T-0168	BSE - Soil Classification Data	Closed	06/08/2011	06/18/2011	06/22/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Nhi Tran	To: Turner Construction Company		Daphne Faulkner	Answered By:Transbay PMPC	
Co-Author: Balfour Beatty Infrastructure, Inc.		Ural Yal	Roger Rothenburger				
REQUEST:		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>			
Reference Specification Section 01 13 50		Contract Specification Section 01 13 50 Part 1.1.C (General Summary - Soils Management) requires that the Contractor use "Site Mitigation Plan, Transbay Transit Center" by Treadwell and Rollo March 24, 2010 for "...the management of existing soils in a manner consistent with the reuirements of the Contract." This report is attached as Appendix A in Specification Section 01 13 50.					
The Class 1 and Class 2 Disposal site does not want to use the old "PSI for Caltrans" Reports in the Soil Profile, due to the lack of necessary tests, missing pages in the report, and age.		Section 01 13 50 Par 1.1.C for soils management also references a 2nd Treadwell and Rollo Report, "Environmental Site Characterization, Transbay Terminal, San Francisco California April 2009" that is referenced in Specification Section 00 03 35 (Existing Conditions Hazardous Materials Reports). This report is not a part of the Contract as stated in Section 00 03 35 is not part of the Contract except for the technical data incorporated by reference into the Contract.					
The Disposal site recommends the use of the Treadwell & Rollo reports from 2008 and 2009, and to dismiss the "PSI for Caltrans" reports.		A partial review of this document shows that there is nothing to require that the Contractor use "PSI for Caltrans" reports. The April 2009 Treadwell and Rollo report is basically a detailed data report which predates the March 2010 report "Site Mitigaiton plan, Transbay Transit Center".					
Please Advise.		The March 2010 Treadwell and Rollo document modified by any additional data in the 600page April 2009 Treadwell and Roll report should be used to manage the soils being excavated and coordination with the Class 1 and Class 2 Disposal Sites.

T-0169	BSE - Disposal of Drilling Spoils	Closed	06/09/2011	06/19/2011	07/07/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Nhi Tran		<b>To:</b> Turner Construction Company Daphne Faulkner		<b>Answered By:</b> Transbay PMPC		Roger Rothenburger	
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.                      Ural Yal							
<b>REQUEST:</b>		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>			
Reference Specification Section 01 13 50				Contract Specification 01 13 50 Part 1.1.C (General Summary - Sil Management) requies the Contractor to use the Treadwell and Rollo March 24, 2010 "Site Mitigation Plan, Transbay Tranit Center" and April 2009 "Environmental Site Characterization, Transbay Terminal" reports for managing existing soil disposal.			
BBII is concerned of the close proximity of the differently classified layers within the Buttress Area of Zone 4. The concern is during Drilling & Shaft Excavation, cross contamination of the material could potentially lead to Class 1 Material inadvertently going to a Class 2 Disposal site, or even a clean waist site. The class 1, the class 2, and the clean material layers are described below:				Only the March 24, 2010 Treadwell and Rollo report is a Contract Document in Appendix A of Section 01 13 50 and only data from April 2009 Treadwell and Rollo Report is included as Contract information even though both reports contain much of the same language. The April 2009 report is 600 pages and the March 2010 report is considerably shorter and condensed.			
Surface to GL-11 ft --- Land fill (clean material except for Equipment Pad Concrete)				Section 01 13 50 requires the Contractor to submit a material handling plan for each type of excavation operation on the site and includes the buttress piles as well as CDSM overflow materials, pre-trench excavation material, bulk excavation material, etc.			
GL-11 ft to GL-13 ft --- Class II (based on Spec 01 13 50/APA)				Both the April 2009 and March 2010 Treadwell and Rollo report give the expected ground condition classifications as:			
GL-13 ft to GL-16 ft --- Class I (based on Spec 01 13 50/APA )				5~16 feet (below grade) fill material composed of loose to medium dense silty sand with varying amounts of brick, wood, tar, and glass fragments.			
GL-16 ft to bottom ---Clean Material				15~18 feet (below grade) fill material composed of medium dense to very dense sand with variable amutns of silt			
BBII is concerned that due to the process of excavating the soil out of the Buttress Shaft with large amount of water and the use of a clam shell digging attachment, that the soil layers have a high opportunity of mixing within the casing. Presumably the mixed the soil layers will make it difficult to distinguish between the class 1, the class 2, and the clean materials.				18~55 feet (below grade) Bay Mud			
BBII requests the engineer to provide a revised stratum classification that is better for the actual shaft excavation methods being used, that will prevent cross contamination.				Under Section 01 13 50 Part 1.5.G the Contractor is resonsible for develeoping a plan that reduces the amount of hazardous waste generated. This plan also includes (Part 1.4.C Submittals - Excavation Handling) methods, means, equipment, sequences that segreegates the material to reduce cost of hazardous material disposal.			
Please Advise.				Since the buttress pile area was excavated to remove piles and backfilled with a combination of existing clean material (fine sand with silt) and crused concrete debris and poured concrete (top 2 feet buttress pile			

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>working pad) the Contractor needs to devise and submit the methods to handle the segregation of those materials for disposal in the appropriate Class land fills.</p> <p>The Contractor will need to test materials for suitability and work out a plan with the Disposal Landfill Operators. TJPA will assist with the TJPA environmental consultant, Treadwell and Rollo but it is the Contractor's responsibility to mke the plan and handle the material. Classification of excavated materials by TJPA will not always govern how the disposal operators deal with the material. The actual condition of the material must be determined prior to disposal.</p> <p>The materials listed by elvation in the RFI are presumably the levles of CLSM, crushed concrete debris and the material below. The buttress area was excavated to a minimum of 12 feet below grade at the Fremont St. shoring wall and then another 3~5 feet was excavated to grab on to the timber piles for removal. The excavated material was replace with different materials when the engineered work pad was constructed with compacted material.</p> <p>This means that the material is not necessarily class I as stated in the RFI or as designated in the Treadwell and Rollo March 2010 report. Whether the land fill operators will agree with that is the open question.</p> <p>However, as stated in Section 01 13 50 it is up to the BSE Contractor to test and determine the disposal of material in accordance with the Contract.</p> <p>TJPA will assist with some testing by their outside environmental consultant Treadwell &amp; Rollo but such testing does not erelieve the Contractor of the responsibility for the means and methods of proper disposal despite TJPA being the "generator" of the material.</p>

<b>From:</b> Webcor Construction LP <b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.		<b>To:</b> Turner Construction Company <b>Co-Author:</b> Daphne Faulkner		<b>Answered By:</b> Turner Construction Company Jack Adams			
<b>REQUEST:</b> Reference Drawing Sheets GT-1303, D-5100, D-5101, D-5102, D-5103, response to Pre-Bid RFI #TG0300-014, and attached drawing  Contract drawings GT-1303, D-5100, D-5101, D-5102, and D-5103 along with the response to Pre-Bid RFI #TG0300-014 describe the finish grades and subsequent quantities of crushed 3" minus concrete to be left on site for the BSE package. In summary, Zone 4 was to be left with a depression as shown on GT-1303 and Zone 1-3 were to be left no higher than existing ground elevations.  Previous discussions between BBII, W/O, EBI and TJPA were made to accommodate BBII's early access into Zones 1-3 for pre-trenching. At the time of these discussions EBI indicated they were short approximately 7000 cy of balancing the site and that they would not be able to get that remaining 7000 cy until the existing ramps were demolished. As a result of the short term shortage and in exchange for access to zone 1-3 BBII agreed to:  - Allow EBI to leave Zone 3 low of the Existing elevations - Allow EBI to set up Crusher in Zone 2 for ramp demolition - Allow EBI to leave the 7000 cy shortage in a stockpile in Zone 2, for our later use.  BBII appreciated the partnering agreement however the current size of the stockpile is far greater than BBII ever expected. BBII surveyed the stockpile and the Zone 3 depression on 6/7/11 after they completed their export to zone 4 and BBII estimates the size of the concrete stockpile to be in excess of 11,000 cy (this does not include the asphalt stockpile that was created after the survey).  Based on BBII's calculations (see attached topo) Zone 3 was left approximately 2000 cy short of existing grade and 5000 cy were taken from the stockpile to Zone 4. As a result BBII requests the current stockpile be removed in its entirety from the site, as it is in excess of the contractual amount to be removed by the BSE contract.  However, If acceptable to TJPA, BBII would be interested in taking 2000 cy of the crushed concrete if it could be		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Intent of the demolition project is to retain processed construction demolition concrete onsite for use as buttress fill material and provide a working platform for construction of new terminal perimeter wall.  Contract drawings state" Subsequent to placement of CDSM wall perimeter shoring remove all onsite crushed/processes demolition concrete backfill." REF: D-2200-2203 inclusive, and D-1001 Note 2.  The amount of crushed concrete (and asphalt) is from the demolition contract is in accord with Demolition Contractor drawings and specs. REF: Demo Spec. 02-42-00.

T-0173	BSE - Enhanced Trial Batch Testing	Closed	06/13/2011	06/23/2011	06/15/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Nhi Tran		<b>To:</b> Turner Construction Company Daphne Faulkner		<b>Answered By:</b> Adamson Associates, Inc. George Metzger			
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.                      Ural Yal							
<b>REQUEST:</b> Reference Specification Section 03 30 01, 2.2.E and attached mix designs  BBII, Becho, Central Concrete, W/O, ARUP and Adamson Associates met on Tuesday 5/24/2011 to discuss the results of Buttress Primary Concrete Mix Trial Batches. Based upon the preliminary results of the 2nd Trial Batch, BBII proposes to submit the following three mixes for approval for use on the Buttress Primary Shaft Concrete: 1. Mix 1: 85AEC3B6 2. Mix 5: 86AEC3A6 3. Mix 7: 87AEC3A6  BBII believes that having additional mixes available for use as the Buttress Primary Concrete would be of great benefit to the Project. BBII proposes "enhanced testing" of these three mixes as well as three additional hybrids of each mix for a total of nine mixes (please see attached for mix designs). The intent of the enhanced testing is to further refine the information we currently have on all three of the above three mixes, as well develop additional mixes for future use as Primary Shaft Concrete.  One of the concerns of 1st and 2nd Trial Batches was potentially accelerated curing due to the Styrofoam insulated boxes in which the trail batch "cubes" were cast. BBII proposes a 3rd trial batch using all of the same methodology of the approved trial batch method placing, the only exception being that the concrete will be cast into +/- 5'x5'x4' deep excavations in lieu of the Styrofoam insulated forms. Each mix would be placed in an individual excavation, lined with plastic to retain moisture. All other aspects of the proposed trial batch methodology would be as previously submitted & approved.  The results of the "enhanced testing" would be evaluated and possibly submitted for approval as additional Buttress Primary Shaft Concrete Mixes.  Please confirm that this is acceptable.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> ARUP Response:  This is acceptable.

Reference drawing C-2000					Accept Suggestion: <input type="checkbox"/>																							
The existing curb around the manholes at the east and west ends of the 301 Mission Wall is unknown. Design documents do not provide information as to the specs of this concrete mixture. The existing concrete appears to have a color added to the mix design. Please provide a mix design and color specification (if necessary) to use at these locations.					New concrete finish shall match existing concrete finish. Contractor shall provide concrete mix designs for curb(s) and walkway(s) based on specification as follows;																							
					Concrete Mix, Design and Testing: Design the mix to produce standard weight concrete consisting of Portland cement, aggregate, air-entraining admixture and water to produce the following properties:																							
					Compressive Strength: except as noted below, four thousand five hundred (4500) psi, minimum at twenty-eight (28) days, with a water cement ratio not to exceed 0.45 by weight.																							
					Slump Range: Two (2) inches to Four (4) inches.																							
					Air Content: Five (5) to seven (7) percent.																							
					Mixed shall be design to provide concrete with the following properties:																							
					<table><tr><td>Location</td><td colspan="2">Maximum Size of Aggregate</td></tr><tr><td>Min. 28 Day Strength (psi)</td><td colspan="2">Min Sacks of</td></tr><tr><td>Cement/cu. Yd.</td><td colspan="2"></td></tr><tr><td>Concrete Curb</td><td>¾"</td><td></td></tr><tr><td>3000</td><td></td><td>6</td></tr><tr><td>Concrete Walkways</td><td>¾"</td><td></td></tr><tr><td>2500</td><td></td><td>5-1/2</td></tr></table>			Location	Maximum Size of Aggregate		Min. 28 Day Strength (psi)	Min Sacks of		Cement/cu. REQUEST:			SUGGESTION:		ANSWER:		
Should the concrete mix design for the fill pour back and 9"x12" curbs along the north side of the 301 Mission wall be the same mix that is used for the new curb around the manhole? The mix design for curbs around the existing manhole was requested in RFI T-0175. Please advise.					Accept Suggestion: <input type="checkbox"/>		
					Concrete mix design for new concrete curbs shall be as specified in RFI T-0175.		
					Finished concrete curbs shall match existing concrete curb finish.		
					Contractor to submit concrete mix design to TJPA Representative for review and acceptance prior to placing concrete.		
<hr/>							
T-0177	BSE - Alternate Method Of Pile Removal Along 181 Fremont	Closed	06/15/2011	06/25/2011	06/16/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP                      Nhi Tran                      To: Turner Construction Company Daphne Faulkner			Answered By:Turner Construction Comp Jack Adams				
Co-Author: Balfour Beatty Infrastructure, Inc.                      Ural Yal							
REQUEST:			SUGGESTION:		ANSWER:		
Reference attached procedure, photos, and sketch					Accept Suggestion: <input type="checkbox"/>		
During the extraction of unforeseen piles along 181 Fremont, two piles located inside the proposed CDSM wall broke and are now too deep to extract under using the current extraction method. During the attempted extraction of pile 151, the pile continued to break. The top of this pile is approximately 9' below the base of the foundation wall. Considering the length of the adjacent removed piles, there is approximately 6' left to be removed. Pile 105 is approximately 6' below the base of the foundation wall leaving approximately 12'-14' to be removed. Further excavation to expose these piles is not reasonable. BBII proposes to drill the remainder of each pile out. See below the proposed procedure as per committee meeting and consultation with Viking Drillers Inc. on 6-15-11. It was agreed that this work will be charged to CR T-010. Also attached are photos and a drawing indicating the location of both broken piles (105 and 151).					Confirmed - Method of pile removal is acceptable. CR T-010 is used to document work.		
Please provide direction.

Co-Author: Balfour Beatty Infrastructure, Inc.		Ural Yal					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Specification Section 31 56 13							
As requested by the TJPA, DND submits this request to modify the horizontal tolerance for the CDSM shoring wall. The new goal is to set the wall 2" outside of the original planned centerline of shoring wall. This solution has been proposed by the TJPA in order to not encroach into the structure at the bottom of the train box.							
DND respectfully requests the maximum soldier pile & CDSM wall tolerances be revised to 0 inches into the trainbox & up to 5 inches outside the trainbox.							
There will be no additional excavation and/or bracing costs associated with this increase in tolerance from BBI. However; there may be future additional cost impacts to the Structural Concrete & Waterproofing that are to be handled in future trade packages.							
Please confirm, if this is acceptable.

T-0180.1	BSE - CDSM Wall Tolerance	Closed	06/24/2011	07/04/2011	07/07/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Nhi Tran	To: Turner Construction Company		Daphne Faulkner	Answered By: Transbay PMPC	
Co-Author: Balfour Beatty Infrastructure, Inc.		Ural Yal				Roger Rothenburger	
REQUEST:		SUGGESTION:		ANSWER:			
Reference Response to RFI#T-0180				Accept Suggestion: <input type="checkbox"/>			
Please delete the first sentence "TJPA did not request this RFI" of the response for RFI T-0180, because it is the wrong statement.				It depends on how "request" is defined. TJPA did "request" the RFI for expanded tolerances but only if the CDSM shoring wall subcontractor felt that they needed more tolerances and wished to have TJPA confirm that it would accept a larger set back (4") than allowed in the Specifications (2"). This is the same understanding held my Emilio Cruz.			
Emilio Cruz, PMPC, requested to submit this RFI at the Schedule Review Meeting on 6/14/2011 at W-O JV Office Conference Room, 183 Fremont St.				TJPA has allowed a 4" set back while maintaining the verticality specifications for the steel soldier piles (1/200) and the CDSM (1/150). The CDSM shoring wall subcontractor has initially selected a 2" setback for placing the steel soldier beams. At 1/200 for a depth of 55ft there could be as much as 1.3" of encroachment (1/200x55x12 - 2" = 1.33").			
				At the very least it would seem that a 3" setback would minimize further the possibility for encroachment since the 1/200 is still a difficult specification to achieve as TJPA understands it from the CDSM subcontractor.			
				Since encroachment can be very problematic with the concrete structural wall TJPA supports the larger setback to avoid difficult encroachment problems while maintaining the specifications on verticality. The issue of who requested what and when is immaterial. TJPA has accepted the potential for additional concrete from allowing a larger setback and the BSE Contractor has accepted any impact to the bracing system from a larger impact.

T-0181	BSE - CDSM Pile Tolerance Measurement Location	Closed	06/22/2011	07/02/2011	07/01/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Nhi Tran      To: Turner Construction Company Daphne Faulkner			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc.      Ural Yal							
REQUEST:			ANSWER:				
Reference Specification Section 31 56 13			Accept Suggestion: <input type="checkbox"/>				
BBII's subcontractor DND would like to confirm the exact location of the soldier pile, where the pile tolerance is to be measured. Please find below DND's question:			ARUP Response:				
"It is our understanding that the tolerance of the soldier pile beams is to be measured at the plan top of pile elevation. Is this correct?"			We confirm that the tolerance refers specifically to the location of the CDSM wall and soldier pile centerlines.				
Please confirm that DND's interpretation of the pile tolerance measurement is correct.			Section 31 56 13 3.3 A. states: "The location of the CDSM wall centerline relative to that shown on the Drawings is 0" toward the excavation and 2" away from the excavation." This refers to the location at the ground surface ("original grade") at the start of drilling.				
			Section 31 56 13 3.13 B. 8. states: "Acceptable construction tolerance for the location of the soldier pile centerline relative to that shown on the Drawings is 0" toward the excavation and 3" maximum away from the excavation." This refers to the location at ground surface ("original grade") at the start of pile installation.				
			Please also refer to 31 56 13 3.4 A and 31 56 13 3.13 B 2 which stipulates respectively the vertical alignment of the CDSM wall and soldier piles.

<b>REQUEST:</b> Reference Sheet GT-5202, Specification Section 03 20 01, attached sketch, and approved Shop Drawings from Package TA2010-032001A05  Drawing 12/GT-5202 shows 5" clearance between the hoop OD and the inside diameter of a 7' +/- 2" shaft. Per discussions with Becho, at least 3" of clearance is needed between the rebar spacers and the ID of the casing to facilitate proper installation of the rebar cages inside the casing.  BBII would like to propose 7 1/4" minimum clearance in lieu of the 5" clearance (shown on 12/GT-5202) between the hoops and the inside diameter of the hole. Changing the clearance from 5" to 7 1/4" would give Becho the 3" of clearance that they need between the spacers and casing ID.  Note that the approved rebar shop drawings show 5" clearance to the hoops as per 12/GT-5202. BBII will submit for your records only revised shop drawings showing the proposed 7 1/4" minimum clearance.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> ARUP Response:  Changing the clearance from face of reinforcing steel to the soil face from 5" to 7 1/4" is acceptable.

T-0188	BSE - Timber Piles Minna Street	Closed	07/01/2011	07/11/2011	07/05/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Masashi Kojima	To: Turner Construction Company		Daphne Faulkner	Answered By: Turner Construction Company Jack Adams	
Co-Author: Balfour Beatty Infrastructure, Inc.		Ural Yal					
REQUEST:		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>			
Reference D-2211 and D-5101. During the pre-trenching operation on Minna Street between Gridlines 9-17, BBII discovered unknown timber piles. The timber piles are not shown on the BSE drawings. See attached BSE drawing D-2211, D-5101. The attached pictures indicate timber piles to be approx 2ft from the centerline of the CDSM wall. These piles meet the general conditions set out in article 3.05A.2. The piles encountered were not outlined in the bid documents. Please confirm the removal of the "unforeseen" timber piles, tracking and paid under a Force account contract change order similarly as done for Zone 4 pre-trench obstructions.				Please refer to note on Drawing D-2212 which states,  "In areas where (N)CDSM wall conflicts with the existing pile caps and piles, remove (E) pile caps and/or piles prior to construction of (N) Transit Center Building CDSM perimeter shoring wall (see Note 3 and 6)."  Please refer to note on Drawing GT-5103 which states,  "Width and Depth as required to remove obstacles"  This includes all piles within the CDSM wall footprint.  "Unforeseen Conditions" are covered in Section 00 07 00 (General Conditions) Article 3.05.A.2 and 3.05.A.3 (Unforeseen or Changed Conditions).  Article 3.05.C states,  C. Differing Site Conditions shall not include:  1. All that is indicated in or reasonably interpreted from the Contract Documents or Reference Documents;  2. All that could be seen on Site  3. Conditions that are materially similar or characteristically the same as those indicated or described in the Contract Documents or Reference Documents.  Since Section 31 56 13 discusses both pre-trenching and the removal of timber piles and Bid Item #6 is for the removal of timber piles before the CDSM shoring wall is installed TJPA believes that this work was indicated and will provide payment for it under Bid Item #2, #4, #6, and #7.  There will be no additional payment for the removal of timber piles for the CDSM wall.

T-0188.3	BSE - Timber Piles Minna Street	Closed	07/18/2011	07/28/2011	07/26/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Nhi Tran			<b>To:</b> Turner Construction Company Daphne Faulkner				
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.                      Ural Yal			<b>Answered By:</b> Transbay PMPC                      Roger Rothenburger				
<b>REQUEST:</b> Reference RFI#T-0188.2 and attached photos  BBII has concerns for the integrity of the adjacent street and utilities, as a result of the pile extraction being performed on Minna Street in accordance with the response to RFI#T-0188.2. BBII has observed			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Contractor's concern for the integrity of the adjacent street and utilities is as a result of the shoring method used - not the result of the pile extraction being performed on Minna Street in accordance with the response to RFI#T-0188.2.		

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>undermining and adjacent settlement during the extraction process (see attached photos).</p> <p>Please advise an acceptable method of pile extraction that will allow this work to continue</p>						<p>The observed undermining and adjacent settlement during the extraction process is to be restored to prevent damage to Utilities installed in Minna Street. The methods allowed in RFI T-0188.2 are to be followed by the Contractor.</p> <p>Section 31-56-13 Part 3.2.C (CDSM Wall - Pre-trenching) also references Section 32-12-17 (Street Excavation &amp; Restoration) for pre-trenching "...within and or adjacent to the public right of way." In addition Section 31-56-13 Part 3.2.D requires the Contractor to "Comply with all regulatory requirements regarding trench shoring." Both Section the Street Excavation and Restoration Specification 32-12-17 and the regulatory requirements for trench shoring require a shoring system designed by a Professional Engineer and submitted to TJPA as well as the SFDPW. OSHA requires for all trenches deeper than 5 feet and not sloped according to OSHA standards be designed by a Professional Engineer.</p> <p>Given the above it is the Contractor's responsibility to select the means and methods and to design pre-trench shoring meeting the above requirements.</p> <p>TJPA observations of the Minna Street pre-trenching operations showed that the "trench shield" method of support where excavation below the trench shield required for both sinking the shield and exposing "obstructions" allowed the loose fill sand at the bottom of the excavation to slough into the excavation. This loss of ground led to settlement of the street and potential settlement of the adjacent water line and sewer.</p> <p>TJPA notes that the Contractor has commenced using near-flat sheet piles in combination with the trench shield bracing to achieve the depths required. However, no submittal of a design done by a professional engineer has been submitted to TJPA in accordance with the requirements from the Specifications stated above.</p> <p>An acceptable method of pile extraction includes a suitable trench shoring method and plan that meets</p>

Co-Author: Balfour Beatty Infrastructure, Inc.		Ural Yal	Roger Rothenburger				
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
BBII discovered an unforeseen tank structure during the pre-trenching operation along Gridline 35 between Gridline A-J that is not shown on the contract plans. The tank contains liquid substance; the odor from the excavation around the tank, it is assumed this is a fuel liquid. This tank needs to be removed to allow the continuation of the pre-trenching operation. Please advise as soon as possible.		TJPA environmental consultant has contacted Golden Gate Tank Removal Co and removal is being scheduled. The TJPA has not yet received the paperwork from the Golden Gate Tank Removal Co. to schedule the date. TJPA will discuss further with W/O - BBI regarding handling.

<b>REQUEST:</b>		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>			
Reference RFI#T-0192 and attached photo				See attached test reports			
The unforeseen tank discovered during the pre-trench operation on Beale Street contains liquid. The liquid has spilled and is present in the surrounding soil, visible from the surface. The response to RFI#T-0192 does not address the soil surrounding the tank. BBII suspects this soil is contaminated with hydrocarbons in excess of the current approved Class 1 profile.				Report Completed By - Title - Date - Work Order - Number of Pages			
Please advise on the classification, limits and disposal methods for the contaminated soil surrounding the tank.				McCampbell Analytical, Inc. - Analytical Report - July 20, 2011 - 1107352 - 8 McCampbell Analytical, Inc. - Analytical Report - July 25, 2011 - 1107352 A - 8			
				----- ----- 07/15/2011 Roger Rothenburger			
				TJPA has had their environmental consultant,Treadwell & Rollo (Peter Cusack) arrange for the underground storage tank (UST) and its contents to be removed, test samples of the material, determine the extent of the contamination, and the proper disposal of the soil around the tank. The following response has been reviewed by Mr. Cusack.			
				1. Soils in the area of the UST were orginally classified as Class I from 0~6ft below grade and Class II from 6~22 feet below grade (Soils Management Plan figure 4 & 7.			
				2. Remove and stockpile contaminated soils in the immediate area of UST including 2 feet along the sides of the UST and 2 feet below the UST.			
				3. If soils beyond this area still have a strong gasoline or petroleum odor then remove those soils as well.			
				4. The samples taken by TJPA environmental consultant Peter Cusack on Thursday July 14, 2011 will be chemically tested for different contaminants.			
				5. The results of these tests will not be available for approximately 2 weeks (July 28, 2011).			
				6. Maintain the contaminated stockpiles covered until classification is complete and further directions are given by TJPA at that time.			
				7. Backfill the open trench/hole from which the contaminated material described above has been removed with clean suitable material as defined in the Specifications.

T-0193	BSE - CDSM Buttress Connector Wall	Closed	07/07/2011	07/17/2011	07/08/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Nhi Tran		<b>To:</b> Turner Construction Company Daphne Faulkner		<b>Answered By:</b> Adamson Associates, Inc. George Metzger			
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.                      Ural Yal							
<b>REQUEST:</b> Reference Specification Section 31 56 13  DND is refining the CDSM Shoring Wall mix design based upon the initial results of the Zone 4 Test Section in order to meet the specified compressive strength and permeability. DND is currently planning on trying 2 new mixes / methods in the CDSM Buttress Connector Wall:  1) Single Phase (down and up with grout only) - 275 kg/m3 cement treatment, 220% water/cement, specific gravity ~1.4 a. Based on Japanese experience 2) Two Phase (down with water, up with grout) - 265 kg/m3 cement treatment, 70% water/cement, specific gravity ~1.7 a. Based on US experience  DND is currently proceeding with the installation of the CDSM Buttress Connector Wall. Per BBII's July 5, 2011 meeting with the Engineer, BBII believes that this approach is acceptable for the CDSM Connector Wall and the CDSM Buttress Connector Wall will not have to be re-mixed in the event that it does not achieve the specified compressive strength of 90 psi at 28 days and 120 psi at 90 days. Please confirm.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> ARUP Response:  Arup will review the strength tests from the connector columns and make a determination of acceptable in-situ strength based on these.

T-0194	BSE - Unforeseen Buried Obstructions at CDSM Connector Wall in Zone 4	Closed	07/12/2011	07/22/2011	07/19/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Daphne Faulkner			<b>Answered By:</b> Transbay PMPC      Roger Rothenburger				
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal							
<b>REQUEST:</b> Reference Specification Section 31 56 13, attached sketches, and photo  During the installation of the CDSM Connector Wall at Zone 4, DND's drill rig hit unidentified buried obstructions at approx. 14' - 15' below the original grade (El. 0 ~ -1). Please see DND's attached sketch for further details. The exact location and composition of the obstructions are yet to be determined but BBII's preliminary findings indicate that they are timber piles that were neither shown on the original contract plans nor found during buttress area pile extraction. Find attached the as-built drawing that depicts the locations and the top elevations of the timber piles that BBII extracted at that location. Please note that the top elevations of the extracted piles range between 2.40 to 3.11 feet.  BBII has just been informed by DND Construction that the other rows of the connector wall cannot be installed while these obstructions are being removed per the committee meeting on 07/11/2011, due to the proximity of the obstruction removal trench to the next two rows. The CDSM connector wall installation has currently ceased until further notice. BBII is currently seeking drill rigs capable of removing these obstructions also as discussed at the committee meeting.  Please direct BBII on how to proceed.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> TJPA and its Representative agreed that the reasonable approach for removal of the obstructions as encountered was to mobilize an auger drill rig similar to the Viking drill rig used for the dewatering wells and removal of broken off piles along 181 Fremont street to drill out the area. A 36" diameter casing was used in this application. This meeting was held on Monday July 11, 2011 at approximately 12:30pm.  The drill rig arrived on site mid Thursday morning July 14, 2011 (3 work days after the site meeting) and drilled until 7pm exploring the CDSM connector piles in the remaining rows. The material removed was some wood (volume less than a 5 gallon bucket - photos attached) and a number (approximately 15 pieces) of chunks of unreinforced concrete 3" to 10" in size.  At this time without more evidence TJPA believes that this material was inadvertently left behind in the backfilling of the timber pile removal zone. BBI should prepare a formal claim as to why TJPA should pay for this work or delay. TJPA will give it fair consideration but needs to have this filed as a claim outside the RFI process. BBI did perform the work in accordance with specifications and site agreements made as to means and methods for the way forward. The drill rig requiring 3 work days to mobilize was at the choice of BBI to use their subcontractor Malcolm-DND.

T-0197	BSE - Maximum Allowable Vibration	Closed	07/20/2011	07/30/2011	08/12/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Nhi Tran	To: Turner Construction Company Daphne Faulkner		Answered By: Adamson Associates, Inc. George Metzger		
Co-Author: Balfour Beatty Infrastructure, Inc.		Ural Yal					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Specification Sections 31 09 13 and 01 35 65		The table reportedly from the FEIS/EIR included in the RFI appears to be in error. This shall be addressed by others.					
According to the Final FEIS/EIR, specified in the Specification 01 35 65 as the reference document, the Vibration Impact Criteria, which is the base criteria for the analysis, is shown in the table 5.21-8 (refer to BBI RFI for table).		The Action Trigger Level and Maximum Allowable peak particle velocities listed in Table 1 in specification section 31 09 13 are for separate, transient vibration events rather than continuous construction vibration. It is not known if the values shown in the FEIS/EIR table are intended for transient or continuous events.					
The vibration impact criteria used in the Final FEIS/EIR contradicts the Maximum Allowable Movement for the vibration (PPV) specified in Specification 31 09 13. In this specification section, the maximum allowable movement for vibration and the action trigger level is described in Table 1 (refer to BBI RFI for table).		The Action Trigger Level and Maximum Allowable peak particle velocities listed in Table 1 in specification section 31 09 13 apply to all structures around the site where vibration monitoring will occur. In drawing up these values we have taken into account the types of plant likely to be employed in construction and the very low probability that the natural frequency of the input vibrations will approach those of the surrounding buildings and utilities.					
Please clarify where within the project site the vibration impact criteria for fragile structures are applicable (according to Specification 01 35 65), and where the maximum allowable movement for vibration of 1 inch per second is applicable (according to Specification 31 09 13).		The RFI question regarding the identification of "fragile structures" shall be addressed by others. ----- URS - Response by Alana Callagy 8/11/2011					
		The table in the FEIS/EIR included in the RFI is in error. The table cites the FTA as the source of the potential impact thresholds for vibration. However, the table used in the FEIS/EIR appears to have reversed the FTA's threshold levels. The RFI should cite Table 12-3 (page 12-13) of the FTA's Noise and Vibration Manual (www.fta.dot.gov/documents/FTA_Noise_and_Vibration_Manual.pdf).					
		FTA Table 12-3 is for potential structural or architectural building damage, which is generally a function of Peak Particle Velocity (PPV), not a time-averaged level. These criteria should be applied to both transient and continuous construction events. Furthermore, the PPV value should be presented/evaluated as the vector sum of the PPV values in the three orthogonal coordinate directions

T-0197.1	BSE - Maximum Allowable Vibration	Closed	07/20/2011	07/30/2011	09/12/2011	Potentially	<input type="checkbox"/>
From: Turner Construction Company Gary Krutsch			To: Webcor/Obayashi Joint Ventu Nhi Tran				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal			Answered By:Turner Construction Comp Kevin Chiu				
REQUEST: Refer to RFI #T-0197			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/>				
			Table 5.21-8: Construction Vibration Impact Criteria in the Project EIS / EIR has a number of typos. Refer to Table 12-3: Construction Vibration Damage Criteria in Transit Noise and Vibration Impact Assessment (FTA document # FTA-VA-90-1003-06) for the corrected version. For the avoidance of doubt, these values shall be considered Action Trigger Levels as defined in Section 31 09 13 of the Specification. All the buildings within 25 ft of the site boundary shall be considered to be Category I with the exception of the following buildings that are to be considered Category III:				
			177/181 Fremont Street				
			530 Howard				
			540 Howard				
			580 Howard				
			594 Howard				
			133 Second St				
			141 / 143 / 145 Second				
			163 Second				
			171 Second st.				
			90 Natoma				
			92 Natoma				
			83 Minna				
			46 Minna				
			In accordance with the recommendations at Section 12.2.1 of FTA(2006) , we expect BBI to assess quantitatively the potential groundborne vibration impact from site operations on adjacent buildings using the formula:				

BBI should carry out vibration monitoring inside buildings when (PPV equip) is calculated to lie within 90% of the values given in Table 12-3: Construction Vibration Damage Criteria in Transit Noise and Vibration Impact Assessment in FTA-VA-90-1003-06. The Action Trigger and Maximum Allowable movement level for vibration given in Table 1 of Section 31 09 13 is for Category I buildings only.

1. BBII has applied FTA Table 12-3 per [RFI #T-0197]

T-0200	<b>BSE - Unforeseen Buried Obstructions - Zone 4 A Line (Gridline 27-34)</b>	<b>Closed</b>	<b>08/02/2011</b>	<b>08/12/2011</b>	<b>08/12/2011</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal			<b>Answered By:</b> Turner Construction Company Jack Adams				
<b>REQUEST:</b> Reference Specification Section 31 56 13, attached photos, and sketch  On Saturday, July 30th 2011, DND's CDSM drill rig encountered unidentified buried obstructions during the installation of the CDSM Shoring wall panel identified by the pile numbers 285-286 at Zone 4 "A" line between Grid "27 & 28". The newly found obstructions are deeper than the previously excavated timber piles.  DND construction initially attempted to drill through the buried obstructions without success. The drill rig was subsequently moved to further east to drill the next available panel. Between 10:30 am and 3:30 pm, DND made eight drilling attempts along the "A" line between pile numbers # 285 and # 300. All eight drill attempts failed due to the similar obstructions encountered within the 13' - 17' depth range below grade. Consequently, the CDSM shoring wall installation along grid line "A" at Zone 4 had to be suspended. DND is able to provide a drill rig to drill out these obstructions and currently this rig is scheduled to arrive Tuesday morning, August 2, 2011.  These obstructions constitute a differing site condition in accordance with Article 3.05 of Section 00 07 00 of the Specifications.  Please provide confirmation and/or direction regarding the following:  - BBII is to proceed with drilling out these obstructions on 8/2/2011, so CDSM installation in this area can continue. - These obstructions constitute a differing site condition.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Per Contract Spec. 31-56-13 Shoring wall by CDSM Method Para 3.2 Pretrenching and removal of Obstructions, Contractor is to "remove any obstructions that might be encountered along the alignment of the walls. The depth and width of trench shall be that required to remove the obstructions from the path of the shoring wall."  This area was to be Pretrenched per Spec and should have been cleared. The Spec calls for fill the voids from pile removal with 300psi CLSM, However; the area in question had CLSM installed of between 1000psi and 1600psi which may be causing this condition.  "Unforeseen Conditions" are covered in Section 00 07 00 (General Conditions) Article 3.05.A.2 and 3.05.A.3 (Unforeseen or Changed Conditions).  Article 3.05.C states,  C. Differing Site Conditions shall not include:  1. All that is indicated in or reasonably interpreted from the Contract Documents or Reference Documents;  2. All that could be seen on Site  3. Conditions that are materially similar or characteristically the same as those indicated or described in the Contract Documents or Reference Documents.

Co-Author: Balfour Beatty Infrastructure, Inc.		Ural Yal					
REQUEST:		SUGGESTION:	ANSWER:      Accept Suggestion: <input type="checkbox"/>				
Reference RFI#T-0146.2		Contractor may wish to consider placing the steel sheet prior to excavating to retain the material under Beale Street to keep it from sloughing into the excavation.					
After exposing 5 piles at gridline 33.5 west of Beale Street, BBII intends on extracting these piles as per the accepted method described in RFI # T-0146 2,		Extract the wood piles with vibratory hammer, with the same stroking procedure without steel casing. BBII will perform dewatering enough to be able to connect the hammer to the pile.					
"6. BBII will extract the wood piles with vibratory hammer, with the same stroking procedure without steel casing. BBII will perform dewatering enough to be able to connect the hammer to the pile.		Option: Backfill the void with CLSM low strength material Central Concrete Mix FOA100CX (RFI #T-0138.1).					
7. BBII will backfill the void with low strength material Central Concrete Mix FOA100CX (RFI #T-0138.1).		Option: Back fill the pile voids using a tremie pipe of minimum length 20ft attached to the concrete bucket. The tremie shall be inserted as far into the pile hole as possible prior to pouring the concrete, and the concrete shall be placed using normal tremie techniques. BBII will make efforts to pour the material into the void as possible, but BBII is not responsible to eliminate void completely."(RFI 146.4)					
8. BBII will backfill the piles.		Recommends that the procedure for removing these piles follow the procedure described in Arup's response to RFI T-0146.4. Optional is to use method from RFI 188.2. Sand can used for back fillings instead of the low strength material described in RFI#T-0146.4.					
Answer:							
Per Brian Dykes, this work is authorized to proceed. Allowable work hours will be established after 199 Fremont pile extraction begins."							
This involves backfilling any voids with 1 sack sand. The attached drawing indicates the location and quantity of piles to be extracted. Please confirm that this method is acceptable.							
Also, please advise if any work hour restrictions apply.

	Reference Sheet GT-5202 and Specification Section 31 63 29						
	Per SS03.20.01.3.3.B.4, "Inspect welding as required by Code for compliance with AWS D1.4."						
	Per AWS D1.4.2, "Other welding processes may be used when approved by the Engineer, provided that any special qualification test requirements not covered here are met to ensure that welds are satisfactory for the intended application will be obtained."						
	As of this writing, the AWS does not cover Resistance Welding which is the type of welding that Harris-Salinas Rebar is using for the hoops. Caltrans has a written specification for Resistance Welding. Per Caltrans Standard Specifications Section 52, four (4) samples out of a lot of one hundred fifty (150) are taken to the lab for testing. If three (3) or more samples comply with the requirements, the whole lot is accepted. If only two (2) samples comply, one (1) additional test of four (4) samples out of the same lot is allowed. If any of the four (4) fail, the whole lot is rejected.						
	It was agreed upon in the DFOW meeting this week (8/1/2011) that it is acceptable to test the lots per Caltrans Standard Specifications. Please confirm.						
T-0206	BSE - Smart Hoops For CSL Tubes	Closed	08/05/2011	08/15/2011	08/09/2011	Potentially	<input type="checkbox"/>

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
T-0207	designed to serve two purposes: 1. To allow the tremie pipe to pass through. 2. To keep the CSL tubes equally spaced around the perimeter per Drawing GT-5202.	Closed	08/09/2011	08/19/2011	08/12/2011	Potentially	<input type="checkbox"/>
	In subsequent discussions the engineer suggested orientating the CSL tubes at a 23 degree angle from the longitudinal center of pile. In the Phase 1 DFOW Buttress Rebar QC Meeting on 8/1/2011 Harris-Salinas Rebar suggested using "smart hoops" to keep the CSL tubes in place and symmetrical around the perimeter at 23 degrees since the square spider could no longer be utilized for CSL tube alignment. This suggestion was well received by meeting attendees. Please confirm that the 23 degree CSL spacing is required. If so, please advise if the added "smart hoop" CSL alignment bars are acceptable?						
	BSE - Unknown Fiber Optic on Fremont Street						
	From: Webcor Construction LP                      Nhi Tran To: Turner Construction Company Gary Krutsch Co-Author: Balfour Beatty Infrastructure, Inc.                      Ural Yal						
	REQUEST:                      SUGGESTION:                      ANSWER:                      Accept Suggestion: <input type="checkbox"/> Reference Specification Section 02 41 01  PG&E was scheduled to have all the utilities and structures confirmed dead on the East side of Fremont Street 8/07/2011 as part of the phase 1 PG&E relocation work. On 8/08/2011, W/O and PG&E conducted a USAR walk-through on Fremont Street to sign off and confirm that all PG&E utilities and structures have been confirmed de-energized and abandoned. PG&E discovered a live fiber optic cable between vaults 1675-1670. This fiber optic cable is in conflict with and causing delays to the CDSM wall and Buttress work commencement.  Please provide a date this fiber will be confirmed de-energized.						
T-0208	BSE - Long Term Seismic Loading	Closed	08/09/2011	08/19/2011	08/12/2011	Potentially	<input type="checkbox"/>

<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal							
<b>REQUEST:</b> Reference Sheet GT-1110 and Specification Section 31 55 00  Note 7 on sheet GT-1110 states that "Seismic Increment Loads shall be considered to be long term loading." Per conversation at the 8/03/11 TG03 Design Team Coordination meeting, BBII understands that this note applies only to the lower level struts at the 301 Mission buttress case. Please confirm.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> We refer to Comments and Corrections provided by DBI to TJPA in a document dated July 27, 2011 at item G 23.  With reference to Drawing GT-1110 we clarify that Note 7 applies strictly to the incremental strut loads in Table 7 (301 Mission buttress case shaking analysis) and consequently apply to calculations for the lowest level of struts and walings between Gridlines 26 and 30. The incremental strut loads given in Tables 5, 6 and 8 can be considered as transient, rather than long term, loads on the bracing system.			
<b>T-0209</b>	<b>BSE - Abutment Bearing On CDSM Wall</b>	<b>Closed</b>	<b>08/11/2011</b>	<b>08/21/2011</b>	<b>08/19/2011</b>	<b>Potentially</b>	<input type="checkbox"/>

T-0209.2	BSE - Abutment Bearing On CDSM Wall - Follow-Up	Closed	09/13/2011	09/23/2011	09/16/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Reference RFI #T-0209.2, Specification Section 01 53 13, and attached sheets  As requested by ARUP, please see the attached loads placed on each individual CDSM soldier beam beneath the proposed temporary bridge abutment. The loads include both the bracing self weight and the combined dead and live loads of the temporary bridges.  BBII requests confirmation from the CDSM shoring wall EOR that these imposed loads do not exceed the assumed vertical loads used during original design analysis.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> ARUP Response: The results of the analysis reported in the table "SUMMARY OF LOADS ON CDSM SOLDIER PILES AT BRIDGE ABUTMENTS" indicates that, for a number of locations, the load per soldier pile is too great and that the pile spacing will need to decrease from 4'-0" o.c. to 2'-0" o.c. to reduce the load per pile. Subsequent analysis by the Contractor shall demonstrate the structural adequacy of the pile shape and the adequacy of the pile embedment.				
T-0209.3	BSE - Abutment Bearing On CDSM Wall - Follow-Up	Closed	09/13/2011	09/23/2011	09/28/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Reference RFI #T-0209.2, Specification Section 01 53 13, and attached sheets  As requested by ARUP, please see the attached loads placed on each individual CDSM soldier beam beneath the proposed temporary bridge abutment. The loads include both the bracing self weight and the combined dead and live loads of the temporary bridges.  BBII requests confirmation from the CDSM shoring wall EOR that these imposed loads do not exceed the assumed vertical loads used during original design analysis.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> ARUP Response:  1. The CDSM wall cannot accept the widely varying point loads as implied by the submitted tables of imposed loads from the cross-lot bridges. We recommend that a spreader beam arrangement is provided for each bridge abutment and is connected to the all the affected W21x201 soldier piles in the CDSM wall. A vertical spring constant of 1150 kips/inch can be used to calculate the pile reactions under such a spreader beam arrangement for the range of loads given.  2. The allowable loads from the bridge deck for the soldier piles on the basis of 1 above is 90 kips/pile at an excavation of 10 feet below grade and can be taken to fall linearly to 60 kips/pile at 60 ft elevation depth.  3. It follows from 2 above that the ability of the CDSM wall to carry the maximum load, the construction crane condition, will reduce as excavation proceeds. This may require disassembly of the construction crane

into smaller components in order to remove it from site at the later stages of excavation.							
4. The load pathway, from the bridge deck at the abutment into the ground, is in direct shear transfer across 2 interfaces: steel/soil mix and soil mix/in-situ ground. The shear transfer across the steel/soil mix interface cannot be estimated with accuracy, in the absence of an embedded soldier pile test in compression or tension. If the early excavations, down to 10 feet below grade at the bridge abutment, show that soil mix falls away easily from the face of the W21 steel soldier pile, the bond/interface shear is likely to be very low indeed and the allowable capacity of the soldier piles will need to be re-evaluated.

T-0210	BSE - Pile #498 Top Of Pile Elevation Issue	Closed	08/16/2011	08/26/2011	08/19/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Reference W/O NOTICE0010 (attached), Sheet GT-5101, and Specification Section 31 56 13  Please address the following information request from BBII's subcontractor DND:  "The specifications do not specify an allowable tolerance with regard to the vertical position of the beam tip relative to the plan drawings (GT-5101, Note 16). Please clarify the allowable tolerance for the beam tip elevation.  For example, beam 498 (BBII ID #287) was set slightly high. The beam was measured prior to setting to be 97'-5 1/2" long. It was set to a top elevation of approximately +16'-11" which calculates a tip elevation of approximately - 80.63'. Specified tip elevation is -81'-0" in this wall section (J/27-33.5)."			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> ARUP Response:  The acceptable variation in bottom of pile elevation (shown on 16/GT-5101) is +/- 1'-6". In order to verify this using the top of pile elevation as the measure, the Contractor shall provide Turner with the length of the piles.

T-0214	BSE - Instrumentation Protection Slab Zone 4	Closed	08/16/2011	08/26/2011	08/23/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal							
<b>REQUEST:</b> Reference Sheet GT-5102 and attached shop drawing and BBI sketches  BBII is proposing to pour a 2' thick instrument slab per the attached BBII drawings in lieu of the 1' thick concrete slab shown on Drawing GT-5102 to match the overall thickness of the Buttress Temporary Work Platform Concrete Cap. Approved 6000 psi Central Mix #960PC3Z3 (Submittal Item #TZ1010-033001A10) will be used for the instrument protection slab. Please confirm that this is acceptable.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> ARUP Response:  Pouring a 2' thick instrument protection slab in lieu of the 1' thick concrete slab shown on Drawing GT-5102 is acceptable.  Central Mix #960PC3Z3 is acceptable for use in the instrument protection slab.  The reinforcing steel configuration shown on Section A is acceptable. The bars may be shifted to clear the soldier piles and the instrument locations.  Block-outs shall be placed in the slab for the instruments as noted on GT-5102. Contractor to coordinate locations of block-outs with Arup field staff.  The protection slab shall be extended as noted on the attached sketch.				
T-0215	BSE - Diagonally Cut Unforeseen Piles at Grid Line 33.5 J	Closed	08/17/2011	08/27/2011	08/17/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Turner Construction Company Jack Adams				
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal							
<b>REQUEST:</b> Reference Sheet GT-2103, Specification Section 02 41 19, and attached photos  BBII has extracted four (4) unforeseen piles at GL 33.5 J. Three (3) piles had an average length of 45' long. However, one (1) of these piles appeared to have 20' diagonally cut out of it at the bottom (see attached Photo 3). Another pile was only 23' long and appeared to have broken off underground (see attached Photo 1). BBII has concerns that lengths of pile may still remain in ground and will be an obstruction to the CDSM shoring wall installation. Please advise on how to proceed.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Refer to specification 31 56 13, 3.2, A, which states, "The Contractor shall construct a trench along the entire alignment of the shoring wall and the cut-off walls and remove any obstructions that might be encountered along the alignment of the walls. The depth and width of the trench shall be that required to remove the obstructions from the path of the shoring wall."

<b>REQUEST:</b> Reference Specification Section 01 53 13 and Submittal TG0300-201 Item TZ1030-015313A09 response comments (attached)  DPW review comment #40 on the temporary bridge submittal (TZ1030-015313A09, package TG0300-201) calls for BBI to "provide concrete approach slabs similar to Caltrans." URS comment #32 on the submittal states that "Approach slabs are recommended. After seismic event, it is important that emergency vehicles still have access to these temporary bridges." Concrete approach slabs are not included as a requirement in the temporary bridge specifications. Please advise if approach slabs must be added to the scope of the temporary bridges.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Per spec 01 53 13 and David Fyfe's response included herein, approach slabs are necessary items required to provide a coordinated design and a completely functional temporary bridge.  ----- ----- 2011-09-14 - David Fyfe  SF DPW requires approach slabs.

	and attached sketch						
	BBII intends on extracting the remainder of the existing timber piles located at gridline 33.5J/Beale St., using the method approved in T-0188.1, as the piles are located a considerable distance from the 199 Fremont building. This involves extracting piles using the vibratory hammer without a steel casing and backfilling the void with structural pre trench sand. Attached is a drawing indicating the locations of the piles obstructing the CDSM wall. Please confirm that this is acceptable.			piles east of Beale Street follow the procedure described in our response to RFI T-0146.4 with the exception that backfilling with sand is acceptable. See also answer to RFI T-199.			
T-0221	BSE - Salvage Steel At Temporary Bridges	Closed	08/29/2011	09/08/2011	09/30/2011	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Nhi Tran Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal	To: Turner Construction Company Gary Krutsch	Answered By: URS Corporation	Carolina Aguilar			
	REQUEST: Reference Specification Section 01 53 13 and Submittal TG0300-201 Item TZ1030-015313A09 response comments (attached)  DPW review of the temporary bridges submittal (TZ1030-015313A09, package TG0300-201) includes comment #8 that states "salvage materials are not acceptable to be used as structural members for the bridges. The temporary bridge specifications do allow for the use of salvage material as follows:  "2. Steel, Salvage Material: Submit coupon tests for mechanical properties and chemical tests for determination of weldability. For steel materials which are recycled from prior Projects (salvaged materials) and are to be incorporated into temporary works, testing shall be performed on a random sampling basis as follows: a. Where material properties relied upon for design corresponding to minimum yield strength fy=30,000 psi, sampling shall be performed on 5% of each major series of structure element type. b. Where material properties corresponding to minimum yield strength fy=36,000 psi, sampling shall be performed on 10% of each major series of structure element type.	SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>	In order to evaluate compliance, additional information is required. Please submit list of all structural steel members that will be used on each of the three temporary bridges. For each structural steel member listed:  1). Indicate whether the structural steel member consists of new or salvaged material  2). Provide the exact location along the bridge that the steel member is located  3). Provide information on the salvaged material, such as its current condition, when and where it may be inspected by a TJPA Representative, and what its prior use was  4). For each complete temporary bridge, provide the total weight of salvage steel, summarized by element type and usage.  Finally, please provide the weight of total salvaged steel material that will be used at each temporary bridge.

	<p>c. Where material properties corresponding to minimum yield strength fy=42,000 psi or 50,000 psi is used, sampling shall be performed on 20% of each major series of structure element type.</p> <p>d. Testing performed per subparagraphs above at sampling rates of 5%, 10%, and 20%, respectively, shall be reported to the Owner's Representative in writing. Testing results must satisfy all samples meeting 100% of materials strength requirements for acceptance of salvage materials. If less than 100% of materials tested meet this requirement, then the sampling rate shall be increased. In this event, the sampling rate for retesting shall be subject to review and approval by the Owner's Representative."</p> <p>Please advise if salvage material is still acceptable per the project specifications.</p>						
T-0222	BSE - Temporary Bridge Pier Locations	Closed	08/29/2011	09/08/2011	09/01/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP                      Nhi Tran		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Balfour Beatty Infrastructure, Inc.                      Ural Yal							
REQUEST:		SUGGESTION:		ANSWER:              Accept Suggestion: <input type="checkbox"/>			
Reference Specification Section 01 53 13 and Submittal TG0300-201 Item TZ1030-015313A09 response comments (attached)		Thornton Tomasetti Response: The piers shall not be in conflict with the mat foundation chamfer (chamfer shown in plan and section S1-3201). Minimum clear distance from face of pier to bottom edge of chamfer shall be 2'-0."					
Temporary bridge review comments (Submittal TZ1030-015313A09, package TG0300-201) call for the end piers on all three bridges to be relocated to avoid interrupting chamfer rebar (see attached markups). With the information provided to BBII in the plans and specifications, there was no indication that this reinforcement must be avoided, nor was there a required clear zone from the shoring wall to the first pier. Please advise if these piers absolutely need to move, or if their current locations can be accommodated. Increasing the span between the abutments and the first pier will have commercial impacts.		----- 8/31/2011 George Metzger ARUP Response: Arup takes no exception to the referenced pier locations that are shown in the submittal.

T-0223	BSE - Temporary Bridge Pedestrian Barrier Height	Closed	08/30/2011	09/09/2011	09/27/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Nhi Tran      To: Turner Construction Company Gary Krutsch			Answered By: URS Corporation      David Fyfe				
Co-Author: Balfour Beatty Infrastructure, Inc.      Ural Yal							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Specification Section 01 53 13 and Submittal TG0300-201 response comments (attached)					Accept Suggestion: <input type="checkbox"/>		
DPW review of the temporary bridges includes comment #42 that calls for the pedestrian barrier to be designed as a combination railing with a minimum height of 4'-6" while the specifications only call for a 3'-6" barrier. Please advise if the minimum height must be increased to 4'-6".					Response to RFI No.T-0223 is provided herein and on attached sketch titled, "Sketch - RFI Nos.T-0223 and T-0228." This attached sketch is a mark-up of BBII's traffic plan figure, "Non-Working Hours, Temporary Bridge Traffic Plan" (submittal package TG0300-204, submittal item TZ1030-015313, page 3 of 6) because this is the latest presentation of the Contractor proposed product.		
					This attached sketch shows an installation in conformance with current coordination comments completed between the Project and CCSF DPW and SFMTA. Where the handrail/guardrail system occurs separating pedestrian and vehicle traffic, required height equals 3'-6" measured from the top of pedestrian walking surface.		
					Note, these comments provided on this attached sketch pertain only to RFI Nos.T-0223 and T-0228, a full review and response of Traffic Plan Submittal Package TG0300-204 will be finalized and transmitted at a later date.		
T-0224	BSE - Temporary Bridge Deflection and Suspended Utilities	Closed	08/30/2011	09/09/2011	09/09/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Nhi Tran      To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Service Eric Zagol				
Co-Author: Balfour Beatty Infrastructure, Inc.      Ural Yal							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Specification Section 01 53 13 and attached cut sheets					Accept Suggestion: <input type="checkbox"/>		
Where utilities transition from direct bury to hanging under the temporary bridges, BBII believes there must be some allowance for deflection to prevent damage to the conduits during a seismic event. Attached are cut sheets for an expansion fitting and deflection fitting that BBII has seen used in combination at bridge transitions. Watertight flexible steel conduit may be an option as well. Please confirm that all Phase 2 utilities to be suspended below the temporary bridges will include some means of handling bridge deflection.					Please provide information on the predicted movement and hanger support system such that the condition can be assessed. Movement direction; lateral or longitudinal? How much movement is being predicted and at what location? Are the steel conduits rigidly connected to the hanger supports? Please provide the hanger support design for review.

Co-Author: Balfour Beatty Infrastructure, Inc.      Ural Yal							
REQUEST:			SUGGESTION:		ANSWER:		
Reference RFI#T-0225					Accept Suggestion: <input type="checkbox"/>		
The response received for RFI #T-0225 does not provide the requested information.					Status is as follows, RUP ASI-015 has been created to address the relocation of utilities impacted by the change to the CDSM shoring wall resulting from BSE RFI-0017. ASI-015 was issued for pricing and implementation on 9/8/11.		
-----							
Question from RFI#T-0225							
Reference Sheet D-2231, Specification Section 31 56 13, and attached photo							
BBII laid out centerline of the CDSM on Gridline 1 and Gridline J. The centerline of the shoring indicates that the existing utilities PG&E/Water is in direct conflict with the location of the CDSM shoring wall. These utilities appear to be capped east of the centerline.							
Drawing D-2231 BSE contract states "Unless specified otherwise all utilities have been cut and capped outside the limits of the work by Transbay Transit Centre program relocation of utilities"... Please see photos attached.							
Please confirm the status on the relocation of these utilities.

T-0225.2	BSE - CDSM Alignment Conflict GL 1-J - PG&E Vault Utility Conflict on Natoma	Closed	09/12/2011	09/22/2011	09/14/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Gary Kruttsch			<b>Answered By:</b> AECOM Technical Service Eric Zagol				
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal							
<b>REQUEST:</b> Reference RFI #T-0017, #T-0225.1, Sheet U-1110, and Specification Section 31 56 13  Please refer to RFI No. T-0017, which revised the southwest corner of the CDSM shoring wall alignment. Your attention is also directed to the utility drawing U-1110, which depicts the utilities to be abandoned and the ones to be protected in place with respect to the old CDSM wall alignment. According to U-1110, the PG&E vault on Natoma Street shall be protected in place. However, based on the field layout, the PG&E vault on Natoma St. is in conflict with the southwest corner of the CDSM wall alignment, which was revised per RFI No. T-0017.  Based on BBII's field measurements, the clearance between the PG&E vault on Natoma St. and the centerline of the CDSM wall is 29", which is less than the 36" typical distance required by the contract plans as the minimum clearance between the demarcation lines and the CDSM wall alignment.  BBII requests the PG&E vault on Natoma St. to be relocated to a safe distance outside the work limits of the revised CDSM wall alignment.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Based on provided field information, the existing PG&E MH is located 11" clear of the CDSM shoring wall revised per response to RFI T-0017, please clarify what/where the conflict is.  If safety is of concern while working in close proximity to a live PG&E MH, coordinate with PG&E through TJPA's Representative to de energize the existing MH prior to and during CDSM wall construction. Existing PG&E MH 1348 exists to provide power to 90 Natoma. 90 Natoma is owned by the TJPA and is currently vacant.  The 36" demarcation line mentioned in the RFI is an arbitrary scope division line established between the RUP and BSE packages to differentiate abandon utility removal between the two packages.				
T-0225.3	BSE - CDSM Alignment Conflict GL 1-J - PG&E Vault Utility Conflict on Natoma	Closed	10/03/2011	10/13/2011	10/20/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Gary Kruttsch			<b>Answered By:</b> Turner Construction Company Kevin Chiu				
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal							
<b>REQUEST:</b> Reference RFI #T-0225.2, Sheet D-2231 and ASI-015, Specification Section 31 56 13, and attached photos and sketch  BBII in discussions with DND will be able to work adjacent to PG&E vault #1348, referenced in RFI #T-0225.2.  BBII is currently considering removing the concrete over pour on the vault, de-energizing the power in the vault and installing CDSM Shoring Wall without relocating the vault.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> It is noted that prior to receiving the response to this RFI, the contractor installed CDSM panel #W0001 adjacent PG&E vault 1348 without chipping away the concrete over pour. A PG&E standby crew was present and observed the installation.  It is understood that during this work the outside tooth of auger may have broken off during install of piles in this area. W/O to confirm there is no damage to Vault #1348 due to CDSM work

T-0228	BSE - 6-inch Sidewalk At Temporary Bridges	Closed	09/02/2011	09/12/2011	09/27/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP                      Nhi Tran                      To: Turner Construction Company Gary Krutsch			Answered By: URS Corporation                      David Fyfe				
Co-Author: Balfour Beatty Infrastructure, Inc.                      Ural Yal							
REQUEST:                      SUGGESTION:			ANSWER:                      Accept Suggestion: <input type="checkbox"/>				
Reference Specification Section 01 53 13 and attached sketches			Response to RFI No.T-0228 is provided herein and on attached sketch titled, "Sketch - RFI Nos.T-0223 and T-0228." This attached sketch is a mark-up of BBII's traffic plan figure "Non-Working Hours, Temporary Bridge Traffic Plan," (submittal package TG0300-204, submittal item TZ1030-015313, page 3 of 6) because this is the latest presentation of the Contractor proposed product.				
During a temporary bridge traffic coordination meeting on 8/29/11, SFMTA suggested the use of a 6" elevated sidewalk curb in lieu of the crash rated pedestrian barrier. The crash rated barrier would be relocated to the outside edge of the temporary bridge.			This attached sketch shows an installation in conformance with current coordination comments completed between the Project and CCSF DPW and SFMTA. As shown on attached Sketch - RFI Nos.T-0223 and T-0228, a handrail/guardrail providing separation of pedestrian and vehicle traffic is required.				
BBII believes this layout has numerous advantages and resolves some concerns as well: - SFMTA brought up the obvious concern of damage to side mirrors with tall barriers directly adjacent to the traveled lanes. To compensate for this, drivers will shy away from barriers in already tight lanes. Moving the barrier alleviates this problem on one side of the road. - A barrier between the sidewalk and traveled lanes has a blunt ends that pose a hazard (see sketch). Relocating the barrier eliminates this hazard. - The area formerly occupied by the pedestrian barrier (approx 14" in width) can be used as extra traveled width for vehicles (distributed per SFMTA's discretion) - An elevated sidewalk curb will make trestle crossings feel like a typical street crossing, especially for the visually impaired. As such, pedestrians will be more likely to treat the trestle intersection as a true signalized intersection.			Note, these comments provided on the attached sketch pertain only to RFI Nos.T-0223 and T-0228, a full review and response of Traffic Plan Submittal Package TG0300-204 will be finalized and transmitted at a later date.

<p>SFMTA has indicated that the elevated sidewalk is preferred over a pedestrian barrier. Attached are several sketches of the proposed layout - please confirm this is acceptable.</p>							
T-0229	BSE - Concrete Time of Discharge Requirement	Closed	09/06/2011	09/16/2011	09/08/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Nhi Tran	To: Turner Construction Company		Gary Krutsch		
Co-Author: Balfour Beatty Infrastructure, Inc.		Ural Yal	Answered By:Adamson Associates, Inc. George Metzger				
REQUEST:		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>			
Reference Specification 03 30 01		ARUP Response:					
Per SS 03 30 00, 3.3.D, "Discharge of concrete shall be completed within 1½ hours or before the drum has revolved 300 revolutions, whichever comes first, after the introduction of the mixing water to the cement and aggregates or the introduction of the cement to the aggregates."		This is acceptable.					
Per ACI 301 (Section 4.1.2.9), "Time of discharge - When it is desired to exceed the maximum time for discharge of concrete permitted by ASTM C 94C/ 94M, submit a request along with a description of the precautions to be taken."							
BBII is planning for discharging concrete with the following precautions: As concrete hydration can be controlled for a maximum of 10 hours, BBII suggests discharge of concrete shall not be restricted to 1½ hours. In order to sustain the requirements of Becho, BBII purposes to replace the 1½ hour time restriction to 3 hours with an 80° F maximum temperature requirement.							
Please confirm that this discharging plan is acceptable for Buttress Concrete per ACI 301.

<b>REQUEST:</b> Reference Specification Section 03 30 01  Per the Pre-Construction Buttress Shoring Phase 1 DFOW Meeting on 8/30/2011, BBII proposes to conduct concrete sampling of Central Concrete Trucks in Lot P in lieu of Zone 4 due to site congestion and safety concerns. In order to sustain the requirements of Becho and to provide safe disposal of concrete for sampling, BBII purposes Lot P for all concrete sample inspections.  Please confirm that this is acceptable.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The Contractor shall bear all additional costs associated with changing the concrete sampling location from Zone 4 to Lot P (including, but not limited to, additional inspectors)  ----- 2011-09-15 George Metzger  ARUP Response:  Arup takes no exception to sampling the trucks in Lot P provided the concrete is sampled and tested in accordance with the ASTM Standards. For example, in accordance with the Standards, sampling of the concrete shall be obtained after 10 % and before 90 % of the batch has been discharged from the truck.				
T-2031	BSE - 24-Hour Inspection of Buttress Shoring Shaft	Closed	09/12/2011	09/22/2011	09/12/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal			<b>Answered By:</b> Turner Construction Comp Kevin Chiu				
<b>REQUEST:</b> Reference Specification Section 03 30 01  Per the Pre-Construction Buttress Shoring Phase 1 DFOW Meeting on 8/30/2011, Becho requests that a TJPA representative be available to observe the 24 hour Buttress Shoring drilling operation and to perform any/all specified inspections. This includes: verticality of shaft, shaft cleanliness, verification of bed rock, concrete and rebar. In addition, Becho requests that a TJPA representative be available 24 hours of the day to provide Becho/BBII with full support and contact information of all available representatives.  Please confirm that this is acceptable.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> TJPA Representatives will be available to inspect the work as specified in 31 63 29 (referenced in 03 30 01).

	<p>observed at Buttress shaft C2, which was poured on Sunday 9/18/2011. The settlement led to the formation of a 13' deep unstable hole on the buttress working pad. After consulting with ARUP representative and W/O's field personnel, BBII/Becho Inc. decided to fill the newly formed hole with concrete to mitigate the settlement risk of the working pad. Additional concrete was poured into the 13' deep hole on Monday 9/19/2011.</p> <p>Please confirm that pouring additional concrete/CLSM will be considered as an acceptable method, if such settlements will occur during the future installation of the upcoming buttress shafts.</p>						
T-0235	BSE - Unforeseen Reinforced Concrete Slab at GL 7.5 J	Closed	09/20/2011	09/30/2011	09/27/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP                      Nhi Tran		To: Turner Construction Company Gary Krutsch	Answered By:Transbay PMPC                      Roger Rothenburger				
Co-Author: Balfour Beatty Infrastructure, Inc.                      Ural Yal							
REQUEST:		SUGGESTION:		ANSWER:              Accept Suggestion: <input type="checkbox"/>			
Reference Sheet D-2210, Specification Section 31 56 13, attached photos and sketch				This slab is a Cal Trans slab and is located within TJPA property limits. The slab is not unknown and is shown in the set of Drawings listed in Section 00-03-31 Part 1.2.D.6 (Existing Condition: Buildings and Improvements - Drawings "Project Plans for Construction from Figh Streeet to Beale Street, 2000" (168 pages). Removal of the slab is acceptable.			
While excavating a pre trench at gridline 7.5J close to Natoma Street, BBII uncovered an unforeseen reinforced concrete slab. This slab is 3ft thick, uncovered at grade and a section of it is in the direct line of the proposed CDSM wall. Indicated at this location in drawing D-2210 are grade beams and pile caps which BBII assumes will be encountered under this mat slab. However, this slab is not indicated on contract drawing D-2210.				----- 9/22/2011 - George Metzger			
The concrete shown in contract survey sheet 5 appears to be a concrete driveway and it does not indicate the 3ft thick concrete slab that BBII are encountering.				ARUP Response:			
Measurements taken in the field also indicate a larger area than this. The attached photos and drawing indicate the scale of this obstruction. It is required to be removed.				It is Arup's understanding that the slab encountered is a remnant of the Caltrans seismic retrofit work of the previous, now-demolished bus ramps. Therefor, removal of the portion of the slab within the shoring wall alignment is acceptable, but ownership of the property on which the slab is located should be confirmed by the PMPC / TJPA.			
Please advise if this is acceptable.

T-0236	BSE - Unforeseen Concrete Section Found at Grid Line 1E	Closed	09/22/2011	10/02/2011	09/26/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal							
<b>REQUEST:</b> Reference Sheet D-2210 (attached), Specification Section 31 56 13, and attached photos  While DND were drilling at panel 28 and 29 on grid line 1E at the locations of piles 839-843, an unknown section of concrete was encountered. The concrete was found at a depth of 9.5ft. The quantity of concrete is unknown at this point. The concrete is not indicated on contract drawing D-2210. It is in direct conflict with the CDSM shoring wall and must be removed. Shown below [attached] are photos of the debris removed from the excavation.  Please advise on how to proceed.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> ARUP Response:  Contract documents require obstacles that may interfere with installation of the CDSM wall to be removed by pre-trenching. The concrete shall be removed.				
T-0237	BSE - Bridge Welding Code	Closed	09/26/2011	10/06/2011	10/03/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Turner Construction Company Kevin Chiu				
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal							
<b>REQUEST:</b> Reference Specification 01 53 30  Temporary Bridge Specification 01 53 13 (1.6H) requires the welding qualifications for the bridges to be in accordance with AWS D1.5 "Bridge Welding Code", however BBII's design was based on AWS D1.1 "Structural Welding Code" as specified in General note 3.2-A4.2 of Sheet SH-0100. BBII and their designer felt AWS D1.1 is more applicable for the temporary bridge structure for the following reasons:  - The members that make up BBII's temporary bridge consists of readily available standard grade mill rolled shapes, comprised of a variety of base metals (A36, A53, A572, A992, A500, and A252) which are joined by simple prequalified joints (fillets). D1.1 provides the flexibility to weld all of these base metals in any combination utilizing prequalified procedures, since they are all in the same base metal group. D1.5 only allows prequalified welding of A709 plate material only.  - BBII's temporary bridge structure contains structural tubing (piers and rails), which D1.5 does not cover tubing			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> ISI Commentary:  "We have been requested to provide a commentary/discussion regarding AWS D1.5-2002 Bridge Welding Code in reference to RFI #T-0237. The scope of our discussion is limited to an interpretation of D1.5 and not to the design/use of welded temporary steel bridges. The RFI's request by BBII is to accept WPSs/WQTRs to AWS D1.1 rather than to AWS D1.5.  Base Materials: Although D1.5 specifies A709 as the approved steel, it also states that other steels may be approved by the Engineer [D1.5 Section 1.2.2].  Fillet Welding: The RFI states all welding to be fillet welds (mostly single pass). D1.5 state fillet welding may be performed, within given limitations, without performing WPS qualification tests [D1.5 Section 2.8.1].  Welder Qualifications: We note that the qualification requirements for both groove and fillet welds are

<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal							
<b>REQUEST:</b> Reference Sheet GT-5101, Specification Section 31 56 13, attached photos and sketch  Please address the following information request from BBII's sub contractor DND:  "The new CDSM shoring wall crosses an existing CDSM wall at 2 locations. Following CR T-005B, both of these crossings are perpendicular to the existing CDSM wall, as shown in Note 1 on GT-5101. Note 1 shows the new wall making a jog to avoid hitting the beams of the existing CDSM wall. The detail shown on contract plan GT-5101 is constructible only if the existing CDSM wall was built exactly as shown, without any room for construction tolerances for both the new and existing wall. Instead of trying to install this section of the CDSM wall according to the detail shown on GT-5101, which would potentially cause damage to the CDSM equipment, DND proposes to remove the existing CDSM beams that are in conflict. The contract plan GT-5101 shows two CDSM panels to jog around the existing beam and one offset panel parallel to the new wall.  DND's proposed solution would eliminate the 2 panels in the jog but still maintain the additional offset panel parallel to the wall line. This additional offset panel would act as insurance so a seal is maintained through any deflection caused by the hard in-situ soil mix. This would present a potential cost savings to the project (due to 2 less panels being installed), providing the conflicting beams can be successfully removed.  DND has mobilized a drill rig with an auger to this area to pre-drill the wall prior to the removal of beams. This will substantially reduce the amount of vibration that will be required to remove the beams. DND proposes to utilize the same method at the other wall crossing near Natoma Street. Is this proposed method of removing the existing beams and soil mixing through the existing CDSM wall acceptable?"		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> ARUP Response:  This is acceptable provided there is no additional cost to the TJPA.			
T-0239	BSE - Rebar Cages for Deeper Buttress Shafts	Closed	09/28/2011	10/08/2011	10/03/2011	Potentially	<input type="checkbox"/>

<b>REQUEST:</b> Reference Sheet GT-5202 Detail 12, RFI T-0216, and Approved Rebar Shop Drawings  The approved rebar cages per RFI T-0216 are sized for 241' deep shafts. Rebar cages for shafts C-1 and M-1 have already been released and fabricated. Note that the depth after airlifting of shafts C-2 and M-2 have been 247' and 252.7' respectively. Please advise on how to proceed with the installation of the cages for shafts C-1 and M-1 and with the fabrication of the rest of the cages assuming these shafts extend beyond planned depth.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> ARUP Response:  Detail 12/GT-5201 requires the reinforcing steel to be placed up to 1'-0" below the top of the concrete. The top of concrete is shown on GT-5201. Longitudinal bar extensions shall be spliced as needed to achieve this. If the top of the fabricated cage is within 3'-0" of the top of the concrete, no bar extensions are required.  The 24" tie spacing shown on the shop drawings at the setting cage (Drawing SC1) is acceptable at the bar extensions.		
<b>T-0240</b>	<b>BSE - Demo AT&amp;T Duct on Natoma at Second</b>	<b>Closed</b>	<b>09/29/2011</b>	<b>10/09/2011</b>	<b>10/07/2011</b>	<b>Potentially</b>	<input type="checkbox"/>

T-0241	BSE - Brick Wall at GL 2, J Line In Conflict With The CDSM Wall	Closed	09/29/2011	10/09/2011	10/07/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Gary Kruttsch			<b>Answered By:</b> Turner Construction Company Jack Adams				
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal							
<b>REQUEST:</b> Reference Specification Section 31 56 13 and attached meeting minutes and photos  The brick wall remaining from the 580 Howard building, at grid line 2 J, is protruding into the CDSM wall limits, as noted in BBII's previous RFI #203 (The question was responded by TCCO at the job site meeting on 9/6/2011. Refer to the attached meeting minutes). While attempting to remove, BBII has discovered that the fence and patio pavement are founded on this remaining portion of brick wall. This condition does not allow for the removal of the wall without damage to the fence and patio.  Please provide direction on how to proceed.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1. The 580 Howard courtyard fencing can be removed from the corner because it is owned by TJPA and located on TJPA property. 2. After removal of this corner section of fence, a section of temp fence and signage shall be placed on TJPA property. 3. During demolition of this corner section the temp fence and signage will likely have to move in towards the 580 Property as a safety precaution. 4. The demolition and backfill shall be expedited so that the courtyard can be restored (preferably same day). 5. The temp fence section and signage shall be moved back on to TJPA property until CDSM wall is complete. 6. The permanent fence will be reinstalled on TJPA property as soon as possible after CDSM wall installation at the corner.  CR T-5B excluded this scope. These costs will be issued under forthcoming CR.				
T-0242	BSE - Becho's Request For Rock Classification Data	Closed	09/29/2011	10/09/2011	10/11/2011	Potentially	<input type="checkbox"/>

Co-Author: Balfour Beatty Infrastructure, Inc.                      Ural Yal							
REQUEST:		SUGGESTION:	ANSWER:            Accept Suggestion: <input type="checkbox"/>				
Reference Specification Section 31 56 13 and attached sketch		Coordination with 530 Howard property management cannot be obtained without specific dates. Once the dates are known, coordinate through Jason Padavich (jpadavich@tcco.com 510-453-8598).					
Pre-trenching and CDSM wall installation at the rear of the 530 Howard building will have an impact on the accessibility to the emergency exit at that location. In order for the pre trench and the CDSM wall installation to safely proceed past this location, the rear exit must be closed for 1-2 days for each operation. The attached drawing indicates the location of the emergency exit and its proximity to the CDSM wall.							
Please confirm if this is acceptable. BBII is available to meet with the property owner to coordinate this work.

T-0245	BSE - Ground Conduits detail for PG&E phase 2 works on First Street	Closed	10/05/2011	10/15/2011	10/12/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Masashi Kojima To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference CR No. T-017 - BSE - First Street Phase 2 Utility Relocation  For the installation of the PGE 6" and PGE 4" GRS conduit between the CDSM walls, is grounding of the PGE conduits required? If so, please provide grounding details/requirements.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Response from PG&E (attached) is as follows:  Yes and at both ends of the conduits. As a suggestion, we would propose to tie into the bonding jumpers of the AX and EX expansion fittings with a bare copper solid stand #6 copper wire. The #6 wire can be either soldered or crimped to the bonding jumper. All the #6 ground wires would then be brought together and connected to a single bare #2/0 copper wire. The 2/0 copper ground wire would then be routed and cadwelded to the nearest I-beam that support the traffic bridge.  If it is not possible to attached the #6 copper wire to the AX and EX grounding jumpers, we will require a separated bonding clamp that can be used in a wet or dry location.  One grounding point is usually sufficient but I am asking for grounding at both ends of the steel conduits in case one ground is accidentally cut.

---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

**REQUEST:**

Reference Specification Section 31 56 13

Please address the following information request from BBII's sub contractor DND:

"As of to date, the following three soldier piles have sunk below grade during their placement into the CDSM wall.

- Beam # 154 installed on 09.08.11
- Beam # 631, installed on 09.29.11
- Beam # 602, installed on 10.01.11

DND was unable to recover those piles and set them to their plan elevations without disturbing the adjacent beams that were already in place. To mitigate this issue, DND proposes to conduct the below course of remedial action:

1) Wait until mass excavation commences. Excavate with caution the locations, and determine the top elevation of the sunken beams.

2) Provide this information to the Engineer for evaluation.

3) Implement corrective action based on Engineer's evaluation. Possible corrective measures are:

- a. No action necessary. The strength of the CDSM material may be sufficient to support the unreinforced depth.
- b. Install lagging between the adjacent beams above the top of the sunken beam.
- c. Splice a beam on the top of the sunken beam and backfill with low strength concrete.

Please advise, if the proposed course of remedial action and/or any of the three possible corrective measures are acceptable."

**SUGGESTION:**

**ANSWER:**

**Accept Suggestion:** ☐

ARUP Response:

The proposed sequence is not acceptable. The Contractor shall submit a corrective action plan at least four weeks prior to the start of excavation for evaluation by the TJPA's Representative. The plan shall assume a range of depths to the top of the sunken beam and shall describe the impact on the walling and strutting plan. The plan shall be location-specific and shall include a drawing indicating the location of the sunken beam.

Reference Specification Section 01 53 13					Accept Suggestion: <input type="checkbox"/>		
Attached is an as-built sketch of Verizon utilities potholed and located along First St. on 10/4/10. These utilities were originally scheduled to be relocated during phase two to allow for CDSM installation and subsequently temporary bridge construction. BBII has learned that in an effort to save time, the TJPA is considering leaving the utilities in their current locations and working around them. As shown on the attached section of the First St. temporary bridge, the Verizon utilities will be in direct conflict with the temporary bridge structure. Please confirm these utilities will be relocated as planned to allow for installation of the CDSM shoring wall and temporary bridge.					"Yes, they will be relocated. This RFI was related to the lateness of Verizon relocation and the idea of installing CDSM wall with Verizon still in place. Due to delays in starting PGE is now taking longer than Verizon so that PGE work governs duration and we no longer have to install last CDSM wall with Verizon in place to save time on bridge installation on First Street."		
					Solcom has a start date of 1.03.2012 and a finish date of 2.29.2012.

