During the installation of the CDSM Connector Wall at Zone 4, DND's drill rig hit unidentified buried obstructions at approx. 14' - 15' below the original grade (El. 0 ~ -1). Please see DND's attached sketch for further details. The exact location and composition of the obstructions are yet to be determined but BBII's preliminary findings indicate that they are timber piles that were neither shown on the original contract plans nor found during buttress area pile extraction. Find attached the as-built drawing that depicts the locations and the top elevations of the timber piles that BBII extracted at that location. Please note that the top elevations of the extracted piles range between 2.40 to 3.11 feet. BBII has just been informed by DND Construction that the other rows of the connector wall cannot be installed while these obstructions are being removed per the committee meeting on 07/11/2011, due to the proximity of the obstruction removal trench to the next two rows. The CDSM connector wall installation has currently ceased until further notice. BBII is currently seeking drill rigs capable of removing these obstructions also as discussed at the committee meeting. T-0195	BSE - Unknown Utility on Beale Street West Side	Closed	01	07/13/2011	07/23/2011	07/14/2011
From: Webcor Construction LP Nhi Tran						
REQUEST:		ANSWER:				
Reference attached photos and drawing		Reference attached photos and drawing				
BBI discovered an 8" utility line during the installation of the wheel wash on the west side of Beale Street. The utility indicated in the attached pictures is not shown on the BSE contract drawings. The alignment (North to South direction) of this utility appears in conflict with the CDSM wall. On 7/12/2011, BBI was able to confirm that this utility is not active. This utility will need to be removed during the pre-trenching operation, to avoid conflict with the CDSM. REQUEST:		ANSWER:				
Reference Sheet GT-2201 and Specification Section 31 56 13		Reference Sheet GT-2201 and Specification Section 31 56 13				
See Note 1 on Sheet GT-2201. DND is concerned that if the row of buttress connector columns (A/26.5 - A/30) immediately adjacent to the shoring wall is installed prior to the shoring wall, the shoring wall will not meet verticality and tolerance specifications due to a difference in strength of the soil on one side and the CDSM on the other side. BBII believes that it will be possible to install the buttress connector columns after the shoring wall without hitting the shoring wall beams.		See Note 1 on Sheet GT-2201. Reference RFI #T-0197, Specification Section 01 35 65 & 31 09 13, and attached map			Reference RFI #T-0197, Specification Section 01 35 65 & 31 09 13, and attached map			
BBII recognizes and agrees Table 5.12-8 is in error, and BBII will refer to FTA Table 12-3 as the correct table. However, BBII believes the TJPA's response provides information that is in conflict with the specifications as well as between the two separate responses provided. BBII requests the following clarifications and confirmations:			BBII recognizes and agrees Table 5.12-8 is in error, and BBII will refer to FTA Table 12-3 as the correct table. However, BBII believes the TJPA's response provides information that is in conflict with the specifications as well as between the two separate responses provided. BBII requests the following clarifications and confirmations:			
1. BBII has applied FTA Table 12-3 per [RFI #T-0197] (BBI RFI 147) to the attached map. The attached map indicates PPV values for continuous construction events, based on the surrounding buildings. Please review and verify this interpretation. Please note that this table, as also indicated in ARUP's response, applies to "continuous construction events".			1. BBII intends on extracting the existing concrete piles located between gridlines 5 and 10 on the south side, using the method approved in RFI#T-0188.1. This involves extracting piles using the vibratory hammer without a steel casing and backfilling the void with structural pre-trench sand. Attached is a drawing indicating the locations of the piles obstructing the CDSM wall. Please confirm that this is acceptable. T-0218	BSE - Timber Lagging Underneath Instrument Protection Slab	Closed	01	08/29/2011	09/08/2011	08/31/2011
From: Webcor Construction LP Nhi Tran						
REQUEST: Reference RFI #T-0214, Sheet GT-5102, and Specification Section 31 56 13 Contract drawing GT-5102 indicates timber lagging being installed underneath the 2' section of the concrete instrumentation protection slab between grids 27 and 30. The original construction sequence foresaw the instrumentation protection slab being installed prior to the adjacent buttress work platform. BBII is planning on pouring the instrumentation slab and the adjacent buttress work platform monolithically on Wednesday 8/31/2011, which makes the timber lagging support redundant. Please confirm that the timber lagging shown on contract drawing GT-5102 is not required to be installed. Your prompt response is highly appreciated.

Reference Specification Section 01 53 13 and Submittal TG0300-201 Item TZ1030-015313A09 response comments (attached)		Reference Specification Section 01 53 13 and Submittal TG0300-201 Item TZ1030-015313A09 response comments (attached)				
Temporary bridge review comments (Submittal TZ1030-015313A09, package TG0300-201) call for the end piers on all three bridges to be relocated to avoid interrupting chamfer rebar (see attached markups). With the information provided to BBII in the plans and specifications, there was no indication that this reinforcement must be avoided, nor was there a required clear zone from the shoring wall to the first pier. Please advise if these piers absolutely need to move, or if their current locations can be accommodated. Increasing the span between the abutments and the first pier will have commercial impacts. REQUEST:			ANSWER:			
Reference RFI #T-0017, #T-0225.1, Sheet U-1110, and Specification Section 31 56 13			Reference RFI #T-0017, #T-0225.1, Sheet U-1110, and Specification Section 31 56 13			
Please refer to RFI No. T-0017, which revised the southwest corner of the CDSM shoring wall alignment. Your attention is also directed to the utility drawing U-1110, which depicts the utilities to be abandoned and the ones to be protected in place with respect to the old CDSM wall alignment. According to U-1110, the PG&E vault on Natoma Street shall be protected in place. However, based on the field layout, the PG&E vault on Natoma St. is in conflict with the southwest corner of the CDSM wall alignment, which was revised per RFI No. T-0017.			Please refer to RFI No. T-0017, which revised the southwest corner of the CDSM shoring wall alignment. Your attention is also directed to the utility drawing U-1110, which depicts the utilities to be abandoned and the ones to be protected in place with respect to the old CDSM wall alignment. According to U-1110, the PG&E vault on Natoma Street shall be protected in place. However, based on the field layout, the PG&E vault on Natoma St. is in conflict with the southwest corner of the CDSM wall alignment, which was revised per RFI No. T-0017.			
Based on BBII's field measurements, the clearance between the PG&E vault on Natoma St. and the centerline of the CDSM wall is 29", which is less than the 36" typical distance required by the contract plans as the minimum clearance between the demarcation lines and the CDSM wall alignment.			Based on BBII's field measurements, the clearance between the PG&E vault on Natoma St. and the centerline of the CDSM wall is 29", which is less than the 36" typical distance required by the contract plans as the minimum clearance between the demarcation lines and the CDSM wall alignment.			
BBII requests the PG&E vault on Natoma St. to be relocated to a safe distance outside the work limits of the revised CDSM wall alignment.			BBII requests the PG&E vault on Natoma St. to be relocated to a safe distance outside the work limits of the revised CDSM wall alignment.

T-0229	BSE - Concrete Time of Discharge Requirement	Closed	01	09/06/2011	09/16/2011	09/08/2011
From: Webcor Construction LP Nhi Tran						
REQUEST:						ANSWER:
Reference Specification 03 30 01						Reference Specification 03 30 01
Per SS 03 30 00, 3.3.D, "Discharge of concrete shall be completed within 1½ hours or before the drum has revolved 300 revolutions, whichever comes first, after the introduction of the mixing water to the cement and aggregates or the introduction of the cement to the aggregates."						Per SS 03 30 00, 3.3.D, "Discharge of concrete shall be completed within 1½ hours or before the drum has revolved 300 revolutions, whichever comes first, after the introduction of the mixing water to the cement and aggregates or the introduction of the cement to the aggregates."
Per ACI 301 (Section 4.1.2.9), "Time of discharge - When it is desired to exceed the maximum time for discharge of concrete permitted by ASTM C 94C/ 94M, submit a request along with a description of the precautions to be taken."						Per ACI 301 (Section 4.1.2.9), "Time of discharge - When it is desired to exceed the maximum time for discharge of concrete permitted by ASTM C 94C/ 94M, submit a request along with a description of the precautions to be taken."
BBII is planning for discharging concrete with the following precautions: As concrete hydration can be controlled for a maximum of 10 hours, BBII suggests discharge of concrete shall not be restricted to 1½ hours. In order to sustain the requirements of Becho, BBII purposes to replace the 1½ hour time restriction to 3 hours with an 80° F maximum temperature requirement.						BBII is planning for discharging concrete with the following precautions: As concrete hydration can be controlled for a maximum of 10 hours, BBII suggests discharge of concrete shall not be restricted to 1½ hours. In order to sustain the requirements of Becho, BBII purposes to replace the 1½ hour time restriction to 3 hours with an 80° F maximum temperature requirement.
Please confirm that this discharging plan is acceptable for Buttress Concrete per ACI 301.						Please confirm that this discharging plan is acceptable for Buttress Concrete per ACI 301.

T-0234	BSE - Buttress Shaft Post Pour Settlement	Closed	01	09/20/2011	09/30/2011	09/22/2011
From: Webcor Construction LP Nhi Tran						
REQUEST:						ANSWER:
Reference Sheet GT-2201 and Specification Section 31 63 29						Reference Sheet GT-2201 and Specification Section 31 63 29
Please be informed that an uncontrolled settlement was observed at Buttress shaft C2, which was poured on Sunday 9/18/2011. The settlement led to the formation of a 13' deep unstable hole on the buttress working pad. After consulting with ARUP representative and W/O's field personnel, BBII/Becho Inc. decided to fill the newly formed hole with concrete to mitigate the settlement risk of the working pad. Additional concrete was poured into the 13' deep hole on Monday 9/19/2011.						Please be informed that an uncontrolled settlement was observed at Buttress shaft C2, which was poured on Sunday 9/18/2011. T-0235	BSE - Unforeseen Reinforced Concrete Slab at GL 7.5 J	Closed	01	09/20/2011	09/30/2011	09/27/2011
From: Webcor Construction LP Nhi Tran						
REQUEST:		ANSWER:				
Reference Sheet D-2210, Specification Section 31 56 13, attached photos and sketch		Reference Sheet D-2210, Specification Section 31 56 13, attached photos and sketch				
While excavating a pre trench at gridline 7.5J close to Natoma Street, BBII uncovered an unforeseen reinforced concrete slab. This slab is 3ft thick, uncovered at grade and a section of it is in the direct line of the proposed CDSM wall. Indicated at this location in drawing D-2210 are grade beams and pile caps which BBII assumes will be encountered under this mat slab. However, this slab is not indicated on contract drawing D-2210. Reference Sheet D-2210 (attached), Specification Section 31 56 13, and attached photos		Reference Sheet D-2210 (attached), Specification Section 31 56 13, and attached photos				
While DND were drilling at panel 28 and 29 on grid line 1E at the locations of piles 839-843, an unknown section of concrete was encountered. The concrete was found at a depth of 9.5ft. The quantity of concrete is unknown at this point. The concrete is not indicated on contract drawing D-2210. It is in direct conflict with the CDSM shoring wall and must be removed. Shown below [attached] are photos of the debris removed from the excavation. REQUEST:						ANSWER:
Reference Specification 01 53 30						Reference Specification 01 53 30
Temporary Bridge Specification 01 53 13 (1.6H) requires the welding qualifications for the bridges to be in accordance with AWS D1.5 "Bridge Welding Code", however BBII's design was based on AWS D1.1 "Structural Welding Code" as specified in General note 3.2-A4.2 of Sheet SH-0100. BBII and their designer felt AWS D1.1 is more applicable for the temporary bridge structure for the following reasons:						Temporary Bridge Specification 01 53 13 (1.6H) requires the welding qualifications for the bridges to be in accordance with AWS D1.5 "Bridge Welding Code", however BBII's design was based on AWS D1.1 "Structural Welding Code" as specified in General note 3.2-A4.2 of Sheet SH-0100. BBII and their designer felt AWS D1.1 is more applicable for the temporary bridge structure for the following reasons:
- The members that make up BBII's temporary bridge consists of readily available standard grade mill rolled shapes, comprised of a variety of base metals (A36, A53, A572, A992, A500, and A252) which are joined by simple prequalified joints (fillets). D1.1 provides the flexibility to weld all of these base metals in any combination utilizing prequalified procedures, since they are all in the same base metal group. D1.5 only allows prequalified welding of A709 plate material only.						- The members that make up BBII's temporary bridge consists of readily available standard grade mill rolled shapes, comprised of a variety of base metals (A36, A53, A572, A992, A500, and A252) which are joined by simple prequalified joints (fillets). D1.1 provides the flexibility to weld all of these base metals in any combination utilizing prequalified procedures, since they are all in the same base metal group. D1.5 only allows prequalified welding of A709 plate material only.
- BBII's temporary bridge structure contains structural tubing (piers and rails), which D1.5 does not cover tubing						- BBII's temporary bridge structure contains structural tubing (piers and rails), which D1.5 does not cover tubing
- The bridge as designed has short spans and very simple welded connections. All welds shown are fillet welds (mostly single pass). Additionally there are no complete penetration welds as are typically seen on steel plate girder bridges.						- The bridge as designed has short spans and very simple welded connections. All welds shown are fillet welds (mostly single pass). Additionally there are no complete penetration welds as are typically seen on steel plate girder bridges.
- The life span of these temporary bridges are less than 5 years						- The life span of these temporary bridges are less than 5 years
- The temporary bridge's intended use and the site specific geometry restraints led to a steel framing design much more similar to a structural steel building than to a typical Highway bridge. The steel columns with angle cross-bracing, and the girders and cap beams as detailed are similar to building with columns and floor beams.						- The temporary bridge's intended use and the site specific geometry restraints led to a steel framing design much more similar to a structural steel building than to a typical Highway bridge. The steel columns with angle cross-bracing, and the girders and cap beams as detailed are similar to building with columns and floor beams.
The submittal review did not take exception to the general note specifying D1.1. therefore please confirm it is acceptable to submit weld procedures and welder qualifications per AWS D1.1 as specified by the bridge's Engineer of Record.						The submittal review did not take exception to the general note specifying D1.1. therefore please confirm it is acceptable to submit weld procedures and welder

T-0238	BSE - Zone 1 CDSM Crossing Over Existing Wall	Closed	01	09/26/2011	10/06/2011	09/29/2011
<div><div><div>From: Webcor Construction LP</div><div>Nhi Tran</div></div><div>REQUEST:<p>Reference Sheet GT-5101, Specification Section 31 56 13, attached photos and sketch</p><p>Please address the following information request from BBII's sub contractor DND:</p><p>"The new CDSM shoring wall crosses an existing CDSM wall at 2 locations. Following CR T-005B, both of these crossings are perpendicular to the existing CDSM wall, as shown in Note 1 on GT-5101. Note 1 shows the new wall making a jog to avoid hitting the beams of the existing CDSM wall. The detail shown on contract plan GT-5101 is constructible only if the existing CDSM wall was built exactly as shown, without any room for construction tolerances for both the new and existing wall. Instead of trying to install this section of the CDSM wall according to the detail shown on GT-5101, which would potentially cause damage to the CDSM equipment, DND proposes to remove the existing CDSM beams that are in conflict. The contract plan GT-5101 shows two CDSM panels to jog around the existing beam and one offset panel parallel to the new wall.</p><p>DND's proposed solution would eliminate the 2 panels in the jog but still maintain the additional offset panel parallel to the wall line. This additional offset panel would act as insurance so a seal is maintained through any deflection caused by the hard in-situ soil mix. This would present a potential cost savings to the project (due to 2 less panels being installed), providing the conflicting beams can be successfully removed.</p><p>DND has mobilized a drill rig with an auger to this area to pre-drill the wall prior to the removal of beams. This will substantially reduce the amount of vibration that will be required to remove the beams. DND proposes to utilize the same method at the other wall crossing near Natoma Street. Is this proposed method of removing the existing beams and soil mixing through the existing CDSM wall acceptable?"</p></div><div>ANSWER:<p>Reference Sheet GT-5101, Specification Section 31 56 13, attached photos and sketch</p><p>Please address the following information request from BBII's sub contractor DND:</p><p>"The new CDSM shoring wall crosses an existing CDSM wall at 2 locations. 	REQUEST: Reference Specification Section 31 56 13 and attached meeting minutes and photos The brick wall remaining from the 580 Howard building, at grid line 2 J, is protruding into the CDSM wall limits, as noted in BBII's previous RFI #203 (The question was responded by TCCO at the job site meeting on 9/6/2011. Refer to the attached meeting minutes). While attempting to remove, BBII has discovered that the fence and patio pavement are founded on this remaining portion of brick wall. This condition does not allow for the removal of the wall without damage to the fence and patio. Please provide direction on how to proceed.

T-0242	BSE - Becho's Request For Rock Classification Data	Closed	01	09/29/2011	10/09/2011	10/11/2011
	From: Webcor Construction LP Nhi Tran					
	REQUEST: Reference Sheet GT-2201, Specification Section 31 63 29, and attached letter from Becho Please find attached BBII's sub-contractor Becho's letter that requests the following information: "... during the drilling of buttress shaft M4 rock socket, at a depth of approximately 250 feet below ground level, Becho encountered rock formations of unmeasured hardness. At a depth of 250 feet, Becho's steel grab, used for rock drilling, fractured under the increased stress. Please see attached photos. The incident occurred between the hours of 9.30 am and 10.00 am on Wednesday, 09.28.11. BBII immediately notified W/O and called for an emergency meeting to discuss the hardness of the rock formation and the status of drilling. During the meeting, Arup confirmed and accepted the 250 foot depth to be adequate and sufficient to stop the rock socket drilling. Immediately, following Arup's confirmation at 11.09 am, Becho proceeded to clean the remaining rock debris from the bottom of the shaft and prep for air lifting operation. The total down time recorded as a result of the incident is 68 minutes, not including adjustments of airlift, tremie pipe and repair of grab.

T-0247	BSE - Proposed Corrective Action Plan for Sunken CDSM Soldier Piles From: Webcor Construction LP Masashi Kojima REQUEST: Reference Specification Section 31 56 13 Please address the following information request from BBII's sub contractor DND: "As of to date, the following three soldier piles have sunk below grade during their placement into the CDSM wall. - Beam # 154 installed on 09.08.11 - Beam # 631, installed on 09.29.11 - Beam # 602, installed on 10.01.11 DND was unable to recover those piles and set them to their plan elevations without disturbing the adjacent beams that were already in place. To mitigate this issue, DND proposes to conduct the below course of remedial action: 1) Wait until mass excavation commences. Excavate with caution the locations, and determine the top elevation of the sunken beams. 2) Provide this information to the Engineer for evaluation. 3) Implement corrective action based on Engineer's evaluation. Possible corrective measures are: a. No action necessary. The strength of the CDSM material may be sufficient to support the unreinforced depth. b. Install lagging between the adjacent beams above the top of the sunken beam. c. Splice a beam on the top of the sunken beam and backfill with low strength concrete. Please advise, if the proposed course of remedial action and/or any of the three possible corrective measures are acceptable."	Closed	01	10/10/2011	10/10/2011	10/12/2011

T-0251.1	BSE - Drawings To Coordinate Trestle Pile Locations	Closed	01	10/14/2011	10/24/2011	11/03/2011
	<p>From: Webcor/Obayashi Joint Venture Nhi Tran</p>					

ANSWER:

RFI T-0251 original inquiry:
During the 10/12/11 trestle submittal review meeting, statements were repeatedly made with regard to incrementally complete underground drawings in which to coordinate trestle pile locations. As of 10/13/11, W/O has not received any future package documents accompanied with the direction to coordinate with the TG03 documents. If such documents are available please make available the entire series to include, however not limited to, A, S, M, E, & P.

