set for in specification sections 00 08 13, and 01 35 65 prior to starting Work onsite. W/O shall check and verify trade subcontractor's compliance with air quality requirements on a daily basis. Any non-compliant trade subcontractors will receive both verbal and written notice through Safe Site One (W/O internal program). Additional, W/O will require trade subcontractors to demonstrate they are actively monitoring air quality by providing checklists or documentation on each Trade Subcontractors daily report. W/O shall verify its Trade Subcontractors Air Quality plan includes the following but not necessary limited to:

1. Specific measures to minimize impacts to sensitive receptors associated with exposure to respirable nuisance dust (PM10) and achieve a goal of No Visible Emissions.
2. W/O shall verify Trade Subcontractors comply with City Dust Control Order (DPW Order No. 171,378. Water active construction areas at least twice daily to control dust using non-potable water in accordance with San Francisco Ordinance 175-91
3. Identify specific measures to minimize dust generation; to reduce health risks to workers and the public.
4. Mist the immediate excavation area with a water spray to prevent airborne dust particles. Perform continuous water spraying during dust-generating activities. Mist or spray in such a way as to prevent puddling or generation of runoff, which could potentially reach storm drains or catch basins.
5. Minimize the amount of excavated material or demolished debris stored at the Site. Remove excavated material and demolished debris, with the exception of hazardous materials or suspected hazardous materials, from the Site no later than the end of each workday. If hazardous materials or suspected hazardous materials are stored on site, store such materials in accordance with all applicable California Environmental Protection Agency regulations, including providing storage in proper containers and protection from exposure to the elements. Remove such materials from the Site as soon as possible for disposal or recycling in accordance with applicable laws and regulations.
6. Wet all exposed soil surfaces at least 3 times daily during dry weather or more frequently if dust is blowing or if required by the TJPA. Immediately wet sweep serpentine residuals from the street.
7. Keep the Site and adjacent areas clean and perform wet sweeping at the end of each shift. Sweep daily (with water sweepers) all paved access roads, parking areas and staging areas at construction sites. Sweep streets daily (with water sweepers) if visible soil material is carried onto adjacent public streets.
8. Load haul trucks carrying excavated material so that the material does not extend above the walls or back of the truck bed. Wet before covering and tightly cover the surface of each load before the haul truck leaves the loading area. Cover trucks hauling soil, sand, and other loose materials or require trucks to maintain at least 2 feet of freeboard
9. Clean up spillage on City streets, whether directly or indirectly caused by Contractor's operations.

10. Minimize use of on-site diesel construction equipment, particularly unnecessary idling. Shut off construction equipment to reduce idling when not in direct use. Where feasible, replace diesel equipment with electrically powered machinery.
11. Retain receipts of ultra-low sulphur fuel (ULSF) purchase and equipment tuning and repair and make these available to the TJPA Representative or to the Federal Transit Administration (FTA) designee upon request.
12. Locate diesel engines, motors, or equipment as far away as possible from existing residential areas.
13. Properly tune and maintain diesel power equipment. To manufacturer's specification and frequency.
14. Suspend grading operations during first and second stage smog alerts, and during high winds (i.e., winds greater than 25 miles per hour).
15. Upon completion of the construction phase, buildings with visible signs of dirt and debris from the construction site shall be power-washed and/or painted (provided that permission is obtained from the property owner to access and wash the property with no fee charged by the owner). Trade Contractor shall request CMGC to contact Singer and Associates to notify property owners for access. If permission from property owners for access is not granted, Trade Contractor is not responsible for power-washing or painting.
16. Pave, apply water three times daily, or apply (non-toxic) soil stabilizers on all unpaved access roads, parking areas, and staging areas at construction sites.
17. If applicable, replant vegetation in disturbed areas as quickly as possible.

W/O will verify Trade Subcontractors comply with the requirements of the Bay Area Air Quality Management District (BAAQMD) Regulation 6 (for particulate matter and visible emissions), Regulation 7 "Odorous Substances," Regulation 11 "Hazardous Pollutants," and the California Health and Safety Code Division 26 "Air Resource", Chapter 3 "Emission Limitations," Section 41700 "Prohibited Conduct," and related regulations. Trade Subcontractors shall notify the BAAQMD 10 working days prior to commencing demolition or hazardous materials abatement work.

1. Such notification shall include the names and addresses of operations and persons responsible; description and location of the structure to be demolished or altered including size, age and prior use, and the approximate amount of friable asbestos; scheduled starting and completion dates of demolition or abatement; nature of planned work and methods to be employed; procedures to be employed to meet BAAQMD requirements; and the name and location of the disposal site.
2. The BAAQMD randomly inspects removal operations and will respond to any complaints received. Contractor shall cooperate with and facilitate all BAAQMD authorized inspections.\
3. Notifications shall be documented and provided to CM/GC for submission to the TJPA via ConstructWare.

Trade Subcontractors shall be responsible for providing technical information, as required by the specifications, in their plan. All trade subcontractors plans shall be submitted for Record Only via ConstructWare.

**Transbay Transit Center – San Francisco, CA**

**Waste Management and Construction Debris Plan Revision 6**

Webcor/Obayashi  
November 7, 2013

## **GENERAL PLAN:**

Webcor/Obayashi Joint Venture (Webcor/Obayashi) understands that the building contractor plays a critical role in the management of jobsite produced construction waste. Webcor/Obayashi has adopted a waste reduction and recycling policy that will be implemented on the Transbay Transportation Center Project. This policy will be an overall policy with each subcontractor contributing their specific plan as they come on board to the project.

The primary goal of the plan is to divert as much construction generated debris & unused material from landfills as possible. At a minimum, Webcor/Obayashi and its trade subcontractors will divert 75% of the waste generated on the construction project from landfills. Trade subcontractors Construction Waste Management Plan shall be prepared and submitted in compliance with the Owner's LEED project requirements and the requirements of the City and County of San Francisco.

The Trade Subcontractors are required to comply with Specification Sections 00 08 15, 01 74

00, and 01 81 13 as well as any or all of the procedures listed below. If a conflict in percentages exists between this section and Section 01 81 13, General LEED Building Design and Construction Requirements, the most stringent section shall govern.

- Use of approved debris haulers with documented recycling levels.
- Source separated debris boxes will be provided onsite for mixed debris and recyclable items such as lumber and wood related products, dirt, concrete and asphalt, cardboard & metals.
- Trade Subcontractors are required to handle and dispose of any generated hazardous waste.
- Requesting Trade Subcontractors and vendors to utilize reusable packaging when possible.
- Trade Subcontractor shall provide a Construction Waste Management Plan.

All Trade Subcontractors shall develop their own Waste Management and Construction Debris Plan that complies with the Contract Documents and this plan. Trade Subcontractors shall submit this plan in accordance with the specifications and it shall become part of Webcor/Obayashi's overall project plan. All technical requirements defined in the contract documents shall be fulfilled by Trade Subcontractors and submitted to the Construction Management Oversight (CMO) For Record Only through ConstructWare

Webcor/Obayashi will ensure the Trade Subcontractors are effectively implementing the procedures and are in compliance with Specifications.

Webcor/Obayashi will verify that after Award of Contract and before commencement of the Work at the site, the Trade Subcontractor conducts a Reuse/Recycle Assessment as part of their Solid Waste Management Plan (SWMP): Trade Subcontractor's assessment shall

estimate the types and quantities of materials for the Project that are anticipated to be feasible for source separation for recycling or reuse, either onsite or offsite, and note the procedures intended for a recycling, reuse, and salvage program. Documentation of the trade subcontractor's plan shall consist of the following:

- Trade subcontractor and vendor waste management strategies.
- Trade subcontractor required to provide a monthly summary of the total waste material with backup documentation (weight tickets) if processed offsite.
- The amount recycled (in tons), material types, recycling procedures, and processing facility locations to which materials were diverted if processed offsite.

Trade Subcontractor's Construction Waste Management Plan shall also include estimated wastes, disposal, and handling with the following:

A. List of materials that comprise source separated materials include, but are not limited to:

- Concrete, Wood, Mud, Mixed Aggregates, Yard waste, Metals, and Cardboard.
- Yard waste is not included in our overall diversion rate calculation on the template or corresponding spreadsheet per the requirements from the LEED BD&C v3.0 Reference Guide.

B. List of materials that comprise Miscellaneous Construction Debris include, but are not limited to:

- Wood, Scrap Metal, Drywall, Plastics, Film Plastics, Wire, Cable, Glass.
- The total quantity estimated, inception to completion Disposal.
- Total Project Generation, Diversion + Disposal.
- Project Diversion Rate.

Webcor/Obayashi will verify that Construction and Demolition Waste; Non- hazardous solid resources resulting from Trade Subcontractor's construction, remodeling, repair, and demolition operations for the Project are properly transferred to a C&D Recycling Facility. The C&D Recycling Facility shall be a facility that receives only C&D (construction and demolition) material. Trade Subcontractors shall provide Webcor/Obayashi a summary sheet, including all receipts for transport materials each month with the progress billing if any materials are processed offsite.