REQUEST:		SUGGESTION:		ANSWER:				Accept Suggestion: <input type="checkbox"/>		
RFI T-0251 original inquiry: During the 10/12/11 trestle submittal review meeting, statements were repeatedly made with regard to incrementally complete underground drawings in which to coordinate trestle pile locations. As of 10/13/11, W/O has not received any future package documents accompanied with the direction to coordinate with the TG03 documents. If such documents are available please make available the entire series to include, however not limited to, A, S, M, E, & P.				Thornton Tomasetti Reply:  "See attached PDF files SKS-0130 through SKS-0137 for exclusion zones for trestle and pin pile locations, per requested additional TT review. W/O to review for constructability. Submit updated pile locations for review.						
RFI T-0251.1 Clarification to RFI T-0251: The TG03 package was executed with limited documents in which to coordinate future packages with. Please provide all documents the TJPA requests BBII coordinate the TG03 package with and to.				Note:  Penetrations through the Mat slab shall not intersect the hatched zones in the attached sketches. Note hatched zones at and near columns and at side walls.						
As it pertains to structural columns (round/pill/rectangle/ect.) please provide the minimum clear distance to trestle pile penetrations in the mat slab so BBII may coordinate.				Any Lower Concourse level penetrations within 3'-0" on either side of primary column lines (e.g. 1.4, 2, ..., 35, V, W, X) will impact construction of primary concrete moment frame beam elements; coordinate with W/O. Block outs in moment frame beams shall not encroach into the hatched zones in the attached sketches.						
Should there remain any ambiguity in the inquiry above please indicate the nature of misunderstanding.				Coordinate interruptions of lower concourse slabs and secondary framing beam elements with W/O.						
				24" Diameter columns located 21'-3" west of GL 23 and 21'-3" east of GL 23 along GL D.8 and E.2, extending between mat level and lower concourse level.						
				Verify construction sequence of Light Column at GL 23 in relation to cross lot bracing and re-bracing; coordinate with W/O.

REQUEST:		SUGGESTION:		ANSWER:			
On 11/3/11 W/O was informed by PMPC during an Access Trestle Criteria Discussion meeting with URS and W/O that PMPC will request Thornton Tomasetti to provide "no pine pile zone" sketches for the Lower Concourse Level similar to the Sketches provided through RFI T- 251.1 response. Also, PMPC is requesting Thornton Tomasetti to provide criteria of concrete connection details around pin piles/trestle piles for the future Below Grade Concrete Package.				Accept Suggestion: <input type="checkbox"/>			
Please confirm.				TT Response:			
				The response to RFI T-0251.1 and the associated sketches included criteria for Lower Concourse. As stated in the response, BBII is to coordinate the Lower Concourse framing elements with Webcor. Although the block out at the lower concourse level is a means and methods issue, TT further clarifies the implication of the block out if it affects the primary moment frames along the column grids as noted below:			
				The primary moment frame girders at the Lower Concourse level are to act as a brace when the Second level braces are removed as shown in the GT drawings. If a complete moment frame girder is not poured due to conflict with the trestle piles, those bracing elements immediately adjacent to that girder will need to remain in place until the blocked-out beam is re-cast and reaches its design strength. Alternatively, BBII shall establish another method of

T-0252	BSE - Buttress Rebar Cage Length Adjustment	Closed	10/19/2011	10/29/2011	10/24/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Gary Kruttsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal							
<b>REQUEST:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>				
Reference RFI #T-0216, #T-0239, Sheet GT-2201, Specification Section 31 63 29, and attached sketch			ARUP Response:				
Per the response to RFI T-0239, BBII needs to extend the length of rebar cages to accommodate buttress shafts that are deeper than 240'. The exact length of the rebar cage cannot be known until the drilling of the adjacent shaft. Due to this uncertainty, and the long lead time required to fabricate cages with varying lengths, BBII proposes to fabricate all rebar cages to a pre-extended length of 260'.			The proposal is acceptable with the following notes. Detail 12/GT-5201 requires the reinforcing steel to be placed up to 1'-0" below the top of the concrete. The top of concrete is shown on GT-5201. Longitudinal bar extensions shall be spliced as needed to achieve this (as noted on the sketch; attached). If the top of the fabricated cage is within 3'-0' of the top of the concrete, no bar extensions are required.				
Once the depth of the adjacent shaft is known, the final length of the rebar cage will be adjusted by cutting the top of the rebar cage and the CSL tubes to the desired length. The length of the bottom "structural cage" section that consists of 24 Ea. vertical rebars will remain unchanged at 186'. The length of the top "setting cage" section that consists of 8 Ea. vertical rebars will be adjusted as described above. Please refer to the attached documents and the original shop drawings for the "structural cage" and the "setting cage" details.			The 24" tie spacing shown on the shop drawings at the setting cage (Drawing SC1) is acceptable at the bar extensions.				
BBII proposes to accommodate this change at no additional cost to TJPA beyond the bid item quantity payment per drilled shaft lengths.							
Please advise, if it is acceptable.

T-0253	BSE - Trestle Design Criteria Confirmation	Closed	10/19/2011	10/29/2011	11/01/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Gary Kruttsch			<b>Answered By:</b> Turner Construction Company Kevin Chiu				
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal							
<b>REQUEST:</b> Reference Attachment 3 of Exhibit A of the TG03 Bid Package and attached memo from PB&A  Pursuant to the trestle design meeting held on October 12, 2011, Balfour Beatty Infrastructure Inc.' (BBII) requests clarification regarding their interpreted design criteria of the Temporary Access Trestle  As the only Contract document regarding the Trestle, Attachment 3 of Exhibit A of the TG030 Bid Manual has the following instructions:  In the second sentence of the second paragraph, the following statement is made, "For the design criteria for the Access Trestle, the Contract Documents and applicable standard shall be referred to." The next sentence states, "All requirements in the Temporary Bridge Specification in the Contract Documents, Section 01 53 13, shall apply to the Access Trestle."  Attachment 3 goes on further to provide very specific design load conditions and structural elements (i.e. Deck & barrier) that contradict the requirements of the Temporary bridge Spec Section 01 53 13. Based on the more "Trestle Specific" requirements of Attachment 3 and the interpreted function, being for construction use and not public use, of this type of temporary works structure, BBII and its Engineering Team arrived at the criteria (basis of design) described in the attached memo from PB&A. This document was included with BBII's original design submittal; however for this RFI BBII has expanded some of the explanations.  Please review the provided information and confirm whether or not BBII's design criteria is appropriate for the Temporary Access Trestle.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> PMPC response per Roger Rothenburger, 11/01/11:  "1. The RFI process is not the appropriate venue to "review the provided information and confirm whether or not BBII's design criteria is appropriate." The RFI requested at the October 12, 2011 meeting was to request clarifying instructions to specific perceptions of conflict between Exhibit A - Attachment 3 and Specification Section 01-53-13 (Temporary Bridges)  2. As for the design criteria, the fourth sentence of "Exhibit A - Attachment 3" is explicit; "All requirements in the Temporary Bridges Specification in the contract Documents, SECTION 01 53 13, shall apply to the Access Trestle." This would include the requirement in Section 01-53-13 Part 1.3.A.1 (Temporary Bridges - Performance - Design Loads) stating the use of seismic design load for 475 year earthquake (earthquake with 10% probability of being exceeded in 50 years),  3. Among other criteria, wood decking material, "wheel stops, hand rails, special working access, etc listed in the balance of Attachment 3 modify the requirements in Section 01-53-13 and are not contradictory.  4. Attachment 3 does not address crash barriers or lateral bracing, among other criteria, which would defer to section 01-53-13. (Temporary Bridges)  5. PMPC recommends a small group meeting of the constructing parties to discuss the technical details to meet as many requirements as possible for BBI to get approval for Zones 1 and 2 and proceed with the Access Trestle work in a timely manner."				

T-0253.1	BSE - Trestle Design Criteria Follow-Up	Closed	11/21/2011	12/01/2011	12/02/2011	Potentially	<input type="checkbox"/>

<b>REQUEST:</b>			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>				

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
T-0254	<p>Reference RFI#T-0253, Attachment 3 of Exhibit A of the TG03 BSE Bid Package, Specification Section 01 53 13, and attached memo from PB&amp;A</p> <p>Follow up to RFI T-0253 and the meeting held 11/16/11</p> <p>As noted in the 11/16/11 meeting, the cross lot bracing "struts" are supported by the Trestle substructure and analysis requires limiting trestle deformations to be compatible with the allowable strut deflections (approximately 2"). As a result the "push over" analysis as required by the AASHTO Seismic Design Criteria "SDC" (requirement of bridge spec 01 53 13) is not applicable. This was discussed in detail during the 11/16 meeting and it was concurred that due to unique structural configuration and deflection requirements, an alternate analysis method other than the SDC would be required. Discussions were had that a site specific elastic analysis using the 475 year seismic loads that is controlled by the deflection limits of the cross lot bracing would be necessary. Please confirm that a "push over" type analysis of SDC will not be required for the trestle and that the attached detailed Design Criteria (and analysis method) is acceptable.</p> <p>(W/O added clarification) BBII believes the site specific analysis would demonstrate the trestle substructure will not deform greater than 2" however the trestle superstructure will deform greater than 2".</p>	Closed	10/20/2011	10/30/2011	11/01/2011	Potentially	<input type="checkbox"/>

If the Access Trestle is designed to resist the full 475 year earthquake design requirement with all response being elastic ( $R=1$ ), then the Access Trestle system is not subjected to inelastic deformation for the design event. If the design is additionally shown to be capable of sustaining significant overload (no connection failures, no weld failures, no member failures, remaining stable under loading corresponding to at least two times the required design load, or corresponding to a ductility demand requiring  $R=2$ ), then a pushover analysis is not necessary to verify performance. If there are questions raised regarding if this is sufficient, then the response could be demonstration that the system remains fully stable without connection or member failures at a load level corresponding to the deterministic earthquake load corresponding to the maximum event capable of being delivered by the earthquake fault system at the project location. If the design presented is in accordance with the above, then URS would be able to assist with technical engineering discussions to validate this design approach to the City of San Francisco during the building permitting process.

Further clarification: The procurement specification requires an integrated model capturing interaction between the Cross Lot Bracing and the Access Trestle, note the Cross Lot Bracing is not a component against which the trestle reacts but the Cross Slot Bracing delivers load to the Access Trestle. This behavior must be captured with sufficient accuracy and within all project criteria.

If another alternative is proposed that meets all required design criteria at all structure elements, including contractor teams identified maximum allowable deflection of 2 at the Cross Lot Bracing, URS takes no objection to the contractor pursuing this potential design alternative.

Co-Author:							
REQUEST: Reference Specification Section 32 12 17  With regard to the areas of non-conforming backfill compaction inspection i.e. FCR #TCB-00246: In lieu of contemporaneous compaction inspection by ISI, BBII has proposed the methodology described in attached letter #4225-000-00238. Please confirm the alternate methodology, assuming acceptable results, would suffice to meet the contract requirements.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The proposed methodology will be evaluated pending receipt of the test results.  Submit test results for review and evaluation.		
T-0260	BSE - D.I. Installation at Natoma Street and First Street	Closed	11/01/2011	11/11/2011	11/08/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Service Eric Zagol				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference Sheet U-3012 and attached sketch  BBII carried out an investigation of the active catch basin around the perimeter of the BSE project; and has a concern regarding the street elevation relative to the flow line on Natoma Street between GL 10-17.  The flow line directs surface water in a North East direction towards First Street. The only active catch basin at the intersection of Natoma and First Street is CB #305, which is approximately +8.5" higher than the currently decommissioned CB located at the intersection of Natoma St and First St (see sketch attached).  Noted during the last rain fall, surface water was directed to the decommissioned catch basin at the North East corner of Natoma Street and First Street intersection, BBII recorded approximately 6" of standing rain water accumulating at First Street and Natoma intersection. Please note that existing catch basin was decommissioned during the new sewer installation on First Street (see attached mark up drawing).  BBII recommends 2 options to control rain water from outside the BSE work area: A) modify the flow line on Natoma Street to direct the flow toward CB # 305,			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The referenced decommissioned CB at the north west corner of Natoma and First streets was to be protected in place per RUP documents.  AECOM understands that the CB was decommissioned by BSE contractor in accordance with D-2230 Detail 1 and not RUP as claimed. D-2230 Detail 1 states (E) sewers, MH(s) and CB(s) are to remain active until construction of (N) CDSM perimeter shoring wall along northern end of site.  The decommissioned CB is within the excavation site. In accordance with the specifications referenced in the Recommendation section (i.e. 011560 STORMWATER POLLUTION PREVENTION, EROSION AND SEDIMENT CONTROL) submit for review storm water control plans indicating contractor's method of addressing storm water entering the site in accordance with 011560 1.4.

REQUEST:		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>			
Reference RFI #T-0260 and Sheet U-3012 (attached)		The contractor shall control storm water in accordance with specification 01 15 61 and approved submittals.					
RFI response T-0260 does not address the issue request information, to resolve the surface water from outside the BSE project. BBII recommend a catch basin should be installed at the corner of Natoma and First Street, as part of BBII storm water control. The catch basin will need to be installed at the low point of Natoma Street, across from CB #305.		Per field walk by Turner on 12/02/11 and prior to return of this RFI, it was observed that the contractor had installed measures that appear to have resolved this issue.					
BBII request confirmation and approval to install a catch basin at the above location. Also confirm the lateral from the new catch basin can discharge directly into SSMH#305.

<b>From:</b> Webcor Construction LP      Nhi Tran <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal							
<b>REQUEST:</b> Reference RFI#T-0251.1 and Specification Section 01 53 13  BBII is in receipt of the drawings included in RFI T-251.1 that illustrate trestle pile "exclusion zones" where piles cannot penetrate the mat slab. Of the 24 piles that are currently in conflict with the pile exclusion zones, 20 of them can be relocated with relatively minor member changes. The other 4 as indicated in the attached drawings will require significant redesign and re-procurement, especially at the bridges. Can an exception be made at these four locations?			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> See the attached TT response.

<b>Co-Author:</b>							
<b>REQUEST:</b> Reference: BBI Marked-Up SKS-0135, SH-3103  The previous response to RFI T-264 requested BBII move one of the Beale St. Bridge piles 3' west to avoid mat slab reinforcing congestion. BBII has investigated this request and found that the cap beam already has a significant cantilever on the east side of the pile in question. In order to comply with the request to move the pile, we would have to extend the cap beam and support it off the CDSM wall as shown on the attached sketch. Please advise if this is acceptable, otherwise the pile will need to remain in its current position.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> ARUP Response:  This cannot be evaluated properly by Arup without more information regarding the loads on the shoring wall. Contractor shall submit calculations for review. Calculations shall include the load, if any, which will be imposed on the shoring wall due to settlement of the bridge supports.  Note that we have not yet seen the calculations and details for the bridge abutments at the north and south ends of the bridges.

**Co-Author:**

**REQUEST:**

The response to RFI T-264.1 requested BBII provide the loading that would be placed onto the CDSM wall. This response leads us to believe that the option to leave the pile in the current location was unacceptable. Please confirm that the pile must be moved and provide a detailed location of where the pile placement would be accepted. Upon receipt of this information BBII can accurately determine the load to be placed on the Wall for Arup's review.

**SUGGESTION:**

**ANSWER:**

**Accept Suggestion:** ☐

The bridge pier near 35-E must be relocated. See attached SKS-0179 for acceptable range of pier shift.

<b>T-0264.3</b>	<b>BSE -Bridge-Trestle Piles in Exclusion Zones Beale St</b>	<b>Closed</b>	<b>08/13/2012</b>	<b>08/23/2012</b>	<b>08/17/2012</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP	Kirk Nielsen	<b>To:</b> Turner Construction Company	Gary Kruttsch	<b>Answered By:</b> Adamson Associates, Inc. George Metzger			

**Co-Author:**

**REQUEST:**

W/O in receipt of RFI response T-0264.2 (Exhibit-A). BBII is purporting any shift of the "bent-3" East pile West will cause excessive bridge cantilevering to the extent the Beale St. bridge must be reconfigured (less the sidewalk) and relocated (East) atop the CDSM wall.

Since the issuance of the TG03 package a third pit for an oil & sand interceptor appears to have been added in room B2761 reference:

1. TG06 4/P1-3006 (Exhibit-B) room B2761 floor plan
2. TG03 1/S1-2027 & C/S1-3004 (Exhibit-C) for original room configuration
3. TG06 1/S1-2057 & 2/S1-3007 (Exhibit-D) for revised room configuration

Please reference marked-up sheet S1-3007 (Exhibit-E). W/O is unaware of why the bridge pile could not be located 12" off the edge of the sump pit as depicted. The corner of the oil & sand interceptor pit which is shallow and could easily be formed, reinforced, and poured after the bridge pile is removed.

Please advise.

**SUGGESTION:**

**ANSWER:**

**Accept Suggestion:** ☐

TT will allow the proposed location of the "bent-3" East pile along grid E as depicted in Exhibit E (pile is east of the sump pit and the edge of pile is 12" from the east face of pit). Note that a pile in this location will require the pile to be cut off at a lower elevation than the typical detail, which will involve a larger block-out. The mat shall be re-braced at the block-out by TG03. Acceptance of this pile location will result in a Change Order for TG06.

REQUEST:			SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>		
On 8/22/12 Beale St. bridge submittal #TG0300-206 was returned to W/O marked not reviewed (Exhibit-A). Upon W/O's review of BBII's Beale St. bridge design W/O encountered the following inquiries relative to the CDSM wall:			VOID - SEE RFI T-0305				
1. BBII's bridge design relies on ARUP's RFI response #T-0209.3 (Exhibit-B). Please confirm ARUP's RFI response #T-0209.3 (Exhibit-C) is applicable as the basis of the design for the Beale St. bridge, given unlike First and Fremont Streets, the length of the Beale St. bridge is resting atop the East CDSM wall.							
2. The decision to allow the North and South bridge abutments to be located atop the CDSM wall was predicated on the CR #T-025 load testing reference RFI #T-0209.4 (Exhibit-D). Given the testing was performed on different soldier piles (by others) and differing soil conditions between Zone-1 and Zone-4, is the load capacity derived from the CR #T-025 testing applicable given the different bridge location and configuration?							
3. BBII's Beale St. bridge design relies on resting the length of the Beale St. bridge atop the East CDSM wall. As the designer of the CDSM wall, does ARUP endorse further loading of the East CDSM wall with the forces imposed by the Beale St. bridge?

T-0265	<b>REQUEST:</b> Per TCCO Request RFI being submitted in lieu of a submittal:  Based on the response to Webcor Submittal No. TG0300-206.1, BBII has shifted the bridge superstructure west between the grid lines 34 and 34.8 beams as directed. This necessitates the installation of 2 rows of 5 bridge columns as shown in the attached drawings. The west row will be located 7' east of GL 34 and the east row will be located a further 25' east as shown. All 10 columns have been positioned clear of the internal bracing. The sidewalk will be located in Lot N.  There are two options for the location of east bridge column 3 as shown in the attached layout drawing.  - Option 1 is the preferred option. This is located on E line 10'-6" west of Grid line 35 (Pile exclusion zone penetration approved via response to RFI 264.3).  - Option 2 is located a further 5' west of option 1 to the location on the TG-06 drawing. The impacts of option 2 to the superstructure are not known at this time. The irregular alignment of the eastern row of piles in option 2 will create local stress concentration in both the diaphragm and superstructure in the longitudinal seismic analysis. This is not a preferable configuration.  Please confirm the location of the superstructure and the piles. Advise on the location of east bridge pile 3.	<b>SUGGESTION:</b>	Closed	11/09/2011	11/19/2011	11/17/2011	Potentially <input type="checkbox"/>

T-0266	<b>BSE - Moratorium Conflict With Phase 2 Utilities In 1st Street</b>	Closed	11/23/2011	11/23/2011	12/06/2011	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Manuel Saldana <b>To:</b> Turner Construction Company Gary Krutsch		<b>Answered By:</b> Turner Construction Company Jack Adams					
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Jeff Molloy							
<b>REQUEST:</b> BBII is in receipt of the moratorium waiver expire date of 12-09-2011. BBII/PEC will not be able to complete the Phase II utility work by 12/9/11 without accelerating the schedule. Our original request for extension was December 19, 2011. A 12/9/11 completion date may be achievable if PEC is allowed to work 10 hr shifts during the day beginning 11/28 through 12/2 as well as working on 12/3 and 12/4. In addition, we propose to have a separate night crew to work near / around the Minna Street intersection to alleviate impacts to heavy demand of day traffic. The majority, if not all, of the demolition can occur during the dday to mitigate noise at night. The night work would need to begin on 11/28 and run through 12/2. Please keep in mind that implenting an accelerated schedule may also impact PG&E. We have no control over their work and the completion of the utlity tie-ins and Mandral testing is contingent on PG&E's availability per the new adjusted completion date.  In summary we are requesting direction for the following items to meet the 12/9/11 moratorium deadline: 1) W/O to permit BBII / PEC to work the extended hours, and night shift i.e. 10 Hours Days and Night work operations, 2) Permit from MTA to extend working hours (closure times) during the day 3) Permit from MTA and DPW to work at night within lane closures 4) Permit from TJPA to work in Zones 1 & 2 at night 5) Agreement / Approval for compensation of additional		<b>SUGGESTION:</b>	<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Holiday Moratorium waiver is extended to 12/21/11 by SFMTA. BBII/PEC work can continue on day shift Monday-Friday in accord with SFMTA Special Traffic Permit 11-7786 issued on 12/2/11.

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference: 31 00 00 1.4 C.2 and Attached Sketch							
31 00 00 1.4.C.2 Pile Extraction - To occur in two (2) stages per Zone.		ARUP Response:					
Stage 1 extraction will remove the piles within the footprint of the trestle the middle 60' of the work zone, dewatering wells and piles that are in conflict with the bracing pin pile locations. Piles will be removed using a non ground deformation control method and be removed full length to be utilized for offsite LEED projects and to help achieve sustainability for this material.		The method described is not in accordance with the Contract Documents which require the existing piles to be removed using Ground Deformation Control Methods (as defined in 02 41 19) except where Non-Ground Deformation Control Methods are allowed and noted as such on the drawings.					
Trestle piles will be installed after Stage 1 pile extraction and concurrently with Stage 2 pile extraction.		The method described is acceptable with the following notes: this is acceptable for timber piles only, and if they are longer than 30 feet, Arup may re-evaluate the methods used. If the density of existing piles exceeds 30 piles per 1000 square feet, Arup may re-evaluate the methods used. If excessive ground movements are observed, the Contractor shall switch to using a Ground Deformation Control Method.					
Stage 2 extraction will remove the piles within the 50' +- area adjacent to the CDSM walls along A and J lines. Piles will be extracted using a ground deformation control method as per Section 02 41 19 - 3.1.B of the specifications utilizing both casing and backfilling of the void or removal by means of cutting the pile off at the grade of each level of excavation as the work proceeds.							
Please reference the attached drawing for details of the above procedure.							
The 80 Natoma shoring wall will be removed in stages coinciding with the stages of excavation.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
BBII are proposing to perform "free pull" pile extraction on a 'test section' in Zone 2. The proposed piles will be extracted near GL14, close to CDSM wall on the south side using a 'non ground deformation control method' by free pulling each pile without using steel casing. Any movement that may occur in the CDSM wall will be monitored by the inclinometer located close to GL 14. This test section will give us give us the information we need to determine: 1) If free pulling the piles using a non ground deformation control method affects the CDSM wall by causing movement.				ARUP Response:  Contractor to provide details of the instrumentation that will be installed by the Contractor to demonstrate compliance with Minimal Ground Loss defined in 02 41 19 3.2 G.			
Reference: DD-2211		Arup's response to RFI 269 continues to be our position regarding pile removal during mass excavation					
W/O Note: W/O understands this RFI is the result of ongoing conversations between BBII, ARUP, & PMPC. W/O remains concerned that should the CDSM wall experience movement, the use of the 'Free Pull' method beneath or outside the trestle area, would significantly increase the difficulty in determining the cause of the CDSM wall movement. 2) If it is a suitable method to adopt for removing the remainder of the piles in Zone 2 located outside the trestle area. The attached drawing (D-2211) conveys the test section in red. Please advise on the suitability of this test to determine if free pulling can be used outside the trestle zone.

From: Webcor Construction LP      Kirk Nielsen      To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Please confirm ARUP's 9/25/12 verbal revision to RFI response T-0269.3, to employ the originally specified ground deformation control method (not free pull) when pulling timber piles between: Soldier piles 251 and 276 & between A-line and the north edge of the access trestle.					Accept Suggestion: <input type="checkbox"/>		
					Arup confirms this verbal revision.		
					The Contractor shall employ the originally specified ground deformation control method (not free pull) when pulling timber piles in the portion of Zone 3 and Zone 4 which is defined by soldier pile 251 to the west and soldier pile 276 to the east, and A-line to the north and the north edge of the trestle to the south.		
					Additionally, due to the excessive movements caused by the timber pile pulling in the southwest corner of Zone 3, the Contractor shall revert to using the original timber pile pulling as specified in the construction documents for removal of any piles within 30 feet of the CDSM shoring wall.		
T-0269.5	BSE Zone 3 & 4 Pile Extraction Methodology	Closed	10/10/2012	10/20/2012	10/12/2012	Potentially	<input type="checkbox"/>

REQUEST:			SUGGESTION:		ANSWER:		
Specification Reference: 02 41 19 Drawing Reference: GT-2102 / GT-2103					Accept Suggestion: <input type="checkbox"/>		
The response to RFI # T-0269.4 says to revert to using timber pile pulling as specified in the contract documents.					Arup confirms this verbal revision.		
Per notes on GT-2102 and GT-2103, non-ground deformation control methods (free pull) can be used between Grid Lines 20 and 24.					The Contractor shall employ the originally specified ground deformation control method (not free pull) when pulling timber piles in the portion of Zone 3 and Zone 4 which is defined by soldier pile 251 to the west and soldier pile 276 to the east, and A-line to the north and the north edge of the trestle to the south.		
Upon field conversations, please confirm BBII's interpretation of the designer's intent is correctly shown on the attached drawing.					Additionally, due to the excessive movements caused by the timber pile pulling in the southwest corner of Zone 3, the Contractor shall revert to using the original timber pile pulling as specified in the construction documents for removal of any piles within 30 feet of the CDSM shoring wall.

REQUEST: In regards to the Proposed Driveway shown on the CRT#021 drawing and outlined in Bullets #1 and #2 in the Scope of Work, please clarify the following:  -Per the location of the 18ft Gate, a 10ft fence would need to be constructed to connect the existing 9ft tall fence to the Proposed Driveway gate location (see 1/4/12 Photo attached). Please confirm the 10ft fence should be included in this CRT-021. -Should the 24'-10" section of the existing 6ft tall fence (see 1/4/12 Photo attached) be replaced?  Confirm Howard St shown on the CRT#021 attached drawing should read "Folsom St"  Confirm that Bullet #3 under the "Scope of Work" refers to Gate #1 in the CRT#021 attached drawing.		SUGGESTION:		ANSWER:              Accept Suggestion: <input type="checkbox"/> Proposed Driveway, Gate and Fence shown on the CRT#021 drawing:  -Not Confirmed. The location of new gate and curb cut is where the Contractor is currently driving trucks and equipment over city sidewalk and curb north of this light pole. Contractor has misinterpreted the locations of curb cut and gate provided by TJPA. The location of proposed driveway curb cut and new gate is to be north of existing light pole as shown - dimensions were provided only as guidance.  - Confirmed the added fence cost should be included in this CR T-021. Contractor to add small section of fence as required to install new gate (fence added both north and south side of gate). Fence can be nine foot and align with top of existing Parcel P'-P" fence and/or step down to align with existing 6 foot fence. Note: green slats are to be eliminated at both gate and fence in this area to assist Truck Drivers and pedestrian vision.  -Not Confirmed. Section of the existing 6ft tall fence up to AC Transit Fence corner is acceptable as is.  - Confirmed. "Howard St" shown on the CRT#021 attached drawing should read "Folsom St" .  - Confirmed. Bullet #3 under the "Scope of Work"

REQUEST:		SUGGESTION:		NOTE: Void. Answered in RFI T-0272.1			
BBII is requesting the following to complete its D1 casing retrieval plan: 1. Condition specific engineering calculations to mitigate earth and water heave from the bottom of the casing. 2. Condition specific engineering calculations to substantiate no casing buckling. 3. Condition specific plan engineering calculations for dewatering, specifically expected water quantity.  Note - This RFI is high priority and an expedited review/response is necessary.				ARUP Response:  Arup is in receipt of the Contractor's Buttress Shaft D1 Casing Retrieval Plan (Constructware Transmittal item 140-03134). Designing and executing the plan to retrieve the casing is the Contractor's responsibility. The Contractor shall provide calculations for Arup to review which demonstrate that the method does not lead to ground loss beneath and around the casing. Arup will not provide calculations in support of the Contractor's plan.  1. Arup cannot comment without a more complete plan that includes the methodology by which they intend to retrieve the casing. The plan should include, but not be limited to, the current height and composition of the soil plug in the shaft, the planned height and composition of the soil plug during the retrieval process, the depth of maximum dewatering, the method by which the shaft will be backfilled upon retrieval of the casing, and the measures they will take to monitor heave at the plug.  2. Arup will not perform these calculations. The Plan (Constructware Transmittal item 140-03134) states that calculations are being prepared.  3. Refer to response to question 1.

#### Co-Author:

#### REQUEST:

Reference:  
ASHTO/AWSS D1.5M/D1.5:2008  
SH-0200

The Temporary Access Trestle Design submitted in December specified AWS 01.1 as the required welding code. During the review process the reviewers requested that the welding code be changed to AWS 01.5- Bridge Welding Code. This request was complied with by revising general note A5.2 on the conformed trestle drawings.

Since issuing these documents, BBII has been informed by both our shop and field welding inspectors that a compatibility discrepancy exists between the 01.5 welding code and base metals/ member shapes originally specified in the trestle design.

D1.5 is specifically intended for use on bridges and it is not intended for use on "structures composed of structural tubing" as noted in section 1.1.1 attached. This causes a discrepancy because unlike most bridges, our trestle contains a substructure completely comprised of structural steel tubing. (ie Pipe pile, lateral and longitudinal X-bracing).

In addition to the pipe incompatibility, there is also an incompatibility between the specified base metals. 01.5 requires base metals to be ASTM A709 and the trestle design specified a variety of different base metals depending on their structural shape as shown in general note 2.28 also attached. Since Article 1.1.1 of 01.5 permits the Engineer to choose to reference an alternate applicable welding standard when fabrication or structure components are not specifically addressed within its sections, BBII proposes keeping AWS 01.1 as the specified welding code because of its base metal compatibility, but adding a supplemental trestle specific welding specification written by the EOR that increases the quality control to a level equal to that of 01.5. This supplemental specification will include applicable portions of 01.5 section 3 "Workmanship" and section 3 "Inspection" when the requirements are greater than that of 01.1. (ie: fit-up tolerances, NOT frequency, etc).

#### SUGGESTION:

#### ANSWER:

Accept Suggestion: ☐

URS Response to RFI No. T-0279 Trestle Welding Code Compatibility:

A series of typographic errors occur within the RFI, referencing the AWS documents D1.1 and D1.5 as 01.1 or 01.5. References to AWS documents should be correctly identified by the correct AWS document numbers to avoid any future confusion within the project documentation. This RFI should be corrected or annotated to reflect these typographic errors.

No exception has been taken to use tubular steel elements as components within the trestle structures.

Note AWS D1.5 section 1.2.2 Approved Base Metals: This AWS section provides a list of approved base metals, and prefaces this with Unless otherwise specified, and furthermore specifically states Other steels may be approved by the Engineer. We understand other steels have been recommended for approval by the Engineer (EOR = Pirooz Barar of PB&A) as they are included for use in the set of contract drawings for the Access Trestle. With the recommendation by the EOR and concurrence by the Peer Reviewer that the base metals proposed for use are suitable for the intended usage including an assessment of fatigue and potential for cracking of welding for the required service loading and service life, URS takes no exception to the use of the alternate base metals.

Use of AWS D1.5 is a requirement of the procurement specification, not simply a request made by technical reviewers. Reference 01 53 13 Rev 1.

Where materials within the trestle structure are not addressed by AWS D1.5, then use of AWS D1.1 is approved for connection of these elements where D1.5 is not applicable as follows:

Where preapproved joint geometry for welding is required, geometry in accordance with preapproved welding procedures per AWS D1.1 are approved for use;

T-0279.1	BSE - Trestle Welding Code Compatibility	Closed	03/28/2012	04/07/2012	04/09/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Shad Gardner			To: Turner Construction Company Gary Krutsch			Answered By:URS Corporation David Fyfe	
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference: BBII Demarcation Sketch PB&A Trestle Welding Inspection Plan			Use of AWS D1.1 and AWS D1.5 for superstructure and substructure as indicated on bridge cross section figure prepared by BBII and attached to this RFI No. T-0279.1 is acceptable.				
The response to RFI T-279 provided a method of dealing with the trestle welding code compatibility issues that would be difficult to enforce, track and document. BBII proposes making a clear demarcation line at the bottom the cap beam that will clearly differentiate the two welding codes.			Submission of the Trestle Welding Inspection Plan (by PB&A and attached to this RFI No. T-0279.1) for review and acceptance via the RFI process is not an acceptable method, therefore we have no comment on it.				
Additionally the RFI response appears to infer that the Temporary Bridge Specification 01-53-13 requires full compliance with AWS D1.5 as described in the third and last paragraph. 01-53-13 Paragraph 1.6.H (revB) only requires Welding Qualifications (procedures and personnel) to be performed in accordance with AWS D1.5.			For clarity we respond to the welding inspection plan with the following: All requirements, including inspection, of AWS D1.1 apply to AWS D1.1 areas. All requirements, including inspection, of AWS D1.5 apply to AWS D1.5 areas.				
Therefore in order to comply with the project specifications and the appropriate welding codes, BBII will Perform all welding below the demarcation line (substructure) with weld procedures and welder qualifications in conformance with AWS D1.1 since the members are predominately comprised of tubular material.							
Perform all welding above the demarcation line (superstructure) with weld procedures and welder qualifications conformance with AWS D1.5 since the main members are Wide flange beam.							
Inspection will be performed by the project special inspector in accordance with recommendations of the EOR attached.							
Please confirm this is acceptable.

REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
BBIII is unclear on what is required for the "site drawing and certificate" submittal listed in section 01 10 50 1.3B. As the first contractor working on the construction of the terminal, no previous work is in place. Please confirm that the requirement is intended for future trade packages (to verify the work already completed by previous trade subcontractors), or provide additional clarification on what is required of BBII to complete this submittal requirement.			The Contractor with certification of the GC's surveyor is to provide items specified in Division 01 10 50 1.3B for the purpose noted in the specification: to certify "the elevations and locations of the Work are in conformance with Contract Documents".

T-0283	BSE - Backfill Material For Pre-Trench	Closed	03/15/2012	03/25/2012	03/20/2012	Potentially	<input type="checkbox"/>
<b>From:</b> Balfour Beatty Infrastructure, Inc.      Jeff Molloy			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Turner Construction Comp Jack Adams	
<b>Co-Author:</b>							
<b>REQUEST:</b> Reference: Proposed 1 sack sand mix design  BBII is not able to achieve the required compaction per SFDPW requirements due to inclement weather conditions. We have been advised from suppliers that the sand backfill material is saturated, and from past experience will not achieve the required compaction.  If the weather persists as forecasted BBII is proposing to backfill with 1 sack sand as a substitute to dry material. This will allow us to maintain the scheduled CDSM wall installation on 3/23/2012, and maintain the DPW compaction standards. Note sand slurry is only required in the street or public right of way.  Note: According to BBII this will not impact DND/Malcolm in the installation of the CDSM wall.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> BBII has requested use of sack sand slurry mix design FOA100CX. This use of sand/slurry is specified in Section 31 23 10, 2.2, H of the utility relocation spec. See also RFI U-0156.  This use is acceptable per SFDPW requirements due to inclement weather conditions. Also, this use of slurry is important for the upcoming CDSM wall at the pretrench locations. Per correspondence attached from Webcor-Obayashi the CM/GC, they state that their Trade Subcontractor "BBII has considered and coordinated with DND/Malcolm in this regard." (see uploaded document under 'Supporting Documents')  Substituting this slurry versus soils compaction and testing is acceptable. However this sand slurry use is a Contractor scheduling decision and will be at no additional cost to the TJPA from WOJV, BBII, and/or Malcolm-DND.

Co-Author:

REQUEST:

As a supplement to RFI 283 regarding the use of a CDF mix for backfill of the pre-trench at A-line across First Street, BBII is submitting the attached mix design for review and acceptance. The previously submitted mix design was not pumpable and due to the nature of the pile extraction and backfill operation a pumpable mix is required so backfill compaction can be achieved. The attached mix will allow us to achieve the DPW compaction requirements and also allow for the installation of the CDSM wall.

The use of this mix design is scheduled for this afternoon in order to maintain the CDSM installation schedule for this weekend. BBII would much appreciate an expedited review and acceptance of this mix design.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

CDF mix for backfill of the CDSM pre-trench locations is acceptable. CM/GC Webcor-Obayashi to confirm with their Trade Subcontractor such that "BBII has considered and coordinated with DND/Malcolm in this regard.

Substituting this mix versus soils compaction and testing is acceptable for the upcoming CDSM walls at the pretrench locations First and Fremont Streets.

However, again this use is a Contractor scheduling decision and will be at no additional cost to the TJPA from WOJV, BBII, and/or Malcolm-DND

T-0284 BSE - Request to Borehole Coordinates TTB-07 TTB-09

Closed

03/21/2012 03/31/2012 03/23/2012 Potentially ☐

T-0285	BSE - Buttress Rebar Cage Length Adjustment	Closed	03/21/2012	03/31/2012	03/26/2012	Potentially	<input type="checkbox"/>
<b>From:</b> Balfour Beatty Infrastructure, Inc.      Ural Yal			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b>							
<b>REQUEST:</b>		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>			
Please refer to RFI T-0252, where the Engineer accepted BBII's proposal of fabricating the buttress rebar cages to a pre-extended length of 260' in order to accommodate the buttress shafts that are deeper than 241'. In RFI T-0252, BBII had suggested to extend the overall length of all rebar cage assemblies to 260' by increasing the length of the top "setting cage" 19 feet more. In this proposal, the lengths of structural cage segments were to remain unchanged.				Detail 12/GT-5201 requires the reinforcing steel to be placed up to 1'-0" below the top of the concrete. The top of concrete is shown on GT-5201. Longitudinal bar extensions shall be spliced as needed to achieve this, or the cage shall be fabricated long to achieve this. However, if the top of the fabricated cage is within 9'-0" of the top of the concrete, no bar extensions nor extended cages are required.			
BBII's proposal of extending the length of the setting cage by 19' got accepted with the added requirement of splicing vertical rebar extensions on the job site. BBII takes exception to the added requirement of splicing vertical rebar extensions on the job site, which would lead to an increase in durations of the rebar cage installations.							
In order to eliminate splicing, BBII now proposes to fabricate the setting cage segments up to 9 feet longer than shown on the plans. The structural rebar cage segment lengths will remain unchanged. The top of the structural cage sections will be within up to 9 feet proximity from the top of concrete. This proposal will accommodate the rebar cages with a maximum total length of 250' (241 '+9'=250').							
If the rebar cage assembly needs to be longer than 250 feet, BBII will direct the rebar cage manufacturer to also extend the bottom structural cage segment by an added distance equal to the required total length of the rebar cage assembly less 250 feet.

Reference: Marked-Up SH-3101 Marked-Up SH-3102 Utility Weight Calculations PG&E Weights Email				Reply to RFI 286.0 Use of actual utility loads versus 3000lb per lf in Specifications			
				RFI T-0286.0 regarding the use of actual weight of			

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	Verizon Weights Email						
	Temporary Bridge specification 01-53-13 (1.3B) requires the bridge design to include a 3000 lb/lf allowance for hanging utilities below the bridge. Extensive coordination between the RUP designers and the utility owners, BBI has attained the exact location and actual weight of the utilities to be supported by the bridge structures. These weights are shown in the attached document and have been used in the design of the bridge structure as well as the utility hangers. Through our coordination efforts we also know that future utilities will not be added until the temporary bridges are removed. Please confirm that use of the actual utility weights in our design is acceptable.						
					utilities versus the nominal 3000 lb/lf required in Specification Section 01-53-13 Part 1.3.B (Temporary Bridges - Performance Requirements) first requires the correct actual weight of the utilities and the application to each of the streets, First, Fremont, and Beale respectively..		
					First Street Utility Unit Weights		
					The BBI/PBA temporary bridge design for First Street shows the following utilities suspended from the bridge:		
					Girder #3 & Girder #4 (Counting from left to right facing north)		
					PG&E (6) each 6" diameter steel ducts (17.7 lb/lf) + cable (8.2 lb/lf) @ 25.9lb/lf = 155.4 lb/lf under 2 girders #3 & #4 (counting left to right)		
					Girder #5 & Girder #6 (Counting from left to right facing north)		
					PG&E (9) each 6" diameter steel ducts @ 25.9lb/lf = 233.1 lb/lf under 2 girders #5 & #6)		
					PG&E (1) each 4" diameter steel duct @ 25.9lb/lf = 25.9 lb/lf under 2 girders #5 & #6)		
					Verizon (6) each 4" diameter steel duct @ 11.59lb/lf = 69.54 lb/lf under 2 girders #5 & #6		
					Subtotal utility load used by BBI/PBA for girders #3 & #4 = 155.4 lb/lf		
					Subtotal utility load used by BBI/PBA for girders #5 & #6 = 328.54 lb/lf		
					Total utility load used by BBI/PBA for all girders #3~#6 = 483.94 lb/lf		
					There are several slight errors in this BBI/PBA calculation:		
					Verizon has incorrectly used the weight of 4" diameter PVC duct rather than steel duct used in the temporary bridge crossing (4" diameter steel @ 10.3lb/lf duct + 3lb/lf fiber cable x 6 each lines = 6ea x 13.3 lb/lf = 79.8 lb/lf versus 69.54 lb/lf)

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference: TG0300-210.1 TG0300-205.2 City Planning/KCA Emails							
In order to comply with city standards BBII intended to install a standard city drain inlet on the north west corner of the Minna and First street intersection as required by our site civil drainage plan (submittal TG0300-205.2, TZ1030-01513A08.2 see also submittal TZ1030-015313A04.1 package TG0300-210.1 for product data). When potholing where this drain inlet is to be located, it was discovered that it would be in conflict with an existing gas line. BBII's design engineer KCA contacted the city planning department and got pre approval of the attached catch basin per the attached email and details. Please confirm that it is acceptable for us to install this catch basin in lieu of what was submitted in the aforementioned submittals.				Submission of the storm water inlet detail (attached to this RFI No. T-0287) for review and acceptance via the RFI process is not an acceptable method, therefore we have no comment on it.			
				In an effort to help expedite resolution of this conflict the following questions/requests are provided below:			
				What is the location (depth of cover and horizontal offsets to existing and proposed features) of the existing gas line (and electrical conduits/conductors) relative to the proposed storm water inlet? The proposed storm water inlet appears to extend approximately 41" deep from top of rim/grade. From review of RUP sheets U-3409 and U-3410/Section T, it appears that there could be as little as 36" of cover over top of the existing PG&E gas line. If PG&E gas line is located within limits of proposed storm water inlet (plan view), there does not appear to be sufficient vertical clearance to install the proposed storm water inlet? Specify engineered base material that is to be placed beneath proposed storm water inlet. Provide a detailed sketch (plan and section) with submittal illustrating location of proposed storm water inlet and adjacent existing/proposed features. Has PG&E reviewed and approved the proposed storm water inlet location? Provide confirmation that the proposed storm water inlet is in compliance with PG&E separation requirements

T-0290	BSE - Stabilization of Unimproved Soil Conditions Along the Interior Face of the C	Closed	04/11/2012	04/21/2012	04/18/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Ural Yal			To: Turner Construction Company Gary Krutsch			Answered By:Webcor Construction LP David Fields	
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference: 31 56 13 3.7 C BBII Photo of CDSM Wall J-Line			The quality of the CDSM wall is dependent upon the Contractors' chosen means and methods. If the Contractor has concerns regarding the integrity of the wall, the Contractor shall provide a remedial plan to the TJPA for consideration.				
BBII is requesting direction for a method to stabilize the unimproved soil conditions along the interior face of the CDSM wall.			Conformance with the criteria within a sample does not relieve the Contractor of their responsibility that the entire wall meet the specifications.				
The current condition of the CDSM wall includes unimproved soil conditions that have the potential to become detached from the wall and create large voids at the face of the wall. Please reference attached photo for visual details.							
Based on our records, the CDSM wall met all the specification requirements for uniformity and improved soil as per section 31 56 13 of the contract specifications. Please note: Section 31 56 13 3.7 C's requirements (10% and 6") are satisfied by during the TJPA's Representative inspection of double-tube samples at the time of installation.							
<hr/>							
T-0290.1	BSE - Relevance of Unimproved Soil Pockets in CDSM Wall as it Relates to Waterp	Closed	05/28/2012	06/07/2012	06/05/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kirk Nielsen			To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Neither section 31 00 003.8.L or 07 12 10.3.2.C anticipated +1" cavities in the surface of the CDSM wall. However there are +6" cavities in the surface of the CDSM wall the result of unimproved soil pockets although BBII would contend the CDSM wall was installed in accordance with section 31 56 13.3.7.C. On 5/25/12 W/O spoke with Jonathan Lawrence President of Laurenc Systems (888) 321-3338 specified per section 07 12 10.2.1. Sections 31 00 00.3.8.L and 07 12 10.3.2.C speak of "buckling" due to cavities of the face of the CDSM wall. Mr. Lawrence was not concerned over the cavities in the face of this project's CDSM wall for two reasons:			Per specification section 31 00 00 / 3.8 L: "On vertical surfaces of CDSM shoring walls, scarify high areas and fill in cavities exceeding 1" deep with patching cement to provide a reasonably uniform surface over which protection board, installed in a later contract, will span without buckling." Repair wall as required in the contract documents.				
1. Subsequent to his review of the bid documents the substrate for the waterproofing is the INS-1, depicted on 4/A1-8710, rather than the CDSM wall.

Per conversation in previous coordination meeting between Balfour Beatty Webcor, Turner, TJPA and 301 Mission's management. We are confirming direction to extend the sidewalk past the limits shown in our grading and drainage submittal through the limits of the 301 Mission drive way. It is also our understanding that we are directed to match the color of the existing black sidewalk in this area. Please confirm.				The work BBII has proceeded with at the 301 Mission driveway is in general conformance with the 6/8/12 TCCO, W/O, BBII, Millennium Mgmt. meeting. The direction however is from, to include however limited to, base contract specification section: 00 08 13.1.8.E, 0115 40.1.4, and or General Excavation Permit #12E-0181. The TJPA is not anticipating added cost the result of this issue.

T-0296	BSE - Clarification of Soil Segregation and Disposal per spec. section 01 13 50/SM	Closed	06/27/2012	07/07/2012	06/29/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Kirk Nielsen      To: Turner Construction Company Gary Kruttsch			Answered By: Transbay PMPC      Roger Rothenburger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
On 6/26/12 BBII clarified their desired method / location of disposing of the Zone-3 concrete rubble was to deliver it to Brisbane.					Accept Suggestion: <input type="checkbox"/>		
Section 01 13 50 / 5.2.1 of the SMP states:					Roger Rothenburger 6/28/2012 Section 01-13-50 Part 1.1.C (Hazardous Materials Procedures - Summary) references "Site Mitigation Plan, Transbay Transit Center, Treadwell & Rollo, March 24, 2010" report and states,		
"TJPA shall be provided documentation from the excavation contractor that the accepting landfill for the soil from Transbay Terminal project has been provided with and has reviewed all analytical data collected from the Site."					"Contractor's work shall include the management of existing soils in a manner consistent with the requirements of the Contract Document including the following reports, "Site Mitigation Plan, Transbay Transit Center, Treadwell & Rollo, March 24, 2010", appended to this Sectin as 01 13 50/APA, and Section 00 03 35 ..."		
Brisbane has refused to provide the aforementioned documentation.					Section 5.2.1 ( Soil Segregation and Disposal) of the Treadwell & Rollo Site Mitigation Plan, 01-13-50/APA states, "Before any excavation activities begin at the Site, TJPA shall be provided documentation from the excavation contractor that the accepting landfill facility for the soil from Transbay Terminal project has been provided with and has reviewedall analytical data collected from the Site. TJPA shall approve all off-site disposal facilities and soil transportation contractors, including, without limitation, available insurable coverge, and prior to the shipment of any soil or other waste materials (emphasis added)."		
In order to facilitate BBII's desired method / location of disposing of the Zone-3 concrete rubble W/O requests that the TJPA clarify, exclusively for the subject Zone-3 rubble, that the documentation required by the TJPA consists only of standard shipping tags and invoices.					TJPA in the interest of facilitating disposal of material to Brisbane and other disposal sites removes from Site Mitigation Plan Section 5.2.1 by Treadwell & Rollo, the highlighted words, "with and has reviewed" .		
					The only requirement is that some documentation from BBI (the "excavation contractor" that the "analytical data collected from the Site" has been provided to the disposal site.

T-0299	Micropile Performance Testing	Closed	07/16/2012	07/26/2012	07/30/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Ural Yal		To: Turner Construction Company Gary Krutsch		Answered By:Arup		Kevin Clinch	
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference Part 3.2 "Performance And Proof Testing" of Specification Section 31 63 33				Specification section 31 63 33 3.2 A states: The contractor shall conduct performance tests and proof tests consisting of tension load testing on micropiles. The tests are to be done on piles installed from the bottom of the excavation.			
In order to expedite the Micropile Performance Testing review period, BBII is requesting to conduct the performance testing of micropiles prior to excavating Level 5, at approximately -32' Elevation, concurrent with the installation of Level "0" struts. See attached sketch for details.Please confirm that it is acceptable.				The Contractor's proposal is not acceptable as the testing methodology and the acceptance criteria in the Project Specifications have been developed assuming the piles used for the performance tests will be installed and tested in conditions matching those of the production piles. The performance of the piles installed and tested as proposed will differ due to the higher effective stresses in the soil.			
<hr/>							
T-0300	Micropile Performance Test Pile Relocations	Closed	07/17/2012	07/27/2012	07/26/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Yuriy Stryzheus		To: Turner Construction Company Gary Krutsch		Answered By:Arup		Kevin Clinch	
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Please refer to BBII's micropile layout submittal and RFI T-262 that references IFB- Below Grade package for coordination of micropile layouts.				Arup takes no exception to the proposed locations			
Based on the information provided within BBII's Micropile layout drawing and Below Grade package drawings S1-2023 through S1-2027, the four micropiles subjected to performance testing are labeled as: W411, W396, E383, and E401.							
BBII requests to conduct the performance test in Zone 1 at pile No. W604 instead of pile No. W411, which is located underneath Struts No. 6 & 7.							
Similarly, BBII requests to test the piles numbered as W473, E477, & E599, instead of the piles numbered as W396, E383, & E401, which are located underneath the trestle.							
Please confirm that it is acceptable.

T-0301	Trestle Piles in Exclusion Zones (Zone 4)	Closed	07/23/2012	08/02/2012	07/30/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP                      Robert Kjome                      To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Review comments on submittal package TG0300-284 directed BBII to shift two trestle piles (#69 & #72) out of pile exclusion zones (provided by Thornton Tomasetti in response to RFI T-0251.1). BBII worked to avoid these zones to the extent possible. However, in zone 4 the additional buttress shafts created further limitations on trestle pile locations and it was infeasible to completely avoid both the permanent structure and buttress. BBII is aware of the possibility of eliminating some of these additional buttress shafts but this will not resolve these specific conflicts. Due to the congestion in Zone 4 with both the pile exclusion zones and added buttress shafts, BBII requests an exception for trestle piles #69 and #72.					Accept Suggestion: <input type="checkbox"/>		
			Requested exceptions will be granted for locations of trestle piles #69 and #72 in submittal TG0300-284. Prior to proceeding the GC is to confirm this has no cost impact to the TJPA or impact on other trades.

T-0302	ISI Low Compression Strength for CLSM	Closed	07/31/2012	08/10/2012	08/10/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Ural Yal			To: Turner Construction Company Gary Krutsch				
Co-Author:			Answered By: Turner Construction Company Jack Adams				
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Please confirm the low compression strengths for the CLSM, in the ISI test results (attached), are acceptable. The CLSM was used for pre-trench backfill on Gridline A, First St. and Fremont St.			There is no compressive strength requirement for the pre-trench backfill Slurry(CLSM) chosen by the Trade Subcontractor in lieu of compaction of soils. This was confirmed with ARUP and per RFI 283/RFI 283.1.				
Please see attached ISI Test reports: 55606 Compression Test Report on A line between 18-19 lines, sampled 3/29/2012 55607 Compression Test Report on A line between 19-20 lines, sampled 3/30/2012 55608 Compressive Test Report on A line between 19-20 lines, sampled 4/4/2012 51399 Compression Test Report on A line between 19-20 lines, sampled 3/28/2012 56162 Compressive Test Report on A line between 25.2 - 25.5 lines, sampled 4/2/2012			1. TJPA Spec. 31-00-00 Earthwork requires pre-trenching to be backfilled and compaction with satisfactory materials, i.e., sand / soil.  2. These Slurry(CLSM) materials were allowed for backfill as a weak CLSM per RFI 283.  3. There is no project design/specification of ultimate compressive strength for these pre-trench backfill Slurry(CLSM).  4. The purpose of sampling the CLSM mix is to document the Slurry(CLSM) strength data only  A review of the ultimate strengths (attached and below) are consistent with the strength of compacted soils used for temporary backfill areas prior to completing the CDSM wall processes. T-0303	BSE - Verizon Duct Bank at the First St Bridge	Closed	08/07/2012	08/17/2012	08/08/2012	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Kirk Nielsen <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Turner Construction Company Stacy Wilson				
<b>Co-Author:</b>							
<b>REQUEST:</b> Reference: Attached Photo  Despite providing Verizon surveying, staking, and cutsheets, the Verizon duct bank at the North side of the First St. bridge was installed by others at the incorrect elevation (too low). Please confirm if additional utility supports will be required of TG03 or if others will be performing the additional utility supports required for the Verizon duct bank.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 8/8/2012 Per Steve Cunningham, TCCO -  Review attached drawing provided by BBLi:  1. PB&A; First, Fremont, and Beale Street Temporary Bridges, Detail 1/SK 3105. Horizontal layout is provided, but not vertical layout for the PGE duct banks.  2. BBLi letter number 4225-000-0316, dated 1/9/12, provided bottom elevation for Verizon duct bank at 12.57' and 13.40'.  Please provide as built elevations of all duct banks. Confirm PGE Phase 2 duct banks were installed with higher elevation at center of bridge.				
T-0304	BSE - Inquiries with Regard to Proposed Beale St Bridge Atop East CDSM Wall	Closed	08/23/2012	09/02/2012	08/27/2012	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Kirk Nielsen <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> On 8/22/12 Beale St. bridge submittal #TG0300-206 was returned to W/O marked not reviewed (Exhibit-A). Upon W/O's review of BBLi's Beale St. bridge design W/O encountered the following inquiries relative to the CDSM wall:  1. BBLi's bridge design relies on ARUP's RFI response #T-0209.3 (Exhibit-B). Please confirm ARUP's RFI response #T-0209.3 (Exhibit-C) is applicable as the basis of the design for the Beale St. bridge, given unlike First and Fremont Streets, the length of the Beale St. bridge is resting atop the East CDSM wall.  2. The decision to allow the North and South bridge abutments to be located atop the CDSM wall was predicated on the CR #T-025 load testing reference RFI #T-0209.4 (Exhibit-D). Given the testing was performed on different			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1. Arup's response to RFI T-0209.3 may be used as one part of the Contractor's basis of design. Arup will review the design for conformance with these recommendations. Note that our review is only for conformance with the geotechnical recommendations; review for constructability, pedestrian impact, OCS pole locations, impact (or lack of) on extension of the trainbox, etc. are by others.  2. Our design recommendations were not informed solely by the load testing results.  3. Arup does not endorse any design decisions made by the Contractor. We will review the design for conformance with our recommendations

	<p>soldier piles (by others) and differing soil conditions between Zone-1 and Zone-4, is the load capacity derived from the CR #T- 025 testing applicable given the different bridge location and configuration?</p> <p>3. BBII's Beale St. bridge design relies on resting the length of the Beale St. bridge atop the East CDSM wall. As the designer of the CDSM wall, does ARUP endorse further loading of the East CDSM wall with the forces imposed by the Beale St. bridge?</p>						
<b>T-0304.1</b>	<b>BSE - Inquiries with Regard to Proposed Beale St Bridge Follow-Up</b>	<b>Closed</b>	<b>08/29/2012</b>	<b>09/08/2012</b>	<b>08/31/2012</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Kirk Nielsen <b>To:</b> Turner Construction Company Gary Krutsch		<b>Answered By:</b> Adamson Associates, Inc. George Metzger					
<b>Co-Author:</b>							
<b>REQUEST:</b>		<b>SUGGESTION:</b>	<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>				
In follow-up to RFI T-0304:			Arup's recommendations in RFI T-0209.3 may be applied to the east CDSM shoring wall.				
- From the response to question #2 of RFI T-0304 it is understood that ARUP's design recommendations were not informed solely by the load testing results. However the original question remains, is the load capacity derived from the CR #T-025 testing applicable given the different bridge location and configuration?			The CDSM wall was not designed to support vertical loads, but we have estimated its vertical load carrying capacity and outlined this in our response to RFI T-0209.3. If the bridge bears on the wall, we recommend that the Contractor monitor the wall for movements.				
- So the contractor can understand the parameters of what we are submitting, was the Shoring Wall Designed to withstand the loads imposed by the proposed Beale St. bridge?

T-0305	BSE - Inquiries Regarding Proposed Beale St Bridge Relative to Below Grade Structure	Closed	08/23/2012	09/02/2012	08/27/2012	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      David Fields <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> Reference: TG0300-206 Beale St. Bridge Structural Design  On 8/22/12 Beale St. Bridge submittal TG0300-206 was returned to W/O marked not reviewed. In lieu of piers the proposed bridge relies on the eastern shoring wall for structural support along the bridge. As a result, the design utilizes the additional capacity of the internal bracing to restrain lateral loads imposed by the bridge.  Upon W/O's review of BBII's Beale St. bridge design W/O encountered the following inquiries relative to below grade structure:  -Do the below grade foundation walls as designed have the additional capacity required to support the lateral loads imposed by the proposed Beale St. bridge?  -Will the below grade foundation walls be required to achieve additional strength prior to removal of re-bracing as a result of the additional laterals loads in which they are subjected by the proposed Beale Street bridge?			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The Contractor shall demonstrate, through calculations and drawings, that the seismic load from the bridge has a complete load path from bridge to ground.		
T-0306	BSE - Pedestrian Connection Across the Construction Excavation at Beale St	Closed	08/23/2012	09/02/2012	08/29/2012	Potentially	<input type="checkbox"/>

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
At the 8/27/12 TJPA Traffic Coordination meeting Balfour Beatty presented a construction plan for the proposed Beale St. bridge. In violation of Specification Section 01 15 70-2 the construction plan included reducing Beale St. down to two available traffic lanes for an approximately six week duration. Please confirm if this is acceptable.					Accept Suggestion: <input type="checkbox"/>		
					Contractor can temporarily reduce traffic lanes (including up to a full street closure) if they comply with Spec and SFMTA Blue Book requirements. Per Spec 01-15-70 TRAFFIC ROUTING WORK the Contractor would have to:		
					1. Submit a traffic control and detour plan.		
					2. Submit a STP Request - Special Traffic permit Request.		
					SPEC Section 01 15 70 TRAFFIC ROUTING WORK		
					Paragraph 3.5 SPECIAL TRAFFIC PERMIT		
					A. Contractor shall apply for a Special Traffic Permit from the SFMTA, if any deviation from the traffic lane requirements (time, width, etc.), as shown in these Specifications, is required. If SFMTA approves the issue of the Special Traffic Permit, the Contractor shall pay the required fee to SFMTA, as specified in the Blue Book, and obtain the necessary permit.		
					The STP request would need to be reviewed and may be approved by TJPA Reps and SFMTA/MUNI.

T-0311	Subgrade French Drains Along CDSM Wall	Closed	08/31/2012	09/10/2012	09/07/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Ural Yal			To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Spec. Reference: 31 00 00				Installation of these drains is acceptable with regards to geotechnical engineering as long as it does not incur any additional costs to the owner.			
In order to control surface water at final subgrade, Balfour Beatty would like the option of installing (a) trench drain(s) per the attached drawing as necessary around the perimeter of the excavation just prior to or once final subgrade is established. These trench drains will be filled with ¾" drain rock in accordance with specification section 31 00 00-3.16.A. These trench drains will be left in place during micro-pile installation and remain below the mud slab. Water will be pumped out of these trench drains using sump pumps and/or routed to dewatering wells in accordance with specification section 31 23 19. Please confirm that this is acceptable.				Installation of these drains is not an appropriate mitigation for CDSM walls which are not watertight as specified in Section 31 56 13 Chapter 3.12 ACCEPTANCE CRITERIA, Item F. "Watertight" is defined in this same specification section as "no continuous running or seeping water from the shoring wall."			
				We have not reviewed this with regards to conflicts with non-geotechnical subgrade features.			
<hr/>							
T-0311.1	Modified French Drains Zones 3 and 4	Closed	03/04/2014	03/14/2014		Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche			To: Turner Construction Company PHIL MILITELLO			Answered By:	
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Due to the varying dimensions between the edge of mud slab and the face of the CDSM wall, WOJV requests that the currently specified width (24 inches) of the French drain be maintained as a minimum at all locations for Zones 3 and 4. As a result, the width of the drain may be up to 30 inches at the widest locations.							
Please confirm this is acceptable.

From: Webcor Construction LP                      Kirk Nielsen                      To: Turner Construction Company Gary Krutsch			Answered By:Turner Construction Comp, Stacy Wilson					
Co-Author:								
REQUEST:			SUGGESTION:		ANSWER:			Accept Suggestion: <input type="checkbox"/>
BBII's sheet 1/SH-2105 (BBII submittal TZ1030-015313A31.1) calls for the 48" diameter CIDH column to be located 21'-6" off 35-line along E-line. As per sheet A1-2817 (TG06) the proposed location would obstruct, requiring redesign of the reinforcement, the construction of the structural wall separating the (2) deep pits depicted on 1/S1-3007 (TG06) in room B2761. The location of the pits and the wall separating the (2) pits were always depicted on S1-2027 (TG03). May the aforementioned CIDH column be located as proposed?					RFI will not be responded to per submittal response TG0300-206 Temp Bridges- Beale Street Structural Drawings and Calculations.			
T-0313	Micropile Layout	Closed	09/13/2012	09/23/2012	09/20/2012	Potentially	<input type="checkbox"/>	
From: Webcor Construction LP                      Robert Kjome                      To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger					
Co-Author:								
REQUEST:			SUGGESTION:		ANSWER:			Accept Suggestion: <input type="checkbox"/>
Reference Documents Specification Section: 31 63 33 Drawings: ASI #0097  Per 9/12/12 Turner BSE Progress Meeting, Adamsons Associates(AA) requested BBII to submit a RFI requesting distance tolerances for the proposed micropile layout relocations. Please see BBII's verbage below in response.  The response comments provided to submittal TA1020-316333A12.2 (TG0300-622.2) for micropile stated that the submitted micropile layout was unacceptable, but that the micropile locations shown in the TG0600 (ASI 0097) documents are acceptable. The attached marked up coordination drawings show the locations of the TG0600 documents micropile locations compared to various overhead horizontal and vertical obstructions. The obstructions considered in this comparison include trestle pile and bracing; internal bracing struts, supports, and pin piles; bridge piles; and the buttress walls. The submitted micropile locations are also shown.  The equipment that will be used to install the micropiles require 2.5 feet clearance from the center of the micropile hole to surrounding obstructions. The circles and arrows on the attached drawing indicate which micropiles do not					It is acceptable to use the first contractor-proposed approach (number 1), that of using the TG0600 documents for micropile layout and shifting the micropiles up to 4 feet, however such shifts will be subject to design verification and SEOR approval following our receipt of final proposed locations. Note that the shifting of micropiles shall adhere to submittal notes 2 and 3 on sheet ML-1 of Submittal TG0300-622.2 (TA1020-316333A12.2). Micropiles shall not be installed in the buttress shafts.  The alternative contractor-proposed approach (number 2), that of using the submittal (TG0300-622.2) layout and applying submittal notes 2 & 3 is not acceptable as the approach does not consider submittal note 1 (which addresses the density of micropile layout).

From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Kruttsch			Answered By: Turner Construction Company Jack Adams				
Co-Author:							
REQUEST:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Specification Reference: 02 41 01 Drawing Reference: D-2210			No. The excavation limits for BSE contractor 80 Natoma/Buttress prototype and CDSM prototype are to be demolished to a depth of -44'.5 in their entirety.				
Demolition of the prototype shafts and the 80 Natoma CDSM wall are required in order to allow clearance for the geothermal piping. BBII proposes to only demolish portions of these structures which would interfere with the geothermal piping. The prototype buttress shafts would be demolished to elevation -41.42 with depressions cut out where the piping crosses. The 80 Natoma CDSM wall would be demolished to allow the piping to be installed. The CDSM piles would be otherwise cut off 4" below mud slab subgrade. See attached sketches.			The demolition limits for BSE contractor are to be per contract. REF: BSE Drawing D-2210 and RFI 317.3 response.				
Please confirm this is acceptable.			CSM Prototype shoring wall -44'.5 +/- See D-2210 Note 10 for the entire length CDSM 80 Natoma shoring wall -44'.5 +/- See D-2210 Note 11 for the entire length 80 Natoma Piles -44'.5 +/- See D-2210 Note 11 for the entire length Buttress prototype shafts -44'.5 +/- See D-2210 Note 9: This is CHANGED from -41.5' (CR forthcoming) and is now to be demolished to a depth of -44'.5 for the entire length per this RFI series.				
			Additional Costs associated with ASI No. 0099 Field Order 08-04-CMGC-000-T-00014 which updated pit depths and locations impacting the Mat Slab (Transmitted to WOJV on 12/12/12) are a separate issue than this RFI.

Please confirm that demolition and excavation in areas of buttress shafts in Zone 4 shall be at the final subgrade elevation of 41' - 5". The Geothermal Subcontractor shall provide demolition and excavation for their geothermal piping in accordance with specification section 31 23 34.					ARUP Response:		
					Confirmed that Zone 4 Buttress removal area final subgrade elevation of 41' - 5" per BSE Contract drawing GT-2103.		
					Which Subcontractor provides "demolition and excavation for geothermal piping" is a CM/GC coordination issue.		
					NOTE:		
					1. Subgrade elevation of pits is per BSE Contract drawing GT-2103 as modified by FO T-00010 R2.		
					2. Demolition and excavation depths for geothermal piping is not found in specification section 31 23 34. BGP Contract drawing 4/M1-5002 and notes on BGP Contract drawing M-0006 provide detail on geothermal piping depths.		
T-0318	Verification of Sump Pit and Elevator Pit Locations and Dimensions	Closed	09/24/2012	10/04/2012	09/25/2012	Potentially	<input type="checkbox"/>

REQUEST:			SUGGESTION:		ANSWER:		
Reference Specification 31 00 00					Accept Suggestion: <input type="checkbox"/>		
The Below Grade Package drawings identify the depression required in the sub grade for future construction of elevator pits and sump pits. The below grade package drawings do not correspond with the Buttress, Shoring and Excavation (BSE) contract drawings for the location depth and size of the elevator and sump pits.					The intent of releasing TGO600 drawings to the CM/GC was solely for coordination purposes between the Below Grade and Buttress/Shoring/Excavation trade packages.		
Please confirm the TG06 drawings supersede the TG03 drawings and should be used for construction.					Please proceed accordingly

Pursuant to discussions with ARUP at the Turner weekly meeting held on September 12, 2012, BBII is requesting the following information regarding the additional excavation and bracing requirements along the A line adjacent to the western and eastern edges of 301 Mission:			Due to file size please find the response attached.				
-Limits of the work							
-Sequence of demolition, excavation and bracing (waler and struts). ie .. do we excavate for installation of one strut or waler at a time or can we expose more than one strut or waler location concurrently.							
-Wall support details, for example there were discussions as to maintaining a soil berm between different stages of the work. Please provide the width, height and length of berm or other support needed.							
-Length of exposed wall area and duration of exposure

T-0321.1	Additional Excavation and Bracing Constraints at A Line and 301 Mission	Closed	10/10/2012	10/20/2012	10/19/2012	Potentially	<input type="checkbox"/>
<b>From:</b> Balfour Beatty Infrastructure, Inc.      Dean Wallahan <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>		
BBII would like to confirm the following direction received at TCCO's weekly meeting on October 10, 2012 in regards to the limits of the berm and sequence of work referenced in the response to RFI T-0321.					The sequencing of activities proposed by the Contractor adequately addresses our concerns regarding the Contractor's means and methods which in the other portions of Zone 3 have caused over 1.5 inches of lateral movement into the excavation at locations where excavation has not even progressed past the first level.		
The following work will take place between CDSM beams 251 and 276 along the A-Line and the southern edge of Zone 3's trestle.					Additionally, as discussed in the Movement Review Panel Meeting the morning of October 17, 2012, Arup asked the Contractor to consider excavation under the Fremont Street bridge to progress from south to north. The Contractor agreed that this would be beneficial and possible.		
Demolition: Upon completion of the demolition and removal of the basement walls and footings BBII is to place an earth berm to elevation +10.00, extending 25 feet from the face of the CDSM wall into the excavation and having a 3:1 slope at the southern hinge point of the berm.							
Bracing: Walers 24 and 48 as well as Struts 49 and 50 will be installed within a 6 working day window to address ARUP's concern of overexposure from the Millennium's Building's foundation pressure on the CDSM wall. During the installation of these walers and struts the berm as described in the demolition section above will remain between CDSM beams 260 and 271 until completion of the bracing of walers 24 and 48 and struts 49-50. The sequence will be repeated for installation of walers 25 and 49 as well as struts 51 and 52 with the exception of the earth berm easterly limit will be CDSM beam 276 (centerline of buttress A line pile).							
<hr/>							
T-0321.1R	Additional Excavation and Bracing Constraints at A Line and 301 Mission REVISIO	Closed	10/26/2012	11/05/2012	10/26/2012	Potentially	<input type="checkbox"/>

<b>From:</b> Webcor Construction LP      David Fields <b>To:</b> Turner Construction Company Gary Krutcs			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> In follow up to RFI T-0322:  Upon dewatering system removal BSE Specification 31 23 19 3.9 requires that abandoned piping be filled with grout to an elevation of 36" below subgrade elevation consistent with the originally specified cut and cap elevation. Below Grade Drawing A-8711 does not specify a grout requirement for the dewatering pipes.  Is it acceptable to have a void space in the abandoned dewatering pipes between the grout terminating 36" below subgrade elevation to the Bentonite at 14" below top of mat slab consistent with the current contract documents?			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> No, a void space is not acceptable. The abandoned dewatering pipes are to be grout filled per specification 31 23 19. Follow detail 6/A1-8711 for dewatering pipe steel sleeve, waterproofing and mat slab block out. When the dewatering system is removed, the dewatering pipes are cut off, fully grouted to bottom of the block out and bentonite installed for the last 4" to the top of the sleeve. The a steel cap assembly is welded to the top of the sleeve and the mat slab block out grouted.

T-0327	GRD - Ground Rod Placement	Closed	10/16/2012	10/26/2012	10/31/2012	Potentially	<input type="checkbox"/>
<b>From:</b> BASS Electric Jerry Brys <b>Co-Author:</b>		<b>To:</b> Turner Construction Company Gary Krutsch		<b>Answered By:</b> Adamson Associates, Inc. George Metzger			
<b>REQUEST:</b> There are no dimensions shown for placement of the ground rods. Should we scale off the drawings or will a drawing be produced reflecting dimensions?		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The placement of the ground rods and the ground ring does not require exact dimensioning. The ground rods are regularly spaced around the building perimeter at the building column lines approximately forty five feet on center. The rods are shown approximately two feet inside the foundation wall, but they can be closer to the foundation wall if the layout is coordinated with the geothermal system piping, micropiles and foundation wall supports.			
Per Section 26 05 01, provide Contractor's Coordination drawings for review.

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:            Accept Suggestion: <input type="checkbox"/>			
<p>Drawing GT-1112 stage 13 shows a maximum of 16' or 17' between level B struts and the lower level of rebracing. For Case West, level B supports are at elevation -3 ', resulting in the lower level of rebracing supports at elevation -20'. Internal bracing drawing sheet SH-4000 shows W21 strut support members on the underside of level C bracing. In order to install the lower level rebracing and accommodate the existing level C bracing, the lower level bracing will need to be installed at elevation -22'.</p> <p>Similarly, the top level of rebracing is called out in stage 15 to be 3' below level A bracing. Top level rebracing will need to be 5' below level A bracing in order for struts to be clear of the overhead strut supports.</p> <p>Please confirm that the 17' and 16' maximum dimensions in stage 13 and 3' maximum dimension in stage 15 will not be required if the rebracing design calculations show that it is acceptable.</p>				<p>Constructructability issues shall be reviewed by Webcor / Obayashi. This is acceptable pending review of submittal.</p>

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference: 23 57 34					Accept Suggestion: <input type="checkbox"/>		
Please confirm that there is no restriction on GHEX Horizontal Loop or Ground Loop Zone length.					There is no maximum length for the headers. Most headers should be roughly the same length, the headers are set up in reverse return fashion to allow for self-balancing of the loops. All headers will ultimately be balanced at the entrance to building allowing for some variation in header length to accommodate building entrance locations.		
					All loops on a single header should be the same length. The number of loops attached to a single header has been limited to 10.

<b>Co-Author:</b>							
<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>		
RFI T-0333 inquired if utilizing the mat slab for re-bracing reactions was acceptable provided it meets the provisions set forth within 31 55 00 1.5 Q in regards to connections, penetrations, imbeds, and restoration.					TT Response: As stated in the original RFI T-0333 response, "...specification article 1.5, which shall also apply for the mat (i.e. reactions shall not exceed capacity of mat). Submit re-bracing for review per submittal process, including calculations that show reactions onto permanent structure do not exceed capacity of permanent structure."		
The response stated that structurally it was acceptable provided the contractor outline if there will be a cost and schedule reduction pursuant to the specification requirements for "Proposed Alternatives". W/O is unable to locate a specification provision for "Proposed Alternatives" in the TG03 or TG06 contract documents.					URS Response: If the load capacities to be provided by re-bracing elements are less than the design loading for bracing elements removed, then specifically identify this in the re-bracing submission. Any reduction of this loading requires specific explanation and specific review and approval.		
Is utilizing the mat slab for rebracing reactions acceptable pursuant to the TG03 or TG06 contract documents?							
If acceptable, please identify the specification section for "Proposed Alternatives" within the TG03 or TG06 documents so cost and schedule reduction proposals can be provided pursuant to the applicable requirements.							
Additionally, please identify the TG03 and/or TG06 contract requirements for secondary bracing (31 55 00 1.3D) geometry.

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Specification: 03 30 00					Accept Suggestion: <input type="checkbox"/>		
Please confirm it is acceptable to displace a top mat 4th layer contract reinforcing bar and a bottom mat 2nd layer contract reinforcing bar one bar diameter every 6' - 0" +/- oc to support the mat reinforcing. A sketch is attached for reference and to graphically represent the proposed bar configuration.					It is not acceptable to displace/deviate mat rebar from contract layout.		
					NOTE: The RFI sketch does not graphically represent the orientation of mat reinforcement. See "Mat Bottom Rebar Notes" on S1-2022 and "Mat Top Rebar Notes" on S1-2052 as well as detail 3/S1-3005 for orientation of layers of mat reinforcement.		
T-0336	BGP - Wall Dowels Standard Hooks	Closed	11/05/2012	11/15/2012	11/10/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Specification: 03 20 00 Reference Drawings: S1-3201					Accept Suggestion: <input type="checkbox"/>		
Contract drawing S1-3201, Section 1 depicts the #11 vertical wall dowels with a terminator, typ. embedded into the mat foundation rather than a standard hook. Shimmick is requesting the option to utilize a #11 standard hook (1' - 7") orientated inward or a terminator as shown at these locations. Please verify that either option is acceptable for use.					Contractor-proposed #11 standard hook for wall vertical bars is not acceptable as the inside wall bar would need to be hooked towards the outer bar and would result in congestion. Please provide vertical wall bars with terminators per contract drawing.		
T-0337	BGP - Bottom Mat Reinforcing Clear Cover to Edge	Closed	11/06/2012	11/16/2012	11/12/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Specification: 03 30 00 Reference Drawings: S1-3201					Accept Suggestion: <input type="checkbox"/>		
Contract drawing S1-3201 depicts the clear cover to the mat reinforcing as 6" along the edge. Please verify it is acceptable to extend the bottom mat reinforcing closer to the edge such that the clear cover along the edge is 2", the same as it is for the vertical wall reinforcement.					Contractor - proposed modification to clear cover at mat edge is not acceptable as it would result in a congestion condition. Please provide contract drawing clear cover.

<b>Co-Author:</b>							
<b>REQUEST:</b> Reference Specification: 03 20 00 Reference Drawings: N/A  Shimmick would like to request the use of the Schnell IDEA Machine. The IDEA Machine pre-assembles grade beam, columns or other "boundary" type elements by a process of resistance welding three (3) 1/4" ASTM 82 wires to the ASTM A706 reinforcing ties. This process provides a more secure and accurate tie configuration with			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> It will be acceptable to use contractor-proposed use of machine-welded holding wires to column ties and beam stirrups only provided the following conditions are met:  1. Column ties and beam stirrups must be ASTM A706.  2. Holding wire bars shall conform to ASTM A82 or		

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	a more effective and timely installation. Attached is CRSI's engineering data report #53 which provides an in-depth explanation of the process as well as their acceptance of the same. Also attached is a reference list of recent projects where this process has been approved and utilized as well as a testing report from Christensen Materials Engineering. Please confirm if this is acceptable.		A496.				
			3. Holding wires are only allowed to be welded to column ties and beam stirrups #5 or smaller.				
			4. Holding wires are not to eliminate any longitudinal bars or interfere with flow and placement of concrete.				
			5. Verification tests: Contractor shall submit results of verification tests conducted during the month of tie/stirrup production from a Certified Testing Laboratory for review. Tests shall be performed on 3 samples of bar sizes to match project conditions. Samples shall have a gage length of 24 bar diameters with the holding wire weld located in the middle quarter of the length. Test the samples in tension and report elongation of the sample at fracture, the location of the fracture and the type of fracture. Test and production bars to be welded shall be ASTM A706.				
			6. Production tests: If verification tests are acceptable, production tests will be required only if there is deviation from the accepted process or if the inspector identifies potential defects.				
			7. Fabrication shall conform to the following:				
			a.) Holding wire welds shall be located a minimum of 2 tie/stirrup diameters away from bends and/or cold-worked regions of stirrups.				
			b.) Maintain a minimum clear cover from the face of the concrete to the ties/stirrups as noted on the drawings and maintain clear cover to holding wire as required by ACI 318.				
			c.) If field installation requires adjustment of tie/stirrup locations due to mis-coordination or mis-placement, adjustments/corrections shall be responsibility of Contractor.				
			d.) Holding wires shall be located a minimum of 2 inches clear from main longitudinal bars.