RFI T-0251.1 Clarification to RFI T-0251:
The TG03 package was executed with limited documents in which to coordinate future packages with. Please provide all documents the TJPA requests BBII coordinate the TG03 package with and to.

As it pertains to structural columns (round/pill/rectangle/etc.) please provide the minimum clear distance to trestle pile penetrations in the mat slab so BBII may coordinate.

Should there remain any ambiguity in the inquiry above please indicate the nature of misunderstanding.

T-0252	BSE - Buttress Rebar Cage Length Adjustment	Closed	01	10/19/2011	10/29/2011	10/24/2011
From: Webcor Construction LP Nhi Tran						
REQUEST: Reference RFI #T-0216, #T-0239, Sheet GT-2201, Specification Section 31 63 29, and attached sketch Per the response to RFI T-0239, BBII needs to extend the length of rebar cages to accommodate buttress shafts that are deeper than 240'. The exact length of the rebar cage cannot be known until the drilling of the adjacent shaft. Due to this uncertainty, and the long lead time required to fabricate cages with varying lengths, BBII proposes to fabricate all rebar cages to a pre-extended length of 260'. Once the depth of the adjacent shaft is known, the final length of the rebar cage will be adjusted by cutting the top of the rebar cage and the CSL tubes to the desired length. The length of the bottom "structural cage" section that consists of 24 Ea. vertical rebars will remain unchanged at 186'. The length of the top "setting cage" section that consists of 8 Ea. vertical rebars will be adjusted as described above. Please refer to the attached documents and the original shop drawings for the "structural cage" and the "setting cage" details. BBII proposes to accommodate this change at no additional cost to TJPB beyond the bid item quantity payment per drilled shaft lengths. Please advise, if it is acceptable. Follow up to RFI T-0253 and the meeting held 11/16/11			Follow up to RFI T-0253 and the meeting held 11/16/11			
As noted in the 11/16/11 meeting, the cross lot bracing "struts" are supported by the Trestle substructure and analysis requires limiting trestle deformations to be compatible with the allowable strut deflections (approximately 2"). As a result the "push over" analysis as required by the AASHTO Seismic Design Criteria "SDC" (requirement of bridge spec 01 53 13) is not applicable. This was discussed in detail during the 11/16 meeting and it was concurred that due to unique structural configuration and deflection requirements, an alternate analysis method other than the SDC would be required. Discussions were had that a site specific elastic analysis using the 475 year seismic loads that is controlled by the deflection limits of the cross lot bracing would be necessary. Please confirm that a "push over" type analysis of SDC will not be required for the trestle and that the attached detailed Design Criteria (and analysis method) is acceptable. 	<p>Per TCCO Request RFI being submitted in lieu of a submittal:</p> <p>Based on the response to Webcor Submittal No. TG0300-206.1, BBII has shifted the bridge superstructure west between the grid lines 34 and 34.8 beams as directed. This necessitates the installation of 2 rows of 5 bridge columns as shown in the attached drawings. The west row will be located 7' east of GL 34 and the east row will be located a further 25' east as shown. All 10 columns have been positioned clear of the internal bracing. The sidewalk will be located in Lot N.</p> <p>There are two options for the location of east bridge column 3 as shown in the attached layout drawing.</p> <p>- Option 1 is the preferred option. This is located on E line 10'-6" west of Grid line 35 (Pile exclusion zone penetration approved via response to RFI 264.3).</p> <p>- Option 2 is located a further 5' west of option 1 to the location on the TG-06 drawing. The impacts of option 2 to the superstructure are not known at this time. The irregular alignment of the eastern row of piles in option 2 will create local stress concentration in both the diaphragm and superstructure in the longitudinal seismic analysis. This is not a preferable configuration.</p> <p>Please confirm the location of the superstructure and the piles. Advise on the location of east bridge pile 3.</p>

T-0266	BSE - Moratorium Conflict With Phase 2 Utilities In 1st Street	Closed	01	11/23/2011	11/23/2011	12/06/2011
	From: Webcor Construction LP Manuel Saldana					
	REQUEST: BBII is in receipt of the moratorium waiver expire date of 12-09-2011. BBII/PEC will not be able to complete the Phase II utility work by 12/9/11 without accelerating the schedule. Our original request for extension was December 19, 2011. A 12/9/11 completion date may be achievable if PEC is allowed to work 10 hr shifts during the day beginning 11/28 through 12/2 as well as working on 12/3 and 12/4. In addition, we propose to have a separate night crew to work near / around the Minna Street intersection to alleviate impacts to heavy demand of day traffic. The majority, if not all, of the demolition can occur during the dday to mitigate noise at night. The night work would need to begin on 11/28 and run through 12/2. Please keep in mind that implmenting an accelerated schedule may also impact PG&E. We have no control over their work and the completion of the utlity tie-ins and Mandral testing is contingent on PG&E's availability per the new adjusted completion date. In summary we are requesting direction for the following items to meet the 12/9/11 moratorium deadline: 1) W/O to permit BBII / PEC to work the extended hours, and night shift i.e. 10 Hours Days and Night work operations, 2) Permit from MTA to extend working hours (closure times) during the day 3) Permit from MTA and DPW to work at night within lane closures 4) Permit from TJPA to work in Zones 1 & 2 at night 5) Agreement / Approval for compensation of additional cost (premium time and or shift rate) BBII will have magnitude of cost for the Monday morning discussion					ANSWER: BBII is in receipt of the moratorium waiver expire date of 12-09-2011. T-0269.2	BSE - Zone 2 Free Pull Pile Extraction Test Section	Closed	01	05/01/2012	05/11/2012	05/04/2012
From: Balfour Beatty Infrastructure, Inc. Ural Yal						
REQUEST:			ANSWER:			
Reference: BBII 4/30/12 Ground Deformation Control Drawing			Reference: BBII 4/30/12 Ground Deformation Control Drawing			
BBII are proposing to perform "free pull" pile extraction on a "test section" in Zone 2. The proposed piles will be extracted near GL14, close to CDSM wall on the north side using a "non ground deformation control method" by free pulling each pile without using steel casing. Inclinator (I-011) located close to GL 14 will be monitored during the test. This test section will give the information needed to determine: 1) If free pulling the piles using a non ground deformation control method affects the CDSM wall by causing movement. 2) If it is a suitable method to adopt for removing the remainder of the piles in Zone 2 located outside the "trestle area".			BBII are proposing to perform "free pull" pile extraction on a "test section" in Zone 2. T-0270	BSE - Clarification for Existing Ground Water Elevation	Closed	CR	12/28/2011	01/07/2012	12/30/2011
From: Webcor Construction LP David Fields						
REQUEST: Reference: 31-23-29 and Attached Document As discussed during the meeting on 12/22/11, to help obtain an accurate dewatering model, BBII is requesting the recent piezometer data for Zones 1 and 2. In addition, BBII has reviewed the data for piezometers 1182, 1229 and 1255 located adjacent to 301 Mission St (see attachment) and would like to clarify the initial ground water level to use in the model for Zone 4. Based on our review, the existing natural groundwater condition fluctuates between 1.6 E.L and -8.1 E.L in this area. BBII would like to agree upon a starting groundwater elevation of -5.0 E.L for Zone 4. Also, BBII would like clarification as to the base groundwater level to use for Zones 1, 2 and 3 based on the project data.

T-0273	BSE - Clarification for Driveway Desgin at 540 Howard CR -018R2	Closed	01	01/30/2012	02/09/2012	02/06/2012
From: Webcor Construction LP David Fields						
REQUEST:			ANSWER:			
Reference: Attached BBI Sketch CRT-018RI directs BBII to complete a 12ft driveway at the 540 Howard Street. The existing conditions/location of the curb, USPS facilities and water fire hydrant prevents the driveway from being installed within compliance with the DPW and ADA standards. DPW/Tumer/W/0 and BBII discussed various solutions to bring the driveway into confrmance with ADA and DPW standards at the field meeting held on January 17th 2012 and again 01/24//2012. Pursuant to the field meeting and direction of CRT-018R2, BBII is requesting detailed plans to allow for construction of a compliant driveway at 540 Howard Street. BBII has been directed in the field by W /0/Tumer, to complete modification to the driveway at 540 Howard Street. Per our field meeting please refer to the attached drawing, indicating BBII understanding on the modifications required. Please confirm the modification per the attached drawing is compliant with City and ADA driveway standards.			Reference: Attached BBI Sketch CRT-018RI directs BBII to complete a 12ft driveway at the 540 Howard Street. The existing conditions/location of the curb, USPS facilities and water fire hydrant prevents the driveway from being installed within compliance with the DPW and ADA standards. DPW/Tumer/W/0 and BBII discussed various solutions to bring the driveway into confrmance with ADA and DPW standards at the field meeting held on January 17th 2012 and again 01/24//2012. T-0279	BSE - Trestle Welding Code Compatibility	Closed	01	02/27/2012	03/08/2012	03/20/2012
From: Balfour Beatty Infrastructure, Inc. Shad Gardner						
REQUEST:		ANSWER:				
Reference: ASHTO/AWSS D1.5M/D1.5:2008 SH-0200		Reference: ASHTO/AWSS D1.5M/D1.5:2008 SH-0200				
The Temporary Access Trestle Design submitted in December specified AWS 01.1 as the required welding code. During the review process the reviewers requested that the welding code be changed to AWS 01.5- Bridge Welding Code. This request was complied with by revising general note A5.2 on the conformed trestle drawings.		The Temporary Access Trestle Design submitted in December specified AWS 01.1 as the required welding code. During the review process the reviewers requested that the welding code be changed to AWS 01.5- Bridge Welding Code. This request was complied with by revising general note A5.2 on the conformed trestle drawings.				
Since issuing these documents, BBII has been informed by both our shop and field welding inspectors that a compatibility discrepancy exists between the 01.5 welding code and base metals/ member shapes originally specified in the trestle design.		Since issuing these documents, BBII has been informed by both our shop and field welding inspectors that a compatibility discrepancy exists between the 01.5 welding code and base metals/ member shapes originally specified in the trestle design.				
D1.5 is specifically intended for use on bridges and it is not intended for use on "structures composed of structural tubing" as noted in section 1.1.1 attached. This causes a discrepancy because unlike most bridges, our trestle contains a substructure completely comprised of structural steel tubing. (ie Pipe pile, lateral and longitudinal X-bracing).		D1.5 is specifically intended for use on bridges and it is not intended for use on "structures composed of structural tubing" as noted in section 1.1.1 attached. This causes a discrepancy because unlike most bridges, our trestle contains a substructure completely comprised of structural steel tubing. (ie Pipe pile, lateral and longitudinal X-bracing).				
In addition to the pipe incompatibility, there is also an incompatibility between the specified base metals. 01.5 requires base metals to be ASTM A709 and the trestle design specified a variety of different base metals depending on their structural shape as shown in general note 2.28 also attached Since Article 1.1.1 of 01.5 permits the Engineer to choose to reference an alternate applicable welding standard when fabrication or structure components are not specifically addressed within its sections, BBII proposes keeping AWS 01.1 as the specified welding code because of its base metal compatibility, but adding a supplemental trestle specific welding specification written by the EOR that increases the quality control to a level equal to that of 01.5. This supplemental specification will include applicable portions of 01.5 section 3 "Workmanship" and section 3 "Inspection" when the requirements are greater than that of 01.1. (ie: fit-up tolerances, NOT frequency, etc).		In addition to the pipe incompatibility, there is also an incompatibility between the specified base metals. 01.5 requires base metals to be ASTM A709 and the trestle design specified a variety of different base metals depending on their structural shape as shown in general note 2.28 also attached Since Article 1.1.1 of 01.5 permits the Engineer to choose to reference an alternate applicable welding standard when fabrication or structure components are not specifically addressed within its sections, BBII proposes keeping AWS 01.1 as the specified welding code because of its base metal compatibility, but adding a supplemental trestle specific welding specification written by the EOR that increases the quality control to a level equal to that of 01.5. T-0285	BSE - Buttress Rebar Cage Length Adjustment	Closed	01	03/21/2012	03/31/2012	03/26/2012

Number	Subject	Status	Choice Required	Date Created	Date Required	Date Answered
<p>From: Balfour Beatty Infrastructure, Inc. Ural Yal</p> <p>REQUEST:</p> <p>Please refer to RFI T-0252, where the Engineer accepted BBII's proposal of fabricating the buttress rebar cages to a pre-extended length of 260' in order to accommodate the buttress shafts that are deeper than 241'. In RFI T-0252, BBII had suggested to extend the overall length of all rebar cage assemblies to 260' by increasing the length of the top "setting cage" 19 feet more. In this proposal, the lengths of structural cage segments were to remain unchanged.</p> <p>BBII's proposal of extending the length of the setting cage by 19' got accepted with the added requirement of splicing vertical rebar extensions on the job site. BBII takes exception to the added requirement of splicing vertical rebar extensions on the job site, which would lead to an increase in durations of the rebar cage installations.</p> <p>In order to eliminate splicing, BBII now proposes to fabricate the setting cage segments up to 9 feet longer than shown on the plans. The structural rebar cage segment lengths will remain unchanged. The top of the structural cage sections will be within up to 9 feet proximity from the top of concrete. This proposal will accommodate the rebar cages with a maximum total length of 250' (241 '+9'=250').</p> <p>If the rebar cage assembly needs to be longer than 250 feet, BBII will direct the rebar cage manufacturer to also extend the bottom structural cage segment by an added distance equal to the required total length of the rebar cage assembly less 250 feet.</p>						<p>ANSWER:</p> <p>Please refer to RFI T-0252, where the Engineer accepted BBII's proposal of fabricating the buttress rebar cages to a pre-extended length of 260' in order to accommodate the buttress shafts that are deeper than 241'. Per 9/12/12 Turner BSE Progress Meeting, Adamsons Associates(AA) requested BBII to submit a RFI requesting distance tolerances for the proposed micropile layout relocations. Please see BBII's verbage below in response.		Per 9/12/12 Turner BSE Progress Meeting, Adamsons Associates(AA) requested BBII to submit a RFI requesting distance tolerances for the proposed micropile layout relocations. Please see BBII's verbage below in response.				
The response comments provided to submittal TA1020-316333A12.2 (TG0300-622.2) for micropile stated that the submitted micropile layout was unacceptable, but that the micropile locations shown in the TG0600 (ASI 0097) documents are acceptable. The attached marked up coordination drawings show the locations of the TG0600 documents micropile locations compared to various overhead horizontal and vertical obstructions. The obstructions considered in this comparison include trestle pile and bracing; internal bracing struts, supports, and pin piles; bridge piles; and the buttress walls. The submitted micropile locations are also shown.		The response comments provided to submittal TA1020-316333A12.2 (TG0300-622.2) for micropile stated that the submitted micropile layout was unacceptable, but that the micropile locations shown in the TG0600 (ASI 0097) documents are acceptable. The attached marked up coordination drawings show the locations of the TG0600 documents micropile locations compared to various overhead horizontal and vertical obstructions. The obstructions considered in this comparison include trestle pile and bracing; internal bracing struts, supports, and pin piles; bridge piles; and the buttress walls. The submitted micropile locations are also shown.				
The equipment that will be used to install the micropiles require 2.5 feet clearance from the center of the micropile hole to surrounding obstructions. The circles and arrows on the attached drawing indicate which micropiles do not have the required clearance and which direction of shift is preferred. The maximum shift is 4 feet, which occurs when a micropile is located directly below an internal bracing strut. Please confirm that the micropile locations shown on the TG0600 documents are to be used for the micropile layout, and that a shift of up to 4 feet in the directions shown on the attached drawings is acceptable.		Please confirm that the micropile locations shown on the TG0600 documents are to be used for the micropile layout, and that a shift of up to 4 feet in the directions shown on the attached drawings is acceptable.				
As an alternative, BBII would prefer to use the submitted layout which has fewer conflicts. Micropiles would be eliminated or added per notes 2 and 3 respectively on sheet ML-1 of the returned submittal. The submitted micropile layout contains 1858 each micropiles. The TG0600 documents contain 1860 each micropiles. By eliminating piles per comments 2 and adding piles per comment 3, the total quantity would be approximately the quantity in the TG0600 documents. T-0328	BSE - Re-Bracing Elevations	Closed	01	10/17/2012	10/17/2012	11/01/2012
From: Webcor Construction LP David Fields						
REQUEST: Drawing GT-1112 stage 13 shows a maximum of 16' or 17' between level B struts and the lower level of rebracing. For Case West, level B supports are at elevation -3 ', resulting in the lower level of rebracing supports at elevation -20'. Internal bracing drawing sheet SH-4000 shows W21 strut support members on the underside of level C bracing. In order to install the lower level rebracing and accommodate the existing level C bracing, the lower level bracing will need to be installed at elevation -22'. Similarly, the top level of rebracing is called out in stage 15 to be 3' below level A bracing. Top level rebracing will need to be 5' below level A bracing in order for struts to be clear of the overhead strut supports. Please confirm that the 17' and 16' maximum dimensions in stage 13 and 3' maximum dimension in stage 15 will not be required if the rebracing design calculations show that it is acceptable.						ANSWER: Drawing GT-1112 stage 13 shows a maximum of 16' or 17' between level B struts and the lower level of rebracing. Similarly, the top level of rebracing is called out in stage 15 to be 3' below level A bracing. Top level rebracing will need to be 5' below level A bracing in order for struts to be clear of the overhead strut supports. Please confirm that the 17' and 16' maximum dimensions in stage 13 and 3' maximum dimension in stage 15 will not be required if the rebracing design calculations show that it is acceptable.