Webcor/Obayashi will verify that of the inevitable waste generated, Trade Subcontractor's reuse, salvage, or recycle as many of the waste materials as economically feasible.

Webcor/Obayashi will participate/attend a meeting with Trade Subcontractor, the TJPA Representative and representatives of the City's Solid Waste Management and recycling programs prior to commencement of work. Webcor/Obayashi will

ensure all Trade Subcontractors are made aware of the LEED requirements for C&D diversion before being allowed to work on the site.

Webcor/Obayashi will verify that Trade Subcontractors submit a Monthly Disposal and Recycling Summary Report; quantifying the construction and demolition waste generated and recycled, reused or disposed of at Class 3 Landfill. Contractor shall also send a copy of this report to the TJPA Representative and the SWMP to the City Government Recycling Coordinator. The Comprehensive Disposal and Recycling Summary Report shall be submitted quantifying the construction and demolition waste generated and recycled, reused or disposed of at Class 3 Landfill, on a monthly basis. This report is a condition of progress payment and failure to submit this information shall render the Applications for Payment incomplete. The Trade Subcontractors/trades are also responsible for contracting with a regional facility to haul any hazardous materials from the site. The Trade Subcontractor shall calculate the C&D diversion rate for both LEED requirements (excluding yard waste) and the requirements set by the City (including yard waste) for all materials processed offsite. The W/O LEED representative will screen every C&D Submittal and review Trade Subcontractor and lower-tier subcontractors C&D Plans for clarity, completeness, and compliance with City/LEED requirements.

Webcor/Obayashi will verify that Trade Subcontractors develop and implement procedures for source separation to the greatest extent feasible.

Webcor/Obayashi will verify the Trade Subcontractors plans develop and implement procedures for transporting commingled (mixed) construction and demolition waste that cannot be feasibly source-separated if the intent is to process it offsite instead of using debris boxes provided onsite.

Webcor/Obayashi will verify the Trade Subcontractors plans develop and implement procedures for Salvage and Reuse.

Webcor/Obayashi will verify the Trade Subcontractors plans develop and implement practices for this project that will reduce waste at the source.

Webcor/Obayashi will verify the Trade Subcontractors plans develop and implement procedures for materials that are recycled and/or reused onsite

Webcor/Obayashi will verify that Trade Subcontractors participate in reuse programs by reviewing each Trade Subcontractors Monthly Disposal report for any material processed offsite. For such reuse programs, Trade Subcontractor shall refer to the City's construction and demolition recycling program.

Webcor/Obayashi shall review the environmental goals of this Project with all Trade Subcontractors during the preconstruction meeting. Webcor/Obayashi shall make a proactive effort to increase awareness of these goals among the job site workers. Webcor/Obayashi will make a proactive effort to increase awareness of these goals among the site workers by requiring that each Subcontractor take Click Safety training prior to stepping on the jobsite. As part of this Click Safety training, there is a module dedicated to teaching and reviewing the

Exhibit P

LEED requirements of the project during construction activity.

Webcor/Obayashi will verify that Trade Subcontractors are using registered transporters and registered facilities. Only registered transporters can remove mixed construction and demolition debris from the construction site, and they must take this material to a registered facility. NOTE: A Registered facility: is any facility that accepts mixed construction and demolition debris for processing and recycling must be registered with the City and County of San Francisco and must demonstrate an overall minimum recycling rate of 65% for mixed construction and demolition debris. A registered facility must have applied for and received a registration from the San Francisco Department of the Environment. Webcor/Obayashi will ensure that Waste Management Companies that service San Francisco and retained by the Trade Subcontractors are registered transporters and meet the City/LEED requirements. Trade Subcontractors shall refer to SFEnvironment.org for the City's most current list of registered transporters.

Webcor/Obayashi will verify that Trade Subcontractors are implementing the following:

1. Eliminate the procurement of unneeded supplies.
2. Reduce waste by printing and copying double-sided.
3. Submit all submittals, reports, and forms in electronic format (PDF) unless otherwise noted.
4. Fully participate in available and required recycling and composting programs.
5. Purchase products made with recycled content such as paper and recycled aggregate.

Webcor/Obayashi will verify that Trade Subcontractors shall submit:

1. Construction and Demolition Debris Management Plan.
2. Construction and Demolition Debris Recovery Monthly Summary Report and supporting documentation for any materials processed offsite.
3. Construction and Demolition Debris Recovery Final Report for all materials processed offsite.

Trade Subcontractor's plan shall comply with specification section 02 41 00. All Trade Subcontractors will remove and dispose of all waste materials from the site for off-site disposal in compliance with all applicable laws, ordinances, rules, and regulations. Webcor/Obayashi and all Trade Subcontractors will work with the TJPA representative so that the representative may characterize the waste materials as required by law to the extent required by Webcor/Obayashi's selected disposal facilities.

Trade Subcontractor's plan shall comply with specification section 01 15 00. Trade Subcontractor's shall perform work in a manner to minimize generation of dust, dirt, rubbish, and other debris, to prevent dust and debris from interfering with the progress of the work, and to keep dust and debris from accumulating at the work site or adjacent areas. Trade Subcontractor's shall remove debris and rubbish from the site on a daily basis.

Trade Subcontractor's plan shall comply with specification section 01 13 50, by preventing the mixing of hazardous and non-hazardous materials.

Trade Subcontractor's shall be required to provide technical information, as required by the specifications including compliance with the City and County of San Francisco Ordinance 27-Exhibit P

Construction Waste Management Plan

06, in their plan which will be submitted For Record Only to the CMO.

Mr. Rick Buellesbach  
Senior Project Manager - Transbay Transit Center  
Webcor/Obayashi Joint Venture  
175 Beale Street  
San Francisco, CA 94105

Re: Transbay Transit Center Quality Control Surveys  
Subject: December 2011 Control Verification Survey Results

Dear Mr. Buellesbach:

The field work for subject surveys was conducted by Chaudhary & Associates December 5 - 8, 2011. The surveys included verification of Chaudhary & Associates control (as shown on the Survey Control Plan dated 11-10-2011), with the exception of control point 217 which was destroyed sometime between the November 2011 and December 2011 control verification surveys.

Horizontal control values for point numbers 54, 208, 209, 213, 101, 105, 215, and 227 were constrained in this control network horizontal adjustment. The elevation values remain unchanged from the November 2011 surveys. The table below shows both the 11-10-2011 and the 12-21-2011 values for the remaining control points. Because data values can be impacted by environmental factors (temperature and humidity), seismic activity, and the various combinations of back sight and foresight data available on any given day, only the values which differ by 0.01' or more are adjusted and shown on the following table (and updated on the 12/2011 control map to be sent to you tomorrow). Field note copies and Star Net Reports have been mailed to you.

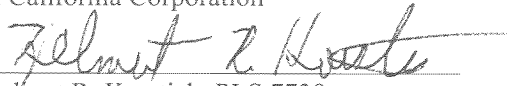

## Horizontal Values

Point #	November 10, 2011		December 2011		Description
	Northing	Easting	Northing	Easting

Please feel free to call me at (707) 255-2729 any questions or comments.