T-0341.1	BGP - Type D8 Column Serpentine Ties	Closed	12/04/2013	12/11/2013	12/10/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Please refer to drawing S1-3305 and RFI T-0341.			George Metzger 12/9/2013				
The response to RFI T-0341 accepted the use of one-piece/serpentine ties for the columns as proposed by Gerdau. Gerdau has found that the fabrication of a single piece serpentine tie for the type D8 column could pose safety risks. Therefore, Gerdau is proposing to fabricate the type D8 column ties with two pieces of serpentine ties. See the attached Gerdau sketch SK- T-0341.1 for details.			RESPONSE: Proposed serpentine tie configuration for Tie Type D8 will conflict with anchor bolts for the steel column above. Refer to Sheet S1-3305 for the design tie configuration for Column C7 (Tie Type D8). However, proposed Serpentine tie configuration can be used up to an elevation within the column where anchor bolts are not present. Where anchor bolts are present, loose ties that confirm with the design configuration shall be used to clear the anchor bolts. Note the following anchor bolt embedment lengths for different anchor bolt configurations: - For Column C7 with Type T anchor bolts, anchor bolts are embedded 3'-8" from the top of the Lower Concourse Moment Frame beam. - For Column C7 with Type TT anchor bolts, anchor bolts are embedded 6'-8" from the top of the Lower Concourse Moment Frame beam. - For Column C7 with Type TTT anchor bolts, anchor bolts are embedded 20' from the top of the Lower Concourse Moment Frame beam. See Sheet S1-5051 for further information on anchor bolts. Also, per RFI T-0924, it is acceptable to eliminate/lower column cross ties that interfere with the shear key block out. (Ties and hoops that do not interfere shall remain.) This information should also be considered in finalizing the detailing/fabrication of the column ties near the top of the concrete columns.				
Please confirm the alternate serpentine ties as shown in the attached sketch is acceptable.

T-0345	BSE - CDSM Wall Parallel Stiffness for Bridge Design	Closed	11/13/2012	11/23/2012	11/15/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Ural Yal		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Specification Reference: 01 53 13.1.3D				Refer to Note 5 on GT-1111 which requires the Contractor to analyze the soldier piles if the soldier piles are subjected to loads other than those shown on the drawings. Refer to the Contract Documents for the design strength of the CDSM material.			
BBII has recently received information in a non bridge design related correspondence that could impact the already designed, permitted, and constructed First and Fremont St. Bridges. In an ARUP memo dated October 5th, 2012 bullet #2 states:							
"The Contractor has verbally attested that they designed the diagonal corner braces using an interpretation of Note 11 on sheet GT-1111 which yielded a key assumption which is that the CDSM wall is infinitely strong and infinitely stiff. This assumption is an inaccurate and unreasonable interpretation of this note and in no way does the note infer this".							
Although this comment is in reference to the internal bracing design, it also relates to the temporary bridge design. As noted on page 156 of the First and Fremont St Bridge structural calculations (attached), this same interpretation of note 11 on GT-1111 was used for the abutment shear key design. The Bridges have been designed, reviewed and approved by DPW under with the assumption that no additional deformation occurs at the base of the abutments. If in fact the CDSM wall is truly NOT infinitely strong or infinitely stiff parallel to the wall, BBII requests a value from the CDSM engineer of record that can used in our re-evaluation of the First and Fremont Bridges to ensure the existing design remains in compliance with the design criteria. Additionally this value would be used in the re-design of the Beale St. Bridge.

T-0346	BGP - Mat Slab Maximum Aggregate Size	Closed	11/15/2012	11/25/2012	11/21/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Specification Reference 30 30 20  Shimmick is requesting approval of 1 inch nominal maximum aggregate size in lieu of the 3/4 inch nominal maximum aggregate size for the Mat Slab concrete. Shimmick's backup data indicates that concrete made with larger aggregate size (1 inch instead of 3/4 inch) produces lower drying shrinkage values mainly due to a reduction in the water consumption of the mix and a reduction in paste content.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>  Contractor-proposed use of 1" nominal max aggregate size for the mat slab concrete is acceptable. Submit mix designs through submittal process.  Jeff Thiel Per discussion at 11/16/12 VE meeting, a CR for VE items will be issued in the future.		

T-0347	Trim Steel Requirements for the Mud Slab	Closed	11/19/2012	11/29/2012	11/29/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference Specification: 03 20 01 Reference Drawing: S1-3003  Please confirm that trim steel will not be required. If trim steel is required, provide the details for trim in the 4" mudslab where the #4 bars @ 18" are interrupted. Please reference the attached sketch.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>  RFI question is not clear and is inconsistent with the referenced documents. Revise and resubmit the RFI with a clear question.  The mud slab is scope for Package TG03 in which the rebar shop drawing (TG0300-340.0, Item TZ1020-032001A06.0) has already been approved. The referenced specification does not apply to the mud slab.		

T-0347.1	BSE - Mud Slab Trim Rebar	Closed	12/12/2012	12/22/2012	12/18/2012	Potentially	<input type="checkbox"/>

top of the mud slab. Please review and advise as this does not match the as bid details.							
T-0350.1	BGP - Mat Slab Penetration Waterproofing	Closed	12/06/2012	12/16/2012	12/13/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Robert Kjome	To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger		
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>			
Reference Specification:07 12 10 Reference Documents: A1-8711				For details 2, 3 and 5 on A1/8711 the butyl tape can extend 4" above the mud slab. However on details 4 and 6 on A1/8711 the butyl tape at the penetration does not 'tie off' on to the waterproofing membrane. For these details the waterproofing does not engage with the butyl tape at the mud slab penetration, the steel sleeve is in the same plane as the butyl tape, therefore the butyl tape cannot extend above the mud slab. The details will not be revised.			
Futher to the engineers response to RFI T-0350, the extension of the butyl tape conflicts with the casings that are required around the dewatering wells, trestle piles, bridge piles, and pin piles. Please provide revised details at each of the aforementioned locations to accommodate the extended butyl tape.				The Contractor's shop drawing submittal is to be revised to show the butyl tape's relationship to the waterproofing membrane and other elements of the assembly. Submit the revised shop drawing with manufacturer's recommended detail for the butyl tape for TJPA Representative review.

<b>From:</b> Webcor Construction LP                      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> Reference Drawing: A1-8711  SCCI would like to confirm conversations concerning the Butyl tape and Mud Slab Penetrations. From the meeting held 12/19/2012, the design Engineer mentioned that the Butyl tape at the Mud Slab Penetrations does not serve as a waterproofing purpose, but rather a bond breaker between the concrete and the steel penetrating through the mud slab. Because of this, the Engineer stated the Butyl tape did not need to be extended above the Mud Slab and could stop at the penetration slab.  Please confirm.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> With the exception of the tie down WP detail 2/A1-8711, the Butyl tape at the Mud Slab Penetrations does not serve a waterproofing purpose, but rather a bond breaker between the concrete and element penetrating through the mud slab. On 2/A1-8711 the butyl tape does engage the waterproofing and must extend above the mud slab.

T-0356.1	BGP - GEOTHERMAL - Loop Soil Compaction Conflict in Specifications	Closed	01/22/2013	02/01/2013	01/29/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Chris Williams							
<b>REQUEST:</b> Please refer to attached excerpts from spec section 23 57 34, 31 23 34 and RFI response to T-0356.  The RFI response to T-0356 (SCI-017) requires the backfill of the trenches to meet specifications section 23 57 34 and 31 23 34. However, the two sections are in conflict with one another. Section 23 57 34-3.1, D, requires geothermal loop trenches to be filled with loose soil and then apply water to settle the loose soil. Section 31 23 34, notes that flooding or jetting with water is not allowed.  Therefore, the work sequence directed in RFI T-0356 to meet "...spec section 23 57 34 loose soil shall be used by the geothermal contractor to backfill the trenches where the HDPE ground loops are located to avoid any damage to the pipes during the process. Once the trenches have been backfilled per section 23 57 34 and the piping is protected the soil can be compacted as required by section 31 23 34..." are not feasible.  Please advise.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Wetting of backfill not required.

T-0360	BSE - Mud Slab Welded Wire Reinforcement	Closed	12/21/2012	12/28/2012	01/03/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Webcor Construction LP Joanne Filipas				
Co-Author:							
REQUEST: Specification Section: 03 20 01  Regarding the concrete reinforcement within the mud slab, BBII would like the option of using Deformed Welded Wire Reinforcement (DWR) in lieu of rebar reinforcement. DWR strictly conforms to ACI 318 and offers multiple advantages to rebar reinforcement. Particularly, DWR will help reduce the risk of inclement weather damage to the subgrade, due to a quicker installation which will leave the subgrade exposed for a shorter period of time. Please see attached supporting documentation.  Please confirm this is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Albeit after the specified 10 days, W/O will consider this substitution request only subsequent to receipt of a completed Request for Substitution form found in specification section 00 04 40.		
T-0361	BGP - Slab Penetration Sleeve Slipsheets	Closed	01/03/2013	01/13/2013	01/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Joanne Filipas To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference S1-3003:  The existing piles are to be wrapped with a 10 Mil polyethylene (for 30" & 36" sleeves) or 112" compressible material (for 48") slipsheet between the sleeve and the piles. Because of the minimal distance between the sleeve weld and the existing pile, the slipsheet at the weld locations will be damaged from the heat of the welding. Is this acceptable?  If the slipsheets cannot be damaged by the heat of the welding, can the slipsheets have a 3" or 4" vertical break in them at the locations of the vertical welds to avoid the bum damage? This would create two slipsheet breaks or gaps per pile penetration. Is this acceptable?			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> It is acceptable to provide a 4" vertical break in the slipsheet at the sleeve joint to avoid burn damage.

T-0364	BGP - WPM-1 ASTM 6769 & Blindside Waterproofing Application	Closed	01/15/2013	01/24/2013	01/25/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Chris Williams			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Please refer to Specification 07 12 10 3.3 and Drawing 1/A1-8710.  Section 3.3 of the specifications require that all work be performed in accordance with ASTM D6769 (Application of Fully Adhered, Cold-Applied, Prefabricated Reinforced Modified Bituminous Membrane Waterproofing Systems). The WPM-1 vertical application (071210-1.1, A.2) is a blind-side WP application; however, the ASTM D6769 is written to address positive-side WP application.  1. Please confirm the blind -side WP application is covered under the ASTM D6769 requirement or provide the applicable ASTM requirement to perform the blind-side application. 2. Please confirm which section of the ASTM D6769 requirement is applicable to blind-side WP application. 3. The ASTM D6769 section 11.7 requirement to "backfill vertical waterproofing installation within 24 h of protective board installation..." isn't feasible due to the extensive work sequence to install concrete reinforcement, form and place the foundation wall. Please confirm this section of the ASTM requirement is not applicable to blind-side WP applications.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1. Paragraphs 11.4.1.1, 11.6 and 11.7 are not applicable to the blindside installation.  2. Paragraphs 11.4 1.1 through 11.4.1.4 relating to a one ply application are not applicable to the 2 ply vertical installation specified and indicated on this Project.  3. Paragraph 11.4.1.1, 11.7 is not applicable to blindside installation.  All other paragraphs apply where they do not conflict with the Project Specifications or the manufacturer's printed recommendations and specifications. In those cases, the Project and manufacturer's specifications are to be followed.		
T-0365	BSE - Micropile W127 Relocation	Closed	01/15/2013	01/25/2013	01/17/2013	Potentially	<input type="checkbox"/>

T-0366	BGP - WPM-1 - Adhesive Between Bottom Ply Waterproofing Membrane and Mud 3 Closed		01/22/2013	01/22/2013	01/24/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Please refer to attached Specification Section 07 12 10, Article 3.3.			The bottom sheet is to be installed dry per 3.3, B.				
Per Specification Section 07 12 10-3.3, B, the bottom ply of the waterproofing membrane is to be installed dry with the polyethylene protection sheet facing the mud slab. Per Specification Section 07 12 10, 3.3, D, each polyethylene protection sheet is to be installed embedded in adhesive (wet) such that each sheet will have enough adhesive uniformly placed on it that it won't come into contact with the other sheet.							
Is the bottom sheet to be installed dry per 3.3, B. or is it to be installed embedded in adhesive (wet) per 3.3, D? Please advise.							
T-0366.1	BGP - WPM-1 - Adhesive Between Bottom Ply Waterproofing Membrane and mud 3 Closed		02/01/2013	02/11/2013	02/05/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
The response to RFI T-0366 directs Shimmick to install the bottom waterproofing membrane without adhesive to the mud slab. If the membrane is installed dry or without adhesive, nothing will prohibit water from entering between the membrane and mud slab. This would cause the membranes to float or bubble. Per the manufacturer's recommendation, the waterproofing membrane is to be adhered to the mud slab with adhesive.			The specification is correct. The method of installation, installing the first ply with the polyethylene protection sheet facing the mud slab, without adhesive, was recommended by the manufacturer.				
Please advise.

T-0369	BGP - REBAR - Headed Steel Bar Shear Conflict in Mat Slab	Closed	01/21/2013	01/31/2013	01/25/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b> Please refer to attached drawing S1-3005 and S1-2022.  Detail 3 on sheet S1-3005 depicts the full size T-head bars as they interface with the mat reinforcement. The same detail includes additional reinforcement depicted at column locations. The reinforcement (open circles) is shown between the typical main mat reinforcement and others are aligned with above layers one and two of the main mat reinforcement as defined in note 4 and 6 on sheet S1-2002. As a result, the clearances created by the #10 main mat reinforcement being spaced at 8" O.C. and the 3" square heads at the ends of the #8 T-heads (refer 2/S1-3005) do not allow enough of a clearance to install the headed bars into position. Refer to the annotations in the attached drawings.  Please advise.			<b>SUGGESTION:</b> Gerdauproposes to place the added reinforcement directly in line and above the main mat reinforcement in both directions as required. The suggested proposal may require several additional layers of steel to accommodate the total quantity of added bars at each column. Furthermore, it is unknown whether another conflict is created at the column dowel T-heads.			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Contractor-proposed placement of additional mat bottom rebar to an upper layer is not acceptable. Placement of the vertical headed bars is construction means and methods. However, it is acceptable to move the additional mat bottom rebar horizontally a maximum of 3/4", as required.	
<hr/>							
T-0370	BGP - WPM-1 - Mud Slab Finish for Waterproofing	Closed	01/22/2013	02/01/2013	01/25/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Chris Williams							
<b>REQUEST:</b> Specification Section 07 12 10, 3.2  The concrete surface profile (CSP) required by the waterproofing manufacturer Laurencos, ranges between a CSP level of 2 and 4 as defined by the International Concrete Repair Institute (ICRI) of technical guide "Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, and Polymer Overlays." The ICRI defines the levels of CSP as 1 (nearly flat) to CSP Level 9 (very rough). The Laurencos waterproofing system requires "a good wood screed or broom finish...often referred to as a 'sidewalk' finish..Do not use a steel trowel finish." See attached excerpt of the manufacturer specification.  1. Please confirm the ICRI CSP requirements as it relates to surface finish, flatness and levelness are to supersede the varying ASTM F-value requirements set forth in specification section 033000-3.6, B1 or provide a revised specification section 033000 incorporating the ICRI			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1. ICRI CSP requirements are not appropriate for the mud slab. The mud slab in being poured, not repaired. The International Concrete Repair Institute CSP scale is used for existing concrete surfaces when they are being acid etched, ground or shotblasted. The appropriate finishing for the mud slab is described in the BGP Specification 03 30 00 Cast in Place Concrete 3.6 Concrete Finishes and calls for compliance with the American Concrete Institute concrete finish recommendations ACI 302.1R and ACI 304R, with dimensional tolerance limitations given by ACI 117.  2. Specification 03 30 00, 3.6 C stipulates: Finish for monolithic slab surfaces to be covered with membrane i.e. the entire mud slab is covered with membrane is to be a Float Finish. Note that 3.6 C. 1.d for Float Finish has the same finish surface values as 3.6 D. 3., which is the finish for Pedestrian Sidewalks and

T-0371.1	BSE - Micropile W154 & W236 Bent After Install	Closed	02/04/2013	02/14/2013	02/06/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Lynn Kowallis      To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Ref: Specification Section 31 63 33 3.2.L					Accept Suggestion: <input type="checkbox"/>		
BBII is in receipt of reply to RFI T-0371, which suggests that piles which have experienced an impact be rejected and re-drilled. Acceptance of piles is based on specification 31 63 33 3.2.L. Per the recommendation of the Micropile Engineer (Drill Tech's Steve McCullough) and the anchor bar manufacturer (DSI), the piles were bent back to plumb and retested on 02/01/2013. Attached are the passing proof test results for the piles in question. Please confirm that these piles are accepted.					The piles are confirmed to be Rejected and shall be replaced with new piles. The concerns include, but not limited to, the following: * de-bonding of bars and grout * cracking of the grout that may compromise its ability to provide corrosion protection of the bar * the ULTIMATE uplift capacity of the pile might have been compromised, which cannot be verified by the proof test Unless the contractor can provide sufficient evidence that addresses the concerns listed above and approved by TJPA, the piles shall remain as Rejected. It should also be noted that the contract documents call for a coupler at the mud slab level to allow the projected portion of the bars be dissembled to avoid the exact problem. If BBI cannot prevent the micropile from being hit again, BBI shall install the coupler as shown and take down the portion of the bar above the coupler as soon as the pile is proof tested and re-install the bars above the coupler at a later time.		
T-0371.2	BSE - Micropile W154 & W236 Bent After Install	Closed	02/08/2013	02/18/2013	02/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Lynn Kowallis      To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
BBII is in receipt of reply to RFI T-0371.1, which confirms that piles W154 and W236 are rejected. Per response to RFI T-0371, BBII proposes piles W154R1 and W236R1 be drilled at the locations on the attached drawing. Piles W154 and W236 will be cut off at bottom of mud slab and the mud slab blackouts poured back.					Accept Suggestion: <input type="checkbox"/>		
Please confirm that these pile locations and method of pile abandonment are acceptable.					Thornton Tomasetti does not object to new locations of micropiles W154R1 & W236R1 as proposed, as well as the method of abandonment for piles W154 & W236 as proposed.

REQUEST:			SUGGESTION:		ANSWER:		
Reference P1-2026					Accept Suggestion: <input type="checkbox"/>		
Please reference attached contract drawing P 1-2026 and the drainage system at the SP B2-D-2. Referenced drawing shows 1% flow from the catch basin to the sump pit, however; the specified invert elevations call out the opposite. Please confirm that the invert elevations called out on P 1-2026 are correct, if not please specify new pipe invert elevations to be used for the drainage system specified herein.					The invert elevation for drainage piping from the catch basins to sumps is -36'-10".		
T-0376	BGP - Column Spiral Reinforcing in Lieu of Individual Ties	Closed	01/24/2013	02/03/2013	01/30/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Joanne Filipas      To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference S1-3300 & S1-3304					Accept Suggestion: <input type="checkbox"/>		
Gerdau is requesting the use of spiral reinforcing in lieu of the #6 individual stirrups/hoops that are shown on contract drawings SI-3300 and SI-3304 detail 1 for column types B1, B2 and B3. The spiral reinforcing would be #5 and maintain 3.5" pitch for the B1 column, 3" pitch for the B2 column and 4.5" pitch for the B3 column. Please confirm the use of spiral at the pitch indicated is acceptable.					The size/spacing proposed by the contractor does not meet the volumetric ratio of spiral or hoop reinforcement requirement in ACI 318 therefore the request is declined in current form. For columns C10 and C11, if the contractor prefers to use #6 spirals with the spacing specified for column ties in Sheet S1-3300, that is acceptable to the SER. The tightest spacing specified in S1-3300 along the column height shall govern.		
					If spiral reinforcement is used for Column C12, the size and pitch of the spiral shall be #5 and 3", respectively, for the full column height.		
					In addition, if spiral reinforcement is used, detailing requirements in ACI 318 Section 7.4 shall be fully met.

REQUEST: See attached RFI T-0379		SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>			
Please confirm it is acceptable to repair the punctured geothermal piping in geofield 14R Area 16 by using a fusion butt weld. The butt fusion method of heat fusing ground loop piping is acceptable per the IGSHIP A.							
T-0380	BSE - K9 Buttress shaft CSL Tubes	Closed	01/28/2013	02/07/2013	02/14/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis		To: Turner Construction Company Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST: Reference attached sketch and spreadsheet.		SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>			
We were informed by Harris-Salinas that they are short of CSL tubes for the last rebar cage K9. Since K8/K9 interface will not be CSL tested, per the agreed upon list of shaft interfaces (generated by Arup and BBII), it is in BBII's opinion that it would be more beneficial to the shaft if it is installed without CSL tubes. The benefits include the following: There would be no need to grout the holes; no voids; and there would be more concrete in the shaft. If CSL tubes are required, we are proposing to install them per the attached drawing.			The Contractor's proposal is acceptable.				
Please advise.							
T-0381	BGP - PLUMBING Floor Cleanout Requirement	Closed	01/28/2013	02/07/2013	02/01/2013	Potentially	<input type="checkbox"/>

T-0389	BGP - Cast-in-place Concrete Shrinkage	Closed	02/11/2013	02/21/2013	02/22/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Lynn Kowallis <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> Ref: Specification Section 03 30 20 1.7.F.3.i  Please reference attached ACTM C 157, pages from SEONC San Francisco Bay Area Concrete Aggregate Report 2008, and Specification Section 03 30 20- 1.7.F.3.i. ASTM 157 section 4.3 states that if the condition of mixing, curing sampling and storage other than specified in the test method are required, they shall be reported but are not to be considered as standard conditions of this test method. In section 6. Sampling, it requires samples from batches made in the laboratory and the Note 2 states that field cast specimens can show up to twice as much drying shrinkage as laboratory cast specimens from the same materials and proportions. Furthermore, SEONC 2008 states that "actual shrinkage of the concrete in service and in field-cured tests will not necessarily correlate closely with the trial batch test results." For these reasons SCCI believes that shrinkage tests from samples at the job site can not verify the specified shrinkage limit and can not be compared with the laboratory tests.  Please confirm that shrinkage results from the samples taken in the field will not be directly compared to laboratory tests, and consequently used as basis for rejection of material.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The project specification specified that the shrinkage tests shall be in accordance with ASTM C157 with modified SEONC Recommendations.  It is recognized that the field sampled tests will not necessarily correlate closely with the trial batch test results, which should be anticipated before bidding.  In accordance with SEONC, field sampled test will be used for the evaluation of the specified limits as specified. However, rejection of a concrete pour will not be based on shrinkage test of field samples alone.				
T-0390	BGP - Floor Drain FD-1 Clarification	Closed	02/12/2013	02/22/2013	02/20/2013	Potentially	<input type="checkbox"/>

<b>REQUEST:</b> Ref: 8/P1-6001  Detail 8 on drawing PI-6001 calls out a "Heavy duty galvanized steel custom made curb frame embedded in concrete." Please provide the following information:  1. Thickness of steel for curb frame. 2. Anchor clip details (size, spacing, connection to curb frame).			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1. The curb frame thickness is 5/8".  2. The anchor clips are 2"x 6"-2", they are welded to the frame. There will be two anchor clips on each side of catch basin/pit.  This are minimum requirements for the custom made curb frame. Contractor to submit shop drawing for review.				
<b>T-0396.1</b> <b>BGP - Drainage Pits Embedded Frame Details and Curb Frame Steel and Anchor C Closed</b>			<b>03/04/2013</b>	<b>03/14/2013</b>	<b>03/08/2013</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Lynn Kowallis <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> Ref: 8/P1-6001, DS-0001, RFI # 396  Detail 8 on P1-6001 does not specify the thickness of the frame material, nor any of the Specs and Addendums. Based on RFI 396, Designer specified for the frames to be 5/8" thick. However SCCI believes that ¼" thick frame is adequate to satisfy "heavy duty requirement". SCCI's has estimated the Work to fabricate the embedded grate frame out of the stock angles (2x2x¼" and 3x2x¼"), per attached SCCI's drawing DS-0001. Further to RFI 396, please answer the following:  1. Can stock angle sizes noted above be used for construction of the embedded frames? 2. Could Nelson studs be used in lieu of the anchor clips, as noted on the attached drawing?  Please note that increase of the material size consequently increases the cost of furnished material, and therefore will constitute a compensable change.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1. The required thickness of the frame material is 3/8" and not 5/8" as previously provided in response to RFI T-0396. The construction of the frame is very clearly shown in detail 8/P1-6001. Welded stock angle iron is not acceptable.  2. Nelson studs can be used in lieu of anchor clips.

T-0396.2	BGP - Drainage Pits Embedded Frame Grates	Closed	03/22/2013	04/01/2013	04/01/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Filip Filipic							
<b>REQUEST:</b> Reference Specification: 23 13 01 Reference Drawings: P1-6001 Reference RFIs: T-0396, T-0396.1  Detail 8 on CD P1-6001 does not provide enough details for assembly and fabrication of the embedded frames. SCCI's drawing attachment in the RFI 396 series provides such details.  As per our discussion with the SER(Structural Engineer of Record) on 3/21/2013, see attached revised SCCI's drawings of the embedded grate assemblies. As discussed SCCI has revised the weld detail between the two angles to be used to fabricate the embedded frames. Weld is changed to T-joint, PJP double bevel groove weld per AWS D1.1 (references 8-56, table 8-2 from AISC Steel Manual 13th ED.)  Is it acceptable to construct the embedded grate frames per attached detail?			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The construction of the embedded frame is clearly shown in detail 8/P1-6001 as a formed frame. The proposed assembly including two angles with double bevel groove weld is acceptable. Contractor to provide submittal for frames and grates.

T-0397	BGP - RCW Dimension Clarification	Closed	02/21/2013	03/03/2013	02/28/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Joanne Filipas <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> Reference A1-2123 and attached.  Between gridlines 12-13 and G-H there appears to be two conflicting dimensions. Please confirm the 7'3" dimension is from gridline H to the work the point.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> On A1-2123, between gridlines 12-13 and G-H, we confirm the 7'-3" dimension from gridline H to the work point is correct. The dimensions are not conflicting. The 7'-1 3/8" dimension from gridline H is to the South West corner of the train platform knee wall. The platform is curved, which accounts for the slight difference in dimension between the corner and the work point.

T-0400	BGP - Seismic Joint Detail	Closed	02/21/2013	03/03/2013	03/06/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Joanne Filipas			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Webcor Construction LP    Robert Kjome	
<b>Co-Author:</b>							
<b>REQUEST:</b> Reference S1-3010, A1-8881, & A1-8882  The detail 4/S1-3010 does not appear to be coordinated with the details shown on A1-8881 and A1-8882. Please revise accordingly.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> We have reviewed the structural and architectural details for the Seismic Joint on GL 35. Attached SKA-2594 and SKA-2595 show the coordination modifications made to drawings A1-8881 and A1-8882, which will be issued with the next Below Grade Package ASI.  S1-3010 compared to A1-8881:  1.    4/S1-3010 does not include/detail part of the seismic joint below the 5' Mat Slab (these parts was shown on Architectural details).  2.    4/S1-3010 shows deformed bar anchors welded to the joint where as A1-8881 details shows different embeds. Embed anchors have been removed from the architectural drawings as anchoring / attachment is per the structural drawings.  3.    4/S1-3010 shows plate with hole to fully cover top of curb of gutter where as architectural details shows the plate with equal length same as other side of seismic joint, this has been adjusted.  4.    Note that the water stop injection hose locations have been adjusted.  S1-3010 compared to A1-8882:  1.    Dimension on A1-8882 should be 3'-0" instead of 2'-11 5/8". I will adjust dimension on sheet.

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Ref: Specification Section 31 00 00.3.15.C.1					Accept Suggestion: <input type="checkbox"/>		
Specification Section 31 00 00.3.15.C.1 states. C.Percentage of Maximum Dry Density Requirements: Compact soil to not less than the following percentages of maximum dry density according to ASTM D1557: 1.Under structures, building slabs, foundations and steps, fill deeper than five feet, shall be placed in lifts as defined above and compacted to at least 95 percent dry density.					ARUP Response:		
Does the 95 percent dry density requirement apply only when fill is deeper than five feet and/or under structures, building slabs, foundations and steps?					The subgrade beneath the mat slab is required to be native undisturbed soil or compacted to 95% of maximum dry density.		
T-0406	BSE - Micropile W434 Relocation	Closed	02/22/2013	02/22/2013	02/27/2013	Potentially	<input type="checkbox"/>

T-0408	BGP - Open Stirrup with a Cap for Frame Beam Sections	Closed	02/25/2013	03/07/2013	03/01/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Lynn Kowallis	To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger		
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Ref: 5/S1-3600				The inquired stirrups are for beams that are not in the TG06 package. There is a note on the detail that states "This Detail For Reference			
Detail 5 on sheet S1-3600 depicts beam configurations Type SI through S5 all of which graphically depict a closed stirrup. Please confirm that it is acceptable to utilize an open stirrup with a cap. The cap would maintain a 135 degree hook on one side and 90 degree hook on the other and placed in an alternating fashion.							
T-0409	BSE - Micropile W226 Relocation (Due to Overhead Obstruction)	Closed	02/27/2013	03/09/2013	03/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Robert Kjome	To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger		
Co-Author: Balfour Beatty Infrastructure, Inc. Brandon Miller							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Specification: 31 63 33 Reference Dwg: Attached sketch				Shifting W226 north 12' as proposed is acceptable provided W227 will also be shifted 2' north (otherwise W226 and W227 are too close together).			
Micropile W226 as laid out does not have adequate overhead clearance to be installed. BBII proposes moving Micropile W226 North 12' to provide adequate clearance. An alternate relocation position for Micropile W226 could be 4' East and 4' North.				Shifting 4' East and 4' North (5.66' Northeast) is not acceptable as this proposed location would conflict with the mat shear reinforcement.			
W/O recommends relocating the micropile North in order to avoid conflict with geothermal.							
Please confirm this is acceptable.							
T-0409.1	BSE - Micropile W226 Relocation (Due to Overhead Obstruction)	Closed	03/04/2013	03/14/2013	03/05/2013	Potentially	<input type="checkbox"/>

Co-Author:								
REQUEST:		SUGGESTION:		ANSWER:				
Specification Reference: 31 63 33 Specification Drawings: Attached BBII sketch  Micropile W226 as laid out does not have adequate overhead clearance to be installed. BBII previously asked to move the pile 12' North. BBII understands that this location would be too close to pile W227 which is already installed. BBII now proposes to move the pile 10' North and 1' West. This does not appear to conflict with geothermal piping.  Please confirm this is acceptable.				Accept Suggestion: <input type="checkbox"/> Thornton Tomasetti does not object to relocating micropile W226 as proposed (10' North and 1' West).				
T-0410	BGP - Lower Concourse Top of Slab between Gridlines 3-9	Closed	02/27/2013	03/09/2013	03/05/2013	Potentially	<input type="checkbox"/>	
From: Webcor Construction LP		Robert Kjome	To: Turner Construction Company		Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger
Co-Author:								
REQUEST:		SUGGESTION:		ANSWER:				
Reference Drawings: S1-3201 (BSE Drawings) S1-2202 (BGP Drawings) S1-2203 (BGP Drawings)  12/10/10 Issued for construction BSE drawing S1-3201 shows lower concourse top of slab to be 8'-8" between gridlines 3-9. 11/27/12 Issued for construction per ASI 100 BGP Drawings S1-2202 and S1-2203 shows lower concourse top of slab to be 5'-5" between gridlines 3-5 & 8-9. Gridlines 5-8 shows top of slab at 5'-10".  Please verify the elevation of the lower concourse top of slab between gridlines 3-9.				Accept Suggestion: <input type="checkbox"/> The lower concourse top of slab is per BGP Drawings. Note that the depressed slab extent is between gridline 6-8 and not 5-8 as the RFI states.

T-0411	BGP - Welding for Penetration Sleeves	Closed	02/28/2013	03/10/2013	03/08/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Robert Kjome <b>To:</b> Turner Construction Company Gary Kruttsch			<b>Answered By:</b> Webcor Construction LP      Robert Kjome				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Chris Williams							
<b>REQUEST:</b> Reference Specification: 05 50 10 Reference Submittal No: TG0600-036  Per the Submittal TG0600-036 comments, the intermediate ring, 3" horizontal weld must have a removable backer bar. Is it acceptable to have a double beveled groove weld replace the single bevel groove with a back bar? Eliminating the backer bar in this weld and having a double beveled groove instead is more efficient.  Secondly, the Submittal TG0600-036 comments address the field welding of the penetration sleeve collars to be conducted after the trestle pile is to be removed. Is it acceptable to weld a full collar with cap in the shop? The assembly would arrive onsite to be welded in place as originally intended by the designer.  Please advise.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1. At intermediate ring, for 3" horizontal weld, contractor may substitute double beveled groove weld to replace single bevel groove with back bar, as proposed.  2. However, the contractor's proposal to pre-assemble the collar ring and the cap plate in the shop is not acceptable. The contract documents indicate that the collar ring and cap plate are two separate pieces to be sequentially field-welded into place. The collar ring is first field welded to the sleeve, and then secondly the cap plate is field welded to the collar ring. The contractor's proposal to pre-assemble the collar and cap into one unit makes it impossible to field weld the collar/cap assembly onto the sleeve because there will be insufficient clearance for welding (mat rebar will already be placed and the mat concrete poured with only a small blockout surrounding each sleeve, making it impossible to weld any pre-assembled collar/cap onto the sleeve from the outside). While this construction sequence is ultimately a construction sequence and means and methods issue that should be commented by W/O, it is the opinion of the design team that contractor's proposal is not feasible.				
T-0412	BGP - Dewatering Well & Piezometer Penetration Sleeve Anchors	Closed	02/28/2013	03/10/2013	03/05/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Robert Kjome <b>To:</b> Turner Construction Company Gary Kruttsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Chris Williams							
<b>REQUEST:</b> Specification Section: 05 50 10 Specification Submittal: TG0600-036  Per the Metal Fabrication Submittal for the pipe/pile penetration sleeves, TG0600-36, the number of anchor holes per ring were arbitrary for the submittal. Is it acceptable to have 4 equally spaced 1/2" holes to fit 3/8" wedge anchors for the anchorage of the dewatering well & piezometer penetration sleeves?  Please advise.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Yes. It is acceptable to have 4 equally spaced 1/2" holes to fit 3/8" wedge anchors for anchorage of the dewatering well and piezometer penetration sleeves.

PROJECT MANAGEMENT - REQUEST AND ANSWERS LOG

30100 - Transbay Transit Center Project

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0414.2	<p>"Penetrating through the protection slab is not acceptable. Contractor shall submit information to TJPA Representative describing how the installation will occur to ensure the attachment system and work method will not penetrate the protection slab and impact the waterproofing system."</p> <p>SCCI proposes the following: The pipe support assembly will be anchored to the Protection Slab with the use of 2 ea- 1/2" diameter Hilti KWIK Bolt TZ or Hilti KWIK Bolt 3 expansion anchors. Holes will be drilled to the manufacturer specified minimum required hole-depths of 2-5/8". In order to prevent over-drilling through the 4" Protection Slab and damaging the waterproofing membrane, SCCI will use roto-hammers equipped with depth-gauges (see attached information for Hilti TE-50 manual). The depth-gauges will be set prior to drilling and checked periodically during drilling operations.</p> <p>Please confirm if this is acceptable. If this is not acceptable, then please provide complete design details for Detail 7 on P1-6001</p> <p><b>BGP - Cast Iron Pipe Support</b></p> <p><b>REQUEST:</b></p> <p>Reference: RFI T-0414 and T-0414.1</p> <p>Per the response to RFI T-0414.1, the Designer states that the protection slab will be sloped with a 4" maximum slab thickness. SCCI does not plan to pour the protection slab with a slope. SCCI plans to pour the protection slab level and keep the protection slab consistently 4" thick.</p> <p>The Designer suggests using a pipe support with a grouted plate for scenarios where the drilled holes may get too close to the membrane. It would appear that grouted plate would still require some type of embedded anchor. By adding the grout, the manufacturer's embedment depth</p>	Closed	05/02/2013	05/15/2013	05/13/2013	Potentially	<input type="checkbox"/>

T-0416	BGP - Geothermal Loop Pneumatic Testing Pressure	Closed	03/01/2013	03/11/2013	03/06/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Lynn Kowallis <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> Per specification 23 57 34, 3.2, C  Per specification 23 57 34, 3.2, C, all individual loops shall be pressure tested at 100 PSI for 30 minutes before installation. The moisture content from the Hydrostatic test of the loop can compromise the fusion weld. As discussed in the DFOW meeting, S3H is recommending pneumatic testing of the pipe at 80 PSI. Upon complete installation of the loops and header piping, the complete sub group will be hydrostatically tested as specified. Please see attached documentation from Manufacturer regarding Pneumatic Testing and confirm pneumatic testing is acceptable.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Pneumatic Testing to 80psi is acceptable.		
T-0417	BSE - Micropile W434.5 Addition per Contract Drawings	Closed	03/04/2013	03/14/2013	03/12/2013	Potentially	<input type="checkbox"/>

T-0419	BGP - Foundation Walls Formwork Ties	Closed	03/07/2013	03/17/2013	03/12/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Robert Kjome			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Shimmick Construction Company, Inc. Chris Williams							
<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>		
Reference Specification: 03 10 00 2.2.B.7.E Reference Drawings: See attached sketches.			The use of any type of form tie/insert for the foundation wall is prohibited per specification 03 10 00 B.5 and B.7.a.				
Please reference attachments and Specifications Section 03 10 00 2.2 B.7.e: "when removed, ties shall not leave holes larger than one inch diameter in concrete surface".							
For the foundation walls formwork SCCI would like to utilize concrete inserts that will be used in subsequent concrete lifts. See attached sketches for conceptual/preliminary formwork design. Concrete inserts need to be rated for up to approximately 35 kips SWL (safe working load). As a result of this, the concrete ties need to have 1.5" to 2" outside diameter.							
For the formwork involved with the 3ft thick foundation walls SCCI requests variance from the specifications referenced above and be able to use these bigger form ties. For all other interior walls including the shear walls, SCCI will comply with the Specification referenced above.							
Is this acceptable?							
<hr/>							
T-0419.1	BGP - Foundation Walls Formwork Anchors	Closed	03/14/2013	03/28/2013	03/26/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Ian Corcorran			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>		
Reference RFI: T-0419 Reference Specification: 03 10 00-2.2 B.8.A, ACI Formwork Manual			It will be acceptable to use these contractor-proposed concrete formwork anchors.				
There has been a misinterpretation of the specifications that were used to classify the referenced RFI No. 419.			Form anchors are not to penetrate full depth of the concrete wall.				
Concrete inserts intended for use with wall formwork design depict Specification Section 03 1 0 00 2.2 B.8.A "Anchorages".							
Per ACI Formwork Manual: "A concrete form tie is a tensile unit adapted to holding concrete form secure

	<p>against the lateral pressure of unhardened concrete, with or without provisions for spacing the forms to a definite distance apart, and with or without provision for removal of metal to a specified distance back from the concrete surface." (ACI Formwork Manual 4-35)</p> <p>"Form anchors are devices used to secure formwork to previously placed concrete of adequate strength; they are normally embedded in concrete during placement." (ACI Formwork Manual 4-36)</p> <p>To reiterate, SCCI intends to utilize concrete inserts/anchors per attachments to secure and anchor the wall forms in place. Use of concrete inserts/anchors will leave 2" hole that will be patched once the form system is removed.</p> <p>Is this acceptable?</p>						
T-0420	BGP -Geothermal Loop Air Pockets	Closed	03/06/2013	03/17/2013	03/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP                      Lynn Kowallis		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:			
Ref: M-0006				Accept Suggestion: <input type="checkbox"/>			
<p>Per contract, the geothermal lines are to run below the elevator and sump pits. This will cause a difference in elevation across the a geothermal pipe loop. This will create high points in the loop for bodies of air to gather or get trapped. These air bodies or pockets can coalesce in stagnant water and potentially compromise the hydraulic stability. Typically air elimination systems are implimented at high points to remove these bodies of air after the initial flush/blowout.</p> <p>Please advise how to handles these bodies/pockets of air.</p>				<p>WSPFK Response: Air elimination devices are not feasible in a ground loop. Manual air vents will be provided inside the building in a future package.</p>

T-0423	BSE -Subgrade pit dimensions per comments to TG0300-340.1	Closed	03/07/2013	03/17/2013	03/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Kruttsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Reference Drawings: S1-2024,S1-2027, 7/S1-3010, A1-2817			1) Confirmed that BBII shall use the revised 20'-3 3/4" dimension, enlarging the pit equally to the north and south as stated on the submittal.				
Reference Specificaiton: 31 00 00							
Reference Submittal: TG0300-340.1							
The response to Mud Slab Rebar Shop Drawings Submittal TG0300-340.1/TA1020-32001A06.1 provided new dimensions for depressions in the trainbox subgrade. Per 00 07 00 Part 6.02.A, BBII would like to clarify which dimensions are to be used for construction.			2) The dimensions noted for the GL35/C pit in returned submittal TG0300-340.1 are not new dimensions. Rather, they are the same dimensions as communicated on A1-2817 Revision 1 dated 11/27/2012 and 7/S1-3010 Revision 0 dated 08/30/2012. The sloping regions of the bottom surface of the thickened mat shall slope at a 1 to 1 slope, and remain 5'-0" MIN from the interior pit boundary as noted on 7/S1-3010. Thus, with these constraints the bottom of mat thickening dimension will be as marked up in the returned submittal (16'-9" from GL 35 to the western limit of the GL35/C depression). The 3'-0" dimension is the dimension from GL 35 to where the 1 to 1 slope turns vertical at the expansion joint/edge of mat. Returned submittal and contract documents do not conflict.				
1. Sheet MS-4 of submittal shows subgrade depression between Grid lines 18 & 19 between Gridlines B & C having dimension of 20 '-0' x 40'-4". This is consistent with the dimensions provided on sheet S1-2024 Revision 2 dated 11/27/2013. The review comment by TT revises the 20'-0" dimension to 20'-3". Please confirm which dimension is to be used.			3) Confirmed that BBII shall use the 3'-0" dimension to GL 35 as noted in returned submittal TG0300-340.1 for the eastern limit of the GL 34-35/E depression.				
2. Sheet MS-7 of submittal shows subgrade depression at Gridline 35 between Gridlines B & C as having dimensions of 22'-1 3/4" x 18'-6 3/4". This geometry is base on the size of the pit shown on A1-2817 Revision 1 dated 11/27/2012 and 7/S1-3010 Revision 0 dated 08/30/2012. The Submittal response comments provided show a new overall dimension of 19' -9" and a specific offset to Gridline 35. Please confirm which dimensions are to be used.			4) The perpendicular dimension from the underside of the mat slab to the top of the mud slab is 4 1/2". This is 4" for the protection slab thickness, plus a 1/2" for the waterproofing zone.				
3. Sheet MS-7 of submittal shows subgrade depression between Gridlines 34 & 35 at Gridline E. TT comment calls out 3'-0" from eastern limit of depression to Gridline 35. This dimension was not provided on sheet S1-2027 Revision 2 dated 11/27/2012. Please confirm this dimension is to be used.							
4. BBII understands that dimensions provided on this submittal are to bottom of Mat Slab concrete, and that each dimension should be increased to account for thickness of protection slab and waterproofing. Please confirm that an additional 0'-7" is the correct dimension for this adjustment.

T-0424	BGP - Dewatering Wells / Monitoring Instrument	Closed	03/08/2013	03/18/2013	03/11/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Chris Williams							
<b>REQUEST:</b> Reference Drawings: A1-8711 Reference Photo: Attached  Per plan sheet A1-8711 , Detail 3 & 6, the dewatering well and monitoring instrument pipes are plumb coming out of the mud slab. Additionally, these details do not show couplers or varying diameters on the dewatering wells or monitoring instruments. Currently almost all of dewatering wells have varying diameters with couplers and are almost all out of plumb. The monitoring instruments also seem to be out of plumb. To avoid the plumbness and varying dewatering well pipe diameter issues, is it acceptable to cut the dewatering well pvc pipe at or close to the mud slab elevation to avoid conflict with the dewatering sleeves? How should SCCI handle the sleeves for the monitoring instruments that are out of plumb? Please advise.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>  No. It is not acceptable to cut the dewatering pvc pipe at or close to the mud slab elevation. The cut off must be well above the elevation of the waterproofing spiral wrap and ring plate.  The varying diameters and plumbness of each of the penetrating devices / pipes will require field measurement and shop drawings prepared showing adaptation of the sleeve detail to each unique situation.		
<hr/>							
T-0425	BGP -Geothermal Trench Methods	Closed	03/08/2013	03/18/2013	03/19/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Lynn Kowallis <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> Reference Specification: 31 23 34 3.3 F  Per Coordination Meeting March 6, 2013, S3H Inc. is looking to install the geothermal loop at a depth of 2' below the Mat slab. After the loop installation, the trenches will be back filled with 8" of loose native soil to protect the pipe. This 8" lift will be watered to settle the loose soil around the pipe. Upon watering and settling of the loose 8" lift, the remainder of the trench will be backfilled with native soil and compacted to the relative density of the surrounding soil per specification.  Please confirm.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>  Item 1. F+K response: Depth of trench for geothermal piping shall be per mechanical drawings and specifications.  Item 2. Arup response: 8" of loose satisfactory soil material is per specification 23 57 34 paragraph 3.1.D.  Item 3. Arup response: The remaining backfill shall be compacted to 95% as required in the specifications.

Reference Specification: 03 20 00 Reference Drawing: S1-2250, S1-3306			The inquired C19 & C38 columns are diamond shape in plan where the 3 sides match the shear wall geometry at the edge of opening below and the 4th side is 24" away from and parallel to the end of wall at opening below. Reinforcement & detailing of S1-3306 shall apply to this shape.				
The two columns C19 and column C38 depicted on contract drawings SI-2250, Section 1 all appear to be located adjacent to the opening and per the plan view are graphically represented as diamond shaped. When referencing contract drawing sheet S1-3306 these columns are graphically and dimensionally represented as square and not diamond shaped. Please confirm the geometry of these columns matches that as shown on S1-3306.

<p>other than that of bending of bars is permitted.</p> <p>Also, please refer to the attached section from CRSI which states that flame-cutting of bars have no adverse effects on reinforcement.</p>							
T-0435.1	BGP - Flame Cutting Follow-Up to RFI 435	Closed	05/02/2013	05/10/2013	05/14/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Andy Khuu							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: RFI T-0435, 03 20 00-3.1.6.A							
The response to RFI T-0435 indicated that heating and flame cutting of reinforcing is prohibited unless approved by the EOR and per further discussion about this matter with the engineer it was requested that specific applications be submitted for further review. The following is a list of those applications:		1. From the 05/09/2013 W/OJV Assist Meeting, it was discussed the intention for the need to flame-cut at penetration openings was for trimming straight bars around mat openings or pit edges to achieve proper clear cover that will be spliced with an "L" bar as detailed in contract documents & reflected in the rebar shop drawings and that the use of cutters or saws are not applicable/practicable. It will be acceptable to trim the ends of the Mat and Lower Concourse slab straight bars at openings and pit edges via flame-cutting to achieve detail intent.					
1. Penetrations in Slabs, Walls or Decks. Torch used to cut opening into reinforcing based on final asbuilt layout of penetration.		2 & 3. Handling of construction aids is means and methods and we do not have any comments.					
2. Support Bar. Torch used to trim or remove support/give-away bar due to conflict or other project need.		4. See response to item 1 regarding what will be allowed. For the CDSM shoring wall pile conflict application, it was discussed at the 05/09/2013 W/OJV Assist Meeting that flame-cutting would not be required for necessary adjustments at the mat and that the edge mat bars could be slid inward as required. While we are in support of facilitating construction efforts, the term "unforeseen conflicts" is too vague to allow a blanket approval. If there are other repetitive and already known conditions that the contractor finds flame-cutting necessary, please submit for review with detailed description.					
3. Column Rack/Crush Bar Removal. Torch used to remove rack and crush bars from columns to allow for tremie insertion and additional open space through center of column after column erected into place.		General comments:					
4. Unforeseen Conflicts. Project conflicts that are identified during the course of work and require trimming or removal of reinforcing steel to correct condition. Example CDSM pile conflict.							
Please confirm the use of a torch/flame is allowable for the applications listed above.

Please confirm that the dimension from the left end of the 1/2" embedded plate to the center of the welded headed stud is 3".			Note that detail 4A/S1-7630 specifies the dimension of 1/2" from top of HSS12x6 to 5/8" plate and that the 5/8" plate is shaped with a top edge at a 1:1 slope. This slope starts at the side of the HSS. With the welded studs centered on the HSS and spaced at 1'-0" on center, that leave 3 1/2" from center of welded stud to edge of 1/2" embedded plate.

lines 22 and 26) 121' long (East-West direction)?							
T-0446	BSE - Micropiles W390 & W393 Relocation (Overhead Obstruction)	Closed	03/18/2013	03/28/2013	03/19/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Lynn Kowallis	To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger		
Co-Author: Balfour Beatty Infrastructure, Inc.		Brandon Miller					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Ref: Submittal TG0300-622.4 and TG0601-009.1				Thornton Tomasetti does not object to shifting Micropiles W390 and W393 as proposed.			
Micropiles W390 and W393 cannot be installed as laid out due an overhead obstruction. BBII proposes moving W390 West 16" to provide adequate clearance. BBII proposes moving W393 West either 10" or 2'-10" to provide adequate clearance. The proposed location for Micropile W390 will be South of the geothermal area. The proposed locations for Micropile W393 will be within the geothermal area; however, the proposed locations do not appear to impact geothermal piping and the 12" minimum clearance between pipe and piling will be maintained (Note 4 on Geothermal Submittal sheet GT-Zone-02). See attached sketch. Please confirm this is acceptable.							
T-0447	80 Natoma Shoring Beam in Sump Pit	Closed	03/18/2013	03/28/2013	03/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Robert Kjome	To: Turner Construction Company Gary Krutsch		Answered By:Turner Construction Comp Jack Adams		
Co-Author: Balfour Beatty Infrastructure, Inc.		Kelly Phariss					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference RFI: T-0317.3 Reference Photo: attached				BBII IFC drawing D-2210 shows 80 Natoma Shoring wall to be removed to elevation -44'-6" also GT-2101 shows the Subgrade elevation of Pits to be -44'- 9" .			
BBII has confirmed that the 80 Natoma H pile (shown in attached photo) has been demolished to the -44.5 ft required per Sheet D-2210 and RFI T-0317.3. Please provide depth that BBII must demolish the attached 80 Natoma H pile so not to conflict with geothermal piping.				Deeper removal of the 80 Natoma wall beams are not required in order to allow clearance for the geothermal piping. The TG06 Contractor has taken these into account (Refer to Geothermal Loop Piping Submittals)

T-0448	CDSM Soldier Pile Encroachment	Closed	03/19/2013	03/29/2013	03/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP                      Kirk Nielsen		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:            Accept Suggestion: <input type="checkbox"/>			
Reference Documents: Exhibits A-H		It is acceptable to reduce the foundation wall thickness with reinforcement spacing reduction as proposed for the 5 inquired locations.					
In follow up to the 3/13/13 meeting with AAI and TT regarding the CDSM soldier pile (SP) encroachment WOJV's proposal for mat slab area #1 (Exhibit-A) is as follows:		Note that this is not a pre-approval for future conditions that may arise. W/O shall coordinate these approved modifications with shop drawing preparation.					
Marked up sheets SH-2000 (Exhibit-B) and SH-2001 (Exhibit-C) depict the location of the encroaching SPs and the degree in which they are encroaching.							
Predicated on SE stamped detail A/SLC.1 (Exhibit-D):							
A. At (4) SPs 753, 761, 765, & 787, WOJV is proposing to decrease the wall thickness to 34-1/2" with #11 rebar spacing to 6" o.c. between the centerline of the (2) adjacent piles. For example, as depicted in SK-T-0448.1 (Exhibit-E) SP #753 encroaches 1-1/4". WOJV would reduce the wall thickness while reducing the rebar spacing to compensate for the reduced wall thickness to clear the encroaching SP as depicted in SK-T-0448.2 (Exhibit-F).							
B. At SP 819 WOJV is proposing to decrease the wall thickness to 33 3/16" with #11 rebar spacing to 6" o.c. between the centerline of the (2) adjacent piles. Similar to above, as depicted in SK-T-0448.3 (Exhibit-G) SP #753 encroaches 2-3/16". WOJV would reduce the wall thickness while reducing the rebar spacing to compensate for the reduced wall thickness to clear the encroaching SP as depicted in SK-T-0448.4 (Exhibit-H).							
WOJV did review the possibility of cutting the W21x201 flanges to accommodate the encroachment however, this high risk remedy was ruled out as it could jeopardize the project shoring system.							
Please advise.

<b>REQUEST:</b> Reference: Previous RFI #T-0448, Related RFI #T-0530.  Previous RFI response #T-0448 only addressed the impact of the encroaching CDSM soldier piles (SPs) on the first or bottom wall segments. This RFI addresses the encroaching SPs in mat slab areas 1&2 at all levels of wall. This RFI shall supersede previous RFI response #T-0448.  Please see attachment SK-1 for RFI T-0448.4 questions.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Foundation wall modification proposals 1-10 are not acceptable. Comments are as follows:  A.) This RFI supersedes RFI #T-0448. The proposed rebar scheme in this RFI differs from previously suggested solution without providing calculations that show proposed additional rebar compensates for reduction in moment and shear capacity of the foundation wall cross-section due to shoring encroachment.  B.) Reinforcement for knock-out walls (west of mat slab area #1) differ from those in typical foundation walls (e.g., see S1-2060 for section call out). Provide solutions for knock-out walls.  C.) Provide an elevation sketch that shows the proposed vertical extent and detail of added rebar.  D.) Lap splices are not allowed in additional rebar. Use Type 2 mechanical couplers.  E.) Provided generic cross-section detail is insufficient to show the actual location of the added rebar in plan. The extent of the applied options should be shown on plan for clarity.  F.) Reference SK1 is not included in this RFI.  G.) Maximum encroachment dimension provided for SP(s) #737-739 does not match maximum dimension provided in SK-2 and SK-3, please reconcile.  H.) Do not refer to a superseded RFI (in SK-3 comments column for pile 819).  I.) Coordinate all modifications with future shop drawings for TG06.

#### Co-Author:

#### REQUEST:

Reference Documents: Exhibits A - G

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the South wall in slab area 1 & 2 as well as all levels of the encroachment into the foundation wall between CDSM piles 733 and 772. (Exhibit A)

Exhibit B & Exhibit C depict the location and degree in which the SPs are encroaching.

WOJV proposal: Between SPs 733 and 772 (which is the intersection of the South and West wall) WOJV is proposing to decrease the specified 36" wall thickness to 33 1/8" to clear all the encroaching SPs. WOJV would reduce the thickness while reducing the rebar spacing to compensating for the reduced wall thickness predicated on SE stamped Detail A/SLC.1 (Exhibit D) this modification would clear all the encroaching SP/steel plate issues between 733 & 772, See Exhibit E, F, & G.

This modification, if approved, would be incorporated into the TG06 shop drawings.

Please confirm if this is acceptable.

#### SUGGESTION:

#### ANSWER:

Accept Suggestion: ☐

The proposed modification to foundation wall reinforcement is acceptable. W/O to coordinate these changes with TG06 contractor, including previously-approved mat rebar shop drawings for this zone.

Co-Author:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
REQUEST:				Plumbness of the dewatering well is not explicitly mentioned in the specifications. However Dewatering Specification section 31 23 19 1.11 C states "Coordinate work to avoid clashes with.....and other items to be installed as part of the permanent structure" and detail 6 / A1-8711 shows the Dewatering Pipe drawn plumb and fitting snug within the steel sleeve.			
Specification Section: 31 23 19							
Please confirm the TG03 contract documents tolerance for the plumbness of the dewatering well casings.							

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>Reference Specification:032000 Reference Drawings:S1-3411, S1-2251</p> <p>Please reference the Vehicle/Bike beam end support detail 1 on S1-3411. The L8x8 connections appear to be shown to be fabricated at a 90 deg angle between the foundation wall and the Vehicle/Bike beams. Per Detail 1 on sheet S1-2251, the beams are shown to be intersecting the foundation wall at varying angles. SCCI requests further clarification/details at the beam locations for the fabrication of the L8x8 connections.</p>						
T-0453.1	BGP - Vehicle/Bike Beam End Supports	Closed	04/11/2013	04/21/2013	04/22/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis		To: Turner Construction Company Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Jesse Dillon							
REQUEST: Ref: RFI T-0453, AI-7401, SK-115		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>			
<p>Please reference attached drawings. RFI T-0453 stated that the L8x8x1 1/8" shall be bent to match the angle at which the Vehicle/Bike ramp beams meet the wall. At the western most beam the acute angle at which the beam meets the wall is 56 degrees and the obtuse angle is 124 degrees. See attached marked up Contract Drawing AI-7401 for angle measurements. Bending the 1 1/8" thick legs of the L8x8 is not feasible and would structually stress the member. SCCI proposes to weld two 1 1/8" plates together to fabricate the angles. See attached drawing SK-115 for details. The additional two beam members shall be fabricated per the measured angles.</p> <p>Please advise if this is acceptable.</p>				<p>For inquired non-90 degree angle conditions, L8x8 can be bent to angle required.</p> <p>It is acceptable to weld two 1 1/8" plates together to create the (2) angles for the western most beam, provided a complete-joint-penetration (CJP) weld is used.</p>

Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST: Reference Specification:055010-3.2.C Reference Drawings: S1-3003 Reference Photo: attached  Please reference Sheet S1-3003 of the Contract Drawings and Spec Section 055010-3.2.C SCCI spot checked two of the existing dewatering wells for plumbness and found them both to be approximately 3/4" over 48" out of plumb (see attached photos). With this existing condition, SCCI can not adhere to the plumbness tolerance (1/16") for installation and maintain the required 1/2" maximum gap between sleeve and casing per Section 2 of Sheet S1-3003. SCCI suggests increasing the diameter of the sleeve and granting a variance on the 1/2" gap tolerance per Sheet S1-3003. SCCI will maintain adherence to the installation tolerances in Spec Section 05 50 10.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> For the existing dewatering wells, we will not object if the maximum gap between sleeve and dewatering well casing exceeds 1/2" for those dewatering wells found to be out of plumb.	

T-0455.1	BGP - Dewatering Well Above Grade PVC Pipe	Closed	03/29/2013	04/08/2013	04/02/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome			To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger	
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST: Reference Drawings: A1-8711  Per discussion in the pre-installation and preparatory DFOW meetings for the metal fabrication penetration sleeves, the PVC dewatering casing above the mud slab can be cut just above or at top of mud slab elevation to avoid varying diameter issues. Without the dewatering casing present above mud slab grade, the varying casing diameter issues and plumbness issues are solved. The to avoid debris entering the dewatering casing, the casing would not be cut until the penetration sleeve is to be installed. Please confirm per the discussions in the meeting that cutting the casing is acceptable. Please note that the grouting back of the dewatering casing shortly after the decommissioning of the dewatering pump will be uniform (without segregation) for both below mudslab elevation and above.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The description contained in RFI T-0455.1 is acceptable. Note that dewatering casings that require to be cut, should be cut above the top of mud slab (not at the top of mud slab).

T-0456	BGP - Mass Concrete Temperature Monitoring Equipment Installation in MAT Slab	Closed	03/25/2013	03/25/2013	04/03/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Ian Corcorran <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Reference Specification: 03 30 20 (3.11.A & 1.3.A.8)  Per Specifications 03 30 20 (3.11.A & 1.3.A.8), SCCI will install temperature monitoring devices at specified locations and depths. These instruments use RFID Tag technology for communication with the data logger. The RFID transmitter, which is wired to the temperature monitoring device, will be elevated out of the concrete. SCCI will tie a 1/4" diameter fiberglass, or similar non-corrosive, rod to the reinforcing mat. The temperature monitoring RFID transmitter will then be elevated clear of the Mat Slab. Once Thermal Monitoring activities are complete, this non-corrosive rod and cable will be cut flush with slab. Reference attached brochure and SCCI sketch.  Is this method acceptable?			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Thornton Tomasetti does not object to proposed method presented in RFI.  GC to coordinate waterproofing requirements with waterproofing subcontractor and submit proposed waterproofing details in the shop drawings.				
T-0457	BGP - Mat slab changes per Field Order 11 (Future ASI 102)	Closed	03/25/2013	04/04/2013	04/03/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Filip Filipic			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Reference RFI: T-0415 Reference Field Order No. 11 (Future ASI 102)  Field Order No.11 (Future ASI 102) is still in the design stage, and without the Contract Drawings incorporating the field orders SCCI cannot plan the work. More specifically, are there any changes to the foundation (Mat slab) resulting from Field Order 11 (Future ASI 102)?  For example: If there are changed/added drainage pits in the SCCI's Area 3 (Mat slab pour # S103; GL A thru J, and 1 thru 3.5), geothermal work cannot begin until such changes are incorporated.  Please confirm that Field Order No.11 (Future ASI 102), or any other forthcoming Field Order has no changes in the Mat slab drainage system (drainage pits, thickened sections, etc.), that would impact the subgrade work.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Regarding ASI 102 For the Mat slab GL A thru J and 1 thru 3.5 drainage pits are not expected change, with the exception of the small sump pit in the elevator pit GL 1.4 to 2, E.6 which was shown on the attachments responding to RFI T-0415 BGP. Within the mat slab (not affecting slab thickenings) floor drains and floor sinks have been relocated at the Fire Pump and Domestic Booster and Irrigation Pump Rooms and a floor drain will be added at the electrical room located GL 1.4 to 2, B to C.

T-0458	BGP - Concourse Slab CJ Layout	Closed	03/26/2013	04/05/2013	04/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Andy Khuu							
REQUEST: Reference Specification: 03 30 20 Reference Drawings: CJ-05 and CJ-22  In order to meet the Joints in Concrete specifications (03 30 20-3.2), SCCI's revision of Construction Joint (CJ) Layout Submittal requires the CJ between concourse slabs D116 and D117 (see attached reference drawing CJ-22) to be 2'-10" outside of the required center third of the span (reference 03 30 20- 3.2.B.1 ). Please advise if this is acceptable.  If the above is not acceptable, then SCCI proposes to move the CJ line (between D116 and D117) 2'-10" to the East. Since mat slab S108 (see attached reference drawing CJ-05) is currently 120'-0" wide, it will be increased to 122 '-1 0" wide. This would be wider than the maximum width of 120' -0" as specified in 03 30 20-3.2.A.3. Please advise if this alternative is acceptable.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The second option (that will result in a larger mat pour) is acceptable.			

T-0459	BGP - Waterproofing and CJ Concourse Slab Layout Conflict	Closed	03/27/2013	04/06/2013	04/01/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis		To: Turner Construction Company Gary Krutsch		Answered By: Turner Construction Comp Jeff Thiel			
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference Specification: 07 12 10 Reference Drawings: A1-2203 and S1-3201  Please reference A1-2203 and SI-3201 of the Contract Plans and the attached drawings. The current elevation at the bottom of the 2nd level bracing lookouts is at approximately -5.13, WEST of Grid 9 (see concourse slab drawing). The proposed top of concourse slab elevation is to be -5.42, WEST of Grid 9. Per the WPM-1 waterproofing system, the minimum overall tie-in dimension needed for the succeeding lift is approximately 1 '-11" (see attached waterproofing drawing).  The current elevation at the bottom of the 2nd level bracing lookouts is at approximately -6.15, EAST of Grid 9 (see concourse slab drawing). The proposed top of concourse slab elevation CJ is to be -7.67, EAST of Grid 9. Per the WPM-1 waterproofing system, the minimum		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>  This is a contractor coordination issue. T-0462	BGP - Grounding Wire Penetrations in Mud & Protection Slab	Closed	03/28/2013	04/07/2013	04/10/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Lynn Kowallis      To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:			SUGGESTION:		ANSWER:		
Ref: 5/A1-8710 and Submittal Package TG0600-023.1 sheet 5.07, Specification Section 26 05 27					Accept Suggestion: <input type="checkbox"/>		
The contract plans and specifications call for the grounding wire to be bare copper. At the locations in which this grounding wire penetrates the mud & protection slab, the waterproofing supplier (Laurenco) requires the ground wire penetration to be solid metal or a rod. Laurenco has stated that if the electrical grounding penetration through the slab is wire as shown in the plans and specifications, the waterproofing system will leak. Please advise.					For each of the grounding electrode conductors that penetrate the waterproof membrane, in order to provide a smooth impenetrable surface, splice a solid copper 4/0 grounding conductor per the attached detail sketch ESK-20 using Erico Cadweld mold #PTC-2P2L or equal. Refer to the attached revised waterproofing detail 5/A1-8710 for waterproofing of these spliced conductors.		
					Jeff Thiel 4/10/2013 Pending TJPA approval, a CR for this work is forthcoming.		
T-0463	BSE - Micropiles W400 & 417 Relocation	Closed	03/28/2013	03/29/2013	04/01/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Ian Corcoran      To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc.      Brandon Miller							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Specification: 31 63 33					Accept Suggestion: <input type="checkbox"/>		
Micropiles W400 and W417 cannot be installed as laid out due to an overhead obstruction (Geotechnical Instrumentation Pipes).					Thornton Tomasetti does not object to moving micropiles W400 and W417 as proposed.		
BBII proposes moving W400 South 5' and W417 South 3' to provide adequate clearance. The proposed locations for Micropile W400 and W417 will be within the geothermal area; however, the proposed locations do not appear to impact geothermal piping.							
See attached sketch.							
Please confirm this is acceptable.

T-0466.1	BGP - Ground Rod for SFPUC	Closed	04/11/2013	04/21/2013	04/23/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Lynn Kowallis		<b>To:</b> Turner Construction Company Gary Krutsch		<b>Answered By:</b> Adamson Associates, Inc. George Metzger			
<b>Co-Author:</b> Shimmick Construction Company, Inc. Chris Williams							
<b>REQUEST:</b> Ref: RFI T-0466, RFI T-0442  SCCI is in receipt of the response to RFI T -0466 concerning the addition of SFPUC grounding rods/grids. In order to price this change SCCI and its electrical subcontractor need the following information:  On Drawing SKE-021, Note 8, please provide a location on where to terminate each of the four 4/0 cables at the lower concourse slab. A revised SKE-024 drawing showing the exact stub up locations and dimensions is needed to accurately price and construct this change.  On Drawing SKE-022, Note 3, please again advise where to terminate the four 4/0 cables at the lower concourse slab. A revised SKE-024 drawing showing the exact stub up locations and dimensions is needed to accurately price and construct this change.  Please confirm that the details from the RFI T -442 response will apply to these penetrations.  Please confirm that there only two areas (detailed on SKE-021 & SKE-022) that will require the additional SFPUC grounding.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>  1. Please find the attached drawings to clarify the ground rod locations. The ground rods are noted to be approximately ten feet on center. Coordinate the specific placement of the rods and GEC to avoid the geothermal piping. We have included Lower Concourse drawings to indicate the grounding electrode conductors that will route into the Lower Concourse slab. Exact dimensioning of these conductors in the foundation wall and slab are not required, Contractor to coordinate exact locations with underground piping in this area. The GEC will be extended to bond to a ground grid at the four corners of the new Electrical Rooms B1289 and B1441. Additional slab details for the mesh and GEC bonding will be provided in an upcoming drawing issue.  2. Yes, the details from RFI T-442 will apply to these and all grounding conductor penetrations of the waterproof membrane. See SKE-025 for the connection detail referenced on sheet E1-6006, detail 2.  3. Yes, the two locations are the only known new SFPUC grounding locations. Please note that the ten foot ground rod separation shown on SKE-021R1 at the transformer vaults has been increased.			
<hr/>							
T-0466.2	BGP - Requesting Detail 2 on drawing E1-6006	Closed	04/19/2013	04/29/2013	04/23/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Lynn Kowallis		<b>To:</b> Turner Construction Company Gary Krutsch		<b>Answered By:</b> Adamson Associates, Inc. George Metzger			
<b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b> Ref: RFI T-0466, Drawing E1-6006  Reference is made to RFI T -0466 and the attached sketches. Note I on SKE-022, Note A on SKE-023 and the first note below (Top of Slab -35'-8") references a detail on Contract Drawing E1-6006 for the added SFPUC Ground Rods. The current drawing E1-6006 does not have the noted detail. SCCI requests an updated E1-6006 drawing with the new detail.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>  SKE-025 issued with the RFI response indicates the specific referenced detail 2 on Sheet E1-6006. See attached for a duplicate copy.

T-0467	BGP - Lower Concourse Conflicts	Closed	03/28/2013	03/28/2013	04/01/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome			To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Jeff Thiel	
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference Drawings: SH-5002, SH-2007, SH-2008, SH-3001			This is a contractor coordination issue. CM/GC to coordinate this work between their sub-contractors and show the proposed solution in the coordinated shop drawings.				
SCCI is in discovery that the W21x101 and W14x30 support beams and lookouts at the shoring level B are encroaching into the lower concourse slab between GL 1 and 9.5. TOC for the concourse slab is at EL. -5.42' (GL 1 thru 9.5); Bottom of W21x101 support beams and W14x30 lookouts are at EL. -6.25' and -5.67' respectively.							
Please confirm that these will be removed prior to construction of the lower concourse level. If these struts supports are to remain throughout construction of the lower concourse please provide detailed drawings showing incorporation (or blockout) of these W21x101 support beams and W14x30 lookouts into the lower concourse slab.							
<hr/>							
T-0468	BGP - Geothermal Pipe Riser in CDSM Wall Excavation Specification	Closed	03/29/2013	04/08/2013	04/08/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference Specification: 23 57 34, 31 23 34			This is acceptable west of gridline 7.				
Per discussions with the designer (ARUP), the CDSM wall will continue to move until the mat slab has been placed. With the geothermal pipe riser being installed much ahead of the mat slab, there is a good chance that the riser chase pour back will be jeopardized by the wall movement. Per specification 31 23 34, 3.2, B, the geothermal riser pipe chase cannot remain open for longer than 10 calendar days. Is it acceptable to extend this duration to account for the wall movement until the mat slab is poured?							
Please advise.

<b>From:</b> Webcor Construction LP      Ian Corcorran <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b> Ref. Spec: 03 30 20.3.6.B.1.b  Contract specification section 03 30 20.3.6.B.1.b, states "Slope surfaces uniformly to drains where required."  However, the contract plans for the below grade package (TG06.0), does not show drainage slope for the Mat Slab.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> We confirm that there are no slopes to drain on the Mat Slab. The top of slab is uniformly -35'-8".

<b>From:</b> Webcor Construction LP <b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.		Lynn Kowallis Danny Walsh		<b>To:</b> Turner Construction Company Gary Krutsch		<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>REQUEST:</b> BBII has received COM1902 directing BBII to re-design the east end shoring utilizing similar waler connections provided in the attached sketches.  Prior to commencing re-design, BBII requests the following information from the Shoring wall EOR so our Bracing EOR can properly evaluate the interaction between the Bracing system and wall.  Will it be permissible to shed the bracing loads from the transverse end wall (line 35) into the longitudinal CDSM wall (A&J Lines)? If this is acceptable please indicate if there are any limitations, restrictions, or design assumptions regarding the amount of load that can be shed over a given length of wall.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Regarding permissibility, see Note 11 on Sheet GT-1111.  Regarding the CDSM wall stiffness, see the response to RFI T-0345.  Regarding the CDSM wall allowable friction, see the response to RFI T-0427.  To evaluate horizontal stress, see the guidance provided on Sheet GT-1110

T-0477	BSE - Multiple Micropile Relocation (Below Grade Obstruction)	Closed	04/03/2013	04/13/2013	04/04/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Lynn Kowallis <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Brandon Miller							
<b>REQUEST:</b> Ref: Submittal TG0300-622.4  While installing Micropile W454 as laid out in the approved submittal, BBII encountered a concrete obstruction 8' below grade and was unable to continue drilling at that location. Even though the micropile layout was approved in submittal TG0300-622.4, BBII suspects the drill rig encountered the CDSM Prototype wall as approximately shown in the attached drawing. BBII suggests relocating the micropiles as shown in the attached drawing to avoid the obstruction. The proposed locations for the micropile relocations will be within the geothermal area; however, the proposed locations do not appear to impact geothermal piping. See attached sketch. Please confirm this is acceptable.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Thornton Tomasetti does not object to relocating micropiles W452, W454, W473, W475, W487, W488, and W500 as proposed.		
T-0478	BGP - Shear Reinforcement Clear Cover at Pits	Closed	04/03/2013	04/17/2013	04/10/2013	Potentially	<input type="checkbox"/>

From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference RFI T-0479 & T-0479.1							
Grace requires that there be a minimum 8" clear horizontal to allow for the waterproofing membrane transition.							
For trestle piles and pin piles located at slab depressions at the edge of the slope or on the face off the slope, please confirm that the flat mud slab can be lowered to provide 8" clear horizontal to allow waterproof membrane transition in lieu of the 18" described in RFI T-0479 and T-0479.1							
		This RFI is for a substituted system that is not the system designed by the Architect, so the Architect cannot comment on design intent or other aspects of the substituted system. Per specification section 01 16 30 article 1.4/B and other associated specification sections the Contractor is to prepare all necessary documentation to support the contractor's substitution proposal which would include direction on the item noted in this RFI.					
		The Contractor should have the design professional responsible for the substituted waterproofing design: (1) immediately prepare necessary design documentation for the substituted system including the impacts on adjacent trades as required by specification section 01 16 30 article 1.4/B.5, and stamp and certify that design to the Owner and the Architect; and (2) respond to Contractor submittals and manufacturer questions about the substituted system (with copies to the Owner and the Architect). Until that design professional's documentation, certification, and response process is in place, the Contractor should confirm all waterproofing system questions and details with the waterproofing manufacturer (with copies to the Owner and the Architect).

T-0480	BGP - Future Train Platform Wall Dimension Conflict	Closed	04/03/2013	04/17/2013	04/16/2013	Potentially	<input type="checkbox"/>
<div><div>From: Webcor Construction LP</div><div>Ian Corcorran</div><div>To: Turner Construction Company Gary Krutsch</div><div>Answered By: Adamson Associates, Inc. George Metzger</div></div> <div>Co-Author: Shimmick Construction Company, Inc. Andy Khuu</div>							
REQUEST:		SUGGESTION:		ANSWER:			
Ref. Dwg. S1-2054, S1-2055				Accept Suggestion: <input type="checkbox"/>			
Drawing S1-2054, at Grid line E/13 calls out Future Train Platform Room Walls to be 1'- 2" Typ, UNO. Drawing S1-2055, at Grid line C/22 calls out Future Train Platform RM Walls to be 1'- 0" Typ. UNO. Please clarify the proper dimension of the Future Train Platform RM Walls.				The note for future train platform room wall thickness apply per zone sheet. Therefore the future train platform walls are confirmed to be 1'-2" typ UON on S1-2054 and confirmed to be 1'-0" typ UON on sheet S1-2055. Note that for S1-2055, there are 2 future train platform rooms - one at gridline C between 21 and 22 and the other at gridline E west of 19.9.			
T-0481	BGP - Concourse Slab Penetration Sleeves	Closed	04/08/2013	04/18/2013	04/12/2013	Potentially	<input type="checkbox"/>
<div><div>From: Webcor Construction LP</div><div>Ian Corcorran</div><div>To: Turner Construction Company Gary Krutsch</div><div>Answered By: Adamson Associates, Inc. George Metzger</div></div> <div>Co-Author: Shimmick Construction Company, Inc. Ben Gordon</div>							
REQUEST:		SUGGESTION:		ANSWER:			
Ref Dwg. A1-2842-2851				Accept Suggestion: <input type="checkbox"/>			
In SCCI's experience unanticipated modifications and adjustments to the plumbing system are inevitable. Because of this SCCI requests not installing vertical block out sleeves in the concourse level for plumbing prior to slab placement. SCCI shall core penetrations after the slab is placed. The slab shall be scanned for rebar prior to coring to avoid unnecessary rebar strikes. This will allow for any unforeseen modifications or adjustments and ensure there are no unnecessary or extra penetrations in the concourse slab. Please advise if this is acceptable.				George Metzger 4/11/2013 It is not acceptable to post-core (or post-drill) penetration into the lower concourse slab, except where specifically approved by the Structural Engineer of Record. Contractor shall coordinate penetrations with other trades and embedded assemblies in concrete as required by specifications. Post-installed modifications/adjustments shall be submitted for review.			
T-0482	BGP - Partition Wall Pier Height	Closed	04/05/2013	04/15/2013	04/17/2013	Potentially	<input type="checkbox"/>

showing piers at a height of 27'2" and 28'11" respectfully. SCCI is requesting clarification with pier height regarding reinforcement as well as opening width allowed.							
T-0483	BGP - Request for reinstatement of a smaller high congestion mock-up.	Closed	04/05/2013	04/15/2013	04/17/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Lynn Kowallis	To: Turner Construction Company Gary Krutsch		Answered By:Turner Construction Comp Stacy Wilson		
Co-Author: Webcor Construction LP		Kirk Nielsen					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Ref: S1-3202, S1-2204, S1-3201, S1-3208		VOID per conversations between Kirk Nielson and Gary Krutsch on 4/15/2013. This RFI is considered void. Refer to CR T-063.					
Via CCO #0035 the TJPB unilaterally deleted Bid Item #14 the high congestion mock-up and disposal. WOJV maintains that the inclusion of a mock-up for areas of high congestion (Exhibit-A) is not only good construction practice but will mitigate if not eviscerate the unquantifiable liability. WOJV recommends, at a minimum, reinstating a high congestion mock-up configured as follows:							
1. The area to mock-up is indicated on marked up sheet S1-3202 (Exhibit-B).							
2. The mock-up is representative of the location marked up on sheet S1-2204 (Exhibit-C) and configured as indicated on marked up sheet S1-3201 (Exhibit-D).							
3. The mock-up is dimensioned as indicated on marked up sheet S1-3208 (Exhibit-E).							
Please issue drawings for a smaller high congestion mock-up that the TJPB deems appropriate, if not indicated on the attached sheets.

T-0484	BGP - Water Welding Test	Closed	04/05/2013	04/15/2013	04/18/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome			To: Turner Construction Company Gary Krutsch				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference Specification: 05 50 10- 2.5.C.2  Per the discussions held at the Metal Fabrications Preparatory DFOw meeting, SCCI is requesting a variance from Spec Section 05 50 10 - 2.5.C.2. This Spec. is feasible in a shop environment prior to galvanization and an effective means to dry and remove water upon completion of testing. These sleeves will be continuously welded in the field both before and after the horizontal waterproofing is installed (depending on the type of sleeve), therefore making it very difficult to seal and handle the water upon completion of the test. Discussions were held regarding leaving the water between the sleeve and pile and evaporating over time. SCCI sees this as a concern due to the backside of the weld and the heat-affected zone will not be galvanized and will potentially become a point of corrosion. SCCI requests 100% visual inspection on both the root and cover passes in lieu of filling the sleeve gap with water. Is this request and variance acceptable?			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The sleeve joints are to be water tight. Water testing of welds as required in the specification is to be executed. Please submit a test procedure description.	
<hr/>

Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Specification: 033020							
Pursuant TJPA's response to RFI T-0486 please reference attached letter from SCCI's concrete supplier Cemex. Cemex has performed the set time test to evaluate the time at which at which the onset of hydration occurs for mixes 1556034 and 1558218. For the two mixes referenced herein, is it acceptable to extend the concrete delivery times to 2 hours?		Extending the concrete delivery to 2 hours is acceptable as proposed in RFI T-0486 provided that the tested mixes match approved mix designs.					
		It is not clear that the tested mixes were the approved mix designs for the mat and foundation wall (we assume the RFI means 3'-0" exterior foundation wall and not any other wall or shearwall and our response only applies to this item) as the mix numbers and/or the mix descriptions do not match any approved mix design.