T-0341.1	BGP - Type D8 Column Serpentine Ties	Closed	CR	12/04/2013	12/11/2013	12/10/2013
<p>From: Webcor Construction LP Jackson Tukuafu</p>						
REQUEST:			ANSWER:			
<p>Please refer to drawing S1-3305 and RFI T-0341.</p> <p>The response to RFI T-0341 accepted the use of one-piece/serpentine ties for the columns as proposed by Gerdau. Gerdau has found that the fabrication of a single piece serpentine tie for the type D8 column could pose safety risks. Therefore, Gerdau is proposing to fabricate the type D8 column ties with two pieces of serpentine ties. See the attached Gerdau sketch SK- T-0341.1 for details.</p> <p>Please confirm the alternate serpentine ties as shown in the attached sketch is acceptable.</p>			<p>Please refer to drawing S1-3305 and RFI T-0341.</p> <p>The response to RFI T-0341 accepted the use of one-piece/serpentine ties for the columns as proposed by Gerdau. T-0351	BGP - Grace Eclipse Floor 200	Closed	01	11/26/2012	12/06/2012	11/26/2012
From: Webcor Construction LP Robert Kjome						
REQUEST: Reference Specification: 03 30 20 Eclipse Floor and Eclipse Plus admixtures were replaced by a new generation of drying shrinkage reducing admixtures Eclipse Floor 200 and Eclipse 4500. This new family of admixtures is equivalent to BASF Tetraguard and based on our experience we should be able to achieve project specifications on drying shrinkage. CEMEX has been using the two new products for more than two years with excellent results. Attached, please find the communication from Grace Construction Products about the two new shrinkage reducing admixture products. Please verify these eclipse products are acceptable for use on this project. T-0360	BSE - Mud Slab Welded Wire Reinforcement	Closed	01	12/21/2012	12/28/2012	01/03/2013
From: Webcor Construction LP Robert Kjome						

<i>Number</i>	<i>Subject</i>	<i>Status</i>	<i>Choice Required</i>	<i>Date Created</i>	<i>Date Required</i>	<i>Date Answered</i>
	<p>REQUEST:</p> <p>Specification Section: 03 20 01</p> <p>Regarding the concrete reinforcement within the mud slab, BBII would like the option of using Deformed Welded Wire Reinforcement (DWR) in lieu of rebar reinforcement. DWR strictly conforms to ACI 318 and offers multiple advantages to rebar reinforcement. Particularly, DWR will help reduce the risk of inclement weather damage to the subgrade, due to a quicker installation which will leave the subgrade exposed for a shorter period of time. Please see attached supporting documentation.</p> <p>Please confirm this is acceptable.</p>					
T-0361	BGP - Slab Penetration Sleeve Slipsheets	Closed	01	01/03/2013	01/13/2013	01/11/2013
	From: Webcor Construction LP Joanne Filipas					
	<p>REQUEST:</p> <p>Reference S1-3003:</p> <p>The existing piles are to be wrapped with a 10 Mil polyethylene (for 30" & 36" sleeves) or 112" compressible material (for 48") slipsheet between the sleeve and the piles. Because of the minimal distance between the sleeve weld and the existing pile, the slipsheet at the weld locations will be damaged from the heat of the welding. Is this acceptable?</p> <p>If the slipsheets cannot be damaged by the heat of the welding, can the slipsheets have a 3" or 4" vertical break in them at the locations of the vertical welds to avoid the bum damage? This would create two slipsheet breaks or gaps per pile penetration. Is this acceptable?</p>

BBII is in receipt of reply to RFI T-0371, which suggests that piles which have experienced an impact be rejected and re-drilled. Acceptance of piles is based on specification 31 63 33 3.2.L. Per the recommendation of the Micropile Engineer (Drill Tech's Steve McCullough) and the anchor bar manufacturer (DSI), the piles were bent back to plumb and retested on 02/01/2013. Attached are the passing proof test results for the piles in question. Please confirm that these piles are accepted. T-0380	BSE - K9 Buttress shaft CSL Tubes	Closed	01	01/28/2013	02/07/2013	02/14/2013
From: Webcor Construction LP Lynn Kowallis						
REQUEST:						
Reference attached sketch and spreadsheet.						
We were informed by Harris-Salinas that they are short of CSL tubes for the last rebar cage K9. Since K8/K9 interface will not be CSL tested, per the agreed upon list of shaft interfaces (generated by Arup and BBII), it is in BBII's opinion that it would be more beneficial to the shaft if it is installed without CSL tubes. The benefits include the following: There would be no need to grout the holes; no voids; and there would be more concrete in the shaft. If CSL tubes are required, we are proposing to install them per the attached drawing.						
Please advise.

T-0389	BGP - Cast-in-place Concrete Shrinkage	Closed	01	02/11/2013	02/21/2013	02/22/2013
From: Webcor Construction LP Lynn Kowallis						
REQUEST:			ANSWER:			
Ref: Specification Section 03 30 20 1.7.F.3.i			Ref: Specification Section 03 30 20 1.7.F.3.i			
Please reference attached ACTM C 157, pages from SEONC San Francisco Bay Area Concrete Aggregate Report 2008, and Specification Section 03 30 20- 1.7.F.3.i. ASTM 157 section 4.3 states that if the condition of mixing, curing sampling and storage other than specified in the test method are required, they shall be reported but are not to be considered as standard conditions of this test method. In section 6. Sampling, it requires samples from batches made in the laboratory and the Note 2 states that field cast specimens can show up to twice as much drying shrinkage as laboratory cast specimens from the same materials and proportions. Furthermore, SEONC 2008 states that "actual shrinkage of the concrete in service and in field-cured tests will not necessarily correlate closely with the trial batch test results." For these reasons SCCI believes that shrinkage tests from samples at the job site can not verify the specified shrinkage limit and can not be compared with the laboratory tests.			Please reference attached ACTM C 157, pages from SEONC San Francisco Bay Area Concrete Aggregate Report 2008, and Specification Section 03 30 20- 1.7.F.3.i. For these reasons SCCI believes that shrinkage tests from samples at the job site can not verify the specified shrinkage limit and can not be compared with the laboratory tests.			
Please confirm that shrinkage results from the samples taken in the field will not be directly compared to laboratory tests, and consequently used as basis for rejection of material.			Please confirm that shrinkage results from the samples taken in the field will not be directly compared to laboratory tests, and consequently used as basis for rejection of material.

T-0396.1	BGP - Drainage Pits Embedded Frame Details and Curb Frame Steel and Anchor C Closed		01	03/04/2013	03/14/2013	03/08/2013
From: Webcor Construction LP	Lynn Kowallis					
REQUEST:						ANSWER:
Ref: 8/P1-6001, DS-0001, RFI # 396	Detail 8 on P1-6001 does not specify the thickness of the frame material, nor any of the Specs and Addendums. Based on RFI 396, Designer specified for the frames to be 5/8" thick. However SCCI believes that 1/4" thick frame is adequate to satisfy "heavy duty requirement". SCCI's has estimated the Work to fabricate the embedded grate frame out of the stock angles (2x2x1/4" and 3x2x1/4"), per attached SCCI's drawing DS-0001. Further to RFI 396, please answer the following: 1. Can stock angle sizes noted above be used for construction of the embedded frames? 2. Could Nelson studs be used in lieu of the anchor clips, as noted on the attached drawing? Please note that increase of the material size consequently increases the cost of furnished material, and therefore will constitute a compensable change. T-0404	BGP - Replacement of Lap Splice with Mechanical Couplers From: Webcor Construction LP Lynn Kowallis	Closed	01	02/22/2013	03/04/2013	03/06/2013
REQUEST: Ref: S1/3201 Please verify that it is acceptable to replace a lap splice with an approved mechanical coupler (500 series coupler) as needed to support the means and methods of construction. The current location being considered is the outside face wall vertical lap splice between the dowel extending from the mat slab and the typical wall vertical reinforcing at the bottom of the wall. See attached plan sheet S1-3201 to reference the proposed location. Should this be acceptable please verify: 1. The mechanical coupler can infringe upon the 2" clearance as the diameter of the coupler is greater then that of the actual reinforcing. 2. Also verify that the couplers can be installed at one typical elevation similar to that of the other couplers depicted on the inside face wall curtain. T-0411	BGP - Welding for Penetration Sleeves	Closed	01	02/28/2013	03/10/2013	03/08/2013
From: Webcor Construction LP Robert Kjome						
REQUEST:		ANSWER:				
Reference Specification: 05 50 10 Reference Submittal No: TG0600-036		Reference Specification: 05 50 10 Reference Submittal No: TG0600-036				
Per the Submittal TG0600-036 comments, the intermediate ring, 3" horizontal weld must have a removable backer bar. Is it acceptable to have a double beveled groove weld replace the single bevel groove with a back bar? Eliminating the backer bar in this weld and having a double beveled groove instead is more efficient.		Per the Submittal TG0600-036 comments, the intermediate ring, 3" horizontal weld must have a removable backer bar. Is it acceptable to have a double beveled groove weld replace the single bevel groove with a back bar? Eliminating the backer bar in this weld and having a double beveled groove instead is more efficient.				
Secondly, the Submittal TG0600-036 comments address the field welding of the penetration sleeve collars to be conducted after the trestle pile is to be removed. Is it acceptable to weld a full collar with cap in the shop? The assembly would arrive onsite to be welded in place as originally intended by the designer.		Secondly, the Submittal TG0600-036 comments address the field welding of the penetration sleeve collars to be conducted after the trestle pile is to be removed. T-0414.2	BGP - Cast Iron Pipe Support	Closed	01	05/02/2013	05/15/2013	05/13/2013
From: Webcor Construction LP Ian Corcorran						
REQUEST:		ANSWER:				
Reference: RFI T-0414 and T-0414.1		Reference: RFI T-0414 and T-0414.1				
Per the response to RFI T-0414.1, the Designer states that the protection slab will be sloped with a 4" maximum slab thickness. SCCI does not plan to pour the protection slab with a slope. SCCI plans to pour the protection slab level and keep the protection slab consistently 4" thick.		Per the response to RFI T-0414.1, the Designer states that the protection slab will be sloped with a 4" maximum slab thickness. SCCI does not plan to pour the protection slab with a slope. SCCI plans to pour the protection slab level and keep the protection slab consistently 4" thick.				
The Designer suggests using a pipe support with a grouted plate for scenarios where the drilled holes may get too close to the membrane. It would appear that grouted plate would still require some type of embedded anchor. By adding the grout, the manufacturer's embedment depth for the anchor is shortened and the tensile (pull-out) strength will be reduced.		The Designer suggests using a pipe support with a grouted plate for scenarios where the drilled holes may get too close to the membrane. It would appear that grouted plate would still require some type of embedded anchor. By adding the grout, the manufacturer's embedment depth for the anchor is shortened and the tensile (pull-out) strength will be reduced.				
An alternative method to anchoring the pipe supports would be the use of 1/2" short drop-in anchors (see attached Red Head Multi-Set II information) which requires 1" of embedment into concrete. The holes would be drilled using a Depth Charge drill bit which is a 1" long bit with a shoulder to prevent over drilling. T-0435.1	BGP - Flame Cutting Follow-Up to RFI 435	Closed	01	05/02/2013	05/10/2013	05/14/2013
From: Webcor Construction LP Robert Kjome						
REQUEST:						
Reference: RFI T-0435, 03 20 00-3.1.6.A						
The response to RFI T-0435 indicated that heating and flame cutting of reinforcing is prohibited unless approved by the EOR and per further discussion about this matter with the engineer it was requested that specific applications be submitted for further review. The following is a list of those applications:						
1. Penetrations in Slabs, Walls or Decks. Torch used to cut opening into reinforcing based on final asbuilt layout of penetration.						
2. Support Bar. Torch used to trim or remove support/give-away bar due to conflict or other project need.						
3. Column Rack/Crush Bar Removal. Torch used to remove rack and crush bars from columns to allow for tremie insertion and additional open space through center of column after column erected into place.						
4.Unforeseen Conflicts. Project conflicts that are identified during the course of work and require trimming or removal of reinforcing steel to correct condition. Example CDSM pile conflict.						
Please confirm the use of a torch/flame is allowable for the applications listed above.

T-0440	BGP - Glass Guardrail Embeds	Closed	01	03/12/2013	03/26/2013	03/20/2013
From: Webcor Construction LP Ian Corcorran						
REQUEST:						
Reference Drawings: 7/S1-3410, S1-2202-2207, S1-2210, S1-2211						
Please reference attached drawings of Concourse Level glass guardrail embeds and openings. Detail 7 on drawing S1-3410 is the typical PL 3/8x7 glass guardrail embeds for escalator and stair openings. The detail states that the guardrail embeds are continuous. It is unclear what the boundaries of the guardrail embeds are. SCCI has determined that no guardrail embeds are necessary at the opening locations where future CMU or concrete walls shall be constructed flush with the opening. Also, the guardrail embeds can be terminated at the escalator openings where the opening is reduced. Attached drawings SI-2202 through SI-2207, SI -2210 and S1 -2211 show the limits SCCI has determined the glass guardrail embeds shall be installed. Please advise if these locations are accurate and the only locations the guardrail embeds shall be installed.

T-0453.1	BGP - Vehicle/Bike Beam End Supports	Closed	01	04/11/2013	04/21/2013	04/22/2013
From: Webcor Construction LP Lynn Kowallis						
REQUEST: Ref: RFI T-0453, AI-7401, SK-115 Please reference attached drawings. RFI T-0453 stated that the L8x8x1 1/8" shall be bent to match the angle at which the Vehicle/Bike ramp beams meet the wall. At the western most beam the acute angle at which the beam meets the wall is 56 degrees and the obtuse angle is 124 degrees. See attached marked up Contract Drawing AI-7401 for angle measurements. Bending the 1 1/8" thick legs of the L8x8 is not feasible and would structually stress the member. SCCI proposes to weld two 1 1/8" plates together to fabricate the angles. See attached drawing SK-115 for details. The additional two beam members shall be fabricated per the measured angles. Please advise if this is acceptable. T-0455	BGP - Out of Plumb Dewatering Casing	Closed	01	03/19/2013	03/29/2013	03/27/2013
From: Webcor Construction LP Robert Kjome						
REQUEST:		ANSWER:				
Reference Specification:055010-3.2.C Reference Drawings: S1-3003 Reference Photo: attached		Reference Specification:055010-3.2.C Reference Drawings: S1-3003 Reference Photo: attached				
Please reference Sheet S1-3003 of the Contract Drawings and Spec Section 055010-3.2.C SCCI spot checked two of the existing dewatering wells for plumbness and found them both to be approximately 3/4" over 48" out of plumb (see attached photos). With this existing condition, SCCI can not adhere to the plumbness tolerance (1/16") for installation and maintain the required 1/2" maximum gap between sleeve and casing per Section 2 of Sheet S1-3003. SCCI suggests increasing the diameter of the sleeve and granting a variance on the 1/2" gap tolerance per Sheet S1-3003. SCCI will maintain adherence to the installation tolerances in Spec Section 05 50 10. T-0455.1	BGP - Dewatering Well Above Grade PVC Pipe	Closed	01	03/29/2013	04/08/2013	04/02/2013
From: Webcor Construction LP Robert Kjome						
REQUEST:		ANSWER:				
Reference Drawings: A1-8711		Reference Drawings: A1-8711				
Per discussion in the pre-installation and preparatory DFOW meetings for the metal fabrication penetration sleeves, the PVC dewatering casing above the mud slab can be cut just above or at top of mud slab elevation to avoid varying diameter issues. Without the dewatering casing present above mud slab grade, the varying casing diameter issues and plumbness issues are solved. The to avoid debris entering the dewatering casing, the casing would not be cut until the penetration sleeve is to be installed. Please confirm per the discussions in the meeting that cutting the casing is acceptable. Please note that the grouting back of the dewatering casing shortly after the decommissioning of the dewatering pump will be uniform (without segregation) for both below mudslab elevation and above.		Per discussion in the pre-installation and preparatory DFOW meetings for the metal fabrication penetration sleeves, the PVC dewatering casing above the mud slab can be cut just above or at top of mud slab elevation to avoid varying diameter issues. Without the dewatering casing present above mud slab grade, the varying casing diameter issues and plumbness issues are solved. T-0458	BGP - Concourse Slab CJ Layout	Closed	01	03/26/2013	04/05/2013	04/04/2013
From: Webcor Construction LP Robert Kjome						
REQUEST:			ANSWER:			
Reference Specification: 03 30 20 Reference Drawings: CJ-05 and CJ-22			Reference Specification: 03 30 20 Reference Drawings: CJ-05 and CJ-22			
In order to meet the Joints in Concrete specifications (03 30 20-3.2), SCCI's revision of Construction Joint (CJ) Layout Submittal requires the CJ between concourse slabs D116 and D117 (see attached reference drawing CJ-22) to be 2'-10" outside of the required center third of the span (reference 03 30 20- 3.2.B.1). Please advise if this is acceptable.			In order to meet the Joints in Concrete specifications (03 30 20-3.2), SCCI's revision of Construction Joint (CJ) Layout Submittal requires the CJ between concourse slabs D116 and D117 (see attached reference drawing CJ-22) to be 2'-10" outside of the required center third of the span (reference 03 30 20- 3.2.B.1). Please advise if this is acceptable.			
If the above is not acceptable, then SCCI proposes to move the CJ line (between D116 and D117) 2'-10" to the East. Since mat slab S108 (see attached reference drawing CJ-05) is currently 120'-0" wide, it will be increased to 122 '-1 0" wide. This would be wider than the maximum width of 120' -0" as specified in 03 30 20-3.2.A.3. Please advise if this alternative is acceptable.			If the above is not acceptable, then SCCI proposes to move the CJ line (between D116 and D117) 2'-10" to the East. 	<p>Reference Mass Concrete Plan prepared by CTL Group, Submittal Package TG0600-201.1, item 033000-011.1, page 10 - Curing. This paragraph state " ... slab placement will be cured in a method that does not artificially excessively decrease the surface temperature of the concrete placement. This means that continuous wetting of the concrete should he avoided."</p> <p>Reference specification section 033020.3.11.D. This paragraph states "Thermal Blankets are required to insure minimal thermal cracking."</p> <p>Reference specification section 033020.3.7.A.C. This paragraph calls for "Moist curing of the Mat Slab by means of continuously covering the slab with water."</p> <p>Reference attached letter " Wet Curing Mat Slab", author Bob Foley, CEMEX QC Manager Bay Area.</p> <p>SCCI intends to cure the Mat slab per recommendations of CLT Group Mass Concrete Plan. Due to the high risk of thermal cracking, SCCI intends to utilize impermeable insulated curing blankets and not cover the slab with water.</p> <p>Is this acceptable?</p>

T-0481	BGP - Concourse Slab Penetration Sleeves	Closed	01	04/08/2013	04/18/2013	04/12/2013
From: Webcor Construction LP Ian Corcorran						
REQUEST: Ref Dwg. A1-2842-2851 In SCCI's experience unanticipated modifications and adjustments to the plumbing system are inevitable. Because of this SCCI requests not installing vertical block out sleeves in the concourse level for plumbing prior to slab placement. SCCI shall core penetrations after the slab is placed. The slab shall be scanned for rebar prior to coring to avoid unnecessary rebar strikes. This will allow for any unforeseen modifications or adjustments and ensure there are no unnecessary or extra penetrations in the concourse slab. Please advise if this is acceptable.		ANSWER: Ref Dwg. T-0484	BGP - Water Welding Test	Closed	01	04/05/2013	04/15/2013	04/18/2013
From: Webcor Construction LP Robert Kjome						
REQUEST: Reference Specification:05 50 10- 2.5.C.2 Per the discussions held at the Metal Fabrications Preparatory DFOW meeting, SCCI is requesting a variance from Spec Section 05 50 10 - 2.5.C.2. This Spec. is feasible in a shop environment prior to galvanization and an effective means to dry and remove water upon completion of testing. These sleeves will be continuously welded in the field both before and after the horizontal waterproofing is installed (depending on the type of sleeve), therefore making it very difficult to seal and handle the water upon completion of the test. Discussions were held regarding leaving the water between the sleeve and pile and evaporating over time. SCCI sees this as a concern due to the backside of the weld and the heat-affected zone will not be galvanized and will potentially become a point of corrosion. SCCI requests 100% visual inspection on both the root and cover passes in lieu of filling the sleeve gap with water. Is this request and variance acceptable?

T-0496	BGP - Deneef Swellseal at Micropile Boots	Closed	01	04/11/2013	04/25/2013	04/26/2013
From: Webcor Construction LP Ian Corcorran						
REQUEST:		ANSWER:				
Ref Dwg. 2/A1-8711		Ref Dwg. 2/A1-8711				
Please reference Detail 2 of A1-8711 of the Contract Drawings and the attached letter from Deneef/Grace. Detail 2 of A1-8711 calls for a 6" diameter, 18 ga. galvanized steel boot to be adhered with trowelable grade adhesive and filled with urethane sealant. Submittal #TG0600-024 approved the use of Deneef Swellseal WA which is the product called out in Spec Section 07 12 10.		Please reference Detail 2 of A1-8711 of the Contract Drawings and the attached letter from Deneef/Grace. Detail 2 of A1-8711 calls for a 6" diameter, 18 ga. galvanized steel boot to be adhered with trowelable grade adhesive and filled with urethane sealant. Submittal #TG0600-024 approved the use of Deneef Swellseal WA which is the product called out in Spec Section 07 12 10.				
The attached Deneef/Grace technical letter dated 04/05/13, states that filling the entire boot with Deneef Swellseal is excessive and state that filling the entire boot with Swellseal WA is more than necessary and affect the curing capability.		The attached Deneef/Grace technical letter dated 04/05/13, states that filling the entire boot with Deneef Swellseal is excessive and state that filling the entire boot with Swellseal WA is more than necessary and affect the curing capability.				
Deneef/Grace suggests that the material be installed 2-3" deep and topped with a non-shrink grout such as "Rapid Set CT Construction Grout" or "Rapid Set Cement All" to contain it in the boot. The manufacturer states that the waterproofing ability of the material in this configuration would not be compromised. Please review and advise. T-0503	BGP - Geothermal Pipe Loop Bends	Closed	01	04/18/2013	04/18/2013	04/23/2013
From: Webcor Construction LP Robert Kjome						
REQUEST:		ANSWER:				
Per the geothermal pipe manufacturer's (Performance Pipe) recommendations, the geothermal pipe should not be bent in a radius smaller than 25 times the pipe diameter. For the geothermal pipe loops, this equates to a bend radius of 41.5". However, the geothermal design drawings depict the loops to be 60" on center that would leave a large overlap (in theory) of almost 24"/2'. To achieve a 41.5" radius, the trench spacing will have to be increased to 83" between the supply and return trench. Please note, that the pipe manufacturer discourage "bulbing" the end of the loop and recommended resolving the issue away from bending or "bulbing" the end of the		Per the geothermal pipe manufacturer's (Performance Pipe) recommendations, the geothermal pipe should not be bent in a radius smaller than 25 times the pipe diameter. For the geothermal pipe loops, this equates to a bend radius of 41.5". However, the geothermal design drawings depict the loops to be 60" on center that would leave a large overlap (in theory) of almost 24"/2'. To achieve a 41.5" radius, the trench spacing will have to be increased to 83" between the supply and return trench. Please note, that the pipe manufacturer discourage "bulbing" the end of the loop and recommended resolving the issue away from				

bending or "bulbing" the end of the pipe loop.