Sincerely,  
**CHAUDHARY & ASSOCIATES, INC.**  
A California Corporation

  
Helmut R. Korstick, PLS 7739  
Project Surveyor

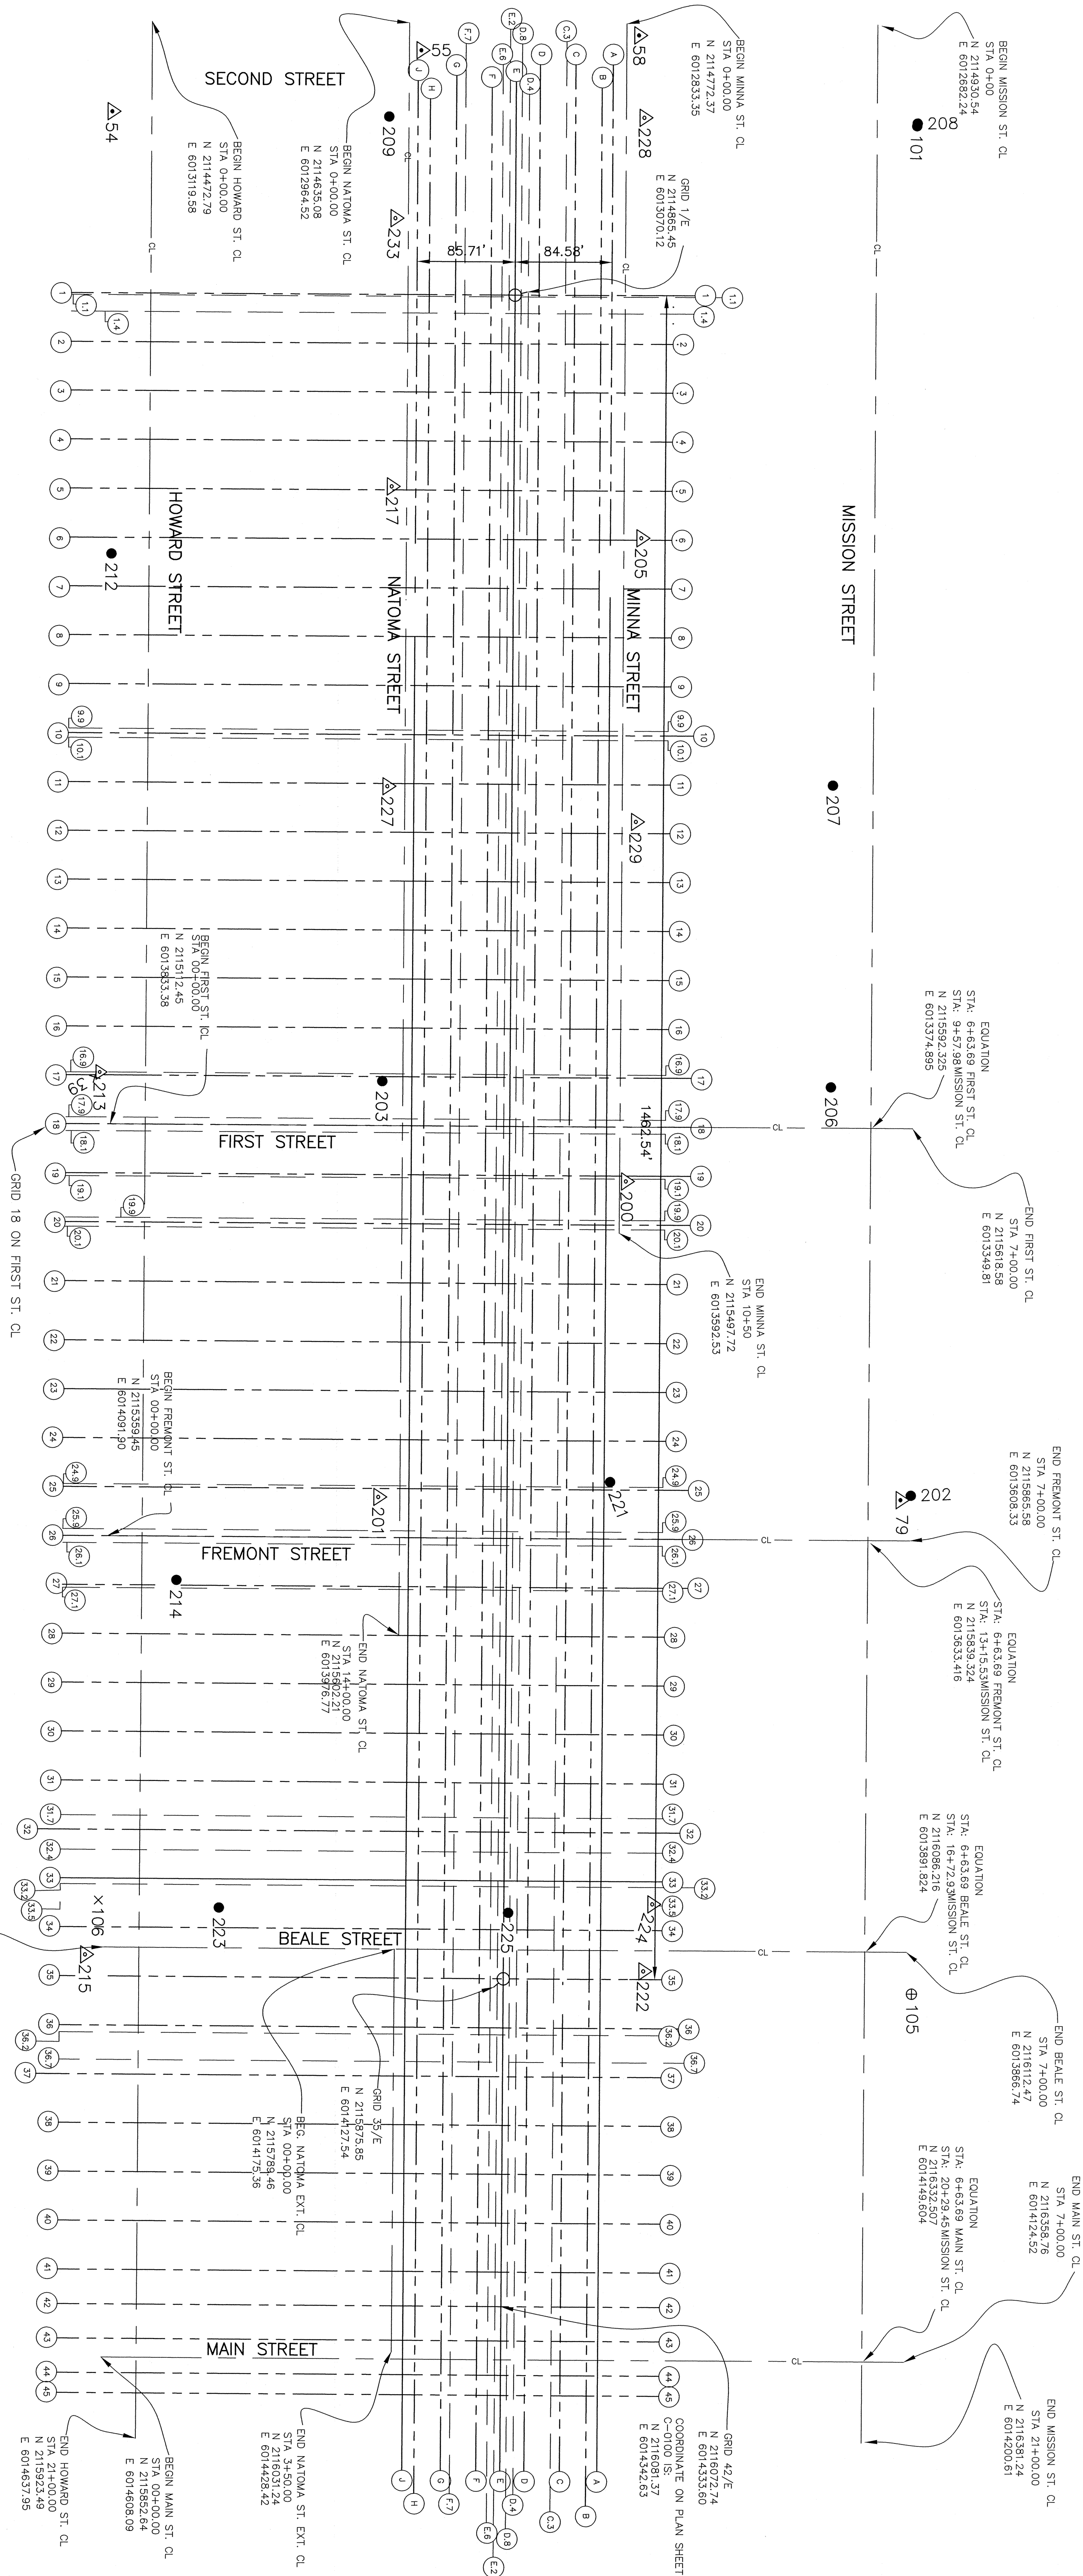

SURVEY PROCEDURES

- 1) CHAUDHARY AND ASSOCIATES FIELD CREW LOCATED AND TIED OUT CONTROL BETWEEN APRIL 22-MAY 13, 2011. DIGITAL LEVELS WERE UTILIZED FOR THE VERTICAL COMPONENT, AND A TRIANGLE SB WAS USED FOR THE HORIZONTAL COMPONENT. CONTROL WAS ADJUSTED UTILIZING STAB-NET SOFTWARE.
- 2) THE 4 MAIN CONTROL POINTS SHOWN ON SHEET C-0100 OF PLANS (BEING PINS 54, 101, 105, AND 106) WERE USED TO ESTABLISH THE GRID. THE GRID WAS ADJUSTED TO BE THE MOST ACCURATE REPRESENTATION OF THE FIELD IN THE STAB NET ADJUSTMENT. A TOPCON DL-102 DIGITAL LEVEL WAS UTILIZED FOR THE VERTICAL COMPONENT.
- NOTE: CONTROL POINTS 220-226 WERE FIELD SURVEYED BETWEEN SEPTEMBER 9-14, 2011.
- 3) CENTERLINES AS SHOWN ON PLAN SHEET C-0100 TO BE FIELD VERIFIED.

GRID LINES TO BE SET BY PLACING A CUT X OR OTHER APPROPRIATE SURVEY MARKER ON THE EXTENSION OF SAID GRID LINES WHERE PRACTICAL, OR PER WEBCOR AUTHORIZATION.