T-0490	BSE - Multiple Micropile Relocation (Trestle Overhead Obstruction)	Closed	04/09/2013	04/19/2013	04/16/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Lynn Kowallis <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.                      Kelly Phariss							
<b>REQUEST:</b> Ref: TG0300-622.4  Multiple micropiles underneath the trestle cannot be installed as laid out due to an overhead strut support obstruction. BBII suggests relocating these micropiles south to provide 4' of clearance from the overhead strut support to each micropile. The proposed micropile locations will be within the geothermal area; however, they do not appear to impact geothermal piping. See attached sketch.  Please confirm this is acceptable.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Thornton Tomasetti does not object to relocating these micropiles as proposed.		
<hr/>							
T-0492	BGP - Backfill of Geothermal Pipe	Closed	04/11/2013	04/21/2013	04/23/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Lynn Kowallis <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Chris Williams							
<b>REQUEST:</b> Per discussions following the Turner BSE Progress Meeting with the geothermal designer, it is acceptable to backfill and compact the continuous loop after having been installed in the trench. This backfill is contingent upon the ends of the loop being left exposed for the loop welds to the manifold. Backfill over these welded joints and manifold will not be completed until the 100 psi hydro test is complete.  Please confirm this is acceptable.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> It is acceptable to backfill horizontal loop trenches after pneumatic test of individual horizontal loops.		
<hr/>							
T-0493	BGP - Geothermal Loop Spacing Tolerances	Closed	04/11/2013	04/21/2013	04/16/2013	Potentially	<input type="checkbox"/>

<b>REQUEST:</b> Per attached RFI response T-0494, please provide SCCI with an architectural fin ish schedule.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Refer to the Draft Room Finish Schedules for the B2 and B1 levels on the attached SKA-2726 and SKA-2727.			
<hr/>							
T-0495	BGP - Foundation Wall Concrete Inserts	Closed	04/12/2013	04/22/2013	04/24/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Lynn Kowallis		<b>To:</b> Turner Construction Company Gary Krutsch		<b>Answered By:</b> Adamson Associates, Inc. George Metzger			
<b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b> Ref: A1-2812, A1-2821 A1-2842, A1-2843, A1-6231  Please reference the attached drawings regarding foundation wall concrete inserts. SCCI is requesting details clarifying the locations and scope of the horizontal concrete inserts on the mat slab level foundation walls and vertical concrete inserts on the lower concourse level foundation walls. The following issues have been discovered in the drawings:  1. A1-2843 has specified two contradicting lengths for the continuous vertical wall inserts as shown in the clouded sections. 2. A1-2812 and A1-2842 appear to indicate inserts along the West wall however there is no information declaring lengths and scope. 3. A1-2821 references detail 3 / A1-6231 which is not a detail that is shown on A1-6231.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1. Horizontal concrete inserts are to extend entire length of the South foundation wall. Refer to clarification on the attached sketch SKA-2690, which corresponds to sheet A1-2843.  2. There are no concrete inserts along the West foundation wall at B2 (Train Platform) level. Refer to clarification on the attached sketch SKA-2689, which corresponds to sheet A1-2842 for concrete inserts at the B1 (Lower Concourse) level.  3. Clarification notes have been added to SKA-2693, which corresponds to A1-6231. Reference correction shall be made to read A, B, C/ A1-6231. Also, starting point for horizontal concrete insert has been added on SKA-2687, which corresponds to A1-2820.  Attached sketches, SKA-2687, SKA-2688, SKA-2689, SKA-2690, SKA-2691, SKA-2692 and SKA2693 are included for clarification purposes. Their corresponding sheets shall be formally issued as an ASI at a future date.

	<b>REQUEST:</b> Ref Dwg. 2/A1-8711  Please reference Detail 2 of A1-8711 of the Contract Drawings and the attached letter from Deneef/Grace. Detail 2 of A1-8711 calls for a 6" diameter, 18 ga. galvanized steel boot to be adhered with trowelable grade adhesive and filled with urethane sealant. Submittal #TG0600-024 approved the use of Deneef Swellseal WA which is the product called out in Spec Section 07 12 10.  The attached Deneef/Grace technical letter dated 04/05/13, states that filling the entire boot with Deneef Swellseal is excessive and state that filling the entire boot with Swellseal WA is more than necessary and affect the curing capability.  Deneef/Grace suggests that the material be installed 2-3" deep and topped with a non-shrink grout such as "Rapid Set CT Construction Grout" or "Rapid Set Cement All" to contain it in the boot. The manufacturer states that the waterproofing ability of the material in this configuration would not be compromised. Please review and advise.	<b>SUGGESTION:</b>					
			<b>ANSWER:</b>	<b>Accept Suggestion:</b> <input type="checkbox"/>			
				The design team does not object to your proposal.			
<b>T-0497</b>	<b>BGP - C29 Column Detail Clarification</b>	<b>Closed</b>	<b>04/17/2013</b>	<b>04/27/2013</b>	<b>04/22/2013</b>	<b>Potentially</b>	<input type="checkbox"/>

T-0498	BGP - Waterproofing Mock Up	Closed	04/18/2013	04/18/2013	04/25/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Kody Cooper <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Reference Specification: 07 12 10 - 1.6.C.2  The waterproofing manufacturer's field representative/installer are to construct a 10'x10' on site mock up of the full waterproofing assembly. Upon completion of the mock up (excluding any major waterproofing deficiencies), SCCI intends to utilize it as part of the permanent structure. Is this acceptable?			<b>SUGGESTION:</b>  <b>ANSWER:</b> Accept Suggestion: <input type="checkbox"/> It is suggested, but not a requirement, the mock-up is installed separate from the work to allow the mock-up to be referenced in the future. Installing the mock-up as part of the work has some benefits in uncovering additional site issues.  2. All shop drawings related to the waterproofing and the proposed materials to be used have not been submitted to the design team for review at this time. The mock-up shall utilize the materials confirmed in the shop drawing process. If the mock-up is constructed with the wrong materials, the mock-up may need to be reconstructed with the proper materials based on the TJPA Representative's determination as to the acceptability of the materials utilized in the mock-up.  3. The mock-up is scheduled to be constructed today. The overall waterproofing work may not happen immediately, in which case the mock-up may need to be replaced if it is not properly protected until the remainder of the work is installed.				
T-0499	BGP - Geothermal Manifold Location for Fields1 & 2	Closed	04/18/2013	04/28/2013	04/25/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Kody Cooper <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Chris Williams			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Reference Drawing: SK-3  Per the contract drawing, the manifold is to be located at an elevation no greater than 14' below finish grade (street) elevation. Per conversations in the preparatory DFOW meeting and other coordination meetings, the Engineer planned to have the manifold in a specific location. Attached is an elevation drawing for Field 1 & 2 Manifolds. Please confirm that the attached elevation details work with the designer's intent for the manifold locations for Field 1 & 2.			<b>SUGGESTION:</b>  <b>ANSWER:</b> Accept Suggestion: <input type="checkbox"/> Height of vertical sleeve penetrations through the foundation wall is acceptable for loop fields 1 and 2. Please submit similar clarifications for all further ground loop riser penetrations.

	<p>The details call for various pieces of the slide bearing assemblies to be continuously and tack welded to plates. See clouded callouts on attached drawings. No welding details are provided with the callouts. Please provide details for continuous welds and spacing for tack welds.</p>						<p>provide 1"@4"oc max 1/8" fillet weld with 1" min at each corner along each side of the 10 gauge plate.</p>
T-0503	<b>BGP - Geothermal Pipe Loop Bends</b>	Closed	04/18/2013	04/18/2013	04/23/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Robert Kjome		<b>To:</b> Turner Construction Company Gary Krutsch	<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Chris Williams							
<b>REQUEST:</b> <p>Per the geothermal pipe manufacturer's (Performance Pipe) recommendations, the geothermal pipe should not be bent in a radius smaller than 25 times the pipe diameter. For the geothermal pipe loops, this equates to a bend radius of 41.5". However, the goethermal design drawings depict the loops to be 60" on center that would leave a large overlap (in theory) of almost 24"/2'. To achieve a 41.5" radius, the trench spacing will have to be increased to 83" between the supply and return trench. Please note, that the pipe manufacturer discourage "bulbing" the end of the loop and recommended resolving the issue away from bending or "bulbing" the end of the pipe loop.</p> <p>S3H Inc. is proposing to overlap half of a loop onto another such that the spacing between pipes remains at a 4' minimum (per RFI T-0493). This would create a 8' minimum distance between the supply side of a loop and the return side of a loop. In doing so, a portion of the two overlapping loops would be crossing. Is this acceptable? Please find attached drawing #1 as a reference of the proposed layout. Please note that this proposed method would change the reverse return self balancing configuration of piping. This proposed method also has the possibility of being impacted by various micropile conflicts.</p> <p>S3H Inc. is also proposing as a fix to field one to install 2 fused - 90 degree elbows at the end of each loop in a U-shape configuration using the current, as installed dimensions between the loops. Please find attached Drawing #2 depicting the 90 degree elbows on the loops</p>		<b>SUGGESTION:</b>	<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> <p>WSPFK Response: Maintain pipe manufacturers' minimum long term bend radius as required per specifications with loop arrangement as shown on contract documents. Large Radius bends following the manufacturers' minimum pipe bend radius are an acceptable practice per IGSHPA standards (IGSHPA Design Manual Section 7.6.2.1). James Bradshaw 4/19/2013</p>				

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
<p>This would eliminate the required 83" bend diameter. This is least impact proposal to rectify the already installed field 1, but would be an additional cost.</p> <p>Please advise as to how to proceed with Field 1 as well as the remaining 14 Fields.</p>							
T-0504	BGP - Radius Foundation Walls - R=637.63'	Closed	04/19/2013	04/29/2013	05/02/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis		To: Turner Construction Company Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST: Ref: Submittal Package T0600-030  SCCI's plan is to construct the R=637.63' foundation walls in 16' chords. Layout of the construction joints shall be per approved as noted CJ layout submittal. R=637.63' foundation wall runs along the Southwest portion of the project, from GL 3 thru GL 16, or SCCI's wall pours W160 thru W174A. See attached sketch of the wall detail for clarification. Is this acceptable?		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/> The proposal to layout the wall in 16' chord segments is not acceptable. The foundation wall assembly is designed with a 2" zone for the waterproofing assembly and a 3' thick foundation wall. Providing chord segments instead of a curved radius will reduce the thickness of the foundation wall.			
<hr/>							
T-0504.1	BGP - Radius Foundation Wall Formwork	Closed	11/19/2013	11/29/2013	11/25/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST: Please reference RFI T-0504.  SCCI plans to construct the south foundation walls from GL2.75 to GL 12.08 in 8' chords. See attached sketch for clarification. 8' chording of the walls will keep the wall faces within the construction tolerances.  Is this acceptable?		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/> George Metzger 11/22/2013 RESPONSE: The 8' chording on the curved part of the foundation wall, as proposed in the RFI, is acceptable.

T-0505	BGP - Protection Board on Horizontal Surface of Waterproofing	Closed	04/19/2013	05/03/2013	04/29/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Ian Corcorran To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Ref. Dwg. A1-8710, A1 -8711, S1-3003  Please confirm that there is no protection board installed on top of the waterproofing membrane to receive protection slab. Drawing S1-3003 shows protection board, while A1-8710 & A1-8711 does not.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Protection board is not required on top of the waterproofing membrane which is to receive protection slab, as shown on the architectural drawings A1-8710 & A1-8711.		
T-0506	BGP - Continuous Horizontal Concrete Inserts	Closed	04/22/2013	05/02/2013	05/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference Drawing: A1-6231  Please reference the attached sheets regarding continuous concrete inserts. On the enlarged detail C of A1-6231 SCCI is proposing the layout of the horizontal concrete inserts. Raising the bottom insert 1- 1/2" and lowering the top insert 1" will provide a greater clearance between the inserts and the construction joint. Achieving a greater clearance from the construction joint will reduce the risk of rock pockets or voids. Please confirm these dimensions as acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The proposal to raise the bottom insert 1 ½" and lower the top insert by 1" is acceptable.		
T-0507	BGP - Continuous Concrete dobie-mat slab	Closed	04/22/2013	05/02/2013	05/06/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please see attached sheets regarding mat slab bulkhead forms. SCCI is proposing the use of a continuous concrete dobie as part of the bulkhead design along the vertical construction joint. The continuous dobie will be installed with the reinforcement mats and will act as a cast-in portion of the formwork. The dobie will become a permanent member and will meet all specifications that the mat slab concrete mix design requires. Please confirm			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The use of a continuous dobbie acting as both reinforcement support and permanently cast-in construction joint form is not acceptable to Thornton Tomasetti. We are concerned that the continuous nature of the proposed dobbie will increase likelihood of introducing two cracks in the mat (one at each face of the dobbie). Per spec, bottom reinforcing bars in mat slab shall be supported by precast concrete bricks

T-0508	BGP - Drainage Composite Joint Orientation	Closed	04/23/2013	05/03/2013	04/25/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kody Cooper			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:			ANSWER:				
Reference Specification: 07 12 10-3.2.F			Accept Suggestion: <input type="checkbox"/>				
This spec section states "Install drainage composite either vertically or horizontally and lap sheets 1 inch in the direction of water flow." The manufacturer's instructions state "the drainage side laps must be tightly butt joined together so there are no gaps or voids between them." SCCI suggests butt joining the drainage composites per the manufacturer's instructions. Is this acceptable?			The proposal to butt joint the panels is not acceptable for the conditions of this project.				
			The purpose of interlocking is to aid in supporting the drainage panels by hanging one from the one above.

T-0510	BGP - Internal Bracing Pin Pile #8 in conflict with Moment Beam BMATV	Closed	04/23/2013	05/03/2013	04/30/2013	Potentially	<input type="checkbox"/>	
From: Webcor Construction LP		Lynn Kowallis	To: Turner Construction Company Gary Krutsch		Answered By: Webcor Construction LP			Robert Kjome
Co-Author: Webcor Construction LP		Kirk Nielsen						
REQUEST:		SUGGESTION:		ANSWER:				Accept Suggestion: <input type="checkbox"/>
Please reference attached marked up sheet S1-2202.				Per discussions during 04/25/2013 "W/OJV Assist Meeting", this pin pile is being re-visited by Contractor to consider being eliminated as well as to be coordinated with the in-progress re-bracing solution. Please close this RFI as currently presented.				
The location of internal bracing pin pile #8 conflicts with moment beam BMATV. General Note GR-9 on sheet S-0005 precludes blocking out moment frames. Upon submitting for the internal bracing system the TG03 BSE subcontractor was not aware of the location of beam BMATV to coordinate around. WOJV is requesting a variance from note GR-9 and is requesting to block out beam BMATV around pin pile #8.								
Please advise.

T-0510.1	BGP - Internal Bracing Pin Pile #8 in conflict with Moment Beam BMATV	Closed	05/02/2013	05/14/2013	05/15/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>		
Please reference attached marked up sheet S1-2202.					At pin pile #8 location, we will allow contractor to block-out the Lower Concourse beam. Contractor shall limit the width of block-out to 1/3 the width of the beam and refer to GR-9 for other block-out info. Block-out reinforcement shall be included in rebar shop drawings.		
The location of internal bracing pin pile #8 conflicts with moment beam BMATV. General Note GR-9 on sheet S-0005 precludes blocking out moment frames. Upon submitting for the internal bracing system the TG03 BSE subcontractor was not aware of the location of beam BMATV to coordinate around. On 4/23/13 WOJV submitted RFI #T-0510 requesting a variance from note GR-9 and is requesting to block out beam BMATV around pin pile #8. During the 4/25/13 "WOJV SE Assist Meeting," when the issue was brought up, a PMPC employee suggested prematurely removing strut STA09 because it has diminished load. On 4/30/13 WOJV received RFI response #T-0510 stating pin pile #8 was going to be removed hence WOJV should close the RFI #T-0510. In addition to strut STA09 pin pile #8 supports strut #STB09 which is carrying a load, not that the internal bracing EOR would allow the premature removal of two strut levels. WOJV again requests a variance from note GR-9 and is requesting to block out beam BMATV around pin pile #8.					Note that the Lower Concourse structure acts as a brace for the foundation wall. Contractor is responsible for the stability of the structure per GR-4 as well as coordinating with other packages.		
Please advise.					Note that the RFI mis-quotes the reason why the original RFI #510.0 was commented to be closed

T-0513	BSE - Steel plate at CDSM piles 738-739	Closed	04/24/2013	05/04/2013	05/08/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Lynn Kowallis	To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger		
Co-Author: Balfour Beatty Infrastructure, Inc.		Shad Gardner					
REQUEST:		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>			
Ref: Specification Section 31 56 13							
During leak grouting at level 5 excavation, a section of the CDSM wall panel between soldier piles 738-739 became dislodged, resulting in a high volume leak. In an effort to stabilize the damaged CDSM panel and stop the leak, BBII installed a steel road plate between soldier piles 738-739 and injected grout behind it.		It is acceptable to leave the steel plate in place as proposed in the RFI. This will result in the waterproofing membrane encroaching in on the foundation wall at pile 738. The foundation wall at pile 738 may be reduced to 34 5/8" thickness and the foundation wall vertical reinforcement shall be modified per proposed solution presented in RFI 0448.0 for wall thickness reduction up to 3" and applied between piles 737 and 739.					
BBII is concerned that removing the plate will likely cause the panel to become destabilized and could reopen the flow of water. BBII surveyed the face of the plate and found that at pile #738, the face of plate is 3' 0-5/8" back from the inside face of concrete wall and at pile #739 the plate is 3' 1-7/8" back from inside face of concrete wall. BBII proposes leaving the steel plate in place to maintain integrity of the CDSM panel. The edges of the plate may be grouted to provide a smooth transition to the CDSM wall for waterproofing.		W/O Note: Acceptable provided BBII take a survey of the face of the plate and provide coordinates.					
Please confirm this is acceptable

T-0513.1	BGP - Steel plate (RFI #T-0513) encroachment between CDSM Piles No. 738 & 739	Closed	05/16/2013	05/26/2013	05/24/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Kirk Nielsen      To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
As depicted in attached SK-0153.1, the encroachment of the steel plate is primarily in the mat slab pour. WOJV is proposing to locally adjust the reinforcement in the mat slab pour to achieve the required cover. There will be no change to the reinforcement on the wall width.					Accept Suggestion: <input type="checkbox"/>		
As a means of chamfering the offset the result of steel plates edges to the face of CDSM wall: WOJV is proposing to mechanically fasten expanded metal lath to the CDSM beams using powder activated fasteners. Rapid set mortar is then applied to the required depth ensuring all edges of the plates have a gradual slope back to match the existing face of the CDSM wall.					ARUP Response:		
Please confirm this is acceptable.					This is acceptable however this work should be coordinated with other disciplines.		
					Thornton Tomasetti Response:		
					It is not clear from the RFI when the Contractor proposes "...no change to the reinforcement..." if this means the unmodified wall contract bars stay in original location or if the bars will move inward. Based on the provided encroachment info, there is still encroachment in the wall. If the bars are proposed to move inward, the thickness of the wall is reduced and therefore the original response of T-0513 shall apply. If the Contractor proposes not to modify the wall reinforcement, please submit technical justification.		
T-0514	BGP - Mech Room Slab Finish Elevation and Grate Clarification	Closed	04/24/2013	05/04/2013	04/30/2013	Potentially	<input type="checkbox"/>

T-0522.1	<b>BSE - Micropile Relocation- Performance Test Pile Zone 2 &amp; 3 (Sequencing)</b>	<b>Closed</b>	<b>05/02/2013</b>	<b>05/12/2013</b>	<b>05/03/2013</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Lynn Kowallis <b>To:</b> Turner Construction Company Gary Krutsch		<b>Answered By:</b> Adamson Associates, Inc. George Metzger					
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Brandon Miller							
<b>REQUEST:</b>		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>			
Ref: Specification Section 31 63 33 1.1B				The proposed relocation for the zone 2 performance test micropile is acceptable.			
This RFI supersedes RFI T-0522. DTDS proposes to reduce the design length of the Micropiles East of Gridline 17 (EG17) from 80 feet to 70 feet. DTDS has shown through testing and reduced post-grouting that a higher soil-grout bond than originally assumed in the design can be achieved in the field. DTDS will install two (2) performance test piles to verify the capacity of a 70 foot micropile EG17. One performance test pile will be installed in Zone 2 at gridline 17 between piles E005 and E008. The second performance test pile will be installed in Zone 3 at gridline 20 between piles E136 and E137. DTDS believes that 70 foot micropiles EG17 will still achieve the maximum required load capacity of 2.4 times Design Load (560 kip). The performance test piles will be installed with one (1) round of post-grout. Based on the results of the testing, additional post-grouting can be provided as necessary.  Upon completion of the testing DTDS will submit revised micropile working drawings and calculation supplement.  All production micropiles will continue to be proof tested per the Specifications. The performance test locations provided would supplant the performance test locations shown in the Contract plans for Zones 2 and 3.  Please confirm this is acceptable.				The proposed relocation for the zone 3 performance test micropile is not acceptable. (The contract documents indicate the zone 3 performance test micropile to be located at GL E and to the east of GL 22. If the contractor desires to relocate the zone 3 performance test micropile, the proposed location will not be approved at locations west of GL 22.)  Thornton Tomasetti does not object to the other aspects of the RFI except to note that the maximum required load capacity for the performance test remains at 2.8 times the Design Load (not 2.4), per the contract documents.

										<b>Answered By:</b> Adamson Associates, Inc. George Metzger
								<b>REQUEST:</b> Ref: Specification Section 07 12 10 - 3.2.E.  Please reference Specification Section 07 12 10 - 3.2.E. Specification 3.2.E states "Install two plies of asphalt saturated felts over the protection board in walnut sized gobs of asphalt cement sufficiently spaced to hold felts in place." Spec Section 07 12 10 does not specify the type of asphalt cement to be used. SCCI submitted Roofxtender RX-100 Flashing Cement which was rejected. Shimmick is now proposing to use Laurenco recommended AIM # 340 Flashing Cement. Please confirm that this is acceptable.	<b>SUGGESTION:</b>	<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The Asphalt Flashing Cement product should conform to ASTM D3747 for bituminous emulsions or D4586 Class I Type I for solvent bearing depending on how dry the substrate is. An example is Karnak's Perfectseal, Flashing Cement, Amphibikote or "Slaters Cement". The Contractor shall provide a shop drawings submittal with their proposed product for use on the project.

<b>Co-Author:</b>							
<b>REQUEST:</b> Due to the revision of the Zone 4 internal bracing and the use of the already procured steel sections the lookout installed for level A bracing were installed at a lower elevation than first planned resulting in the need to revise the finished elevation of the foundation wall downwards for the TG06 package. This scope reallocation will now be moved to the TG07.2 work package. See sketch SK01 attached for TG06 foundation wall finish elevations.  Please confirm if this is acceptable.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Judy Long 10/25/2013 <b>RESPONSE:</b> This RFI involves the Contractor's Means and Methods. It is not the Design Team's role to define Scope of Work.		
T-0528	BSE - Zone 4 Level 2 Excavation	Closed	05/02/2013	05/12/2013	05/13/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Kody Cooper <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc.      Danny Walsh							
<b>REQUEST:</b> Per sheet GT-1111, excavation at each level is limited to 3' below the centerline of internal bracing struts. In zone 4, the spacing between Level A and B struts is only 8' O.C. (typically 12' to 14' elsewhere), which provides extremely limited clearance below Level A for excavation & demolition equipment at level 2 excavation. BBII requests the limit of level 2 excavation be extended to 7' below centerline of level B struts. (Note: the plans already allow for a +/- 2' variation in bracing elevation from those shown on sheet GT-1111. Therefore, BBII is only requesting two additional feet of excavation over what is allowed based on the contract drawings). Please advise if this is acceptable.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> ARUP Response:  It is acceptable to overexcavate the center of the excavation below the centerline of the level B struts in accordance with the illustration titled Stage 5 on sheet GT-1111 of the drawings. Berms along the shoring wall must be maintained.

<b>REQUEST:</b> Reference Specification: 01 31 26  SCCI is requesting access to the latest, most up to date Structural and Architectural Revit models from the designers. The 3D database would be used for reference only and will not be used for construction. SCCI understands that the 3D Database is subject to change as the project design evolves. As a user of this 3D database, SCCI accepts the risk and acknowledge that the data is subject to change. SCCI also acknowledges the terms and conditions outlined in the Transbay Transit Specification Section 01 31 26.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The updated In-Progress Revit computer model will be issued to TJPA for review and comment on May 31, 2013. TJPA will forward this model to the Contractor for information, review, and comment. The Revit model is clearly clarified as not a Contract Document for use in construction. The documents issued on May 31, 2013 are not being issued for bid or construction. The Contractor shall determine when, for what purpose, and how the model is shared with their Sub-contractors.				
<b>T-0535</b>	<b>BGP - Elevator Opening Encroachment at Concrete Beam B131</b>	<b>Closed</b>	<b>05/07/2013</b>	<b>05/16/2013</b>	<b>05/09/2013</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Reference Drawing: A1-2842, S1-2202, S1-3401  Please reference attached Contract Drawings A 1-2842, S 1-2202 and S 1-3401. Drawing S 1-2202 calls out concrete beam B131 running east to west between the elevator and Stair openings. The dimensions of concrete beam B131 are 22 inches wide and 36 inches high. See drawing S1-3401 for beam schedule. A1 -2842 calls out the spacing between openings to be 1'-9". This makes the elevator pit encroach 1 inch into concrete beam B131. Shall the elevator opening be relocated 1 inch to the south to accommodate the concrete beam? Please advise.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The openings in the Lower Concourse slab shall remain as shown on A1-2842. The beam shall be modified to 21" wide by 36" deep. Longitudinal reinforcement for this beam shall be 2-#10 for continuous top bars, 3-#10 continuous for bottom bars, and 3-#10 additional short bottom bars (L=18'-0" centered at midspan). Stirrups shall be #4's, type 2, 12@8"OC from each end, balance at 12" OC. Top & bottom clear cover to the stirrup shall be 3" and 1.5", respectively.

<b>REQUEST:</b> Ref Spec. 07 12 10- 3.2.D  Please reference Specifications Section 07 12 10- 3.2.D. This spec states the following: "Install protection board on vertical surfaces with long dimension vertical and the polyethylene film side facing the soil/cement surfaces. Secure 1 /4" protection board to flanges of soldier piles with powder driven fasteners and washers spaced 12 inches o.c .... "  At the SW corner of the project, the soldier beams are spaced greater than the width of the protection board. We suggest rotating the protection board 90-degrees so that the long dimension is horizontal instead of vertical. This would allow for attachment to the soldier piles and the inside corner of protection board to be heated and formed into the corner. We also suggest using this method where pile spacing exceeds 4' on center.  Please review and advise.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The contactor's suggestion to rotate the protection board 90-degrees is acceptable where the soldier pile spacing and the waterproofing manufacturer require.				
T-0542	BGP - Drainage Mat Installation Clarification	Closed	05/09/2013	05/23/2013	05/13/2013	Potentially	<input type="checkbox"/>

<b>REQUEST:</b> Ref. Dwg. A1-2842, A1-2850  Please reference Contract Drawings A1-2842 to A1-2850. These drawings contain numerous "EJB" callouts. SCCI's issued drawings do not contain details for embedded junction boxes. SCCI is trying to determine if there will be any conflicts with the EJB locations. Will the EJB's be selected by the future contactor in which this scope is contained? If specific EJB's have been specified already, please provide the detail so SCCI can confirm there are no conflicts with SCCI's scope.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Refer to the electrical drawings and specifications section 260534 for EJB specifications. The related information to select and detail the box is included in the Documents.				
T-0546	BGP - Shear Reinforcement and Drainage Conflict at Grldlines 4/C	Closed	05/09/2013	05/23/2013	05/28/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Ian Corcorran <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Andy Khuu			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Ref Dwg A1-9215, S1-2022  At gridlines 4/C, the floor clean out and floor sinks (see A1-9215) cannot be installed due to the spacing of the top layer mat slab and shear reinforcement (see S1-2022). Please advise on how to proceed. Reference the attached sketch of conflict.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> TT response: From the floor sink dimensional info provided in the RFI, it appears the floor sinks will interrupt the top bars of the mat. Contractor shall apply detail 1 on S1-3501 for reinforcement requirements at top mat bars that are interrupted by the floor sinks.  WSP Flack and Kurtz response: The floor sink located east of column 4/C may be moved North, next to the Fire Pump room North wall. The floor clean-out may be moved to a similar position, south of the relocated floor sink. The associated vent and the trap primer line will be relocated in front of the Fire Pump Room north wall.

T-0550	BGP - Request to Revise Lower Concourse Elevation	Closed	05/14/2013	05/24/2013	05/24/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP                      Robert Kjome                      To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:            Accept Suggestion: <input type="checkbox"/>		
Reference Exhibits: A - G			The contractor's suggestion to revise the Lower Concourse slab elevation is NOT acceptable. The contractor is to follow the elevations set out on the latest Below Grade Package documents.				
The BSE IFC drawing S1-3201 (Exhibit-A) depicted the Lower Concourse slab at an elevation of -8'-8" between grid lines 9-3 and West of grid 3 & North of grid E.6.							
Although specification section 01 13 00.1.3.H.3 precludes the TJPA from making scope changes in submittals, on 3/29/11 the TJPA returned submittal package ID TG0300-541/submittal ID TA2010-315500A10 (Exhibit-B) which included a note stating the Lower Concourse level slab varies as follows:							
T/Lower Concourse slab East of gridline 9 = -8'-2" T/Lower Concourse slab West of gridline 9 = -5'-5"							
Although specification section 00 07 00.1.01.37 stipulates a Field Order is not to involve a change in Contract Sum or Time, on 9/7/12 after the zone-1 level-B bracing and trestle was installed (Exhibit-C), the TJPA issued Field Order #T-00008 / ASI #0097 (Exhibit-D) which revised the top of the Lower Concourse slab elevation between grid lines 1-5.5 from -8'-8" to -5'-5" a difference of -3'-3" reference sheets S1-3201 (Exhibit-E) and S1-2202 (Exhibit-F).							
The latent elevation change of the Lower Concourse slab has created proximity conflicts with the previously installed internal bracing and trestle steel depicted on the attached marked-up drawings (Exhibit-G).							
WOJV has surveyed the internal bracing and trestle steel conflicting with the Lower Concourse slab and believes the most cost and schedule efficient solution would be to again revise the elevation of the Lower Concourse slab to -6'-6".							
Please advise if the proposed elevation revision is acceptable.

T-0551	BGP - CR T-069 Wall Penetration Link Seals	Closed	05/14/2013	05/28/2013	05/29/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Ian Corcorran <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Chris Williams			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Ref Dwg. 4/A1-8712  SCCI is in receipt of CR T-069 regarding the below grade modifications. On Plan Sheet A1-8712, Detail 4 was modified to relocate the second link seal to opposite end of the penetration sleeve. Originally, both link seals were located in series at the surface of the concrete wall. This relocation is not constructible in that the link seal cannot be installed or tightened properly when located 3ft into an embedded sleeve. In addition, this link seal cannot be installed prior to placing concrete due to access issues adjacent to the CDSM wall. Is it acceptable to return the relocated link seal to it's original location near the surface of the concrete wall? This would be per the original design shown on A1-8712, Detail 4.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> It is acceptable to have the linkseals installed in the sleeves from the inside, with exception of the incoming electrical service ducts to the transformer vaults that are located inboard of the exterior walls. This applies to the sleeves serving electrical vaults B1322, B1325, B1561 and B1562. Because these sleeves must be concrete encased as they enter the building and cross the service corridor, the linkseals need to be provided at the exterior side of the foundation wall penetration to prevent migration of water through the sleeves across the corridor.				
T-0552	BGP - CR T -069 Electrical Scope	Closed	05/14/2013	05/28/2013	05/29/2013	Potentially	<input type="checkbox"/>

T-0554	<b>BGP - Field Quality Control</b>  From: Webcor Construction LP                      Ian Corcorran Co-Author: Shimmick Construction Company, Inc. Ben Gordon  <b>REQUEST:</b> Please reference Specifications Sections 07 12 10 - 3.3-3.5.  Specifications Section 07 12 10- 3.5.A states the following: "The manufacturer's field representative shall be present before and during installation as specified above."  Please confirm that this is in reference to Section 3.3 "Application" and Section 3.4 "Flashing" which are directly above Section 3.5, A on page 07 12 10-8 of the Specifications (attached for reference).	<b>Closed</b>  To: Turner Construction Company Gary Krutsch	05/14/2013	05/28/2013	05/25/2013	Potentially	<input type="checkbox"/>
			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
		<b>SUGGESTION:</b>	<b>ANSWER:</b>	<b>Accept Suggestion:</b> <input type="checkbox"/>			
			No. The specification is clear and the question is superfluous. "The manufacture's field representative shall be present before and during installation" (for surface examination, protection board installation, felt installation, drainage installation and other activates before the membrane is installed). Section 3.1 also requires the manufacturer's presence related to substrate examination.

T-0561	BSE - Standard for Determining Buttress Concrete Strength	Closed	05/16/2013	05/26/2013	05/20/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Kirk Nielsen <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>		
Spec. section 31 63 29.3.9.D states,			ACI 301 is the standard.				
"Not less than 28 days after concreting is completed, perform HQ coring over the full depth of 10% of the shafts to verify the quality of concrete and test whether the shafts are free of defects. Provide these cores for inspection by the TJPA Representative. The TJPA's Representative will select the locations where coring shall be performed and will select the cores which will be tested for strength."							
The aforementioned language in addition to spec. section 31 63 29.1.6.A which states:							
"Perform work in accordance with ACI 301, except where otherwise specified. Specifications herein set minimum results required and references to procedures to establish minimum guidelines."							
reads as if ACI 301 would be the specified standard for determining the required buttress concrete strength (specifically ACI 301 section 1.6.6.2) hence acceptance.							
Please confirm what if not ACI 301 is the standard for determining the buttress concrete strength hence acceptance.

Ben Gordon  <b>REQUEST:</b> Please reference attached drawing A1-8711. Please confirm all Waterstop Injection Hose Boxes in the Mat Slab are to be mounted as illustrated in the attached drawing (flush@ -35' -8"). With the installation of a future topping slab, mounting these boxes at Mat Slab elevation may render the injection hose system inaccessible at that time.	<b>Closed</b>  <b>To:</b> Turner Construction Company Gary Krutsch  <b>SUGGESTION:</b>	<b>05/22/2013</b>	<b>06/01/2013</b>	<b>05/23/2013</b>	<b>Potentially</b>	<input type="checkbox"/>
			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The Design Team confirms that that Waterstop Injection Hose Boxes in the Mat Slab are to be mounted flush at -35'-8". The rail bed system (by others), which will not be determined until a future time, will need to make provisions for access to these boxes.

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Ref: 5/E1-6001, E1-2202, E-0006				The referenced detail is limited to the conduits for devices that are mounted on walls or columns at the Train Platform level. Refer to Sheet E-0006, Note R, for the requirements for the fire alarm raceways and boxes to be embedded in the Lower Concourse slab.			
Per Plan Sheet E1-6001 , Detail 5. (attached) the embedded conduits for the fire managment system do not extend above or into the lower concourse floor slab. Additionally, on Plan Sheet E1-2202 for the lower concourse level, Sheet Note A (attached) states that the "scope of work on this sheet is limited only to grounding electrode conductors embedded in slab and main grounding bus (MGB) in the main electrical room." From these two notes, it is clear that the fire alarm system scope is limited to the train platfonn level.							
However, on Plan Sheet E-0006 (attached) General Note R., "For fire alarm devices, provide embedded boxes, conduit, and pull strings in the lower concourse slab for service to fire alarm devices for both levels".							
Please proved direction as to whether or not the fire alarm system conduit is to be installed in the lower concourse level slab.

	<b>REQUEST:</b> Specifications Section 071210  We are in receipt of Laurencio Waterproofing Products, Inc.'s Installation Instructions revision dated 5/15/13 and have found several discrepancies with what is called out in Specifications Section 071210. Section 8, f, iv, 4, (d), vi calls for an additional layer of adhesive on walls prior to concrete. It calls for a coat of Laurencio Adhesive over COMPLETED membrane and cold joint reinforcement applied after wall ply adhesive has cured at least (3) days and (1) to (3) days in advance of reinforcement steel application for walls. This is added scope as this additional layer is to be applied over the completed membrane and is not called out in the Specifications.  Please confirm that SCCI is to use the manufacturers installation instructions	<b>SUGGESTION:</b>			<b>ANSWER:</b> The Contractor is to follow specification section 07-12-10 Modified Bitumen waterproofing (WPM-1) where the Manufacturer involvement is specified.  Questions on the proper installation of the system are to be directed to the waterproofing membrane manufacturer. Questions on the detailed installation procedure (Waterproofing Install Instructions) should be directed to Laurencio, not to the TJPAs Reps via RFI.	<b>Accept Suggestion:</b> <input type="checkbox"/>

---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

**Co-Author:** Shimmick Construction Company, Inc. John Berggren

**REQUEST:**

Reference Specification Section 05 05 15-3.3.B

The shop applied coating thickness for the pin and trestle pile sleeve fabrications is determined to be 3.9 mils per Table 2 in ASTM A 123. Under Section 05 05 15-3.5 the repair/restoration field-applied coating thickness is specified to be 8.0 mils. For field touch-up of damaged areas Section 05 50 10-3.2.D states to apply a thickness of 2.5 to 3.5 mils. For the coating hold back areas for the sleeve field weld joints and for any damage coatings that may arise during installation - is a uniform required minimum field-applied thickness of 3.9 mils acceptable?

**SUGGESTION:**

**ANSWER:**

**Accept Suggestion:** ☐

The question asks for clarification of the galvanizing coating repair thickness required for a specific location and for specific repair or touchup. The location noted in the question is not clear enough to answer the question. Resubmit the question with a more specific location noted. "Sleeve field weld joints and for any damage coating that may arise during installation" is too vague. Also, clarify if you are asking about field repair or field touchup of damaged zinc coatings.

The 8.0 mil repair thickness specified in section 05 05 15 applies to repair/restoration on most items as specified in 05 05 15 / 1.1.A: "zinc galvanic coatings applied in the shop or factory to surfaces of iron and steel installed at exterior locations and either totally or partially exposed to weather, humidity, moisture or precipitation; and elsewhere as indicated and specified." Specification Section 05 50 10 / 2.6 call for Hot Dip Galvanizing per specification section 05 05 15. Specification 05 50 10 / 3.2D applies to field touchup of damaged zinc coatings at areas covered by specification 05 50 10.

<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc. Brandon Miller							
<b>REQUEST:</b> Reference : Attached Sketch  This RFI supersedes RFI 375. Micropile E038 as laid out cannot be installed due to an overhead strut obstruction. BBII now recommends relocating E038 east 3'4" to be in line with E037 and E039. See attached sketch.  Please confirm this is acceptable.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Thornton Tomasetti does not object to moving micropile E038 as proposed.			
<b>T-0576</b>	<b>Wall Alignment on Westside of Zone 1</b>	<b>Closed</b>	<b>05/31/2013</b>	<b>06/10/2013</b>	<b>06/11/2013</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Robert Kjome		<b>To:</b> Turner Construction Company Gary Krutsch		<b>Answered By:</b> Adamson Associates, Inc. George Metzger			
<b>Co-Author:</b>		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> For the pile encroachments at the Zone 1 West and South West CDSM walls, as described and illustrated in this RFI, the Design Team confirms it is acceptable to offset the alignment of the inside face of the Concrete Foundation Walls as the contractor proposes in RFI T-0576 BGP.			
<b>REQUEST:</b> Webcor is proposing to change the alignment of the Concrete Foundation wall on the west elevation along gridlines 1 & X1-1.  The Concrete wall which runs along gridline 1 would be offset into the structure by 0.2656' (3-1/8") (proposed Face of concrete Foundation wall would now be 15-1/8" of gridline 1). Similarly along gridline X1-1 the wall would also be offset into the structure by 0.1575' (1 7/8") these offsets would enable the contract reinforcement to be installed without the need for further modifications to the reinforcement due to encroachment of the CDSM piles.  See sketch SK-1 showing Cross section of concrete Foundation wall between CDSM piles 818 - 822 GL 1 in proposed revised location.  Please confirm if this is acceptable.

	<p>secured only to the vertical bars and have the potential during concrete placement to shift or slide down the vertical bars until resting on the next adjacent horizontal bar. The inconsistent spacing of the cross-ties and horizontal bars congests the reinforcing configuration which may lead to potential problems when interfacing the concourse level reinforcing with the walls. In order to eliminate these potential problems Gerdau proposes to perform a grade 80 conversion of the cross-ties such that the size of the cross-tie remains as a #4 bar but the spacing of the cross-ties are installed with uniform spacing to the horizontal reinforcing at 8" O.C. within the designed 6" O.C. ranges or 16" O.C. within the designed 12" O.C. ranges.</p> <p>Please advise if this grade and spacing change is acceptable.</p>						
T-0579.1	BGP - Horizontal Wall Reinforcing Equal Area Conversion	Closed	06/19/2013	06/29/2013	06/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: S1-3201, Spec Section 03 30 20							
Gerdau (SCCI's subcontractor) has recently constructed a mock-up of the 1st lift of typical wall reinforcing and identified a potential problem with congestion and quality of the final designed product. The contract drawings on sheet S1-3201 depict the typical wall reinforcing details including #8 horizontal wall reinforcing which is designed at 8" O.C. E.F. Typical. Additionally, the #4 cross tie spacing has been designed at either 6" O.C. or 12" O.C depending on the location (elevation) within the wall. With the non-uniform spacing of the cross-ties and horizontal bars the cross-ties are secured only to the vertical bars and have the potential during concrete placement to shift or slide down the vertical bars until resting on the next adjacent horizontal bar. Additionally, the inconsistent spacing of the cross-ties and horizontal bars congests the reinforcing configuration which may lead to potential problems when interfacing the concourse level reinforcing		TT does not see slippage of the cross-ties will be a concern if they are properly tied, and we don't see reducing the spacing of the horizontal bar from 8" to 6" will help the congestion issue raised. However, we don't take exception to the proposed change as long as it does not affect the cost and schedule.

<b>Co-Author:</b>							
<b>REQUEST:</b> Reference: RFI T-0584, Attached sketch  Please refer to RFI 584 and the attached sketch of the proposed block out in concrete partition walls as referenced in RFI 584. The 28" x 28" blockout in the mat slab will be transferred to the blockout of the wall and be 25" from the mat slab elevation to the top of blockout. This will create 3'-0" from top of penetration sleeve to top of wall blockout. We are proposing to use formsavers and the male ends will extend the length of the blockout.  Please confirm this is acceptable or provide acceptable solution.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The proposed block-out for the dewatering well & concrete partition conflicts is acceptable provided the following:  1. Confirm the vertical bar size for max height partition at these locations.  2. Extend the vertical bars in the block-out a min 4" into the top of mat.			
<b>T-0585</b>	<b>BGP - Mass Concrete Specifications</b>	<b>Closed</b>	<b>06/05/2013</b>	<b>06/05/2013</b>	<b>06/13/2013</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Robert Kjome		<b>To:</b> Turner Construction Company Gary Krutsch		<b>Answered By:</b> Adamson Associates, Inc. George Metzger			
<b>Co-Author:</b> Shimmick Construction Company, Inc. Filip Filipic		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> It will be acceptable to use the contractor-proposed performance-based temperature differential limit approach for spec section 3.11.B provided the following:  1. This approach shall be approved mix-specific.  3. The maximum temperature of 3.11.B as well as remaining mass concrete specification requirements shall still apply.  4. CTL shall provide the required measurements as well as field quality control.  4. Contractor shall still remain responsible for providing a mat foundation that meets requirements of the contract documents.			
<b>REQUEST:</b> Specifications Section: 03 30 20 3.5 & 3.11 Reference attached letter from CTL Group  SCCI is asking for variance to the temperature differential requirements for the mat slab concrete. If granted, this variance would be based on performance based temperature differential limit (PBTDL), which is tailored to both the Project's mass concrete mix design and the placement. Refer to the attached letter from CTL. The intent of this PBTDL is to prevent thermal cracking, and at the same time reduce duration of the thermal control requirement.  Is this acceptable?

T-0586	BGP - Fire Management System and Concourse Slab Electrical Scope	Closed	06/05/2013	06/05/2013	06/17/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Chris Williams			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Reference Drawing: E-0006, E-0000, 6/E-2202 Reference RFI: T-0567  Per the response to RFI T-567, the fire management system conduit is to be installed into the concourse slab per Note on Sheet E-0006 . However, per Plan Sheet E-0000, only a small grounding portion of electrical drawings are in the TG06.0 concourse slab scope. The remaining concourse level electrical drawings are "For Reference Only" and for informational purposes only. Please confirm that the only TG06.0 electrical scopes in the concourse slab are the grounding wire extensions from the mud slab (per Detail 6/E 2202-TG06.2 scope), lighting conduit and boxes for Type "F15" and Exit Signs, and 4" 90 degree elbows per Details 1 & 2 on TE 1-8000. Please confirm that outside of those scopes, all other electrical scopes of work in the concourse slab are to be part of a later electrical scope package as indicated on the E-0000 index and the "for information only" plans.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> WSPFK Response: Per sheet note J on Sheet E1-006, the scope for TG06.0 shall include fire alarm system conduits embedded in the Lower Concourse slab that are required to serve fire alarm equipment that is located at the Train Platform level. Note that conduits for fire alarm devices on the Lower Concourse level will be provided under a separate scope package.				
T-0586.1	BGP - Fire Management System in the Concourse Slab Only	Closed	07/12/2013	07/22/2013	07/19/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Per the response to RFI T-567 (attached), please confirm that the only slab with embedded fire system conduit is the concourse slab. All stub ups or risers will either come up out of the concourse slab for the concourse level fire management system or drop down out of the concourse slab for the fire management system on the train platform level. Please confirm that the fire management system is not embedded in the mat slab.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> This RFI gets into contractors' means and methods. The contractor can route the fire alarm conduit embedded in either the Lower Concourse slab or the Foundation Mat Slab as required to provide connectivity to the fire alarm devices shown on the electrical drawings.

T-0587	BGP - Future Train Platform Wall Reinforcing Size and Spacing	Closed	06/05/2013	06/15/2013	06/16/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference RFI:T-0480					Accept Suggestion: <input type="checkbox"/>		
The contractor is to construct the future train platform walls using the thickness of the wall as called out within the specific zone sheet (1'-0" or 1'-2"). When coordinating the wall thickness called out in the Plan with Detail 5 on S1-3205 Future Wall Detail no specific bar size or spacing is called out for the 1'-2" thick walls. Please confirm if the reinforcing required for the 1'-2" walls is the same as that called out for a 12" wall, #6 @ 8" oc.					Confirmed, the dowels for future train platform room walls that are 1'-2" thick are #6@8"OC each face.		
T-0588	BGP - Future Partition Wall Dowel Size Spacing	Closed	06/06/2013	06/06/2013	06/10/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:			SUGGESTION:		ANSWER:		
Contract drawing S1-2052 depicts 12" Partition Walls and 12" Future Partition Walls. Contract drawing S 1-9050 provides the reinforcing details for the Partition Walls which depict #7 @ 12" OC reinforcing dowels for a 12" wall. Per S 1-3205 Future 12" Walls receive #6 @8" OC reinforcing dowels. Please confirm the proper bar size for the Future Partition Wall dowels.					Accept Suggestion: <input type="checkbox"/>		
					"Future 12 thk conc wall partitions" shall be reinforced per S1-9050 as they are labeled as partition walls. Detail 5/S1-3205 is for future walls within the train platforms.		
T-0589	BGP - Epoxy Coating Thickness Over Formsaver Couplers	Closed	06/06/2013	06/16/2013	06/17/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:			SUGGESTION:		ANSWER:		
Reference: 6/S1-3001, Attached Letter					Accept Suggestion: <input type="checkbox"/>		
The response to RFI T 0515 confirmed to coat the form saver couplers for future construction as specified in ASTM A 775. Per ASTM A 775, the standard coating thickness specifies a required thickness range by which different size bars are to be coated 7 to 12 mills for bar sizes 3 to 5 and 7 to 16 mills for bar sizes 6 to 18; however, detail 6 on S1-3001 indicates a 12 mill minimum coating thickness over the couplers. Per the attached					We understand that the epoxy-coated form-saver couplers supplied by Lenton may contain a mill thickness less than 12 while still complying with ASTM A 775 and consider this acceptable.

T-0598	BGP - Fire Management System Class A vs. Class B	Closed	06/12/2013	06/22/2013	06/15/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Reference: Attached Documents, E1-5201  After consulting with Siemens on the fire management system a clarification is needed. The riser diagram on sheet EI-5201 shows Class A conduit routing for the train platform level and the lower concourse level. Using a Class A wiring layout limits the system to 3 or 4 strobe devices per circuit. Under the NFPA 130 6.3.3.2.8 specification, the embedded (note (1) of the specification) fire management conduit protects against the ASTM E119 fire conditions and Class A isn't required per NFP A specification. Is it acceptable to design the fire management conduit system to meet the NFP A 130 specification under Class B requirements and impliment 6 or 7 strobe devices per circuit instead of the 3 or 4 stobe devices per Class A. By implimenting a Class B system, the future fire management system (installed under a future contract) will be less costly all while meeting the the NFP A 130 requirements. Please advise.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> WSP Response: We confirm the Specification requirements for Class A wiring shall apply. The design of the conduit systems shall be configured to achieve Class A wiring for the fire alarm communication circuits that will power the strobelights at the Train Platform Level and Lower Concourse Level. Although we have designed for embedded conduit where possible, we cannot assure in the future design that we can embed or provide approved fire rated cable from the source fire alarm panel to the end device, since the fire rated cable systems that were planned for extension of the circuits have had their listings voided. Embedment and layout for Class A wiring will provide the required protection to meet code and to provide the future flexibility for the life of the building.				
T-0599	BGP - Continuous Concrete Insert Elevations	Closed	06/13/2013	06/23/2013	06/21/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Reference: Attached Documents, Drawing A1-6231  Please reference the attached - clouded, Submittal TG0600- 110 BGP -Concrete Formwork Lift #1 sheet, comment regarding the elevation of the cast-in-place continuous concrete insert. The submittal comment requests an adjustment of the concrete insert elevations. In the attached RFI T-0506 the elevations of the concrete inserts were given to accomplish equal spacing as required by the drawings, as well as incorporate the agreed upon adjustments to the top and bottom insert. SCCI would like to verify that the given elevations of the cast-in members in the clouded section of RFI T-0506 are the correct elevations.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Please refer to the attached SKA -2745 which confirms the elevations of the continuous concrete inserts.

T-0602	Arup Monitoring Instruments	Closed	07/02/2013	07/12/2013	07/17/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP                      Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:            Accept Suggestion: <input type="checkbox"/>			
Reference Drawings: 3/A1-8711 and 6/A1-8711				The monitoring instruments / piezometers will continue to function for a few years after the entire building has been completed, therefore will remain as shown on detail 3 / A1-8711. No additional detail is required at this time.			
BBII's dewatering wells and piezometers are installed per Detail 6 on Sheet A1-8711 which clearly shows how the wells and piezometers will be filled and capped after the dewatering has been decommissioned. Detail 3 on Sheet A1-8711 does not provide any indication that these piezometers will be plugged and/or filled. Does the design team intend on leaving these piezometer holes open after the dewatering is shut off? If not, please provide a revised 3/A1-8711 clarifying the design teams intent.				The instrumentation cables are inside a 2" dia steel pipe. A seal between the sleeve and the pipe is provided by the two linkseals. When the instruments are decommissioned, the conduit is cut off and the opening sealed. Then a steel cap is fully welded to the ring flange at the top of the sleeve, which is flush to the top of the mat slab.			
<hr/>							
T-0603	BSE - Beale PG&E Utilities	Closed	06/19/2013	06/29/2013	07/01/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP                      Lynn Kowallis		To: Turner Construction Company Gary Krutsch		Answered By: Transbay PMPC                      Douglas Jacobson			
Co-Author: Balfour Beatty Infrastructure, Inc.                      Rodney Gordon							
REQUEST:		SUGGESTION:		ANSWER:            Accept Suggestion: <input type="checkbox"/>			
Refer RFI T-0286 Specification Section 01 53 13				Based on the attached Reference Data table, the total wt. of rigid conduit + conductors: 4" dia = 19.7 plf; 6" diameter = 40.0 plf			
Please reference W/O RFI T-0286. For First and Fremont street BBII was directed to use a cable weight of 8.2 lb/ft to be used with the 6" conduit. BBII was supplied with a weight of 3 lb/ft for fiber cable used in 4" conduit (not PG&E conduit). BBII does not have a cable weight for 4" PG&E conduit.							
1. Please confirm that the 6" PG&E conduit on Beale Street will contain a 8.2 lb/ft cable. 2. Please clarify the weight/ft of the cable used in the 4" PG&E conduit on Beale Street.							
This information is necessary to design the utility supports on the Beale street Bridge.

<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>		
Please see the attached shop drawings and layout of the construction personnel hoist (CPH) to be installed in Zone 2. The CPH elevated steel PLATFORM to be installed and later removed and poured back such as the trestle pile penetrations.					The proposed Zone 2 personnel hoist installation described in the RFI is acceptable to the Design Team.		
All work dimensions have been coordinated with structure overhead into future bid packages as well as as-built information of internal bracing in the field.							
We propose to :							
1) Lower the geothermal piping an additional 12" to maintain the same 15" deep trench under all concrete. This will be performed the same way they install the piping in the sump pits with correct bend radius.							
2) Install at 19'-6" x 13'-0" x 16" thickened slab incorporated with the current 4" reinforced mudslab. The thickened slab will contain #5 bars 12" OC EW T&B and we have confirmed that the total load of thickened slab, CPH, and platform will not exceed 500 PSF.							
3) Install CPH elevated steel platform through the mat slab with 3'-0" of clearance between top of mat slab and bottom of platform deck and beams.							
4) Waterproof platform legs per detail 5/A1-8711 04/29/13 per ASI 0102 Issued for Construction, Below Grade Package, including galvanized penetration sleeves and waterproofing. Penetration sleeve will be 30" diameter.							
5) Reinforcing details will be the same as all other reinforcing at pin/trestle pile blockouts.							
Please confirm this is all acceptable.							
<hr/>

	<p><b>REQUEST:</b></p> <p>SCCI requesting access to the latest, most up to date Auto cad files for the Plumbing (P1-series) and Electrical (E1-series) drawings from the designers. The files would be used for Reference only and will not be used for construction. SCCI understands that the Autocad files are subject to change as the project design evolves.</p>	<p><b>SUGGESTION:</b></p>			<p><b>ANSWER:</b></p>	<p><b>Accept Suggestion:</b> <input type="checkbox"/></p> <p>The TJPA may release Autocad files on a case by case basis. Contact the TJPA Engineering Manager and provide the nature of the request and final distribution of Autocad files. We understand that the information requested covers drawings that have not been released for construction.</p>	
T-0606	<p><b>BGP - Mat Slab Pour and Bracing Removal- Area 1 to 4</b></p>	Closed					
	<p><b>From:</b> Webcor Construction LP Jackson Tukuafu</p> <p><b>To:</b> Turner Construction Company Gary Krutsch</p> <p><b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon</p>						
	<p><b>REQUEST:</b></p> <p>Reference: Spec Section 01 13 00</p> <p>The latest Webcor's weekly update schedule received by SCCI (Data date 06.17.2013), shows that Balfour Beaty (BBII)'s activity "Bracing Removal- Level D- BBII- Z1 A1", in Zone 1, area 1 cannot commence until the completion of Webcor's activity "Mat Slab Cure- Z1A1 ".The same relationship exists between the two activities for Area 1 to Area 4. Preliminary rough analysis done by SCCI suggests that there is not sufficient sliding resistance to permit the slab in each area to act as effective support for the base of the shoring wall when the lowest level of bracing is removed in that area. The preliminary analysis also suggests that bracing removal level D in Area 1-4 should not commence until the entire mat slab in Area 1-4 are in place.</p> <p>Please confirm that :</p> <p>1. Webcor has performed a detailed analysis that the relationship as shown in the schedule between the Bracing Removal- Level D and Mat Slab Cure can be performed in each area, independent of any other areas.</p> <p>2. SW Comer bracing level D could be removed if only Areas 1 &amp;2 are poured and cured</p> <p>3. NW Comer bracing at Level 2 could be removed if only Areas 3&amp;4 are poured and cured</p>	<p><b>SUGGESTION:</b></p>			<p><b>ANSWER:</b></p>	<p><b>Accept Suggestion:</b> <input type="checkbox"/></p> <p>In response to your RFI 232 the requested analyses cannot be performed until rebracing submittals are received from the BSE contractor and reviewed for approval.</p>

T-0607	BGP - Bracing Removal Sequence- Area 5-16	Closed	06/21/2013	07/01/2013	06/28/2013	Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. Ben Gordon		To: Webcor Construction LP	Jackson Tukuafu	Answered By:Webcor/Obayashi Joint Vt Spencer Sayles			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
<p>The latest Webcor's weekly update schedule received by SCCI (Data date 06.17.2013), shows that:</p> <p>* "Bracing Removal- Level D" (BGSOX-1120) is the driving predecessor to "Wall Waterproofing- 1st lift" (BGSOX-4000)- in each area.</p> <p>* "Bracing Removal- Level E" (BGSOX-41 00) is the predecessor to "Wall Waterproofing- 2nd lift" (BGSOX - 4110)- in each area</p> <p>* "Bracing Removal- Level B" (BGSOX-6000) is the predecessor to "Wall Waterproofing- 3rd lift" (BGSOX - 6010) in each area</p> <p>Based on the current schedule logic, the bracing will need to be modified to allow the removal of walers and struts in each area, separately and independently from each other. E.g: Any walers spanning two areas will need to be cut during removal ofbracing so seer can proceed with the waterproofing install in that area, without having to wait for the adjacent area. This is applicable to Bracing Removal level B, C and D.</p> <p>Please confirm.</p>				<p>As was discussed in yesterday's schedule meeting, please provide a detailed wall pour sequence schedule and indicate where specific waler conflicts are anticipated. We will be able to perform an analysis at that point in time.</p>

T-0608.1	BGP - Revised Spacing to Foundation Wall Vertical Reinforcement in Area 2	Closed	10/10/2013	10/20/2013	10/14/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon <b>ANSWERED BY:</b> Adamson Associates, Inc. George Metzger							
<b>REQUEST:</b> A 16-ft portion of the Area 2 wall vertical reinforcement, between GL 6 and 7, has been installed at 6" OC instead of the required WR1 spacing (8" OC).  Please confirm the as-built vertical wall reinforcement spacing identified in the attached sketch is acceptable.		<b>SUGGESTION:</b>	<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 10/11/2013 <b>RESPONSE:</b> Please resubmit the RFI with the sketch referenced in the question.				
T-0608.2	BGP - Revised Spacing to Foundation Wall Vertical Reinforcement in Area 2	Closed	10/14/2013	10/24/2013	10/18/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon <b>ANSWERED BY:</b> Adamson Associates, Inc. George Metzger							
<b>REQUEST:</b> Please reference drawing S1-2061.  A 16-ft portion of the Area 2 wall vertical reinforcement, between GL 6 and 7, has been installed at 6" OC instead of the required WR1 spacing (8" OC).  Please confirm the as-built vertical wall reinforcement spacing identified in the attached excerpt drawing sheet S1-2061 is acceptable.		<b>SUGGESTION:</b>	<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 10/16/2013 <b>RESPONSE:</b> As built vertical wall reinforcement spacing indicated in the RFI is acceptable. Please incorporate this change into as-built drawings.				
T-0609	BGP - Clear Cover to the Vertical Reinforcement on the Foundation Wall	Closed	07/03/2013	07/13/2013	07/10/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Michael Spillane <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> <b>ANSWERED BY:</b> Adamson Associates, Inc. George Metzger							
<b>REQUEST:</b> Reference: Exhibit A, Attached  At some locations the clear cover to the vertical reinforcement on the foundation wall will be far in excess of the 2" shown on detail 1/S1-3201. Base on the RFI T-180.1 (see Exhibit - A) the clear cover could potentially be up 8" at the interface between the foundation wall at lower mat slab elevation and the waterproofing system.  Existing grade elevation = +25' + (protection slab elevation = -42') = 67' X 1/200 (CDSM pile vertical tolerance) = 4"		<b>SUGGESTION:</b>	<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Maximum acceptable clear cover between the waterproofing system and foundation wall vertical reinforcement is 6 inches. For clear cover larger than 6 inches, evaluation will be made on a case by case basis. Submit information for review where clear cover exceeds 6". For this calculation, waterproofing thickness can be assumed 2 inches and location of foundation wall reinforcement can be assumed as indicated in contract drawings.

T-0611	SSS - Grout Hole Diameter and Material	Closed	06/24/2013	07/04/2013	07/01/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> Reference RFI: CN-005  Following up with the response to RFI CN-005 please clarify the following:  1. Please advise if steel pipes intend to be filled with grout or concrete.  2. If the filler is grout, a 1" hole for venting should work. We do not need a 3" hole for venting.  3. If the filler is grout please advise if locations of the grout holes in cast nodes have been reviewed in the 3D model for accessibility in the field after nodes are attached to structural steel.  4. If steel pipes are filled with concrete and 3" hole must be patched with partial penetration weld please provide proposed detail and procedure for PJP weld.  5. Please provide procedure for patching the node grout hole.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1. Steel pipe is to be filled with 4000 psi pea gravel concrete. 2. As noted in the response #1 to RFI CN-005, the 1" dia hole in the cast node will be remain to serve as a vent hole. 3. Hole in the cast node is to be used as vent hole, not as a grout port. W/O should review the constructability issue raised as this is a means and method issue. 4. As noted in item 2 of RFI CN-005 response, the 3" dia hole and patching details will be provided in a future ASI. 5. 1" dia hole in the node does not require patching.				

---

T-0611.1	SSS - Grout Hole Options	Closed	08/19/2013	08/29/2013	08/23/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> Reference Drawings: S1-4002 Reference RFI: T-0611 Reference Sketch: Sketch 1, Sketch 2  Design documents do not specify or provide procedures for filling the steel pipe column with 4,000psi pea gravel. The following two options are proposed, please review and advise.  Option 1 (prefered) 1. Locate 3" grout hole at the back of the pipe to provide access from inside of the building. 2. Locate 3" grout hole about 6" below CJP weld.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> This is a contractor's means and method issue. Arup fire/blast engineer indicated that the fill needs to be concrete with carbonate aggregate with strength from 4000 to 6000 psi. From the IFC document, a 3" dia grout hole is to be provided for concrete pumping. If the pea gravel cannot travel thru the 1" dia hole in the bus deck cast node, a second group hole is needed above the bus deck node for pumping concrete above the bus deck. Using grout (with siliceous aggregates) is not permitted.				

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

3. Fill out pipe with concrete up to the hole.
4. Use 1" vent / grout hole in the cast node to fill out the upper void with grout (not concrete). If it is not required leave the void to reduce added cost.

Option 2

1. Weld a pipe nozzle with threaded end with a valve to 3" grout port.
2. Pump up concrete to completely fill the pipe column including voids in cast nodes.
3. Shut down the valve and wait until concrete sets.
4. Cut the pipe nozzle off.
5. Clean up the nozzle weld, remove extra concrete, weld in the plug, grind to AESS requirements, touch up.
6. Note: this option will be very expensive.

T-0611.2	SSS - Grout Hole Options	Closed	08/28/2013	09/07/2013	09/09/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Robert Kjome			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b>							
<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b>		
Reference RFI: T-0611.1					Accept Suggestion: <input type="checkbox"/>		
Reference Sketch: Attached					TT has previous responded to RFI 611.1. TT's original response is excerpted below:		
The response to RFI T-0611.1 does not address the question. If grouting of the void in the cast node per Option 1 is not permitted, then Option 2 should be applied to completely fill the pipe column and the void in the cast node with concrete. Please confirm this is acceptable.					"This is a contractor's means and method issue. Arup fire/blast engineer indicated that the fill needs to be concrete with carbonate aggregate with strength from 4000 to 6000 psi. From the IFC document, a 3" dia grout hole is to be provided for concrete pumping. If the pea gravel cannot travel thru the 1" dia hole in the bus deck cast node, a second group hole is needed above the bus deck node for pumping concrete above the bus deck. Using grout (with siliceous aggregates) is not permitted."		
					TT is not in the position to give instruction to the contractor on how to fill the pipe with pea gravel concrete, as it is contractor's Means and Methods as stated in the original response. Some other possible options are discussed below for contractor's consideration:		
					Instead of using a 3" grout hole above the ground floor node as noted in Option 2, the contractor can pour the concrete through a 3" hole above the bus deck node and let the grout flowing through the 1" hole in the bus deck node to the pipe below, and the existing grout hole in the ground floor node can be used as a vent hole.		
					The Contractor may decide to grout the pipe by pouring concrete from the top of the lower pipe before the bus deck cast node is welded.		
					The Contractor may decide to grout the pipe by pouring concrete from the top of the upper pipe after the bus deck cast node is welded but before the roof node is welded (an external vibrator might be needed to facilitate the flow of the pea gravel concrete thru the 1" hole in the center of the bus deck node.

REQUEST:      SUGGESTION:			ANSWER:      Accept Suggestion: <input type="checkbox"/>				
Please see attached BBII Letter 4225-000-1232.			ARUP Response:				
1. In Zone 4, East of the buttress shafts, BBII would like to excavate down 3 feet within the 50' berm in order to uncover timber piles. Please confirm this acceptable.			This is acceptable east of the buttress and west of Beale Street only.				
2. Please confirm if the soils need to be immediately backfilled upon completion of the survey or if the excavated elevation can remain.							
T-0614	BGP - C21 Column Vert Std. Hooks, Replace with HRC 555 T-head	Closed	06/24/2013	07/04/2013	07/28/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Robert Kjome      To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:      SUGGESTION:			ANSWER:      Accept Suggestion: <input type="checkbox"/>				
Reference: Drawing S1-3302			It is not acceptable to replace the standard hooks with heads in Detail 1/S1-3302. The possibility of using heads in the second layer of vertical bars in this detail was previously discussed with Seismic and Structural Review Committee (SSRC). Citing minimum clear spacing requirements between headed bars, SSRC recommended use of hooks in the second layer of vertical bars as indicated in the construction drawings.				
Section 1 on sheet SI-3302 depicts a standard hook at the bottom of the #11 vertical for the embedded C21 column. Please confirm it's acceptable to replace the standard hook with an HRC 555 T-head similar to that of the typical vertical wall reinforcing.							
T-0615	BGP - Clear Cover Notation Discrepancy with RFI 339 Response	Closed	06/24/2013	07/04/2013	06/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Robert Kjome      To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:      SUGGESTION:			ANSWER:      Accept Suggestion: <input type="checkbox"/>				
Reference: Drawing S1-3302, S1-3201			The wall vertical reinforcing cover detail in 1/S1-3302 is not superseded by our response to RFI T-0339. RFI T-0339 was on detail 1/S1-3201. Detail 1/S1-3201 and detail 1/S1-3302 correspond to different sections through the foundation wall. Detail 1/S1-3201 is a typical section and detail 1/S1-3302 is embedded columns within the foundation wall. 2-1/4" cover to the vertical reinforcement is specified in Detail 1/S1-3302 because of the larger cross ties required in the embedded columns.				
Section 1 on S1-3302 details 2-1/4" clear cover from the face of concrete to the typical wall vertical reinforcing. Per the response to RFI T-0339, the clear cover to the vertical reinforcing was confirmed to be 2" and the cross-ties would encroach into the 2" clear cover. Please confirm the wall vertical reinforcing cover detail in 1/S 1-3302 is superseded by the response outlining the clear cover requirements in RFI T-0339.

Within the issued response to RFI 448.5 no details were provided to depict the reinforcing configuration at the point in which the wall steps from it's reduced width back to it's original contract width of 36". Please provide a detail depicting the acceptable configuration at both the typical wall section and of the concourse level which includes the spandrel beam/wall interface.				Please refer to RFI response T-0608. The WOJV generated RFI T-0608 anticipated these revisions and was submitted prior to RFI T-0619 (SCCI #236).

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: Drawing S1-3260, S1-3301, S1-2030  Based on the layout of the shoring and diagonal struts in the West end of the job, shear wall reinforcement (as shown on CD S1-3260) and the diagonal struts are in conflict. CD S1-3260 shows continuous vertical shear wall reinforcement from top of the mat slab to top of concourse deck. To avoid constructability issues SCCI suggests for shear walls to be constructed with horizontal construction joints at the same elevation as the first level of foundation walls. Adding horizontal joints will require modification of the reinforcement. Please confirm this is acceptable.				Contractor-proposed addition of horizontal CJ's for the shearwalls is acceptable. Contractor to propose reinforcement changes for submittal review.

From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				

## Co-Author:

## REQUEST:

Reference Documents: Exhibits A - H

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north wall in slab area 3 as well as all levels of the encroachment into the foundation wall between CDSM piles 1 to 32 as well. Location Plan see exhibit - A

Exhibit - B , C & H depict the location and degree in which the SP are encroaching

## Option A

Webcor is proposing to change the alignment of the Concrete Foundation wall on the north elevation along gridlines A between gridlines 1 and 5 - 6 (CDSM piles 1 to 50)

The Concrete foundation wall which runs along gridline A between gridlines 1 and 5-6 would be offset into the structure by 0.1979' (2-3/8") the proposed Face of concrete Foundation wall would then be 2-3/8" off gridline A, this offset would enable the contract reinforcement to be installed without the need for further modifications to the reinforcement due to encroachment of the CDSM piles in concrete pour Areas 3 & 4. See Exhibit - H

## Option B

WOJV proposal: (See Exhibit - B) Between CDSM piles 1 to 20-21 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear all the encroaching SP. This foundation wall area was originally a WR1 reinforcement area (#11@8"oc EF vertically) and would change to #11@6"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 see Exhibit - D.

Between CDSM piles 20-21 to 22 WOJV is proposing to decrease the specified 36" wall thickness again to 33 5/8" to clear all the encroaching SP, originally this was a WR2 reinforcement area #11@6"oc vertically and would change to #11@5"OC the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit - E)

Between CDSM piles 22 to 31 the reinforcement would remain unchanged as per the Contract Reinforcement.

## SUGGESTION:

## ANSWER:

Accept Suggestion: ☐

Option A

For Option A the proposed revision is acceptable, with the following conditions:

The Train Box design is restricted at the B2 Train Platform Level by the Rail Vehicle Kinematic Envelopes (RVKE). The B1 Lower Concourse Level is strictly controlled by space planning constraints, particularly minimum requirements for Public Utility rooms, service rooms and associated structural and service coordination.

The CDSM wall zone described in this RFI is outside of the RVKE, therefore at the B2 level the foundation wall face can be offset as proposed. However, at B1 Level, the offset will affect Utility Room and Service configurations.

If Option A is adopted, either:

1) Provided the foundation wall configuration and structural design permit, the offset should only occur in this area at the B2 Level and transition back to the original alignment on Gridline A before reaching the B1 Level.

OR

2) Any offset to the foundation wall face at B1 Level will require adjustment to space planning, coupler layouts, structural / service opening coordination and potentially may need further negotiations with Public Utility Companies i.e. it is not acceptable to simply 'shave off' a couple of inches from a room at this level.

Note that all transitions are to be smooth and not stepped.

Our comments for proposed Option B are as follows:

1) It is not acceptable to transition foundation reinforcement width and/or vertical rebar spacing within sections where specified foundation wall

T-0621.3	<b>BGP - Area 3 North Wall Verts Clearance Near GL 2</b>  <b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company PHIL MILITELLO  <b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto  <b>REQUEST:</b> Reference: RFI T-0621.1 and drawing S1-3201.  Due to the CDSM soldier pile encroachment, the area 3 North foundation wall reinforcement was moved 2-3/8" towards the center of the structure per RFI T-0621.1. During placement of a 4'-6" section (8 vertical bars) of the first lift of the foundation wall exterior vertical steel approximately 2'-0" west of GL 2, it was discovered that there was 1/4" to 1" of clearance between the waterproofing and vertical bars. The concern is once the cross-ties are placed between the vertical bar and waterproofing, there would not be enough concrete coverage.  Please confirm if it is acceptable to omit the first 3 rows of cross-ties (24 total) in the area as described.	Closed	01/27/2014	02/06/2014	01/31/2014	Potentially	<input type="checkbox"/>
<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 1/29/2014 It is acceptable to omit the cross ties in the region depicted in the RFI provided that additional ties be provided elsewhere as follows: Assume encroachment region measures L x h. For a distance equal to L/2 on both sides of the encroachment region, provide double the number ties over a height equal to 2 x h. Additionally, provide double the number of ties for a distance, L, and a height, h, directly above the encroachment. It is acceptable to secure the added ties to the wall horizontal reinforcing on the opposite side of the normally required ties, i.e. an even spacing increment is not required.

Reference Documents: Exhibits A - J

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north wall in slab area 4 as well as all levels of the encroachment into the foundation wall between CDSM piles 31 to 60 as well. Location Plan see exhibit - A

Exhibit - B ,C & J depict the location and degree in which the SP are encroaching

## Option A

Webcor is proposing to change the alignment of the Concrete Foundation wall on the north elevation along gridlines A between gridlines 1 and 5 - 6 (CDSM piles 1 to 50)

The Concrete foundation wall which runs along gridline A between gridlines 1 and 5-6 would be offset into the structure by 0.1979' (2-3/8") the proposed Face of concrete Foundation wall would then be 2-3/8" off gridline A, this offset would enable the contract reinforcement to be installed without the need for further modifications to the reinforcement due to encroachment of the CDSM piles in concrete pour Areas 3 & 4. See Exhibit - J

## Option B

WOJV proposal: (See Exhibit - B) Between CDSM piles 31-32 to 35 and 41-42 to 45-46 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear all the encroaching SP, originally this was a WR2 reinforcement area #11 @6"oc EF vertically and would change to #11 @5"OC the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit -E) Between CDSM piles 35 to 41-42 and 45-46 to 49 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear all the encroaching SP. This foundation wall area was originally a WR1 reinforcement area (#11 @8"oc EF vertically) and would change to #11 @6"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 ( Exhibit - D). Between CDSM piles 49 to 60 the reinforcement would remain unchanged as per the Contract drawings. See Exhibit-G, H & I showing details of transition between modified reinforcement to contract reinforcement.

## SUGGESTION:

## ANSWER:

Accept Suggestion: ☐

Option A

For Option A the proposed revision is acceptable, with the following conditions:

The Train Box design is restricted at the B2 Train Platform Level by the Rail Vehicle Kinematic Envelopes (RVKE). The B1 Lower Concourse Level is strictly controlled by space planning constraints, particularly minimum requirements for Public Utility rooms, service rooms and associated structural and service coordination.

The CDSM wall zone described in this RFI is outside of the RVKE, therefore at the B2 level the foundation wall face can be offset as proposed. However, at B1 Level, the offset will affect Utility Room and Service configurations.

If Option A is adopted, either:

1) Provided the foundation wall configuration and structural design permit, the offset should only occur in this area at the B2 Level and transition back to the original alignment on Gridline A before reaching the B1 Level.

OR

2) Any offset to the foundation wall face at B1 Level will require adjustment to space planning, coupler layouts, structural / service opening coordination and potentially may need further negotiations with Public Utility Companies i.e. it is not acceptable to simply 'shave off' a couple of inches from a room at this level.

Note that all transitions are to be smooth and not stepped.

Option B

For Option B, proposed revision is acceptable however, we note the following:

## REQUEST:

Reference Documents: Exhibits A - J

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north & south walls in slab area 5 as well as all levels of the encroachment into the foundation wall between CDSM piles 60 to 81 on the north elevation and 702 to 732 on the south elevation. For Location Plan see exhibit - A.

Exhibit - B, & C depict the location and degree in which the SP are encroaching

For this RFI, the combined layers of the water proofing system had been assumed to be 2" thick, which is subject to change, this may increase or decrease the number of encroaching piles depending on the thickness of the system used.

WOJV proposal North elevation on gridline A: (See Exhibit - B) Between CDSM piles 60 to 62 and 69 to 71 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 61 & 70, originally these were WR1 reinforcement area's #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit - D). Between CDSM piles 76 to 78-42, WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 77. This foundation wall area was originally a WR2 reinforcement area (#11@6"oc EF vertically) and would change to #11@5"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit - E).

WOJV proposal on the South elevation: (See Exhibit - B & F) Between CDSM piles 704 to 706, WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 705, originally this was a WR1 reinforcement area #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit - D).

## SUGGESTION:

## ANSWER:

Accept Suggestion: ☐

1-) It is not acceptable to transition foundation reinforcement width and/or vertical rebar spacing within sections where specified foundation wall reinforcement is "WR2" or where there is an embedded column per contract documents. Provide uniform reinforcement width and rebar spacing within these regions. The transitions can be acceptable at the ends of (or just outside) these regions. In Area 5, this comment applies near GL 8, North Wall.

2-) Per Exhibit D, encroachments for some piles seem very small (for example, pile 61). For small encroachments, a 'no remedy' approach can be followed as long as the actual construction is executed within the tolerances specified in the contract documents (see specifications for information on construction tolerances).

3-) Mock up specimen is being developed for a location where an embedded column is used within the foundation wall. Embedded columns include two layers of #11 rebar with 6" spacing. The contractor proposes to use #11@5" in lieu of WR2 foundation wall reinforcement (#11@6") at a number of locations to remedy encroachment issues. If this option is adopted, the tightest foundation wall reinforcement will become #11@5". Revise the foundation wall mock up specimen shop drawings to include #11@5" single layer foundation wall vertical reinforcement.

4-) Foundation wall rebar WR2 and embedded columns are designed using vertical rebar spacing of 6" (see construction documents). We note that proposed changes to this spacing can negatively impact the constructability of the foundation wall joints at mat, lower concourse and ground levels (e.g. installing beam rebar, foundation wall dowels at the mat). An example was provided with our response to RFI T-0621.

REQUEST:		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>			
Reference Documents: Exhibits A & D				1-) See our response to RFI T-0622.1.			
This RFI addresses the previous comments to RFI T-626 see exhibit - D.				2-) Revised reinforcement detail near GL 8, North wall is acceptable.			
Exhibit - A shows the revised Plan view with modifications made. Exhibit -C depict the degree in which the SP are encroaching in area 5.							
Based on the response to the previous RFI the number of encroaching beams in area 5 has been reduced mainly due to the decreased thickness of the waterproofing system and the contractor willingness to use some of the construction tolerances in an effort to mitigate some of the smaller encroachments. This has resulted in only one area where modified reinforcement will have to be installed this is Between CDSM piles 73-74 to 78 on the north wall elevation WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP number 77. This wall area was originally a WR2 reinforcement area (#11 @6"oc EF vertically) and would change to #11@5"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing.							
In all other locations on the north and south walls of area 5

<b>Co-Author:</b> Webcor Construction LP      Michael Spillane							

**REQUEST:**

Reference Documents: Exhibits A - J

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north & south walls in slab area 7 as well as all levels of the encroachment into the foundation wall between CDSM piles 104 to 134 on the north elevation and 649 to 679 on the south elevation. For Location Plan see Exhibit A.

Exhibit B, & C depict the location and degree in which the SP are encroaching

For this RFI, the combined layers of the water proofing system had being assumed to be 2" thick, which is subject to change this may increase or decrease the number of encroaching piles depending on the thickness of the system used.

WOJV proposal North elevation on gridline A: (See Exhibit B) Between CDSM piles 102 to 105 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 103 & 104, originally these were WR1 reinforcement area #11@8"OC EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit D).