S3H Inc. is proposing to overlap half of a loop onto another such that the spacing between pipes remains at a 4' minimum (per RFI T-0493). This would create a 8' minimum distance between the supply side of a loop and the return side of a loop. In doing so, a portion of the two overlapping loops would be crossing. Is this acceptable? Please find attached drawing #1 as a reference of the proposed layout. Please note that this proposed method would change the reverse return self balancing configuration of piping. This proposed method also has the possibility of being impacted by various micropile conflicts.

S3H Inc. is also proposing as a fix to field one to install 2 fused - 90 degree elbows at the end of each loop in a U-shape configuration using the current, as installed dimensions between the loops. Please find attached Drawing #2 depicting the 90 degree elbows on the loops This would eliminate the required 83" bend diameter. This is least impact proposal to rectify the already installed field 1, but would be an additional cost.

Please advise as to how to proceed with Field 1 as well as the remaining 14 Fields.

T-0504 **BGP - Radius Foundation Walls - R=637.63'**

From: Webcor Construction LP Lynn Kowallis

REQUEST:

Ref: Submittal Package T0600-030

SCCI's plan is to construct the R=637.63' foundation walls in 16' chords. Layout of the construction joints shall be per approved as noted CJ layout submittal. R=637.63' foundation wall runs along the Southwest portion of the project, from GL 3 thru GL 16, or SCCI's wall pours W160 thru W174A. See attached sketch of the wall detail for clarification.

Is this acceptable?

T-0510.1	BGP - Internal Bracing Pin Pile #8 in conflict with Moment Beam BMATV	Closed	01	05/02/2013	05/14/2013	05/15/2013
From: Webcor Construction LP Robert Kjome						
REQUEST:			ANSWER:			
Please reference attached marked up sheet S1-2202.			Please reference attached marked up sheet S1-2202.			
The location of internal bracing pin pile #8 conflicts with moment beam BMATV. General Note GR-9 on sheet S-0005 precludes blocking out moment frames. Upon submitting for the internal bracing system the TG03 BSE subcontractor was not aware of the location of beam BMATV to coordinate around. On 4/23/13 WOJV submitted RFI #T-0510 requesting a variance from note GR-9 and is requesting to block out beam BMATV around pin pile #8. During the 4/25/13 "WOJV SE Assist Meeting," when the issue was brought up, a PMPC employee suggested prematurely removing strut STA09 because it has diminished load. On 4/30/13 WOJV received RFI response #T-0510 stating pin pile #8 was going to be removed hence WOJV should close the RFI #T-0510. In addition to strut STA09 pin pile #8 supports strut #STB09 which is carrying a load, not that the internal bracing EOR would allow the premature removal of two strut levels. WOJV again requests a variance from note GR-9 and is requesting to block out beam BMATV around pin pile #8.			The location of internal bracing pin pile #8 conflicts with moment beam BMATV. General Note GR-9 on sheet S-0005 precludes blocking out moment frames. Upon submitting for the internal bracing system the TG03 BSE subcontractor was not aware of the location of beam BMATV to coordinate around. T-0513	BSE - Steel plate at CDSM piles 738-739	Closed	01	04/24/2013	05/04/2013	05/08/2013
From: Webcor Construction LP Lynn Kowallis						
REQUEST:			ANSWER:			
Ref: Specification Section 31 56 13			Ref: Specification Section 31 56 13			
During leak grouting at level 5 excavation, a section of the CDSM wall panel between soldier piles 738-739 became dislodged, resulting in a high volume leak. In an effort to stabilize the damaged CDSM panel and stop the leak, BBII installed a steel road plate between soldier piles 738-739 and injected grout behind it.			During leak grouting at level 5 excavation, a section of the CDSM wall panel between soldier piles 738-739 became dislodged, resulting in a high volume leak. In an effort to stabilize the damaged CDSM panel and stop the leak, BBII installed a steel road plate between soldier piles 738-739 and injected grout behind it.			
BBII is concerned that removing the plate will likely cause the panel to become destabilized and could reopen the flow of water. BBII surveyed the face of the plate and found that at pile #738, the face of plate is 3' 0-5/8" back from the inside face of concrete wall and at pile #739 the plate is 3' 1-7/8" back from inside face of concrete wall. BBII proposes leaving the steel plate in place to maintain integrity of the CDSM panel. The edges of the plate may be grouted to provide a smooth transition to the CDSM wall for waterproofing. WOJV is proposing to locally adjust the reinforcement in the mat slab pour to achieve the required cover. There will be no change to the reinforcement on the wall width.				
As a means of chamfering the offset the result of steel plates edges to the face of CDSM wall: WOJV is proposing to mechanically fasten expanded metal lath to the CDSM beams using powder activated fasteners. Rapid set mortar is then applied to the required depth ensuring all edges of the plates have a gradual slope back to match the existing face of the CDSM wall. <p>This RFI supersedes RFI T-0522.</p> <p>DTDS proposes to reduce the design length of the Micropiles East of Gridline 17 (EG17) from 80 feet to 70 feet. DTDS has shown through testing and reduced post-grouting that a higher soil-grout bond than originally assumed in the design can be achieved in the field. DTDS will install two (2) performance test piles to verify the capacity of a 70 foot micropile EG17. One performance test pile will be installed in Zone 2 at gridline 17 between piles E005 and E008. The second performance test pile will be installed in Zone 3 at gridline 20 between piles E136 and E137. DTDS believes that 70 foot micropiles EG17 will still achieve the maximum required load capacity of 2.4 times Design Load (560 kip). The performance test piles will be installed with one (1) round of post-grout. Based on the results of the testing, additional post-grouting can be provided as necessary.</p> <p>Upon completion of the testing DTDS will submit revised micropile working drawings and calculation supplement.</p> <p>All production micropiles will continue to be proof tested per the Specifications. The performance test locations provided would supplant the performance test locations shown in the Contract plans for Zones 2 and 3.</p> <p>Please confirm this is acceptable.</p>			<p>This RFI supersedes RFI T-0522.</p> <p>DTDS proposes to reduce the design length of the Micropiles East of Gridline 17 (EG17) from 80 feet to 70 feet. REQUEST:			ANSWER:			
Ref: GT-2101 Detail 1 Specificaion Section 07 12 10			Ref: GT-2101 Detail 1 Specificaion Section 07 12 10			
To include however not limited to, sheet 1/GT-2101 allows 2" for the specified below grade waterproofing. The installed waterproofing system (07 12 10) thickness is 2-1/4". The insulation layer of the waterproofing system is specified at ½" (07 12 10.2.5.E).			To include however not limited to, sheet 1/GT-2101 allows 2" for the specified below grade waterproofing. The installed waterproofing system (07 12 10) thickness is 2-1/4". The insulation layer of the waterproofing system is specified at ½" (07 12 10.2.5.E).			
So as to resolve the proximity conflict may the contractor reduce the specified insulation thickness from ½" to ¼"?			So as to resolve the proximity conflict may the contractor reduce the specified insulation thickness from ½" to ¼"?			

ANSWER:

Reference Specification: 07 12 10
Reference Drawings: A1-8710, A1-8711

Contract Drawings and approved shop drawings show sheet metal boots over micropile penetrations set in trowel grade adhesive over two plies of Laurenco.

Spec Section 07 12 10- 3.4 states the following:

A Install flashing at terminations and penetrations

B. Flash waterproofing with a minimum of 2 plies of woven glass fabric and 3 applications of adhesive. Extend first ply 6 inches onto each membrane and second 8 inches

C. At penetrations, apply a minimum of 2 plies spirally wrapped and a target patch per Manufacturer's requirements. Where indicated on the drawings provide stainless steel drawbands.

Contract Drawing details and approved shop drawing submittal details do not match what is called out in the above Spec section. Please advise as to which detail is to be used (shop drawing or specifications).

T-0541	BGP - Protection Board Installation at SW Corner	Closed	01	05/09/2013	05/23/2013	05/13/2013
From: Webcor Construction LP Ian Corcorran						
REQUEST:		ANSWER:				
Ref Spec. 07 12 10- 3.2.D		Ref Spec. 07 12 10- 3.2.D				
Please reference Specifications Section 07 12 10- 3.2.D. This spec states the following: "Install protection board on vertical surfaces with long dimension vertical and the polyethylene film side facing the soil/cement surfaces. Secure 1 /4" protection board to flanges of soldier piles with powder driven fasteners and washers spaced 12 inches o.c "		Please reference Specifications Section 07 12 10- 3.2.D. This spec states the following: "Install protection board on vertical surfaces with long dimension vertical and the polyethylene film side facing the soil/cement surfaces. Secure 1 /4" protection board to flanges of soldier piles with powder driven fasteners and washers spaced 12 inches o.c "				
At the SW corner of the project, the soldier beams are spaced greater than the width of the protection board. We suggest rotating the protection board 90-degrees so that the long dimension is horizontal instead of vertical. This would allow for attachment to the soldier piles and the inside corner of protection board to be heated and formed into the corner. We also suggest using this method where pile spacing exceeds 4' on center.		At the SW corner of the project, the soldier beams are spaced greater than the width of the protection board. T-0543	BGP - Galvanizing Varying Material Category Variance	Closed	01	05/09/2013	05/23/2013	05/21/2013
From: Webcor Construction LP Ian Corcorran						
REQUEST: Ref. Spec. 05 05 15- 3.3.B.2 Reference is made to Specification Section 05 05 15- 3.3.B.2 and the attached 'Ask Dr. Galv' galvanizing article. Section 3.3.B.2 states "When galvanizing assemblies of components of varying material category and material thickness, provide minimum coating thickness grade for all members equal to or exceeding the maximum highest material category coating grade." For the dewatering and piezometer mat slab penetration sleeves, A513 tube is being used, which has a Grade 75 designation per ASTM A123. Based on the above specification, Grade 100 must be followed because these sleeves have plate components. The reason Grade 75 is specified in ASTM A123 is that it is the minimum consistent attainable galvanizing coating for the thickness and chemistry of the material being coated. As an aluminum killed steel product, it is not a natural catalyst to galvanizing as silicon is per the attached article. To specify Grade 100 goes beyond A123 specifications. Therefore, SCCI requests Grade 75 be used, with a minimum coating thickness of 3.0 mils, for the dewatering wells and piezometer mat slab penetration sleeves. Please be advised if Grade 100 (3.9 mils) is required, the galvanizing process to attain the thicker coating can lead to embrittlement and delamination of the coating. Is Grade 75, with a minimum 3.0 mil coating thickness on the dewatering well and piezometer mat slab sleeve penetrations, acceptable?		ANSWER: Ref. Spec. 05 05 15- 3.3.B.2 Reference is made to Specification Section 05 05 15- 3.3.B.2 and the attached 'Ask Dr. Galv' galvanizing article. T-0561	BSE - Standard for Determining Buttress Concrete Strength	Closed	01	05/16/2013	05/26/2013	05/20/2013
From: Webcor Construction LP Kirk Nielsen						
REQUEST:						
Spec. section 31 63 29.3.9.D states,						
"Not less than 28 days after concreting is completed, perform HQ coring over the full depth of 10% of the shafts to verify the quality of concrete and test whether the shafts are free of defects. Provide these cores for inspection by the TJPA Representative. The TJPA's Representative will select the locations where coring shall be performed and will select the cores which will be tested for strength."						
The aforementioned language in addition to spec. section 31 63 29.1.6.A which states:						
"Perform work in accordance with ACI 301, except where otherwise specified. Specifications herein set minimum results required and references to procedures to establish minimum guidelines."						
reads as if ACI 301 would be the specified standard for determining the required buttress concrete strength (specifically ACI 301 section 1.6.6.2) hence acceptance.						
Please confirm what if not ACI 301 is the standard for determining the buttress concrete strength hence acceptance.