Note: Coordinates are ground coordinates (see note 6)  
1: SCALE FACTOR = 1.000000

NOTES

- SEE ARCHITECTURAL PLANS FOR GRID LAYOUT AND DIMENSIONS.
- NAD 83 REFERS TO THE CALIFORNIA STATE PLANE COORDINATE SYSTEM. HORIZONTAL CONTROL FOR THIS SURVEY IS BASED UPON NAD83, CA ZONE 3, BPOCH 1991.36, GRID 03.
- UNITS ARE FEET AND REPRESENT GROUND (NOT GRID) DISTANCES.
- THE VERTICAL DATUM IS BASED UPON NAD 83.
- CONTROL VALUES BASED UPON FIELD TIES SURVEYED BETWEEN APRIL 22 AND MAY 13, 2011 BY CAA FIELD CREW.
- COORDINATES AS SHOWN REPRESENT GROUND COORDINATES AND WERE CONVERTED BY APPLYING A SCALE FACTOR OF GRID/999984.11. THE ORIGIN OF THE SCALING FOR THE ENTIRE PROJECT IS CONTROL POINT NO. 39 SEARCHED FOR AND NOT FOUND ON APRIL 23, 2011.
- BASIS OF ELEVATION IS DPM SURVEY CONTROL PT. NO. 54, BEING A CAA MAG NAIL AND WASHER IN THE CURB AT THE EASTERLY CORNER OF END AND HOWARD STREETS. ELEV=25.36 NAD 83 VERTICAL DATUM.
- CENTERLINE DATA DERIVED FROM PLAN SHEET C-0100.

#### Traffic Control Plan

Webcor/Obayashi

WO-TCP0001

**REVISION 2**

**8/22/2012**

## **GENERAL**

The Webcor/Obayashi Joint Venture (W/O) Traffic Control Plan that will be implemented on the Transbay Transportation Center Project is an overall project policy, with each trade subcontractor contributing their specific plan as they come on board to the project. The primary function of this plan is to provide a framework to insure compliance with Specification Section 01 15 70. To assist in this effort, W/O has enlisted the services of a traffic control consultant (TCC) – Sandis Engineering. Award of this contract between Sandis Engineering and W/O was based on a competitive request for proposal (RFP) process referred to as TG05.4.

TCC is responsible for participating in all aspects of traffic control planning and implementation including, but not limited to:

- Traffic control design oversight;
- Coordination between trade subcontractor traffic control designs;
- Interface with City of San Francisco and other agencies as necessary;
- Participate in coordination efforts of the TJPA Representative;
- Oversight of implementation of approved traffic plans;
- Provide daily reports regarding status of traffic control measures;
- On call traffic control services as requested.

## **TRAFFIC PLAN REVIEW AND COORDINATION**

TCC shall prepare a detailed “as built” traffic plan for approximately four blocks in all directions from the jobsite. This map will be based on SFMTA maps and will be augmented as appropriate per field review of existing conditions. This map will include all striping, signage, curb lines, curb cuts, curb painting, buildings and any other feature of the street layout and traffic control. Beyond the four block distance, the map will include street layout and striping configuration.

Once a trade subcontractor is under contract, W/O shall provide the trade subcontractor with the as-built plan in CADD format. The trade subcontractor will then be required to use this base map for preparation of all their traffic control plans. A summary of the below criteria can be found in the attached Traffic Control Plan Preparation Packet.

The trade subcontractor is required to prepare and submit a complete traffic plan consistent with requirements of the project specification and all requirements per the City of San Francisco. The submittal must be made in a timely fashion to allow for the review timeframe prescribed in the specifications plus an additional four weeks for review by the TCC.

Upon receipt of the submittal from trade subcontractor, W/O will forward it to the TCC for review. The plan will be reviewed for adherence to specifications and for compatibility with previously submitted plans. Comments will be returned to the trade subcontractor who will make modifications as is appropriate.

When the trade subcontractor’s traffic control plan is reviewed and coordinated with the TCC, it will be submitted to the TJPA Representative for approval. Submittal will be in compliance with Specification Section 01 15 70, paragraph 1.4B.

Upon approval by the TJPA Representative and SFMTA, the TCC will update the baseline traffic

control plan as appropriate. The baseline plan will be updated only when a change to the traffic pattern will be in place for three or more months. If the traffic control plan will be in place for less than three months, the plan will be superimposed over the base map for coordination but the baseline drawing will not be modified.

#### **FIELD IMPLEMENTATION**

It is intended that the TCC will maintain a regular, but not full time, presence on site. Similar to the traffic control design review, their scope of work is to review the trade subcontractor's adherence to city standards, project specifications and approved traffic control plans.

TCC review and assistance in field coordination includes but is not necessarily limited to:

- Perform site review of traffic control;
- Note traffic control deficiencies;
- Coordinate correction of site deficiencies with W/O and trade subcontractor;
- Provide daily report of traffic control observations and corrective measures;
- Attend site meetings as necessary to review short term Special Traffic Permit and coordinate between subcontractors and SFMTA;
- Miscellaneous coordination with SFMTA as necessary;
- Review of pedestrian protection as it relates to vehicle traffic;
- Provide traffic control devices and personnel as required to augment traffic control efforts;
- Confirm proper training of subcontractor flagging personnel;
- Provide continuous oversight of traffic control for major construction operations as determined by CM/GC.

#### **TASKS NOT CURRENTLY ANTICIPATED BY TCC**

Training of flaggers for the trade subcontractors although it is an option should it become apparent that subcontractor employees need additional training.

Coordination of the 10b police officers between subcontractors will be the responsibility of the CMO.

Pedestrian control unless it is specifically impacted by vehicle traffic.

## **TRANSBAY TRANSIT CENTER – TRAFFIC CONTROL PLAN PREPARATION PACKET**

### ***Overview***

The purpose of this packet is to provide the contractor with the information necessary to prepare a Traffic Control Plan (TCP) for their work in accordance with the requirements of the Project Specifications and the City and County of San Francisco (CCSF). It includes procedures, timing, a base map, plan sheet template and examples for use when preparing and submitting Traffic Control Plans (TCPs) for review and approval. The documents included in the TCP Packet are described below.

### ***Flow Diagram***

The flow diagram included within the TCP packet identifies the specific components and required time intervals for TCP submittal, review and approval. Please note time requirements for Plan review and approval. No work will be allowed without an approved plan. It is the contractor's responsibility to anticipate and allow for required lead times.

### ***Base Map File***

The AutoCAD drawing of the Base Map file included in this packet represents the City of San Francisco street layout as of the date indicated on the Base Map file title block. ALL proposed TCPs shall be created using this Base Map file as a starting point. It is crucial that proposed TCPs be provided on the same coordinate system as the Base Map file so multiple approved TCPs can be overlain in a composite exhibit. TCPs prepared using a different base or plan template will be rejected.

### ***TCP Standards***

#### ***Design Standards***

The Traffic Control Plans shall be prepared and submitted in accordance with the following documents:

1. Transbay Transit Center Project Specification Section 011570 – Traffic Routing Work, dated September 23, 2010. A copy of this specification is included in the TCP Packet.
2. City and County of San Francisco Regulations for Working in San Francisco Streets (Bluebook), 7<sup>th</sup> Edition dated October 2006. Refer to the following link for a copy of this document: <http://www.sfmta.com/bluebook>

#### ***CAD Standards***

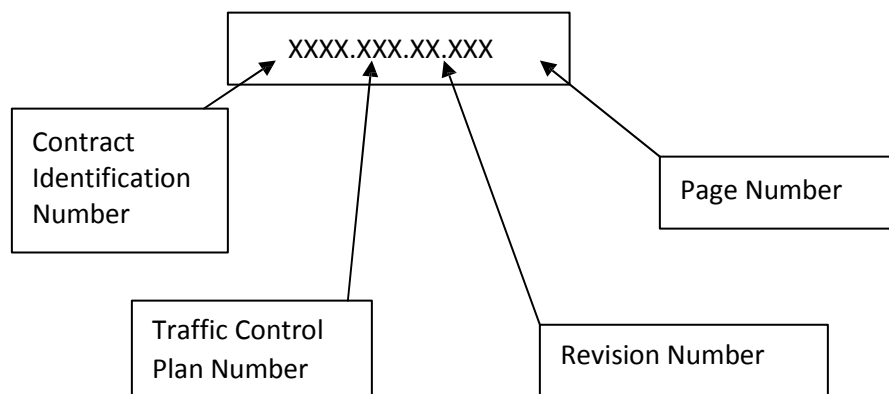

The sheet TCP-001 provides a template with title block, symbols, and specific details pertaining to the presentation and setup of drawings to be used when preparing a TCP. The CAD standards identified under the Vendor Submittal Instructions, including layering configuration, title block, and symbols, shall be referenced and followed when creating all TCP AutoCAD drawings. The contractor shall include additional signs in the form of blocks, notes, and details as needed.