WOJV proposal on the South elevation: (See Exhibit B & Exhibit F) Between CDSM piles 657 to 659 & 677 to 680, WOJV is proposing to decrease the specified 36" wall thickness to 33 1/2" & 33 5/8" respectively to clear the encroaching SP 658 & 678, Originally these were a WR1 reinforcement area #11@8"OC EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit D). Between CDSM piles 665 to 667 & 673 to 677, WOJV is proposing to decrease the specified 36" wall thickness to 32 15/16" & 33 5/8" respectively to clear the encroaching SP 666, 674 & 675. This foundation wall area was originally a WR2 reinforcement area (#11@6"OC EF vertically) and would change to #11@5"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped

**SUGGESTION:****ANSWER:****Accept Suggestion:** ☐

It is not acceptable to transition foundation reinforcement width and/or vertical rebar spacing within sections where specified foundation wall reinforcement is "WR2" or where there is an embedded column per contract documents. Provide uniform reinforcement width and rebar spacing within these regions. The transitions can be acceptable at the ends of (or just outside) these regions. In Area 7, this comment applies near GL 12, South Wall. Solutions at all other locations are acceptable. However, as indicated in response to RFI T-0626, use of #11@5" for foundation wall vertical reinforcement can negatively impact constructability.

Reference: Drawing S1-3500, Spec Section 03 30 20, 03 20 00			Concrete cover is for protection of reinforcement against weather and other effects. The cover is prescribed for 3 classes of structural members in ACI				

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>Detail 1 on S 1-3500 calls out for 3/4" clear cover on top and bottom of the lower concourse slab. ACI codes 301 and 318 specify 3/4" minimum cover for #11 bars and smaller, in slabs that are not exposed to extreme environment. Even though lower concourse is designed to eventually be enclosed with the rest of the superstructure, it will be exposed to the weather elements during the construction of the project. With that said, inadequate cover over rebar can cause plastic settlement cracking. SCCI is concerned that the 3/4" clear cover in the concourse slab could cause this plastic settlement cracking.</p> <p>Please confirm that the clear cover on the lower concourse slab is 3/4" minimum?</p> <p>Please specify what is the maximum clear coverage of the lower concourse reinforcement?</p>				<p>318, a) concrete cast against and permanently exposed to earth, and b) concrete exposed to earth or weather, and c) concrete not exposed to weather or in contact with ground. The concrete slab at the lower concourse level, even though will temporarily exposed to weather during construction like any other building structure, is usually categorized as type c condition, which requires a 3/4" minimum cover per ACI 318, Section 7.7.</p> <p>The statement of "inadequate cover over rebar can cause plastic settlement cracking" is not totally correct, as the ratio of cover to reinforcing bar diameter is only one of many factors that contributes to the plastic settlement cracking. The amount of settlement tends to be proportion to the depth of concrete, i.e., the deeper the section the greater the settlement. Hence, plastic settlement usually occurs in a much thicker slab with much heavier top rebars. With only a 12" thick slab at the lower concourse level, we don't anticipate that plastic settlement cracking becomes a problem, as long as good construction practices are follow. Those practices include, but not limited to the following:</p> <p>Use mixes with lower bleeding characteristics.</p> <p>Wet the subgrade or formwork before placing concrete to avoid excessive water loss from the base of the concrete.</p> <p>Set all formwork accurately and rigidly so that it will not move during concrete placement</p> <p>Place concrete in the deep sections (beams or columns) first and let it settle prior to placing and compacting the top layers (ensuring two layers blend together)</p> <p>Fully compact the concrete</p> <p>Follow the requirements of hot weather concrete placement specified in the Specifications.</p> <p>Cure the concrete promptly and properly.</p>

T-0630	<b>BGP - Mat Slab Key Way Waterstops Installation</b>  <b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon  <b>REQUEST:</b> Reference: Attached Photos, Spec Section 03 30 20  SCCI is proposing to leave the formed key surface in the mat slab as a formed finish to aid in the bonding of the hydrophilic waterstops to the concrete. With a specified 1/4" amplitude on the concrete surface, the bond between the concrete and the waterstop system decreases. The remainder of the construction joint will have stayform in place which generates a roughened surface. Please see attached photos that high light the area which will be formed finish. Please advise if this is acceptable?	Closed	06/28/2013	07/08/2013	07/04/2013	Potentially	<input type="checkbox"/>
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Specification section 03 20 00 2.5.C addresses this topic and requires a reasonably smooth finish at surfaces which are to receive waterstops. 2.5.C also requires roughened surface be leveled with 2-part epoxy per manufacturer's recommendations. Leaving the vertical surface indicated in the RFI as a formed finish will be acceptable provided the finish to receive the waterstop is reasonably smooth and meets the installation surface requirements of the hydrophilic waterstop manufacturer. The hydrophilic waterstop is to be installed on surfaces prepared in accordance with the manufacturer's instructions.

T-0631	BGP - Mat Slab Reinforcing Conflict with Micropiles	Closed	07/01/2013	07/11/2013	07/12/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				

Co-Author: Shimmick Construction Company, Inc. Ben Gordon

REQUEST:

Reference: Drawing S1-2022 Thru S1-2031

The typical mat slab reinforcing designed to be installed at 8" O.C.E.W. for the bottom and top mats. The micropile layout also consists of a uniformed spacing and at some locations has been adjusted for conflicts or for other purposes, example RFI 490. Should the typical mat slab reinforcing when laid out at 8" O.C.E.W. or some other reinforcing designed within the mat slab conflict with the micropile asbuilt, is it acceptable to displace the reinforcing from the designed spacing layout such that it is repositioned to either side of the micropile? Additionally, please confirm if reinforcing in direct contact with the micropile is acceptable? Should the displacement of the reinforcing to either side of a micropile not be acceptable please provide direction.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Typical and additional mat reinforcing bars (flexural steel) and mat pit reinforcing bars may be shifted in plan up to +/- 4" from the typical spacing of 8" o.c.e.w. where the typical spacing would result in a conflict between the flexural steel and the micropile. Before making such a shift, the contractor shall verify that said shift will not cause unforeseen conflicts that impact the placement of column dowels, mat headed shear reinforcement, or any other mat or wall reinforcement detailing. Where such a shift will impact the placement of other reinforcement, contractor shall not shift the mat bar out of typical spacing, and instead may resolve the conflict by either of the following methods:

- a) Treat the micropile obstruction sim to a typical opening per the Typical Slab Opening Detail found on 1/S1-3501 (i.e. add 2 bars of same dia and grade as the bar being interrupted, one to either side of the conflicting micropile).
- b) Shift the conflicting bar only locally, up to +/- 4" from the typical as permitted above, splicing back to typical spacing (with non-contact splice either side of micropile) as required to avoid any conflicts with other mat reinforcement that may occur due to the shift.

Mat rebar shall not be in direct contact with the micropile or gage steel boot that functions as part of the waterproofing assembly, but rather achieve min 1.5" clear btwn rebar and micropile steel. Refer to 2/A1-8711 for waterproofing assembly info.

T-0632	BGP - Geothermal Field 7 & 8 Manifold Riser Layout	Closed	07/02/2013	07/12/2013	07/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: Attached Photos			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
The initial geothermal riser/manifold layout for Fields 7 & 8 placed the field 7 & field 8 risers between soldier piles 176-177 and 177-178 respectively. To avoid conflicts with the riser install and the temporary 1st bridge, is it acceptable to move the field 7 riser to the CDSM wall panel between piles 172 and 173 and the field 8 riser to the CDSM wall panel between piles 173 and 174? See attached photos. Additionally, SCCI is looking to relocate the temperature probe to the CDSM wall panel between soldier pile beams 171 and 172. Is this acceptable? Please advise.			It is not acceptable to locate the risers for fields 7&8 as suggested between soldier piles 172-173-174. Riser for field 7 can be located between piles 174 and 175. Riser for field 8 can be located between piles 175 and 176.		It is not acceptable to re-locate temperature probe pipe between 171 and 172. It is acceptable to locate the probe east of risers 7 and 8 between soldier piles 178 and 179.		

T-0633	BGP - ASI#104 Clarifications	Closed	07/03/2013	07/13/2013	07/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: ASI 104s			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
SCCI is in receipt of ASI #104 on June 25th, 2013 in CR#T-071. Please clarify the following:			See below GM/TT comments. WOJV comments included.		1.		
1) Per Sheet S-2202 to S-2211, the additional internal walls at the concourse are shown to be in solid line, for Zone 2-7, 10-11. Note 7 on S1-2022 refers us to the architectural drawings for CMU and concrete partition layout dimensions, joint locations, and CMU thickness. However, the corresponding Architectural drawings issued in ASI #104 for wall at concourse (A-2222 and A-2223), only depicts changes in Zones 2 and 3.			a. WOJV to confirm this item. JT/WOJV - Confirmed.		b. WOJV to confirm this item. JT/WOJV - Confirmed, same as 1a.		
a) A-2222 and A-2223 depicts the revised concourse walls to be RCW- please confirm that the internal concourse walls are not in TG-06 scope and additional scope to TG-06 contract will only be the additional couplers for added wall.			c. We assume the RFI means sheet range starting with S1-2202 and not S-2022. These lower concourse partition walls are supposed to be dashed. WOJV to confirm these are NOT part of the TG06 package. JT/WOJV - Price all internal walls below the concourse level.		d. WOJV to confirm this item. JT/WOJV - Provide dowels for all CMU walls shown on the concourse level and below.		
b) Please confirm that there are no internal walls to be constructed in TG06's scope at concours level.

T-0638	BGP - Mat Slab U Bars in Modified WR-2 Reinforcement Areas	Closed	07/16/2013	07/26/2013	07/23/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Michael Spillane <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>		
Reference Documents: Exhibits A - E					Either of the options presented in this RFI are acceptable where the #11@5" rebar is used. The "candy cane shaped bar" should include 180-deg standard hook (refer to detail 4/S1-3001 in contract drawings). Note that this RFI seems to focus on the constructability of the U-bars. However, if the top mat rebar was projected on Exhibits D or E, clashes with the 5" spaced foundation wall vertical rebar (inner face) can also be seen."		
The contractor has highlighted a potential conflict with the uses of #11@5"OC vertically at the areas where CDSM piles at encroaching in WR-2 reinforcement areas.							
Exhibit - A is a vertical cross section through the modified WR-2 area							
Exhibit - B is a cross section showing the potential conflict with verts @ 5"OC							
Exhibit - C is a cross section showing the original design with verts @ 6"OC							
Exhibit - D & E depicts possible solutions							
One of the proposed solutions Exhibit - D is to have the "U" bars at the contract width of 7.41"(6"+#11 bar dia) and the vertically rebar @ 5" OC and the U bars moves horizontally to avoid any conflicts with the mat slab reinforcement.							
Another possible solution is to change the "U" bars to a bar with a standard hook "candy cane shaped bar" see Exhibit - E							
Please confirm if either of these options would be acceptable

T-0642	BSE - Steel Plates at CDSM Piles 167-168	Open	07/17/2013	07/27/2013	07/18/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Stacy Wilson				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference: Spec Section 31 56 13					Accept Suggestion: <input type="checkbox"/>		
During leak grouting at level 5 excavation, a section of the CDSM wall panel between soldier piles 167-168 became dislodged, resulting in a high volume leak. In an effort to stabilize the damaged CDSM panel and stop the leak, BBII installed a steel road plate between soldier piles 167-168 and injected grout behind it.					W/O to resubmit once the encroachment requirement is determined.		
BBII is concerned that removing the plate will likely cause the panel to become destabilized and could reopen the flow of water. BBII surveyed the face of the plate and found that at pile #167, the face of plate is 1/2" out from the theoretical face of pile, and at pile #168 the plate is 1-1/2" out from the theoretical face of pile. BBII proposes leaving the steel plate in place to maintain integrity of the CDSM panel. The edges of the plate may be grouted to provide a smooth transition to the CDSM wall for waterproofing.							
Please confirm this is acceptable.							
T-0643	BGP - ASI#104 - A1-2122 Added Line	Closed	07/17/2013	07/27/2013	07/19/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:			SUGGESTION:		ANSWER:		
Reference: Drawing A1-2122, ASI#104					Accept Suggestion: <input type="checkbox"/>		
Please find attached A1-2122 issued in ASI#104. Please clarify what do the highlighted lines represent.					The highlighted line indicated in this RFI, is a 3" concrete topping with slope that will added later. It is not part of the Below Grade Package and should not have been shown on this Wall Plan Drawing. The attached SKA-2771 shows A1-2122 without the topping line.		
T-0644	BGP - Plumbing Scope Clarification ASI 104	Closed	07/17/2013	07/27/2013	07/26/2013	Potentially	<input type="checkbox"/>

**Co-Author:** Shimmick Construction Company, Inc. Ben Gordon

**REQUEST:**

Reference: Drawing A1-9215, S1-9050, Spec Section 03 30 20

There appears to be conflicting dimensions for the concrete interior wall pier located near gridlines 3.5/C.3 as shown in the attached drawing A1-9215. Contract drawing A1-9215 details the pier to be 2'0" wide by 1 '4" thick. However, based on criteria for wall piers as shown on S1-9050, the wall pier should be 2'0" wide by 1 '6" thick.

Please confirm if the two wall piers identified in the attached A 1-9215 should be 1 '4" thick or 1 '6" thick.

If the wall is to be 1 '6" thick, please provide direction as to which side of the wall pier is to be maintained flush with adjacent wall.

**SUGGESTION:****ANSWER:****Accept Suggestion:** ☐

The 2 piers identified in the RFI sketch are 1'-6" thick as per schedule on S1-9050. The north side of the piers along the corridor shall remain flush with adjacent walls.

See attached SKA-2783. The pier thickness dimensions have been removed from this architectural drawing as the pier dimensions are obtained from S1-9050 as noted above.

**T-0647**      **BGP - Area 3 Clear Cover to the Vertical Reinforcement on the Foundation Wall**      **Closed**

**Answered By:** Adamson Associates, Inc. George Metzger

**Co-Author:**

**REQUEST:**

Reference Documents: Exhibits A - G

Further to response to RFI T-609 (see exhibit - F) this RFI shows the areas of foundation wall in pour area 3, north and west walls which will have greater than 6" of clear cover to the vertical reinforcement for location plan see exhibit - A & C

Exhibit - B & C depict the amount and location of the foundation walls which will have greater than 6" of clear cover to the vertical reinforcement

Area of concern is the west wall along gridline 1 where the alignment of the foundation wall was moved by 3-1/8" per RFI T-576 see exhibit - E due to encroachment issues on CDSM piles see exhibit - G for information on the encroaching piles in this area as a result of this move there are large areas which will have greater than 6" of clear cover.

**SUGGESTION:****ANSWER:****Accept Suggestion:** ☐

The clear cover between the waterproofing system and vertical reinforcement as presented in Exhibit B of this RFI is acceptable. We note that the reference to RFI T-0448.5 in Exhibit B in is incorrect. RFI T-0448.5 is not relevant to this zone.

T-0655	BGP - Revised Attached Method of Nelson Studs to the Elevator Pit Embedded Angle	Closed	07/24/2013	08/03/2013	08/05/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: Spec Section 05 50 10  While attaching the 3/4" diameter by 8" Nelson Studs to the 8" X 4" X 1/2" angle it was determined the studs were not fusing to the base metal (angle). To maintain the procurement schedule of this fabrication needed for the Zone 1 - Area 03 Mat Slab placement, our fabricator (Gerlinger Steel) used the fillet weld method performed under the attached Welding Procedure Specifications (WPS) to attach studs to the angle(s). The welding was witnessed by the dispatched (IR #001459) ISI Shop CWI. Attached for the readers information and use are the shop fabrication drawing, the employed WPS, and photographs of the finished fabrication.  Is the alternate means of attaching the Nelson Studs to the angle, using the fillet weld method in lieu of the fusing method, acceptable?			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>  The angled stud in the interior of the angle requires a different type of ferrule (heel) to address the angled condition. The alternate means used to attach Nelson studs for angles in this RFI is acceptable provided that at least 2 studs per angle have been verified by bend test per specification section 03 20 00 2.2.C.2, which references AWS D1.1-2010 (Paragraph 7.8 for testing requirements).		
T-0656	BGP - Shear Wall Dowel and Shoring Pipe Bracing Conflict	Closed	07/24/2013	08/03/2013	08/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: Drawing S1-3001, Spec Section 03 30 20  A few potential conflicts exist between the typical shear wall vertical dowels and the 36" OD shoring Pipe Struts in Area 1. See attachment for locations of conflict.  Based on Detail A shown in S1-3260, the typical shear wall verts will be lap spliced.  Per the schedule in Detail 1-S1-3001, the #9 vertical shear wall reinforcement requires a 63" lap splice, which places the top of dowel at elevation -30'-5".  The centerline of Level D diagonal bracing atop Area 1 is shown to be at EL -29'-0" and the bottom of the 36" OD pipe strut at level D is at EL -30'-6".  The pipe strut will potentially encroach on the shear wall			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>  The contractor proposed lap splice length is acceptable only at locations where the conflict exists.		

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
T-0659	BGP - Mat Slab Conduits	Closed	07/30/2013	08/09/2013	08/13/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b> Reference: A1-9204, E1-6001  The electrical conduit details on sheet A1-9204/Detail 1 and Detail 5 on E1-6001 regarding the electrical conduits on the columns are in conflict. Detail 1 on A1 -9204 indicates an embedded junction box in the long portions of the columns at Line D.8 above the Train Platform Level. Detail 5 on E1- 6001 indicates all conduits are to be stubbed up 12" at the face of the column. This Detail 5 shows all conduits (shown dashed) above the 12" stub up in the Mat Slab are to be installed in future phases outside of the TG06.0 contract. The columns are part of the TG06.0 scope.  1. Please clarify if these junction boxes and conduit are to be embedded in the columns or stubbed up through the slab at the face of each column at all four (4) locations..  2. If the conduits and boxes are to be embedded in the columns please provide a revised embedded conduit detail indicating conduits as part of TG06 Below Grade Scope.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The embedded junction box details on A1-9204 applies only to the flat surfaces (north and south sides) of the columns along GL D.8 of Platform 2 (refer to note on details 1 & 2 on A1-9204) and shall have embedded boxes and conduits. Locate the conduit and boxes such that the device faceplates will be finished flush to the finished column cladding.  The east and west sides of the columns indicated on the note shall have surface mounted junction boxes and conduits (refer to detail 1 on A1-9204).  For all other columns in the BGP, the junction boxes and conduits are typically surface mounted (refer to detail 5 of E1-6001).	

T-0660	BGP - Clear Cover to Mat Reinforcing at CDSM Pile Encroachment	Closed	07/30/2013	08/09/2013	08/07/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b> Reference: Drawing S1-3201, Spec Section 03 30 20  Per Section 1 on S1-3201, the mat slab reinforcing is shown with 6" of clear cover from the outside face of the concrete wall. When the outside face wall and mat foundation step in and out due to CDSM encroachment, the 6" clear dimension shown on 1/S1-3201 will be encroached upon.  Please confirm this is acceptable. This would apply in any area where the wall thickness is being reduced due to encroaching CDSM Pile.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Encroachment into the 6" clear dimension is acceptable as long as mat rebar does not conflict with the foundation wall vertical reinforcement at the outer face. To avoid this conflict, clear dimension between the mat slab reinforcing and outer face of the concrete wall shall not be less than 4". For future reference, note that the condition at the embedded columns within the foundation walls is different. That condition is illustrated in detail 1/S1-3302 of the construction drawings and the question included in this RFI does not cover that condition.

	<p>typical contract bar +/- 4" from the called out spacing as required to avoid clashes with the installed micropile. The displacement of the typical reinforcing may be either for the full length of the bar or weaved around the clashes depending on the specific condition. If this solution is incorporated and results in the typical reinforcing being displaced such that the end of the bar is not in the typical alignment a non-contact lap splice with the next adjacent designed/detailed bar is acceptable. Should the displacement of the typical contract bar to resolve the clash with the micropile result in another clash with another element of the reinforcing design this condition will be addressed through the RFI process upon recognition. See attached sketch #1 for reference.</p> <p>3. At the contractor's discretion, he/she may cut the typical contract bar creating a gap in the bar to allow for the clashing micropile. Should this be the selected method to resolve the clash a lap splice bar of the same grade and bar size will be required at either side of the gap. The splice bar may be a non-contact lap splice. See attached sketch #2 for reference.</p>						
T-0663	BSE - Micropile Tie-Down detail	Closed	08/05/2013	08/15/2013	08/09/2013	Potentially	<input type="checkbox"/>

T-0664	BGP - Conflict Between Pit Reinforcing & Trestle/Pin Piles	Closed	08/05/2013	08/15/2013	08/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: Drawing S1-2022, Attached Photos				The tails of pit reinforcement that are extending beyond limits of pits and are in conflict with trestle/pin piles may be trimmed for only the 4 of the 5 locations identified in the RFI.			
During the installation of the pit reinforcing between GL 1.4-2.3 and D.4-F a conflict was discovered between trestle/pile and the tail of the #11 pit reinforcing that extends beyond the limit of the pit out and into the main mat slab. Gerdau proposes to trim the tails of the conflicting rebar (Flame Cut) such that clearance can be maintained to the sleeve around the piles.				For the 5th location at trestle pile located at D.4-4.4 (which is within the pit depression), see attached SKS-0281.			
Please confirm this is acceptable or provide direction on how to proceed. This conflict is expected to occur at future pits too.				Note that flame-cutting that has been allowed is limited to applications of this RFI only.			
				For future pits within the remainder of the Project, when the tails of pit reinforcement that extend beyond the limits of the pits that conflict with trestle/pin piles/bridge piers, Contractor shall coordinate with as-built locations and apply detail similar to 1/S1-3007 (where bars interrupted by trestle/pin/bridge pier shall turn up).

T-0665	BGP - Locations of Electrical Outlets, Equipment, and Fixtures	Closed	08/05/2013	08/10/2013	08/07/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon <b>ANSWERED BY:</b> Adamson Associates, Inc. George Metzger							
<b>REQUEST:</b> Reference: Spec Section, 26 05 34  Per Specification Section 26 05 34, 3.2 B., the dimensions of the equipment fixtures and outlets are to be submitted via RFI for clarification pre pour. Attached is the layout for Electrical Room B2221 in the first Mat Slab pour.  Please confirm that these dimensions are acceptable so that the conduit can be laid out correctly.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Layout does not match architectural wall dimensions. Contractor to revise and resubmit layout as coordinated with ASI-102, dated 04/29/2013. Refer to sheet A1-9215 markup attached and coordinate with architectural wall dimensions.  Submitted sketch does not show wall details. Future layouts to be submitted on current CAD backgrounds and all dimensions must be based on interior clearances.  All electrical rooms will be lined with 3/4" plywood backboard. Contractor to coordinate layouts to accommodate.  Due to potential conflict with door, FATC to be relocated to south wall, 9" from west wall, as shown in sheet E1-3101 markup attached. Dimensions added for clarity.			
T-0665.1	BGP - Electrical Locations of Outlets, Equipment, and Fixtures in Electrical Room	Closed	08/23/2013	09/03/2013	08/27/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Chris Williams <b>ANSWERED BY:</b> Adamson Associates, Inc. George Metzger							
<b>REQUEST:</b> Please refer to drawing A1-9215, 1/E1-3101 and attached sketch SK-SCCI-0204.2.  Please find a revised electrical conduit layout for Electrical Room B2221 as requested in RFI T-0665. Please confirm the conduit layout and outlet, equipment and fixture locations shown in the attached sketch SK-.SCCI-0204.2 is acceptable.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> WSP notes revised location of FATC per original RFI response; however, the following items are still outstanding: Layout does not match architectural wall dimensions. Contractor to revise and resubmit layout as coordinated with ASI-102, dated 04/29/2013. Submitted sketch does not show wall details. Future layouts to be submitted on current Contract Document backgrounds and all dimensions must be based on interior clearances. All electrical rooms will be lined with 3/4" plywood backboard. Contractor to coordinate layouts to accommodate.

T-0666.1	BGP - Mat Slab Clarification to Elevator Pit and Slab Opening Dimensions	Closed	08/21/2013	09/03/2013	08/28/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Webcor/Obayashi (W/O) is in receipt of attached Adamson Associates, Inc. (AAI) response to RFI T-0666 - BSE - Elevator Pit Dimensions Between GL1.4 and GL 2.					Accept Suggestion: <input type="checkbox"/>		
This response is unacceptable. The Architect has sole responsibility for confirming that the pit dimensions of all elevators and escalators will accommodate the Architect's proposed elevator and escalator systems.					The design team believes the elevator pit dimensions noted in the contract documents are coordinated with the requirements of the alternate elevator manufacturers noted in the specification. The CMGC shall confirm the work of adjacent trades have been coordinated between shop drawings and existing field conditions. The CMGC shall coordinate with the TJPA to hire Sub-contractors at the required times to ensure that construction work and shop drawings of adjacent trades are completed in time to coordinate between trades.		
Until a 100% IFC set is completed by the Architect, W/O has no definite knowledge of the Architect's proposed elevator and escalator systems. This issue has been discussed verbally for over 2 years, during which the Architect has maintained that they have full responsibility for designing all pits and openings to fit their proposed elevator and escalator systems. W/O is unable to even start the RFQ/Bidding process for hiring sub-contractors until the 100% IFC Contract Drawings are finalized by the Architect and approved by the owner; therefore, it is impossible for W/O to hire/coordinate sub-contractors prior to pouring of the elevator pit in the mat slab.							
The same applies to all pits and openings throughout the design documents, only the Architect is capable of confirming that these dimensions are acceptable for all of the Architect's proposed elevator/escalator systems.							
Please confirm all elevator pits and slab openings are acceptable as currently shown on the contract documents.							
T-0667	BGP - Geothermal Loop Excavation in Zone 4	Closed	08/05/2013	08/09/2013	08/07/2013	Potentially	<input type="checkbox"/>

<p>SCCi is aware of the CDSM wall excavation required for the geothermal field risers, but is not aware of a geothermal specification requiring buttress shaft demolition for the geothermal loop trenches. Specification 31 23 34, Section 3.2 is very clear in the full scope of the ground excavation in soil and wall riser excavation in the CDSM, but it does not cover trenching in buttress shaft concrete.</p> <p>Please provide a design defining the geothermal fields within the buttress shafts. Please include slot excavation, back-fill and compaction requirements in the the affected buttress'.</p>							
T-0668	BGP - CIDH Temporary Bridge Pier Sleeve Detail	Closed	08/05/2013	08/04/2013	08/08/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b> <p>Please refer to drawing S1-3003, A1-8711, SCCI RFI #269 with asbuilt information of CIDH Piles at First Street, and ACI 117-90 section 3.4.1.2</p> <p>The typical 48" diameter bridge pier detail (6/S1-3003) and waterproofing detail (4/A1-8711, 5/A1-8711 and 6//A1-8711) are designed for a steel assembly i.e. bridge pier, piles for shoring, bracing and trestle columns, pin piles and dewatering wells. As a result, the means of achieving the shown steel pipe sleeve is attainable.</p> <p>As per submittal package TG0300-201.3, the 48" temporary bridge piers are designed as CIDH (cast-in-drilled piles) piles and not steel. Specifications for concrete construction tolerances in ACI 117, section 3.4.1.2 allow for horizontal dimension of unformed members cast against soil for greater than 2 ft. but less than 6 ft. allow for +6" and -1/2".</p> <p>The penetration sleeves for these piles have been fabricated.</p> <p>Proposed Solutions:</p>		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> <p>Utilization of concrete piles for the bridge piers was chosen by the contractor to suit their means and methods. The sleeve shown on the architectural and structural drawings provide details of sleeving penetrations to permit expected movement and provide a waterproofing interface. Sleeves at bridge piers were indicated on the Bridge shop drawings and the requirements for field measurements before fabrication were indicated on the metal sleeve shop drawings.</p> <p>New details will not be provided. CM/CG to provide means and methods of adapting concrete pier to suit mat slab waterproofing metal sleeve details.</p>

	<div>1. Remove extra concrete from the outside diameter of the CIDH pile to allow the fabricated 48" penetrations to fit through means of bushing or grinding the concrete as necessary and utilize sleeves as originally intended.</div> <div>2. Please provide a detail drawing with the 48" temporary bridge pier condition as CIDH pile. Please include a sleeve detail allowing for the aforementioned tolerances and waterproofing. Please note, as typical of CIDH piles, the surface profile varies much greater than the 1/2" gap tolerance required for steel assemblies shown in 6/S1-3003.</div>						
T-0669	BGP - Foundation Wall Vertical CJ	Closed	08/06/2013	08/16/2013	08/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: Spec Section 033020, Attached Drawings		Option 2 will be acceptable (reduce the depth of the foundation wall vertical construction joint to 1.5").					
See attached sketch of the vertical foundation wall CJ.							
During construction of the high congestion mockup SCCI has discovered a constructibility issue with the construction of the foundation walls, more particularly, the vertical construction joints. Vertical construction joints are to be constructed as prescribed on Detail 2 of the S 1-3001 CD.							
The designed vertical reinforcement consists of the following: a. WR-1 with #11 vertical bars 8" OC, haunch #10 bars 8" OC, and #4 cross ties 6" or 12" OC. b. WR-2 with #11 vertical bars 8" OC, haunch #10 bars 8" OC, and #4 cross ties 6" or 12" OC. c. WR-2MOD (CDSM Encroachments) with #11 vertical bars 5" OC, haunch #10 bars 8" OC, and #4 cross ties 5".							
When rebar configurations noted above are implemented, even with ACI allowed tolerances included, it will conflict

T-0670.1	BGP - Mat Slab Construction Joint Conflicts	Closed	08/19/2013	08/29/2013	08/30/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Reference: Spec Section 03 30 20, Attached Sketches  Please see attached sketches of mat slab CJ layout. SCCI has discovered conflicts between the CJ formwork and reinforcing steel, pin pile. SCCI proposes to modify the mat slab construction joint to clear the conflicting reinforcing steel and pin pile, as shown on the attached sketches.  Is this acceptable?			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Contractor-proposed CJ layout as presented in the RFI is acceptable.  Although the contractor has not inquired yet, one N-S line of shear reinforcement for the column at F-4 will conflict with the joint key. Contractor may shift this one conflicting line of shear reinforcement max of 3" to clear the key.				
T-0671	BGP - Control Joint Amplitude	Closed	08/08/2013	08/18/2013	08/12/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Reference: Drawing S1-3001  See attached contract drawing S1-3001 regarding vertical and horizontal control joints of the foundation walls. SCCI is requesting acceptance to eliminate amplitude on the face of the control joint keyway where hydrophilic waterstop and injection hose is to be installed. Amplitude will remain on the diagonal portions of the CJ. This RFI is intended to clarify the use of this procedure for foundation walls only.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> For vertical and horizontal control joints at the foundation wall, see response to RFI T-0630.				
T-0672	BGP - Fire Management Device Layout	Closed	08/08/2013	08/18/2013	08/14/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon			<b>Answered By:</b> Turner Construction Company Jeff Thiel				
<b>REQUEST:</b> As discussed in the fire management coordination meeting on Monday 8/5, the contract plan device layout does not meet code for current draw. The stub ups from the mat slab to the devices shown on the contract plans at every other column will not be sufficient enough to meet code requirements for the future fully occupied space. If stubbed up at every other column, the consequences are			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The fire management system of design is a performance based design as per Section 28 30 01-1.1C of the contract documents. The contractor is responsible for the design of the system, including stub ups and device layout, as required to adhere to all applicable code requirements.

T-0679	BGP - CDSM Wall leaks	Closed	08/13/2013	08/23/2013	08/27/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Webcor Construction LP    Jackson Tukuafu				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b> Reference: Attached Photo, Spec Section 07 12 10  Please reference the attached photo. CDSM wall leaks above Level D bracing have created standing water on top of the Area 3 protection slab in multiple areas. The ponding water is triggering the Ad cor ES Waterstop (see photo) along the perimeter of the excavation. SCCI has had minimal success shimming the areas of high leakage to help mitigate the water. Please review and provide direction as to how the leaks will be mitigated. As for the repair of the Adcor Waterstop, SCCI suggests cutting and removing the activated waterstop and installing a new strip with a 4" overlap on both sides. Is this acceptable?			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The suggested remedial work by SCCI is recommended as to adhere to Article 3.07, Section D of the general conditions; SCCI to protect installed materials to prevent damage. As per the approved product data, proper confinement time restrictions are required for any premature swelling or remove and replace damaged material.  Please coordinate accordingly with WOJV for specific locations where areas of high leakage occur. As currently coordinated, SCCI is performing mitigation efforts on force account where applicable.

T-0685	BGP - North Shear Wall Concrete Mix	Open	08/09/2013	08/23/2013	08/29/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Marina Rosso To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: See attached drawing regarding the North shear wall.  Due to the monolithic pours at the intersection of the shear wall, foundation wall and mat slab chamfer, there will be differentiating concrete mix uses. The attached drawing assigns the portions of this intersection with its corresponding concrete mix.  Please verify the use of these concrete mixes at this location as acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Contractor-proposed concrete mix use at north shearwall is acceptable.		
T-0686	BGP - Drain Line Conflict with Micro Piles	Closed	08/22/2013	09/01/2013	09/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Marina Rosso To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: See attached photo and CD PI-2030.  After performed layout of the drainage line system around GL K5 SCCI has discovered that a row of micro piles is in conflict with the 4" cast iron pipe drain line. SCCI suggest shifting the drain line run to clear the micro piles.  Is this acceptable?			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> In order to avoid the conflict between micropiles and drainage piping, the catch basin indicated in RFI T-0686 BGP has been relocated slightly north. The drainage piping will run straight from the catch based as it did before. Refer to the attached PSK-2030 and SKA-2822.		
T-0687	BGP - Drain Line Conflict with Reinforcement	Closed	08/22/2013	09/01/2013	09/03/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Marina Rosso To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: See attached photos and CD P 1-2030.  Tails of the bottom rebar mat at the drainage pit are interfering with the construction of drainage lines and catch basin.  SCCI proposes following: 1. Shift the catch basin to where it clears the reinforcement tails.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Option 2 will be allowed. Rebar tail ends that conflict with the catch basin for this location may be cut to clear the catch basin. 12" max may be cut off.

T-0688	BGP - Pin Pile No 6 Conflict with Future Walls	Closed	08/23/2013	09/02/2013	09/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST:		SUGGESTION:		ANSWER:			
Please refer to attached drawing S1-2052 (ASI 102), S1-3205 (ASI 100) and attached photos.				Accept Suggestion: <input type="checkbox"/>			
Drawing S1-2052, shows pin pile No. 6 (43"x43 block-out) at GL D.8/4 encroaching the future reinforced concrete wall (RCW). As a result, the couplers shown in detail drawing 5/S1-3205 cannot be installed in the area where the pin pile 43'x43" block-out is located.				Note that the wall reinforcement for this RFI is #7@12" OC each face per S1-9050 as it is labeled as a partition wall on plan as well as reflected in rebar submittal TG0600-301.2.			
Please confirm it is acceptable to reduce the distance between the mechanical coupler for the future 12" RCW from 8" O.C. to 4" O.C. as shown in detail drawing 5/S1-3205, The revised coupler spacing would only span a distance of three feet on either side of the block-out to compensate for the coupler that cannot be installed due to the block-out/pin pile location.				The OC spacing of the vertical dowels shall be 6" OC each face for a distance of 3'-0" on either side of the inquired block-out. For vertical bars within the block-out embed min 4" into concrete.

<b>Co-Author:</b>							
<b>REQUEST:</b> Reference Sketch: attached Reference Email: attached  The micropile designer has confirmed that it is not necessary to extend the micropile to within 6" of the top of concrete and that the 5' embedment in the sump pit is adequate. Please confirm that this is acceptable to the design team.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> This is acceptable with the design team.	
<hr/>							
T-0690	SSS - Stainless steel welded to cast iron	Closed	08/23/2013	09/02/2013	09/05/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Robert Kjome			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b>							
<b>REQUEST:</b> Reference Drawing: 1/S1-6056  A number of details throughout structural steel drawings indicate stainless steel welded to cast iron or mild steel, see detail 1, 2/S1-6056 as one example. If two metals are fused, cast iron welded to stainless steel results in carbon migration. The chromium in the stainless and carbon in the steel have affinity for each other at elevated temperatures that results in carbon and chromium combining to form chromium carbide. This turns the welded area into hard and brittle material with a potential for rust that overtime has a high possibility to crack and fail.  For Det. 1 and 2 on S1-6056 the added tension from cables may contribute to failure. The proposed solutions include:  1.Use stainless steel instead of mild steel for the bottom connection plate thus welding stainless steel to stainless steel. Where the bottom plate has to connect to structural steel use bolted connection with thin dielectric isolator between two surfaces.  2.Replace welded connection to bolted connection with an isolator.  3.Use galvanized and painted plate instead of stainless			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The inquired connection can be executed in the way shown. Welding stainless steel to carbon steel is an established method, which can be done using an appropriate welding method. As with all welding methods, there are certain points to be considered, such as:  - The fabricator to be approved for welding stainless steel to carbon steel and/or cast steel (qualification submittals)  - The welder to be approved for welding stainless steel to carbon steel and/or cast steel (qualification submittals)  - Surface preparation before welding necessary (welding procedure submittals)  - Selection of weld filler material (welding procedure submittals in combination with structural design verification)  - Surface preparation after welding (welding procedure submittals)  - Coating of weld and stainless steel member 30mm beyond weld (welding procedure submittals)

<b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b> Please refer to attached detail 3 on drawing S1-3603 and attached Gerdau Sketch SK-Gerdau RFI 070.  Please confirm it is acceptable to install S-3 stirrups and one T-9 tie as shown in the attached sketch for the vertical ties in the moment frame beam in lieu of installing all T-9 ties as depicted in detail 3/S1-3603. The proposed concrete reinforcement configuration is needed to avoid the constructability issues associated with alternating the hooks under the 1.5" of clear cover beneath the bottom beam bars.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Contractor proposed reinforcement configuration for the lower concourse moment frame beam transverse reinforcement is acceptable.		
<b>T-0693</b>	<b>BGP - Conduits in Columns</b>	<b>Closed</b>	<b>08/23/2013</b>	<b>09/02/2013</b>	<b>08/27/2013</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> From discussions with the Design Team, we have been informed that a number of columns will have post installed steel jackets. Columns with Fire Management and steel jackets will require the conduits and j-boxes to be embedded. It is noted that the jackets will not be full height, so the j-boxes will be flush with the concrete face.  Please provide the locations of the affected columns and a height for the boxes.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> AAI response: Refer to the attached sketches SKA-2808R1, SKA-2809R1, SKA-2811R1 showing the locations of the West End B2 level concrete columns which will receive post installed steel jackets and embedded conduits. The attached SKA-2817R2 shows the mounting height of the surface mounted electrical boxes for these columns.  WSP response: On the steel jacketed columns, backboxes will be surface mounted with conduit routed within the column. Conduit will exit the column terminating into the back of the surface mounted box. Contractor shall lay out and route the embedded conduits such that the number of bends between boxes does not exceed code (360 degrees between boxes). These embedded conduits shall not be required to follow building column lines, and direct runs between devices shall be acceptable to avoid intermediate junction boxes.		

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
T-0693.1	BGP - Embedded Conduits in Columns	Closed	09/04/2013	09/14/2013	09/05/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Marina Rosso			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Shimmick Construction Company, Inc. Chris Williams							
<b>REQUEST:</b> In the MEP meeting on 9/4/13, the response to RFI T-0693 was clarified. To confirm conversations with the WSP Electrical Design representative, the only conduits to be embedded in columns per the RFI T-0693 response are to be fire management conduits per the locations depicted in the response. All other conduits (power recepticals etc) are to be stubbed up on the face of the columns and are not to be embedded in the column.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> With reference to RFI T-0693, all other conduits (power receptacles etc.) are to be stubbed up adjacent to the face of the columns and are not to be embedded in the columns. The conduits and receptacles will be surface mounted on the post-installed steel jackets. Note that the conduits are to be stubbed up with 5" between the conduit face and the concrete column face, to allow for the post-installation of the steel jackets. There are also plumbing risers on a number of the steel jacketed columns. The pipe risers should be positioned relative to the columns in accordance with the plumbing documents, but should not be closer than 5" to the concrete column, to permit post installation of the steel jackets.	
<hr/>							
T-0694	Additional Rebar Conflict for Plumbing Trim at GL2/D.4	Closed	08/26/2013	09/03/2013	08/27/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b> Please refer to drawings 1/A1-2122, 1/S1-3501 and attached Gerdau sketch SKS-1  Due to the density or the typical N-S top mat bars (#10) and additional bars (#11) near the elevator pit at Gridlines 2 and D.4, the additional trim rebar per 1/S1-3501 for interrupting the bars over the plumbing opening cannot be installed to the East of the plumbing opening within 3" of the opening. The alternative solution would be to install the additional steel in a new layer below the top mat; however, due to proximity of the piping to the steel the bars cannot be placed below the top mat. Gerdau proposes the folloing options:  A. Omit the additional trim bars to the East of the trimmed opening. B. Relocate the additional trim bars approximately 3'-0" East of the opening where the rebar spacing would allow for additional steel.  Please advise if proposed options are acceptable.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Contractor-proposed option to omit additional trim bars to the east of the trimmed opening is acceptable for the cut plumbing opening at Grid 2/D.4. Added trim bars to the west of the opening will remain as placed.

T-0695	BGP - Additional Rebar Conflict for Floor Sink Trim GL B.7/2.7	Closed	08/26/2013	09/02/2013	08/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
See attached Gerdau's RFI #72, 1/S1-3501, A1-2122, attached Gerdau sketch SKS-1				Per SKS-0282 (attached),			
Due to the density of the typical N-S top mat bars (#10), additional N-S top mat bars (#11) and pin pile trim steel (#11 with lap splices directly over floor sink) near the floor sink at Gridlines 2.7 and B.7, the additional trim rebar per 1/S1-3501 for interrupting the bars over the plumbing opening cannot be installed on either side of the plumbing opening. The alternative solution would be to install the additional steel in a new layer below the top mat; however, due to the proximity of the plumbing piping to the steel the additional bars cannot be placed below the top mat. Also, the additional bar to the East of the opening would conflict with the pin pile. Gerdau proposes to cut top mat bars to allow for the floor sink installation and omit the additional trim bars.				Pin pile add bars will be calculated as ½ the number of interrupted bars each side in lieu of ½+1 bars. This eliminates (2) pin-pile add bars being interrupted by the drain.			
Please advise if the proposed solution is acceptable.				One wall add bar interrupted by the drain will be cut short at the northern limit of the drain and not be considered interrupted by the drain.			
				Reinforcing west of the drain centerline, but within the cut zone, will be jockeyed west so that no bars are required to be cut.			
				Reinforcing east of the drain centerline, but within the cut zone, will be jockeyed east so that no bars are required to be cut.			
				A single typical mat bar will remain within the cut zone and may be cut.			
				Congested reinforcing east of the cut zone will be jockeyed east aided by the partial (or complete) removal of a plumbing add bar.			
				Clear spacing of 1db to be maintained between all bars except where lap spliced.			
				In displacing bars to achieve the configuration shown in the SKS, resulting non-contact lap splices will be tolerated up to 6".

T-0696	SSS - Type 1 Drag Connection Angles	Closed	08/26/2013	09/05/2013	08/29/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> Reference Drawings: S1-2502, S1-2503, S1-2504, S1-2505, S1-2506, S1-2507  The angles shown in the bus deck plan views (drawings S1-2502 through S1-2507) for the Type 1 drag connections to the bus deck cast nodes do not appear to match with the corresponding angles shown on the casting drawings (drawings S1-5121 through S1-5125).  The attached mark-ups show our fabricator's (Oregon Iron Works) attempt to calculate the angles on the bus deck plan views and compare them to the corresponding angles of the castings.  Please clarify.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Beam plan angles (Sheets S1-2502 through S1-2507) and Bus Deck casting angles (S1-5121 through S1-5125) will not match in all cases because some casting types are used at multiple locations as indicated in Sheet S1-5120. The design intent was to minimize the number of unique castings in the structure which is more cost effective than developing unique casting geometry for every joint. For example, as indicated Sheet S1-5120, Casting 21A is used at various different joints at which joining beam angles vary in a certain range. The pad widths on the castings have been designed to be wide enough so that beams with different plan angles can be connected to the casting.  In some other cases, the casting angles were revised during cast node shop drawing review. For example, for Casting 35B one of the plan angles was changed from 42.25 to 26.14 degrees to match the beam angle. Contractor shall coordinate the information in the drawings with those in cast node shop drawings.		
T-0697	BGP - Moment and Spandrel Beams 180 Degree Hooks Versus 135 Degree Hooks	Closed	08/26/2013	09/06/2013	08/30/2013	Potentially	<input type="checkbox"/>

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<b>REQUEST:</b> Reference Drawings: A1-2863, S1-2303, S1-5000 Reference Sketch: attached  There are many conflicts in the plans where the top of concrete and the top of the transfer girder in that given area does not leave the amount of space required under the Metal Deck Schedule on 2/S1-5000.  For Example: Using the Top Of Concrete (TOC) and Top Of Steel (TOS) elevation from sheet S1-2303 a clash occurs between the slab (S3 - TOC: 19.00') and Transfer Girder TR9 (TR9 - TOS: 18.37'). The 10" that the S3 deck requires in the Metal Deck Schedule on 2/S1-5000 cannot be maintained over the Transfer Girder. Please clarify.	<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Refer to details that have been cut on plan across the transfer girders as applicable in the Superstructure IFC/ASI 105 issue.  Example: See section detail 8/S1-3705 that is cut at gridline 9 & D.4 on S1-2303 (included in the RFI).		
<b>T-0699</b>	<b>BGP - Catch Basin Requirements</b>	<b>Closed</b>	<b>08/27/2013</b>	<b>09/06/2013</b>	<b>09/30/2013</b>	<b>Potentially</b>	<input type="checkbox"/>

<b>Co-Author:</b> Shimmick Construction Company, Inc. Filip Filipic							
	<b>REQUEST:</b> See attached page from DBI's standard catch basin detail, and reference drawings P1-6001 and P1-2022 thru 2030.  On 08/26/2013 during pressure testing inspection of the drainage lines in mat slab areas 1 and 2, the SFDBI Plumbing Inspector pointed out that all catch basins in the mat slab should be constructed per city standard catch basin details. However, the contract drawings do not show catch basins details with cleanouts, vents and trap primer connections per the City Standard details.  Please confirm the attached SFDBI city standard catch basin detail is to supersede all catch basin details currently shown in trade group package TG06.0 drawing set. Please include revised plumbing drawings incorporating the City Standard details.	<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> As discussed in our review meeting with the SFDBI Plumbing Inspectors, the catch basin which are actually points of collection, will be installed as shown on contract documents.

	built up from domestic plate.  6/S1-5050 gives an option for W14 built up columns but does not give an option for W40 columns.  please advise						the bid was certified to conform to the Buy America clause.
T-0704.1	SSS - Built Up Plate Fabrication for W40x503	Closed	09/16/2013	09/26/2013	09/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:			
Reference RFI: T-0704				Accept Suggestion: <input type="checkbox"/>			
The built up beam will consist of 1 9/16" webs and 2 3/4" flanges. Please confirm that these plate sizes are appropriate.				Flange and web thicknesses are confirmed. The beams shall be 42" deep, the flanges shall be 16-3/8" wide. The plates shall be ASTM A572, GR 50 per General Notes SS-1. Web to flange welding shall be with double 5/8" fillet welds for 4 ft from each end of each flange plate and double 3/8" fillet welds in between.			
The web to flange weld was not addressed on returned RFI T-0704. We would suggest a 3/8" double fillet weld to join the web and flanges.				W40X503 are also used at Roof and Ground Levels. W/O to coordinate RFI T-0704-SSS and T-0704.1-SSS responses with other sub-contractors, as needed.			
Please confirm or provide an alternate detail.

T-0709	BGP - Mat Slab Added Steel Interference	Closed	09/03/2013	09/16/2013	09/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Drawing S1-3003 and Spec Section 03 20 00 See attached Gerdau Sketch SK-77, BM-3b, BM-3t				The rebar conditions for bars at pin/trestle piles are addressed in typical details 2 & 3 on S1-3003 as well as details 4 & 7 on S1-3009 - these also apply to the inquired add bars in the RFI. The contractor-proposed use of spliced hook at these locations is acceptable.			
Due to the location of select trestle and pin piles, the #9@16" (bottom mat) and #11@16" (top mat) added North-South layer reinforcement cannot be installed at the desired spacing. The proposed solution is to cut the added #9 or #11 bars, where interrupted by a pile, and add a hook of equal size or greater (#11 hook max) with a lap splice similar to the hooks used for the trestle and pin pile trim steel.							
Please confirm if this is acceptable.

T-0710	BGP - Haunch Reinforcement Alternative Detail at Dewatering Well in Area 3	Closed	09/03/2013	09/16/2013	09/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST: Reference Drawing: S1 -3201 Reference Spec: 03 20 00 Attached Gerdau Sketch: SKS-76.1, SKS-76.2, SKS-76.3  A portion of the #10 @ 8" haunch bars cannot be installed as fabricated due to conflicts with overhead obstructions (shoring walers and struts) and the dewatering well sleeves. Per discussions with Sean McNeil where bars cannot be installed due to the obstructions, a modified #10 haunch bar with an HRC 555 head can be installed in place of the typical haunch bar. The attached sketches (SKS-76.1 and SKS-76.2) depict the magnitude of the obstructions at the dewatering wells in Area 3.  Please confirm if this is acceptable.  Additionally, please provide the required embedment length for the headed tail of the modified haunch bar.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> At conflicts with dewatering wells, the tail of the haunch bar may be terminated as shown in Gerdau SKS-76.3 contained in the RFI. The embedment length for #10 headed bar shall be 18". Alternatively, the embedment may be a straight development, either inclined or vertical, of 42". The 180 degree hook at the top of the bar shall comply with the RFI T-702 BGP response regarding the location of the radius point.				
T-0711	SSS - Radius Change Request for LC301	Closed	09/03/2013	09/13/2013	09/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: A design change on the light column critical type LC301 (CN0058) node has changed the radius between the body and the lifting bracket from the original two inches to one inch. We would like to formally request a change to a minimum of a two inch radius in this location. A one inch radius on the 301 bracket creates the following manufacturing challenges:  A. The sand in the 1 inch radius in the mold will superheat and cause burn in/on sand adherence to the casting causing additional grinding and work in the finishing department to meet visual acceptance criteria.  B. The sharper radius will create a hot spot and solidification challenges - liquid metal contracts % inch per foot and silica sand expands 1.2% during solidification and as cast hot tear potential in the radius may occur causing welding, grinding and blending. This again will be to meet			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Proposed 2" fillet radius between the main body of casting LC301 and its side fin is acceptable.

	<p>the visual acceptance criteria.</p> <p>C. With a 2 inch radius the appendage (lifting bracket) will be much closer to thermally neutral reducing solidification stresses and potential shrinkage in the section radius.</p> <p>D. Cosmetically a 2 inch radius will look much more presentable in the as cast state.</p> <p>E. The 1 inch radius will require either chill sand in the radius, a metal chill made in the mold, or solidification cracking brackets as heat sinks to equalize the solidification temperatures and add strength to prevent hot tearing during solidification. Additional grinding of these areas will be necessary to meet visual acceptance criteria.</p> <p>F. Items A, B, and E will add costs to the manufacturing process of the casting.</p> <p>Our purpose is to point out the effects of the 1 inch radius design request and make sure that the designers are aware of the potential impact of having the smaller radius versus the 2 inch radius in the original designs that were reviewed. Bradken Atchison can certainly produce the 1 inch radius and manage the effects the 1 inch radius causes, but producing that design will have cost impacts to the casting process.</p>						
T-0712	BGP - Jitter Bug Finish on Mat Slab Surface	Open	09/03/2013	09/13/2013	09/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference Spec Section 033020.3.6.B.I.c. See attached photos for a visual reference.  Please reference TG06.0, BGP contract specifications 033020.3.6.B.I.c. SCCI is proposing to finish the top surface of the Mat foundation Slab, as a "Jitter Bug" finish. All other finishing requirements will remain the same.  Is this acceptable?		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/> The proposed ¿Jitter Bug¿ finish is not acceptable. Future requirements for the train bed are unknown and the proposed finish may not be acceptable in some instances. Use the stiff broom finish per specification section: 03 30 20.3.6.B.1.c

<b>Co-Author:</b> Webcor Construction LP      Jackson Tukuafu							
<b>REQUEST:</b> See attached Gerdau's RFI #79.  The RFI Response to RFI T -0702 stated that the 180 degree hook chamfer bars are acceptable where the bars conflict with the double shoring walers. The intent of the RFI was to request the use of the 180- degree hook for the chamfer bars throughout the structure regardless of whether or not the bars were below a double or single walers.  Please confirm that this is acceptable.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Per RFI 702 response, contractor-proposed 180 degree hook for the chamfer bars that are in conflict with double shoring walers is acceptable for bars that have not been fabricated. The radius point for the bend shall remain located as originally detailed on 1/S1-3201.  At contractor's option, the same bars may be used at any haunch location and are not restricted to the double walers.

T-0723	<b>BGP - Couplers for Future Walls</b>  <b>From:</b> Webcor Construction LP Marina Rosso <b>Co-Author:</b> Shimmick Construction Company, Inc. Filip Filipic  <b>REQUEST:</b> Reference Det. 6 on S1-3001 See attached photo of the form savers that are going to be used as couplers for future walls.  As discussed in area 3 Mat Slab meeting on 9/4/2013 SCCI is proposing to installing all formsavers for future walls in the Mat slab flush with the top of the Mat slab, to EL -35.67'. As shown on the attached photo, epoxy coated form savers have tin cap incorporated into coupler's body. This tin cap will protect the rebar until the future construction, and will substitute "tar" shown on Det. 6 on S1-3001.  Is this acceptable?	Pending	09/05/2013	09/13/2013	09/05/2013	Potentially	<input type="checkbox"/>
		<b>To:</b> Turner Construction Company Gary Krutsch	<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
		<b>SUGGESTION:</b>	<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Epoxy-coated form savers shall be installed at the top of the mat slab as discussed on site in the RFI for locations where Detail 1/S1-9051 is applicable and may remain attached to the field observed 2x12 lumber, which shall be chaired to the target elevation. The form-saver/ lumber assembly is not applicable to any wall where there is a keyed joint or waterstop, such as the water tank walls. The arrangement is not acceptable for any "future wall" where the form-saver warranty will not cover corrosion protection for the construction interval without supplementary surface measures to be approved by the design team.

## REQUEST:

Reference Documents: Exhibits A - I

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north & south wall in mat slab pour Area 8 as well as all levels of the encroachment into the foundation wall between CDSM piles 133 to 164 on the north elevation and 618 to 650 on the south elevation for Location Plan see exhibit - A

Exhibit - B, & C depict the location and degree in which the SP are encroaching

WOJV proposal North elevation on gridline A:  
(See Exhibit - B & Exhibit - F) Between CDSM piles 145 to 147 and 157 to 159 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 146 & 158, originally these were WR1 reinforcement area's #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit - D).

Between CDSM piles 159 to 162-163, WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 161. This foundation wall area was originally a WR2 reinforcement area (#11@6"oc EF vertically) and would change to #11@5"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit -E).

WOJV proposal on the South elevation:  
(See Exhibit - B) Between CDSM piles 631 to 635, WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 632. This foundation wall area was originally a WR2 reinforcement area (#11@6"oc EF vertically) and would change to #11@5"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit - E).

In all other areas without CDSM pile encroachment issues the reinforcement will remain unchanged as per the

## SUGGESTION:

## ANSWER:

Accept Suggestion: ☐

George Metzger  
9/16/2013

## RESPONSE:

The contractor proposed revisions to foundation wall reinforcement due to encroaching CDSM Piles 146, 158, 161 and 632 are acceptable.

T-0725	BGP- CDSM Soldier Pile Cut-Off	Closed	09/06/2013	09/16/2013	09/18/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Michael Spillane			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b>							
<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>		
<p>In Detail 2/A1-8710 (see attached) it's not clear as to the final cut-off elevation for the CDSM wall shoring piles. Currently CDSM shoring piles extend up past the existing grade and future TG12.1 Civil Site Work Trade Contractor will be responsible for cutting off the CDSM wall shoring steel piles to the final elevation. WOJV propose that the cut-off elevations for the shoring piles be established at 3" above the train box lid i.e. at the top of concrete protection slab. See attached sketch SK -1.</p>					<p>George Metzger 9/17/2013 RESPONSE: The soldier piles are within the City Public Right of Way. Obstructions either have to be at least 4' below the surface or be protected with 1" thick steel plates (similar to the Train Box Lid). Leaving the soldier piles in this Public Right of Way may compromise agreements that have been established with the City.</p>		
<p>If the shoring piles are to be cut off below the train box lid as currently shown in detail 2/A-8710, the waterproofing membrane could be compromised by the heat generated by the cutting torches which will have to be used to cut these large steel piles, also this detail does not address the instances where the shoring wall is shared with further new projects i.e. 181 Fremont street in Zone 4 and 101 1st street in Zone 3.</p>					<p>Either the piles will need to be cut down below the 4' depth entirely or the vertical flange adjacent to the Train box is left in place and the opposite (outside) flange and the web are cut down to 4' below the finished surface. Leaving the inside flange in place to the top of the Train Box Lid could facilitate support for the vertical waterproofing assembly.</p>		
<p>It is preferable that the shoring piles be cut-off 3" above the top of the train box lid to ensure that the waterproofing system isn't compromised and omits the need to pothole around 861 CDSM piles which are in close proximity to adjacent property and live traffic.</p>							
<p>Please confirm this is acceptable.</p>							
<hr/>							
T-0725.1	BGP- CDSM Soldier Pile Cut-Off	Closed	09/30/2013	10/10/2013	10/14/2013	Potentially	<input type="checkbox"/>

T-0725.2	BGP - CDSM Soldier Pile Cut-off	Closed	06/30/2014	07/10/2014	07/16/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche			To: Turner Construction Company PHIL MILITELLO				
Co-Author:			Answered By:Turner Construction Company Jack Adams				
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Further to response to RFI T-725.1 TG07.2 trade package requires the cut off elevations for the 861 CDSM pile around the perimeter or the train box taking into account but not limited to, San Francisco city requirements for beam cut off in a public right of way, the elevation of utility/s entering the train box structure, bridge structures and ramps as well as pedestrian stair towers 201A and 201B and passenger elevator 201 foundations on the west side of zone 1, Another item which will also need to be take into account is where the CDSM shoring wall is shared with adjoining Projects i.e. 181 Fremont street in Zone 4 and 101 1st street in Zone 3.			As discussed with the design team and the TJPA, Tabular format a list of the final cut-off elevations for each individual CDSM pile does not exist. The CDSM Wall cut-off elevations are by contractor means and methods with the elevation determined by the contractor based on the various components of the Transit Center building construction for example; contractor formwork, waterproofing and re-construction of adjacent streets/sidewalks.				
Please provide in Tabular format a list of the final cut-off elevations for each individual CDSM pile.			Where CDSM wall is shared with adjoining Projects i.e. 181 Fremont street in Zone 4 and (Salesforce Tower) 101 First street again the CDSM Wall cut-off elevations are a contractor means and methods with the elevation determined by the contractor to construct the Transbay Transit Center.				
			For future bid packages, the Construction Manager can coordinate with the City of San Francisco for the requirement for removal. For example the City DPW states sheet piling and laggin"shall be cut off at least 3 feet below pavement subgrade with the upper part removed."				
			Jack Adams, Turner Construction			Dated 7/16/14	

T-0726	BGP- Trestle pile No 6 in conflict with beam at Lower Concourse Level	Open	09/09/2013	09/19/2013	09/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu			To: Turner Construction Company Gary Krutsch				
Co-Author: Webcor Construction LP Michael Spillane			Answered By:Adamson Associates, Inc. George Metzger				
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Following a review and discussion on the trestle pile location, it has been noted that trestle pile number 6 (see sketch attached) is in conflict with a beam (B45) at the lower concourse slab elevation between gridline 5-6, E-F. The contractor is proposing to blockout a section of slab as shown on the sketch, this blockout section would then be infilled once the trestle pile has been removed.			George Metzger 9/20/2013 RESPONSE: This approach is acceptable. Please submit detailing in reinforcement submittal for review.

T-0728	BGP - Column Shear Reinforcement and Bump-Out Pile Interference at GL G/15 in	Closed	09/10/2013	09/20/2013	09/13/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Webcor/Obayashi Joint Venture Bob Garcia							
<b>REQUEST:</b> Please refer to attached drawing S1-2024 (dated 11/27/12), S1-3005 (dated 08/3012) and attached Shimmick sketch SK-SCCI 316.  Per field measurements, the 36" bump-out trestle pile near gridlines F.7/15 interferes with the nearby column shear reinforcement at gridlines G/15. Due to the size of trestle pile, the adjustment of the shear head locations, as provided in RFI T-0703, cannot be achieved.  Please advise.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Per SKS-0283 (Attached):  To avoid the trestle pile interference with the column shear heads at Grid G/15, the heads layout shall be rotated 45 degrees about the column center.  The layout of heads in an arm shall be modified such that each of the arms contains 9 lines of heads extending to 16' from the column center.  Heads in an arm shall be placed approximately at each 8' reinforcing module intersection, such that each adjacent line radiating from the column is staggered.  The minimum number of total heads shall be 508.				
T-0729	BGP - Typical Trim Steel Requirements for Mat Slab per Field Coordination	Closed	09/10/2013	09/20/2013	09/11/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b> Please refer to attached drawing S1-3009 and S1-3501.  As per field coordination between SCCI, Gerdau, WOJV and TT on 09/09/2013, to help alleviate congestion in the mat reinforcing, and in particular, congestion resulting from add bars due to openings and penetrations, please confirm the following items are acceptable:  1. Details 4 and 7 on Sheet S1-3009 in so far as they apply to trestle piles, pin piles, dewatering wells and piezometric pipes can be relaxed in terms of additional bars. For an even number of bars interrupted (typical bars and add bars) the number of bars added on either side of the opening can be (number of interrupted bars)/2. For an odd number of bars interrupted (typical bars and add bars) the number of bars added on either side of the opening can be (number of interrupted bars +1)/2.  2. Detail 1 on Sheet S1-3501, which applies to sinks, can be relaxed in terms of additional bars. For an even number			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 9/11/2013 <b>RESPONSE:</b> The measures to reduce congestion described in the RFI are confirmed.				

<b><i>Number</i></b>	<b><i>Subject</i></b>	<b><i>Status</i></b>	<b><i>Date Created</i></b>	<b><i>Date Required</i></b>	<b><i>Date Answered</i></b>	<b><i>Cost Impact</i></b>	<b><i>Proceed</i></b>
	<p>of bars interrupted (typical bars and add bars) the number of bars added on either side of the opening can be (number of interrupted bars)/2. For an odd number of bars interrupted (typical bars and add bars) the number of bars added on either side of the opening can be (number of interrupted bars +1)/2. The minimum requirement of 2 bars on either side of the opening need not apply.</p> <p>3. The number of bars and maintenance of clear spacing will take precedence over 8" or 4" module spacing as to minimize the number of potential bar interruptions (and minimize resulting add bars). Any bar may be displaced to avoid conflict. The maximum center-to-center spacing of any two adjacent bars may be as large as 16". Clear spacing of 1 bar diameter shall be maintained between bars where bar relocation necessarily reduces spacing in the vicinity of relocation. Where bar relocation affects a lap splice, noncontact lap splices will be allowed up to 6" for #10 and #11 bars. This remedy shall apply in particular when seeking to avoid interruptions at small penetrations such as risers, vents, sinks and conduits.</p> <p>4. Clear spacing of 1db minimum shall be maintained in all mat reinforcing except for contact lap splices.</p> <p>5. Measures to reduce congestion at other locations such as catch basins, sump pits, elevator pits, shoring bracing and bridge piers will be considered on a case-by-case basis during field coordination with Thornton Tomasetti's field representative.</p>

<b>REQUEST:</b> Reference Drawing: S-0007  Please identify what are considered "LATERAL SYSTEM MEMBERS" as called out in the GENERAL NOTES SS-9, B "REGARDLESS OF THICKNESS ALL TRUSSES, LATERAL SYSTEM MEMBERS (INCLUDING COLUMNS, BRACES, ETC.): 20FT-LB @ 70 DEG. F."			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Lateral system members refer to members of the seismic framing. Following members constitute the seismic frame: Members designated as SLRS or SFRS in the drawings, members in "seismic frame elevations". See plan notes to locate "seismic frame elevations". As called out in Specification 05 12 10 (Structural Steel - Additional Seismic Requirements) Section 2.1.A.1, "Heavy sections shall be supplied with CVN testing in accordance with AISC 341". Therefore, requirements of SS-9B need not be applied and CVN testing requirements can be limited to heavy sections (shapes) per the AISC 341 requirements. As noted in General Notes GR-2, AISC 341-10 is the governing provision.

<b>Co-Author:</b>							
<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b>		
Reference Drawings: S1-5016 and S1-5017					<b>Accept Suggestion:</b> <input type="checkbox"/>		
The spacing of the shear plates on the bus deck cast nodes varies in conjunction with the thickness of the web of each connecting beam. See 1c/S1-5016 and 1b/S1-5017 for reference.					In concept, TT take no exception with standardizing the bolt and pin lengths, but offer the following comments:		
In order to avoid customizing the cast nodes, connection pins and/or the bolt lengths, our fabricator, Oregon Iron Works, proposes to standardize the spacing on the cast node shear connection plates and customize the thickness of the web reinforcing plates. See the attached mark-ups of S1-5016 & S1-5017 depicting the proposed detail.					1.The bus deck cast nodes are in the process being fabricated, so the proposed change shall not affect the cast node pad width. The pad on the cast node has sufficient width to accommodate the connection plates as shown on the contract documents.		
Please confirm that this proposal is acceptable.					2.For Type I drag connection, the tabulated plate thicknesses do not include the ones for W40 x327 (near Grid 9.9, 10.1, & 19.9) and W40x392 (near Grid 20.1).

T-0738.1	SSS - Nominal Gap Dimensions for Cast Node Drag Connections	Closed	01/14/2014	01/24/2014	01/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Stephanie Azzolino      To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:      SUGGESTION:      ANSWER:      Accept Suggestion: <input type="checkbox"/>							
WOJV RFI T-0738 (SK RFI 004.1) was submitted to the EOR proposing a 1/2" gap for Type 1 and Type 2M drag connections at the Bus Deck Level Cast Nodes. These ½" gaps were not explicitly called out, but were indicated on the supporting documents attached for your reference.			The 1/2" gap was proposed initially in RFI T-0738 to allow for 1/4" gap at each side of the beam web. We propose a 1/8" gap each side to mitigate the potential joint movement in an earthquake. We believe that the 1/8" gap is sufficient for erection tolerance. If Skanska prefer the 1/4" gap, please provide justification for the Design Team to review.				
Subsequent conversations with Thornton Tomasetti and Webcor/Obayashi have revealed that a 1/8" nominal gap is preferred in lieu of the noted ½" gap.							
Please advise if a 1/2" or 1/8" nominal gap is required for the Type 1 drag connection on 1/S1-5016 and Type 2M drag connection on 1/S1-5017.							
T-0739	BGP - Column C16 and Knock-Out Corbel at West Throat	Closed	09/17/2013	09/27/2013	09/18/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Jackson Tukuafu      To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:      SUGGESTION:      ANSWER:      Accept Suggestion: <input type="checkbox"/>							
Please refer to attached drawing detail 1/S1-2022 and 4/S1-3260.			George Metzger 9/17/2013 RESPONSE:				
Per previous discussion with TT field engineer, in the West throat shearwalls which contain integrated C16 columns and vertical corbels to restrain the knock-out walls, only the C16 column ties are required to penetrate the mat at the designated spacing for a distance of at least 12" below the lowest top mat elevation. The ties associated with the corbel are not required to penetrate the mat slab.			Column C16 is a boundary element in the West Throat Shearwall. Integral to the column (and the wall) is a vertical corbel that restrains the knock-out wall. Ties are indicated for both the column and the corbel. Only the column ties are required to penetrate the mat at the designated spacing for a distance of at least 12" below the lowest top mat elevation. The ties associated with the vertical corbel are not.				
This RFI confirms that the column and corbel ties, as placed, are acceptable based on the observation by the TT field engineer.			As the corbel ties are not required below the mat, the corbel ties observed in the field are necessarily confirmed as acceptable.				
			The column ties, which are required to penetrate the mat, shall be placed per the contract drawings. This RFI response does NOT confirm the placement or spacing of the column ties observed in the field.

T-0742	BGP- CDSM Soldier Pile Encroachment Area 9	Closed	09/20/2013	09/30/2013	09/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				

## Co-Author:

## REQUEST:

Reference Documents: Exhibits A - G

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) and steel plate on the north & south wall in mat slab pour Area 9 as well as all levels of the encroachment into the foundation wall between CDSM piles 164 to 188 on the north elevation and 595 to 618 on the south elevation for Location Plan see exhibit - A Exhibit - B, & C depict the location and degree in which the SP are encroaching

WOJV proposal North elevation on gridline A: (See Exhibit - B) Between CDSM piles 167 to 168 WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching Steel plate attached to SP 167 & 168, originally this was a WR1 reinforcement area #11@8" oc EF vertically and would change to #11@6" OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

WOJV proposal on the South elevation: (See Exhibit - B) Between CDSM piles 611-612 to 613-614, WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 612. This foundation wall area was originally a embedment column with reinforcement in this area was a double layer of #11@6" OC EF vertically and would change to #11@5" OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.4 option1 (Exhibit -E).

In all other areas without CDSM pile encroachment issues the reinforcement will remain unchanged as per the Contract drawings.

See Exhibit - F & G showing details of transition between modified reinforcement to contract reinforcement.

These solutions if approved would be incorporated into the TG06 shop drawings.

Please confirm if these solutions would be acceptable.

## SUGGESTION:

## ANSWER:

Accept Suggestion: ☐

George Metzger

9/25/2013

## RESPONSE:

The contractor proposed revisions to foundation wall reinforcement due to encroaching CDSM Piles (and added steel plates) in Area 9 are acceptable. Note that reducing the spacing of embedded column vertical reinforcement from 6 inch to 5 inch may negatively impact the installation of embedded column cross-ties which are #5 per construction drawings.

Reference Drawing: S1-4201, S1-4203, S1-4202 Reference Sketch: CD RFI 022 SK1 & SK2					<b>Accept Suggestion:</b> <input type="checkbox"/>		
Reference is made to drawing 1/S1-4201 detailing the moment frame column field splice above the Bus Deck Level. Per details 1/S1-4201 and 1/S1-4203, a thickened column web plate is required at the Bus Deck Level in the 48" deep moment columns. Please verify the following is acceptable at this field splice:					The contractor's proposal to extend the thickened web plate to the splice point is acceptable.		
1. The web plate can be extended 14" to the field splice location, eliminating a shop web splice in the column. Reference CD RFI 022 SK1 & SK2 for additional information.					The thickened web plate shall be tapered similar to detail 8/S1-4202 as stated in the RFI.		
2. The thickened column web plate will need to be tapered similar to detail 8/S1-4202 at the field splice location.							
<b>T-0751</b>	<b>SSS - Roof Level Moment Frame Column Field Splice at GL 28</b>	<b>Closed</b>	<b>09/20/2013</b>	<b>09/30/2013</b>	<b>09/26/2013</b>	<b>Potentially</b>	<input type="checkbox"/>

T-0753	BGP - East Bulkhead and Catch Basin Conflict with Mat Slab Construction Joint in Closed		09/20/2013	09/30/2013	10/02/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST: Please refer to attached photo of as-built location, drawing SKA-2821 and excerpt from the CJ submittal shop drawing CJ-04 (TG0600-030).  SCCI had to shift the construction joint between mat slab areas 6 and 7 Eastward due to the interference with the micropiles and trestle piles. This shift in the CJ puts the bulkhead against the catch basin near GL G11.  Please confirm it is acceptable to shift the catch basin location approx. 24-inches in either east or west direction of the bulkhead/CJ.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 9/28/2013 RESPONSE: It is acceptable to shift the Catch Basin location approximately 24" to the West (Refer to SKA-2850). Drainage piping to be shifted to the west accordingly.

<b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b> Please refer to the attached letter, authored by Rober Foley (CEMEX QC), dated September 17, 2013.  With limited site access, many Mat Slab pours will require a larger than normal amount of slick-line. To ensure that no slick-line gets plugged, SCCI is proposing to prime the slick-line with a structural slurry that will reach and exceed the specified design strength for the Mat Slab. A miniscule percentage of this primer will be deposited into the mat slab. This percentage would amount to .01 to .02 percent by volume.  Please confirm the proposed SCCI method of slick-line priming is acceptable.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 9/24/2012 <b>RESPONSE:</b> Any material that is not the approved mix design for the mat slab, including slick-line primer, shall not be placed in the mat slab.

T-0764	SSS - Built-Up Beams - Plate Yield Strength	Closed	09/26/2013	10/06/2013	09/30/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> Please reference contract sheet S-0007, specifically structural steel note SS-1, which indicates that plates used for flanges in built up beams shall meet the criteria of ASTM Designation A572-50 (UNO) and have a maximum yield point of 58ksi.  The plate mills will not guarantee material that meets the A572-50 criteria and further restricts the yield to a maximum of 58ksi. The plate mills will guarantee material that will yield within the range of 50ksi - 65ksi. Attached you will find correspondence with two major US steel mills for reference.  Please confirm, for the plates used for flanges in built-up members produced from A572-50 material, that a yield range of 50ksi - 65ksi is acceptable.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The maximum yield strength specified on General Note SS-1 is to ensure the strong column/weak beam condition is met. Hence, this requirement may be relaxed to applicable to steel plates for seismic moment frame beams only.  From our past experience, the maximum yield of 58 ksi is a very reasonable target. Also, the lab tensile tests commonly show a lower yield than what is provided on the mill certifications (around 2- 6 ksi lower).  However, we understand that this is still a risk to the steel contractor even though it is only applicable to the seismic moment frame beams. We agree to relax this requirement further accepting the yield strength up to 65 ksi as requested

Please reference Drawing S1-5051 and confirm the following in regards to the column base details:			The numbering of the response below matches with the numbering of the RFI.				
1) Confirm it is acceptable to oversize the holes for anchor bolt penetrations through base plate per AISC's 13th Edition Table 14-2 (reference CD RFI 016 SK2 attached).			1. Confirmed the holes may be oversized per AISC's 13th edition, Table 14-2.				
2) Confirm the hole sizes indicated in Part 1 are acceptable for anchor bolt penetrations through the horizontal column stiffener.			2. Confirmed.				
3) Confirm it is acceptable to supply a ½" x 4" x 4" (A36) plate washer above the column stiffener with a 1/16" oversize hole.			3. Washer thickness shall be in accordance with AISC's 13th edition, Table 14-2.				
4) Confirm it is acceptable to locate the grout holes typically as shown on CD RFI 016 SK3.			4. Grout hole locations and procedure shall be confirmed by the mock-up.				
5) To aid in the alignment of the thread bar anchor rods during concrete operations, please confirm it is acceptable to provide one ½" thick anchor plate at the base of the thread bars with size to match the base plate in lieu of four separate ½" x 4" x 4" anchor plates.			5. 1/2" anchor plate matching the base plate at the bottom of the anchor bolt is not acceptable as it will affect the consolidation of the concrete.				
6) Confirm the thickness of the stiffener for Type II and Type III column bases is to be 2".			6. Confirmed, the stiffener is 2" thick.				
7) Confirm an anchor bolt projection of 2.5 x AB dia. above the plate washer on top of the column stiffener is acceptable. See CD RFI 030 SK3 for reference.			7. Contractor to verify with the anchor rod suppliers for the length of the hex nut. Recommend projection = washer thickness + hex nut length + 1.5x d Minimum to account for construction tolerance				
8) Confirm the thickness of the stiffener for Type II and Type III column bases is to be 2".			8. See response to question #7.				
9) Confirm an anchor bolt extension of 2.5 x AB dia. below the bottom plate washer is acceptable. See CD RFI 030 SK3 for reference.			9. Confirmed the 1" clear is acceptable.				
10) Confirm that the 1" cover as shown on CD RFI 030 SK3 is acceptable.			10. Confirmed that wrench tight is adequate.				
10) Confirm that the anchor bolts shall be installed wrench tight.

REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
As per the response to RFI# T-0771 please confirm the following:					1) Confirmed that it is acceptable to have 0" cover at the underside of the concrete beam, as the bolt is directly above the concrete column.		
1. For items 8 & 9 please confirm it is acceptable to have 0" cover at the underside of the concrete beam. See attached sketch SK-1 for clarification.					2. Confirmed that it is acceptable to use an alignment plate with a 7" diameter center hole		
2. For item 5 please confirm it is acceptable to use an alignment plate with a 7" diameter center hole to allow for the consolidation of concrete and aid the alignment of the threaded bar. See attached sketch SK-2 for clarification.							
T-0772	SSS - Anchor Bolt Details at Column Base	Closed	09/30/2013	10/10/2013	10/04/2013	Potentially	<input type="checkbox"/>

T-0774	BGP-Pre-cutting of CDSM Soldier Pile	Closed	09/30/2013	10/10/2013	10/21/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Gary Krutsch				

Co-Author:

#### REQUEST:

Further, in response to RFI T-725, WOJV is proposing to pre-cut the inside flange of the CDSM beams at the required cut off elevations prior to the installation of the waterproofing system see exhibit A for details, This pre-cutting of the CDSM beams would minimize the possibility of heat damage to the waterproofing system. The remainder of the CDSM beam cutting and top section removal will be completed by the TG012.1 Civil Sitework contractor.  
Please confirm if this would be acceptable.

#### SUGGESTION:

#### ANSWER:

Accept Suggestion: ☐

Judy Long  
10/18/2013  
RESPONSE:  
This is a means and method item. Contractor to comply with manufacturer's requirements and recommendations to ensure proper installations and warranties while performing work per contract documents.

T-0775	BGP-Concrete strength requirement for bracing Removal	Closed	09/30/2013	10/10/2013	10/10/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				

Co-Author:

#### REQUEST:

In accordance with Spec section 31-55-00 1.4 J the contractor is to submit concrete strength results to the design team prior to the removal of internal bracing. In order to fulfill this requirement the contractor has asked the following questions.

1. What is the criteria for bracing removal for instant if the average strength of the concrete cylinders tested is calculated to be above the design strength can the internal bracing be removed?
2. Is there any tolerance on the design strength requirement for bracing removal, for example if the concrete has reached 90% of design strength could the bracing be removed? Obviously this could have a positive effect on the construction schedule.

#### SUGGESTION:

#### ANSWER:

Accept Suggestion: ☐

George Metzger  
10/9/2013  
RESPONSE:  
The response of this RFI is limited to the scope of the removal of the lowest level D temporary shoring struts:

1. The criteria for removing the shoring struts is defined in general note FO-5 on sheet S-0005 of the TG03 BSE documents: " F0-5 Do not remove temporary shoring struts against foundation walls until the foundation wall and mat concrete has attained 100% of its design strength."

For consideration of bracing removal prior to 56 day concrete cylinder tests, design strength may be considered achieved when all earlier tested cylinders meet ACI 318 acceptance criteria. For this purpose, "test" in ACI will not be required to be the average of multiple test results of a particular batch.

If the results of the concrete cylinders meet ACI criteria and averages (as defined by ACI) exhibit values above design strength, the element may be considered to have attained its design strength.

T-0775.1	BGP-Concrete strength requirement for level D bracing removal	Closed	10/09/2013	10/19/2013	10/16/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: To clarify question 2 in RFI T-0775  WOJV is requesting that the level D bracing be removed once the concrete in the mat slab beneath has reached 75% of its design strength.  Please confirm if this would be acceptable.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 10/15/2013 RESPONSE: RFI T-0775 already allowed a relaxation of the original contract document requirement. To consider the criteria of 75% design strength, the Contractor shall produce all necessary calculations to justify that the 75% strength and the reduced stiffness at 75% strength is sufficient.				
T-0775.2	BGP-Concrete strength requirement for the level D bracing removal	Closed	11/15/2013	11/25/2013	11/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Further to response to RFI T-0775.1, Please find attached supporting calculations to justify that the concrete in the mat slab is sufficient at 3000 psi to removal the level D bracing.  Please confirm that this is acceptable			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/19/2013 RESPONSE: A submittal is required to address the contents of this RFI.				