T-0573	BGP - Locations of Electrical Outlets, Equipment, and Fixtures	Closed	01	05/29/2013	06/08/2013	06/11/2013
From: Webcor Construction LP Robert Kjome						
REQUEST: Reference Specification 26 05 34, 3.2 B. The exact locations of the electrical equipment are to be provided by the TJPA through the RFI process. With the electrical equipment provided and installed at a later date under a separate contract, please provide the dimensions of the electrical equipment, boxes, and cabinets to allow for accurate electrical riser locations in the concrete slabs. The equipment, boxes, and cabinet dimensions in Zone 1, Area 1 are needed first with the areas to the east to follow.						ANSWER: Reference Specification 26 05 34, 3.2 B. The exact locations of the electrical equipment are to be provided by the TJPA through the RFI process. With the electrical equipment provided and installed at a later date under a separate contract, please provide the dimensions of the electrical equipment, boxes, and cabinets to allow for accurate electrical riser locations in the concrete slabs. The equipment, boxes, and cabinet dimensions in Zone 1, Area 1 are needed first with the areas to the east to follow.
T-0574	BGP - Field Galvanizing of Mat Slab Sleeve Penetrations	Closed	01	05/31/2013	06/10/2013	06/09/2013
From: Webcor Construction LP Robert Kjome						
REQUEST: Reference Specification Section 05 05 15-3.3.B The shop applied coating thickness for the pin and trestle pile sleeve fabrications is determined to be 3.9 mils per Table 2 in ASTM A 123. Under Section 05 05 15-3.5 the repair/restoration field-applied coating thickness is specified to be 8.0 mils. For field touch-up of damaged areas Section 05 50 10-3.2.D states to apply a thickness of 2.5 to 3.5 mils. For the coating hold back areas for the sleeve field weld joints and for any damage coatings that may arise during installation - is a uniform required minimum field-applied thickness of 3.9 mils acceptable? T-0579.1	BGP - Horizontal Wall Reinforcing Equal Area Conversion	Closed	01	06/19/2013	06/29/2013	06/20/2013
From: Webcor Construction LP Robert Kjome						
REQUEST:		ANSWER:				
Reference: S1-3201, Spec Section 03 30 20		Reference: S1-3201, Spec Section 03 30 20				
Gerda (SCCI's subcontractor) has recently constructed a mock-up of the 1st lift of typical wall reinforcing and identified a potential problem with congestion and quality of the final designed product. The contract drawings on sheet S1-3201 depict the typical wall reinforcing details including #8 horizontal wall reinforcing which is designed at 8" O.C. E.F. Typical. Additionally, the #4 cross tie spacing has been designed at either 6" O.C. or 12" O.C depending on the location (elevation) within the wall. With the non-uniform spacing of the cross-ties and horizontal bars the cross-ties are secured only to the vertical bars and have the potential during concrete placement to shift or slide down the vertical bars until resting on the next adjacent horizontal bar. Additionally, the inconsistent spacing of the cross-ties and horizontal bars congests the reinforcing configuration which may lead to potential problems when interfacing the concourse level reinforcing with the walls. Gerda would like to propose an equal area conversion for the horizontal reinforcing from #8 @ 8" OC to #7 @ 6" OC in order to make the spacing between the horizontal bars and cross-ties uniform. Please confirm this is acceptable. Please refer to RFI 584 and the attached sketch of the proposed block out in concrete partition walls as referenced in RFI 584. The 28" x 28" blockout in the mat slab will be transferred to the blockout of the wall and be 25" from the mat slab elevation to the top of blockout. This will create 3'-0" from top of penetration sleeve to top of wall blockout. We are proposing to use formsavers and the male ends will extend the length of the blockout. T-0589	BGP - Epoxy Coating Thickness Over Formsaver Couplers	Closed	01	06/06/2013	06/16/2013	06/17/2013
From: Webcor Construction LP Robert Kjome						
REQUEST:		ANSWER:				
Reference: 6/S1-3001, Attached Letter		Reference: 6/S1-3001, Attached Letter				
The response to RFI T 0515 confirmed to coat the form saver couplers for future construction as specified in ASTM A 775. Per ASTM A 775, the standard coating thickness specifies a required thickness range by which different size bars are to be coated 7 to 12 mills for bar sizes 3 to 5 and 7 to 16 mills for bar sizes 6 to 18; however, detail 6 on S1-3001 indicates a 12 mill minimum coating thickness over the couplers. Per the attached letter from Stanley Johnson the Regional Manager for Erico (Lenton) the epoxy coated form-saver couplers specified for use cannot be procured with a guaranteed 12 mill coating but rather an epoxy coating that meets the requirements of the ASTM A 775 standard. Please confirm that supplying an epoxy coated form-saver coupler that meets the ASTM A 775 standard but may contain a mill thickness less than 12 is acceptable. T-0598	BGP - Fire Management System Class A vs. Class B	Closed	01	06/12/2013	06/22/2013	06/15/2013
From: Webcor Construction LP Robert Kjome						
REQUEST: Reference: Attached Documents, E1-5201 After consulting with Siemens on the fire management system a clarification is needed. The riser diagram on sheet EI-5201 shows Class A conduit routing for the train platform level and the lower concourse level. Using a Class A wiring layout limits the system to 3 or 4 strobe devices per circuit. Under the NFPA 130 6.3.3.2.8 specification, the embedded (note (1) of the specification) fire management conduit protects against the ASTM E119 fire conditions and Class A isn't required per NFP A specification. Is it acceptable to design the fire management conduit system to meet the NFP A 130 specification under Class B requirements and impliment 6 or 7 strobe devices per circuit instead of the 3 or 4 stobe devices per Class A. By implimenting a Class B system, the future fire management system (installed under a future contract) will be less costly all while meeting the the NFP A 130 requirements. Please advise. T-0606	BGP - Mat Slab Pour and Bracing Removal- Area 1 to 4	Closed	01	06/21/2013	07/01/2013	06/28/2013
From: Webcor Construction LP Jackson Tukuafu						
REQUEST:			ANSWER:			
Reference: Spec Section 01 13 00			Reference: Spec Section 01 13 00			
<p>The latest Webcor's weekly update schedule received by SCCI (Data date 06.17.2013), shows that Balfour Beatty (BBII)'s activity "Bracing Removal- Level D- BBII- Z1 A1", in Zone 1, area 1 cannot commence until the completion of Webcor's activity "Mat Slab Cure- Z1A1 ".The same relationship exists between the two activities for Area 1 to Area 4. Preliminary rough analysis done by SCCI suggests that there is not sufficient sliding resistance to permit the slab in each area to act as effective support for the base of the shoring wall when the lowest level of bracing is removed in that area. The preliminary analysis also suggests that bracing removal level D in Area 1-4 should not commence until the entire mat slab in Area 1-4 are in place.</p> <p>Please confirm that :</p> <ol style="list-style-type: none">1. Webcor has performed a detailed analysis that the relationship as shown in the schedule between the Bracing Removal- Level D and Mat Slab Cure can be performed in each area, independent of any other areas.2. SW Comer bracing level D could be removed if only Areas 1 &2 are poured and cured3. NW Comer bracing at Level 2 could be removed if only Areas 3&4 are poured and cured			<p>The latest Webcor's weekly update schedule received by SCCI (Data date 06.17.2013), shows that Balfour Beatty (BBII)'s activity "Bracing Removal- Level D- BBII- Z1 A1", in Zone 1, area 1 cannot commence until the completion of Webcor's activity "Mat Slab Cure- Z1A1 ".The same relationship exists between the two activities for Area 1 to Area 4. T-0607	BGP - Bracing Removal Sequence- Area 5-16	Closed	01	06/21/2013	07/01/2013	06/28/2013
From: Shimmick Construction Company, Inc. Ben Gordon						
REQUEST:			ANSWER:			
The latest Webcor's weekly update schedule received by SCCI (Data date 06.17.2013), shows that: * "Bracing Removal- Level D" (BGSOX-1120) is the driving predecessor to "Wall Waterproofing- 1st lift" (BGSOX-4000)- in each area. * "Bracing Removal- Level E" (BGSOX-41 00) is the predecessor to "Wall Waterproofing- 2nd lift" (BGSOX -4110)- in each area * "Bracing Removal- Level B" (BGSOX-6000) is the predecessor to "Wall Waterproofing- 3rd lift" (BGSOX -6010) in each area Based on the current schedule logic, the bracing will need to be modified to allow the removal of walers and struts in each area, separately and independently from each other. E.g: Any walers spanning two areas will need to be cut during removal of bracing so seer can proceed with the waterproofing install in that area, without having to wait for the adjacent area. This is applicable to Bracing Removal level B, C and D. Please confirm.			The latest Webcor's weekly update schedule received by SCCI (Data date 06.17.2013), shows that: * "Bracing Removal- Level D" (BGSOX-1120) is the driving predecessor to "Wall Waterproofing- 1st lift" (BGSOX-4000)- in each area. * "Bracing Removal- Level E" (BGSOX-41 00) is the predecessor to "Wall Waterproofing- 2nd lift" (BGSOX -4110)- in each area * "Bracing Removal- Level B" (BGSOX-6000) is the predecessor to "Wall Waterproofing- 3rd lift" (BGSOX -6010) in each area Based on the current schedule logic, the bracing will need to be modified to allow the removal of walers and struts in each area, separately and independently from each other. T-0620	BGP - Strut Bracing Conflicts With Shear Walls and Columns	Closed	01	06/26/2013	07/06/2013	07/15/2013
From: Webcor Construction LP Jackson Tukuafu						
REQUEST:			ANSWER:			
Reference: Drawing S1-3260, S1-3301, S1-2030			Reference: Drawing S1-3260, S1-3301, S1-2030			
Based on the layout of the shoring and diagonal struts in the West end of the job, shear wall reinforcement (as shown on CD S1-3260) and the diagonal struts are in conflict. CD S1-3260 shows continuous vertical shear wall reinforcement from top of the mat slab to top of concourse deck. To avoid constructability issues SCCI suggests for shear walls to be constructed with horizontal construction joints at the same elevation as the first level of foundation walls. Adding horizontal joints will require modification of the reinforcement. Please confirm this is acceptable. <p>This RFI is an additional request based on the response to RFI T- 621 option A (see exhibit - A) The original RFI T- 621 option A addressed the impact of the encroaching CDSM soldier piles on the north wall in slab in areas 3 and 4 by proposing to offset the face of concrete foundation wall by 0.1979' (2-3/8") into the structure. WOJV note the original response where it was acceptable to offset the foundation wall between B2 and B1 elevations but would have to transition back to design alignment between B1 and ground elevation however this transition back would not be possible as there are CDSM piles encroaching the full high of the foundation wall, with that WOJV is proposing the following possible solution, to continue the revised offset alignment between B1 and ground elevation however limiting it to an area between GL 1 and 2-3 (CDSM piles 1 to 21)full wall height , WOJV acknowledge the fact the PG&E transformer room need to remain at its current size but feel there may be some scope to slightly change the dimensions of the main switchgear room or the service corridor or both see exhibit B and exhibit C.</p> <p>This proposal if acceptable to offset the foundation wall would enable the contract reinforcement to be installed without the need for further modifications due to encroachment.</p> <p>Please confirm if this option would be acceptable</p>			<p>This RFI is an additional request based on the response to RFI T- 621 option A (see exhibit - A) The original RFI T-621 option A addressed the impact of the encroaching CDSM soldier piles on the north wall in slab in areas 3 and 4 by proposing to offset the face of concrete foundation wall by 0.1979' (2-3/8") into the structure. REQUEST:						ANSWER:
Reference Documents: Exhibits A & D						Reference Documents: Exhibits A & D
This RFI addresses the previous comments to RFI T-622 see exhibit - D.						This RFI addresses the previous comments to RFI T-622 see exhibit - D.
The contractor preference approach is to use a modified option B originally outlined in RFI T-622						The contractor preference approach is to use a modified option B originally outlined in RFI T-622
Exhibit - A shows the revised Plan view with modifications made. Exhibit - C depict the degree in which the SP are encroaching in area 4.						Exhibit - A shows the revised Plan view with modifications made. Exhibit - C depict the degree in which the SP are encroaching in area 4.
Based on the response to previous RFI's the number of encroaching beams in area 4 has been reduced mainly due to the decreased thickness of the waterproofing system and the contractor willingness to use some of the construction tolerances in an effort to mitigate some of the smaller encroachments. This has resulted in only one area where modified reinforcement will have to be installed; Between CDSM piles 47 to 49 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP number 48. This wall area was originally a WR1 reinforcement area (#11 @8"oc EF vertically) and would change to #11 @6"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing. T-0629	BGP - Clear Cover on Concourse Slab	Closed	01	06/28/2013	07/08/2013	07/01/2013
From: Webcor Construction LP Jackson Tukuafu						
REQUEST:		ANSWER:				
Reference: Drawing S1-3500, Spec Section 03 30 20, 03 20 00		Reference: Drawing S1-3500, Spec Section 03 30 20, 03 20 00				
Detail 1 on S 1-3500 calls out for 3/4" clear cover on top and bottom of the lower concourse slab. ACI codes 301 and 318 specify 3/4" minimum cover for #11 bars and smaller, in slabs that are not exposed to extreme environment. Even though lower concourse is designed to eventually be enclosed with the rest of the superstructure, it will be exposed to the weather elements during the construction of the project. With that said, inadequate cover over rebar can cause plastic settlement cracking. SCCI is concerned that the 3/4" clear cover in the concourse slab could cause this plastic settlement cracking. Please confirm that the clear cover on the lower concourse slab is 3/4" minimum? Please specify what is the maximum clear coverage of the lower concourse reinforcement? T-0630	BGP - Mat Slab Key Way Waterstops Installation	Closed	01	06/28/2013	07/08/2013	07/04/2013
From: Webcor Construction LP Jackson Tukuafu						
REQUEST:		ANSWER:				
Reference: Attached Photos, Spec Section 03 30 20		Reference: Attached Photos, Spec Section 03 30 20				
SCCI is proposing to leave the formed key surface in the mat slab as a formed finish to aid in the bonding of the hydrophilic waterstops to the concrete. With a specified 1/4" amplitude on the concrete surface, the bond between the concrete and the waterstop system decreases. The remainder of the construction joint will have stayform in place which generates a roughened surface. Please see attached photos that high light the area which will be formed finish. Please advise if this is acceptable?		SCCI is proposing to leave the formed key surface in the mat slab as a formed finish to aid in the bonding of the hydrophilic waterstops to the concrete. T-0633.1	BGP - 100% CD Phase 1 Documentation	Closed	CR	08/27/2013	09/01/2013	09/11/2013
From: Webcor Construction LP Jackson Tukuafu						
REQUEST:						
Please reference CR T-071 - ASI 104 - Below Grade Modifications and RFI T-0633.						
As per coordination meeting on 08/26/2013, to discuss discrepancies in ASI #104, the architectural drawings for Zone 4 thru Zone 11 (A1-224-2231, A1-2844-2846, A1-2848-2851) are not included in ASI 104. The architectural drawings are critical for SCCI's coordination and pricing of interior wall layout on the concourse level in conjunction with the corresponding structural drawings released in CR T-071 - ASI #104. Although, the design team provided their response to these discrepancies in RFI T-0633 by referencing "100% CD Phase 1 Documentation," the drawings have yet to be released for construction.

T-0642	BSE - Steel Plates at CDSM Piles 167-168	Open	01	07/17/2013	07/27/2013	07/18/2013
From: Webcor Construction LP Robert Kjome						
REQUEST:		ANSWER:				
Reference: Spec Section 31 56 13		Reference: Spec Section 31 56 13				
During leak grouting at level 5 excavation, a section of the CDSM wall panel between soldier piles 167-168 became dislodged, resulting in a high volume leak. In an effort to stabilize the damaged CDSM panel and stop the leak, BBII installed a steel road plate between soldier piles 167-168 and injected grout behind it.		During leak grouting at level 5 excavation, a section of the CDSM wall panel between soldier piles 167-168 became dislodged, resulting in a high volume leak. In an effort to stabilize the damaged CDSM panel and stop the leak, BBII installed a steel road plate between soldier piles 167-168 and injected grout behind it.				
BBII is concerned that removing the plate will likely cause the panel to become destabilized and could reopen the flow of water. BBII surveyed the face of the plate and found that at pile #167, the face of plate is 1/2" out from the theoretical face of pile, and at pile #168 the plate is 1-1/2" out from the theoretical face of pile. BBII proposes leaving the steel plate in place to maintain integrity of the CDSM panel. The edges of the plate may be grouted to provide a smooth transition to the CDSM wall for waterproofing.		BBII is concerned that removing the plate will likely cause the panel to become destabilized and could reopen the flow of water. BBII surveyed the face of the plate and found that at pile #167, the face of plate is 1/2" out from the theoretical face of pile, and at pile #168 the plate is 1-1/2" out from the theoretical face of pile. T-0656	BGP - Shear Wall Dowel and Shoring Pipe Bracing Conflict	Closed	01	07/24/2013	08/03/2013	08/07/2013
<div><div>From: Webcor Construction LP Jackson Tukuafu</div><div>REQUEST: Reference: Drawing S1-3001, Spec Section 03 30 20 A few potential conflicts exist between the typical shear wall vertical dowels and the 36" OD shoring Pipe Struts in Area 1. See attachment for locations of conflict. Based on Detail A shown in S1-3260, the typical shear wall verts will be lap spliced. Per the schedule in Detail 1-S1-3001, the #9 vertical shear wall reinforcement requires a 63" lap splice, which places the top of dowel at elevation -30'-5". The centerline of Level D diagonal bracing atop Area 1 is shown to be at EL -29'-0" and the bottom of the 36" OD pipe strut at level D is at EL -30'-6". The pipe strut will potentially encroach on the shear wall dowels since the vertical spacing is #9 at 10" OC. Please confirm that a 60" lap splice is acceptable at locations where conflicts exist, if not please provide solutions.</div><div>ANSWER: Reference: Drawing S1-3001, Spec Section 03 30 20 A few potential conflicts exist between the typical shear wall vertical dowels and the 36" OD shoring Pipe Struts in Area 1. 	REQUEST: Reference: A1-9204, E1-6001 The electrical conduit details on sheet A1-9204/Detail 1 and Detail 5 on E1-6001 regarding the electrical conduits on the columns are in conflict. Detail 1 on A1 -9204 indicates an embedded junction box in the long portions of the columns at Line D.8 above the Train Platform Level. Detail 5 on E1- 6001 indicates all conduits are to be stubbed up 12" at the face of the column. This Detail 5 shows all conduits (shown dashed) above the 12" stub up in the Mat Slab are to be installed in future phases outside of the TG06.0 contract. The columns are part of the TG06.0 scope. 1. Please clarify if these junction boxes and conduit are to be embedded in the columns or stubbed up through the slab at the face of each column at all four (4) locations.. 2. If the conduits and boxes are to be embedded in the columns please provide a revised embedded conduit detail indicating conduits as part of TG06 Below Grade Scope.					
T-0660	BGP - Clear Cover to Mat Reinforcing at CDSM Pile Encroachment	Closed	01	07/30/2013	08/09/2013	08/07/2013
	From: Webcor Construction LP Jackson Tukuafu REQUEST: Reference: Drawing S1-3201, Spec Section 03 30 20 Per Section 1 on S1-3201, the mat slab reinforcing is shown with 6" of clear cover from the outside face of the concrete wall. When the outside face wall and mat foundation step in and out due to CDSM encroachment, the 6" clear dimension shown on 1/S1-3201 will be encroached upon. Please confirm this is acceptable. This would apply in any area where the wall thickness is being reduced due to encroaching CDSM Pile.

T-0664	BGP - Conflict Between Pit Reinforcing & Trestle/Pin Piles	Closed	01	08/05/2013	08/15/2013	08/07/2013
From: Webcor Construction LP Jackson Tukuafu						
REQUEST: Reference: Drawing S1-2022, Attached Photos During the installation of the pit reinforcing between GL 1.4-2.3 and D.4-F a conflict was discovered between trestle/pile and the tail of the #11 pit reinforcing that extends beyond the limit of the pit out and into the main mat slab. Gerdau proposes to trim the tails of the conflicting rebar (Flame Cut) such that clearance can be maintained to the sleeve around the piles. Please confirm this is acceptable or provide direction on how to proceed. This conflict is expected to occur at future pits too. T-0672	BGP - Fire Management Device Layout	Closed	01	08/08/2013	08/18/2013	08/14/2013
From: Webcor Construction LP Jackson Tukuafu						
REQUEST:		ANSWER:				
As discussed in the fire management coordination meeting on Monday 8/5, the contract plan device layout does not meet code for current draw. The stub ups from the mat slab to the devices shown on the contract plans at every other column will not be sufficient enough to meet code requirements for the future fully occupied space. If stubbed up at every other column, the consequences are having circuit runs that will end up doubling when the devices are added in the future. Siemens recommends that the stub ups are made at every column which will reduce the total current draw when devices are added in the future. T-0684	BGP - Couplers for Future Construction	Closed	01	08/19/2013	08/29/2013	08/28/2013
From: Webcor Construction LP Robert Kjome						
REQUEST:		ANSWER:				
Reference: Drawing S1-3206, Spec Section 03 30 20		Reference: Drawing S1-3206, Spec Section 03 30 20				
See attached photo of the form savers that are going to be used for the coupler for future construction as depicted on Detail 4 of S1-3206, and Detail 6 of S1-3001.		See attached photo of the form savers that are going to be used for the coupler for future construction as depicted on Detail 4 of S1-3206, and Detail 6 of S1-3001.				
SCCI believes that Detail 6 on S1-3001 is not applicable due to the following: 1. As shown on the attached photo, epoxy coated form savers have tin cap incorporated into the coupler body. This tin cap will protect the rebar until the future construction. 2. Whatever tar is intended to be used with form savers in not compatible with the Grace waterproofing. 3. Detail 6 on S1-3001 is a detail for the slabs, where future walls are to be constructed.		SCCI believes that Detail 6 on S1-3001 is not applicable due to the following: 1. T-0703	BGP - Drainage Conflicts with Reinforcement	Closed	01	08/29/2013	09/08/2013	09/05/2013
From: Webcor Construction LP Jackson Tukuafu						
REQUEST:						ANSWER:
See attached marked up contract drawings PSK-2022 and S1-3005						See attached marked up contract drawings PSK-2022 and S1-3005
Some of the drainage lines and fixtures are designed to be constructed in close proximity of the concrete columns, similarly S1-3005 depicts typical mat shar reinforcement schedule and details. Some of these shear reinforcement bars will be interfering with the drainage lines and fixtures. SCCI suggest to displace these shear reinforcement bars where conflicts occur. Displacement would occur laterally, in 8" increments, governed by the grid of the mat slab main reinforcement bars.						Some of the drainage lines and fixtures are designed to be constructed in close proximity of the concrete columns, similarly S1-3005 depicts typical mat shar reinforcement schedule and details. See Exhibit- G, H & I shows details of transition between modified reinforcement to contract reinforcement.

These solutions if approved would be incorporated into the TG06 shop drawings.

Please confirm if these solutions would be acceptable.

In all other areas without CDSM pile encroachment issues the reinforcement will remain unchanged as per the Contract drawings.

See Exhibit- G, H & I shows details of transition between modified reinforcement to contract reinforcement.

These solutions if approved would be incorporated into the TG06 shop drawings.

Please confirm if these solutions would be acceptable.

Please provide in Tabular format a list of the final cut-off elevations for each individual CDSM pile.			Please provide in Tabular format a list of the final cut-off elevations for each individual CDSM pile.			
T-0726	BGP- Trestle pile No 6 in conflict with beam at Lower Concourse Level	Open	CR	09/09/2013	09/19/2013	09/20/2013
<div><div>From: Webcor Construction LP</div><div>Jackson Tukuafu</div></div>						
REQUEST:			ANSWER:			
Following a review and discussion on the trestle pile location, it has been noted that trestle pile number 6 (see sketch attached) is in conflict with a beam (B45) at the lower concourse slab elevation between gridline 5-6, E-F. The contractor is proposing to blockout a section of slab as shown on the sketch, this blockout section would then be infilled once the trestle pile has been removed.			Following a review and discussion on the trestle pile location, it has been noted that trestle pile number 6 (see sketch attached) is in conflict with a beam (B45) at the lower concourse slab elevation between gridline 5-6, E-F. The contractor is proposing to blockout a section of slab as shown on the sketch, this blockout section would then be infilled once the trestle pile has been removed.			
The contractor is to insure that the appropriate reinforcement lap splices are present between these concrete pours.			The contractor is to insure that the appropriate reinforcement lap splices are present between these concrete pours.

This foundation wall area was originally a embedment column with reinforcement in this area was a double layer of #11@6"oc EF vertically and would change to #11@5" OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.4 option1 (Exhibit -F).</p> <p>In all other areas without CDSM pile encroachment issues the reinforcement will remain unchanged as per the Contract drawings.</p> <p>See Exhibit - G, H & I showing details of transition between modified reinforcement to contract reinforcement.</p>

T-0756	BGP - Structural Slurry Primer in Mat Slab	Closed	CR	09/24/2013	10/04/2013	09/25/2013
From: Webcor Construction LP Jackson Tukuafu						
REQUEST:			ANSWER:			
Please refer to the attached letter, authored by Rober Foley (CEMEX QC), dated September 17, 2013. With limited site access, many Mat Slab pours will require a larger than normal amount of slick-line. To ensure that no slick-line gets plugged, SCCI is proposing to prime the slick-line with a structural slurry that will reach and exceed the specified design strength for the Mat Slab. A miniscule percentage of this primer will be deposited into the mat slab. This percentage would amount to .01 to .02 percent by volume. Please confirm the proposed SCCI method of slick-line priming is acceptable.			Please refer to the attached letter, authored by Rober Foley (CEMEX QC), dated September 17, 2013. T-0775	BGP-Concrete strength requirement for bracing Removal	Closed	01	09/30/2013	10/10/2013	10/10/2013
<div><div>From: Webcor Construction LP</div><div>Michael Spillane</div></div>						
REQUEST:			ANSWER:			
In accordance with Spec section 31-55-00 1.4 J the contractor is to submit concrete strength results to the design team prior to the removal of internal bracing. In order to fulfill this requirement the contractor has asked the following questions.			In accordance with Spec section 31-55-00 1.4 J the contractor is to submit concrete strength results to the design team prior to the removal of internal bracing. In order to fulfill this requirement the contractor has asked the following questions.			
1. What is the criteria for bracing removal for instant if the average strength of the concrete cylinders tested is calculated to be above the design strength can the internal bracing be removed?			1. What is the criteria for bracing removal for instant if the average strength of the concrete cylinders tested is calculated to be above the design strength can the internal bracing be removed?			
2. Is there any tolerance on the design strength requirement for bracing removal, for example if the concrete has reached 90% of design strength could the bracing be removed? Obviously this could have a positive effect on the construction schedule.			2. Is there any tolerance on the design strength requirement for bracing removal, for example if the concrete has reached 90% of design strength could the bracing be removed? See attached.</div> <div>Please confirm that the layout is acceptable.</div>

ANSWER:

Please reference RFI #T-0781, drawings EI-2024 and AI-2104 and Spec Section 26 05 34.