### ***TCP Samples***

There are three sample Traffic Control Plans included in this packet. These samples provide an example of how the TCPs shall be set up and configured.

### ***TCP Submittals***

All proposed Traffic Control Plans shall be submitted at 1"=80' scale on 22"x34" sheet size in both pdf and AutoCAD 2007 formats. They are to be submitted electronically to Webcor-Obayashi's trade package project manager. An important item to be included on all TCP sheets is the submittal tracking number. The tracking number consists of four segments separated by a period. The first segment is the 4-digit contract identification number, the second segment the 3-digit TCP number (provided by Webcor), the third segment is the 2-digit revision number, and the fourth the 3-digit page number. Refer to the Submittal Tracking Number Diagram below for additional direction.

SHEET

VENDOR SUBMITTAL INSTRUCTIONS

TRAFFIC CONTROL PLANS SHALL BE SUBMITTED AS FOLLOWS:

- 1) FIVE (5) HARD COPIES

2) ELECTRONIC COPY IN PDF AND AUTOCAD 2007 FORMATS

3) 11"x17" SHEET SIZE

4) 1"=80' SCALE

5) SHEET NUMBERING "TCP-###"

6) ELECTRONIC FORMAT PER TEMPLATE PROVIDED: SINGLE CAD FILE CONTAINING MULTIPLE LAYOUT TABS WITH A SINGLE TCP PER TAB. THE TCP SHALL BE DRAFTED IN MODEL SPACE ON TOP OF THE STREET BASE FILE WITH NOTES/LEGEND IN PAPER SPACE. MODEL SPACE SHALL BE DRAFTED AS FOLLOWS:

a) EACH TCP PAGE SHALL CONSIST OF FIVE LAYERS WITH A PREFIX FOR THAT PAGE NUMBER. FOR EXAMPLE, PAGE 001 WOULD CONTAIN THE FOLLOWING LAYERS:

001-TCP-DIM

001-TCP-NOTES

001-TCP-SIGN

001-TCP-SIGNTEXT

001-TCP-STRIPELINE

001-TCP-WORKAREA

b) ALL SYMBOLS, BLOCKS AND DIMENSIONS SHALL MATCH THOSE ON THIS SHEET IN SIZE, COLOR, AND LAYER. CREATE NEW BLOCKS USING SIMILAR COLOR AND SIZE FOR SIGNS/DEVICES NOT SHOWN HERE.

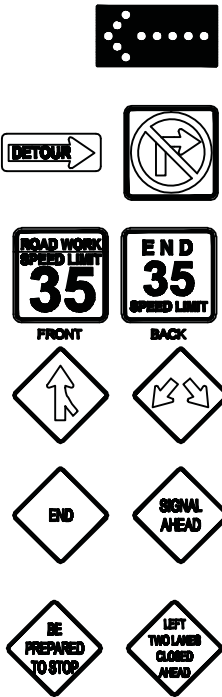

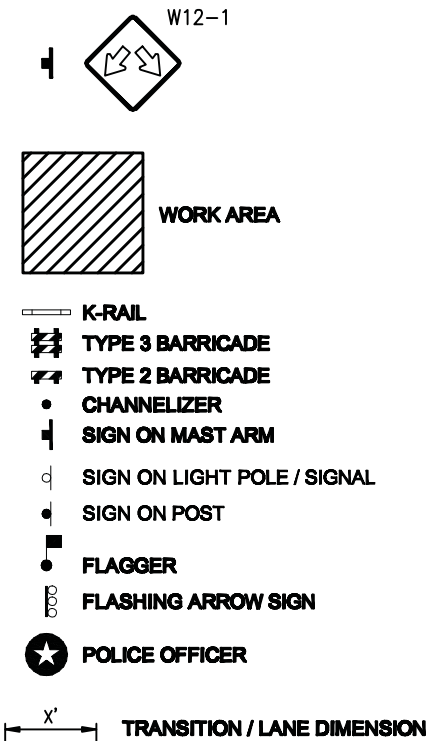

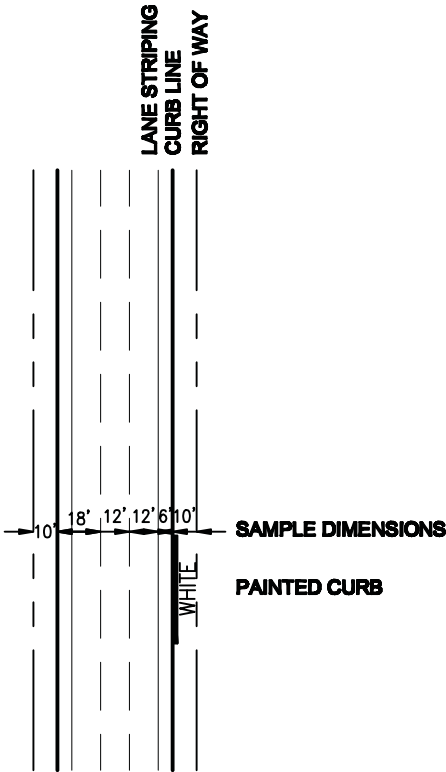

c) INSERT STANDARD TITLE BLOCK PER SHEET. USE ATTRIBUTE EDITOR TO FILL IN TITLE BLOCK WITH APPLICABLE INFORMATION.

d) TABLES, NOTES, AND LEGENDS SHALL BE IN PAPER SPACE PER SHEET ON LAYER XXX-TCP-GENERAL, WHERE XXX IS THE PAGE NUMBER

e) STANDARD TEXT STYLES, SIZES, DIM STYLES PER TEMPLATE

f) STANDARD LAYER COLORS AND NAMES; AND CTB/PEN SETTINGS PER TEMPLATE

g) FREEZE LAYERS IN VIEWPORTS AS NECESSARY TO ONLY SHOW THOSE NEEDED FOR THAT INDIVIDUAL SHEET.

7) REFER TO PROVIDED SAMPLE TCP PLAN FOR AN EXAMPLE OF THE FORMAT BEING IMPLEMENTED.

## **Exhibit U      Submittal Schedule**

Trade Subcontractor's Schedule submission shall include a full submittal schedule per Specification Section 01 13 00 1.4 – Submittal Schedule.

1. All submittals are to be submitted to Webcor/Obayashi Joint Venture within 60 days of Award.
2. The Submittal Schedule shall contain additional data fields to indicate: 1) the duration in work days for procurement of the item starting from the date that the submittal is approved until the item is available for construction, and 2) the Activity ID of the earliest construction activity for which the item will be required (the submittal/procurement item's successor).
3. The Trade Subcontractor should use the attached data format, Submittal Schedule Excel Template, for the submission of Submittal Schedule as Microsoft Excel File. Contact Webcor/Obayashi Joint Venture to obtain the blank excel file of the Submittal Schedule.
4. The Trade Subcontractor shall show critical submittals in the Exhibit I Construction Schedule in addition to providing the comprehensive submittal schedule required herein. Critical submittals are those submittals considered vital to the timely progression of the project schedule. These items may include, but are not limited to, engineering submissions; long lead items; items required within the first 25% of Subcontractor's performance period; and items that are required for construction or installation of a task with less than 20 working days of total float in the overall project schedule. The last group of items may not be determined until after acceptance of the Trade Subcontractor Construction Schedule submission and its full incorporation into the project schedule. Therefore, the Subcontractor may be required to add items to its Primavera schedule file subsequent to approval of its Construction Schedule submission.

## QUALITY COMMISSIONING PROCEDURES AND GUIDELINES

### Exterior Skin and Waterproofing Systems

- ✓ Roofs
- ✓ Decks
- ✓ Windows
- ✓ Curtain Walls
- ✓ Exterior Wall Systems (Precast, Stucco, EIFS, GFRC)
- ✓ Water Shedding Systems
- ✓ Flashings
- ✓ Expansion Joints
- ✓ Caulking, Sealants
- ✓ Primary and Secondary Water Barrier Systems
- ✓ Above & Below Grade Waterproofing
- ✓ General Waterproofing Systems

#### 1.0 Purpose

The purpose of this procedure and guideline is to set forth a commissioning process, which will ensure that the building's exterior envelop and waterproofing systems perform and function in conformity with design intent and to provide a means of verifying the implementation of these systems based on the project specifications, design and applicable industry standards.

#### 2.0 Definition of Commissioning

The term "Commission" refers to a Quality Assurance process by which the building's exterior envelop and waterproofing systems (i.e., below and above-grade waterproofing, decks, roofs, caulking, plaster, precast concrete and GFRC, curtain-wall, flashing, expansion joints, etc.) are provided, installed and tested in order to verify the systems perform in accordance with the contract documents and the design intent.

Commissioning entails the development of a clear and complete process that verifies the systems design and operational intent. It also is to verify that the exterior envelop and waterproofing systems and its components are installed according to the contract documents, manufacturer's recommendations and published industry standards and that the system receives adequate installation and performance inspections by the installing contractor.