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
T-0776	BGP - Mat Slab Construction Joint Between Area 2 and Area 4	Closed	10/01/2013	10/11/2013	10/03/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Filip Filipic							
<b>REQUEST:</b> Please refer to attached excerpt drawing CJ-04 from submittal package TG0600-030.3, Item ID #033000-003.3.  As discussed and coordinated in various Progress Meetings, SCCI plans to combine slab pours S102 and S104 into one pour without bulkhead forms in between. The specifcations do not restrict SCCI from using bulkheads in the east and west directions. The returned construction joint layout shop drawing review comments do not reflect the coordinated revised construction joint.  Please confirm it is acceptable to combine slab placement areas S102 and S104 into one pour without bulkhead forms in between.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 10/3/2013 RESPONSE: The construction joints submitted and approved in Submittal TG0600-030.2 (Item 033000-003.2) dated May 29, 2013 were acceptable to the design team and formed the basis for CTL's Submittal TG0600-201.1 (Item 033020-011).  CTL (Shimmick's consultant) indicates that slab cracking becomes increasingly likely when aspect ratios exceed 1.5:1. TT notes that the revised construction joint layout creates an additional high aspect ratio pour. While TT does not recommend the elimination of the joint, the contractor may at their own risk eliminate the joint between Area S102 and S104 per the revised joint layout contained in Submittal TG0600-030.3 (Item 033000-003.3) dated September 17, 2013. Further, the contractor shall verify that the new geometry does not change the previously issued CTL submittals.		
<hr/>							
T-0777	BGP - FF & FL Values for Concourse Slab	Closed	10/02/2013	10/12/2013	10/17/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b> Please refer to attached RFI T-0691.  This RFI is being submitted in response to RFI response T-0691. As per contract specification section 033020, Section 3.6.B the concrete finish of the lower concourse slab notes an FF value of 20.  Table 8.15.3b of ACI 302.1R (page 46) states that to achieve a surface with an FF value of 20, it must be a smooth floated surface. ACI 302.1R does not provide any recommendations of "F" numbers for broomed surfaces.  Please confirm the design intent for the concourse slab finish: 1. To have a rough broom/rake finish or 2. To have			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 10/16/2013 RESPONSE: The Lower Concourse shall be finished to the FF and FL numbers contained in the Specification 03 30 20, Section 3.6B-1a. Section 3.6B-1a will take precedence over Section 3.6B-1c.

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north elevation in mat slab pour Area 12 for location Plan see exhibit - A. This RFI is subject to revision as the current survey data available does not recorded positioning of the CDSM beams at the lowest mat slab elevation. Exhibit - B, & C depict the location and degree in which the SP are encroaching				George Metzger 10/23/2013 RESPONSE: The contractor proposed revisions to foundation wall reinforcement due to encroaching CDSM Piles in Area 12 are acceptable. We note that the survey data for CDSM piles near the mat level is not provided in this RFI. Once that information is available, the encroachment information and therefore the foundation wall reinforcement in Area 12 may require further revision.			
WOJV proposal North elevation on gridline A: (See Exhibit - B) between CDSM pile254 to 257, WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 255 & 256. Originally this

	5160 STEEL, OIL QUENCHED FROM 830C, 650C TEMPER OR DIN 34 CRNIMO 6 + QT CODE EN 10083". The pin manufacturer, Dyson Corp., indicates this material is not available and suggests a substitution to ASTM-A540 grade 823, class 5 (see attachment).			A540 grade B23, class 4.			
T-0787	SSS - Charpy V-Notch Impact Testing Requirements	Closed	10/04/2013	10/14/2013	10/10/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Please confirm the following regarding the Charpy V-Notch (CVN) testing requirements for the project:			1-) In elevation sheets S1-4101 through S1-4116; moment frame columns, transfer girders and tapered roof girders are part of Seismic Framing (SFRS). In this RFI, only moment frame beams are highlighted by the Contractor as SFRS in these sheets. As indicated in Sheet S1-2302 (see Sheet Notes), Sheets S1-4101 through S1-4116 include "superstructure transverse seismic frame elevations".				
· The members identified on the attached sketches (SFRS - SK) are the only members that are part of the Seismic Force Resisting System (SFRS/SLRS/MF/BF) and are CVN tested in accordance with AISC 341-10 "Heavy Section" definition.			2-) RFI correctly highlighted all the members in the "longitudinal seismic framing elevations" as SFRS. This was also indicated in Sheet S1-2302 (Sheet Notes).				
o Except from AISC 341-10: "For structural steel in the SFRS, hot rolled shapes with flanges 1-1/2" thick and thicker shall have a minimum CVN toughness of 20 ft-lb at 70°F, tested in the alternate core location as described in ASTM A6 Supplementary Requirement S30. Plates 2" thick and thicker shall have a minimum CVN toughness of 20 ft-lb at 70°F, measured at any location permitted by ASTM A673, Frequency P, where the plates is used for the following:"			3-) Buckling Restrained Braces are part of SFRS. If core plates within the BRBs 2" or thicker (unlikely since the specified BRB steel core area is relatively small), AISC 341-10 Heavy Section CVN requirements will apply.				
- Members built up form plate			4-) Ground Level Gridline G beams between Gridlines 12 and 16.9 are SFRS. Note that RFI correctly highlights these beams as SFRS in longitudinal seismic framing elevation views. However, they were not shown as SFRS in the plans.				
-The steel core of buckling restrained braces			5-) 2nd Floor Gridline D beam between Gridlines 16 and 16.9 is SFRS as indicated in construction drawings.				
· SFRS/SLRS/MF material will use the "Heavy Section" definition from AISC 341-10: hot rolled shapes with flanges 1-1/2" thick and thicker and plate 2" thick and thicker.			6-) For pipe columns (large diameter tubular sections),				
· Non SFRS/SLRS/MF material will use the project specification, Section 05 10 00, Part 1, 1.2, C.6, "Heavy Section" definition: hot rolled shapes with flanges exceeding 1-1/2" thick and plates exceeding 2" thick.

T-0788	BGP - Areas 5 and 6 EW Top Mat Reinforcing at South Wall Radius	Closed	10/04/2013	10/14/2013	10/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST: Refer to the attached sketch 131003_S105-S106 South Radius.  In Areas S105 and S106, EW top mat reinforcing makes an increasingly acute angle with the south wall. This eventually prevents the reinforcing from penetrating the haunch and wall reinforcing curtains to reach the edge of the mat.  Per field coordination, please confirm it is acceptable to terminate EW top mat reinforcing in a hook prior to reaching the edge of the mat slab provided the following provisions are as followed:  - All terminating EW top mat reinforcing shall be hooked - Where the angle becomes such that the mat reinforcing cannot penetrate the inner wall reinforcing. The reinforcing may terminate immediately in front of the wall reinforcing inside the haunch. This is labeled Zone 1 in the sketch. - In Zone 1, single haunch bars that interfere with penetration of mat reinforcing into the haunch shall be relocated to allow penetration. Relocation will be to the nearest adjacent placement opportunity without regard to the 8" spacing module. Clear spacing, however, between haunch bars shall be maintained. - The total number of haunch bars will remain unchanged. - In Zone 1, provide a curved band of reinforcing at the typical size and spacing of the mat within the wall. - Where the angle becomes such that the mat reinforcing cannot penetrate the haunch without relocating more than one haunch bar, reinforcing may terminate at the toe of the haunch. This is labeled Zone 2 in the sketch. - In Zone 2, provide a curved band of reinforcing at the typical size and spacing of the mat within the haunch. - Zone 1 and Zone 2 bands will overlap typical reinforcing by the distance LTS.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 10/4/2013 RESPONSE: It is acceptable to terminate EW top mat reinforcing of Areas S105 and S106 prior to reaching the edge of the mat as described in the RFI.

<b>From:</b> Webcor Construction LP      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> Reference Drawing: S1-5051  1) The plate washer will clear the fillet weld by 3/16". This is not sufficient to accommodate the maximum anchor bolt as-built tolerance based on the maximum oversize holes per A.I.S.C. Please advise.  2) The plate washer will clear the fillet weld by 1/4". This is not sufficient to accommodate the maximum anchor bolt as-built tolerance based on the maximum oversize holes per A.I.S.C. Confirm it is acceptable to locate the anchor bolts 5 1/2" from the center of the column.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> In the direction parallel to column web, moving the anchor bolts to 5-1/2" from column center line as proposed in RFI will cause washer plates to clash with column flange (or welds). To alleviate this problem, suggest locating the 2 1/2" anchor bolts 4" from column center line (in direction parallel to web). The plate washer for the lower nut may be deleted.  In the direction perpendicular to column web, moving the anchor bolts as proposed in this RFI is acceptable.		
T-0793	SSS - Connection Plates at Type 2 Drag Connections	Closed	10/07/2013	10/17/2013	10/22/2013	Potentially	<input type="checkbox"/>

T-0796	SSS - Transfer Girder Stiffener Thickness	Closed	10/07/2013	10/17/2013	10/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP                      Robert Kjome			To: Turner Construction Company Gary Krutsch				
Co-Author:			Answered By:Adamson Associates, Inc. George Metzger				
REQUEST:			SUGGESTION:		ANSWER:		
Reference Drawings: S1-4300, S1-4308, S1-5052					Accept Suggestion: <input type="checkbox"/>		
For columns above transfer girders Detail 1/ S1-5052 calls out thicknesses of "X=1 1/2" for tfc <2 or tfc=2" and "X=2" for tfc >2"). For columns that are below transfer girders 4/ S1-5052 calls out "2 1/2" thk stiffener PL ea side, typ. (see note 3)". Note 3 states "Stiffeners required UON in transfer girder elevations".					When a below grade column is present immediately below an above grade column, full depth stiffeners that line up with the flanges of the column above are used within the transfer girder. Therefore, Details 1, 2 or 6/S1-5052, which are for above grade columns, govern the thickness of the full height stiffeners. This condition is indicated by Note 4 of Detail 1/S1-5052 which states, the stiffeners are half-depth UON in transfer girder elevations. For information not shown in Detail 2 and 6/S1-5052 (see Note 2 in these details), Detail 1/S1-5052 is referred to as correctly understood by the contractor.		
Where columns are directly above and below a transfer girder and full height stiffeners are shown per transfer girder elevations, please advise on what thickness these full height stiffeners should be.					Note that where the above grade columns are connected to the transfer girders via castings, different details apply and stiffener requirements are different. Refer to corresponding details from Transfer Girder elevations.		
*Please note that 1/S1-5052 is also referred to on 2 and 6/S1-5052.							
<hr/>							
T-0797	BGP - Mat Slab Construction Joint Conflicts in Area 8	Closed	10/08/2013	10/18/2013	10/16/2013	Potentially	<input type="checkbox"/>

Co-Author: Shimmick Construction Company, Inc. Filip Filipic			Answered By:Adamson Associates, Inc. George Metzger				
REQUEST:			SUGGESTION:		ANSWER:		
Please refer to attached photos, excerpt drawing CJ-05 from submittal package TG0600-030.3 and SCCI sketch SK-0341.					Accept Suggestion: <input type="checkbox"/>		
The east side of the mat slab construction joint of Area 8 (S108) has several constructability issues with the mat keyway and other project structure elements. The following are identified conflicts and SCCI proposed remediation:					George Metzger 10/15/2013 RESPONSE:		
1. The current east construction joint layout in Area 8 falls within the row of micropiles as shown in attached Photo-1 and Photo-2. SCCI intends to jog the joint an addition 12" +/- to the East of GL 16.6 to clear the micropile conflict					1. We assume the RFI means to state the proposed shift is "... 12"+/- to the East towards GL 16.6..." (and not "...12"+/- to the East of GL 16.6...") as graphically depicted in the RFI sketch SK-341. This is acceptable.		
2. The east construction joint of area 8 currently jogs thru the thickened slab section at GL 16.6/G.3. SCCI intends to shift the joint Eastward to capture the thickened section					2. The proposed jog around the pit/thickened slab is not acceptable as proposed. However, an acceptable alternative would be to turn the CJ westward along (or parallel) to GL F.7 within S108 and then turn 90 degrees south to align with the CJ on the west side of wall W160.		

Refer to RFI T-0797 for the joint on west side of area 9 between S109 and S108.

T-0803.1	SSS - 2nd Level Revit Model Dimension Verification	Closed	11/22/2013	12/02/2013	12/19/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Gregory Kemerer <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton  <b>REQUEST:</b> On the response to Webcor RFI # T-0769 (SK RFI # SK 050) & T-0803 SK RFI # 067) we have reviewed and located most of the beam locations in question using the nearest gridlines, architectural dwg's, partial plans, equal spacing, etc per the noted guidelines in the response. However on drawings S1-2402, S1-2403, S1-2404, S1-2406 & S1-2407 there are still some beam locations that cannot be located and require verification therefore on sketches CD RFI 048.1 SK1 to SK5 please verify all clouded dimensions in RED as noted to close this RFI.							
<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Responses to the queries on dimensions for locating beams on floor plans have been noted on the attached sketches SKS-0307 through SKS-0311 and SKA-2970.				
T-0804	SSS - W21 Beam Substitution	Closed	10/08/2013	10/18/2013	10/11/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b>  <b>REQUEST:</b> With reference to the W21x44 and W21x50 beams shown on Dwgs S1-2302 to S1-2307 (Ground Level), S1-2402 to S1-2407 (Second Level), Dwgs S1-2502 to S1-2507 (Bus Level) and Dwgs S1-2602 to S1-2607 (Roof Park Level), these beams have relatively narrow flanges. These beams sizes are problematic with regard to stability during erection for spans over 30 feet in length. The substitution of the W21x48 for the W21x44 and W21x55 for the W21x50 would resolve the stability issue. Please advise if these substitutions are acceptable.							
<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> In general, where there is no shaft opening or recess on either one or both sides of the W21, the proposed substitutions for temporary erection stability are acceptable as long as there is no additional cost to TJPA. However, where there is an opening or recess on either one or both sides of the W21, substituting W21x44 or W50 with a beam with wider flange might negatively affect the edge clearance. Skanska may decide to move the beam to gain the same edge distance and submit the revised framing plan (with dimensions) as a RFI.				
T-0805	BGP-Area 7 level D bracing removal	Closed	10/08/2013	10/18/2013	10/21/2013	Potentially	<input type="checkbox"/>

<b>REQUEST:</b> For the typical shear plate connections per detail 1/S1-5011 see sketches CD RFI 060 SK1 & SK2 for items 1, 2 & 3 noted below.  1. Confirm it is acceptable to locate the bolts 2 3/4" from face of beam web as shown for duplication of shear plate marks.  2. Confirm it is acceptable to cope the beam to match the "k" distance of the supported beam (W24) while maintaining a 1/2" minimum clearance to avoid cutting inside the "k" in lieu of the 1/2" max. shown in detail 1/S1-5011.  3. Confirm the shear plate thickness and weld size at a W16x31 to W24x68 connection as per Note 3 in 1/S1-5011 is 3/8" shear plate and 1/4" weld.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1. Confirmed. It is typically acceptable to provide a distance of 2 3/4" between face of the beam web and the bolt centerline.  2. It is acceptable to typically cope the supported beam by a distance of k - e while maintaining a ½" minimum clearance as noted wherever detail 1/S1-5011 applies. k is the "k" distance of the supported beam and e is the fillet encroachment allowed per Figure 10-3 of the AISC Steel Manual 14th Edition. For the instance highlighted in the RFI, see response to 3.  3. The shear plate connection shown in SK1 and SK2 occurs at 4 locations between GL 12 and 14. W16 beams at these four locations are going to be upsized in a future ASI.

T-0812	SSS - Pipe Column Connections to Cast Nodes	Closed	10/10/2013	10/20/2013	10/18/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Robert Kjome	To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger		
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
<p>Please review attached sketches with details on S1-4020 and cast node details for pipe connections to cast nodes.</p> <p>1. Work points for 32" diameter basket column to cast node connections have been offset from the theoretical work line as noted on design sheet S1-4020. Verify ends of 32" pipe will need to be bevel cut to match face of cast node geometry.</p> <p>2. Where necessary bevel cuts are required at each end of the 32" diameter pipe we propose to add a scribe line along the top surface on centerline of the pipe to facilitate matching the cut surface to the cast node face. Please verify a corresponding scribe line will be added to the face of Cast Nodes.</p>				<p>1. As noted on details on Sheet S1-4020, the center line of the pipe is not in line with the center line of the cast node. Since the cast node ears are casted to be perpendicular to the cast node axis, the pipe end need to be bevel cut to match face of the case node geometry.</p> <p>2. Scribe line if needed shall be laid out and scored into the casting by Skanska as a part of means and methods. The depth and thickness of the scribe line shall be submitted for review. Scribe line if added, shall not affect the appearance of the cast node nor pipe after painting.</p>

				for the metal deck at the gap between the WT and the transfer girder top flange. Refer to SKS-0288 (attached) for the connection details.			
				2. Provide connection detail per 2/S1-5011 except that the shear plate spans between top and middle flange plates of the Transfer girder. Refer to SKS-0288 (attached).			
				3. Connection detail at the W30x99 beam will be similar to that described in 1. For the connection at W40x183, provide 2 bolts in the top shear plate and 7 bolts in the bottom shear plate. Width of plates to match the larger of the transfer girder flange plate widths. Bolt sizes, spacing between the bolts, bolt edge distances, shear plate thickness and fillet weld between the shear plate and transfer girder flanges/web for the two plates are to be followed per 2/S1-5011. When a transfer girder brace is required per 5/S1-5015 at a beam with a shear plate connection, connect the brace angle to the shear plate. Bottom gusset plate per 5/S1-5015 is typically not required in such instances. Refer to SKS-0289 (attached) for the connection details.			
				4. Provide a double angle connection per detail 9/S1-5010 at the W40x183 beam. Provide 1 bolt less than that required by the connection detail to avoid conflict with the connection on other side of the transfer girder.			
T-0821	BGP - Plumbing Line in Area 4 Stairway	Closed	10/10/2013	10/20/2013	10/31/2013	Potentially	<input type="checkbox"/>

T-0834	BGP - Structural Steel Embeds in Concourse Slab/Columns	Closed	10/17/2013	10/27/2013	10/24/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
<b>REQUEST:</b> Attached is a rebar congestion model of the concourse slab and column C2 at C/24.9. As is apparent, the structural steel shear lug portion of the plate embed is in conflict with the reinforcing steel and will not fit with required rebar spacing. The rebar conflicts with the shear lug and blockout that are present, include but are not limited to: <ul style="list-style-type: none"><li>- Typical MFB Beam at C/24.9 (blue colored bars in model)</li><li>- B-68 Beam (yellow colored bars in model)</li><li>- Main concourse slab (pink colored bars in model)</li><li>- Column C-2 vertical T-Heads (purple colored bars in model)</li></ul> Please provide a solution that will provide a constructible blockout and embedment of the structural steel plate.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> Accept Suggestion: <input type="checkbox"/> The 3-D images provided seems to orient the base plate/shear key in the wrong direction. The long face of the shear keys are to be in parallel to the web of the steel column as shown in details on Sheet S1-5051.  Spacing for the slab rebars and the top rebars for the misc. beams (e.g., B71 at Grid C/2, B68 @ Grid C/24.9) shall be adjusted slightly to clear the shear keys.

T-0835.1	BGP - Vehicle Ramp Beam Support Embeds	Closed	11/05/2013	11/15/2013	11/19/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b> Please reference RFI T-0835, RFI T-0453.1 and attached SKA-2863.  RFI Response T-0453.1, stated that in lieu of bending the L8x8x1-1/8" member, it was acceptable to weld two 1-1/8" thick plates together in order to achieve desired obtuse and acute angles.  1. Please confirm that additional embeds per detail 1 S1-3411, not reference in RFI T-0453.1, can be welded to create the specified angles per RFI response T-0853 (this will be an additional 2 angles). Please reference attached SKA-2863 for specified angles and locations of embeds in question.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 11/17/2013 <b>RESPONSE:</b> Contractor proposal as presented in the RFI is acceptable. Include in forthcoming shop drawings that is referenced in RFI T-0881.  (Note that we assume the RFI is intending to reference "T-0835" and not "T-0853".				
T-0836	BGP - Sump Pit Rebar Tail and Trestle Pile @ GL 18.5/E - Area 9	Closed	10/17/2013	10/27/2013	10/23/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Ben Gordon							
<b>REQUEST:</b> Reference: RFI T-0644  Three of the sump pit lower mat #11 tails near grid line 18.5/E are in conflict with the nearby trestle pile. The bars have been trimmed to clear the trestle pile and provide an LTE of 34" instead of 60" as required per plans.  Typically, a bent bar would be spliced to the interrupted bar as required in SKS-0281 in the response to RFI T-066; however, the trimmed bars have a 70" length which would not meet the 78" LTS requirement. Gerdau propose to leave the 3 ea trimmed bars as-is and not incorporate an additional spliced bent bar. Please confirm if this is acceptable.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 10/22/2013 <b>RESPONSE:</b> Provide spliced bent bar as indicated in RFI T-0664 and that RFI's accompanying Sketch SKS0281. Lap length may be reduced to 69". The total length of bent bar extending beyond the intersection with the bottom mat reinforcing shall be 60". The bent bar may be rotated so that the tail clears the layer of mat top reinforcing.

T-0839	SSS - Bolt Specifications	Closed	10/18/2013	10/28/2013	10/30/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> As per the Contract Drawings and Specifications all high strength bolts shall be A325, A490 & A354 BD. All TC bolts shall additionally conform to ASTM F1852 & F2280.  1. We propose to use TC bolts for all connections (shop & field) 1-1/8" diameter or less (unless galvanized). All galvanized bolts to be standard A325.  2. All bolts 1-1/4" to 1-1/2" diameter to be standard A490.  3. All bolts larger than 1-1/2" diameter to be standard A354 BD  Please confirm this is acceptable.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> We assume the term "Standard AXXX" used in this RFI refers to high-strength bolts with Hex Heads that will be pre-tensioned using acceptable methods per Specification Section 05 10 00 - 3.2.K (other than TC). If this is not the case, please resubmit the RFI with additional clarification. Responses to individual items in RFI as follows:  1.) As indicated in Specification Section 05 10 00 - 3.2.K.1, it is acceptable to use TC bolts. Bolt specification shall be as indicated in the construction drawings. Standard A325 is acceptable for galvanized bolts.  2.) Standard A490 is acceptable in this diameter range.  3.) Standard A354BD is acceptable in this diameter range.		
T-0840	SSS - Means & Methods - Erection Devices	Closed	10/21/2013	10/31/2013	10/23/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Turner Construction Company Stacy Wilson				
<b>Co-Author:</b>							
<b>REQUEST:</b> As per OSHA Standards Sub Part R Steel Erection 1926.756 (C)(1) When two structural members are sharing common connection holes, at least one bolt shall remain connected to the first member unless a shop or field attached seat or equivalent connection device is supplied with the member to prevent displacement. We propose the Means & Methods depicted in the attached sketch SK-1A to meet these OSHA requirements. Please advise if this is acceptable.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Per 01 10 40 1.6 C 2 - TJPA will not reply and will reject the RFI: "Questions relating to construction means, methods, techniques, sequences, procedures or safety precautions. (These are the Contractor's responsibilities exclusively.)"

T-0842	SSS - Full Height Columns	Closed	10/18/2013	10/28/2013	10/24/2013	Potentially	<input type="checkbox"/>						
								<b>REQUEST:</b> As noted on sketches CD RFI 075 SK1 through SK8, there are several instances where the clip angle at the beam to transfer girder connection is in conflict with the transfer girder web splice. This condition occurs at TR7, TR8, TR11, TR19.1, TR19.9, TR21, and TR24.  Please reference the sketches attached and confirm the modified transfer girder web splice locations are acceptable to avoid conflict with the beam clip angle connection.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Transfer girder splice locations may be moved as shown in sketches SK1 through SK7 in this RFI.  There is no splice specified on the structural drawings (D/S1-4305) at TR24 between gridlines E.2 and D.8. Additional splice shown on SK8 is not acceptable.	
								<b>From:</b> Webcor Construction LP      Robert Kjome		<b>To:</b> Turner Construction Company Gary Krutsch		<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
								<b>Co-Author:</b>		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> At moment frames where the column sections above and below the splice point are identical, it is acceptable to eliminate the column field splice.	
								<b>REQUEST:</b> Please refer to the attached drawing, S1-4104. The columns shown in the transverse frame elevation that extend from the ground level to the roof level typically have a field splice located 4' above the bus deck slab. Please confirm that this field splice may be eliminated and that it is acceptable to provide full height columns.  The detail is shown at GL 7 & GL 8. Other locations are similar.  Note that a shop splice may be required due to limitations in mill rolling lengths.

T-0842.1	SSS - Moment Frame Column Splice	Closed	01/27/2014	02/06/2014	02/04/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Stephanie Azzolino			<b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>		
In reference to W/O RFI T-0842, in which permission was given to eliminate field splices in the built-up columns, please see the following:					It is acceptable to use single plate flanges where column depth is the same throughout the column height (refer to Sheets S1-4101 through S1-4116 Moment Frame Elevations). However, where column depth changes at the splice locations (for example, at GL2/E.6 and GL2/D.4), splices will be needed since flange thicknesses change. It is acceptable to have these splices done in the shop at Contractor's option.		
At certain column locations (see S1-4102 at GL4, for example) the thickness of the flange is constant throughout the height of the column. The fabricator will seek to provide single piece flanges when material availability permits. In instances where the availability of certain plate sizes does not permit the fabricator to provide a single piece / full height flange plate, a shop splice will need to be introduced.							
Please identify any locations or areas along the height of the column flange that a shop splice is not permissible so that these limitations may be considered while finalizing our shop details and plate purchases.							
<hr/>							
T-0843	SSS - PJP Welds at Roof Node to Brace Beam	Closed	10/18/2013	10/28/2013	10/25/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Robert Kjome			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b>							
<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>		
Reference is made to sheet S1-4205, Detail 2 "Brace Detail" which specifies a 1 ¾" effective weld from roof node to brace beam. Sheet S1-5131, Detail 1, Side View F specifies a bevel of 2 3/8" x 45 degrees for the weld joint area in question.					The weld size shown in Detail 2/S1-4205 is the effective weld size required for this joint. It is acceptable to revise the bevel size shown in 1/S1-5131 according to the effective weld size as required by the welding procedure.		
Sheet S-0007, General Note SC-4 states that weld sizes shown are considered effective weld sizes. Prequalified weld joint BTC-P4-GF (attached for reference) states that the effective weld size shall equal the bevel size for flat and horizontal weld positions.							
These welds are intended to be performed in the horizontal or flat position. Please confirm that a bevel size of 1 ¾" to equal the specified weld size of 1 ¾" is acceptable and conforms to the requirements of note SC-4 and AWS 2010 D1.1 Detail BTC-P4-GF attached.

<b>REQUEST:</b> Reference is made to sheet S1-4205, Detail 1 "EBF Link Beam Detail" which specifies a 2 ¼" effective weld from roof node to EBF Link beam. Sheet S1-5131, Detail 2, Side View F specifies a bevel of 2 3/8" x 45 degrees for the weld joint area in question.  Sheet S-0007, General Note SC-4 states that weld sizes shown are considered effective weld sizes. Prequalified weld joint BTC-P4-GF (attached for reference) states that the effective weld size shall equal the bevel size for flat and horizontal weld positions.  These welds are intended to be performed in the horizontal or flat position. Please confirm that a bevel size of 2 ¼" to equal the specified weld size of 2 ¼" is acceptable and conforms to the requirements of note SC-4 and AWS 2010 D1.1 Detail BTC-P4-GF attached.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The weld size shown in Detail 1/S1-4205 is the effective weld size required for this joint. It is acceptable to revise the bevel size shown in 2/S1-5131 according to the effective weld size as required by the welding procedure.

REQUEST: Please reference sheet S1-5131 Detail 1 Section F, Detail 2 Section F, and sheet S1-5132 Section D. OIW is proposing to perform the CJP welds from P3 to P4 using a "Narrow Gap Improved Electroslag Weld (NGI ESW)" process. AWS D1.8 Section 6.2.1 allows the use of alternate weld processes contingent upon approval by the Engineer. Attached is a detailed narrative and supporting data for this welding process including the following: -Process Details, General Parameters, and Practices from ARCMATIC (OIW welding consultant) -Sample Welding Procedure Data Sheets (WPS) including MTR's and destructive testing  Upon conceptual approval of this process, applicable and job specific PQR/WPS data will be provided for Engineer review.  Please confirm that NGI ESW welding process is acceptable in this application.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Using "Narrow Gap Improved Electroslag Weld" (NGI ESW) for the proposed location is acceptable pending on prior approval of the WPS and Welding procedure Qualification. WPS shall be prepared in accordance with AWS D1.5.

T-0849	BGP - Mat Slab Layer 3 Lap Splice Relocation in Area 11 thru 16	Closed	10/21/2013	10/31/2013	10/23/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please refer to drawing S1-2052.  Due to limited access between the waterproofing and access trestle, Gerdau proposes to shorten the mat slab typical layer three (North-South) 67'-0" bars at Areas 11 through 16. This requires the lap splice location to be moved from the center of column line, as specified on Note 1 of the Mat Top Bar Notes in S1-2052, to the location shown in the attached Gerdau sketch SK-99.  Please confirm the revised lap splice detail shown in Gerdau sketch SK-99 is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 10/22/2013 RESPONSE: It is acceptable to move the reinforcing splice from the center of the column line as indicated in the RFI.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
For Type 4 Drag connection (Y) per detail 1/S1-5019 please refer to sketches CD RFI # 082 SK1 to SK3 for items 1 & 2 noted below. Note sample location is on S1-2402 near grids 2/C.3 shown on SK2.				1a) At Ground Level: Provide b = 18" per schedule in 1/S1-5019 for all Type 4-(Y) drag connections.			
1) See SK2 & SK3 and confirm this 18" applies at all locations noted as "Y" on plans as this will place the bolts exceedingly outside the supporting beam profile.				2b) At Second Level: There are 14 locations between GL 2 and GL 3 where Type 4-(Y) drag connections per Detail 1/S1-5019 are to be provided. At 8 of these 14 locations the supporting girder is a W30x99. At these 8 locations, provide b such that the beam end is 1" outside of the W30x99 flange as indicated in SK3 of the RFI. Provide b = 2" at the remaining 6 locations.			
2) Please clarify which plan drawings this note applies to.				2) Note applies to Ground Level plans.

T-0861	BGP - Interior Wall Thickness Change Clarification in Area 8 & 11	Closed	10/28/2013	11/07/2013	11/06/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please refer to drawing S1-2054, S1-2055 and attached excerpt drawings from submittal package T0600-0103.  Per the submittal review notes found on drawing sheet S108.2 and S111.1 from submittal package TG0600-0103, the train platform future interior wall thicknesses have been increased from 10" to 1'-0" and 1'-2" to 1'-4", respectively. In addition to the revised wall thicknesses, the following noted was included: "For 1'-4" walls use same coupler reinf as 14" walls. Coordinate with RFI T-0587." The note does not include 12" walls which were previously 10".  Please confirm the now 12" wall is to use the same coupler reinforcing as the 10" walls.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/6/2013 RESPONSE: Bars for 12" thick walls are per contract detail 5/S1-3205.				
T-0861.1	BGP - GL 15.4/E Partition Wall Formsavers in Area 8	Closed	11/07/2013	11/17/2013	11/13/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please refer to drawing S1-2054, TG0600-103 and RFI T-0861.  The response to RFI T-0861 confirms that the train platform future interior wall near GL 15.4/E which was changed from 10" thick to 12" thick requires the bars to be #6 @ 8" O.C. E.F. per detail 5/S1- 3205; however, the # 6 epoxy coated formsavers are not available for the Area 8 pour.  Please confirm it is acceptable to use # 5 @ 8" O.C. E.F. in lieu of the # 6 @ 8" O.C. E. F. in Area 8 as shown in 5/S1-3205.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/12/2013 RESPONSE: Contractor-proposed use of #5 bar couplers/dowels is acceptable for the scope of this RFI only.

<b>Co-Author:</b>							
<b>REQUEST:</b> Please reference detail 1/S1-5013 regarding the full height fitted stiffener detail and confirm the following:  1) Confirm it is acceptable to provide a 2" end distance typically at beams with 7/8" dia. bolts in lieu of the 1 3/4" end distance noted by the "2db" dimension.  2) Confirm the stiffener width is to equal the beam "a" dimension, defined as [bf - tw]/2, thus the noted dimension should read "2db min."			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>		
					1.) Acceptable.  2.) Confirmed.		
<b>T-0863</b>	<b>SSS - Double Angled Connections at TPG1 &amp; TPG3</b>	<b>Closed</b>	<b>10/28/2013</b>	<b>11/07/2013</b>	<b>11/07/2013</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> For the double angle beam connections per detail 1/S1-5010 into the TPG1 & TPG3 roof girders on detail 1/S1-4200 are problematic due to the thick flanges. See sketches CD RFI 091 SK1 & SK2 for items 1 & 2 below for proposed modified connection.  1) Confirm it is acceptable to reduce the end distance on the connection angles to 1 1/4" per A.I.S.C.13th Edition Table J3.4 in order to fit the connection angles inside the beams at the TPG1 & TPG3 girders.  2) Confirm it is acceptable to cut the beam flanges flush as shown when the connection angles encroach into the beam "k" area beyond A.I.S.C. allowable limits.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>		
					For connections to TPG1:  1) a) W14x22: Provide one less bolt than that required by 1/S1-5010. All other connection parameters including edge distance on the connection angles shall be per 1/S1-5010. b) For all other beam sizes noted on SK1, our response is "Acceptable".  2) a) W14x22: Cutting the beam bottom flange is not required with the reduction in number of bolts per (see 1a). b) W24x68, W27x84, W30x90, W33x118, W36x135, W40x297: The encroachment of the angle into the "k" region is less than the maximum allowed per AISC 360-05, Figure 10-3. Cutting the bottom flange flush as shown in the RFI is not required and not acceptable. c) W40x149, W40x183, W40x199: Acceptable.  For connections to TPG3:  1) a) W14x22: Provide one less bolt than that required

				by 1/S1-5010. All other connection parameters including edge distance on the connection angles shall be per 1/S1-5010. b) W24x68: Acceptable. c) W27x84: There is no W27x84 framing into a TPG3. d) W40x392: The connection is per detail 8/S1-5032 as noted on Sheet S1-2604 near GL 14/D. In addition, gravity moment connection is shown at the ends of these beams where they connect TPG3. Therefore, flanges of the W40X392s are to be welded to TPG3 per detail 4D/S1-5010.			
				2) a) W14x22: Cutting the beam bottom flange is not required with the reduction in number of bolts (see 1a). b) W24x68: The encroachment of the angle into the "k" region is less than the maximum allowed per AISC 360-05, Figure 10-3. Cutting the bottom flange flush as shown in the RFI is not required and not acceptable. c) W27x84: See 1c. d) W40x392: See 1d.

T-0865	SSS - Clarifications for Kicker Brace at Ground Level	Closed	10/28/2013	11/07/2013	11/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Robert Kjome      To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			ANSWER:				
Please refer to detail 6/S1-5022 and verify the kicker brace requirements at ground level as noted on CD RFI 093 SK1 to SK3 and in the items below:			Accept Suggestion: <input type="checkbox"/>				
1) Confirm the alternate bracing connection proposed in CD RFI 093 SK1 is acceptable.			1) Locate the top gusset plate such that the centerline of kicker angle divides the gusset plate into a 1:3 ratio (3":9") at the top of the plate.				
2) Supply the weld size and length for brace angles to ½" plate.			2) Provide a weld size of 5/16" with a minimum length of 4" on each side of the kicker angles.				
3) Confirm the work point location indicated is acceptable (intended to match S1-5015 details).			3) Confirmed.				
4) Confirm the reference to S1-2304 should be added to the referenced detail and the reference to S1-2307 should be deleted.			4) Correct references are S1-2304 and S1-2306 (updated in ASI 106 drawings).				
5) Confirm detail 6/S1-5022 applies only to grid lines 16.9, 19.1, 24.9 & 27.1 on the Ground Level as referenced on plans.			5) Detail 6/S1-5022 is applicable at Gridlines 16.9 and 27.1 at Ground Level. Detail 9/S1-5022 is applicable at Gridlines 19.1 and 24.9.				
6) Confirm detail 6/S1-5022 is typical for all braces along grid line 16.9, similar to grid line 19.1.			6) Refer to SKS-0297 (attached) that shows applicable bracing type along GL 16.9 transfer girder. As indicated in the sketch, the bracing along GL16.9 is either transfer girder brace per 5/S1-5015 or kicker brace per 6/S1-5022. Same sketch can be used to identify the bracing type along 19.1 transfer girder by replacing 6/S1-5022 with 9/S1-5022.				
7) Confirm detail 6/S1-5022 is typical for all braces along grid line 27.1, similar to grid line 19.1.			7) Refer to SKS-0298 (attached) that shows applicable bracing type along GL 24.9 and GL 27.1 transfer girders. As indicated in the sketch, the bracing along GL 27.1 is either transfer girder brace per 5/S1-5015 or kicker brace per 6/S1-5022. Similarly, the bracing along GL 24.9 is either transfer girder brace per 5/S1-5015 or kicker brace per 9/S1-5022.

T-0866	SSS - Bending Radius at Skewed Beam Connections	Closed	10/28/2013	11/07/2013	11/07/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Robert Kjome <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> Refer to details 7 & 8/S1-5010 regarding bending radius requirements for skewed beam connections. The radius indicated in CD RFI 095 SK2 is per A.I.S.C. (2.5t for A572 GR50 material). Please confirm it is acceptable to proceed per this criteria.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The minimum inside bending radius for a A572 GR 50 plate up to t = 1" is 1.5t per AISC 360-10 Table 10-13, if the bend line is perpendicular to final direction of rolling. These values need to be increased 50% if the bend lines are parallel to the final direction of rolling. 2.5t inside bending radius proposed by the contractor is acceptable for the condition presented in SK2, where t = 1/2". In general, it is acceptable to proceed with the minimum bending radii specified in AISC 360-10 Table 10-13.

T-0868.1	SSS - Framing Clarification for W21 Beams at Ground Level	Closed	11/25/2013	12/05/2013	12/20/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Gregory Kemerer <b>To:</b> Turner Construction Company Gary Kruttsch <b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton <b>ANSWERED BY:</b> Adamson Associates, Inc. George Metzger							
<b>REQUEST:</b> Per the response to W/O RFI T-0868 (SK RFI 135), the TOS for the W21 should be at 16'-11" and the BU-WTs are required to support the slab at 19'-9 1/8". Based on this response, please confirm the following:  1) The difference between the TOS elevations per the response to SK RFI 135 requires a BU-WT with a total height of 2'-2 5/8", exceeding the maximum height dimension indicated on 5/S1-5002. Please confirm it is acceptable to proceed with detail 5/S1-5002 and the required BU-WT height of 2'-2 5/8" at this location.  2) Please confirm it is acceptable to stop the BU-WTs 1" clear from the edge of the transfer girder flange to allow for erection clearance or advise if the BU-WTs are required to extend to the face of the transfer girder web for deck support. (Reference CD RFI 097.1 SK1)  3) The W21 connection to the transfer girder at grid line 11 fouls the bottom flange of the girder and cap plate of the train box columns as indicated on CD RFI 097.1 SK1. Please provide an alternate connection detail at this location.  4) As indicated on CD RFI 097.1 SK2, there is no support down for the escalator slab perpendicular to the W21 near the edge of the knock-out slab and the W21 supporting the S4 escalator slab. Please advise if deck support is required at this location and, if so, please provide details as required.		<b>SUGGESTION:</b>	<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) Confirmed. 2) It is acceptable to stop the BU-WTs 1" clear from the edge of the transfer girder flange. 3) Cope the top of the W21 beam and provide a double angle connection per 1/S1-7604 with 3 bolts. The connection plates shown in 1/S1-7604 are to be welded to bottom of the trainbox column cap plate. In addition, provide web stiffener plates on each side of the beam web at the coped section per 12/S1-5010. Extend the stiffener plate beyond the coped section a distance equal to the depth of the cope. 4) There is no deck at the highlighted location. The pit slab edge is the same as the knock-out slab edge only it is lower. Refer to detail 4/A1-7550 that shows the slab and escalator enclosure assembly at this location. Note that detail 6/S-7660 is called out on 1/S1-7302 (partial plan of this location). Detail 6/S-7660 applies at the north and east edges of the E305 escalator pit but not at the knock-out slab edge. Similarly detail 6/S-7660 applies at the south and east edges of the E304 escalator pit but not at the knock-out slab edge.

T-0875	BGP- Trestle piles No 20 & 21 in conflict with beams at Lower Concourse level	Closed	11/01/2013	11/11/2013	11/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Following a review and discussion with Thornton Tomasetti on the trestle pile locations, it has been noted that trestle pile numbers 20 and 21 (see sketches attached) are in conflict with beams (B4A) at the escalator pits on the lower concourse slab elevation between gridline 11-12, D-F. The contractor is proposing to blackout a section of slab as shown on the sketch, this blackout section would then be infilled once the trestle pile has been removed.					Accept Suggestion: <input type="checkbox"/>		
The contractor is to insure that the appropriate reinforcement lap splices are present between these concrete pours.					George Metzger 11/7/2013 RESPONSE: Contractor proposed approach is acceptable. Note that the trestle pile also encroaches on the pit slab as well and will have to be addressed.		
Please confirm if this option would be acceptable					Include proposed reinforcement in rebar submittal for review.		
T-0876	RFI T-0876 BGP- Trestle piles No 10,12 & 14 are in conflict with a step in the slab a	Closed	11/01/2013	11/11/2013	11/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Following a review and discussion with Thornton Tomasetti on the trestle pile locations, it was noted that trestle pile numbers 10, 12 and 14 (see sketches attached) are in conflict with a step in the slab on the lower concourse elevation between gridline 06-08, E-F. Thornton Tomasetti noted it may be possible to move this step clear of the trestle pile blackout locations.					Accept Suggestion: <input type="checkbox"/>		
Please confirm if this option on moving the step location is still possible.					George Metzger 11/26/2013 RESPONSE: The plan location of the drop shall remain. In order facilitate temporary conditions, such as support of the slab transition without shoring, Detail 2/S1-3501 may be modified increasing the distance "6D" to allow additional reinforcing bars to replace bars interrupted by the blackout in the temporary condition. Additional simplifications to the temperature steel continuity may be allowed. The specific details of the blackout shall be provided by the contractor in accordance with General Note GR-9 on S-0005 and shall provide continuity of longitudinal and temperature steel in the final condition.

T-0879.1	BGP - Conflict of Elevator Opening Embed and Future Walls	Closed	11/25/2013	12/05/2013	12/09/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> SCCI is in receipt of RFI response T-0879. TT's response does not fully address the conflict brought up in the original RFI. TG06.0 contract drawings do not show a curb at the edge of the elevator openings at the lower concourse level.  Please address and provide details regarding the embed in question in RFI T-0879.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 12/6/2013 RESPONSE: As indicated in the response to RFI T-0879, the end of the beam and the embed will be cast into the wall curb. The sketches provided with the response to RFI T-0879.1 illustrate the relationship of the beam and the future wall curb. The concrete curb on the elevator shaft walls in Phase 1 will be extended under the future W-5 cladding and its supporting walls in Phase 2. The HSS rail support embed is within the concrete curb zone for both phases.  Refer to the following attached SKAs:  1. SKA-2958 to SKA-2962 - Lower Concourse Zone Plans showing locations of the Service and Passenger Elevators.  2. SKA-2963 to SKA-2967 - Enlarged Plans of Service and Passenger Elevators showing Partition Types with Concrete Curbs.  3. SKA-2968 - Section Detail at Service Elevator Shaft at Pit showing HSS elevator rail support beam.  4. SKA-2969 - Concrete Curb Schedule.

T-0880	BGP - Receptacle Requirements at Elevator Pits Near GL 19/E and 20/G	Closed	11/04/2013	11/14/2013	11/13/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please refer to drawing E1-2024 and E1-2025  There are elevator pits in the mat slab at approximate grid lines 19/E and 20/G. The drawings E1-2024 and E1-2025 do not show any receptacles being supplied to these pits. Please confirm this is correct.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/13/2013 RESPONSE: These receptacles are not required within the BGP package. The only active elevator in Phase 1 is PE203 at the west end. The elevator pits in question will be provided with power in Phase 2. Provisions have been made to run conduit at that time.				
T-0881	BGP - Vehicle Ramp Wall Embedded Supports	Closed	11/05/2013	11/15/2013	11/18/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please reference attached detail6 S1-3203, attached detail10 S1-3204, RFI Response T-0453.1, RFI Response T-0835 and attached SKA-2863. RFI Response T-0835 confirmed that the vehicle bike ramp wall intersects the foundation wall at a 97 degree angle. Where this ramp wall intersects the foundation wall, embeds per detail 6 on S 1-3203 and detail 10 S 1-3204 are required. SCCI and its embed supplier has a constructability concern with these embeds. A similar constructability concern was brought up in RFI T -0453.1, stating that if an angle member of such thickness is bent to achieve an angle other than that member's stock angle, it will structurally stress that member.  1. Please confirm it is acceptable to weld two (2) 8"x24"x1" plates together in order to achieve angle prescribed in RFI Response T-0835. Reference SKA-2863 for the acute and obtuse angles required. Forthcoming shop drawings will show all welds.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/17/2013 RESPONSE: Contractor proposal to weld 2 plates to create an angle is acceptable as presented in the RFI.				
T-0882	BGP - Column Tie Change from T9 to T12	Closed	11/05/2013	11/15/2013	11/13/2013	Potentially	<input type="checkbox"/>

T-0892	<p>Please reference grid C.9.9 and C10.1 for the transfer girder to moment beam connection shown on S1-2303 and provide clarification on the following:</p> <p>1) Confirm the noted angle (1.2°) is the correct slope for MFB 1 (per Revit Model). If not, please provide the correct angle. [Reference CD RFI 110 SK1 &amp; SK2]</p> <p>2) Confirm the depth of MFB1 is 48" at this location in accordance with 6/S1-3600. [Reference CD RFI 110 SK2]</p> <p>3) Confirm the noted elevation. [Reference CD RFI 110 SK2]</p> <p>4) Provide the width and length of vertical slots to be provided at the 18" stiffeners. [Reference CD RFI 110 SK2]</p> <p>5) Provide the vertical dimension required to locate the #10 bar shown and subsequently the 2" dia. holes through the beam web (SK3), the vertical slots through the 18" stiffeners, and the 3" diameter holes through the 2'-9" stiffeners.</p> <p>6) Confirm the bar indicated represents the beam top bar and that the dimension indicated (3 1/16") is correct. Note this dimension is based on 5/S1-3600. [Reference CD RFI 110 SK2]</p> <p>7) Confirm detail 6/S1-3705 accurately reflects the number of headed studs and spacing required. Otherwise, please provide the requested A, B, C, &amp; D dimensions.</p> <p>8) Detail 4/S1-3705 indicates that 3-3" diameter holes are to be provided in the web stiffeners on each side while only two #10 bars with terminators are indicated to be provided. Further, the section cut 6/S1-3705 (issued with ASI 106) calls for #9 bars at this location. Please clarify the intent of this detail as it pertains to the rebar configuration and stiffener hole details.</p> <p>9) Provide the dimension required to located the first 2" dia. hole from the end of TR9.9 and TR10.1 and confirm the spacing of the remaining holes is to be 8" OC as noted on 6/S1-3705.</p> <p>10) Confirm the dimensions indicated are accurate or provide the required dimensions at this location. The dimensions shown are based on detail 5/S1-3600 and should be confirmed based on the answer provided in Item 8.</p>	Closed	11/08/2013	11/18/2013		Potentially	<input type="checkbox"/>
	<p>1). The slope shall be 1.30 degree at Grid 9.9 and 1.16 degree at Grid 10.1 per top of concrete slab elevations noted on the plan. Revit model (and other electronic files) shall not be used for establish dimensions.</p> <p>2). Confirmed that the MFB1 is 48" deep per beam schedule on S1-3600.</p> <p>3) Top of concrete is at 17.59 at Grid 9.9 and 17.55 at Grid 10.1</p> <p>4). The bottom of the slots are at 2" from the bottom of the concrete beam to allow the beam bottom bars to go through.</p> <p>5). The center line of the beam bottom bars shall be at 2.375" above the bottom of the concrete beam (1 1/2' cover + diameter of the ties + 1/2 of the longitudinal bar diameter).</p> <p>6). The dimension shall be 3.8125" per 5/S1-3600 (2 3/4" cover+ tie diameter+ 1/2" longitudinal bar diameter)</p> <p>7). A=15", B=5, C= 12", D= 16".</p> <p>8). Only one hole each side is needed in vertical stiffeners to allow the #10 bars to go through. See 6/S1-3705 for locations of the hole.</p> <p>9). First hole is 6" from the end of beam. The holes are at 8" on center to match with the tie spacing noted on beam schedule.</p> <p>10). The 2 9/16" dimension noted shall be changed to 3", the 1'-07/17" dimension shall be changed to 1'-0" (for a total beam width of 30" as noted in the beam schedule).</p>						

**ANSWER:** ☐ **Accept Suggestion:** ☐

George Metzger  
11/19/2013

**RESPONSE:**

Having been provided with only schematic representations of the proposed excavation bracing relocation, SK-2 appears to be a preferred solution. Excavation shoring design is a contractor provided item and it is up to contractor to determine the particular temporary configuration that will produce the finished structure as designed. This includes due regard to number and location of block-outs which should not encroach upon the moment frame beams. To this point, we note that pin-piles 19-22 are in close proximity to gridlines (and moment frame beams). This also may be the case for pin-pile 6 and 18. Note that past discussions also included the possibility of removing pin-pile 8 prior to Lower Concourse construction. In any case, any change to the excavation bracing shall be formally submitted for

<b>T-0894</b>	<b>SSS - Double Angle Connection Conflicts Along GL</b>	<b>Closed</b>	<b>11/11/2013</b>	<b>11/21/2013</b>	<b>11/22/2013</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Gregory Kemerer <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b>							
<b>REQUEST:</b> Reference CD RFI SK1 to SK3 indicating the plate on the transfer girder which typically fouls the beam to transfer girder connections along grid lines C.3 and F.7. This is typical at the following locations at Ground Level: 2/C.3; 4/C.3; 5/F.7; 6/C.3; 8/C.3; 9.9/C.3 (see SK2 & SK3); 10.1/C.3 (see SK2 & SK3); 12/C.3; 14/C.3; 16/C.3; 19.9/C.3; 20.1/C.3; 21/C.3; 23/C.3; 23/F.7; 24/C.3 & 24/F.7  Please confirm that the response and details provided in W/O RFI T-0820 can be applied at these locations, thus shear plates may be used in lieu of double angle connections. (W/O RFI T-08020 response is attached for reference.)			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Confirmed. Shear plate connection details provided in the response to the RFI T-0820 may be used in lieu of double angle connections at the locations noted in the RFI where the intermediate transfer girder plate fouls the double angle connection. For W16 and deeper beams, the total number of bolts at a shear plate connection shall be per schedule on 2/S1-5011. Provide two bolts in the top shear plate and remaining bolts in the bottom shear plate. For W14 and shallower beams provide two bolts with only the top shear plate. Bolt edge distances, shear plate thickness and welds shall be per 2/S1-5011 with the exception of W40 beams where the vertical bolt edge distance may be reduced to 1 3/4".

Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
<p>The response to RFI T-0896 confirmed that a full depth back-up stiffener will be required at every shear plate location with the exception of a few locations. Along grid 10.1, between grids D.8/E there are full depth connections for a W33 and W24 staggered on either side of the Transfer Girder that are 4" C/C of beams.</p> <p>1. Please verify if it is acceptable not to provide a back-up stiffener at these locations? See CD RFI 147.1 SK1 &amp; SK2.</p> <p>2. If back-up stiffeners are not required at these locations, please provide a max offset dimension where stiffeners can be omitted for similar conditions. See CD RFI 147.1 SK1 &amp; SK2.</p>				<p>1) Backup stiffener can be waived if there is another full depth shear plate on the opposite side of the connection plate within a distance not more than 6".</p> <p>2) See Response to 1).</p>

T-0899	BGP - Electrical Room Dimensions in RFI 778.1,780.1,781.1 & 782.1	Closed	11/12/2013	11/19/2013	11/15/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: The AAI mark ups included in the responses to RFI 778.1, RFI 780.1, RFI 781.1 and RFI 782.1 do not reflect dimensions in the latest ASI 107 documents or submittal review comments in the Comprehensive Mat Slab Drawings in submittal drawings package TG0600-0103.  For example, the face of wall of Electrical Room B2460 per Response to RFI 780.1 is shown as 4'-0" from GL 15, however the latest drawing issued in ASI 107 A1-2124 shows the face of wall to this room as 3'-7 5/8" from GL 15. Shimmick has poured this area(Area 8) per ASI 104 which shows this dimension to be 3'-8". The next area to be impacted by these discrepancies will be placed on 11/24/2013.  This discrepancy is present in all of the dimensions issued in the mark-ups included in the RFI responses (attached) and the rooms shown in RFI 781.1 and 782.1 are scheduled to pour on 11/24/13.  Please provide a conformed drawing that shows the current layout for the following Electrical Rooms: B2640, B2461, B2441, B2560.			SUGGESTION:		ANSWER: George Metzger 11/14/2013 RESPONSE: The attached SKAs clarify and confirm current layouts/dimensions of Electrical Rooms mentioned in RFI T-0899 as well as setting out of all other PH1 walls at the Train Platform Level.  1. For setting out of PH1 walls above the Train Platform Matt Slab Level, refer to the Zone Plans (SKA-2871 to SKA-2878) and Enlarged Plans (SKA-2893 to SKA-2894).  2. For Setting out of knee walls under the Train Platform Level, refer to the Train Platform Level Slab edge plans (SKA-2885 to SKA-2892) and Detail Section (SKA-2895).  3. For setting out of couplers for PH2 walls, refer to the Train Platform Level Wall Plans (SKA-2879 to SKA-2884).  Note that Detail Section 1 on SKA-2895 shows that for the platform MEP rooms, the edge of slab, dimensioned on the Train Platform Level Slab Edge Plans, aligns with the face of wall for the room. However, the face of the knee wall below is set 4"

T-0900	SSS - Weld Test Requirements for Castings	Closed	11/13/2013	11/23/2013	11/21/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company Gary Kruttsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> The cast node material is not a prequalified base material, thus a PQR test for all welds to the cast material is required. The cast node manufacturer, Bradken, has indicated that all test materials will be supplied in flat plate form only. While AWS D1.1 Table 4.1, Note b qualifies that pipe diameters greater than or equal to 24" may be tested on flat plate, AWS D1.1 Table 4.1 requires that all pipes under 24" must be tested in tubular form. Please confirm it is acceptable to perform all PQR testing for castings less than 24" in diameter, including the 16" diameter castings at the Light Column, on flat cast plate material.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>	
			Ground, Bus Deck and Roof Castings are welded to 32" diameter pipes therefore per Table 4.1 of AWS, PQR can be performed with flat cast plate material. For the light column upper cast node which connects a 28inch tube with a 16inch tube, we confirm that the PQR can be performed with flat cast plate material.

T-0905	BGP - Light Column Anchor Bolts Conflict with Rebar	Closed	11/15/2013	11/25/2013	11/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER:			
Please refer to attached drawing S1-3009, S1-6008.				Accept Suggestion: <input type="checkbox"/>			
SCCI encountered potential conflict between anchor bolts of light column (layout depicted in 2/S1-6008) with light column rebar as shown in 1/S 1-3009. Please find attached model depicting conflict between bundles of 2 ea rebar #11@16" OC with the layout of the anchor bolt.				George Metzger 11/25/2013 RESPONSE: In order to avoid conflict with the light column anchor bars detailed on S1-6008, the bundled #11 bars depicted in Section 1/S1-3009 may have their number take precedence over spacing. Any bundle may be moved from the typical 1'-4" module by up to 11-7/8". The minimum clear spacing between any two adjacent bundles shall be 1'-3/8". The maximum spacing between any two adjacent bundles shall be 23-3/4". The particular arrangement of bundled bars is at the contractor's option per the rules described above. One potential allowable arrangement is presented in the Sketch SKS-0299 (attached).			
Please advise and provide parameters with which the rebar may be moved to clear the anchor bolts.

<b>T-0906</b>	<b>BGP - Omitting the Grout Port at all Applicable Column Base Plates</b>	<b>Closed</b>	<b>11/15/2013</b>	<b>11/25/2013</b>	<b>12/12/2013</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> Please reference column base plate details on Sheet S1-5051.  SCCI proposes to permanently remove the grout ports used to grout the column base plate as shown in A/S1-5051 . SCCI believes the 2" grout holes and 3" perimeter clearance is sufficient to grout voids underneath and around the base plate and shear keys. The blockouts will be grouted from the holes and/or perimeter and the hose removed as the voids are filled up.  Please confirm it is acceptable to remove the grout port depicted in A/S1-5051, typical at applicable column base plates.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 11/19/2013 <b>RESPONSE:</b> Contractor proposed grout procedure is acceptable, pending on the successful grout procedure mock up.		
<b>T-0907</b>	<b>BGP - Haunch Reinforcement Embedment Detail in Area 9</b>	<b>Closed</b>	<b>11/15/2013</b>	<b>11/25/2013</b>	<b>11/20/2013</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Scott Bunnell							
<b>REQUEST:</b> Please refer to drawing S1-3201 and attached SCCI sketch SK-RFI-383.  The haunch bars in Area 9 were fabricated to a shorter length than required. Per discussions with TT Engineer in the field, Gerdau proposes to raise the lowest point of the haunch bar 6" from the designed location. As a result, the haunch would have a 64" embedment into the mat slab and 29" minimum embedment into the foundation wall. Refer to attached sketch for further details.  Please confirm the revised haunch reinforcement detail in Area 9 as depicted in the attached sketch is acceptable .			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 11/18/2013 <b>RESPONSE:</b> The reduction in length is acceptable for use in Area 9 with the following conditions: 1. The top of bar embedment into the wall shall comply with RFI T-0702 and T-0716. 2. The bottom of the bar shall be chaired as required above the lower mat. 3. Embedment into the mat shall conform to RFI T-0710 and T-0762.

T-0909	BGP - Cast-In Place Plumbing Fixtures on Concourse Level	Closed	11/15/2013	11/25/2013	11/25/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu			<b>To:</b> Turner Construction Company Gary Krutsch				
<b>Co-Author:</b> Webcor Construction LP Spencer Sayles			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> As discussed in the 10/28/2013 ASI 104 Concourse Plumbing design meeting, this RFI is requesting confirmation that it is acceptable for the Early Below Grade Package (TG06) contractor to block out the concourse slab where plumbing fixtures are shown to be embedded in concrete.  General notes in TG06 drawing P-0005 call for sleeves only in elevated slabs in the EBG. However, for the future main package plumber to be able to install the cast in place floor sink and floor drain fixtures, larger openings and structural details are needed. The contractor is proposing to install square blockouts sized larger than these fixtures so that they can be installed and grouted in a later date by the main package plumber. The desired benefit of this proposed logic is that concourse plumbing will be installed by one trade contractor who will provide a single source warranty for the work. Also, the later installation allows for more precise coordination of fixture rim elevations.  If this proposed sequence is not acceptable, CIP plumbing fixtures will need to be supplied and installed by the BPG (TG06) contractor. If this proposal is acceptable, please provide blackout size, rebar trim details and rebar doweling details for floor sinks and also floor drains. Sample product data for the fixtures are attached for reference and for sizing of openings.			<b>SUGGESTION:</b>			<b>ANSWER:</b> Accept Suggestion: <input type="checkbox"/> George Metzger 11/22/2013 RESPONSE: We confirm that installing block-outs for the floor drains and floor sinks (to be installed later) is the acceptable solution. The size of the block-outs has to be determined by the contractor, it is part of the means and methods as a temporary condition.	

T-0909.1	BGP - Cast-In Place Plumbing Fixtures on Concourse Level	Closed	12/11/2013	12/21/2013	12/19/2013	Potentially	<input type="checkbox"/>

<div><div>From: Webcor Construction LP</div><div>Jackson Tukuafu</div></div> <div><div>To: Turner Construction Company</div><div>Gary Kruttsch</div></div>			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:			SUGGESTION:		ANSWER:		
Please reference details 7/A1-8881 (ASI #107) and 4/S1-3010 (ASI #100).					Accept Suggestion: <input type="checkbox"/>		
1. Detail 7/A1-8881 calls for a "neoprene gasket compressed by bar and bolt typ." Please provide sizes for tabs and bolts. Also, provide welding instructions (if necessary).					AAI Response:		
2. The same detail shows pipe penetrations through the seismic joint at both levels. Plumbing drawings show a 4" "SAN/ AD" running parallel to the seismic joint. Please confirm this pipe penetrates the joint. If so, provide locations off of grid and pipe sleeve dimensions. Also, provide details on how to seal this penetration (watertight).					1. For size of tabs and bolts for the neoprene gasket, refer to Specification Section 07 09 16 - Seismic Joint Assemblies - Below Grade Package. Fastening device types and sizes required are to be engineered to suit and ensure compliance with the specification. Contractor to coordinate components specified under this section, including Double SJ Seal c/w Clamping Assembly, SJ Cast-in Galv Steel Frame and Stud Assembly, and Waterproofing Assembly, which are closely integrated with materials and assemblies specified in other Specification sections and require close trade coordination to complete the overall Seismic Joint Assembly.		
3. Detail 4/S1-3010 shows a 3/4" dia Headed Stud at 12" oc, with 6" embed. Is this to be one row as the drawing shows?					2. For Seismic Joint Drain locations, refer to SKA-2949. Pipe sleeves are not required around the pipe penetration. Drains to be provided with clamp frames / flanges for clamping the waterproofing system, creating a seal around the pipe penetration at the Seismic Joint.		
4. Detail 4/S1-3010 also calls for 4" diameter hole at 2'-0" oc. What is the purpose of these holes? If the clamping system is continuous, then what will support the rod at the hole locations? Please clarify.					TT Response:		
					3. Confirmed.		
					4. The holes are to ensure that concrete fills all the way up to into the curb and allows for the use of a concrete vibrator. Refer to Double Seismic Joint Seal with Clamping Assembly Manufacturer for bolt spacing. Coordinate concrete fill holes to avoid interference with bolts of the clamping system.

T-0914	SSS - Detail Clarifications for Edge of Slab Supports	Closed	11/18/2013	11/18/2013		Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch			Answered By: Webcor Construction LP Gregory Kemerer				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Please reference details 2, 3, 7, and 9 on S1-5001 and CD RFI 120 SK1-SK2 for the following items: 1) Details 2 & 7/S1-5001 appear to indicate the same condition, however the required deck angle supports are different. Detail 2 shows the configuration of 3/8" bent plates while Detail 7 shows a different configuration. of L6x4x5/16 angles. Please confirm it is acceptable to proceed with the deck supports per detail 7. 2) If detail 7/S1-5001 is acceptable, confirm the deck support angles can be held back 1" from the edge of slab. 3) If detail 2/S1-5001 is preferred, please provide additional information on the indicated members with horizontal and vertical leg dimensions. 4) Details 3 & 9/S1-5001 appear to indicate the same condition, however the required deck angle supports are different. Detail 3 shows the configuration of 3/8" bent plates while Detail 9 shows a different configuration. of L6x4x5/16 angles. Please confirm it is acceptable to proceed with the deck supports per detail 9. 5) If detail 9/S1-5001 is acceptable, confirm the deck support angles can be held back 1" from the edge of slab. 6) If detail 3/S1-5001 is preferred, please provide additional information on the indicated members with horizontal and vertical leg dimensions.					1) Detail 2 shows deck support at exterior column while Detail 7 is to show the slab reinforcement. However, for deck support, either the deck support shown on detail 7 can be used to replace the 3/8" angle shown on Detail 2 at contractor's discretion. 2) Confirmed 3) Horizontal leg to have a dimension so that the edge angle will have 1 1/2" bearing similar to detail 8/S1-5000. Vertical leg shall be not less than 4". 4) Confirmed 5) Confirmed 6) See response to item 3.		
T-0915	SSS - Connection Clarifications For Beam Cope	Closed	11/18/2013	11/28/2013	12/04/2013	Potentially	<input type="checkbox"/>

T-0918	SSS - Connection Clarifications for Offset Beams	Closed	11/18/2013	11/18/2013	12/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: On S1-2503 along line 9 between grids E & F refer to sketches CD RFI 124 SK1 & SK2.  With the beam spacing per S1-2503 (SK1), there will be a 3" offset between the noted beams. The double angle connection per S1-5010 will not work as the bolts will foul the beam web on the opposite side. We propose to relocate the beam per the proposed dimensions shown or connect these beams with shear plates per S1-5011. Please review and advise how to proceed.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>  The W21x50 beam between GL E.2 and E.6 may be moved to align with the W24x68 on other side of GL 9 as shown on SK2. However note that the location of the W24x68 beam east of GL 9 and between E.6 and F is incorrectly shown on SK2. The W24x68 beam is 7' 6" from GL F and is aligned with the W21x50 on the west side of GL 9. Similarly, the W24x68 and W24x55 beams on the two sides of GL 9 between GL D.4 and D are aligned.		
T-0919	SSS - Beam Bottom Flange Bracing Connection	Closed	11/18/2013	11/28/2013	12/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Refer to the beam bottom flange bracing connection detailed on 8/S1-5015 and CD RFI 127 SK1 & SK2 for the following items: 1) In order to support erection requirements, please confirm it is acceptable to: a. Typically locate the bolts shown 3" from the underside of the top flange and 3" from the face of the beam web as indicated in CD RFI 127 SK2. b. Typically locate the bolt 3" from the top of the flange indicated. c. Typically locate the bolt outside the beam profile as shown to make the brace erectable. 2) Confirm the stitch plates should be ½" thick to match the ½" thick gusset plates at each end. 3) Please confirm that it is acceptable to provide slotted holes in the brace at the end connections.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>  1) It is acceptable to typically locate bolts as shown in SK2. However, the slope of the kicker angle shall be such that the centerline of the angle should pass through the centerlines of the beam web and flange similar to that shown in 7/S1-5015 at both top and bottom ends. 2) Confirmed. 3) Slotted holes are not acceptable. Bottom flange bracing detail 8/S1-5015 applies only at beams with the "dashed arrow" symbol (See Note 1 on 8/S1-5015). Bottom flange bracing of 2nd floor and bus deck level spandrel beams is to be provided per S1-8020 as noted on typical sheet notes on S1-2402 and S1-2502 (See Note 3).

	<p>The braces per detail 8/S1-5015 have been added in the model for the area between grids 1.4 to 19.9 as shown on attached SK2. Please see attached CD RFI 127.1 SK1 &amp; SK2 for items 1 &amp; 2:</p> <p>1.) Work with SK1 &amp; SK2 and confirm the request in the response to RFI T-0919 (SK 173 &amp; CD 127) item 1 to have the work points for the braces located at the intersection of the top/bottom of beams on center of beams.</p> <p>2.) If the response to item 1 above is yes, please supply the size of the gusset plates as the dimensioning proposed in CD RFI 127 will not work with the revised work point locations.</p>						
T-0919.2	SSS - Detail Clarification at Angle Brace	Closed	02/06/2014	02/16/2014	02/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Company PHIL MILITELLO		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
This is a follow-up to Webcor RFI # T-0919.1 (SK RFI # 173.1 & CD RFI # 127.1)		Confirmed that the work points shown on CD RFI 127.2 SK1 and SK2 are the design intent. The work points shown on CD RFI 127.2 SK3 previous submitted are also acceptable. There shall be no cost and time increase for this one.					
Per the conference call discussion on 1/16/14 with Webcor, Skanska & Thornton Tomasetti, Candraft was to layout the bracing work points to the underside of the top beam flange superseding the response to locate the work at the top of the beam. Please review the attached two sketches CD RFI 127.2 SK1 & SK2 showing the revised work point locations and confirm this is the intent of the design parameters. Note that the bracing work points are not indicated on 8/S1-5015 and we feel that the original sketch CD RFI 127 SK2 (Relabeled CD RFI 127.2 SK3) conforms to the design with the bolt closer to the inside profile of the beam members and would like to use as modeled.

T-0920	SSS - Kicker Connection Clarification	Closed	11/18/2013	11/28/2013	11/22/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Refer to sketches CD RFI 126 SK1 to SK3 for items 1 to 4:					1) Acceptable. 2) Acceptable. 3) Acceptable. 4) Acceptable. One general comment that is applicable to all sketches include in this RFI is that where shallower beams are supported by deeper girders. Coping the bottom flange of the shallow beam is not allowed per details 1/S1-5010 and 1/S1-5011.		
1) Confirm it is acceptable to locate the brace at the bevel shown to fit the steel framing in lieu of the 2:1 bevel per 5/S1-5015.							
2) Confirm it is acceptable to locate the brace at the bevel shown to fit the steel framing in lieu of the 2:1 bevel per 5/S1-5015.							
3) Confirm it is acceptable to increase the thickness of the full depth shear plate to 1" per 5/S1-5015 and connect the kicker brace to the full depth shear plate as shown.							
4) Confirm that it is acceptable to typically apply item 3 at other similar conditions.							

---

T-0920.1	SSS - Kicker Connection Clarifications	Closed	12/11/2013	12/21/2013	12/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Per the response to Webcor RFI T-0920 (SK RFI # 172) it was confirmed acceptable to increase the full depth shear plate from 3/8" to 1". Upon further review of this location there would be an issue where a 1" thick shear plate would foul the bolts connecting the top flange of the Transfer Girder to the Cruciform column base plate.					1) Confirmed. 2) Confirmed. 3) Confirmed. 4) Confirmed. 5) See responses to 1) through 4). Further comments may be provided on a case by case basis during shop drawings review		
1). Please confirm it is acceptable to center the 3/8" shear between the bolts and move the beam 5/8" south from its original location.							
2). Please confirm the 1" gusset plate welded to the bottom flange of the beam can be moved off the center line of the beam to line up with the 3/8" full depth shear plate. The gusset would move 7/16" from the centerline at this location.							
3). If it is acceptable to line up the gusset with the full depth shear plate, there will be a 5/8" discrepancy between the two plates. Please confirm if stitch plates with varying thicknesses can be used to make up the difference.

	<p>4). Confirm that it is acceptable to typically apply the above items at other similar conditions.</p> <p>5). If any of the above suggestions will not work, please provide an alternate detail for these conditions.</p>						
T-0920.2	SSS - Kicker Connection Clarifications	Closed	12/16/2013	12/26/2013	01/02/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Per the response to Webcor RFI T-0920 (SK RFI # 172) clarification is required regarding the last statement where "Coping the bottom flange of the shallow beam is not allowed" and also per the response to Webcor RFI T-0934 (SK RFI # 187) clarification is required regarding the last statement where coping the bottom flange of the shallow beam shall not exceed 1" from the end of the beam.  1). Per detail 1/S1-5010 where there is a double sided beam connection, the bottom flange is required to be coped in the shallow beam in order to allow for installation of the bolts from the shallow beam side. Note the bolts cannot be torqued if erected from the other side and would also foul the shallow bottom beam flange in question. On the attached sketches CD RFI # 126.1 SK1 to SK4 show some typical sample conditions illustrating the clearance required. The beam flange cope lengths required will range from 4" long in most cases to 4 1/2" at larger web thicknesses. Please verify the shallow bottom beam flanges can be coped for bolt clearance and erection of the beams as noted on SK2 to SK4.  2). Per detail 9/S1-5010 where the WT on the top of the beam flange is required to extend to the end of the beam please verify the beam flange can be coped back to the "k1" of the beam in order to get full bearing and weld for the WT and to clear bolts as noted on SK2.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> 1). Coping the bottom flange 4- 4 1/2" long will affect the block shear of the connection design in some cases. Contractor shall prepared the shop drawings satisfying the require tightening clearance and cloud the coped area requesting approval by the Engineer on a case by case basis.  2) Confirmed.

REQUEST:			SUGGESTION:		ANSWER:		
Per details 8 & 10/S1-5001, refer to sketches CD RFI 121 SK1 for items 1 & 2:					Accept Suggestion: <input type="checkbox"/>		
1) Confirm the noted area indicates that the concrete slab is not required and the edge plates may be terminated as shown.					The noted area does require concrete slab. Note that this detail is for the slab reinforcement at an edge column condition and the detail note references to ¿see typical slab edge details for additional information¿. Refer to detail 2/S1-5001 for additional info regarding edge of deck at exterior columns.		
2) Confirm the noted area indicates that the concrete slab is not required and the edge plates may be terminated as shown.					The noted corner area does require concrete slab. Note that this detail is for slab reinforcement at a corner column condition and the detail note references to ¿see typical slab edge details for additional information¿. Refer to detail 3/S1-5001 for additional info regarding edge of deck at exterior corner columns.		
T-0922	SSS - W-1 Support Connection Clarifications at Bus Deck	Closed	11/18/2013	11/28/2013	12/12/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER:		
Refer to CK RFI 125 SK1, SK2A, SK2B, SK3, and SK4 requesting clarification at the Bus Deck level on the following:					Accept Suggestion: <input type="checkbox"/>		
1) Confirm the noted connection should be a moment connection.					1. Yes, the connections shall be a moment connection as shown on Detail 1/S1-8003 and as denoted on the plans.		
2) At the noted location, two supports for CP5 connections are required adjacent to Grid 9. Based on the CP5 detail requirements, a 1 ¼" horizontal stiffener should span from shear plate to shear plate per 1B/S1-8003; however, because these two connection points span the same beam, the horizontal stiffener would foul the incoming beam to shear plate connection, as there is a horizontal stiffener welded on both sides of the shear plate. Please provide a solution for this condition.					2. The horizontal plates shown on 1B/S1-8003 are eliminated (see ASI 109).		
3) Confirm the vertical spacing of the 1 ¼" horizontal stiffeners is acceptable to accommodate the connection bolts on the incoming beams.					3. See response to item 2)		
4) In the beam connection shown in detail 1/S1-8003, the required shear plate will foul the 2" web reinforcement plate required per 1/S1-5017. Please confirm the shear plate is to be welded to the 2" web reinforcement plate with a ½" double fillet weld per 1/S1-8003 or provide an					4. Is this question related to the vertical shear plate? If so, Confirmed that the shear plate may be welded to the 2" web reinforcement plate with 1/2" double fillet weld as shown.		
					5. 3/4" partial pen weld at the bottom flange called out may be replaced by a partial penetration weld with an 3/4" fillet weld overlay built-up.		
					6. Confirmed.		
					7. Confirmed.		
					8. Confirmed.		
					9. See ASI 109 for bolt hole dimensions.		
					10. Use 2 1/16" holes for 1 ½" bolts to allow for ½" field tolerance.

From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Refer to CD RFI 128 SK1 through SK4 in response to the following regarding the W-1 glazing system connection "CP6" at the bus deck level: 1) The indicated CP6 connections foul the beam connections as indicated in SK3A and SK3B. Please provide a solution to this condition. 2) Confirm the holes for the "CP6" connections may be typically located as shown in SK4 along Grids B & H. 3) Confirm the connection holes for "CP6" are 1 9/16" diameter or provide the required hole diameter.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
					1. The double stiffeners (1" thick) shown on 4/S1-8003 will be revised to single 1 ½" thick stiffener (centered to the W1 support). If the connection for the beam supporting crash rail posts fouls the stiffener and kicker for W1 support, adjust the beam supporting the crash rail post slightly (less than 3") so it is in line with the W1 support. In this case, the kicker is no longer needed.  2. The center line of the bolt shall be 2'-0 1/8" from the top of the beam (2'-0 ¼" shown on SK4). The vertical spacing of the bolt shall be 10 ½"(10" shown on SK4) and the horizontal spacing of the bolt shall be 5 ½"(4 1/2" shown on SK4).  3. Confirmed that 1 9/16" dia. hole is fine for 1" bolt to allow for field tolerance.

---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

**Co-Author:** Skanska USA Civil West California DisRyan Clayton

**REQUEST:**

See attached CD RFI # 128.2 SK1 & SK2 for items 1 & 2:

1) The 1 1/2" thick plate per 4/S1-8003 with the 1/2" fillet welds will interfere with the "CP6" bolts if the beam is placed on the center of the CP6 connection per RFI T-0923 (SK1). Confirm it is acceptable to place the 1 1/2" thick plate on the center of the "CP6" connection and off-set the beam accordingly.

2) Detail 4/S1-8003 calls for the PL 1 1/2" to be 9" wide. Confirm it is acceptable to make the PL 5 1/2" wide as shown to avoid interference with the bolts for the safety handrail post.

**SUGGESTION:**

**ANSWER:**

**Accept Suggestion:** ☐

1. Confirmed.

2. Proposed change of the stiffener is not acceptable. The stiffener shall be welded to the beam web and flange as shown on the contract document. Adjust safety handrail post as needed to avoid conflict.

**T-0924**      **BGP - Column Stirrups and Ties at Top of Concourse (Mock-Up Review)**      **Closed**

**From:** Webcor Construction LP      Jackson Tukuafu

**To:** Turner Construction Company Gary Krutsch

**11/19/2013**      **11/19/2013**      **11/22/2013**      **Potentially** ☐

**Answered By:** Adamson Associates, Inc. George Metzger

**Co-Author:** Shimmick Construction Company, Inc. Sylvia Hartanto

**REQUEST:**

Please refer to drawing S1-3304, 3305 and 5051.

Please confirm that it is acceptable to install the top column stirrups and tie at 12.5" from the top of concrete at concourse level for the concrete columns with anchor base plates.

**SUGGESTION:**

**ANSWER:**

**Accept Suggestion:** ☐

George Metzger  
11/22/2013

**RESPONSE:**

Installing all column stirrups and tie starting at 12.5" from the top of concrete is not acceptable. It is acceptable to eliminate/lower the column ties that interfere with the key blockout. Note that proposed 12.5" would not be sufficient to clear column stirrups/ties from the key blockout at some locations (Base Plate Types 1B and 1C in Sheet S1-5051, base plates embedded within the concrete).

	<p>TG0600-0025 states that "each section of INJECTO should be pressure tested with water to a minimum pressure of 1 00 psi, to insure migration of water through the entire joint. If excessive water leakage out of joint is observed, this may indicate the presence of honeycombs or voids and should be noted on job report..."</p> <p>In addition, the attached Grace/DeNeef Technical Letter also notes that the INJECTO should be tested with water (not air).</p> <p>Please confirm that it is acceptable to test the integrity of the INJECTO hoses with water as required by the manufacturer.</p>						
T-0927.1	BGP - Injection Hose Testing Criteria	Closed	01/06/2014	01/16/2014	01/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please reference attached Grace/DeneefTechnical Letter and RFI #T-0927 response.				George Metzger 1/17/2014 RESPONSE:			
RFI T-0927 response states that "contractor shall use air to test hoses as specified," but the specifications call out several different types of injection hoses. Although, air testing may be suitable for other products specified, Grace/Deneef requires water testing for the INJECTO Tube system. The attached technical letter from Grace/Deneef states that "INJECTO is an open system, and any air pumped in will begin to flow immediately through the 35 micron filter and polypropylene mesh out into the concrete."				H&B does not disagree with deNeef that air will flow into the concrete. We also assume that water will also flow as readily into the concrete as air. What is the water test intended to demonstrate? The requirement in the specifications was in response to a Webcor comment during the design phase on the system and specification.			
Please review and confirm that water testing is acceptable for the Deneef INJECTO Tube system on the TTC project.				The reason air was specified, rather than water is that the injection hose is flanked with hydrophilic water stops. If the hose leaks, it will activate the water stops and the leaks in the hose will go undetected.

REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Please confirm that the dimension indicated on CD RFI 130 SK1 at the Type 1 Drag Connection per detail 1/S1-5016 is to be taken from the Thornton Tomasetti Tekla Model.			No, the distance in question as shown on CD RFI 130 SK1 is to be determined based on the contract document Detail 1/S1-5016 (not based on the TEKLA model). The first row of bolt is to be 6 1/2' min (1 1/2" MIN+1" + 4") from the bottom of the connection pad as detailed. The contactor shall also note that the cast node work point was incorrectly shown on RFI 130 SK1. It shall be at the same elevation as the center of the beam.

			11/25/2013	12/05/2013	12/11/2013	Potentially	<input type="checkbox"/>
			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
			<b>ANSWER:</b>	<b>Accept Suggestion:</b>	<input type="checkbox"/>		
			<p>1. Seal ring is to stop grout from entering steel tube as well as to limit spread of corrosion protection. This requires a rubber O-ring or possibly just denso tape to seal the gap. Additionally, please add a second seal ring between the PE-Tube and the shrinkable tube, to also inhibit the spread of corrosion protection.</p> <p>2. These are non-structural welds. Min. fillet size is all that is required.</p> <p>2e. Please note that there should be no weld here. The plastic PE-Tube cannot be welded to the steel cavity tube.</p> <p>3. Dimension has been added, see marked-up sketch.</p> <p>4. Only the threadbar is Grade 150 ASTM A722 Type II. Anchor plate and steel tube are ASTM A572 Gr. 50. Steel tube should be welded to anchor plate prior to installation, so no welding is done near threadbar.</p> <p>5. Min. length above nut to be determined by contractor based on his means and methods of pre-tensioning. Final length of threaded rod above nut must be long enough to allow re-tensioning at a later date, which must equal thread length of jack used + elongation of threadbar.</p>

T-0952	BGP - Use of historical concrete strength test results	Closed	11/27/2013	12/07/2013	12/05/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Webcor Construction LP Jackson Tukuafu				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Further to discussion with Thornton Tomasetti field personnel.					Accept Suggestion: <input type="checkbox"/>		
WOJV is asking for the remainder of the Mat slab pour, that the requirements per specification Section 31 55 00 1.4J may be deemed satisfied after 14 days to start removing the level D bracing based on historical data of the 284 concrete strength test results completed to date.					George Metzger 12/4/2013		
Please confirm if this would be acceptable					RESPONSE: The RFI does not stand as written. The historical mat slab break data is sufficient only to waive the specification requirement that the TJPA Representative review and approve strength test results prior to removal of bracing (Section 31 55 00 1.4J). It is permissible that Webcor-Obayashi review the 14 day results to determine early brace removal provided they establish and submit acceptance criteria. SEOR is awaiting documentation of the procedure and acceptance criteria, which may take the form of an RFI. Language for this RFI has already been discussed with WO and TCCO.

REQUEST: Reference CD RFI 196 SK1 to SK3 for edge of slab clarifications required at the second level near grid 11.E as follows:  1) The blue dimensions indicated on SK1 are per A1-2883. Please confirm these dimensions are to be used to locate the steel and edge plates on S1-2403. 2) The blue dimensions indicated on SK2 are per A1-2883. Please confirm these dimensions are to be used to locate the steel and edge plates on 2/S1-7302. 3) Please clarify the dimension discrepancy between A1-2883 and S1-7302 as indicated on SK2. 4) Please clarify the dimension discrepancy between A1-2883 and S1-7302 as indicated on SK2. 5) Confirm the built-up walls are 9" thick as indicated on CD RFI 196 SK2. 6) Confirm the green lines indicated on SK3 represent the edge of slab on S1-2403. 7) Confirm the purple lines indicated on SK3 represent the edge of slab on 2/S1-7302. 8) The adjustment indicated on SK3 and A1-2883 is not shown on S1-2403. Please confirm the dimensions indicated on A1-2883 are correct.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Confirmed. 2) Confirmed. 3) Edge of slab dimension shown on A1-2883 is correct. 4) Edge of slab dimension shown on A1-2883 is correct. 5) The thickness of the built-up wall is determined by the location of the beam relative to the step at these escalator pits. Consider detail 2/S1-7661 that applies at the W21x50 beams north of GL D.4 that are supported by a W36x150 beam on GL 11. The only exception to this detail at these pits is that the lower WT is not required as the lower slabs are supported by beams below. In detail 2/S1-7661 the wall thickness is equal to the distance between the slab step and beam web face. 6) Confirmed. 7) Confirmed. 8) Confirmed.

T-0967	Procedure for the removal of the level D bracing	Closed	12/05/2013	12/15/2013	12/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Procedure for the removal of the level D bracing:					Accept Suggestion: <input type="checkbox"/>		
Webcor-Obayashi will review the 14 day compressive strength reports issued by the independent test lab (ISI) for the applicable pour area. In the review WOJV is to ensure that the "lower-bound" concrete strength exceeds 3000psi at 14 days. "Lower-bound" will be understood as the mean minus one standard deviation. If the calculated lower-bound strength <3000 psi, the bracing removal would not continue until results are received satisfying the lower bound criteria. Further, If any single compressive strength test is < 2500 psi, the bracing removal would not continue until results are received satisfying the minimum strength criteria.					George Metzger 12/6/2013 RESPONSE: Confirmed		
Please confirm if this would be acceptable

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>Concern: ASTM A709GR 70W material hardening during welding (alloying up) as each weld layer is deposited (in 2" to 4" material thickness). An increased hardness value is expected and the actual concern is that, in this instance, the E91XX specified will create an overmatching filler metal condition during the welding process.</p> <p>Review: The AWS D1.1 2008 edition in table 3.1 for ASTM A709 Grade HPS70W specified a minimum of 70 ksi Yield Point and 90-110 ksi Tensile Range. In comparison, the AWS D1.1 2010 edition, a revision was made on this same material and the Tensile Range was dropped to 85 ksi minimum and maximum to remain at 110 (85-110).</p> <p>Research: Currently for seismic application, the filler metal companies have seismic testing certificates for E81XX and F8XX electrodes. The Tensile test range for AWS D1.8 requirements is 80ksi minimum, but the manufacturers' test results consistently come in at 88 to 95 ksi, which would meet the 85-110 ksi range for the material. The two manufacturers contacted, ESAB and Lincoln, are willing to do seismic testing (test data) for the purpose of supplying AWS D1.8 seismic certificates to meet the E91XX requirements. However, when reviewing the current test data from the manufacturer, the test tensile range is 90-110 ksi, but the results are 97-110 ksi.</p> <p>Conclusion: TMF and their welding consultants believe that starting with a near Minimum Tension ksi (under match in classification/specification) that allows the use of E81TXX or F8XX electrodes with current seismic certificates would be best for the welding of the A709 HPS70W material due to the 2-4" thickness in this application.</p> <p>Please confirm this proposal is acceptable.</p>						<p>is welcome to certify-by-test their electrode E8 as a E9 and provide the documentation as-such and submit it for approval.</p>

<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> Following the response to RFI T-0970 and after further review of #3 & 10, we agree the rods can be pretensioned from the bottom. Candraft have run a sanity check at several locations to confirm there is adequate clearance for the tensioning device and will continue to do so as other locations are detailed. Any interference will be addressed in future RFIs.  Please confirm it is acceptable to use a standard flat washer in lieu of the plate washer as the holes are not oversized and this will also allow for easier workability during the pretensioning operation from the bottom (see Dyson catalog cut attached). If this is acceptable the 24" dimension indicated from bottom continuity plate to top of built up T & TT (on 3/S1-5050) and the 6x6x2" plate washer under the top nut will not require to be changed (as per #3, 10 & 14 RFI T-0970).  Please confirm this proposal is acceptable.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Acceptable to use standard flat washer at the bottom of the pretension rod.		
T-0971	SSS - Column Side Plates Dimension Increase	Closed	12/09/2013	12/09/2013	12/11/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Gregory Kemerer <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Arup      Rich Coffin							
<b>REQUEST:</b> Please refer to drawing S1-2203 and S1-5050.  On S1-2203 at grids 9/C refer to sketches CD RFI 161 SK1 & SK2 regarding anchor bolts at column side plates. For the column side plates per detail 4/S1-5050 and anchor bolts it is not possible to insert the nuts & plate washers for the anchor bolts with the 3'-0" side plate dimension.  Confirm it is acceptable to increase the noted dimension to 3'-5" or supply an alternate solution.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The detail referred in the RFI (4/S1-5050) is for column W14X730-SP, which is constructed using a rolled W14X730 as a base and welding side plates on it. However, the decision was that the below grade steel columns will be constructed using plates (built-up shapes), they won't be rolled shapes. Equivalent built up shapes for all rolled shape column types shown on Lower Concourse Plans are provided in Detail 6/S1-5050. These equivalent built up shapes do not require the side plates shown in Detail 4/S1-5050.

Co-Author: Arup		Rich Coffin					
REQUEST:		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>			
For Drag connections per detail 1/S1-5017 refer to sketches CD RFI 123 SK1 & SK2 for the following items noted:				TT's response (the original RFI does not use #2, the responses are in the same order as the original RFI):			
1) Confirm the size of the hole required thru the beam web, web stiffeners and shear plates is the diameter of pin +1/32". Confirm if any additional tolerance is allowed for hot dipped galvanized pins.				Tolerance shall be 1/32" per Specification 05 10 00, paragraph 3.2.B.2.			
3) Confirm flanges can be cut flush to the beam web. Note that the flanges need to be cut flush only to the web stiffeners for erection access purposes.				It is contractor's option to either cut the flange flush with beam web or flush with the web reinforcement plate for erection purpose.			
4) Confirm if a radius is required when cutting the flange flush to the beam. If required confirm a radius of 1-1/2" is acceptable.				Confirmed.			
5) On RFI T-0737 Skanska requested to provide a cotter pin to further secure the nuts from backing off. Please confirm it is acceptable to provide one nut with the cotter pin as detailed on SK2.				2 nuts shall be provided as detailed in the contract documents.			
6) Confirm the material grade for the pins and nuts is A668 Class M.				Confirmed.			
7) Confirm all pins and nuts are to be hot dipped galvanized.				Confirmed.			
T-0974.1	SSS - Nut Material Grade	Closed	03/05/2014	03/15/2014	03/06/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Stephanie Azzolino	To: Turner Construction Company PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger		
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER:      Accept Suggestion: <input type="checkbox"/>			
The contract documents do not contain a specific material grade for the nuts for large diameter pin connections (6, 7 and 8" diameter pins). In SK RFI 169A (T-0974), our detailer asked for clarification on the material grade for these nuts. It was confirmed that A668 Cl. M would be acceptable. Given the function of these nuts are to hold the pin in place and not apply a clamping force to the assembly, we do not consider that these nuts need to be a high strength forged material. Please refer to AISC Table 15-8 which shows a thin cap plates for pins overs 10" in diameter which reinforces this position.				Confirmed.			
Please confirm it is acceptable to use A572 Gr.50 plate to fabricate these nuts.

T-0975	SSS - Vertical Clearances at Tapered Girder Kicker Connections in S1-5015	Closed	12/09/2013	12/19/2013	12/26/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP <b>Co-Author:</b> Arup			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
Gregory Kemerer Rich Coffin							
<b>REQUEST:</b> Please refer to drawing 4/S1-5015, S1-2602  Please refer to sketch CD RFI # 071 SK1 - SK3 for items 1 & 2: 1) As shown, 11-3/8" is the minimum vertical clearance required to provide the kicker brace connection per 4/S1-5015. Please confirm criteria as shown is acceptable.  2) Per item 1 on CD RFI 071 SK1, detail 4/S1-5015 cannot be applied in the noted case on SK3 and other similar cases when the vertical clearance is less than 11-3/8".  Please confirm if bracing is required at these locations, if so supply a typical alternate detail.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) Providing a 3' clear distance between the gusset plate shown on SK-1 may be reduced to 1", hence the minimum clearance (11 3/8") required to provide the kicker brace per 4/S1-5015 may be reduced further.  2) Brace is required. The vertical clearance shown on SK3 corresponding to the location shown on SK2 is not correctly determined. The tapered girder is much deeper (about 54" deep) at the brace location shown on SK2. Note that the tapered girder depth increases from 40" at the ends to 60" at the mid span per S1-4200.	
<hr/>							
T-0976	SSS - Transfer Girder Kicker Connection Conflicts	Closed	12/09/2013	12/19/2013	12/26/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP <b>Co-Author:</b> Arup			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
Gregory Kemerer Rich Coffin							
<b>REQUEST:</b> Please refer to drawing 5/S1-5015.  For the Transfer Girder angle connections see sketches CD RFI 063 SK1 to SK4 for items 1, 2, 3 & 4 noted below.  1) The kicker angle fouls the vertical stiffener, this is typical at similar locations. We propose notching the leg of the fouling angle and using a two bolt connection in lieu of welding or provide a typical solution. 2) Due to welding access issues we propose to use a two bolt connection, typical at similar locations. Confirm this is acceptable. 3) The kicker fouls the stiffener and the kicker gusset is too close to the stiffener for welding access. Similar conditions occur at other locations on the Ground Level. Please provide a typical solution. 4) The kicker gusset fouls the stiffener plate. Similar conditions occur at other locations on the Ground Level. Confirm it is acceptable to use the stiffener as the kicker gusset and increase the gusset thickness at the other end to match or provide an alternative detail.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) It is acceptable to typically notch the leg of the fouling angle and provide (2)- 1 1/2" A490X bolts to connect the kicker angle to the bottom gusset plate at the location highlighted in the RFI on SK3 and at other similar locations. Provide a spacing of 3" between the bolts and a bolt edge distance of 2.5". The bolts shall be centered on the kicker angle legs. 2) Submittal shall address all access issues for field welding. It is acceptable to typically provide (2)- 1 1/2" A490X bolts to connect the kicker angle to the bottom gusset plate at the location highlighted in the RFI on SK3 and at similar locations where weld access is not possible. Bolt apacing and edge distance shall meet the requirements in AISC. The bolts shall be in line with the centroid of the kicker angles. 3) Shift the beam to the south so that the same solution in 4) could be applied. 4) Confirmed.

T-0981	BU WT to the web plate of the BU beam and weld as shown. The web to flange fillet welds per RFI # T- 0704.1 will be applied beyond the shown CJP welds.	Closed	12/09/2013	12/19/2013	12/13/2013	Potentially	<input type="checkbox"/>
	3) Confirm it is acceptable to have a continuous 4" vertical bolt spacing in lieu of the pattern interruption as shown in detail 3/S1-4350 to avoid cutting the bottom flange of the BU beam. This may mean that the holes for the 1 1/2" dia. bolts near the WT to BU beam web weld will have to be drilled after the weld is made.						
	4) Confirm it is acceptable to have a continuous 4" vertical bolt spacing in lieu of the pattern interruption as shown in detail 7/S1-4350 to avoid the bolts fouling the web to flange fillet welds. This may mean that the holes for the 1 1/2" dia. bolts near the WT to BU beam web weld will have to be drilled after the weld is made.						
SSS - Cast Node Erection and Fabrication Work Points							
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
It is requested that work points be added to the Cast Connex machine drawings and Bradken Cast Nodes as outlined on the marked up Cast Node drawings attached. These external "physical" work points will be used to reestablish the "non-physical" internal work points set during the pre-machining of Cast Nodes at Bradken. These external work points will be used to aid the following construction activities:		Webcor needs to liaise with Bradken to determine if they are willing and able to punch these marks on the castings, and what (if any) the cost and schedule impact would be. If Bradken can complete the work, then Cast Connex is willing and able to update the machining drawings (at Skanska's cost). The cost for Bradken's additional work will have to be taken care of between Skanska and Bradken and not the TJPA.					
1) Shop fabrication of shear plates and pipe columns							
2) Shop trial assembly and QC dimensional inspections							
3) Field assembly and final QC dimensional inspections							
Please confirm each work point will be precision punch marked and highlighted with paint marker for easy identification.

T-0982	SSS - Elevator Rail Support Connection Clarifications	Closed	12/09/2013	12/19/2013	01/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Please refer to Elevator Rail Support drawings S1-7130 through S1-7139 and provide clarification on the following: 1) At locations where the HSS members span two equally sized support beams, please confirm connection detail 1/S1-7630 typically applies and the HSS member is to be located direction under the beams. Refer to SK1, SK2, SK5, SK6, and SK7 for reference. 2) At locations where the lower HSS member spans two unequally sized beams, it is assumed that the HSS member will connect to the shallower beam per detail 1/S1-7630. Please confirm and provide a typical connection detail for the HSS member to the deeper beam. Reference SK1, SK2, SK5, SK6 for reference. 3) Confirm the HSS beams indicated on SK1, SK2, and SK7 are located flush with the top of slab per 1/S1-7630. 4) Confirm the plates indicated on SK3 & SK4 may be cut as shown on details 1&4/S1-7630 to achieve an effective weld along the full length. 5) Provide a connection detail for the HSS 12x6 to the W21, W24, and W36 beams at the locations indicated on SK7. 6) Provide the elevation of the lower HSS 12x6 indicated on SK RFI 239 SK2 and the connection details required at each end. 7) Confirm the elevation of the W21s indicated on SK5. 8) Provide a connection detail for upper and lower HSS12x6 to HSS12x6 at locations with no floor slab on SK5. 9) Provide a connection detail for upper and lower HSS12x6 to W16 at locations with no floor slab on SK5. 10) Provide a connection detail for HSS12x6 at the W21 indicated on SK5 where there is no edge plate as shown on detail 1/S1-7130.					See attached comments on RFI sketches, RFI_T_0982 sketches w comment.pdf  1. See TT comments on RFI sketches. 2. When HSS is to connected to bottom of W beam use detail 1/S1-7630. At the end where HSS is framed into the web of a beam, provide a double angle connection with 3- 1" dia A325 bolts (with pipe spacer inside the HSS). Alternatively, a welded connection similar to 1/S1-7630 may be used. 3. See TT comments on RFI sketches. 4. Confirmed. 5. See TT comments on RFI sketches. 6. See TT comments on RFI sketches. 7. See TT comments on RFI sketches. 8. See TT comments on RFI sketches. 9. See TT comment on RFI sketches. 10. See TT comment on RFI sketches

Reference sketches CD RFI 193 SK1 & SK2 indicating one specific location where the bolt spacing provided in detail 8/S1-5010 will not work as the bolts will foul each other. In the specific case shown on SK2, the "H1" dimension will need to be increased to 7 1/2" to avoid the fouling issue. Please confirm it is typically acceptable to increase the "H" or "H1" dimensions as required to allow sufficient clearance between the bolts for installation and tightening. If not, supply an alternate solution.  NOTE: RFI #T-0976 item 4 requested permission to typically move the shear plate to the opposite side of the skewed beam from what is shown in 8/S1-5010 to allow erection access for the skewed beams.			Confirmed that in concept, it is typically acceptable to increase the "H" or "H1" dimensions as required to allow sufficient clearance. Final approval of this change will be provided during submittal review.

Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: On S1-2603 at grids 9.9/B, 10.1/B, 9.9/H & 10.1/H shown on sketches CD RFI # 211 SK1 & SK2, the spacing for the Tapered girder flange plates per detail 7/S1-5032 will foul the W24x68 beam web.  Please verify the bolt spacing can be adjusted to 5 1/4" to clear the incoming W24 beam webs as indicated on CD RFI 211 SK2.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed that the bolt spacing may be adjusted as proposed in this RFI.		
T-0992	BGP - Column at GL 16.9/G Coupler Stagger	Closed	12/10/2013	12/17/2013	12/12/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please refer to drawing S1-3304 and S1-3301.  Detail 2/S1-3301 requires the couplers of adjacent column vertical bars to be staggered with a vertical distance of 24" or more; however, at gridlines 16.9/G there is a column dowel that should have been a shorter bar (L) but was installed as a longer bar (H) and casted in the mat foundation concrete. This does not allow for the stagger pattern as required. See the attached sketch SK-RFI-114 for more details. Gerdau proposes to leave the bar as-is.  Please confirm if this is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 12/11/2013 RESPONSE: Confirmed.

<b>REQUEST:</b> On detail 3/S1-7008 refer to sketch CD RFI 164 SK1 and review the noted detail reference does not appear to be the correct detail at the noted location. Should this read 6/S1-7601 and not 3/S1-7601? Please clarify.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Detail 3/S1-7601 shall apply as called out on 3/S1-7008. Detail 3/S1-7601 has been updated in ASI 109 drawings to reflect the condition at that location.		
T-1000	SSS - Machine Lower Nozzles Perpendicular to Pipe	Closed	12/10/2013	12/10/2013	01/13/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Kruttsch			<b>Answered By:</b> Turner Construction Company Stacy Wilson				
<b>Co-Author:</b> Arup Rich Coffin							
<b>REQUEST:</b> Please refer to drawing S1-5111 thru S1-5133.  In recent meetings, Webcor/Obayashi has made it clear that the same Bus Deck Cast Node geometry will be used at multiple locations even though the angle of the lower Basket Columns changes at each Node. This adds a level of complexity and cost to the joint between the Cast Node and Basket Column Pipe due to the kink imposed on that joint as a result of the following:  - The Lower Pipe Columns will be required to be "miter cut" instead of a traditional square cut end. (Please note Spec Section OS 10 00, paragraph 3.2.M.1 states "Bearing ends of columns shall be milled or sawn square perpendicular to axis of the column.") - Miter cut Pipe will have an ellipse cross section and will not match the circular Casting Node. - Backing bars used to full pen weld the Pipe Column to the Cast Node would need to be custom machined to match the ellipse Pipe and circular Node to eliminate weld gaps. This significantly increases the complexity and risk for successfully welding the joint, and reduces the adjustability for fit up of these joints in the shop and the field.  This kink can be accommodated either by machining the nozzle of the Cast Node to be perpendicular to the pipe, or by machining the pipe end at a mitered angle to match the Cast Node.  Since this joint on the Cast Node is already being machined, Skanska/OIW believes that the more desirable			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The contract drawings at bid time clearly showed that the centerline of the pipe is not in line with the centerline of the cast node nozzle, that the same cast node is to be used at multiple locations, and that the cast nodes were not miter cut to be perpendicular to the incoming pipe. The reference to Spec section 05 10 00 noted in this RFI regarding bearing ends does not apply for this condition as the pipe to cast node connections are not $\angle$ bearing $\angle$ connections, they are a fully welded connections as shown on the contract documents.  This $\angle$ kink $\angle$ between the topside of the ground floor basket column and the bottom-side of the bus deck cast node $\angle$ resulting from the building's geometry and the use of the same cast node type in multiple locations $\angle$ can be accommodated by either miter cutting the pipe or the cast node. However, the contract documents, including those available during bid, clearly show that the bus deck cast nodes were not going to be miter cut, and so miter cutting of the basket column pipe members by the Steel Contractor is necessary to accommodate the building's geometry.  The specified miter angle does not exceed 1.5-degrees in any location. Miter cutting a 32-inch diameter steel pipe by 1.5 degrees results in an elliptical cross-section having a major diameter of $32 / \cos (1.5^\circ) = 32.011$ -inches and a minor diameter of 32-inches. This results in a minimal mismatch in cross-sectional dimension / shape between the		

<i><b>Number</b></i>	<i><b>Subject</b></i>	<i><b>Status</b></i>	<i><b>Date Created</b></i>	<i><b>Date Required</b></i>	<i><b>Date Answered</b></i>	<i><b>Cost Impact</b></i>	<i><b>Proceed</b></i>
	<p>and less expensive option is to machine the nozzle of the Cast Node perpendicular to the axis of the Basket Column Pipe. As the nozzles will each be custom machined regardless, machining them to match the pipe axis should be a relatively low cost change.</p> <p>Skanska/OIW requests that the lower nozzle of each Bus Deck Cast Nodes to be machined perpendicular to the axis of the adjoining lower Basket Column Pipe. A negative response will result in a cost increase and a time increase.</p>						<p>outside and inside faces of a mitred pipe member and the cast node. Based on this geometry, a two-inch wide backer bar sized properly would only show a gap of about 2/100ths of an inch, nominally. A split-ring backer bar could also be employed, which would provide some additional adjustability for this joint in the field.</p> <p>There is no objection structurally or architecturally for the miter machining of either the nozzle of the bus deck cast node to be perpendicular to the pipe, or miter machining the pipe end at an angle to match the Cast Node. However, if Skanska seeks this additional miter machining of the bus deck lower nozzles on the Cast Nodes, all related costs and schedule will be the responsibility of Skanska. Skanska would need to provide the requested miter angle for each Cast Node for incorporation into the casting machining drawings. Additional costs including drawing time would need to be paid for by Skanska.</p> <p>Skanska will be responsible for all costs associated with the miter machining of either the nozzle of the Cast Node or the pipe to be perpendicular or coplanar. If Skanska opts to have the lower nozzle ends of the bus deck nodes mitred, Skanska will need to coordinate with the CM/GC to make an agreement with Bradken for this change to Bradken's scope of machining work for the bus deck cast nodes. Skanska will also be responsible to absorb any schedule impact without delaying the overall project schedule. NOTE: If miter cutting the bus deck cast node nozzle is selected, machining would need to be performed by a third party as Bradken does not have this capability. Be aware that those costs for machining, trucking, and for handling the cast nodes would be Skanska's. Custom miter cutting each nozzle end would also require additional geometric inspection of the cast nodes, the cost for which would be borne by Skanska.</p>

<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> On S1-2603 at grids 11/D for the W40 beam connections into the column web call for details 3/S1-5011 with 3 & 4/S15013 to be used. On sketches CD RFI 218 SK1 & SK2 please verify the large 2 3/8" single sided PJP weld for the 2 1/2" thick shear plate required at this location.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Per Detail 3/S1-5013, the two shear plates highlighted on SK2 in the RFI shall be welded with a 3 sided PJP weld with 1 1/8" effective weld.		
T-1002	SSS - Web to Flange Welds at EBF Girders	Closed	12/10/2013	12/20/2013	12/16/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Arup Rich Coffin							
<b>REQUEST:</b> Please refer to drawing S1-4205.  Please see Plan Sheet S1-4205 Detail 1 for typical details at EBF Link Beams. The typical arrangement specifies a transition from CJP weld to fillet welds and incorporates a weld access hole to separate the 2 welds. In an effort to reduce the number of weld access holes and the inherent issues that can arise with them, Oregon Iron Works is proposing to extend the CJP welds to the end of the girders thus removing the weld access holes at the weld transition point.  Please see attached OIW sketch 2770-SK-TH02 representing a typical EBF Blank Beam Fabrication. It is Skanska/OIW's intent to extend the UT testing 1'-0" beyond the specified CJP weld zone. The balance of the weld will be MT/VT tested as required by Contract Documents.  Please confirm that the proposed welding and NDE is acceptable for all EBF link Beams at the roof perimeter. There is no cost or time impact with this change.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Confirmed that the proposed welding and NDE is acceptable for all EBF link beams at the roof perimeter. Also, please note the special CVN requirements for the weld materials for this EBF link beam CJP weld noted in Specification 05 12 10, paragraph 2.1.C.2.

PROJECT MANAGEMENT - REQUEST AND ANSWERS LOG

30100 - Transbay Transit Center Project

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
	<p>a. Pin diameter = 7.906 (bored holes -1/8") b. Bored holes = 8.032" Note that zinc coating is not a hardened material, and the coating on the pins will be prone to galling while attempting to install in a horizontal position. Skanska/OIW suggests investigating alternate pin coatings; for example, a hardened chrome coating has tightly controlled thickness tolerance and will not gall.</p>						
T-1004.1	SSS - Pin Diameter	Closed	01/29/2014	02/08/2014	02/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Company PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
<p>We have identified a fit-up issue with the basket column pin connections at roof node and Type 2M drag connections. Spec section 05 10 00-13 3.2B states that the diameter of the pin hole shall not be more than 0.03125" greater than the diameter of the pin. The response to SK RFI 293 (T-1004) clarifies that the 0.03125" erection tolerance is for the pin after galvanizing.</p> <p>Therefore, to make this pin connection work, the pin must be machined below the 8" nominal dimension stated in the contract drawings (Ref S1-5133).</p> <p>We have determined the maximum allowable pin diameter as follows;</p> <p>Data: Min Bored Hole Diameter: 8.0313 - 0.01 = 8.0213"..... Source: Ref 1 Max Roof Node Bored Holes Concentric Offset: 0.0156"..... Source: Ref 2 Max Galvanizing Thickness: 0.010" (each side)..... Source: Ref 3 Erection Tolerance: 0.03125"..... Source: Ref 4</p>				<p>It is acceptable to machine the pin to 7.953" (+0, - 0.01"), i.e., 0.047" less than the nominal diameter of the pin diameter specified, however, the specified 1/32" tolerance for the pin hole shall not be exceeded.</p>

From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Gary Krutsch	Answered By: Turner Construction Company Gary Krutsch				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: On S1-2303 near grids 12/C refer to sketches CD RFI 221 SK1 & SK2 for items 1 to 4: 1) It appears the plan shows diagonal braces similar to 12/S1-3703 but details 3/S1-3705 & 5/S1-3705 do not show the bracing. Are braces required? If braces are required, please see items 2, 3 & 4. 2) Supply the location of the braces from grid 'C' considering the dimensions on TR12 shown on SK2 and the connection to the girder per 8/S1-5005. 3) Supply the underside of slab elevation at the brace located per dimension supplied in item 2. 4) Supply the underside of slab elevation at the brace located per dimension supplied in item 2.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Yes, braces are required per 12/S1-3703.  2) Braces may be located at one of the stiffener plate shown on 9/S1-3702.  3) Underside of the slab elevation is 18.24 (T/Slab 19.07 minus 10" slab thickness).  4) see response #3.

T-1007.1	SSS - Framing & Connection Clarifications	Closed	04/17/2014	04/27/2014	04/30/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:				
This is a follow-up RFI to RFI T-1007: Per the response to item #1 a dimension of 40' 4-3/4" was provided that differed to the dimension indicated on the Revit model. Candraft & Skanska have reviewed the Structural and Architectural drawings provided and cannot come up with this dimension. This is typical at every location where we are required to calculate the slope of the slab to locate the kicker angles connected to the underside of the slab. Please provide the dimensions indicated on SK1 thru SK4 or clearly direct Skanska as to where to find this information.			ANSWER: Accept Suggestion: <input type="checkbox"/>				
			1) The T/slab elevation is called out at the slab step just north of GL G and west of GL 1. A slope of 1.7% and the direction of the slope is called out on A1-2862. From this information, the T/Concrete elevation can be calculated at the highlighted location.				
			2) The T/slab elevation is called out at the slab step at GL 2 and south of GL G. A slope of 1.7% and the direction of the slope is called out on A1-2862. From this information, the T/Concrete elevation can be calculated at the highlighted location.				
			3) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location. Note that the slope changes from 1.7% to 2% across the step along GL X.				
			4) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location.				
			5) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location.				
			6) Confirmed.				
			7) Confirmed.				
			8) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location.				
			9) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location.				
			10) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location.				
			11) The method described in 2) can be applied to get the T/Concrete elevation along the B88 beam.				
			12) There is no perimeter concrete beam. The MFB beams frame into the foundation wall. See 1/S1-3201 for reference. Yes, the foundation wall slopes between GLs. The T/slab elevations at the foundation wall edge between gridlines can be obtained by the method described in 2) or can be interpolated between the

T-1014	BGP - Moment Frame Beam Tie Configuration	Closed	12/11/2013	12/21/2013	12/12/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER:			
Please refer to detail 2/S1-3600.				Accept Suggestion: <input type="checkbox"/>			
Due to the possibility of limited access during the installation of the individual moment frame hairpins as detailed in 2/S1-3600, SCCI/Gerdau proposes to modify the typical moment frame beam tie configuration to what is shown in the attached SCCI sketch SK-RFI-399.				George Metzger 12/12/2013			
Please confirm if this is acceptable.				RESPONSE: The proposed configuration containing hairpins with 555 t-heads is acceptable for the 48" deep moment frame beams only in regions further than 96" from the face of supporting vertical elements. For locations within 96", the stirrup configuration may remain as proposed; however, the 555 t-heads shall be replaced with hairpins conforming to those of Detail 2/S1-3600. Note that all ties (including cap ties) which contain both 90 and 135 hooks shall have their hooks alternated for all locations.

T-1017	SSS - Location Clarification for Lateral Bracing	Closed	12/11/2013	12/21/2013	12/16/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> On S1-2303 (S1-2302 sim.) at the lateral bracing south of line G, the concrete locations cannot be determined using the structural and architectural drawings. Please refer to CD RFI 216 SK1 & SK2 requesting clarification on the following:  1) Provide the requested dimensions X1, X2, X3, X4, and X5 to determine the length and bevel of braces.  2) Provide the requested elevations to the underside of the slab edge to determine the length and bevel of braces X1, X2, X3, X4, and X5.  3) Supply the elevation to the underside of slab at the edge of concrete beam for each brace to determine the length and bevel of the braces between grids 1.4-9 south of grid G.  4) Supply the information to determine the slope of the slab at each steel to concrete beam brace.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) Braces are equally spaced between Grids 9 & 9.9.  2) The bottom of the slab is equal to the top of slab elevation minus the slab thickness (10"). Top of the slab elevations may be determined assuming that the slab has a constant slope between the elevation points noted on the plan.  3) See response to item 2)  4) See response to item 2)				
T-1018	SSS - Perimeter Protection Detail	Closed	12/11/2013	12/21/2013	12/19/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> In order to comply with OSHA regulation 1926.501 - 'Duty to Have Fall Protection', Skanska has directed our modeling contractor, Candraft, to incorporate holes in new framing members to facilitate installation of the guard rail systems and life lines. Please see the attached sketches, SK 6 A-F, SK 7-8 and SK R-4, which are consistent with the National Institute of Steel Detailing standards for safety holes on beams and columns, and confirm that the EOR takes no exceptions to our proposal.  Particular attention is drawn to the note on our proposal that states 'No Holes or Welded Tabs will be located in the protected zones of the new members.' All open holes will be filled with high strength bolts upon removal of the safety systems.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The holes for erection safety railing are acceptable in concept. The holes shall be detailed on the shop drawings submitted for review as a part of review process. The holes shall not be in any steel exposed to view in the completed design and there may be other areas that are not acceptable once the holes are shown on the shop drawings. Any holes in galvanized steel shall have the galvanized finish repaired.

At a sample location on S1-2403 between grids D & F west of line 10 refer to sketches CD RFI 155 SK1 & SK2 for angle spacing question below.			Confirmed that the framing as shown on S1-2403 is acceptable. No need to add more deck support outrigger and bracing.				
Detail 9/S1-5000 (see SK2) states that the maximum spacing for the deck support angles and bracing is 8'-0. As shown, the spacing of the steel framing on S1-2403 (SK1) exceeds 8'-0. Confirm the framing as shown on S1-2403 is acceptable and no further action is required or supply a revised partial plan to show the revised framing to meet the criteria in detail 9/S1-5000.

REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
At TR8 near grid line G refer to sketches CD RFI 220 SK1 to SK3 for items 1 to 3:		1) Confirmed.					
1) Confirm the headed studs as shown are correct (work with item 2).		2) Head studs placement shall be based on detail shown on SK-2.					
2) Detail 2/S1-5023 is referenced with a "SIM" designation and it is not clear what is required on grid 8 for the additional headed studs shown in detail 2/S1-5023.		3a) Confirmed					
Confirm the headed studs as shown on SK3 are acceptable or supply a clarifying detail specifically for this location showing the stud locations.		3b) Holes are to be on 6" spacing as shown in detail 7/S1-3701					
3a) Confirm the 2" dia. hole locations as shown on SK3 are acceptable to clear the bolts in the bottom flange and the stiffeners.		3c) 3" holes for concrete beam B57 bottom bars are needed per section 52/S1-5023.					
3b) Detail 2/S1-5023 shows the holes at 5" OC but this contradicts the 6" OC shown in detail 7/S1-3701. Confirm the spacing shown in item 3a above is acceptable.							
3c) Confirm the 3" dia holes are not required at grid 8 as they are not shown in detail 7/S1-3701. Supply location dimensions if they are required.							
<hr/>

Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: 1. At 1/S1-4205 EBF LINK BEAM DETAIL, there is a section 4/S1-4205 that cuts an EBF LINK BEAM CROSS SECTION. The same section 4/S1-4205 is cut on 2/S1-4205 BRACE DETAIL. Please confirm that EBF link beams are where the 4/S1-4205 section is shown, and that they will be ASTM A709 grade 50 and other built-up beams at the roof park perimeter will be ASTM A572 grade 50 per SS-1/S-0007.  2. Please verify if bus deck built-up plates that are ASTM A709 grade 50 plates less than 2" thick part of the SLRS should be CVN tested 25 ft.-lb @ 70 degrees F.  3. Please supply CVN testing requirements, if any, for secondary material steel (i.e. stiffeners, connection plate, continuity plates, etc.).			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1. The requirements for ASTM A709 Grade 50 material for the link beam is for the region between the diagonal work point as shown in Detail 1/ S1-4205. At the contractor's option, steel plate beyond the splice point outside of the A709 grade 50 plate may be ASTM A572, grade 50.  2. CVN should be per requirements in the respective ASTM specification and Specification 05 10 00. For a member that is a part of SLRS (or SFRS), see 05 12 10 for additional requirement for CVN testing. Also, the testing temperature for weld metal is not 70 deg F, it should be in accordance with AWS D1.1 and 1.8 (for SLRS), assuming LAST=25 deg F per specification 05 12 10, paragraph 2.1.C.3.  3. CVN requirement for stiffeners, connection plate, continuity plates shall be in accordance with their respective ASTM specification.

T-1037	SSS - Typical Kicker Brace Detail	Closed	12/12/2013	12/22/2013	12/26/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer			<b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> Reference the bracing connection details provided on S1-5015. At conditions where a full depth shear plate and bracing are required, there is consistently a conflict between the bottom gusset plate and shear plate. Based on the weld requirements for the kicker brace connection, the following is proposed to avoid this conflict: 1) Connect the kicker directly to the shear plate 2) Eliminate the bottom gusset 3) Offset the top gusset (below the beam) by the width of the beam web to align with the shear plate 4) Match the thickness of the gusset and stitch plates to the shear plate thickness 5) Shape the bottom of the shear plate, where necessary, to achieve the required angle brace weld  Please confirm this is an acceptable typical solution for the conditions shown in the sketches attached and at other typical locations where bracing and a full depth shear plate are required.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) Acceptable. 2) Acceptable. 3) Acceptable. 4) Reducing the top gusset plate thickness to match the full depth shear plate thickness is not acceptable. See response to RFI T-0920.1 where stitch plates with varying thickness were allowed to be used when the full depth shear plate and gusset plate thickness did not match. The same solution can be applied at all similar locations. Alternatively, the full depth shear plate thickness can be increased to match the gusset plate thickness. 5) Acceptable. It is typically acceptable to apply solutions 1) through 5) at locations where there is a conflict between the bottom gusset plate and full depth shear plate at the transfer girders.

T-1039	SSS - Stitch Bolts on Kicker Braces	Closed	12/16/2013	12/26/2013	12/30/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer			<b>To:</b> Turner Construction Company Gary Krutsch				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Details 4, 5 & 7/S1-5015 do not show a stitch bolt requirement for the kicker braces. At a sample location and detail shown on sketches CD RFI 066 SK1 & SK2 please confirm none are required or supply the necessary information.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Refer to Section 3/S1-3703 that is just above the SK2 section cut, where the Section RFI 066-SK2 was cut. In addition to Section 3/S1-3703 refer to Section 6/S1-5022, which provides information on the stitch plate.		
T-1039.1	SSS - Stitch Bolts on Kicker Braces	Closed	02/03/2014	02/13/2014	02/10/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Stephanie Azzolino			<b>To:</b> Turner Construction Company PHIL MILITELLO				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> The response to T-1039 references details 3/S1-3703 & 6/S1-5022 for stitch plate information although these sections are only cut at Ground Level at Fremont & First Street. Ple ase confirm the response is intended to indicate stitch plat es are required at all kicker brace locations including detail s 4, 5 & 7/S1-5015 as per details 3/S1-3703 & 6/S1-5022. If so pleases confirm detail 8/S1-5015 can also be used for the stitch plate detail.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Confirmed. Stitch plates are required for kickers where Details 4, 5 and 7/S1-5015 are applicable, except where the kicker is shorter than 1.5'. Stitch plate details provided in 8/S1-5015 can be used at locations where kickers are required except that the stitch plate thicknesses shall match those of the gusset plates in the details. Stitch plates can be either welded (as shown in 8/S1-5015) or bolted (as shown in 6/S1-5022) to the kicker angles. For kickers shorter than 3' but longer than 1.5', provide a single stitch plate centered on the kicker angles.		
T-1040	BGP - Width and Depth of Intermediate Beam in Lower Concourse at GL E.6/7	Closed	12/17/2013	12/27/2013	12/19/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu			<b>To:</b> Turner Construction Company Gary Krutsch				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Please reference contract drawing S1-2203.  Plan sheet S1-2203 shows an intermediate beam at gridline E.6 from gridline 6 to gridline 8 (see highlighted area attached). The Section 2/S1-3400 does not give the specific dimensions for a beam with change in slab elevation. Please provide both width and depth of the beam at this location in the lower concourse.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 12/19/2013 RESPONSE: There is no beam at Grid E.6 between Grids 6 and 8 of the Lower Concourse. The hidden line shown on S1-2203 is a step in the soffit that corresponds to a change in top of slab elevation. Refer to Detail 2/S1-3501 for dimensions and reinforcing. Detail 2/S1-3400 does not apply at this location. See RFI T-876 response for additional information.

T-1041	SSS - CJP Weld Prep between Ground Level Cast Node and Transfer Girder	Closed	12/17/2013	12/27/2013	12/26/2013	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer			<b>To:</b> Turner Construction Company Gary Krutsch				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton			<b>Answered By:</b> Turner Construction Comf Stacy Wilson				
<b>REQUEST:</b> Our fabricator Thompson Metal Fab has requested a 2" 45° bevel be incorporated into the ground level cast node machining drawings. This weld is detailed on 6/S1-4350. See attached sketch for bevel detail. Please confirm approval for weld prep detailed in attached sketches.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The 2" 45 degree bevel to the ground cast nodes is acceptable to incorporate into the machined drawings per CCX. The additional Cast Connex detailing, Bradken additional machining, and any other follow on expenses or schedule delays due to this change will be borne by Skanska and not the TJPA.  George Metzger 12/18/2013 RESPONSE: Cast Connex, It makes sense to have Bradken to put in this bevel as detailed on the structural drawings. Please coordinate with Bradken for this work.		
<hr/>							
T-1042	BGP - Geothermal Manifold Locations for Fields 3, 4, 5, 6, 7, 8, 9, and 10	Closed	12/17/2013	12/27/2013	01/07/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu			<b>To:</b> Turner Construction Company Gary Krutsch				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Per the drawings, the manifold is to be located at an elevation no greater than 14' below finish grade (street) elevation. Per conversations in the preparatory DFOV meeting and other coordination meetings, the Engineer planned to have the manifold in a specific location. Attached are elevation drawings for Field 3, 4, 5, 6, 7, 8, 9 and 10 Manifolds. Please confirm that the attached elevation details work with the desgner's intent for the manifold locations for said Fields.  Note that Riser 10 has been relocated approximately 4' East between piles 231 and 232 to allow for the required 10' minimum spacing for future column installation.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 1/7/2014 RESPONSE: Riser penetrations into the building must occur within the beam space of the ceiling of the lower concourse level. The elevations shown on the sketches fall below the beam pockets and conflict with future emergency ventilation ducts within the building. Elevations shall be modified and resubmitted to verify that the pipes enter the building within the beam space. Risers 7 & 8 may be greater than 14'-0" below finished grade and should be reviewed by ARUP for confirmation.

T-1045	BSE - Micropile Relocations -Zone 3	Closed	12/17/2013	12/27/2013	01/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By:Webcor Construction LP Robert Kjome			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Fourteen (14) micropiles located under Span 3.7 and 3.8 in Zone 3 have to be relocated in the field due to their proximity to the Trestle Deck. Micropiles E343/E354/E363/E375/E390/ E401/E411 have to be relocated 5' to the North and micropiles E340/E353/E362/E371/E386/ E400/E410 5' to the South. See attached sketch of micropiles in question.				TT field engineer's observation of pile layout staking and trestle configuration does not support that micropiles have to be relocated as stated in the RFI. The low-overhead rig appears very capable of installing piles per plan.			
Please confirm these relocations are acceptable.				The proposed relocations are not acceptable.			
<hr/>							
T-1045.1	Micropile Relocations -Zone 3 & 4	Closed	12/30/2013	01/09/2014	01/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
BBII is proposing to move 49 micropiles located within Zone 3 & 4 due to their close proximity to the Trestle/bridge Deck. Micropiles E375/E390/ E401/E411/E654/E670/E704/E738/E769/E800/E815/E826 would all be relocated 5' to the North, micropiles E492/E512/E537/E564/E587/E610/E630 would also relocated 3' north. The micropiles E371/E386/E400/E410/E488/E526/E534/E559/E578/E605 /E622/E650/E666/E700/E734 /E765/E796/E811/E825 would also be relocated 5' to the South. Micropiles E416/E417/E418/E419/E420/E426/E427/E428/E429/E430 /E431 would also be relocated 3' to the West. See attached sketch of micro piles in question.				Based on a reanalysis of the mat slab with the proposed micropile relocations contained in the RFI, the proposed relocations are determined to be acceptable. No modifications to the mat slab are required to accommodate the proposed micropile layout.			
Please confirm this is acceptable

T-1049	BGP - Column Base Plate Clearance Lower Concourse Slab	Closed	01/14/2014		01/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Adib Sassine To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Ref: 1 and 3/S1-5051, S1-3600, S1-2205			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
To erect and plumb Lower Concourse Column with base plates Types I as shown on schedule 1/S1-5051 and II at 7/F.8 shown on detail 5A/S1-5051, erection aids will be required at the base plate. However, due to the depression, rebar running thru the depression and based on our experience with the grouting at column base plate mock-up, allowable clearances to set these base plates may not be adequate. As an example, column at GL C/24.9, the bottom of type I C base plate is within 1" from the top of rebar and does not have adequate area for shim packs.			Question 1, Option 1: Lowering the MF Beam reinforcing is not acceptable. Erection aids are contractor's means and methods.				
Question # 1:			Question 1, Option 2: The reinforcing adjustments allowed are contained in RFIs 908.1, 917, 924, 925 and 1015. Erection aids are contractor's means and methods.				
To provide adequate erection aids, please review the following options and advise as to which one is acceptable:			Question 1, Option 3: Raising the column base plates is not acceptable. Erection aids are contractor's means and methods.				
Option 1: Lower rebar around the base plate area by 1" to allow for 2" clear between rebar and bottom of base plate. Install 4 shim packs for erection purposes under each corner of the base plate on top of level concrete surface.			Question 2: Increasing the plan dimension of the column base plate block-out to 6" all around is acceptable.

T-1052.1	SSS - W10 Detail Clarifications	Closed	01/16/2014	01/26/2014	01/28/2014	Potentially	<input type="checkbox"/>
From: Skanska USA Civil West California DisRyan Clayton		To: Turner Construction Company PHIL MILITELLO		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
REQUEST: The response to RFI T-1052 (SK RFI 309.1), states that "The 5/16" fillet weld is on 2 sides only (not all around as stated in this RFI). The width of the stiffeners can be reduced to match the W27 beam flange width. Don't see a problem in performing the double fillet weld, however, a CJP weld to replace the double fillet weld is acceptable." The original question asked permission to use a PJP weld in lieu of the double fillet weld, not a CJP weld. Please clarify the following:  1) Skanska disagrees with the note that the referenced weld is shown as being required on 2 sides only. Please review the attached SK2 and confirm the welding locations as shown are acceptable.  2.) As there is insufficient landing to perform the 5/16" fillet as originally detailed, please confirm the welding as per CD RFI 240.1 SK2 is acceptable.		double fillet weld, however, a CJP weld to replace the double fillet weld is acceptable.		Questions 1 and 2 appear to be asking the same thing.  Welding per SK2 is will be acceptable.

<b>REQUEST:</b> Specification section 05 10 003.2 P.3b specifically excludes shop paint from areas to be enclosed in concrete and cementitious fireproofing. Drawing A-8662 matrix shows 3 different types of fireproofing, SFRM, IFRM-1 and IFRM-2. Please confirm which of these are cement based so we can determine shop painting limits.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Prep and prime all steel that is to receive fireproofing per the fireproofing manufacturer's recommendations. Fireproofing type SFRM-1 is cementitious fireproofing. For reference only, see the attached in-progress specification sections 07 81 00 (SFRM-1) and 07 81 23 (IFRM-1 & IFRM-2).			
<b>T-1060.1</b>	<b>SSS - Shop Primer Coat Exclusion Areas</b>	<b>Closed</b>	<b>01/06/2014</b>	<b>01/16/2014</b>	<b>01/16/2014</b>	<b>Potentially</b>	<input type="checkbox"/>

<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> While specification section 05 10 00-3.2 .P.3b excludes shop paint from areas to receive cementitious fireproofing, the response to SK RFI 319 (WOJV T-1060) indicates that all steel is to be prepped per the manufacturer's recommendations. The response to WOJV T-1060 provided three potential manufacturers for the SFRM-1 per the preliminary specification section 07 81 00-2.3.A.  1.) Based on the product data sheets published for the Grace Monokote Z-146 and Cafco Fendolite M-II products, Skanska understands that these products are recommended to be applied to bare steel that is free of oil, grease, excess rolling compounds, lubricants, loose mill scale, excess rust,..., or any other substance that will impair proper adhesion. Please confirm this interpretation is acceptable and the potential use of these products is intended for application on bare steel.  2.) The Carboline Pyrocrete 40 product does not require the use of a primer, however the published data sheets state that "Pyrocrete 40 neither promotes nor prevents corrosion". It is understood that the manufacturer finds application of Pyrocrete 40 to bare steel to be acceptable on the building interior, but recommends the Owner's consideration of a primer on steel exposed to corrosion. Please advise which areas, if any, are required to be primed prior to application of the Carboline Pyrocrete 40 product.  Please note that application of a primer for areas receiving		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1.) Confirmed. 2.) The two manufacturers described in item 1 above meet the technical performance requirements specified. The third product on item 2 should match the technical performance requirements specified in section 07 81 00 without requiring additional treatments to meet the specified requirements. If the manufacturer of this product deems it necessary to add corrosion protection for meeting the requirements, they should add this to their bid.  As an additional measure prior to issuing specification section 07 81 00 for bid, we will add "or equal" to the Materials listing of Specification Section 07 81 00.

Co-Author:								
REQUEST:		SUGGESTION:		ANSWER:				Accept Suggestion: <input type="checkbox"/>
Details 5, 6, and 7/A1-8662 indicate "12 inches of fireproofing required on stiffener fins, typical."				1) Refer to 'Fire Protection Matrix & Schedule' per attached A1-8662 for UL Assembly listings. Refer to drawings A1-9317, A1-9351 and A1-9354 for related details.				
1) Please provide a UL assembly # and details for conditions where cruciform columns are enclosed with exterior wall cladding or interior furred-out walls.				2) The 'stiffener fins' as noted on sheet A1-8662 are added to the Ground Level columns to increase weak axis bending stiffness of what are known as the cruciform columns on the Structural drawings. These stiffeners are provided for vibration control and being non-load carrying elements they do not require fire protection from a code perspective. As typically recommended by the fire protection manufacturer, non-load carrying attachments be fire proofed to the same level as the protected structural elements to mitigate 'thermal bridging'.				
2) Structural drawings reference cruciform columns while A1-8662 references "stiffener fins." Please advise if the A1-8662 drawings are intended to show the cruciform columns, and provide revised drawings as necessary. Please provide the applicable UL assembly for cruciform columns with any revised details.				3) Confirmed				
3) Please advise if the cruciform columns are to be fireproofed SFRM-1 per spec section 07 81 00

<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>		
1) As noted in the sketch below, exposed surfaces of the isolation bearing pads are to be hot dip galvanized per ASTM A123. Please confirm this is acceptable in accordance with specification section 13 48 63-2.3.A.2.					Confirmed, the steel plates that are a part of bearing assembly are to be galvanized per specification 13 48 63, paragraph 2.3.A.2 Finishes for steel members and pieces that are shown on S1-5021 are to follow the specification.		
2) In accordance with A1-8662 and the response to WOJV T-1060.1, all other steel associated with isolation bearings, such as those members shown on S1-5021, will be bare steel. This is in anticipation of receiving SFRM by others. Please confirm.

REQUEST: Per the response to Webcor's RFI # T-1061 (SK RFI # 180B.1) we have complied with the geometry for the weld access hole size per AWS D1.8, section 6.10. Using this formula we have shown the connection on CD RFI # 134.2 SK1 for a BU column with a 3 1/2" thick web. Please confirm the remaining 5 1/2" web material as shown on SK1 is acceptable.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed that it is acceptable to use AWS D1.8 for WAH geometry and confirmed that the 5 1/2" remaining web material for the column with 3 1/2" web thickness is acceptable.				
T-1062	BSE - Timber Pile Removal from CDSM Wall	Closed	01/03/2014	01/02/2014	01/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc. Danny Walsh							
REQUEST: BBII has located portions of timber piles in several CDSM wall panels along gridline A in zone 3 at excavation levels 4 and 5, between soldier piles 255-257 and 259-261. BBII believes any attempt to remove the piles has the potential to damage the CDSM wall. Given that there is no issue with water intrusion at the pile locations and the CDSM material is in good condition, BBII believes the best course of action is to leave them in place. To ensure a smooth surface for waterproofing, the piles have been ground down so that they are recessed from the face of wall. BBII will then patch over the panel to bring it flush with the CDSM piles. (Patching has already occurred on a portion of the affected areas - see attached photos of panels before and after the above procedure.)  Please confirm this is acceptable		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: We take no exception.  Adamson Associates, Inc. Response: The CM/GC shall confirm the waterproofing subcontractor/manufacturer and the contractor's waterproofing system designer accept the site conditions

T-1067.2	SSS - Stair and Elevator Connections	Closed	04/17/2014	04/27/2014	04/28/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company PHIL MILITELLO				
Co-Author: Skanska USA Civil West California DisRyan Clayton			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
As per the response to T-1067.1 Skanska confirms these details will require field adjustment and proposes the following as per SK1:			1a, 1b) We don't take any exception to the erection approach outlined by the Contractor. Regarding SK1 of the RFI, it is acceptable to field align braces with the closest deck flutes.				
1) Confirm it is acceptable to (a) field weld the bottom connection after aligning the top connection to center of low flutes when deck flutes are parallel to kicker and (b) field drill the top connection after aligning the L6 to center of low flutes when deck flutes are perpendicular to the kicker.			2) Confirmed.				
2) Confirm the diameter of expansion bolt required.			3) It is unclear how the 2" bolt edge distance requirement to the edge of the angle brace per response to item 5 of RFI T-1067 affects the distances noted as "6 inch" and "varies" on SK1. Please add this item to the agenda of an upcoming structural coordination meeting.				
3) Confirm the field drilled top connection is acceptable at deck flutes perpendicular to the kicker as this will vary from the direction in T-1067 #5.							
<hr/>							
T-1068	SSS - Perimeter Connections at GL C&G	Closed	12/30/2013	01/09/2014	01/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company Gary Krutsch				
Co-Author: Skanska USA Civil West California DisRyan Clayton			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Details 7 & 8/S1-3703 are shown on sheet S1-2305 as typical sections for beams connecting perpendicular to the perimeter BU & WF beams at grid lines C & G. These sections reflect the varying elevation differences between the two members. In most conditions, the remaining depth of the beam framing into the perimeter BU or WF will only allow for a two bolt connection as shown in details 7 & 8/S1-3703.			1). Details 7 & 8 /S1-3703 showing 2 bolt shear connection are applicable to the condition where the sections are cut and similar condition.				
1) Please confirm it is acceptable to use a two bolt shear plate connection for any beam size where the remaining depth of the connecting beam will only allow for two bolts. The shear plate thickness and welding will be per the schedule on 1/S1-5011.			2). Confirmed. Specific application of this detail will be reviewed on a case by case basis during shop drawing review.				
2) Please confirm at some locations it is acceptable to cut the flange flush on one side of the beam to maintain edge distance.			3). AISC minimum edge distance shall be maintained.				
3) Please confirm edge distance can be reduced where needed to complete connection.			4). Confirmed.				
4) Please confirm a double angle connection should be used when the varying elevations will allow for more than a two bolt connection. The angle size & thickness will be per			5). Confirmed. Specific application of the approach stated will be reviewed on a case by case basis during shop drawing review.

<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> At the Bus deck level (S1-2503) @ grids D/9.9 & 10.1 and F/9.9 & 10.1 the 3/8" edge of slab bent plate protrudes 3'-4 & 2'-3 from grid lines 9.9 & 10.1 respectively as shown on sketch CD RFI 244 SK1. Due to the 5'-0 protected zone at these lo cations the angle supports per detail 9/S1-5000 cannot be attached due to no welding is allowed in this area. Please advise on this non supported area and other similar type areas where no welding is allowed in the protected zones.		<b>SUGGESTION:</b>	<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> At grids D/9.9 & 10.1 and F/9.9 & 10.1, run an L5x5X3/8 parallel to the moment frame beam between the two outriggers, namely, the cantilever W30x90 (gravity moment connected to the MF beam) and the support angle at the moment frame column. Attach the angle legs to each support using fillet welds (1/4" thk, 2" long), cope the angle as needed. Note that seam welding to be provided where the bent plate width changes.				
<b>T-1071.1</b>	<b>SSS - Edge of slab support @ protected zones</b>	<b>Closed</b>	<b>02/11/2014</b>	<b>02/21/2014</b>	<b>02/24/2014</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Stephanie Azzolino		<b>To:</b> Turner Construction Company PHIL MILITELLO	<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> 1). Per the response to Webcor RFI # T-1071 (SK RFI # 313) please verify the bolted end connections for the new L5x5x3/8 angle now required as shown on sketch CD RFI # 244.1 SK1. 2). To eliminate any overhead field welding confirm the bent plate required will be shop attached to the angle.		<b>SUGGESTION:</b>	<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) The intent for the RFI T-1071.0 is further clarified on the attached sketch. Either bolted or welded connection is acceptable.  2). Skanska should verify whether the bent plate is to be shop welded. Shop welded bent plate might affect the weld access of the moment connection at the beam bottom flange if a "wild cat" position is to be used.				
<hr/>							
<b>T-1072</b>	<b>SSS - Clarify Beam Connections at Protected Zones</b>	<b>Closed</b>	<b>12/30/2013</b>	<b>01/09/2014</b>	<b>01/07/2014</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Gregory Kemerer		<b>To:</b> Turner Construction Company Gary Krutsch	<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> At the Bus deck level near grids 10.1/F & 10.1/D please verify the double angle connections for the W16 beams can partially connect into the protected zones for the BU moment girders as shown on sketch CD RFI 247 SK1. If not please supply an alternate connection.		<b>SUGGESTION:</b>	<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The encroachments into the protected zones by the double angle connections at the two locations indicated the RFI are acceptable. Note that the W16X26s indicated in the RFI have been revised to W21X50s in 12/13/13 package (TG 7.2 IFB, Addendum #1 package).

T-1073	SSS - North Exit Mezzanine Support	Closed	12/30/2013	01/09/2014	01/24/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer			<b>To:</b> Turner Construction Company Gary Kruttsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> Please refer to detail 1/S1-2252 in regards to the following clarifications for the North Exit Mezzanine:  1.) Please provide connection details for MC4x13.8 channels framing into the W12x40 beam, CMU wall, and adjacent MC4x13.8 members. 2.) Please confirm how MC4x13.8 channel, east of GL 24, is supported at east end. 3.) Please provide the required dimension to locate the east end of the W12x40 member. 4.) Bracing for the W12x40 appears to be located slightly west of CL 23. Please provide the indicated dimension to locate bracing. Verify that this is the only location to receive bracing along the length of the W12x40. 5.) a. Please confirm the splice locations indicated on SK1 for the W12x40 beam are acceptable. Note that the splice just west of CL 23 may need to be shifted slightly depending on the response to item #3. b. Please provide a splice detail for the W12x40. Note that bolted splice connections are preferred.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1. For MC4 to W12, weld channel with 5/16 fillet weld to 3/8" thick plate welded to underside of W12 beam (use 1/4" fillet weld, NS/FS). See 4/S1-5032 for graphic reference. For MC4 to CMU wall refer to updated version of sheet dated 12/13/2013 Issued for Bid Addendum #1. For MC4 to perpendicular MC4, use 1/4" fillet weld all around.  2. Refer to 12/S1-9001.  3. End of W12 is at EOS. Refer to architectural drawings for EOS.  4. Dimension to locate bracing in SK1 is 2'-9" west of gridline 23. Locate second set of bracing at 6'-9" west of gridline 24.  5a. Acceptable, however adjust as necessary for brace locations identified in response 4. Locate splice in middle third of spans between hanger locations and avoid locations 3 ft within brace locations.  5b. Refer to T-0979 SSS RFI response for splice information.	
<hr/>							
T-1074	SSS - Crash Rail at Bus Deck	Closed	12/30/2013	01/09/2014	01/13/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer			<b>To:</b> Turner Construction Company Gary Kruttsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> On the Bus deck level, at the Crash Rail detail 1/S1-8000, refer to sketches CD RFI 242 SK1 to SK3 for items 1 to 3:  1.) Confirm the noted weld is acceptable. 2.) Confirm the noted weld is acceptable. 3.) Please confirm it is acceptable to provide a 7/8" plate in lieu of a 13/16" plate, as a 13/16" plate to match the flange thickness is not available. Note this creates a 1/16" gap between the top of the stiffener and underside of the beam flange as indicated in SK3. Please confirm this is acceptable or provide an alternate solution.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1). Confirmed  2). Confirmed  3). Confirm using 7/8" plate is acceptable. Provide shim plate at the bolt connection. Confirmed the 1/16" gap at the stiffener plate is acceptable. Adjust the fillet weld size per AWS code to account for the 1/16".

T-1075	SSS - Girder Weld Details	Closed	12/31/2013	01/10/2014	01/08/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> For girder weld details, refer to detail 7/S1-4202 & CD RFI 241 SK1 for the following:  1). Please verify that holes are not required in the built up members as shown on CD RFI SK1.  2). Please verify the noted welds as shown on CD RFI SK1.  3). Please verify the weld transition as shown on CD RFI SK1.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1.) If the contractor chooses to splice the beam flanges at these weld transitions, then these holes would serve as weld access holes. Otherwise these holes are not required.  2.) To be reviewed as part of shop drawings, following submittal and review of welding procedures.  3.) If no hole used, weld transition should comply with AWS D1.1 Section 2.8.2. Fillet weld shall start at the transition line shown in the construction drawings (i.e., fillet weld to overlap with tapering CJP).				
T-1076	SSS - Transfer Girder Stiffener & Shear Plates	Closed	12/31/2013	01/10/2014	01/07/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company Gary Krutsch <b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> 1). At the Transfer girder stiffener & shear plates noted on S1-5052 & 2/S1-4350 verify the plates corner access hole size with a 1/2" radius when the stiffener & shear plates are welded with a CJP prep as noted on sketch CD RFI # 166.1 SK1 is acceptable.  2). At the Transfer girder stiffener & shear plates noted on S1-5052 & 2/S1-4350 verify the plates corner clip size when the stiffener & shear plates are welded with a fillet weld as noted on sketch CD RFI # 166.1 SK2 is acceptable.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1.) Acceptable. 2.) Acceptable. Note that a minimum clear distance of ½ inch shall be provided between the access hole and fillet welds connecting the stiffener (or shear plate) to beam web.				
T-1077	Bracing removal/re-bracing sequence on the west end of Zone 1	Closed	01/02/2014	01/12/2014	01/13/2014	Potentially	<input type="checkbox"/>

T-1078	SSS - Machine Type 1 Drag Connection Pads	Closed	01/02/2014	01/12/2014	01/15/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer			<b>To:</b> Turner Construction Company Gary Krutsch				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> The Type 1 Drag Connection shear plates are shown on drawing S1-5016 to be oriented perpendicular to the connection face of the cast node and further they are shown to be centered with respect to the width of the connect ion face. OIW has discovered that this is in error; the shear plates are neither centered on the face nor do they project perpendicular from the face. These conditions significantly increase the complexity of this welded joint.  OIW would like to use a CNC milling machine to prepare the surface of the Type 1 Drag Connection pads on the cast nodes in order to provide a perpendicular surface for the shear plates to attach to. Please see attached sketch showing proposed machining.  1. Please indicate if it is acceptable to machine these surfaces. 2. Please indicate if there is adequate stock to allow machining of these surfaces or if additional stock must be added.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The contract drawings at bid time clearly showed orientation of the connection pads of the cast node. Since the cast node contract drawings and the cast node shop drawings (which are also a part of bid documents), were provided, it is clear that the Drag Connection shear plates steel connections (angle and centering) to the castings would need to be cut by the contractor prior to fit-up for welding. The design intent was clearly depicted on the contract documents. The angle of the connection pads (F5 and F6) are provided in the cast node schedules; refer to 1/S1-5121, for example. Each cast node type is used in multiple framing locations as noted on the cast node designation sheets (S1-5110, S1-5120, and S1-5130). The cast node shop drawings, which are also a part of the bid documents, show that the face of the drag pads are cast perpendicular to the axis of the pad and were provided in the as cast condition ( not a machined condition). From the framing plans (Sheets S1-2502 thru S1-2507), Skanska should be able to see that the diagonal beams are framed into the same cast node type at various angles, resulting in a condition that requires some connection plates to be appropriately fabricated. There are many details in the structural set which graphically show the connections not to be concentric and normal to the drag pads on the bus deck nodes. Detail 1 on S1-5030 is one example where the design intent is visually evident without having to correlate information on more than one drawing.			

---

T-1078.1	SSS - Machine Type 1 Drag Connection Pads	Closed	02/25/2014	03/07/2014	03/04/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer		<b>To:</b> Turner Construction Company PHIL MILITELLO					
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton		<b>Answered By:</b> Adamson Associates, Inc. George Metzger					
<b>REQUEST:</b> The response to Skanska RFI 294 (W/O T-1078) states that machining the internal drag pads is Contractors means and methods. In order to simplify modelling, detailing, fabrication and welding of the drag pads, Skanska's fabricator OIW intends to machine the internal drag pads.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Confirmed that the "minimum 1-inch extrusion" dimension called out for the bus deck cast nodes in contract drawings can be less than 1 inch as needed by machining of these pads by the Contractor.

	<p>In so doing, there is potential that the "minimum 1-inch extrusion" called out for the drag pads on the bus deck nodes on the structural drawings may be violated in some cases (refer to 1/S1-5121 attached).</p> <p>Assuming that this minimum dimension was provided to accommodate fabrication, and given that the responsibility for fabrication and erection is with Skanska, please confirm that it would be acceptable for Skanska to violate the 1inch minimum extrusion with machining of the pad.</p> <p>With the design team's approval, Skanska hereby proposes to move forward with machining of the pads without the submission of RFIs for every bus deck node. RFIs will only be submitted for those cases where the planned machining of the pad may slightly undercut an adjacent pad or where the planned machining may slightly bite into the main body of the node.</p>						
T-1079	Bracing removal-rebracing sequence on the East end of Zone 4	Closed	01/02/2014	01/12/2014	01/13/2014	Potentially	<input type="checkbox"/>

T-1087	SSS - Connection Clarifications for Skewed Beams	Closed	01/07/2014	01/17/2014	01/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> Reference details 7 & 8/S1-5010 and CD RFI 094 SK1 to SK7 for clarifications required on skewed beam connections as noted below.  1.) Refer to S1-2303 and CD RFI SK1 indicating an example location where a skewed beam and standard beam connection occur at the same location on the support beam. As noted on CD RFI 094 SK4, the connections foul at this typical condition. Please confirm it is typically acceptable to replace one of the connections with a shear plate connection per detail 1/S1-5011 or supply an alternate typical solution.  2.) Refer to S1-2303 and CD RFI SK1 indicating an example location for two-sided skewed beam connections. As noted on CD RFI 094 SK5, the non -symmetrical bolt locations in detail 7/S1-5050 will not work at two-sided connections. Please confirm it is typically acceptable to locate the bolts as shown at two-sided connections or provide an alternate detail for this condition.  3.) Refer to S1-2305 and CD RFI SK2 indicating an example location of a two-sided skewed beam connection. As noted on CD RFI 094 SK 6, the non-symmetrical bolt location in detail 8/S1-5010 will not work at two-sided connections. Please supply a typical alternate detail for these conditions.  4.) Detail 8/S1-5010 shows the shear plate on the obtuse side. Confirm it is acceptable to locate the shear plate on the acute side for beam erection access purposes as noted on CD RFI 094 SK 6.  5.) Refer to S1-2303 and CD RFI 094 SK3 indicating an example location where details 7 & 8/S1-5010 occur at the same location based on the angles of the skewed beams. Please confirm that one of the connections may be typically replaced with a skewed shear plate per 1/S1-5011 to avoid the conflict shown on CD RFI 094 SK7, or supply a new typical alternate detail.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> Accept Suggestion: <input type="checkbox"/> 1) No, it is not typically acceptable to replace one of the double angle connection with a shear plate connection. Shear plate connection might be able to use for some short span beam if specifically approved during the shop drawings review. The conflict shown on CD RFI 094 SK4 might be resolved by using an bent plate with longer leg. 2) Confirmed. 3) At this specific location, A single shear plate connection per Detail 1/S1-5011 may be used for W16 x 26 beam. 4) Confirmed. 5) It is not typically acceptable to replace one of the double angle connection with a shear plate connection. Shear plate connection might be able to use for some short span beam if specifically approved during the shop drawings review.

<b>REQUEST:</b> See attached CD RFI # 094.1 SK1: The response in RFI T-1087 (SK 122, CD 094) item 3 does not work as the bolts/shear plate foul each other as shown. Supply an alternate typical detail for skewed 2 sided beam to beam connections.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>  The W24x55 beam shall be moved by a few inches towards GL F to clear the bolts of the W21x44 connection. This solution may be applied at three other similar instances around the light column.  TT: We disagree with the reason for RFI request. We categorize this as a no cost clarification.		
<hr/>							
T-1088	BGP - Shear Wall Corbel Tie Spacing at W190C, D and E	Closed	01/07/2014	01/17/2014	01/08/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> In the first lift (up to EL -20.56) of the 190C to 190E shear walls, the #6 ties were installed at 5-inches O.C. instead 4-inches O.C. Please confirm if it is acceptable to leave the corbels as-installed. If not acceptable, Gerdau proposes to install additional T9 (hairpin) ties between every 4ea - #6 ties on the Western face of the corbel. See attached SCCI sketch SK-RFI 410 for details.  Please confirm if this is acceptable.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>  It is acceptable to leave the corbels as installed (5" tie spacing) without adding additional hairpins.		
<hr/>							
T-1089	BGP - Concourse Beam Added Bar Congestion at GL 10.1 to 12	Closed	01/07/2014	01/17/2014	01/20/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Jackson Tukuafu <b>To:</b> Turner Construction Company Gary Krutsch			<b>Answered By:</b> Webcor Construction LP    Robert Kjome				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> Please refer to drawing S1-2203, S1-3400.  In the lower concourse, where four beam pairs consisting of C68 and C69 between GL 10.1 and 12, the added short bars at the top and bottom intrude into the laps of typical bars. This would mean per plans, SCCI would have 14 bars at the top location and 18 bars at the bottom location. Gerdau proposes to move the additional short bars into their own layer to alleviate congestion. Please confirm if this is acceptable.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>  Contractor proposal to place additional short bars at B68 and B69 beams between GL10.1 and 12 in a second layer is acceptable. Place bars in second layer with 1.5" clear distance between the 1st layer.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
	<p>- The Lower Pipe Columns will be required to be limiter cut" instead of a traditional square cut end. (Please note Spec Section OS 10 00, paragraph 3.2.M.1 states 11Bearing ends of columns shall be milled or sawn square perpendicular to axis of the column.")</p> <p>-Miter cut Pipe will have an ellipse cross section and will not match the circular Casting Node.</p> <p>- Backing bars used to full pen weld the Pipe Column to the Cast Node would need to be custom machined to match the ellipse Pipe and circular Node to eliminate weld gaps. This significantly increases the complexity and risk for successfully welding the joint, and reduces the adjustability for fit up of these joints in the shop and the field.</p> <p>This kink can be accommodated either by machining the nozzle of the Cast Node to be perpendicular to the pipe, or by machining the pipe end at a mitered angle to match the Cast Node.</p> <p>Since this joint on the Cast Node is already being machined, OIW believes that the more desirable and less expensive option is to machine the nozzle of the Cast Node perpendicular to the axis of the Basket Column Pipe. As the nozzles will each be custom machined regardless, machining them to match the pipe axis should be a relatively low cost change.</p> <p>OIW requests that the nozzles of each Ground Level Cast Nodes to be machined perpendicular to the axis of the adjoining lower Basket Column Pipe.</p> <p>A negative response will result in a cost increase and a time increase.</p>

T-1097.1	SSS - End Transfer Girder Details at GL19.9 & 20.1G	Closed	03/12/2014	03/22/2014	03/31/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Company PHIL MILITELLO	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 264.1 SK1 to SK3 for items 1 to 4:  At GL 22/G detail 9/S1-3702 is noted as typical at Grids 19.9 & 20.1 on S1-2305. However, TR19.9 & TR20.1 do not match the information as shown in detail 9/S1-3702 due to the MFB1 concrete beam & BU girder depth. See SK3 for the outline of the MFB1 and please provide direction for the following items at Grids 19.9 & 20.1. 1) The number of headed studs requested in detail 9/S1-3702 will not fit TR19.9 & TR20.1. Supply the number of headed studs required with location dimensions. 2) The PL 2 1/2 x 9 x 2'-6 cannot be welded as shown in detail 9/S1-3702. Please advise. 3) The 2" diameter holes at the bottom of MFB1 thru the webs of TR19.9 & TR20.1 cannot be supplied as requested. Please advise. 4) The L8x4x1/2x2'-0 cannot be supplied as shown. Please advise.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> The top of the beam is at 16.07', and the bottom of the concrete beam is at 12.07'. The top of Transfer Girder is at 17.60', which allows 5.3' high region for 5 rows of studs at 6" spacing (out to out distance of 2'-0"). Lower the stud group so that that top row is 6" below the top of concrete beam.  2). The 2 1/2" plate is incorrectly shown graphically. The end of the plate is to flush with the end of the transfer girder web.  3). 2" dia holes are to be provided. The center of the hole is to be 2" above the bottom of the concrete beam.  4). The angle may be deleted.

<b>REQUEST:</b> See attached CD RFI # 267.1 SK1 for items 1 to 3: At GL 22/C detail 3/S1-3705 is noted as typical at Grids 19.9 & 20.1 on S1-2305. However, TR19.9 & TR20.1 do not match the information as shown in detail 3/S1-3705. See SK1 for the outline of the MFB1 and please provide direction for the following items at Grids 19.9 & 20.1.  1) The 112 headed studs requested in detail 3/S1-3705 will not fit inside the MFB1 as is shown. Confirm it is acceptable to eliminate the top row of headed studs and supply a total of 98 headed studs (49 per side) or supply an alternate solution. 2) The 2" diameter holes for the #4 stirrups will not fit inside TR19.9 & TR20.1. Give direction on the bottom stirrup holes and confirm the top stirrup holes are still to be supplied as shown. 3) Confirm the 2 1/2" diameter holes in the bottom stiffeners are no longer required as they will foul the bottom flange of TR19.9 & TR20.1.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1). The top row shall not be eliminated. Those studs will be casted inside a concrete pad.  2). The top row of 2" dia holes is to be located 3" from the top of the concrete beam.  The bottom 2" holes shall be located similar to Section 7/S1-3704  3). Holes still be needed in the vertical stiffeners. See 7/S1-3704 for hole detail and lenton couplers.				
T-1101	SSS - Connections for Rigging Schemes	Closed	01/10/2014	01/20/2014	02/05/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> Skanska is reviewing the rigging schemes required to erect the Transfer Girders, Built-up Columns and Tapered Roof Girders. Please confirm drilling holes for the bolted connection in the following members is acceptable so Candraft can incorporate them into the model as per: 1) Transfer Girders sketches R-1A & R-1B. 2) Built-up Columns sketches R-2A, R-2B & R-2C. 3) Tapered Roof Girders sketches R-5A & R-5B.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Rigging is a means and methods issue, the Design Team does not have specific comment on the proposed rigging scheme, however, the rigging scheme for the transfer girder shall consider the weight of the cast node as it is to be shop welded to the transfer girders.

T-1102	SSS - Type III Column Base Embedded Plate	Closed	01/09/2014	01/20/2014	01/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Webcor Construction LP Jeff Galoyan			Answered By:Webcor Construction LP Gregory Kemerer				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Type III column base detail 8/S1-5051 indicates an embedded plate, as the package delineation line shows the ½" thick embedded plate is not in Skanska's scope of work. TG06 trade subcontractor will be required to coordinate locating the shear studs to clear the congested rebar at these locations. The embedded plates will be supplied and installed by others and Skanska will field weld the L4x3 to the embedded plate as indicated on SK1. Please confirm this is acceptable.			SUGGESTION:		ANSWER: Confirmed.		
					Accept Suggestion: <input type="checkbox"/>		
T-1103	BGP - Increased Slump Specification Limit for Mixes with High-Range Water Redu	Closed	01/13/2014	01/23/2014	01/15/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please reference attached letter Authored by Robert Foley, CEMEX QC Manager, dated 1/2/2014 and TG06.0 technical spec section 033020.2.3.F.1.b.			SUGGESTION:		ANSWER: George Metzger 1/15/2014		
SCCI and CEMEX are proposing the following guidelines regarding slump of cast-in-place mix designs that contain 30% or higher fly-ash (CM) and HRWR:					RESPONSE: The revised guidelines are not acceptable. Acceptability is governed by the limits in the approved mix design submittals and the project Specification within ACI 117 tolerances.		
1. Maximum 8-inch slump will continue to be the target slump for delivery of concrete mixes with HRWR.							
2. 9-inch and higher slump will be considered an action limit. Whenever slump of consecutive loads exceeds 9 inches, actions wiJl be taken to reduce subsequent slump measurements.							
3. Batches with slump as high as 10.5 inches will be accepted provided the batch weights are evaluated to verify the batch did not include water content that exceeds mix design w/c ratio; and the concrete is not visibly segregating.							
Are these revised guidelines acceptable?

<b>REQUEST:</b> Please reference TG06.0 contract specs section 033020.3.2.A.4, submittal TG0600-030.2 and attached drawing showing proposed CJ layout per variance below. SCCI is proposing to increase the allowable maximum construction joint spacing in the lower concourse slab:  With the use of currently approved Concourse Slab cast-in-place mix design, SCCI is proposing to eliminate every other construction joint. See attached pages for reference example. Maximum construction joint spacing would be 96-feet. Joint location will always land on wall joint location below per 033020.3 .2.A.4.  Construction joint layout submittal TG0600-030 will be revised and resubmitted to reflect any change made to currently approved layout.  Is this acceptable?			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 1/27/2014 <b>RESPONSE:</b> The contractor-proposed Lower concourse slab CJs presented in the RFI will be acceptable.