As per spec section requirement 26 05 34 - Raceways and Boxes, Article 3.2 - B, the "...location of outlets, fixtures and equipment is governed by field conditions...verify final location of outlets, fixture and equipment with the TJPA through the RFI process."

Please confirm the coordinated equipment layout with the knee walls per RFI T-0899 as shown in the attached as-built layout SCCI sketch SK-RFI-334.1 for Electrical Room B2441 in Area 09 is acceptable.

Please refer to the conduit layout in submittal shop drawing package TG0600-905.

T-0799	BGP - Partition Wall Pilaster and Plumbing Conflict at GL C.5/4.8	Closed	CR	10/08/2013	10/18/2013	10/10/2013
From: Webcor Construction LP Jackson Tukuafu						
REQUEST: Please refer to drawing S1-2052 and S1-9050. The reinforcement for the partition wall pilaster at approximately GL C.5/4.8 is in conflict with the drainage pipe below. Per note 3 on detail 9/S1-9050 the ties will be installed if possible. Two vertical bars in the pilaster will have to be bent in order to clear the pipe and two others will have to be slightly displaced to clear the pipe. See the attached Gerdau sketch SK-93 for details. Please confirm the revised reinforcement detail for the partition wall pilaster as detailed in sketch SK-93 is acceptable.						ANSWER: Please refer to drawing S1-2052 and S1-9050. The reinforcement for the partition wall pilaster at approximately GL C.5/4.8 is in conflict with the drainage pipe below. Per note 3 on detail 9/S1-9050 the ties will be installed if possible. Two vertical bars in the pilaster will have to be bent in order to clear the pipe and two others will have to be slightly displaced to clear the pipe. See the attached Gerdau sketch SK-93 for details. Please confirm the revised reinforcement detail for the partition wall pilaster as detailed in sketch SK-93 is acceptable.
T-0800	SSS - Top of Base Plate Elevation Clarification	Closed	01	10/08/2013	10/18/2013	10/09/2013
From: Webcor Construction LP Robert Kjome						
REQUEST: Reference Drawing: S1-3621, S1-5051 The top of base plate elevation at Grids 21.0/D.4 & 21.0/E.6 is shown as -4'-4 1/2 in 2/S1-5051 but when working with detail 5/S1-3621, the top of base plate elevation is -4' -6 1/2. Please refer to attached CD RFI # 041 SK1 to SK3 and provide the top of base plate elevation to be used at the noted Grids. T-0804	SSS - W21 Beam Substitution	Closed	01	10/08/2013	10/18/2013	10/11/2013
From: Webcor Construction LP Robert Kjome						
REQUEST:			ANSWER:			
With reference to the W21x44 and W21x50 beams shown on Dwgs S1-2302 to S1-2307 (Ground Level), S1-2402 to S1-2407 (Second Level), Dwgs S1-2502 to S1-2507 (Bus Level) and Dwgs S1-2602 to S1-2607 (Roof Park Level), these beams have relatively narrow flanges. These beams sizes are problematic with regard to stability during erection for spans over 30 feet in length. The substitution of the W21x48 for the W21x44 and W21x55 for the W21x50 would resolve the stability issue. Please advise if these substitutions are acceptable. T-0805	BGP-Area 7 level D bracing removal	Closed	01	10/08/2013	10/18/2013	10/21/2013
From: Webcor Construction LP Michael Spillane						
REQUEST:			ANSWER:			
<p>Further to response to RFI T-0641 please find attached supporting information from the internal bracing designer (PB&A) see exhibits B this information is a three dimensional structural analysis of the CDSM wall and bracing system. WOJV is proposing the removal of the level D bracing in area 7 and also the bracing which spans across the Construction joints between Areas 6 & 7 and Areas 7 & 8 waler (WD-09 to WD-12, & WD-60 to WD-63 as well as struts 20-25 level D See SK-1 2 & 3 in exhibit A) The removal of this bracing will allow all the first lift of wall to be completed in area 7 and mitigate any possible delays to the construction schedule.</p> <p>As part of this bracing removal process, WOJV will also put a monitoring plan in place to monitor the CDSM beams which will be unsupported by either the concrete of the mat slab or the level D walers and struts see exhibit C</p> <p>Please confirm if this would be acceptable</p>			<p>Further to response to RFI T-0641 please find attached supporting information from the internal bracing designer (PB&A) see exhibits B this information is a three dimensional structural analysis of the CDSM wall and bracing system. T-0827	BGP - Clarification to Galvanized Steel Plate at Seismic Joint in Area 16	Closed	CR	10/14/2013	10/24/2013	10/28/2013
From: Webcor Construction LP Jackson Tukuafu						
REQUEST: Please refer to attached drawing detail 7/A1-8881 and 4/S1-3010. Detail 7/A1-8881 (and other details on A1-8881) call for a 5/8" x 6' galvanized steel plate secured to the mud slab and soldier piles. This plate does not appear on the structural details for the seismic joint in drawing S1-3010. 1. Please explain the functionality and purpose of the galvanized steel plate shown in 7/A1-8881 and 1/A1-8881 in relation to the seismic joint assembly. 2. Please provide revised structural drawings showing all welding and design criteria required to attach and secure the "5/8" THK x 6' wide galv steel plate" to the mud slab and soldier beam, respectively. T-0836	BGP - Sump Pit Rebar Tail and Trestle Pile @ GL 18.5/E - Area 9	Closed	CR	10/17/2013	10/27/2013	10/23/2013
<hr/>						
From: Webcor Construction LP Jackson Tukuafu						
REQUEST:			ANSWER:			
Reference: RFI T-0644			Reference: RFI T-0644			
Three of the sump pit lower mat #11 tails near grid line 18.5/E are in conflict with the nearby trestle pile. The bars have been trimmed to clear the trestle pile and provide an LTE of 34" instead of 60" as required per plans.			Three of the sump pit lower mat #11 tails near grid line 18.5/E are in conflict with the nearby trestle pile. The bars have been trimmed to clear the trestle pile and provide an LTE of 34" instead of 60" as required per plans.			
Typically, a bent bar would be spliced to the interrupted bar as required in SKS-0281 in the response to RFI T-066; however, the trimmed bars have a 70" length which would not meet the 78" LTS requirement. Gerdau propose to leave the 3 ea trimmed bars as-is and not incorporate an additional spliced bent bar. Please confirm if this is acceptable. T-0843	SSS - PJP Welds at Roof Node to Brace Beam	Closed	01	10/18/2013	10/28/2013	10/25/2013
From: Webcor Construction LP Robert Kjome						
REQUEST:		ANSWER:				
Reference is made to sheet S1-4205, Detail 2 "Brace Detail" which specifies a 1 ¾" effective weld from roof node to brace beam. Sheet S1-5131, Detail 1, Side View F specifies a bevel of 2 3/8" x 45 degrees for the weld joint area in question.		Reference is made to sheet S1-4205, Detail 2 "Brace Detail" which specifies a 1 ¾" effective weld from roof node to brace beam. Sheet S1-5131, Detail 1, Side View F specifies a bevel of 2 3/8" x 45 degrees for the weld joint area in question.				
Sheet S-0007, General Note SC-4 states that weld sizes shown are considered effective weld sizes. Prequalified weld joint BTC-P4-GF (attached for reference) states that the effective weld size shall equal the bevel size for flat and horizontal weld positions.		Sheet S-0007, General Note SC-4 states that weld sizes shown are considered effective weld sizes. Prequalified weld joint BTC-P4-GF (attached for reference) states that the effective weld size shall equal the bevel size for flat and horizontal weld positions.				
These welds are intended to be performed in the horizontal or flat position. Please confirm that a bevel size of 1 ¾" to equal the specified weld size of 1 ¾" is acceptable and conforms to the requirements of note SC-4 and AWS 2010 D1.1 Detail BTC-P4-GF attached. T-0848	BGP - Dewatering Well Pipe Alternate Route From: Webcor Construction LP Jackson Tukuafu	Closed	CR	10/21/2013	10/31/2013	10/31/2013
REQUEST: Please refer to attached excerpt details 6/A1-8711 and 1/S1-3201. SCCI is requesting to re-route all 2" dewatering well lines as proposed in the attached drawings and depicted in the attached photo. The SCCI proposed re-route is to eliminate any potential conflicts with future work (bracing removal, wall waterproofing, rebar, and form/pour/strip). Upon completion of the use of the dewatering system, the line will be cut below the sleeve, capped and grouted in with the trestle block-out pour back. The line will be poured in place with the future mat and concourse slabs and all 3 wall lifts. The line will also be capped at the top of the final wall lift. Please confirm the proposed dewatering well re-route as shown in the attached file is acceptable.		ANSWER: Please refer to attached excerpt details 6/A1-8711 and 1/S1-3201. T-0849	BGP - Mat Slab Layer 3 Lap Splice Relocation in Area 11 thru 16	Closed	CR	10/21/2013	10/31/2013	10/23/2013
From: Webcor Construction LP Jackson Tukuafu						
REQUEST: Please refer to drawing S1-2052. Due to limited access between the waterproofing and access trestle, Gerdau proposes to shorten the mat slab typical layer three (North-South) 67'-0" bars at Areas 11 through 16. This requires the lap splice location to be moved from the center of column line, as specified on Note 1 of the Mat Top Bar Notes in S1-2052, to the location shown in the attached Gerdau sketch SK-99. Please confirm the revised lap splice detail shown in Gerdau sketch SK-99 is acceptable.		ANSWER: Please refer to drawing S1-2052. From: Webcor Construction LP Robert Kjome						
REQUEST: Refer to the areas indicated on S1-2303 between grids 10.1 & 11 and D & F (CD RFI 097 SK1). Please confirm the noted W21x50 beams are at top of steel elevation 19'-1 5/8" and the BU-WT's are not required.						ANSWER: Refer to the areas indicated on S1-2303 between grids 10.1 & 11 and D & F (CD RFI 097 SK1). Please confirm the noted W21x50 beams are at top of steel elevation 19'-1 5/8" and the BU-WT's are not required.
T-0868.1	SSS - Framing Clarification for W21 Beams at Ground Level	Closed	CR	11/25/2013	12/05/2013	12/20/2013
From: Webcor Construction LP Gregory Kemerer						
REQUEST: Per the response to W/O RFI T-0868 (SK RFI 135), the TOS for the W21 should be at 16'-11" and the BU-WTs are required to support the slab at 19'-9 1/8". Based on this response, please confirm the following: 1) The difference between the TOS elevations per the response to SK RFI 135 requires a BU-WT with a total height of 2'-2 5/8", exceeding the maximum height dimension indicated on 5/S1-5002. Please confirm it is acceptable to proceed with detail 5/S1-5002 and the required BU-WT height of 2'-2 5/8" at this location. 2) Please confirm it is acceptable to stop the BU-WTs 1" clear from the edge of the transfer girder flange to allow for erection clearance or advise if the BU-WTs are required to extend to the face of the transfer girder web for deck support. (Reference CD RFI 097.1 SK1)						ANSWER: Per the response to W/O RFI T-0868 (SK RFI 135), the TOS for the W21 should be at 16'-11" and the BU-WTs are required to support the slab at 19'-9 1/8". T-0875	BGP- Trestle piles No 20 & 21 in conflict with beams at Lower Concourse level	Closed	CR	11/01/2013	11/11/2013	11/07/2013
From: Webcor Construction LP Michael Spillane						
REQUEST:						
<p>Following a review and discussion with Thornton Tomasetti on the trestle pile locations, it has been noted that trestle pile numbers 20 and 21 (see sketches attached) are in conflict with beams (B4A) at the escalator pits on the lower concourse slab elevation between gridline 11-12, D-F. The contractor is proposing to blockout a section of slab as shown on the sketch, this blockout section would then be infilled once the trestle pile has been removed.</p> <p>The contractor is to insure that the appropriate reinforcement lap splices are present between these concrete pours.</p> <p>Please confirm if this option would be acceptable</p>

	REQUEST: During level D bracing removal at area 7,a column rebar dowel was bent, as shown in the attached photograph. Please see below repair options: 1. Abandon the bent rebar leave it in its current position projecting 5' above the mat slab, place and additional equal size bar alongside the damaged bar as a replacement with possibly a 90 degrees hook at the base 2. Leave the dowel as is, couple the upper section of the bar onto it and bring it back in line as the bar continues vertically 3. Drill and epoxy in a new same sized bar beside the damaged one, the slab would have to be scanned for rebar location and new location pick to avoid damaging the existing reinforcement. 4. Concrete around the rebar to be removed the bar would then be cut and a new bar welded to it. 5. Concrete around the rebar to be removed .The bar would be cut and a barlock would be used to couple the rebar this could be difficult to achieve due to congestion with the top mat reinforcement and the depth required for the bar lock to be fitted Please advise on which option is acceptable.

T-0904.1	SSS - W-1 Glazing Connection Clarifications	Closed	CR	12/12/2013	12/22/2013	12/30/2013
From: Webcor Construction LP Gregory Kemerer						
REQUEST: As a follow-up to Webcor/Obayashi RFI T-0904 (SK RFI 182), please see attached CD RFI 136.1 SK1 and SK2 in reference to the following: 1) T-0904 Item 5: The response references the stiffener in detail 1A/S1-8001, while the question is regarding the 1" plate wedged between the BU-Beam web and the 2 ½" thick plate per detail 7/S1-8001. The top and bottom edges of the 1" plate are close to the bolts as shown on SK2. If this is the intent, confirm items 1a and 1b on SK2: a. Confirm the 1" edge distance is sufficient. b. Confirm it is acceptable to notch the 1" plate with partial 1 9/16 dia. holes at 4 locations to accommodate the bolts. 2) T-0904 Item 2: The response does not clarify the requested hole diameters. Please confirm the holes are 1 9/16" diameter for "CP2" connections.						
						ANSWER: As a follow-up to Webcor/Obayashi RFI T-0904 (SK RFI 182), please see attached CD RFI 136.1 SK1 and SK2 in reference to the following: 1) T-0904 Item 5: The response references the stiffener in detail 1A/S1-8001, while the question is regarding the 1" plate wedged between the BU-Beam web and the 2 ½" thick plate per detail 7/S1-8001. The top and bottom edges of the 1" plate are close to the bolts as shown on SK2. If this is the intent, confirm items 1a and 1b on SK2: a. Confirm the 1" edge distance is sufficient. b. Confirm it is acceptable to notch the 1" plate with partial 1 9/16 dia. holes at 4 locations to accommodate the bolts. 2) T-0904 Item 2: The response does not clarify the requested hole diameters. Please confirm the holes are 1 9/16" diameter for "CP2" connections.
T-0905	BGP - Light Column Anchor Bolts Conflict with Rebar	Closed	CR	11/15/2013	11/25/2013	11/27/2013
From: Webcor Construction LP Jackson Tukuafu						
REQUEST: Please refer to attached drawing S1-3009, S1-6008. SCCI encountered potential conflict between anchor bolts of light column (layout depicted in 2/S1-6008) with light column rebar as shown in 1/S 1-3009. Please find attached model depicting conflict between bundles of 2 ea rebar #11@16" OC with the layout of the anchor bolt. Please advise and provide parameters with which the rebar may be moved to clear the anchor bolts.

T-0920.2	SSS - Kicker Connection Clarifications	Closed	CR	12/16/2013	12/26/2013	01/02/2014
From: Webcor Construction LP Gregory Kemerer						
REQUEST:						
Per the response to Webcor RFI T-0920 (SK RFI # 172) clarification is required regarding the last statement where "Coping the bottom flange of the shallow beam is not allowed" and also per the response to Webcor RFI T-0934 (SK RFI # 187) clarification is required regarding the last statement where coping the bottom flange of the shallow beam shall not exceed 1" from the end of the beam.						
1). Per detail 1/S1-5010 where there is a double sided beam connection, the bottom flange is required to be coped in the shallow beam in order to allow for installation of the bolts from the shallow beam side. Note the bolts cannot be torqued if erected from the other side and would also foul the shallow bottom beam flange in question. On the attached sketches CD RFI # 126.1 SK1 to SK4 show some typical sample conditions illustrating the clearance required. The beam flange cope lengths required will range from 4" long in most cases to 4 1/2" at larger web thicknesses. Please verify the shallow bottom beam flanges can be coped for bolt clearance and erection of the beams as noted on SK2 to SK4.						
2). Per detail 9/S1-5010 where the WT on the top of the beam flange is required to extend to the end of the beam please verify the beam flange can be coped back to the "k1" of the beam in order to get full bearing and weld for the WT and to clear bolts as noted on SK2.						
ANSWER:						
Per the response to Webcor RFI T-0920 (SK RFI # 172) clarification is required regarding the last statement where "Coping the bottom flange of the shallow beam is not allowed" and also per the response to Webcor RFI T-0934 (SK RFI # 187) clarification is required regarding the last statement where coping the bottom flange of the shallow beam shall not exceed 1" from the end of the beam.						
1). Per detail 1/S1-5010 where there is a double sided beam connection, the bottom flange is required to be coped in the shallow beam in order to allow for installation of the bolts from the shallow beam side. T-0923.1	SSS - Dimension Clarification for W-1 Glazing	Closed	CR	01/06/2014	01/16/2014	01/14/2014
From: Webcor Construction LP Gregory Kemerer						
REQUEST: See attached CD RFI # 128.1 SK1 & SK2: RFI T-0923 SK4 was submitted with the center of "CP6" down 2'-0 1/4 from the top of steel. The 2'-0 1/4 dimension was taken from the Rhino model. The response to RFI T-0923 item 2 has changed the 2'-0 1/4 dimension to 2'-0 1/8. 1) Confirm the 2'-0 1/4 dimension from the Rhino model is correct. 2) Confirm the locations for all connections for the W-1 glazing system on the Bus Level may be taken from the Rhino model.		ANSWER: See attached CD RFI # 128.1 SK1 & SK2: RFI T-0923 SK4 was submitted with the center of "CP6" down 2'-0 1/4 from the top of steel. The 2'-0 1/4 dimension was taken from the Rhino model. The response to RFI T-0923 item 2 has changed the 2'-0 1/4 dimension to 2'-0 1/8. 1) Confirm the 2'-0 1/4 dimension from the Rhino model is correct. 2) Confirm the locations for all connections for the W-1 glazing system on the Bus Level may be taken from the Rhino model.