The process must include verifying and documenting the installation steps, phases, and system performance with respect to the design intent and the contract documents. Commissioning is a team effort that requires cooperation by all parties to succeed.

#### 3.0 Description of the Commissioning Process

Commissioning is a “**systematic**” process for achieving, validating and documenting the performance of building systems as so that it meets the design intent and requirements.

The process extends through all phases from design to occupancy, and extending through the warranty period. Numerous checks and inspections shall be performed at each stage of the process to ensure that established procedures are followed. The process also includes training of facility operational personnel to ensure continued efficient use of the exterior envelop and waterproofing systems as originally designed and installed.

This guideline provides a uniform, integrated and consistent approach for the commissioning of all waterproofing systems as well as assisting in insuring product and design compatibility. Since many building waterproofing systems are integrated, a deficiency in one system or component may result in sub-optimal performance and failure among others.

#### 4.0 Commissioning Plan

Commissioning is a “**Quality Process**” for validating the system and component design performance.

The reports from the commissioning process are not just test reports, but reports that document design, installation, inspections, and particular tests and or evaluation procedures. The commissioning plan is continually updated to reflect changes in program and design of the waterproofing system(s). Commissioning reports shall document and record the results of the commissioning process.

Each Trade Subcontractor’s specific commissioning plan must be neatly organized in a consistent manner that reflects the nature of the building systems and their performance. The commissioning plan shall include schedules, requirements and procedures.

Trade Subcontractor(s) shall be responsible for the timely and efficient completion of all commissioning in accordance with the Subcontract Agreement.

**At no time shall any work be permitted to commence without a WEBCOR/OBAYASHI’ approved Trade Subcontractor Waterproofing Commissioning Program.**

Failure to do so may require Trade Subcontractor to assume all related costs and expenses in accordance with the Subcontract Agreement.

In addition, Trade Subcontractor may also be required to assume all related cost should WEBCOR/OBAYASHI find it necessary to develop, manage and or perform any Trade Subcontractor commissioning work.

#### 5.0 Objectives

The fundamental objectives of the commissioning process are:

- 5.1 Create a procedure to verify and provide documentation that the waterproofing performance of the facility meet the design requirements.

- 5.2 Enhance communication by documenting data and decisions throughout all phases of the project.
- 5.3 Validate and report that the performance of waterproofing systems meets design intent.
- 5.4 Provide a means of Quality Control and Quality Assurance (QA/QC) throughout all phases of the waterproofing system(s) installation, inspection, and testing process.

## **6.0 Contractors Normally Participating in the Commissioning Process**

- ✓ Waterproofing Consultant
- ✓ Architect
- ✓ Structural Engineer
- ✓ Mechanical
- ✓ Plumbing
- ✓ Electrical
- ✓ Fire Sprinkler
- ✓ Glass Systems
- ✓ Caulking
- ✓ Brick, Tile, Precast, GFRC, and Stone
- ✓ Fountains and Ponds
- ✓ Swimming Pools & Spas
- ✓ Roofing
- ✓ Insulation
- ✓ Flashing & Sheetmetal
- ✓ Waterproofing Contractors
- ✓ Concrete (If waterproofing admixtures are included by design)
- ✓ Stucco, EIFS, DEFS systems
- ✓ Elastomeric Painting
- ✓ Rough Carpentry (Wood cladding)
- ✓ Architectural Metal Cladding
- ✓ Expansion Joint Systems
- ✓ Water Tanks
- ✓ Special Systems or Components

## **7.0 Commissioning Team**

The commissioning team members may consist of the following:

- ✓ WEBCOR/OBAYASHI - Project Team as required

- ✓ Owner - Designated representative of the owner, building operator/engineer, and/or the owner's construction management firm
- ✓ Engineers - Architect and Designers
- ✓ Waterproofing Contractor
- ✓ Waterproofing Consultant
- ✓ Flashing / Sheet Metal Contractor
- ✓ Exterior Skin Contractor
- ✓ Roof Contractor
- ✓ Glass and Curtain Contractor
- ✓ Caulking and Sealants Contractor
- ✓ Commissioning Agent (CA)
- ✓ Mechanical Contractor
- ✓ Plumbing Contractor
- ✓ Fire Sprinkler Contractor
- ✓ Electrical Contractor
- ✓ Testing Contractor
- ✓ Other as necessary

## 8.0 Meetings

Regularly scheduled commissioning meetings of **the entire team** shall be conducted for site coordination, communicating issues of concern, resolving conflicts, reporting on system process and status, identifying urgent work and all deficiencies.

Commissioning meetings are critical to the **Quality** of the commissioning process as well as timely completion of the project.

## **9.0 Trade Subcontractor Performance Requirements**

- 9.1 Designation of the primary person who will be responsible, accountable, and act as the main contact person for all commissioning communications. Provide organizational chart indicating personnel who will be involved in the project. The chart should indicate factory, office, and on-site field personnel.
- 9.2 Review of drawings and specifications for completeness, appropriateness of details, and acceptance by Trade Subcontractor thereof.
- 9.3 Review WEBCOR/OBAYASHI standard details.
- 9.4 Preparing and submitting documentation of Trade Subcontractor's respective materials and systems to be integrated into the overall Commissioning Plan.
- 9.5 Submitting information on the intended commissioning protocol used on materials, and the integration into the system as a whole.
- 9.6 Provide a presentation of the commissioning process to WEBCOR/OBAYASHI, the Owner and or the owner's representatives. Demonstration shall indicate compliance with the Trade Subcontractor Commissioning requirements as outlined in this document.
- 9.7 Submitting shop drawings detailing waterproofing system layout as outlined in the contract documents. Shop drawings shall reflect all conditions present in the building, including but not limited to the following:
  - a. Conditions where different materials meet (i.e. windows to plaster or stone to plaster).
  - b. Corner conditions.
  - c. Conditions where vertical planes meet horizontal planes (i.e. soffits and sills).
  - d. Expansion joints and control joints.
  - e. Flashing.
  - f. Penetrations (i.e. Z-ducts, electrical outlets, louvers).
  - g. Conditions typically utilized by Trade Subcontractor's common practices.

Shop drawings shall include installation drawings indicating the planned sequence of installation of all components.
- 9.8 Providing means and method for preliminary testing of the exterior envelop and waterproofing systems with manufacturer's representative present as required:
  - a. Caulking: Include complete coordination with the caulking manufacturer's representative to assure compatibility of the caulking system with the

surrounding substrate and finishes. Trade Subcontractor shall submit caulking samples including manufacturer's specifications for materials, color, cleaning procedure, required primers, proper backer rod, installation procedures, testing requirements and results. Testing of caulking samples between all combinations of materials shall be performed by qualified testing agencies in direct accordance with A.S.T.M. Standard Test Method C794 (75), including seven (7) day immersion. A letter from the Caulking Manufacturer shall be submitted approving all testing procedures, the installation procedure and the use of the specified materials for the intended application. Any materials installed without such approval that may be in conflict with the approved procedures or of unacceptable color and appearance will be removed and replaced at the Trade Subcontractor's expense.

- b. Windows and Sliding Glass Doors: Assemblies shall be field tested in accordance with American Architectural Manufacturers Association (AAMA) 502-02 Voluntary Specification for Field Testing of Windows and Sliding Glass Doors using Test Methods A and B, testing a minimum of 1% of the products for air leakage resistance and water penetration resistance as specified for various stages of the product installation.
- 9.9 Reviewing all required testing under the witnessing of WEBCOR/OBAYASHI, Building Owner, and or the Owners representatives.
  - 9.10 Correcting all system deficiencies at Trade Subcontractor expense.
  - 9.11 Obtaining all required permits, code required inspections and final certifications.
  - 9.12 Preparing complete as-built record drawings made from an original set that has been marked up throughout the duration of the project. Drawings must indicate all work as it was actually installed showing change order revisions, field changes required to meet the working conditions, and any other items that will affect or reflected in the operation and maintenance of the facility.
  - 9.13 Obtaining all manufacturer's warranties and guarantees.
  - 9.14 Organizing the O&M manuals, if any, from suppliers and manufacturers.
  - 9.15 Performing any specified training for the facility's operational staff.

## 10.0 Information Management

The management and continued organization of the commissioning information shall be the sole responsibility of the Trade Subcontractor.

WEBCOR/OBAYASHI and the Trade Subcontractor shall mutually agree on the location where all the commissioning information and documentation shall be stored.

The Trade Subcontractor shall make every effort to continually update and manage the information throughout the commissioning process. WEBCOR/OBAYASHI and the Building Owner may review the commissioning information provided by the Trade Subcontractor at any time for updates, accuracy and completeness.

WEBCOR/OBAYASHI may elect to withhold or make appropriate adjustments to the Trade Subcontractor's monthly progress billing in the event the commissioning information or performance requirements as described in the Waterproofing Quality Commissioning Procedures & Guidelines are not being performed, managed and updated by the Trade Subcontractor.