	<p>100 cubic yards of concrete, nor less than once for each 5000 square feet of surface area for the mat, cast-in-place formed concrete slabs or walls. Additional tests shall be performed if deemed necessary by the TJPA Representative. Sample each column, regardless of other frequencies listed above."</p> <p>We request that the last sentence "Sample each column, regardless of other frequencies listed above", be deleted. The current testing of columns would fall under the statement to test "...not less than once a day, nor less than once for each 100 cubic yards". As the current schedule shows two columns to be poured per day, this will produce one set per day for testing.</p>						
T-1115	BSE -Alternate Micropile Method in Buttress Area	Closed	01/16/2014	01/26/2014	01/31/2014	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Kelly Phariss		To: Turner Construction Company PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
DTDS is concerned about delays and extra costs resulting from drilling Micropiles adjacent to buttress piles from Gridlines 26.5 to 30. As stated in our Contract Change Order request (CCO #04) regarding "Final Micropile Layout - Additional Micropiles" (attached for reference), drilling for the micropiles may encounter overbreak pile concrete and grout placed during buttress pile remediation. The current drilling system cannot be used to drill through the pile overbreak and/or remediation grout. The reduced pile spacing from 10 feet on center to 5 feet and less may also cause problems such as communication between piles.			This is not an acceptable alternate at this time. If serious delays begin to be encountered, the design team, Turner, Webcor and their subcontractors should meet to discuss this issue immediately.				
Significant additional costs and schedule delays will result should DTDS have to change our procedure and/or equipment to drill through buttress pile concrete and/or remediation grout. Delays will also be realized should DTDS have to change our drilling sequence to mitigate

PROJECT MANAGEMENT - REQUEST AND ANSWERS LOG

30100 - Transbay Transit Center Project

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
	<p>problems that may arise from the reduced pile spacing.</p> <p>Should detrimental issues arise, DTDS proposes to drill, install, and grout micropile dowels in the center of the existing buttress piles as an alternative to drilling adjacent to buttress piles. A micropile dowel could take the place of a micropile as necessary. A dowel would consist of the same #20 Gr. 80 reinforcing bar used for the micropiles. A six- inch diameter, 20 foot long hole would be drilled in the center of the buttress pile. An additional drill rig will be required to perform the drilling. A 25' bar would be set with centralizers and tremie grouted with the same grout used for the micropiles. Based on an assumed minimum Buttress pile concrete and grout strength of 3,000 psi, the developmental length (ld) of a #20 bar is 182.5 inches (15.2 feet). 20 feet embedded would develop the yield strength of the #20 bar (393 kip) and exceed the design micropile load of 308 kips.</p> <p>ld = (80,000 psi/ (20 * sqrt(3000 psi))*2.5 in = 182.5 in.</p> <p>Accepting this alternative would mitigate delays and extra costs that will result should buttress pile concrete and/or grout be encountered while drilling adjacent to these piles.</p> <p>Please confirm that this alternative micropile procedure is acceptable.</p>						
T-1116	BSE - Micropile Removal and Relocation in Buttress Area	Closed	01/16/2014	01/26/2014	01/31/2014	Potentially	<input type="checkbox"/>

T-1120	BGP - Horizontal Hooks in Shear Walls 2nd Lift and Above	Closed	01/17/2014	01/27/2014	01/20/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please refer to attached drawing 4/S1-3261.  Please confirm if it is acceptable to replace the shear wall horizontal bars which have a 90-degree hook with a 180-degree hook. See attached drawing for more details. This change will only be applied to the second lift of shear walls and above (approx. EL. -20.56 and above).			SUGGESTION:		ANSWER: George Metzger 1/20/2014 RESPONSE: Contractor proposal of 180deg hooks for shear wall horizontal bars is acceptable.		
			Accept Suggestion:		<input type="checkbox"/>		
<hr/>							
T-1121	SSS - Bus Deck Level Edge of Slab Plate Clarification	Closed	01/17/2014	01/27/2014	01/31/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI 233 SK1 to SK3 for reference.  After reviewing the structural steel documents for TG 07.1R, a detail is not provided for deck support around the bus deck level cast nodes. Please confirm that the intent is to utilize, 12 gauge sheet metal, in these areas as shown on 1/S1-5001. The sheet metal will follow the contour of the cast node, providing a 1" gap per A1-2893 (SK2).			SUGGESTION:		ANSWER: Architectural slab edge plans A1-2892 to A1-2897 layout all the locations and provide the slab edge heights of the slab edge plate. Additionally detail 4/A1-8376 shows the typical cast node slab edge plan detail and it references section details 4/A1-8675, 3/A1-8376 and 2/A1-8376, which show the conditions around the cast node and gap required - see markup on enclosed CD RFI 233 SK3.  Closure plate (curved at the back of the cast node) may be a 12 gage sheet metal, but it should be welded to the end of edge angle at the seam. The edge angle shall be extended to meet with the curved closure plate.		
			Accept Suggestion:		<input type="checkbox"/>		

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1122	SSS - Edge Plate Detail at Steel Drag Beam	Closed	01/17/2014	01/27/2014	02/03/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino			To: Turner Construction Company PHIL MILITELLO				
Co-Author: Skanska USA Civil West California DisRyan Clayton			Answered By:Adamson Associates, Inc. George Metzger				
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference detail 4 on S1-5022 which indicates that where "S" is less than or equal to 3", a double bent plate is to be used. Based on the information provided in SK RFI 266.1 SK2, this cannot be achieved, as the minimum overall height for a Z angle is 4" and the minimum thickness for a Z angle is ½".					Yes, it is acceptable, however, the weld shall be a continuous 1/4" double fillet weld, not a 3" long weld at 12" on center. Note that the lower horizontal plate needs to be welded according to the weld shown on detail 4B/S1-5022.		
1.) Please advise if it is acceptable to use the detail approved in RFI T-1032 (for sloping conditions), shown on SK RFI 266.1 SK1, at all locations where "S" is less than 4".					2). Z section is acceptable, but it limits any field adjustment that the bolted connection can provide. It is Skanska's decision which way is preferable.		
2.) Please advise if it is acceptable to use a Z angle at all locations where the "S" dimension is greater than or equal to 4" and the required thickness is ½", in lieu of the bolted connection.					3). See Response to #2.		
3.) Please advise if it is acceptable to use the detail approved in RFI T-1032 (for sloping conditions), shown on SK RFI 266.1 SK1, at locations where "S" is greater than or equal to 4" and the required thickness is 3/8", in lieu of the bolted connection.					4). Angles can be used in lieu of bent plates to address the clearance issue raised. Also see response to #2 & #3.		
4.) Note that based on the bending radius and edge distances shown in 4/S1-5022, the minimum height for bolted connections is 4 ¾" as indicated on CD RFI 215.1 SK1 attached. If the bolted connection is required, please verify the maximum height "S" for the bent plate detail in 4A/S1-5022 may be increased to 4 ¾".							
<hr/>							
T-1122.1	SSS - Edge Plate Detail at Steel Drag Beam	Closed	02/05/2014	02/15/2014	02/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company PHIL MILITELLO				
Co-Author: Skanska USA Civil West California DisRyan Clayton			Answered By:Adamson Associates, Inc. George Metzger				
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Detail 4 on S1-5022 calls for a double bent plate for slab support where "S" is less than or equal to 3". However, the minimum overall height for a double bent angle of the required thicknesses is 4" and the minimum overall height for the bolted connections is 4 ¾". Further, it has been determined that the minimum overall height for the detail proposed for sloping conditions is 2".					1). As noted in the response to RFI T-1122.0, the weld of the bent plate to the horizontal plate shall be a continuous 1/4" double fillet weld, not a 3" long weld at 12" on center.		
For instances where the difference between the underside of the slab and top of beam is less than 2", please confirm					2). For the instance where the difference between the underside of the slab and top of beam is less than 2", follow the detail in the attached sketch.

T-1124.1	SSS - Plate Grade Substitution	Closed	02/21/2014	03/03/2014	03/03/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Stephanie Azzolino <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> In response to RFI T-1124 & the Structural Coordination Meeting on February 6, 2014:  The moment frame columns and light column base plates are identified on the structural drawings for TG07.1R as material grade ASTM A572 Grade 50. Please confirm that it is acceptable to use ASTM A572 Grade 42 modified to achieve a minimum specified yield strength of 50 ksi for all plate exceeding 4 1/2 in thickness at these locations.  Please note that the mill certification will read ASTM A572-Gr 42 but the reports will indicate a yield strength of 50 ksi.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Acceptable to use ASTM A572 GR42 with 50 ksi min yield strength for moment frame columns. The light column base plate was already called out as ASTM 572 GR42, therefore 42 ksi yield is acceptable as indicated in contract drawings.		
<hr/>							
T-1125	BGP - Glass Guard Rail Embed A529 Grade 55 Steel in Lieu of A36	Closed	01/21/2014	01/31/2014	01/30/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Jackson Tukuafu <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> Please confirm it is acceptable to use A529 Grade 55 steel in lieu of A36 steel for the 3/8 x 7 flat bar portion of the glass guard rail embeds as shown on detail 7 of S1-3410.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> George Metzger 1/29/2014 RESPONSE: A529 Grade 55 plate is acceptable as long as proper welding procedure specification is used to match with the A529 steel materials.		
<hr/>

T-1142	BGP - Grounding Rod at Buttress Pile in Zone 4	Closed	01/27/2014	02/06/2014	02/03/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Jackson Tukuafu			<b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b>		<b>SUGGESTION:</b>		<b>ANSWER:</b>			<b>Accept Suggestion:</b> <input type="checkbox"/>
Please refer to drawing E1-2026.				RESPONSE			
In Zone 4, an overlapping series of concrete buttress piles were poured along the North Wall of the excavation, extending towards the south wall.				George Metzger			
In this area, the final grade of the excavation will be the concrete buttress piles. The attached photo shows the buttress pile layout with the grounding ring/ground rods overlayed on it. The ground rods need to be driven 10' deep. Please confirm that the rods which conflict with the buttress piles could be moved away from the north CDSM wall and to the void area of the buttress piles as shown in the attached SCCI sketch SK-SCCI_RFI421.				1/31/2014			
				WSP does not object to moving ground rods inward; however, contractor shall maintain separation between ground loop and geothermal piping. The photo submitted does indicate this separation.

T-1143	BSE - Reduced Micropile Testing Requirement in Unsuitable Material Areas	Closed	01/27/2014	02/06/2014	01/28/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP      Stephanie Azzolino      To: Turner Construction Company PHIL MILITELLO			Answered By: Turner Construction Company Jack Adams				
Co-Author: Webcor Construction LP      John Reynolds							

**REQUEST:**

Balfour Beatty Infrastructure Inc. (BBII) has experienced complications with micropile testing in geothermal field 11 due to unsuitable material. In an effort to minimize additional cost and maintain schedule, Webcor/Obayashi Joint Venture (WOJV) requests the testing requirement be reduced in unsuitable areas to test one (1) in five (5) micropiles. To date, all micropiles have passed the testing requirement. WOJV proposes to test seven (7) of the remaining 31 micropiles in geothermal field 11. The micropiles selected to be tested will be approved by a TJPA representative.

**SUGGESTION:**

**ANSWER:**

**Accept Suggestion:** ☐

No. Per discussions with TJPA, AAI and T-T the following response is provided.

The contract Specification Section 31-63-33 Drilled Micropiles is clear; All Micropiles shall be proof tested. Paragraph 3.2H Proof and performance Testing in accordance with ASTM D3689 "Standard Test Method for Individual Piles Under Static Axial Tensile Load" SubParagraph 8 states "Proof tensile load testing shall be performed against reaction piles or cribbing in accordance with ASTM-D3689. Existing footings, piles, or other structures shall not be used as reaction points for load testing. An adjacent production micropile in a group may be used as reaction pile. If cribbing is used, the contractor's attention is drawn to the presence of poor bearing soils and underground utilities, which may require special measures to protect against settlement and damage."

Also; Requests such as these should be accompanied by the [Drilltech] Pile Test Engineer's written recommendation.

1. Pile Test Engineer: A Contractor's engineer who is a registered civil engineer in the State of California.
2. The Pile Test Engineer supervises Performance and Proof Testing.
3. The working drawings and supplement shall be stamped and signed by the engineer who is licensed as a Civil Engineer in the State of California.
4. Micropile Proof Test Plans working drawings and supplement shall be stamped and signed by the engineer who is licensed as a Civil Engineer in the State of California.

NOTE: The RFI statement "In an effort to minimize additional cost and maintain schedule" is not an acceptable justification for changing the testing requirements. Per Contract, RFI's shall not be used as a vehicle for requesting cost and schedule increases which appears to be the purpose of this

T-1144	BGP - Lower Concourse Electric Rooms & Lighting Feeds	Closed	01/27/2014	01/27/2014	02/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
<p>ASI 104 changed the feeds for the embedded (Type F15 fixture) lighting boxes in the lower concourse slab. Previously they were to be fed from Electric Rooms in the Train Platform level; as per ASI 104, they are now to be fed from Electric Rooms in the Lower Concourse Level. Some discrepancies have been noted as to electrical panel location, and room locations.</p> <p>DWG E1-4102, Sheet Note J, and E1-4110, Sheet Note I, specify that the type F15 fixtures in Zones 2 and 10 are to be fed from Panel EDMH-B1-A-EMG located in Electric Room B1253. DWG EI-2202 identifies Room B 1253 as Emergency Equipment Storage.</p> <p>DWG EI-4103 indicates the F15 fixtures in Zone 3 up to Gridline 9 are to be fed from Panel EDMH-B1-A-EMG in Electric Room B1496. This is the same panel as indicated in Zones 1 and 10, but a different room is specified. Room B 1496 is not shown on the drawings.</p> <p>DWG EI-4103 and DWG E1-4104 indicate the F15 fixtures in Zone 3 past Grid Line 9, and the F15 fixtures in Zone 4 are to be fed from Panel EDMH-B1-B-EMG in Electric Room B1322. SKE-02-3201 issued with ASI 104 does not have a Panel EDMH-B1-B-EMG in Rm B1322.</p> <p>DWG E1-4105 and DWG E1-4106 indicate the F15 fixtures in Zone 5 and Zone 6 are to be fed from Panel EDMH-B1-C-EMG in Electric Room B1541. Plan sheet E1-3204 Detail 6 referenced does not seem to be included in the contract drawings.</p> <p>DWG E1-4107 indicates the F15 fixtures in zone 7 are to be fed from EDMH-B2-D-EMG in Electric Room in Electric Room B1644 in Lower Concourse. Per the "Equipment Naming" char on DWG E1-0010, the B2 in the panel name indicates that it is on the Train Platform Level. However, the room number indicates that it is indeed on the Lower Concourse level.</p> <p>1. Please provide an enlarged room plan showing the location of each of the following panels: EDMH-B1-A-EMG, EDMH-B1-B-EMG and EDMH-B1-C-EMG</p> <p>2. Please confirm that panel EDMH-B1-D-EMG is in</p>			RESPONSE George Metzger 2/5/2014		<p>1. Sheets E1-4102 and E1-4110 have been revised. Refer to attached sheets dated 01/23/2014 for revisions. Per Sheet Note J on E1-4102 and Sheet Note I on E1-4110, the type F15 fixtures in Zones 2 and 10 on the Train Platform Level are to be fed from Panel EDMH-B2-A-EMG-1 located in Electric Room B2280 on Train Platform Level.</p> <p>2. Sheet E1-4103 has been revised. Refer to attached sheet dated 01/23/2014 for revisions. Per circuiting note on E1-4103, the type F15 fixtures up to gridline 9 on the Train Platform Level are to be fed from Panel EDMH-B2-A-EMG-1 located in Electric Room B2280 on Train Platform Level.</p> <p>3. Sheets E1-4103 and E1-4104 have been revised. Refer to attached drawings E1-4103 and E1-4104 dated 01/23/2014 for revisions. Type F15 fixtures in Zone 3 and Zone 4 are to be fed from Panel EDMH-B1-B-EMG located in Electric Room B1325 on Lower Concourse Level.</p> <p>4. Sheets E1-4105 and E1-4106 have been revised. Refer to attached sheets E1-4105, E1-4106, and E1-3204, Detail 6 dated 01/23/2014 for revisions. F15 fixtures in Zones 5 and 6 are to be fed from EDMH-B1-C-EMG in Electric Room B1563 on Lower Concourse Level.</p> <p>5. Sheet E1-4107 has been revised. Refer to attached sheet dated 01/23/2014 for revisions. Type F15 fixtures are to be fed from Panel EDMH-B1-D-EMG located in Electric Room B1644 on Lower Concourse Level.</p> <p>6. Refer to attached drawings dated 01/23/2014 for enlarged plans requested (Panels clouded in blue). EDMH-B1-A-EMG is now EDMH-B2-A-EMG-1.</p> <p>7. Refer to revised sheets E1-3203 and E1-4107. Revised sheets dated 01/23/2014 are attached</p>

T-1145	BGP - Plumbing and Floor Drawing Detail Discrepancies	Closed	01/27/2014	02/06/2014	02/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please refer to attached drawing A1-2224, A1-2844, A1-2225, A1-2845, A1-2846, A1-2226 and excerpt from spec section 22 05 30, 3.2.  Details for plumbing and floor drains in the drawings for the Lower Concourse have the following discrepancies:  1. Drawing A1-2224 left of gridline (GL) 13 between GL B - GL C shows two plumbing details and in drawing A1-2844 these plumbing details are not shown 2. Drawings A1-2845 and A1-2225 between GL 22 - GL 23 and GL G - GL H where A1-2845 shows a plumbing (PLBG) detail and A1-2225 shows a floor drain (FD) detail 3. Drawings A1-2846 and A1-2226 between GL 29 - GL 30 and GL G - GL H where A1-2846 shows a plumbing (PLBG) detail and A1-2226 shows a floor drain (FD) detail 4. A plumbing detail shown in drawing A-2225 on GL G between GL 24 - GL 24.9 is not shown in drawing A1-2845.  5. Furthermore, the PLBG callouts in all the Architectural and Structural drawings do not include the size for each pipe or sleeve. Plumbing sleeve details in spec section 22 05 30 - 3, do not state the required clearance spacing needed.  Please verify the conflicting plumbing and floor drain details, the diameter size of each pipe or sleeve detail, and clarify the clearance space for sleeves required for plumbing.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1. 2 PLBG penetrations on A1-2224 (refer to SKA-3021) have been removed and are coordinated with A1-2844 (refer to SKA-3029).  2. PLBG annotation on A1-2225 (refer to SKA-3022) revised to FD and is coordinated with A1-2845 (refer to SKA-2845).  3. PLBG annotation on A1-2226 (refer to SKA-3023) revised to FD and is coordinated with A1-2845 (refer to SKA-2845).  4. PLBG annotation on A1-2225 (refer to SKA-3022) is coordinated with A1-2845 (refer to SKA-2845).  5. For Pipe Sleeve Schedule - Refer to PSK-0051.  For updated Lower Concourse plans, refer to attached SKAs:  SKA-3011 to 3018 - B1 Zone Plans,  SKA-3019 to 3026 - B1 Wall Plans,  SKA-3027 to 3034 - B1 Slab Edge Plans.  Red mark ups are for changes in slab penetration annotations, relocation, and/or deletion.  Blue mark ups are for slab penetrations that were added due to Plumbing coordination.

From: Webcor Construction LP Claude Titché To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
As discussed in the 3.24.2014 submittal TG0600-121 comment review meeting, please issue current design drawings P1-2202 through P1-2211 so that the size of plumbing pipes that pass through the concourse slab can be ascertained for the purposes of sizing the plumbing penetration sleeves per PSK-0051 (issued in RFI 1145rev0). The -8.30.2012 Issued for Construction - Below Grade Package- P1-2202 through P1-2211 pipe plans do not match up to the current sleeve layout as shown in sheets A1-2842, A1-2843, A1-2844, A1-2845, A1-2846, A1-2850 & A1-2851.					Accept Suggestion: <input type="checkbox"/>		
The size of the Concourse level slab sleeves required in the above mentioned A1-2800 series drawings cannot be determined without the current coordinated plumbing design.					Refer to ASI 112, ASI 113 and Addendum #2 for the most current plumbing drawings as of this date.		
					RESPONSE: 3-28-14 Judy Long: Refer to the attached ASI 112, ASI 113 and Addendum #2 plumbing drawings for the most current plumbing drawings as of this date. These drawings will be issued on April 1, 2013 as "Issued for Construction" documents.		

T-1146	SSS - W16 connection fouls W33 connection at grid 14F	Closed	01/27/2014	02/06/2014	02/14/2014	Potentially	<input type="checkbox"/>

REQUEST:			SUGGESTION:		ANSWER:		
On S1-2304 there are W16's centered under CMU wall connecting into a W40 along grid F near grid 14. The drag connection for the W33 connecting into the Transfer Girder and the W16 connections will foul each other. Please verify the following: 1. Per the schedule on 1/S1-5010 the W16 connections should be three bolts. Please verify it is acceptable to reduce the bolts from three to two bolts? 2. Please verify it is acceptable to move the drag connection down to clear the two bolt W16 connection? 3. Please verify coping the bottom flange of the W16's to clear the W40 drag connection is acceptable?					Accept Suggestion: <input type="checkbox"/>		
					1) Acceptable. 2) Acceptable. 3) Acceptable.

	thicknesses greater than 1", the pipes will be produced using the centrifugal cast process as defined in the project specifications section 05 15 22. Please see attached letter of compliance from the pipe manufacturer confirming chemical composition to meet mechanical requirements. Please confirm this is acceptable.						
	material may be as proposed and submitted by the Contractor provided that all mechanical properties (yield strength, tensile strength, elongation, CVN toughness) of the supplied material meet those outlined in specification 05 15 22 (Centrifugally Cast Steel Pipes). However, the Contractor assumes all responsibility for ensuring that the material is adequate from a weldability perspective. Since this is not a prequalified base material, welded joints will need to be qualified per AWS. We recommend that joint qualification is performed in advance (before pipes are manufactured) in order to minimize risks related to weldability and joint adequacy.						
T-1149	SSS - Erection Aids for Studded Plate	Closed	02/03/2014	02/13/2014	02/10/2014	Potentially	<input type="checkbox"/>

REQUEST:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
There are some discrepancies between the Train Platform Level Lighting Plans(E Drawings) and the Lower Concourse Level Slab Edge Plans(A Drawings). Please provide direction and revised drawings for the following instances.			Please refer the following SKAs, ESKs and TE1 pdfs:				
1) The Lighting Plans show two exit signs in close proximity, yet on the Slab Edge Plan only one EJB layout is shown: AI-2844/EI-4104 at approximate Grid Lines: -14.5/F -16.6/A.6 -16.7/F AI-2850/EI-4110 at approximate Grid Lines: -2.8/V.8			SKA-3059 to SKA-3066 for Lower Concourse Slab Edge Plans ESK-026 to ESK-033 for Train Platform Level Electrical Lighting Plans TE1-2202 - Lower Concourse Zone 2 Floor Plan TE1-8014 - Telcom Closet Details				
2) The Slab Edge Plan shows EJB layout, yet there are no fixtures on the Lighting Plan: AI-2842/EI-4102 at approximate Grid Lines: -1.6/C.5 -2.7-3.5/C.3 (Three EJBs in a row) -4.5/C.3 (Two EJBs) AI-2846/EI-4106 at approximate Grid Lines: -25.7/F.I -26.6/C.5 -26.7/A.6			1. EJBs on the Lower Concourse slab edge plan A1-2844 were updated and coordinated with Train Platform Level Electrical Lighting Plan E1-4101: see SKA-3061 and ESK-028  2. EJBs on the Lower Concourse slab edge plan A1-2842 were removed and coordinated with Train Platform Level Electrical Lighting Plan E1-4102: see SKA-3059 and ESK-026 Same with A1-2846, EJBs were coordinated with E1-4106: see SKA-3063 and ESK-030  3. EJBs on the Lower Concourse slab edge plan A1-2845 were updated and coordinated with Train Platform Level Electrical Lighting Plan E1-4105: see SKA-3062 and ESK-029  4. For Train Platform Level Zone 11 Lighting Plan: see ESK-033 and SKA-3066  5. There are no Telcom conduit penetrations for TELCOM closets along GL 1 between E & F. Please refer to attached TE1-2202 and Detail 1 of TE1-8014				
3) The Lighting Plan shows fixtures, yet there is no layout on the Slab Edge Plan: AI-2845/EI-4105 at approximate Grid Lines: -19.2/A.6 -21.2/C.6 -21.2/F							
4) There was no Train Platform Level Zone 11 Lighting Plan (EI-4111) included with the contract documents, but there is an EJB layout on Lower Concourse Level Zone 11 Slab Edge Plan(AI-2851 ).							
5) Telecommunications Drawing Lower Concourse Level Zone 2 Floor Plan(TEI-2202) has six(6) 4" conduit sleeves on Grid Line I between GL E and F. the Slab Edge Plan(AI-2842) does not have a layout for these sleeves.

T-1156.1	BGP - Telecom Drawing Discrepancies	Closed	02/25/2014	03/07/2014	03/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
The response to RFI T-1156 provided a number of drawings which were not previously provided. Only TE1 drawings TE1-0000, TE1-2202, TE12203 and TE12207 were issued with the TG06 scope of work.				AAI Response:			
The telecom sleeve locations on SKA-3060, SKA-3063 and SKA-3064 do not match the TE1 contract drawings.				For updated Slab Edge Plans coordinated with updated TE1 Plans showing telecom enclosure penetrations at the Lower Concourse Slab. Refer to the following sketches:			
The discrepancies between the telecom drawings and the slab edge drawings are:				SKA-3095 to SKA-3102 Lower Concourse Level Slab Edge Plans			
I) GL 5/A - Telecom sleeves indicated on TEI-2202, no layout dimensions on SKA-3059				See also for reference:			
2) GL 10/J -Telecomsleeves on TEI-2203 are not shown in the same location as on SKA-3060				SKA-3079 to SKA-3086 Lower Concourse Level Zone Plans			
3) GL 29.5/A - No TEI drawing provided, however SKA-3063 has layout for three(3) sleeves				SKA-3087 to SKA-3094 Lower Concourse Level Wall Plans			
4) GL 33/A - Telecom sleeves indicated on TEI-2207, but no layout dimensions on SKA-3064				SMW Response:			
Please provide an up to date set of ALL TE I drawings which show telecom sleeves and are consistent with the Lower Concourse Level Slab Edge Drawings.				The attached sketches are based on coordination with updated Lower Concourse Level Slab Edge Drawing provided by AAI. We have adjusted Telecom sleeve locations to match Lower Concourse Level Slab Edge Drawings as well as adjusted Telecom enclosure quantities and locations as needed to match.			
				See attached SMW Response which includes TSK-008, TSK-009, TSK-010, TSK-012, TSK-013.

<b>REQUEST:</b> Please see attached Roof Girder Blank drawing submittal returned by WOJV on 1/27/14 "Approved as Noted". The Engineer's directive to change the configuration of the "stub beam" is inconsistent with the current Plan Sheets. Upon further discussions held in the Structural Coordination meeting on 2/6/14, OIW has been directed to proceed with the 2.25" T&B flange at the stub beam, as detailed on 10/S1-8001, and modify the web of the stub beam to align with grid lines 1 and 33.5.  Please see attached "preliminary" shop drawings representing the requested changes to the stub beam detail.  Please confirm the changes to this drawing are consistent with the Engineer's intent. Upon confirmation, OIW will make the appropriate changes to drawings GB107 through GB110 and resubmit for record.  Please also note that the weld prep in detail 5 on GB107-2 has been modified per the 2/6/14 coordination meeting.			<b>SUGGESTION:</b>		<b>ANSWER:</b> Confirmed

T-1170	SSS - Light Column Base Plate and Corrosion Protection	Closed	02/13/2014	02/23/2014	02/25/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: As a follow up to review comments provided in Submittal Package TG0701-023.1 SSS - Light Column Anchor Bolts (#1.5E), please review and respond to the following items:  1) Base plate hole oversize and subsequent sizing of the top plate washer  As a follow up to the conference call held 1/29/14 for the Light Column anchor bolts, Dywidag provided the following information via the email attached: "If we spec a 50ksi plate and use the full width of the spherical washer, the plate works as-is. Leaving the plate design alone (with the assumed actual contact width of the washer) the plate still works at a 6" hole diameter. This is designing for 95% of the ultimate capacity of the bar."  The maximum outside diameter of the HSS tube inside the base plate is 3.5". Within a 6" hole, this allows for 1.25" of clearance all around the tube, which is more than adequate clearance based on the AISC allowable tolerances for installations of anchor-rod groups. Reference AISC Steel Construction Manual, Section 16.7.5.1 attached, which does not allow for any more than ¼" variation between anchor rod groups nor between anchor rod group and column lines. Please confirm it is acceptable to proceed with a 6" base plate hole size to avoid modifications to the top anchor plate grade and geometry.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> We have reviewed Dywidag's statement for the top plate washer as well as the corrosion protection of the bar within the galvanized tube and based on this guarantee by Dywidag we find these solutions acceptable.

<b>Co-Author:</b>							
<b>REQUEST:</b>			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>		
Per field discussions with ARUP, Airco is to hand tamp (not use the jumping jack) the geothermal trench only to ensure "tight" compaction. ISI will be onsite to visually verify the compaction efforts.					ARUP Response:		
Per field walk on 02-13-14 ARUP has classified the top portion of Geothermal Field #10 and #11 as oversaturated/unsuitable/partially contaminated due to the inclement weather (rain from 02.06.14 through 02.09.14). It is recommended to scrape off the top layer immediately prior to the rat slab rebar install.					Contractor should first perform the required treatment of wet soils resulting from unfavorable weather conditions specified in Spec. 31-23-34.		
Please confirm it is acceptable to pour the rat slab in this area thicker to compensate for the scraped off unsuitable material.					It is acceptable to pour the mud slab in this area thicker to compensate for the scraped off unsuitable material. However; Geothermal Piping must have suitable soils cover of minimum of 6" above top of geothermal piping within header trenches/trenches.		
					Adamson Associates Response:		
					CMGC shall verify the waterproofing sub-contractor, waterproofing manufacturer, & sub-contractor's waterproofing designer approve the proposal in this RFI to confirm the mud slab will provide a suitable installation surface for the waterproofing system.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Detail B/A1-8662 indicates that BRBs at Ground Level between GL D.4/28 and D.4/31 are to receive IFRM-2 fire protection. All other BRBs are to receive SFRM fire protection. Please refer to SK RFI 397 SK1 attached and clarify the following finish requirements for the BRBs:				Item 1. Confirmed and as indicated on the documents referenced.			
1) Details 1, 3, and 5 on S1-4206 indicate that bottom gusset plates are to be galvanized. Please confirm that only the bottom gusset plates are to be galvanized.				Item 2.			
2) For BRBs to receive SFRM fire protection:				a. Extent of SFRM and shop prep as indicated in the documents referenced.			
a. Please confirm the extent of the SFRM at the braces as indicated by the red outline in details 2, 3, and 6. Note that all materials indicated to receive SFRM will be bare steel. Steel will be prepped in accordance with 07 81 00-3.2.B.				b. Extent of SFRM and shop prep as indicated in the documents referenced.			
b. Please confirm the pin, bolts, plates, and top gussets shown in details 2 and 6 are to be bare steel in anticipation of receiving SFRM by others.				Item 3.			
3) For BRBs to receive IFRM fire protection:				a. Extent of IFRM and shop prep as indicated in the documents referenced.			
a. Please confirm the extent of the IFRM at the braces as indicated by the blue outline in details 2, 3, and 6. Materials indicated to receive IFRM will be prepped and primed in accordance with 07 81 23.				b. Confirmed and as indicated on the documents referenced.			
b. Detail B/A1-8662 graphically indicates that only the braces and not the gussets are to receive IFRM. Please confirm the final finish of the bottom gusset plates is to be galvanized and provide the finish requirements for the top gussets.				c. Finish requirements are indicated in referenced drawings and specifications.			
c. Please provide the finish requirements for the pins and 1" thick plates indicated on 6/S1-4206.				d. Finish requirements are indicated in referenced drawings and specifications.			
d. Provide the finish requirements for the bolts indicated in detail 6/S1-4206.

<b>Co-Author:</b>							
<b>REQUEST:</b> Please see attached concourse deck typical blockout detail at pile penetrations.  SCCI proposes to construct the temporary pile penetrations as shown in the attachment.  Please confirm this is acceptable.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The accompanying calculations only include the required development lengths for the additional bars placed with couplers. The additional bars are placed at a lower level due to the form saver that reduce slab flexural capacity, therefore, additional bars are needed to make up for the reduced flexural capacity. A calculation justifying the number of additional bars required shall be submitted as a shop drawing for review.  For the case when the blockout is unfilled, the calculation was incorrectly done assuming #6 bar for calculating the moment capacity instead of #5s actually specified for RCS1. Update this calculation and resubmit for review, or clarify that shoring will be required while the blockout is unfilled.  Note that the application of the blockout detail at the specific field condition shall be incorporate into all applicable reinforcing submittals. Additionally a complete set of calculations addressing all temporary blockout conditions is required for submittal.

REQUEST: See attached sketches CD RFI # 302 SK1 & SK2 for items 1 to 3: 1) The line for the noted W16x26 is not shown. Confirm the beam is centered on the wall. 2) Confirm the connection for the W16 to the Transfer Girder is acceptable as shown with plate thickness, welding and bolts per 1/S1-5011. If not, supply a new detail. 3) Confirm the same connection may be used for the W16 to the Transfer Girder on Grid 20.1.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Confirmed. 2) Connection detail proposed for W16 shown on SK2 is acceptable. Provide plate thickness, welding, bolt size and bolt edge distances per Detail 2/S1-5011. 3) Confirmed.				
T-1188	SSS - Finish Requirements at Basket Columns	Closed	02/21/2014	03/03/2014	03/03/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: A1-8660 conceptually indicates the boundaries of Category 2 and Category 3 AESS requirements for the basket columns. Based on this information and the documents provided for the TG07.1R trade package, SK1 has been provided to depict Skanska's understanding of the basket column finish requirements. Please review the following and confirm the various finish boundaries associated with the basket columns:  1) Confirm the Category 2 AESS boundary is from the Ground Level cast node to the end of the pipe column from the Ground Level to the Bus Deck Level as indicated in SK1. 2) Confirm the Category 3 AESS begins at the Bus Deck level cast node and extends through the pipe column to the Roof Level cast node as indicated in SK1. 3) Confirm the AESS boundary ends at the Roof Level cast nodes and that the Roof Level connection plates are to be delivered on site in the bare steel condition to receive SFRM. 4) Confirm the AESS boundary at the Bus Deck cast nodes extends to the cast node pad, with all shear plates, reinforcement plates, and perimeter beams to receive SFRM as indicated in SK1. 5) Confirm these boundaries can be typically applied to all perimeter basket columns at North, South, East, and West			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1. Boundaries indicated on SK RFI 418 SK1 generally appear to be OK. However, this information should be confirmed by the CM/GC, as this RFI states "by others", which is information for the CM/GC. All this information should be clearly submitted for review in shop drawing submittal per drawings and specification 05 12 14 Paragraph 1.4.  Additionally, see added notes on your SK RFI 418 SK1 attached. The elements currently highlighted in cyan color in the enclosed sketch should be AESS category 3 per A1-8660 and finished per specification section 09 97 16.  2. See response to item 1) above.  3. This statement is incorrect. Cast node connecting plates are AESS members that should be prepped and finished per specification section 09 97 16. SFRM fireproofing should be applied to perimeter beam per A1-8662 and details in sheets A1-8611 and A1-8612.  4. Please submit shop drawings submittals per specification 05 12 14 Paragraph 1.4 and as noted on item 1) above.

2) Detail 10/S1-7600 will not work as the noted posts are off-set from the beam. Provide a connection detail.			2) Beams shall be centered on the highlighted posts and detail 10/S1-7600 shall apply as noted on the drawings. See SKS-0332 for reference.				
3) Supply the missing dimensions.			3) See response to 1).				
T-1190	16" Slab Negative Moments at North-South Walls	Closed	02/24/2014	03/06/2014	02/26/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Please reference attached Memo from seers consulting Engineer.			No additional bars are required at the LCL spandrel/wall interface. Loading on S-1002 applies.				
There is a certain concern that once the LL= 150 PSF is imposed on the LCL deck there will be excess negative moments generated at the interface between weak axis of the supported slab and wall-spandrel beam. This may require additional top reinforcement in the weak axis of the one-way slab.							
Please confirm that there are no additional bars neded at the LCL spandrel/wall interface, and that loading Table from S-1002 applies.

<b>REQUEST:</b> Please confirm it is acceptable to drill (4) holes in the W18 x50 to hold it in position for field welding. See attached sketches CD RFI # 311 SK1 & SK2 for clarification.			<b>SUGGESTION:</b>		<b>ANSWER:</b> Confirmed. <b>Accept Suggestion:</b> <input type="checkbox"/>		
T-1192	BSE - Steel Plate at CDSM Piles 450-451	Closed	02/24/2014	03/06/2014	03/04/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titche			<b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger	
<b>Co-Author:</b> Balfour Beatty Infrastructure, Inc. Kelly Phariss							
<b>REQUEST:</b> During level 4 and 5 excavation, a high volume leak occurred in zone 4 between CDSM pile 450 and 451. In an effort to stabilize the CDSM panel and repair the leak, BBII installed a steel road plate between soldier piles 167-168 and injected grout behind it.  BBII is concerned that removing the plate will likely cause the panel to become destabilized and could reopen the flow of water. BBII survey of the plate indicates that the plate is behind the theoretical face of CDSM wall and does not encroach into the permanent structure - reference the attached drawing.  Please confirm is is acceptable to leave this plate in place. The edges of the plate may be grinded to provide a smooth transition to the CDSM wall for waterproofing.			<b>SUGGESTION:</b>		<b>ANSWER:</b> Confirmed, it is acceptable to leave the steel plate in place, provided, as stated in the RFI, it does not encroach into the permanent structure and the edges of the plate are ground smooth. This location should be reviewed by the waterproofing manufacturer and details developed for the waterproofing and cushioning layers between the CDSM wall and foundation wall, to ensure a smooth transition for the CDSM wall waterproofing at this condition. <b>Accept Suggestion:</b> <input type="checkbox"/>

REQUEST: On attached sketches CD RFI # 309 SK1 & SK2 confirm the connection for the W21x50 to the top of the W30x90 is acceptable as shown or supply a new detail.			SUGGESTION:		ANSWER: Confirmed		
					Accept Suggestion: <input type="checkbox"/>		
T-1204	SSS - Support Steel at Large Slab Openings	Closed	02/26/2014	03/08/2014	03/03/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: The perimeter support steel at large slab openings as detailed on 12/S1-5003 will not work at GL 16.9/D as indicated on SK1 due to the 12" top of slab elevation changes around these openings. Please provide details for the support steel required at this location including all connection details.			SUGGESTION:		ANSWER: The W33 beam is 1'-0" higher than the W24 as shown on the plan. The metal deck for the slab where those 2 openings occur is set by the low slab (similar to Typical Detail 10/S1-5002). The Typical Detail 12/S1-5003 applies. C8 channel shall have a shear connection per typical detail 1/S1-5011 (2 bolts).		
					Accept Suggestion: <input type="checkbox"/>		
T-1205	BGP - Lower Concourse Blockouts to Pour Train Level Partition Walls	Closed	02/26/2014	03/08/2014	03/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: SCCI is planning on pouring as much of the Train Level Partition Walls in Area 3 and 4 prior to the Lower Concourse Deck being poured (see attached Structural Drawings for reference). However, some of the partition walls conflict with the Rakers used for bracing. Additionally, there are some partition walls in Areas 6-16 that are added in ASI #110 that is now included in TG06 scope.  Since the Rakers will not be removed until after the Lower Concourse Deck is poured, SCCI proposes installing blockouts in the Lower Concourse above the walls in order to complete the concrete pours for the partition walls in Areas 3 and 4. The same blockouts will be installed for the partition walls on the mat slab level in Areas 6-16, added as part of ASI 110. The blockouts will be 6"x 12" for RCS 1 reinforcement and 9"x 12" for RCS8 reinforcement, both at 4' O.C. The blockouts would be positioned in the space			SUGGESTION:		ANSWER: Conceptually, it is acceptable to provide blockouts in the Lower Concourse slab for the purpose of pouring the concrete partition walls below. It is noted that the RFI does not address the following conditions:  · Cases where a partition wall is below or partially below a parallel Lower Concourse beam · Cases where a blockout coincides with features above, such as a CMU wall · Means of preparing and pouring back the blockout  Contractor shall give due consideration to the above and revise the plan as required. Consideration shall be given to the differing heights of wall pours due to changes in the Lower Concourse soffit such as for perpendicular beams, particularly with regard to consolidation. Minimum separation gaps between top

See attached CD RFI #314 SK1 to SK3 for items 1 to 8:		Weld the edge angle per 8/S1-5000 to the drag beam along GL D at the highlighted location.					
1) There appears to be a beam missing as there is no support for the slab edge plate per 8/S1-5000. Please advise.		2) Move the short W12x14 beams at the highlighted locations (total 7) so that they are 6 1/2" away from the edge of slab in order to fit the double angle connection within the slab edges.					
2) The double angle connection per 1/S1-5010 will extend beyond the edge of slab located 5" from the center of beams. Confirm it is acceptable to connect the beams using the shear plates connection per 1/S1-5011 at the 7 locations noted.		3) Provide bottom flange bracing per 4/S1-5015 at the highlighted locations.					
3) Details 4-7/S1-5015 do not apply at the noted 4 locations. Please clarify which bracing detail is to be applied.		4) See response to 3).					
4) Details 4-7/S1-5015 do not apply at the noted 2 locations. Please clarify which bracing deatil is to be applied.		5) Confirmed.					
5) Confrim the noted stiffener is a 3/8" plate per 1/A1-7600.		6) Confirmed. Note that the side plates are not continuous and are interrupted by the perpendicular stiffener plates at the HSS post locations.					
6)Confirm the 3/8 side plates are to extend the full length of the elevator slab opening.		7) Acceptable. We assume that the weld shown on SK2 is between the side plate and the perpendicular 3/8" stiffener plate highlighted in 5). Note that the side plates are to be welded to top and bottom beam flanges with 5/16" welds as shown in the detail.					
7) Confirm the noted weld is acceptable.		8) Acceptable.					
8) The double angle connection per 1/S1-5010 will fould the shear plate to the column web. Confirm it is acceptable to connect the noted beam with a shear plate per 1/S1-5011

T-1208	SSS - Verify no Bent Plate Welds at Protected Zones	Closed	02/28/2014	03/10/2014	03/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Per the approval comment on A2647 and RFI T-1071 occurs North of line D and South of line F along line 10.1 for loose bent plate conditions and does not apply at this location. This beam is between greids D and F. Please verify for the continuous shop attached bent plate condition no weld will occur within the noted protected zones. Note this is the same for A2659 and other similar conditions.					Where the bent plate cross-section is continuous between the two outriggers on each side of the protected zone, it is confirmed that the bent plate shall not be welded to the beam along the protected zone and no additional revision is necessary to brace the bent plate. Response to RFI T-1071 applies where the bent plate cross-section changes within the protected zone for example at Bus Deck Level, south of GL 10.1/F and north of GL 10.1/D.

REQUEST:

Reference Documents: Exhibits A - H  
This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north & south wall in mat slab pour Area 14 as well as all levels of the encroachment into the foundation wall between CDSM piles 288 to 318 on the north elevation and 465 to 495 to on the south elevation for location Plan see exhibit - A.  
Exhibit - B & C depict the location and degree in which the SP are encroaching.

WOJV proposal North elevation on gridline A: (See Exhibit - B) Between CDSM piles 284 to 290, WOJV is proposing to decrease the specified 36" wall thickness to 33" to clear the encroaching SP 284,285,286,288-290. This foundation wall area was originally a WR1 reinforcement area #11@8"oc EF vertically and would change to #11@6"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on detail A/Sk.1 (Exhibit -D).

Between CDSM pile 299 to 301,305 to 312 & 315-316 to 322-323 WOJV is proposing to decrease the specified 36" wall thickness to 33.5" to clear the encroaching SP 299 & 301. Originally these were WR1 reinforcement areas #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

Between CDSM piles 290 to 294-295, WOJV is proposing to decrease the specified 36" wall thickness to 33" to clear the encroaching SP 291,292 & 293. Originally this was a WR2 reinforcement areas #11@6"oc EF vertically and would change to #11@5"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.3 option 2 (Exhibit - E)

Between CDSM piles 301 to 305, WOJV is proposing to decrease the specified 36" wall thickness to 33.5" to clear the encroaching SP 301,302 & 304. Originally this was a WR2 reinforcement areas #11@6"oc EF vertically and would change to #11@5"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.3 option 2 (Exhibit

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

The contractor proposed revisions to foundation wall reinforcement due to encroaching CDSM Piles in Area 14 are acceptable. Update Area 14 shop drawings affected by the shoring encroachment info presented in this RFI and submit them for record.

T-1221	BGP - 36" Pile Sleeve Joint	Closed	03/06/2014	03/16/2014	03/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Scott Bunnell							
REQUEST: Please reference attached sketch, photo, and Contract Drawings SI-3003 and SI-2025. SCCI welded the 36" pile sleeve (see S 1-2025) vertical CJP as depicted in the attached sketch due to a shop fabrication error (see attached photo). Per AWS DI .1, the pre-qualified joint designation B-U2a-GF for FCAW allows a 65 degree groove angle with detail and fit up tolerances. The welded joint is approximately 15 degrees out of tolerance and is on one side of the sleeve only (2 joints per sleeve). Due to the member considered as non-structural, SCCI requests this joint to be acceptable as welded at this location only. SCCI will adhere to Spec Section 05 50 10 - 2.5.C.2 - "Weld mat foundation sleeve components continuously and test their water tightness by filling with water. Monitor water level for 48 hours minimum. Dry and correct faulty welds and re-test until proven watertight." Is this acceptable?		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The proposed method and testing described in this RFI is acceptable at this location only.

T-1222	SSS - Filler plate weld access at CP2 connection	Closed	03/07/2014	03/17/2014	03/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Company PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Please reference Details 4 and 7 on sheet S1-8001.  Detail 7 specifies a 1" thick filler plate between the beam web and the 2 1/2" thick backing plate. Detail 4 Section E notes 1" typical from the edge of the fill plate to the adjoining stiffener or beam web. 1" opening does not allow for adequate access to perform the welding.  Oregon Iron Works(OIW) is requesting that all filler plates for CP2 connections have a minimum clearance of 1 1/2" from any adjoining edges. Additionally, OIW is requesting that this minimum clearance be applied to any similar areas that exhibit this limited access for welding.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Welding of the vertical stiffener should be done prior to installing the filler plate, hence there should be no weld access issue. The proposal to increase the 1" gap to 1 1/2" gap is acceptable.

<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton								
<b>REQUEST:</b> At SE401 see attached CD RFI # 317 SK1 to SK5 for items 1 to 7: 1) It is not clear what is meant by the noted slope designation. Confirm the roof slab slopes and the top of pad slab is EL 56'-11 per A1-2894 (SK3). 2) Confirm the noted dimension is 1'-2 3/4 per 8/S1-5004 (SK4). 3) This note is pointing to the edge of slab and giving a top of steel elevation. Work with SK5 and clarify. 4) Confirm the noted dimensions should read 1'-9 & 9'-2 per 1/S1-7113 & RFI T-0965 (SK251, CD 200). If not, clarify. 5) The noted HSS members are not shown on S1-2504 (SK1) or 3/S1-7113 (SK2) but this detail is referenced on both plans noted above. a) Please confirm the HSS members are required. b) If yes, supply the size. c) Supply the horizontal locations on plan d) Supply the elevation e) Supply connection details f) NOTE: the elevator post connections per 1/S1-7600 may foul the HSS members (work with SK5) 6) Confirm the slab edge plate terminates below the 10" raised slab as shown. 7) Confirm detail 1/S1-7600 with the full depth stiffener and kicker brace applies in the noted cases with no elevator post on top of the beam.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) The roof slab does not slope. T/Slab of the elevator shaft roof slab is 56' - 11" as noted on A1-2894. 2) Confirmed. 3) The note is pointing to the horizontal steel beams shown on 8/S1-5004 and notes the T/steel of these members. 4) No. The 10'- 3" and 1'-3" dimensions noted on A1-2894 are correct. The edge of slab for SE 401 at the top of the elevator shaft size increases at the top of the elevator shaft. Also see revised dimensions in the attached sketch SKS-0333. 5a) Yes, beams are required at these locations. These members shall be W18x50 beams. Refer to attached sketch SKS-0333. Note that there are four beams ,one on each side of the shaft. 5b) See response to 5a). 5c) Centerlines of the W18 beams shall be 3 ¾" from the edge of the elevator shaft opening (see note on sketch SKS-0333) . 5d) Elevation is 54' - 5" as noted on 3/S1-7113 (see note on sketch SKS-0333). Also see response to 3). 5e) Connection at the elevator machine support beams is shown in the attached sketch SKS-0333. 5f) See response to 7. 6) Confirmed. 7) The elevator rail posts shall be connected to the depressed W18x50 beams per 1/S1-7600. See detail in attached sketch SKS-0333.

T-1224	BGP - Concourse Top Bars at Column Embedded Plates	Closed	03/10/2014	03/20/2014	03/18/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche		To: Turner Construction Company PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: SKS-0324 and SKS-0325 Per SKS-0324 and SKS-0325, where the top bars for the concourse slab intersect type 1 B and 1 C embedded base plates, the bars are to be trimmed and supplemented with a matching slab dowel in MF beam layer 1. The typical deck top reinforcing consists of a continuous run of #9 bars @ 12" and alternates with a #9 x 28'-0" long bars@ 12". See attached sketch for details. To avoid trimming a 28'-0" bar and splicing it with a 17'-0" bar, please confirm if it is acceptable to relocate the #9 x 28'-0" top bars@ 12" to the MF beam layer 1. The continuous #9 bars@ 12" will remain at 3/4" from the top of concrete and trimmed according to SKS-0324 and SKS-0325.				It is acceptable to relocate the discontinuous T2 bars to the lower layer with the typical continuous T1 bars remaining in the top layer. We note that the RFI mentions the matching dowel length as being 17'-0". For RCS1, this would be a #9 bar with a splice length of 122" for Top Bar, Category II. Given a 42" base plate and either a 3" or 6" oversized block-out, the minimum length of the dowel would be 292" (24'-4") or 298" (24'-10"). The appropriate splice category and block-out size shall be considered when determining the length of the matching dowel.  Alternatively, the Contractor may place the T2 bars that conflict with the base plate in the lower layer.

	<b>REQUEST:</b> Reference sheets E1-2202, E1-2203, E1-2205 and transformer rooms B1223, B1323, B1562.  Each room requires embedded steel plates for which the future transformers are to be welded to. Are all of the embedded plates tied to the same building ground system as shown for the vault room itself? If so, does SFPUC have a specific requirement for plate grounding?	<b>SUGGESTION:</b>	<b>ANSWER:</b>	<b>Accept Suggestion:</b> <input type="checkbox"/> Yes, SFPUC is requiring steel plates within the transformer vaults to be bonded to the same ground as the 3/0 copper pigtails that are being brought to the vault. There are no other special requirements.			
<b>T-1227.1</b>	<b>BGP - SFPUC Plate Grounding</b>	<b>Closed</b>	<b>04/21/2014</b>	<b>05/01/2014</b>	<b>05/02/2014</b>	<b>Potentially</b>	<input type="checkbox"/>

<b>Co-Author:</b>							
	<b>REQUEST:</b> See attached Sketch corresponding to sheet E1-2203  Does the attached sketch clarify the intent of requiring grounding for each SFPUC Transformer mounting plate? If so, is the intent to extend the same grounding conductor type/size from the already contracted embedded conductor? If not, please provide requirement assembly details.  Additionally, will SFPUC require any testing prior to conductor embedment at the concourse level?	<b>SUGGESTION:</b>	<b>ANSWER:</b>	<b>Accept Suggestion:</b> <input type="checkbox"/> The proposed connections meet the grounding requirements provided to the WSP from the SFPUC: however, the specific detailing of the grounding electrode system connections within the vaults must be reviewed and approved by the SFPUC representative. Inspection of the grounding installation shall be provided by the SFPUC representative. Refer to note B on sheets E1-3208, E1-3209 and E1-3210.

<b>Co-Author:</b> Shimmick Construction Company, Inc. Ryan Brekke							
<b>REQUEST:</b> Per field conversation with ARUP, SCCI was directed to locate the riser for Geothermal Field 12 between Soldier Piles 317 and 318 because of a leak in the CDSM wall between piles 316 and 317.  Please confirm this location is acceptable.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> Location is acceptable to WSP.			
<b>T-1229</b>	<b>BGP - As-Built Location of Sump Pit Near GL 14/G</b>	<b>Closed</b>	<b>03/12/2014</b>	<b>03/22/2014</b>	<b>03/14/2014</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Claude Titche		<b>To:</b> Turner Construction Company PHIL MILITELLO		<b>Answered By:</b> Adamson Associates, Inc. George Metzger			
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
<b>REQUEST:</b> Please reference attached sketch that show as-built location of sump pit near GL 14/G.  Please confirm this as-built location is acceptable.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The RFI and as-built sketch refers to a sump pit at west of Gridline 14-G. However, on comparing with the slab edge and reviewed matt slab submittal drawings, the location reference for the subject sump pit should be west of Gridline 16-G.  The sump pit is to serve an escalator which will be installed in Phase 2. The as-built location is not acceptable as the sump pit will not be accessible under the landing for clean-out once the escalator is installed.  Please provide a solution to revise the sump location to its correct position.

T-1230	SSS - Machined Cap Plate Surface Finish	Closed	03/12/2014	03/22/2014	03/14/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Stephanie Azzolino <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> Please confirm it is acceptable to provide the machined surface of the train box column cap plates with a prime coat finish in lieu of the rust inhibiting coating. The surface prep will be SSPC-SP6 commercial blast cleaning with International Interzinc 315B primer (attached).			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> The specified product (Interzinc 315) calls out for a zinc load in the dried film of 83%, where as the proposed product (Interzinc 315B) has only 80%.  The Design Team does not object to this substitution as long as the application meets the performance requirements; it meets the SSPC Paint 20 standard for organic zinc rich primers; it is acceptable to the manufacturer and the entire work receives the specified warranty.		
<hr/>							
T-1230.1	SSS - Machined Cap Plate Surface Finish	Closed	03/24/2014	04/03/2014	04/04/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP                      Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> To clarify, the specifications section 05 10 00 - 3.2.P.2 requires finished bearing surfaces to be protected with a rust-inhibiting coating (which is typically a petroleum/grease or wax based product) which is to be removed immediately prior to erection. The Train Box Column Cap Plate is a finished bearing surface.  The Interzinc 315 product referenced in the response to R FI T-1230 is specific to the IFRM Coating System. Skanska/TMF proposed an organic zinc rich primer (Interzinc 315B) as the rust inhibiting coating, which would not need to be removed prior to placement of the TG atop the cap plate. The proposed product meets or exceeds the primer specified in the 05 10 00 - 2.2.A spec section as noted in the attached manufacturer's letter. Please confirm this is acceptable.			<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> It is acceptable to use the Interzinc 315B coating at the cap plate bearing surface in lieu of a temporary rust-inhibiting coating.		
<hr/>							
T-1231	BGP - Zone 2 Lower Concourse Openings	Closed	03/13/2014	03/23/2014	03/21/2014	Potentially	<input type="checkbox"/>

	<b>REQUEST:</b> There are multiple discrepancies between Zone 2 Lower Concourse Drawings, recently issued in ASI #112 and ASI #113. See attached drawings. The discrepancies have been highlighted in yellow.  AI-2842 (Lower Concourse Slab Edge Plan) generally does not show openings at these highlighted areas, while AI-2222 (Lower Concourse Wall Plan) do show openings. Please clarify whether the highlighted areas are openings or plumbing penetration. If they are plumbing penetrations, please provide sizes and sleeve sizes	<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> For the updated slab edge plans, please refer to the Architectural Sketches (SKAs) attached to the response for RFI T-1156.1 BGP.		
<b>T-1232</b>	<b>BGP - CDSM Wall Movement in Area 3 and Area 1 - West Wall</b>	<b>Closed</b>	<b>03/13/2014</b>	<b>03/23/2014</b>	<b>03/24/2014</b>	<b>Potentially</b>	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP      Claude Titcher		<b>To:</b> Turner Construction Company PHIL MILITELLO		<b>Answered By:</b> Adamson Associates, Inc. George Metzger			
<b>Co-Author:</b> Shimmick Construction Company, Inc. Sylvia Hartanto							
	<b>REQUEST:</b> SCCI performed a survey of the CDSM Soldier Piles approximately March 2013 for the North of Area 3 and West of Area 3 and Area 1. SCCI re-surveyed the soldier piles again this year (March 2014) and have found that the Soldier Piles in the area have displaced into the structure by approximately 1.5" at both the North Wall and the West wall. Please find attached survey information and the changes noticed in the past year.  1. Please confirm that the additional encroachment and future potential movement of wall into the structure will not cause conflict with current and future rebar installation.  2. Please confirm and demonstrate that the future potential movement will not cause additional stress to the Wall Lift 1, which will be poured in the next week.  3. Please confirm that future potential CDSM movement in this area will not impact any of SCCI's future permanent work.	<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> It is requested this RFI be withdrawn as discussed with Turner.  WOJV - 4/23/14 In addition to this WOJV request more information and request that each CDSM wall pile is resurveyed after the level C bracing is removed prior to waterproofing . Two points per pile one at top elevation (similar elevation of the previous surveys) and the other at an elevation of approximately -16'. This survey information should then be then sent to both WOJV and the design team highlighting any additional encroachment which has not been already taken in to account with the current RFI for the relevant area.

T-1234	SSS - Continuity Plate Thickness	Closed	03/14/2014	03/24/2014	03/31/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
1) Confirm it is acceptable to connect the W30x90 to the column with the bolts located as shown and the web extended as shown.			1) Confirmed.				
2) Confirm it is acceptable to connect the W12x40 to the W30x90 using a shear plate per 1/S1-5011.			2) Confirmed.				
3) At 19.9, gridlines C & G, the top flange of a BU-56x30x1.5x4 and sloping W40x327 weld to the continuity plate at the bus deck level. In order to provide a CJP between the aforementioned members and continuity plate, as well as keeping the moment frame members in line with the continuity plate, the continuity plate will need to be increased by 5/8". Please confirm this plate thickness increase to 4 5/8" is required or provide an alternate detail.			3) Not acceptable. Taper the top flange of W40 beam to match the top of the continuity plate and provide a CJP weld as shown in attached sketch SKS-0334. The taper angle shall be 1:2-1/2 as shown in the sketch.				
4) Please confirm that the solution provided for 3) can be used at other locations where the continuity plate thickness needs to be increased.			4) This condition occurs at total 8 locations: 4 at GL 9.9/10.1 and 4 at GL 19.9/20.1. Solution provided in 3) noted above may be provided at these 8 locations.				
			Note that top of the top 4" thick continuity plate shown on SK3 shall be aligned with top of the top flange of the MF beam.				
T-1235	SSS - Thermally Cut Holes in Transfer Girders	Closed	03/14/2014	03/24/2014	03/19/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Please confirm it is acceptable to thermally cut the rebar holes and the column post-tensioned rod holes in the Transfer Girders using an automated (oxy-fuel) process. All other holes in the primary member will be drilled or punched.					1) Holes in transfer girder flanges for column post-tension rods shall not be thermally cut.		
					2). Holes in transfer girder web for rebars may be thermally cut only if the hole is undercut and reamed to the specified size.		
T-1236	SSS - Slab Support Details at GL19E Opening	Closed	03/17/2014	03/27/2014	03/19/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
See attached CD RFI # 327 SK1:					For deck support at the W16 beam highlighted on SK1, provide a continuous 8x4x7/16 angle (LLV) welded to the beam bottom flange at the beam web centerline. Weld between the angle and beam flange		
The deck support detail per 4/S1-7660 & 10/S1-5002 will not work at the noted location.

<b>REQUEST:</b> See attached CD RFI # 341 SK1 & SK2: Confirm the closure plates and welding as shown is acceptable at the coped HSS elevator beam.			<b>SUGGESTION:</b>		<b>ANSWER:</b> Confirmed. Accept Suggestion: <input type="checkbox"/>		
T-1250	BGP - Lower Concourse Beam Discrepancies	Closed	03/18/2014	03/28/2014	03/28/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Claude Titcher <b>Co-Author:</b> Shimmick Construction Company, Inc. Filip Filipic			<b>To:</b> Turner Construction Company PHIL MILITELLO		<b>Answered By:</b> Adamson Associates, Inc. George Metzger		
<b>REQUEST:</b> Reference attached contract drawings.  Latest CDs S1-2203, S1-2210, and S1-2211 have added curved CB16 and CB&B7 downturned beams which appear to be concentric to South spandrel beam B65. However, no dimensions have been provided, i.e. radius, offset etc. Furthermore, CD s1-2211 shows that CB16 and CB&B7 do not follow the same radius. There appears to be an offset between the CB16 and CB/B7 at the MFB at GL 6, and the offset dimensions are not shown. If architectural drawings are used to find the missing radius (reference SKA-3017 and SKA-3026), one can find that the future partition walls at the South corridor have R=647' - 7 1/2" on both East and West side of MFB at GL6. This implies that the partition walls in this area would			<b>SUGGESTION:</b>		<b>ANSWER:</b> Accept Suggestion: <input type="checkbox"/> Confirmed, there is an offset between CB16 Curved beam and CB7 Curved beam. Please see the attached SKA-3105~SKA-3111 for clouded dimensions.  CB16 Curved beam between gridline 5 and 6 to follow radius of curved beam CB16/partition to the west.

T-1266	SSS - ST304 Framing Details	Closed	03/20/2014	03/30/2014	03/31/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO <b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> See attached CD RFI # 364 SK1 to SK3 for items 1 to 4:  1) Confirm the (4) W10x22 beams are located on the center of the supporting posts. If not, supply the location dimensions. 2) Supply the clouded dimensions (4 total). 3a) Confirm the stair stringers do not connect to the W12x14. 3b) If yes, supply a connection detail as 1 or 3/S1-7601 will not work with the 5" offset dimension. 3c) If yes, please supply east/west location dimensions for the stair stringers. 4) Confirm it is acceptable to prep the flanges of the WT5x15 for the 1/4" PJP weld in lieu of the beam flange as shown.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) The stair framing is a design/build item and comes under the stair contractor's scope (W/O to verify). The W10 x 22 is to be provided by stair supplier.  2) See response to 1).  3a) Stringer is to be designed by the stair supplier, however, we anticipate that it is to be connected to W12x14.  3b) See response to 1).  3c) See response to 1).  4) Confirmed.				
T-1266.1	SSS - ST304 Framing Details	Closed	04/04/2014	04/14/2014	04/16/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer <b>To:</b> Turner Construction Company PHIL MILITELLO <b>Co-Author:</b> Webcor Construction LP Jeff Galoyan			<b>Answered By:</b> Adamson Associates, Inc. George Metzger				
<b>REQUEST:</b> Reference RFI T-1266 (attached) and the associated SK1 & SK2 for the following:  1) The (4) W10x22 beams are in Skanska's scope. Only the stringers are design built and provided by the stair supplier. Please confirm these beams are located on the center of the supporting posts or supply the location dimensions. 2) The (6) W10x22 beams in question are also in Skanska's scope. Please supply the requested dimensions (4 total). 3a) W/O agrees that the stringer is to be designed by the stair supplier, however, we anticipate that it is to be connected to the W12x14. Typically the stringer is connected to the bent plate that is part of the W12x14. This member would also include web stiffeners. If a typical detail is not available, please provide stiffener details and leave the stringer connection to be designed by the stair supplier. 3b) See above, the offset dimension for bent plate should work with 3a.			<b>SUGGESTION:</b>  <b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) Confirmed.  2) The east-west dimensions to locate the posts have been noted on 1/S1-7008. The outer north-south W10x22 beams at the landings shall be 8" 7/8" from the centerline of the posts typically. The intermediate moment connected W10x22 beam shall be aligned with the stringer coming from above at the landing per 10/S1-7601.  3a) Stiffener plates are not required at the W12x14 beam.  3b) The W12x14 beam centerline to the edge of slab distance shall be 4". We anticipate that the stringer will be connected to the bent plate.  3c) Refer to Architectural drawings A1-7007, A1-7501, A1-7502, & A1-7503 for stair 304 stringer locations.

T-1268	SSS - Escalator framing details at gridline 11	Closed	03/21/2014	03/31/2014	03/31/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> See attached CD RFI # 344 SK1 to SK3 for items 1 to 5: 1) RFI T-1111 (SK 327, CD 254) confirmed the edge plate to match the thickness of the slab but the approval comment of CS2 drawing 4714 requests a bent plate as shown in SK3. Which is correct? 2) The detail on SK3 is per approval mark-ups on CS2 drawings 4766 & 4767 (noted with an arrow) with references to detail 2/S1-7661 but the approval comments do not occur on the other beams at the yellow walls. Confirm the detail on SK3 applies at all (8) beams next to the concrete walls noted in yellow. 3) Confirm the wall terminates at the lower slab. 4) This detail is per approval mark-ups on CS2 drawings 4766 & 4767 with references to detail 2/S1-7661. Detail 2/S-7661 is not referenced on S1-2403 or 2/S1-7302. Confirm the detail as shown is acceptable. 5) Confirm edge plate per 8/S1-5000 is not required.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) Provide edge closure plate per typical detail 8/S1-5000 as noted in response to RFI T-1111. The tall bent plate and 3/8" stiffener plate per comment and markups on CS2 shop drawings are not required.  2) Response in 1) also applies at the 8 beams highlighted in yellow on SK1.  3) Confirmed.  4) See responses to 1) and 2).  5) Confirmed.  The edge closure plate is required per typical detail 8/S1-5000, hence, there should be no cost and schedule increase.				
T-1269	SSS - GL 15 Dimension Clarifications	Closed	03/21/2014	03/31/2014	03/31/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> See attached CD RFI # 346 SK1 to SK3 for items 1, 2 & 3:  1) The noted dimension should be 4'-7 1/2 per A1-2904 (SK2) but 4'-6 is shown in the Revit model which appears to be supported by 1/S1-7010 (SK1) which shows this beam off center from the wall. Confirm 4'-6 is acceptable. 2) The noted beam should be 9" from Grid D per A1-2904 (SK2) but it will foul the W44x290 on Grid D. Confirm the location of the W27x84 is acceptable as shown. 3) The noted W44x290 is to be located 3'-10 1/2 north of Grid D per A1-2904 as shown. However, the shear plate connection fouls the web stiffener plates per 2/S1-5016 on TPG2. Confirm it is acceptable to locate the W44x290 4'-0 1/2 from Grid D to avoid the fouling.  NOTE: Items 1, 2 & 3 are symmetrical about Grid E and also occur at Grid F.			<b>SUGGESTION:</b>				
			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) The noted dimension shall be 4' - 7 1/2" so that the beam is centered on the wall.  2) Confirmed.  3) Confirmed. Note that per contract document the W44x290 should have a double angle connection. However, to avoid conflict at the tapered girder drag connection plate, it is acceptable to provide a shear plate connection. Provide 3 equally spaced bottom flange braces per 8/S1-5015 at the W44x290 beam from the north side (south side for W44 beam near GL F).

T-1270	SSS - ST401 Geometry Clarification	Closed	03/21/2014	03/31/2014	04/01/2014	Potentially	<input type="checkbox"/>
<b>From:</b> Webcor Construction LP Gregory Kemerer		<b>To:</b> Turner Construction Company PHIL MILITELLO		<b>Answered By:</b> Adamson Associates, Inc. George Metzger			
<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> See attached CD RFI # 347 SK1 to SK3 for items 1 & 2: 1) Shown are two versions of the slope geometry for ST401 with the variations noted. Please clarify which geometry is to be used. 2) Confirm a bent deck support plate per 9/S1-5012 will not be required on top of the W12x14 with the beams aligned as shown.		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/> 1) Provide the geometry shown on the top half of SK1. Note that the starting point of slope at the top of the slab which is noted to be 2-7/16" on SK1 has been revised to 5-1/8" in the TG 7.02 IFB Addendum #1 (See A1-2904). Consequently, the slope angle changed to 32.552 degrees with the end of the slope at the bottom terminating at GL D.4. With the new geometry, the S4 slab does not foul the beam flange at GL D.  2) We confirm that bent plate is not required per 9/S1-5012 at the top of W12x14 on GL D.4.			
<hr/>

<b>REQUEST:</b>		<b>SUGGESTION:</b>		<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>			
1) The WT5x15 interferes with the connection for the W10x22 to the HSS12x6x5/8 post. Please supply a solution.				1) We assume that the "interference" noted in item 1 refers to the accessibility issue for bolt tightening. If the WT5x15 restricts the accessibility for bolt installation, the nuts may be tack welded to the beam web and bolts may inserted from the other side and tightened once the beam is in place. Or, bolts may be tack welded to the beam web on the WT side and nuts may tightened from the other side once the beam is in place.			
2) Confirm the connection for the W10x22 to the HSS6x6 post is acceptable as shown or supply a new detail.				2) Acceptable, except, provide a 1/4" fillet weld on three sides

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
<p>Per the meeting between TCCO, WOJV, SCCI, and AAI on Monday 3/24/14, it was made clear that AAI believes that all documents have been issued to WOJV in order for construction of the lower concourse deck. WOJV stated that there are currently drawings out to bidders (for TG 07.2 /TG10 MEPS Series) and in Pre-Construction, but that WOJV has not been provided direction by TJPA/TCCO to proceed with construction in the field, nor to utilize the most current drawing sets. Prior to this meeting, WOJV requested that all IFB drawings be issued as an ASI's in order to coordinate with current and continuing construction. ASI's 112 and 113 drawings were issued, however they are not complete per our initial request. AAI has responded to RFI's and submittals referring to sheets that have yet to be issued for construction. This has caused confusion and frustration for all parties. Therefore, in lieu of continuing to request ASI's to address this specific issue at the lower concourse, WOJV/Turner have agreed to utilize the RFI process to construct the lower concourse deck.</p>					<p>See the "Issued for Construction" drawings dated April 1, 2014 for the most current drawings.</p>		
<p>For the list of series of drawings below, please note and/or provide the latest drawings or ASI(s) that should be used to construct the lower concourse deck. We understand that there are drawings issued for pre-construction, that will not be issued for construction for multiple bid packages. For those cases, TJPA/TCCO needs to inform and provide WOJV with the set of the most current and coordinated drawings to be used for construction of the lower concourse, including (but not limited to) blockouts, deck penetrations (such as MEPS), beams, dowel/formsaver locations, and electrical conduit locations.</p>					<p>RESPONSE: Judy Long 3/28/14 The drawings, some issued with ASI 115, forthcoming CR-104, are attached for your use and coordination with construction.</p>		
<p>Architectural Drawings : A1-2200 Series Architectural Drawings : A1-2800 Series Architectural Drawings : All sheets providing complete wall dimensions whether floor plan/wall plan/ or enlarged details Structural Drawings : S1-2200 Series Plumbing Drawings : P1-2200 Series Electrical Drawings : E1-2200 Series and E1-3200 Series TE Drawings : TE-2200 Series</p>

T-1283	SSS - Drag Beam Double Connection	Closed	03/25/2014	04/04/2014	04/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 354 SK1 to SK3 for items 1 & 2:  1) Confirm the double angle connection per 5v/S1-5026 (SK2) occurs at all locations noted with an arrow on SK1 (16 total).  2) The double angle connection per 5v/S1-5026 & 6/S1-5026 does not allow access to install the threaded rod nuts (4-3/4" long x 4-1/2" wide) and washers in the field. Please confirm it is acceptable to provide two elongated hand holes (6" wide x 10" long) in each full height shear plate either side of the beam. Due to the restricted access, the post tensioning operation will need to be done from the top of the rod, contrary to the response to RFI T-0970.1. This will require the 6x6" oversized washer to be installed at the bottom and the standard flat washer to be installed at the top. Please confirm this is acceptable			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Confirmed.  2) Providing a hole in the stiffener plates for access to threaded rod nuts is acceptable in concept. Hole shall not be located near the top of the stiffener plate. Final review of the hole location to be done with review of shop drawings. Cloud the hole locations on shop drawings to call the attention of the reviewer. Post tensioning from the top of the rod is acceptable at these locations.	
T-1284	SSS - Erection of Drag Beam at Double Connection	Closed	03/25/2014	04/04/2014	04/04/2014	Potentially	<input type="checkbox"/>

bolts. AISC needs to be followed. See attached letter 027 for additional info from Skanska.							
T-1286	SSS - Bus Level Beam Splice at GL 18	Closed	03/26/2014	04/05/2014	04/16/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: At the Bus deck level see attached CD RFI # 368 SK1 & SK2: With the limitations of the B.U. Beam and the dimensions per 2/S1-5026 (SK1), we cannot fit 28 bolts in 4 rows per beam. Confirm 24 bolts per side are acceptable or supply an alternate solution.		SUGGESTION:	ANSWER: Confirmed		Accept Suggestion: <input type="checkbox"/>		
T-1287	BGP - Mat Slab - Train Platform Future Wall Discrepancies	Closed	03/26/2014	04/05/2014	03/28/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche		To: Turner Construction Company PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: See attached CDs. It appears that all of the future platforms walls along GL E are encroaching into the columns along GL D.8 by 1 1/2".  Please confirm that the designers' intent was for the walls to cope around the "bull nose" column along GL D.8. If so, please provide further details for this column/wall interface.  Otherwise, please provide new offset dimensions, so that the walls clear columns.		SUGGESTION:	ANSWER: Confirmed. It is intended that the identified walls cope at the "bull nose" columns. In all cases, these are walls which will be constructed in Phase 2 and are all escalator pits below the future train platform. The escalators will be above the platform and are designed to clear within the paired columns.  No further details are required.		Accept Suggestion: <input type="checkbox"/>

T-1288	BGP - Lower Concourse Testing and Curing Conflict	Closed	03/26/2014	04/05/2014	04/02/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:			ANSWER:				
Please reference Specification Section 03 30 20 - Cast-In-Place Concrete.			Accept Suggestion: <input type="checkbox"/>				
Spec Section 03 30 20 - 3.6.A.3 states "For shored floor construction: Floor flatness/floor levelness tolerance compliance testing is to be performed prior to the removal of shores and forms but not later than 72 hours of concrete placement by the TJP A Representative." SCCI intends on providing a moist cure on the concourse slab per Spec Section 03 30 20 - 3.7.A.5.b.3 - cover concrete surface with specified absorptive cover, thoroughly saturate cover with water, and keep continuously wet. The absorptive cover is to remain for 10 days for type II cement (Mix #1558218) per Spec Section 03 30 20 - 3.7.A.2 and is to be installed as soon as free water has disappeared from concrete surface and finishing has been completed. The FF/FL 72 hour testing requirement is in conflict with the immediate installation of the moist cure cover requirement.			Neither request is acceptable. FF/FL testing within the 72 hour time limit and curing are not mutually exclusive.				
SCCI requests either of the following:							
1. Waiving the FF /FL requirement on the lower concourse slab due to the later installation of the 5" topping slab it will receive. SCCI will maintain its adherence to dimensional tolerances per ACI 117 and flatness variance per ACI 318 and provide a stiff broom finish per Spec Section 03 30 20 -3.6.B.1.c. (similar to mat slab).							
2. Extending the FF/FL 72 hour requirement out past the 10 day cure time requirement. SCCI does not want to compromise the immediate moist cure cover installation due to the sensitivity for potential shrinkage cracking in the slab.							
Are either of these requests acceptable?

<b>Co-Author:</b> Skanska USA Civil West California DisRyan Clayton							
<b>REQUEST:</b> See attached CD RFI # 367 SK1 to SK6 for items 1 to 13: 1) Review all the east/west post location dimensions on SK1 to SK6 and confirm they are correct as RFI T-1189 (SK419, CD 313) does not show the dimensions at all Levels. 2) The 18'-6" dimension to the edge of slab minus the 6" set-back dimension per S1-2304 locates the beam 18'-0" from Grid 15. This does not match the 18'-8" supplied in RFI T-1189 (SK 419, CD 313). Please clarify the discrepancy in beam and edge of slab location. 3) Confirm the noted section reference is correct. 4) The actual condition does not reflect what is requested in detail 3/S1-7601. Please clarify what is required. 5) Supply the missing clouded dimensions at (4) locations shown. 6) The detail shows the minimum offset dimension from the center of posts to the W10x22's in order to make the requested connections. Please review this with the actual dimensions and supply revised connection details as necessary. 7) Supply the missing clouded dimensions at (8) locations shown. 8) Supply the missing clouded dimensions at (8) locations shown. 9) Supply the missing clouded dimensions at (8) locations shown. 10) Connection section references are missing. Confirm they are correct as shown. 11) Supply the missing clouded dimensions at (8) locations shown. 12) Connection section references are missing. Confirm they are correct as shown. 13) Supply the missing clouded dimensions at (8) locations shown.			<b>SUGGESTION:</b>			<b>ANSWER:</b> <b>Accept Suggestion:</b> <input type="checkbox"/>	
			1) All East/West post location dimensions are correct as noted on SK1 through SK4. On SK5 and SK6, the dimensions noted as 2' - 1" and 8' - 7 1/8" shall be 1' - 10" and 8' - 10 1/8", respectively. 2) The 18' - 8" dimension was specified in response to RFI T-1189 for the HSS 12x6x5/8 posts and the W12x14 and W14x22 beams only. The W12x26 beam shall be 18' - 2 3/4" from GL 15 so that the flange edge aligns with the edge of slab at the opening. 3) The detail reference shall be 11/S1-7601. 4) See response to 2). Detail 3/S1-7601 will reflect the actual condition at the location. 5) See attached sketch SKS-0341 for dimensions. Refer to Architectural drawings A1-7011, A1-7012, & A1-7013 for locations of all stair stringers. 6) Shear plate connections may be provided at the W10 beams and at similar locations at this stair if the double angle connection cannot fit within the available distance. 7) See attached sketch SKS-0341 for dimensions. 8) See attached sketch SKS-0342 for dimensions. 9) See attached sketch SKS-0342 for dimensions. 10) Confirmed. 11) Dimensions are the same as those at the level below. See attached sketch SKS-0342 for dimensions. 12) Confirmed. 13) Dimensions are the same as those at the level below. See attached sketch SKS-0342 for dimensions

the "Mean Service Temperature."								
T-1291	SSS - Engineer's Comments on 643AC & 645AC	Closed	03/26/2014	04/05/2014	04/04/2014	Potentially	<input type="checkbox"/>	
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company PHIL MILITELLO					
Co-Author: Skanska USA Civil West California DisRyan Clayton			Answered By:Adamson Associates, Inc. George Metzger					
REQUEST:			SUGGESTION:		ANSWER:			Accept Suggestion: <input type="checkbox"/>
See attached CD RFI # 372 SK1 & SK2 for items 1 & 2: Drawings 643AC and 645AC from TG0701-075 SSS - Structural Steel Shop DWG (CS3) GL 12-13 are attached for your reference					1). Agree the 8 7/8" dimension as detail is okay to clear the holes.			
1) The noted approval comment does not help as the plate will foul the rebar holes when located 11" down. See SK2 and confirm the 8 7/8" dimension is acceptable or supply a workable solution.					2). Noted. WD1Q is okay, but we still think that it is more appropriate to show the weld on sheet 643AC, not in Detail 1.			
2) The weld is not missing. It is shown in Detail 1 on drawing 643AC as WD1Q, which is correct per 6/S1-4350 as the weld is non-DCW.								
NOTE: The same applies to drawing 645AC.								
T-1292	BGP - Lower Concourse Electrical Room Layout	Closed	03/26/2014	04/05/2014	03/31/2014	Potentially	<input type="checkbox"/>