T-0927.1	BGP - Injection Hose Testing Criteria	Closed	CR	01/06/2014	01/16/2014	01/21/2014
From: Webcor Construction LP Jackson Tukuafu						
REQUEST: Please reference attached Grace/Deneef Technical Letter and RFI #T-0927 response. RFI T-0927 response states that "contractor shall use air to test hoses as specified," but the specifications call out several different types of injection hoses. Although, air testing may be suitable for other products specified, Grace/Deneef requires water testing for the INJECTO Tube system. The attached technical letter from Grace/Deneef states that "INJECTO is an open system, and any air pumped in will begin to flow immediately through the 35 micron filter and polypropylene mesh out into the concrete." Please review and confirm that water testing is acceptable for the Deneef INJECTO Tube system on the TTC project.						
						ANSWER: Please reference attached Grace/Deneef Technical Letter and RFI #T-0927 response. RFI T-0927 response states that "contractor shall use air to test hoses as specified," but the specifications call out several different types of injection hoses. Although, air testing may be suitable for other products specified, Grace/Deneef requires water testing for the INJECTO Tube system. The attached technical letter from Grace/Deneef states that "INJECTO is an open system, and any air pumped in will begin to flow immediately through the 35 micron filter and polypropylene mesh out into the concrete." Please review and confirm that water testing is acceptable for the Deneef INJECTO Tube system on the TTC project.

Per the response to Webcor RFI # T-0948 (SK RFI # 227) the cap plate length was revised to suit a shear plate fouling issue at the cap plate bolts. Please verify the sketch from Thornton Tomasetti SKS-306 can be applied at grids 8/G on S1-2303 and we can adjust the plate length for this similar condition. Refer to sketches CD RFI 178.1 SK1 & SK2 showing a 6 1/4" adjustment at one side of the cap plate. T-0951	SSS - Knock-Out Slab Clarification	Closed	CR	11/25/2013	12/05/2013	12/26/2013
From: Webcor Construction LP Gregory Kemerer						
REQUEST:			ANSWER:			
<p>On S1-2303 there is a detail 7/S1-5004 shown near grids F/11 to supply bent plate to support the permanent slab. This is a general bent plate detail for the knock-out areas and does not provide enough detail at the stepped Transfer Girder. Please see the following questions below:</p> <p>1) Please verify if bent plate is required parallel to the Transfer Girder along grid 11 to support the permanent slab at the knockout areas? If yes, will new beams be needed to support the bent plate and slab? Please provide size and location if new beams are needed at these areas. See RFI 185 SK1 & SK2.</p> <p>2) Please verify step in slab from grid D to F along grid line 11 will incase the Transfer Girder? Will headed studs be required at the transfer Girder web? If so, please provide size and spacing. See RFI 185 SK1 & SK2.</p> <p>3) Please verify it is the designs intent to have the edge of the knock-out slab extend past the edge of the Transfer Girder flange at grid line 10.1? If yes, please provide details to support the edge of the permanent slab at these locations. See RFI 185 SK1.</p> <p>4) Please confirm only steel highlighted in yellow will require bent plate to support the permanent slab? See RFI 185 SK1.</p> <p>5). Please clarify if any slab support is required for the knock-out slab at the edge of the escalator pit as shown on detail 6/S17660, referenced from the escalator plan on 1/S1-7302? Should the knock-out slab be separated in some way from the curb/wall of the escalator pit? See RFI 185 SK1.</p>			<p>On S1-2303 there is a detail 7/S1-5004 shown near grids F/11 to supply bent plate to support the permanent slab. ANSWER: On S1-7303 at the escalator areas refer to sketches CD RFI 177 SK1 & SK8 for items 1 to 6: 1) The elevation of the low beams cannot be determined as the information for the low slab is not shown on A1-2893 (SK2). Please supply the elevation for the low beam as shown on SK3, SK4, SK5 & SK7 2) Confirm the WT on top of the low W18x35 is required at (4) locations as shown. 3) Supply dimension. 4) Supply dimension. 5) Confirm the edge plate is to extend up to the top of low slab. 6) Supply a connection detail as 1/S1-7604 (SK7) does not represent the actual condition.

T-0967	Procedure for the removal of the level D bracing	Closed	01	12/05/2013	12/15/2013	12/09/2013
From: Webcor Construction LP Michael Spillane						
REQUEST: Procedure for the removal of the level D bracing: Webcor-Obayashi will review the 14 day compressive strength reports issued by the independent test lab (ISI) for the applicable pour area. In the review WOJV is to ensure that the "lower-bound" concrete strength exceeds 3000psi at 14 days. "Lower-bound" will be understood as the mean minus one standard deviation. If the calculated lower-bound strength <3000 psi, the bracing removal would not continue until results are received satisfying the lower bound criteria. Further, If any single compressive strength test is < 2500 psi, the bracing removal would not continue until results are received satisfying the minimum strength criteria. Please confirm if this would be acceptable						ANSWER: Procedure for the removal of the level D bracing: Webcor-Obayashi will review the 14 day compressive strength reports issued by the independent test lab (ISI) for the applicable pour area. T-0969	SSS - Filler Metal Usage on Group IV Grade HPS70W Material	Closed	CR	12/06/2013	12/16/2013	12/20/2013
From: Webcor Construction LP Gregory Kemerer						
REQUEST:			ANSWER:			
<p>Observation: Job specifications and Code AWS D1.1, Table 3.1, matching strength filler metal combinations for Group IV material, specifies for use an E91XTX for FCAW and F9XX for SAW process(s).</p> <p>Concern: ASTM A709GR 70W material hardening during welding (alloying up) as each weld layer is deposited (in 2" to 4" material thickness). An increased hardness value is expected and the actual concern is that, in this instance, the E91XX specified will create an overmatching filler metal condition during the welding process.</p> <p>Review: The AWS D1.1 2008 edition in table 3.1 for ASTM A709 Grade HPS70W specified a minimum of 70 ksi Yield Point and 90-110 ksi Tensile Range. In comparison, the AWS D1.1 2010 edition, a revision was made on this same material and the Tensile Range was dropped to 85 ksi minimum and maximum to remain at 110 (85-110).</p> <p>Research: Currently for seismic application, the filler metal companies have seismic testing certificates for E81XX and F8XX electrodes. The Tensile test range for AWS D1.8 requirements is 80ksi minimum, but the manufacturers' test results consistently come in at 88 to 95 ksi, which would meet the 85-110 ksi range for the material. The two manufacturers contacted, ESAB and Lincoln, are willing to do seismic testing (test data) for the purpose of supplying AWS D1.8 seismic certificates to meet the E91XX requirements. However, when reviewing the current test data from the manufacturer, the test tensile range is 90-110 ksi, but the results are 97-110 ksi.</p> <p>Conclusion: TMF and their welding consultants believe that starting with a near Minimum Tension ksi (under match in classification/specification) that allows the use of E81TXX or F8XX electrodes with current seismic certificates would be best for the welding of the A709 HPS70W material due to the 2-4" thickness in this application.</p> <p>Please confirm this proposal is acceptable.</p>			<p>Observation: Job specifications and Code AWS D1.1, Table 3.1, matching strength filler metal combinations for Group IV material, specifies for use an E91XTX for FCAW and F9XX for SAW process(s).</p> <p>Concern: ASTM A709GR 70W material hardening during welding (alloying up) as each weld layer is deposited (in 2" to 4" material thickness). T-0970.1	SSS - Pretensioned Rods at Moment Columns	Closed	CR	01/16/2014	01/26/2014	01/28/2014
From: Webcor Construction LP Stephanie Azzolino						
REQUEST: Following the response to RFI T-0970 and after further review of #3 & 10, we agree the rods can be pretensioned from the bottom. Candraft have run a sanity check at several locations to confirm there is adequate clearance for the tensioning device and will continue to do so as other locations are detailed. Any interference will be addressed in future RFIs. Please confirm it is acceptable to use a standard flat washer in lieu of the plate washer as the holes are not oversized and this will also allow for easier workability during the pretensioning operation from the bottom (see Dyson catalog cut attached). If this is acceptable the 24" dimension indicated from bottom continuity plate to top of built up T & TT (on 3/S1-5050) and the 6x6x2" plate washer under the top nut will not require to be changed (as per #3, 10 & 14 RFI T-0970). Please confirm this proposal is acceptable.

T-0976	SSS - Transfer Girder Kicker Connection Conflicts	Closed	CR	12/09/2013	12/19/2013	12/26/2013
From: Webcor Construction LP Gregory Kemerer						
REQUEST: Please refer to drawing 5/S1-5015. For the Transfer Girder angle connections see sketches CD RFI 063 SK1 to SK4 for items 1, 2, 3 & 4 noted below. 1) The kicker angle fouls the vertical stiffener, this is typical at similar locations. We propose notching the leg of the fouling angle and using a two bolt connection in lieu of welding or provide a typical solution. 2) Due to welding access issues we propose to use a two bolt connection, typical at similar locations. Confirm this is acceptable. 3) The kicker fouls the stiffener and the kicker gusset is too close to the stiffener for welding access. Similar conditions occur at other locations on the Ground Level. Please provide a typical solution. 4) The kicker gusset fouls the stiffener plate. Similar conditions occur at other locations on the Ground Level. Confirm it is acceptable to use the stiffener as the kicker gusset and increase the gusset thickness at the other end to match or provide an alternative detail.						ANSWER: Please refer to drawing 5/S1-5015. For the Transfer Girder angle connections see sketches CD RFI 063 SK1 to SK4 for items 1, 2, 3 & 4 noted below. 1) The kicker angle fouls the vertical stiffener, this is typical at similar locations. We propose notching the leg of the fouling angle and using a two bolt connection in lieu of welding or provide a typical solution. 2) Due to welding access issues we propose to use a two bolt connection, typical at similar locations. Confirm this is acceptable. 3) The kicker fouls the stiffener and the kicker gusset is too close to the stiffener for welding access. Similar conditions occur at other locations on the Ground Level. Please provide a typical solution. 4) The kicker gusset fouls the stiffener plate. Similar conditions occur at other locations on the Ground Level. Confirm it is acceptable to use the stiffener as the kicker gusset and increase the gusset thickness at the other end to match or provide an alternative detail.
T-0977	SSS - Handling Holes at Basket Column Pins	Closed	CR	12/09/2013	12/19/2013	12/19/2013
From: Webcor Construction LP Gregory Kemerer						
REQUEST: The clevis pins for basket columns detailed on S1-5133 do not provide means to safely handle the material during manufacturing, coating, and field assembly. To aid in these processes, please advise if it is acceptable to drill and tap 1-8 x 2" deep in the center of the pins at both ends. T-0980	SSS - BU Girders Connection Clarifications at Ground Level	Closed	01	12/09/2013	12/19/2013	12/16/2013
From: Webcor Construction LP Robert Kjome						
REQUEST:			ANSWER:			
<p>The W40x503 beams along grids C & G on the Ground Level have been substituted with BU beams per RFI # T-0704.1. This changes the flange copes in details 3 & 7/S1-4350. Please refer to attached CD RFI 162 SK1 & SK2 for the following items:</p> <p>1) Please confirm it is acceptable to extend the web plate above the BU beam and cut the top flange plate flush to the web plate as shown. Confirm the CJP weld indicated is acceptable to weld the top flange to the web plate. The web to flange fillet welds per RFI T-0704.1 will be applied beyond the shown CJP welds.</p> <p>2) Confirm it is acceptable to stop the bottom flange plate of the BU WT short as shown, extend the web plate of the BU WT to the web plate of the BU beam and weld as shown. The web to flange fillet welds per RFI # T- 0704.1 will be applied beyond the shown CJP welds.</p> <p>3) Confirm it is acceptable to have a continuous 4" vertical bolt spacing in lieu of the pattern interruption as shown in detail 3/S1-4350 to avoid cutting the bottom flange of the BU beam. This may mean that the holes for the 1 1/2" dia. bolts near the WT to BU beam web weld will have to be drilled after the weld is made.</p> <p>4) Confirm it is acceptable to have a continuous 4" vertical bolt spacing in lieu of the pattern interruption as shown in detail 7/S1-4350 to avoid the bolts fouling the web to flange fillet welds. This may mean that the holes for the 1 1/2" dia. bolts near the WT to BU beam web weld will have to be drilled after the weld is made.</p>			<p>The W40x503 beams along grids C & G on the Ground Level have been substituted with BU beams per RFI # T-0704.1. T-0981	SSS - Cast Node Erection and Fabrication Work Points	Closed	CR	12/09/2013	12/19/2013	12/13/2013
From: Webcor Construction LP Gregory Kemerer						
REQUEST:			ANSWER:			
It is requested that work points be added to the Cast Connex machine drawings and Bradken Cast Nodes as outlined on the marked up Cast Node drawings attached. These external "physical" work points will be used to reestablish the "non-physical" internal work points set during the pre-machining of Cast Nodes at Bradken. These external work points will be used to aid the following construction activities: 1) Shop fabrication of shear plates and pipe columns 2) Shop trial assembly and QC dimensional inspections 3) Field assembly and final QC dimensional inspections Please confirm each work point will be precision punch marked and highlighted with paint marker for easy identification. From: Webcor Construction LP Jackson Tukuafu						
REQUEST: Please refer to drawing S1-3304 and S1-3301. Detail 2/S1-3301 requires the couplers of adjacent column vertical bars to be staggered with a vertical distance of 24" or more; however, at gridlines 16.9/G there is a column dowel that should have been a shorter bar (L) but was installed as a longer bar (H) and casted in the mat foundation concrete. This does not allow for the stagger pattern as required. See the attached sketch SK-RFI-114 for more details. Gerdau proposes to leave the bar as-is. Please confirm if this is acceptable.						ANSWER: Please refer to drawing S1-3304 and S1-3301. Detail 2/S1-3301 requires the couplers of adjacent column vertical bars to be staggered with a vertical distance of 24" or more; however, at gridlines 16.9/G there is a column dowel that should have been a shorter bar (L) but was installed as a longer bar (H) and casted in the mat foundation concrete. This does not allow for the stagger pattern as required. See the attached sketch SK-RFI-114 for more details. Gerdau proposes to leave the bar as-is. Please confirm if this is acceptable.
T-0993	SSS - Deck Support at Columns	Closed	CR	12/10/2013	12/20/2013	12/16/2013
From: Webcor Construction LP Gregory Kemerer						
REQUEST: Detail 9/S1-5000 provides a typical detail for slab edge supports. However, no detail is provided for slab edge support at columns. On S1-2403 @ sample grid locations 10.1/C & 10.1/D for slab edge supports, refer to sketches CD RFI 219 SK1 to SK4 for items 1 & 2: 1) Confirm the connections for the angles to the column flange are acceptable as shown or supply a new detail. Note all not shown is per 9/S1-5000 & RFI T-0901. 2) Confirm the connections for the angles to the column web are acceptable as shown or supply a new detail. Note all not shown is per 9/S1-5000 & RFI T-0901.						ANSWER: Detail 9/S1-5000 provides a typical detail for slab edge supports. However, no detail is provided for slab edge support at columns. 	<p>In recent meetings, Webcor/Obayashi has made it clear that the same Bus Deck Cast Node geometry will be used at multiple locations even though the angle of the lower Basket Columns changes at each Node. This adds a level of complexity and cost to the joint between the Cast Node and Basket Column Pipe due to the kink imposed on that joint as a result of the following:</p> <ul style="list-style-type: none">- The Lower Pipe Columns will be required to be "miter cut" instead of a traditional square cut end. (Please note Spec Section OS 10 00, paragraph 3.2.M.1 states "Bearing ends of columns shall be milled or sawn square perpendicular to axis of the column.")- Miter cut Pipe will have an ellipse cross section and will not match the circular Casting Node.- Backing bars used to full pen weld the Pipe Column to the Cast Node would need to be custom machined to match the ellipse Pipe and circular Node to eliminate weld gaps. This significantly increases the complexity and risk for successfully welding the joint, and reduces the adjustability for fit up of these joints in the shop and the field. <p>This kink can be accommodated either by machining the nozzle of the Cast Node to be perpendicular to the pipe, or by machining the pipe end at a mitered angle to match the Cast Node.</p> <p>Since this joint on the Cast Node is already being machined, Skanska/OIW believes that the more desirable and less expensive option is to machine the nozzle of the Cast Node perpendicular to the axis of the Basket Column Pipe . As the nozzles will each be custom machined regardless, machining them to match the pipe axis should be a relatively low cost change .</p> <p>Skanska/OIW requests that the lower nozzle of each Bus Deck Cast Nodes to be machined perpendicular to the axis of the adjoining lower Basket Column Pipe. A negative response will result in a cost increase and a time increase.</p>					<p>In recent meetings, Webcor/Obayashi has made it clear that the same Bus Deck Cast Node geometry will be used at multiple locations even though the angle of the lower Basket Columns changes at each Node. T-1007.1	SSS - Framing & Connection Clarifications	Closed	CR	04/17/2014	04/27/2014	04/30/2014
From: Webcor Construction LP Gregory Kemerer						
REQUEST: This is a follow-up RFI to RFI T-1007: Per the response to item #1 a dimension of 40' 4-3/4" was provided that differed to the dimension indicated on the Revit model. Candraft & Skanska have reviewed the Structural and Architectural drawings provided and cannot come up with this dimension. This is typical at every location where we are required to calculate the slope of the slab to locate the kicker angles connected to the underside of the slab. Please provide the dimensions indicated on SK1 thru SK4 or clearly direct Skanska as to where to find this information.		ANSWER: This is a follow-up RFI to RFI T-1007: Per the response to item #1 a dimension of 40' 4-3/4" was provided that differed to the dimension indicated on the Revit model. T-1052.1	SSS - W10 Detail Clarifications	Closed	CR	01/16/2014	01/26/2014	01/28/2014
From: Skanska USA Civil West California DisRyan Clayton						
REQUEST:			ANSWER:			
The response to RFI T-1052 (SK RFI 309.1), states that "The 5/16" fillet weld is on 2 sides only (not all around as stated in this RFI). The width of the stiffeners can be reduced to match the W27 beam flange width. Don't see a problem in performing the double fillet weld, however, a CJP weld to replace the double fillet weld is acceptable." The original question asked permission to use a PJP weld in lieu of the double fillet weld, not a CJP weld. Please clarify the following:			The response to RFI T-1052 (SK RFI 309.1), states that "The 5/16" fillet weld is on 2 sides only (not all around as stated in this RFI). The width of the stiffeners can be reduced to match the W27 beam flange width. Don't see a problem in performing the double fillet weld, however, a CJP weld to replace the double fillet weld is acceptable." The original question asked permission to use a PJP weld in lieu of the double fillet weld, not a CJP weld. Please clarify the following:			
1) Skanska disagrees with the note that the referenced weld is shown as being required on 2 sides only. Please review the attached SK2 and confirm the welding locations as shown are acceptable.			1) Skanska disagrees with the note that the referenced weld is shown as being required on 2 sides only. Please review the attached SK2 and confirm the welding locations as shown are acceptable.			
2.) As there is insufficient landing to perform the 5/16" fillet as originally detailed, please confirm the welding as per CD RFI 240.1 SK2 is acceptable.			2.) As there is insufficient landing to perform the 5/16" fillet as originally detailed, please confirm the welding as per CD RFI 240.1 SK2 is acceptable.