## 11.0 Trade Subcontractor Commissioning Submittal Requirement

Each Trade Subcontractor has a responsibility to WEBCOR/OBAYASHI and the Building Owner to comply with the terms of the contract and to verify that the design intent of the waterproofing systems for the project is achieved.

Each Trade Subcontractor is required to provide two completed commissioning manuals containing the information outlined in Section 19 - Commissioning Binder Tab Index of this guideline. Each proposed formatted "3-ring" binder containing all information, including blank forms shall be provided to WEBCOR/OBAYASHI and the Owner for "**review and comment**" before the commissioning process begins, or by an agreed upon date.

WEBCOR/OBAYASHI, the Owner and the owner representative shall review the information and return it to the Trade Subcontractor within **two-week** time with all comments.

Each Trade Subcontractor shall make all required changes as agreed, to the commissioning manuals and resubmit them to WEBCOR/OBAYASHI within **two-weeks**.

Each Trade Subcontractor shall schedule and provide a formal demonstration of their commissioning process to WEBCOR/OBAYASHI, the Owner and the Owners representative after all required changes to the manuals have been satisfactory completed. Demonstration shall indicate compliance with the Trade Subcontractor Waterproofing Commissioning requirements as outlined in this document.

Each Commissioning Manual **shall be neatly organized** using appropriate tabs, dividers, table of content, index, etc. as required for easy referencing. Refer to Section 19 Commissioning Binder Tab Index for a standard binder organization. All Commissioning Manual(s) **must be user friendly**.

## 12.0 Commissioning Binder Tab Index

- Tab 1. Project design criteria specifications** – Provide information that describes the overall design criteria and performance requirements for the waterproofing system(s).
- Tab 2. Manufacture products and components** – Provide complete submittal list of all components that shall be contractually provided and installed.
- Tab 3. Manufacture installation instructions** – Provide manufacture documentation insuring that the system and components installation complies with all Manufacture requirements to maintain performance and guarantee obligations.
- Tab 4. Manufacture details** – Provide manufacture details or published industry standards for penetrations and terminations interfacing with other installed systems.
- Tab 5. Design transition review** – Provide design review comments and concerns on transition interfaces to other s or other compatibility issues.
- Tab 6. Quality Assurance / Quality Control Program** – Provide QAQC program with complete field inspections and checklists.
- Tab 7. Documentation** – Trade Subcontractor shall maintain a separate field binder documenting the QAQC inspections and field-testing for all installed work.
- Tab 8. Field mock-up and testing** – Provide information on mock-up or field performance tests that shall be preformed for all installed system(s). Provide manufacture recommendations or published testing standards used. If no performance testing is preformed, Trade Subcontractor shall provide documentation on how each system is performing in accordance to the documented design intent and contract warranty requirements.
- Tab 9. Schedule** – Provide schedule for, shop drawing devolvement, submittals fabrication, delivery and installation.
- Tab 10. Agency and factory test reports** – Provide all factory, agency, and field performance-testing reports on installed systems.
- Tab 11. Factory and Trade Subcontractor guarantee information** – Provide warranty responsibilities and durations for all systems and components installed.
- Tab 12. Owner Training** – Provide (O&M) and training for all required service and maintenance requirements as it extends throughout each system to maintain warranty. Include owner sign-off sheets verifying training.

- Tab 13. Attic Stock** – Provide list of spare material that shall be supplied by Trade Subcontractor to owner – Paint, applied materials, gaskets, handles, glazing, or patching products.
- Tab 14. As-Built Drawings** – Provide completed set of drawing and details accurately reflecting all installed and completed work.
- Tab 15. Material Safety Data Sheets** – Provide all Material and Data Safety Sheets (MSDS).

### 13.0 Identifying the Defects

It is the intent of the commissioning process to avoid defects in waterproofing systems. A standard of care exhibited during the commissioning process should anticipate potential defects and determine appropriate solutions prior to the installation of these systems. In the event that defects do occur, proper defect identification will help determine the repair needed and assist in selecting the appropriate method and materials.

It is important to acknowledge which factors have caused deficiencies in the waterproofing system and its components, and how a deficiency in one system may influence or amplify another. Careful and thorough defect identification is critical to obtain long-lasting, quality repairs. It is critical and necessary to eliminate the cause of the defect and not solely treat the symptom.

Each Trade Subcontractor shall be responsible for determining the cause and origin of various problems as it pertains to their contractual scope of work. Failure to do so may require Trade Subcontractor to assume all related costs and expenses for damages, repairs performed by others, testing, special inspections, and consultant fees.

### 14.0 Applicable Industry Standards

Unless the Contract Documents include more stringent requirements, applicable published construction industry standards shall be utilized. Where compliance with two or more standards is specified for quality or quantity levels, comply with the most stringent requirement.

Where sections of the specifications require that a product, material, installation, or test complies with a specified industry standard, the Trade Subcontractor shall obtain copies directly from the publication(s) source and include the information in the submitted commissioning information.

Each Trade Subcontractor engaged in construction on the project must be familiar with published industry standards applicable to their construction activity.

### 15.0 Schedules

An initial schedule shall be developed by the Trade Subcontractor identifying dates, times, and durations for shop drawings, approval of submittals, material fabrication, product delivery, acceptance, installation, testing and completion.

The schedule shall also include any commissioning task that shall be performed on waterproofing systems that may involve or affect other related building systems.

Each Trade Subcontractor shall update schedules, daily, weekly, monthly, or as required to keep WEBCOR/OBAYASHI and the Owner informed of the activities performed. This schedule will indicate appropriate milestones during the installation to allow WEBCOR/OBAYASHI and or the Owner the ability to observe and witness system installations prior to being covered up by subsequent s. The schedule will indicate milestone dates for Trade Subcontractor inspection and testing.

#### **16.0 Execution of Inspections and Checklists**

Trade Subcontractor and or vendors shall schedule initial inspections and checklist review with the commissioning team. The inspections and reviews shall be directed, executed, and documented by the Trade Subcontractor or vendor.

To document the process, the Trade Subcontractor performing the task shall provide and complete all documentation forms and checklists. (See attached sample checklist)

#### **17.0 Field Inspections**

One of the most important commissioning activities for waterproofing systems is field inspections. The field inspection process shall serve as a method and means of documenting the installation process as well as indicate variations between contractual design and construction.

Each Trade Subcontractor shall identify in detail the scope of their field inspections, and the types of field procedures that will be required to obtain the necessary information to provide a complete waterproofing quality control evaluation at the completion of the job.

#### **18.0 Field Witnessing of Trade Subcontractor's Quality Control**

WEBCOR/OBAYASHI, the Owner, consultants and the Architect reserve the right to witness the waterproofing system installation at any time. Spot checks shall be conducted on a random basis. If inconsistencies are discovered in quality, performance, or if commissioning information differs from those submitted, the Trade Subcontractor may be required to completely remove and remedy all conditions where the inconsistencies occurred at no additional cost or impact to the schedule.

Witnessing shall include all or part of, but not limited to the following:

- 14.1 Mock ups
- 14.2 Waterproofing component and system installation
- 14.3 System inspection and checks
- 14.4 Performance tests

## 14.5 Special Inspections

## 19.0 Documentation

Trade Subcontractor shall maintain a separate field binder documenting quality control inspections and field-testing for all installed work. Documentation shall include dates, quality control field checklist, reports with inspected locations defined by grid lines and elevations. Provide a dated photo log, documenting inspected areas and general sequence of installed work for the duration of the project.

## 20.0 Testing and Methods

The objective of field-testing is to correlate paths of moisture infiltration and to observe the source of damages. Moisture entering a building during extreme weather may be obvious, but the most reliable method to discover the infiltrating path is to recreate the leakage condition in a controlled manner. Testing also allows verification of the theory for the cause of leakage.

As all system and component tests are unique to some degree, there may not be one standard or method for testing that can be applied to all. There are several methods, standards, governing requirements, and manufacture recommendations, etc., which should be applied.

There are three types of acceptable testing methods that can be used during the investigation. All of which must be approved by WEBCOR/OBAYASHI. These testing categories include:

- ✓ Non-Destructive Testing
- ✓ Destructive Testing
- ✓ Laboratory Testing

### 20.1 Non-Destructive Testing

Non-destructive testing uses a variety of non-invasive tools. This type of testing causes little or no damage or interference to the building envelope. The various methods of non-destructive testing include:

- a. *Rilem Tube* - This calibrated device is adhered to exterior masonry walls to determine the porosity and condition of brick masonry units, mortar joints, head joints, and embedment joints.
- b. *Water Spray Rack (ASTM E1105)* - This test simulates a wind-driven rain condition on a facility. It can assist in determining the specific cause and origin of moisture infiltration when it is used to test independent components of the envelope. Spraying water over a large area in an uncontrolled fashion will not reveal specific causes of water infiltration.
- c. *Hose Spray Test (AAMA 501.2)* - This test method also simulates wind-driven rain in small segmented areas using a standard garden hose in which a calibrated nozzle is attached with a pressure gauge. The spray is

directed at a specific joint, crack, or defect to reveal potential moisture intrusion.

- d. *Differential Pressure Test (ASTM E1105)* - A pressure chamber is constructed on the interior of the facility at a specific location to test moisture driven through an assembly or component. The assembly or component is subjected to a negative force while simultaneously a spray rack is directed at the assembly to draw the moisture into the facility to simulate a negative pressure under a wind-driven rain condition.
- e. *Infra-Red Thermography* - Infra-red Thermography photographs the building exterior to determine the locations of wet components. Components, such as insulation and sheathing, etc., will act as heat sinks if they contain high levels of moisture. During the day, moist and dry components absorb heat. At night, the moist areas release the heat much slower than the dry areas. By reading the heat signature, Infrared Thermography will help expose the problem areas. Small test cuts may be required to verify moisture areas.
- f. *Soundings (ASTM D4580)* - There are different ways to perform sounding tests including the hammer tap test. In this test, a 16 oz. hammer is tapped against concrete for sound. A hollow sound indicates areas where the concrete has separated from the reinforcing steel, typically due to exfoliation or corrosion of the steel. Another method of sounding is to chain drag a heavy 15 ft. link chain along a concrete surface to listen for hollow sounds, indicating defective concrete. This method can cover larger areas effectively and is commonly used on parking garages and loading docks.
- g. *Pachometer Survey* - This test uses a magnetic device used to locate embedded steel reinforcement and help determine the concrete cover over the reinforcement. Generally, the Pachometer is fairly accurate when measuring ¼ inch to 3-inch thick concrete cover and when reinforcing placement is not too congested.
- h. *Poly-sheet Tape-down* - This test determines the presence of moisture coming through a concrete surface, typically a slab-on-grade type of assembly where the typical problem is tile or membrane separation from the floor. A 2' x 2' section of polyethylene is sealed to the concrete with duct tape and removed 24 hours later. If there is moisture beneath the polyethylene, it is a good indication that there is a vapor drive through the concrete section.
- i. *Glass-Slide Epoxy or Crack-o-meter* - This device is sealed in place over a crack and periodically checked to determine if any movement has occurred. If movement has occurred, the glass will crack or the meter will record movement.
- j. *Optical Illuminated Boroscope* - A boroscope is inserted into a 5/8-in. diameter pilot hole through an exterior wall system and allows the cavity walls of brick veneer, stud wall backup of exterior insulated finish systems (EIFS), or other types of constructions to be observed without large-scale destructive testing.

- k. *Smoke/Dust Tracer* - The smoke/dust tracer helps to find air infiltration. It is moved across the interior face of a window to observe the smoke and dust particles coming through the assembly.
- l. *Moisture Meter* - A Delmhorst meter is a digital device that detects the presence of moisture in various building components. This test is typically accompanied by a gravimetric analysis (oven drying of samples), which is used to confirm the results of the Delmhorst meter.
- m. *Flashlight and mirror* - These simple tools can be very useful to detect problem areas. Placing the mirror into the plenum or behind difficult-to-access areas with the flashlight will allow observation of concealed conditions.

## 20.2 Destructive Testing

When the main objective is to determine the existing composition and configuration of concealed assembly conditions, destructive testing may be warranted. The most common methods of destructive testing are test cuts and borings.

Any type of destructive testing must be reviewed and approved by WEBCOR/OBAYASHI.

- a. *Roof Testing* - Test cuts in the roof assembly may be necessary to determine the condition of the underlying insulation and substrate. Cutting into the system may help verify whether roofing problems are causing corrosion of the steel deck, or a spalled and cracked concrete deck, etc. Test cuts may also expose the as-built configurations of the flashing components at roof-to-wall locations, curb locations, etc. This information is critical to the appropriate remedial design and/or repairs.
- b. *Exterior Wall/Skin Testing* - Test cuts on exterior walls may be required to identify the origin of moisture infiltration. For masonry walls, it is most effective to make test cuts at window heads and sills, and at any through-wall flashing locations that may be suspected of allowing moisture intrusion. Masonry test cuts may expose defective through-wall flashing that is allowing moisture intrusion. Test cuts may also help determine the underlying conditions of the steel components in wall systems, including wall ties, reinforcing steel, sub-steel columns, etc.

## 20.3 Laboratory Testing

Destructive testing is also used to obtain samples for lab analysis. Samples of sealants, coatings, painted finishes, roofing materials, etc. can be sent to a laboratory to determine the presence of lead or asbestos. Samples of masonry or concrete can also be tested to help identify causes of moisture/air infiltration (descriptions of these analyses follow).

Laboratory testing may help obtain a better understanding of existing material types, presence of contaminants, and the possibility of hazardous components.

This type of testing can also provide valuable information concerning proper surface preparation, material selection, and implementation of repairs. The following laboratory tests are some of the more useful when performing building envelope evaluations:

- a. *Gravimetric Analysis* - This test will determine moisture content. After weighing and recording the in-situ existing sample, completely dry the sample in an oven and re-weigh it. The weight difference indicates moisture content and is particularly useful for insulating materials. Testing moisture contents of samples is critical to verify results from non-destructive moisture scans.
- b. *Petrography* - Petrography determines the “make-up” of concrete. This test will indicate the size and type of aggregate, air/void ratio, type of cement, and general mix design data of the concrete. Most materials testing lab can perform this test.
- c. *Air Entrainment* - Provides an indication of the existing concrete’s durability and freeze-thaw resistance. Air entrainment is generally indicated by petrography.
- d. *Presence of Carbonization* - Accomplished by spraying a solution of phenothelene on the concrete substrate and recording the depth of the solution’s color change. This will indicate to what depth carbon dioxide has progressed into the concrete. Carbon dioxide will degrade the cement matrix of the concrete and lower the pH level of it. The layer surrounding the reinforcement is then destroyed, allowing corrosion of the reinforcing steel. Corrosion by carbonization usually occurs over a broad area.
- e. *Chloride Ion Content* - Chlorides from marine atmospheres or mists from road salts entering the concrete substrate, and salts originally introduced to the concrete via admixtures or aggregates can promote accelerated corrosion of reinforcing steel, usually at concentrated or specific locations. The chlorides are not consumed in the corrosion process but rather act as catalysts in the process. The corrosion will progress along the reinforcing bars causing concrete de-bonding, cracking, and spalling.
- f. *Reinforcement Placement, Depth, Quantity, and Type* - This information may be established with the use of a Pachometer or similar electronic metal detector. It is useful in determining required steel replacement and structural capacities during engineering analysis phases.

## 21.0 Engineering Analysis

Using information obtained from the field, laboratory results, and collected data, a comprehensive engineering analysis may be required. The engineering analysis should include an assessment of field and laboratory data, structural analysis as well as the following:

- ✓ Thermal Analysis
- ✓ Drainage Analysis

- ✓ Vapor Drive Analysis
- ✓ Fire Rating Requirements
- ✓ Cost Estimations

## **22.0 Deficiencies and Non-Conformance**

The Trade Subcontractor shall identify and list any outstanding deficiencies or procedures that were not completed successfully during any final testing. Documented deficiencies shall be submitted to WEBCOR/OBAYASHI within 48 hours of each test completion.

The Trade Subcontractor shall also provide in writing, the corrective action for each deficiency as required within 48 hours. The installing Trade Subcontractor and or vendor shall correct all outstanding issues or deficiencies in the materials or the installation of the materials and provide the commissioning team with dates and times for the required corrections and any re-testing.

## **23.0 Remedial Work**

General considerations for the repair of defects and replacement of components should include the following:

- 23.1 Determine the effect, if any; the repairs have on the structure, surroundings, and operations of the building.
- 23.2 Ensure proper preparation of surfaces to be repaired and provide chemical and mechanical bonds for new materials.
- 23.3 Material selection should include an understanding of performance limitations and should rely on the products past acceptable performance. Material selections should include consideration of the following:
  - ✓ Compatibility
  - ✓ Maintenance
  - ✓ Life cycle

## **24.0 Project Commissioning Closeout**

WEBCOR/OBAYASHI, the Owner, and/or the Owner's representative shall determine when the Trade Subcontractor commissioning process has been satisfactorily completed and when to submit the final report information and all other documentation to Webcor.

As part of the project turnover, the quality of all work will be reviewed to determine whether it is within specific and manufacturers' guidelines, industry standards, and code compliance.

WEBCOR/OBAYASHI, the Owner, and/or the Owner's representative consultant must be completely satisfied that the commissioning procedures have been performed accurately and professionally.

In the event the commissioning information or performance requirements outlined in the Waterproofing Quality Commissioning Procedure & Guidelines have not been met, WEBCOR/OBAYASHI may elect to withhold or make appropriate adjustments to the Trade Subcontractor's final billing.