From: Webcor Construction LP Gregory Kemerer						
REQUEST:			ANSWER:			
<p>While specification section 05 10 00-3.2 .P.3b excludes shop paint from areas to receive cementitious fireproofing, the response to SK RFI 319 (WOJV T-1060) indicates that all steel is to be prepped per the manufacturer's recommendations. The response to WOJV T-1060 provided three potential manufacturers for the SFRM-1 per the preliminary specification section 07 81 00-2.3.A.</p> <p>1.) Based on the product data sheets published for the Grace Monokote Z-146 and Cafco Fendolite M-II products, Skanska understands that these products are recommended to be applied to bare steel that is free of oil, grease, excess rolling compounds, lubricants, loose mill scale, excess rust,..., or any other substance that will impair proper adhesion. Please confirm this interpretation is acceptable and the potential use of these products is intended for application on bare steel.</p> <p>2.) The Carboline Pyrocrete 40 product does not require the use of a primer, however the published data sheets state that "Pyrocrete 40 neither promotes nor prevents corrosion". It is understood that the manufacturer finds application of Pyrocrete 40 to bare steel to be acceptable on the building interior, but recommends the Owner's consideration of a primer on steel exposed to corrosion. Please advise which areas, if any, are required to be primed prior to application of the Carboline Pyrocrete 40 product.</p> <p>Please note that application of a primer for areas receiving any of the three SFRM-1 products will incur additional costs and schedule impacts, as these areas were originally specified to be bare steel per 05 10 00-3.2.P.3b.</p>			<p>While specification section 05 10 00-3.2 .P.3b excludes shop paint from areas to receive cementitious fireproofing, the response to SK RFI 319 (WOJV T-1060) indicates that all steel is to be prepped per the manufacturer's recommendations. T-1061.1	SSS - Weld Access Holes at Columns Cap Plates	Closed	CR	02/24/2014	03/06/2014	03/04/2014
From: Webcor Construction LP Stephanie Azzolino						
REQUEST: <p>Per the response to Webcor's RFI # T-1061 (SK RFI # 180B.1) we have complied with the geometry for the weld access hole size per AWS D1.8, section 6.10. Using this formula we have shown the connection on CD RFI # 134.2 SK1 for a BU column with a 3 1/2" thick web. Please confirm the remaining 5 1/2" web material as shown on SK1 is acceptable.</p>

REQUEST:			ANSWER:			
For typical stair & elevator connections refer to sketches CD RFI 181 SK1 to SK3 for items 1 to 11: 1. Please consider attached detail (CD RFI 181 SK4) as an alternative for elevator post bases shown in 1/S1-7600 and 10/S1-7600. 2. Confirm a 1/16" gap between post and angle on each side is acceptable (CD RFI 181 SK1). 3. Plate washers are not shown for the slotted holes for 1" dia. A307 bolts. Are they required? (CD RFI 181 SK1) 4. Supply dimensions for kicker brace connections to composite deck requested on (CD RFI 181 SK2) 5. Confirm gusset and hole dimensions at top of kicker brace (Detail E) are same as shown for bottom of brace connection shown in CD RFI 181 SK2B. REQUEST:			ANSWER:			
See attached SK1 & 2 for items 1 & 2: 1) Details B, C & D are not practical as it is not known where the deck bottom flutes will be located at the time of modeling this project. As designed it is not possible to position the brace so the anchor bolts will be located on the centers of bottom flutes. Please confirm it is acceptable to model an oversized plate with additional staggered holes to account for the unknown position of the bottom flutes or supply an alternate detail. 2) Confirm a vertical short slot can be provided in the angle of the top bolted connection to allow for fabrication tolerances of the WF beam. T-1081	BGP -Shear Wall Horizontal Hooks Near GL 1.4-K From: Webcor Construction LP Michael Spillane	Closed	01	01/03/2014	01/13/2014	01/07/2014
REQUEST: At the shear wall (first lift) near grids 1.4/K, the tails to the horizontal hooks which terminate at the columns were erroneously cut in the field and no longer provide the proper development length. See the attached sketch for specific portions of the shear wall affected. Per field discussions with the TT engineer on site, Gerdau proposes to leave the hooks that have been cut "as-is" and to add a standard 180° #9 hook to allow for proper development of the horizontal bar. Please confirm if this is acceptable		ANSWER: At the shear wall (first lift) near grids 1.4/K, the tails to the horizontal hooks which terminate at the columns were erroneously cut in the field and no longer provide the proper development length. See the attached sketch for specific portions of the shear wall affected. Per field discussions with the TT engineer on site, Gerdau proposes to leave the hooks that have been cut "as-is" and to add a standard 180° #9 hook to allow for proper development of the horizontal bar. T-1083	BGP - Geothermal Riser Pressure Gauge Location From: Webcor Construction LP Jackson Tukuafu	Closed	CR	01/06/2014	12/30/2013	01/17/2014
REQUEST: Previous geothermal fields and risers had a "cat walk" behind the risers at grade. Additional pipe and 90s were added to bring the gauges up to grade to allow for pressure monitoring from this "catwalk." At fields 09-15 no cat walk exists, thus no location to access these gauges from. Please provide the location for the geothermal riser gauges for inspection from Field 09 through Field 15. T-1092	SSS - Ground Level Cast Nodes	Closed	CR	01/09/2014	01/19/2014	01/24/2014
<p>From: Webcor Construction LP Gregory Kemerer</p>						
<p>REQUEST:</p> <p>In recent meetings, Webcor/Obayashi has made it clear that the same Ground Level Cast Node geometry will be used at multiple locations even though the angle of the lower Basket Columns changes at each Node. This adds a level of complexity and cost to the joint between the Cast Node and Basket Column Pipe due to the kink imposed on that joint as a result of the following:</p> <ul style="list-style-type: none"> - The Lower Pipe Columns will be required to be limiter cut" instead of a traditional square cut end. (Please note Spec Section OS 10 00, paragraph 3.2.M.1 states 11Bearing ends of columns shall be milled or sawn square perpendicular to axis of the column.) -Miter cut Pipe will have an ellipse cross section and will not match the circular Casting Node. - Backing bars used to full pen weld the Pipe Column to the Cast Node would need to be custom machined to match the ellipse Pipe and circular Node to eliminate weld gaps. This significantly increases the complexity and risk for successfully welding the joint, and reduces the adjustability for fit up of these joints in the shop and the field. <p>This kink can be accommodated either by machining the nozzle of the Cast Node to be perpendicular to the pipe, or by machining the pipe end at a mitered angle to match the Cast Node.</p> <p>Since this joint on the Cast Node is already being machined, OIW believes that the more desirable and less expensive option is to machine the nozzle of the Cast Node perpendicular to the axis of the Basket Column Pipe. As the nozzles will each be custom machined regardless, machining them to match the pipe axis should be a relatively low cost change.</p> <p>OIW requests that the nozzles of each Ground Level Cast Nodes to be machined perpendicular to the axis of the adjoining lower Basket Column Pipe.</p> <p>A negative response will result in a cost increase and a time increase.</p>			<p>ANSWER:</p> <p>In recent meetings, Webcor/Obayashi has made it clear that the same Ground Level Cast Node geometry will be used at multiple locations even though the angle of the lower Basket Columns changes at each Node. T-1093	BGP - Foundation Wall Mix Placed in Shear Wall	Closed	CR	01/09/2014	01/19/2014	01/14/2014
From: Webcor Construction LP Jackson Tukuafu						
REQUEST:			ANSWER:			
Please reference TG06.0 technical specs section 033020.2.1 and cast-in-place mix designs submittal numbers: TG0600-203 (Foundation Walls) and TG0600-204 (Slabs, Beams and Shear Walls).			Please reference TG06.0 technical specs section 033020.2.1 and cast-in-place mix designs submittal numbers: TG0600-203 (Foundation Walls) and TG0600-204 (Slabs, Beams and Shear Walls).			
Foundation Wall cast-in-place mix satisfies all requirements prescribed in table 2-1 "Concrete Properties" (033020.2.1) for the Shear Wall cast-in-place mix design. In order to limit site congestion (1 concrete pump vs. 2 concrete pumps) and to aid in logistic coordination between trade subcontractors (BBII Steel offhaul and/or bracing/rebracing work and SCCI concrete placing activities). SCCI is proposing to utilize the Foundation Wall mix when placing the shear walls. Per the project schedule there will be instances in which a foundation wall and shear wall that are in close proximity, are to be poured on the same day. If the same mix is approved to be used for both types of walls, one pump can be utilized vs. two.			Foundation Wall cast-in-place mix satisfies all requirements prescribed in table 2-1 "Concrete Properties" (033020.2.1) for the Shear Wall cast-in-place mix design. T-1104.1	BGP - Increase Concourse Construction Joint Spacing From: Webcor Construction LP Claude Titcher	Closed	01	12/15/2014	12/25/2014	12/18/2014
REQUEST: Contract Doc Ref: 03 30 20 3.2A.4 Location: Lower Concourse Grid Line: 30-35 Add'l Doc Ref's: RFI T-1104 Please reference TG06.0 contract spec section 033020.3.2.A.4, RFI T-1104 RESPONSE BGP - Increase Concourse Slab Maximum Construction Joint Spacing, and attached drawing showing proposed CJ layout. SCCI is proposing to increase the allowable maximum construction joint spacing in the lower concourse slab from 96' in Area 15 & 16. Maximum construction joint spacing would be 100' for Area 15 and 99' for Area 16. Joint location will always land on wall joint location below per 033002.3.2.A.4. Construction joint layout submittal TG0600-030 will be revised and resubmitted to reflect any change made to currently approved layout. Is this acceptable? 	<p>Package TG0701-023.1 SSS - Light Column Anchor Bolts (#1.5E), please review and respond to the following items:</p> <p>1) Base plate hole oversize and subsequent sizing of the top plate washer</p> <p>As a follow up to the conference call held 1/29/14 for the Light Column anchor bolts, Dywidag provided the following information via the email attached: "If we spec a 50ksi plate and use the full width of the spherical washer, the plate works as-is. Leaving the plate design alone (with the assumed actual contact width of the washer) the plate still works at a 6" hole diameter. This is designing for 95% of the ultimate capacity of the bar."</p> <p>The maximum outside diameter of the HSS tube inside the base plate is 3.5". Within a 6" hole, this allows for 1.25" of clearance all around the tube, which is more than adequate clearance based on the AISC allowable tolerances for installations of anchor-rod groups. Reference AISC Steel Construction Manual, Section 16.7.5.1 attached, which does not allow for any more than ¼" variation between anchor rod groups nor between anchor rod group and column lines. Please confirm it is acceptable to proceed with a 6" base plate hole size to avoid modifications to the top anchor plate grade and geometry.</p> <p>2) Adequate corrosion protection of bar with clearance provided between 2.79" bar and 3" galvanized tube</p> <p>See the email attached from Dywidag stating that the provided clearance allows for adequate corrosion protection of the anchor bar. Please confirm the galvanized duct is acceptable as detailed based on this information.</p>

T-1176	SSS - Finish Requirements at BRBs	Closed	CR	02/19/2014	03/01/2014	02/27/2014
<div><div>From: Webcor Construction LP</div><div>Stephanie Azzolino</div></div>						
REQUEST:			ANSWER:			
<p>Detail B/A1-8662 indicates that BRBs at Ground Level between GL D.4/28 and D.4/31 are to receive IFRM-2 fire protection. All other BRBs are to receive SFRM fire protection. Please refer to SK RFI 397 SK1 attached and clarify the following finish requirements for the BRBs:</p> <p>1) Details 1, 3, and 5 on S1-4206 indicate that bottom gusset plates are to be galvanized. Please confirm that only the bottom gusset plates are to be galvanized.</p> <p>2) For BRBs to receive SFRM fire protection:</p> <p>a. Please confirm the extent of the SFRM at the braces as indicated by the red outline in details 2, 3, and 6. Note that all materials indicated to receive SFRM will be bare steel. Steel will be prepped in accordance with 07 81 00-3.2.B.</p> <p>b. Please confirm the pin, bolts, plates, and top gussets shown in details 2 and 6 are to be bare steel in anticipation of receiving SFRM by others.</p> <p>3) For BRBs to receive IFRM fire protection:</p> <p>a. Please confirm the extent of the IFRM at the braces as indicated by the blue outline in details 2, 3, and 6. Materials indicated to receive IFRM will be prepped and primed in accordance with 07 81 23.</p> <p>b. Detail B/A1-8662 graphically indicates that only the braces and not the gussets are to receive IFRM. Please confirm the final finish of the bottom gusset plates is to be galvanized and provide the finish requirements for the top gussets.</p> <p>c. Please provide the finish requirements for the pins and 1" thick plates indicated on 6/S1-4206.</p> <p>d. Provide the finish requirements for the bolts indicated in detail 6/S1-4206.</p>			<p>Detail B/A1-8662 indicates that BRBs at Ground Level between GL D.4/28 and D.4/31 are to receive IFRM-2 fire protection. T-1205	BGP - Lower Concourse Blockouts to Pour Train Level Partition Walls	Closed	01	02/26/2014	03/08/2014	03/04/2014
From: Webcor Construction LP Claude Titcher						
REQUEST: SCCI is planning on pouring as much of the Train Level Partition Walls in Area 3 and 4 prior to the Lower Concourse Deck being poured (see attached Structural Drawings for reference). However, some of the partition walls conflict with the Rakers used for bracing. Additionally, there are some partition walls in Areas 6-16 that are added in ASI #110 that is now included in TG06 scope. Since the Rakers will not be removed until after the Lower Concourse Deck is poured, SCCI proposes installing blockouts in the Lower Concourse above the walls in order to complete the concrete pours for the partition walls in Areas 3 and 4. The same blockouts will be installed for the partition walls on the mat slab level in Areas 6-16, added as part of ASI 110. The blockouts will be 6"x 12" for RCS 1 reinforcement and 9"x 12" for RCS8 reinforcement, both at 4' O.C. The blockouts would be positioned in the space between bars as to not affect the reinforcement layout. T-1221	BGP - 36" Pile Sleeve Joint	Closed	01	03/06/2014	03/16/2014	03/14/2014
<div><div><div>From: Webcor Construction LP</div><div>Claude Titcher</div></div><div><div>REQUEST:</div><div>Please reference attached sketch, photo, and Contract Drawings SI-3003 and SI-2025. SCCI welded the 36" pile sleeve (see S 1-2025) vertical CJP as depicted in the attached sketch due to a shop fabrication error (see attached photo). Per AWS DI .1, the pre-qualified joint designation B-U2a-GF for FCAW allows a 65 degree groove angle with detail and fit up tolerances. The welded joint is approximately 15 degrees out of tolerance and is on one side of the sleeve only (2 joints per sleeve). Due to the member considered as non-structural, SCCI requests this joint to be acceptable as welded at this location only. SCCI will adhere to Spec Section 05 50 10 - 2.5.C.2 - "Weld mat foundation sleeve components continuously and test their water tightness by filling with water. Monitor water level for 48 hours minimum. Dry and correct faulty welds and re-test until proven watertight." Is this acceptable?</div></div><div><div>ANSWER:</div><div>Please reference attached sketch, photo, and Contract Drawings SI-3003 and SI-2025. T-1224	BGP - Concourse Top Bars at Column Embedded Plates	Closed	01	03/10/2014	03/20/2014	03/18/2014
From: Webcor Construction LP Claude Titcher						
REQUEST:			ANSWER:			
Reference: SKS-0324 and SKS-0325 Per SKS-0324 and SKS-0325, where the top bars for the concourse slab intersect type 1 B and 1 C embedded base plates, the bars are to be trimmed and supplemented with a matching slab dowel in MF beam layer 1. The typical deck top reinforcing consists of a continuous run of #9 bars @ 12" and alternates with a #9 x 28'-0" long bars@ 12". See attached sketch for details. To avoid trimming a 28'-0" bar and splicing it with a 17'-0" bar, please confirm if it is acceptable to relocate the #9 x 28'-0" top bars@ 12" to the MF beam layer 1. The continuous #9 bars@ 12" will remain at 3/4" from the top of concrete and trimmed according to SKS-0324 and SKS-0325. 	REQUEST: SCCI performed a survey of the CDSM Soldier Piles approximately March 2013 for the North of Area 3 and West of Area 3 and Area 1. SCCI re-surveyed the soldier piles again this year (March 2014) and have found that the Soldier Piles in the area have displaced into the structure by approximately 1.5" at both the North Wall and the West wall. Please find attached survey information and the changes noticed in the past year. 1. Please confirm that the additional encroachment and future potential movement of wall into the structure will not cause conflict with current and future rebar installation. 2. Please confirm and demonstrate that the future potential movement will not cause additional stress to the Wall Lift 1, which will be poured in the next week. 3. Please confirm that future potential CDSM movement in this area will not impact any of SCCI's future permanent work.

T-1274	SSS - A4786 Edge Distance	Closed	CR	03/21/2014	03/31/2014	04/04/2014
From: Webcor Construction LP Gregory Kemerer						
REQUEST: See attached CD RFI # 361 SK1: On A4786 (CS2) the connection angles have been located at the top to clear the 'k' of the W40X324 supporting beam. The depth of the bottom cope matches the 'k' of the W40x199. Therefore it is not possible to achieve the requested 1 3/4" edge distance. Confirm the 1 5/16" edge distance is acceptable as it exceeds the 1 1/8" minimum at a gas cut edge.		ANSWER: See attached CD RFI # 361 SK1: On A4786 (CS2) the connection angles have been located at the top to clear the 'k' of the W40X324 supporting beam. The depth of the bottom cope matches the 'k' of the W40x199. Therefore it is not possible to achieve the requested 1 3/4" edge distance. Confirm the 1 5/16" edge distance is acceptable as it exceeds the 1 1/8" minimum at a gas cut edge.

1) Drawing 2669 ~ the noted beam is not sloping per S1-4004. Confirm the drawing is correct as submitted and no action is required.			1) Drawing 2669 ~ the noted beam is not sloping per S1-4004. Confirm the drawing is correct as submitted and no action is required.			
2) Drawing 2707 ~ the noted beam is not sloping per S1-4015 (S1-4004 is not the correct drawing reference). Confirm the drawing is correct as submitted and no action is required.			2) Drawing 2707 ~ the noted beam is not sloping per S1-4015 (S1-4004 is not the correct drawing reference). Confirm the drawing is correct as submitted and no action is required.			
3) Drawings 2706, 2710, 2713AB ~ the 3 1/16" dimensions are necessary as the beam webs vary in thickness. The 3" dimension on the angles has been used at the thickest beam web. Confirm the drawings are correct as submitted and no action is required.			3) Drawings 2706, 2710, 2713AB ~ the 3 1/16" dimensions are necessary as the beam webs vary in thickness. The 3" dimension on the angles has been used at the thickest beam web. Confirm the drawings are correct as submitted and no action is required.			
4) Drawings 3792, 3793 & 3794, 4933, 4935, 4994, 4995, 4998 ~ The top cope on the right end is correct as shown. The Approver's reference to a 2" flange is incorrect as the TPG1 on Grid 13 has a 3 1/2" thick flange per S1-4200. We have limited the clearance at the top to 1/4" be able to fit the number of bolts per S1-5010. Confirm the drawings are correct as submitted and no action is required.			4) Drawings 3792, 3793 & 3794, 4933, 4935, 4994, 4995, 4998 ~ The top cope on the right end is correct as shown. The Approver's reference to a 2" flange is incorrect as the TPG1 on Grid 13 has a 3 1/2" thick flange per S1-4200. We have limited the clearance at the top to 1/4" be able to fit the number of bolts per S1-5010. Confirm the drawings are correct as submitted and no action is required.			
5) Drawings 4832 & 4924 ~ RFI T-0857 (SK 117, CD 089) asked for permission to cope the beam as shown on the submitted drawings on SK2 item 1 and the cope was approved in the response. Cutting one side of the flange is not sufficient to clear the brace. Confirm the drawings are correct as submitted and no action is required.			5) Drawings 4832 & 4924 ~ RFI T-0857 (SK 117, CD 089) asked for permission to cope the beam as shown on the submitted drawings on SK2 item 1 and the cope was approved in the response. T-1313	SSS - Deck Support Detail at Column	Closed	CR	04/09/2014	04/19/2014	04/21/2014
	<div><div>From: Webcor Construction LP</div><div>Gregory Kemerer</div></div> <div>REQUEST: Please reference detail 1/S1-5001. The L3x3x12ga deck support angle is shown coping into the web of the girder. At the majority of the conditions where this may occur the girders have thick and wide flanges. After the angle is coped as detailed we will have very little material to work with and is unlikely to have much structural integrity. Please see attached alternative sketch. In this condition the angle is lapped on top of the girder and connected with fillet welds. The depth of the girder has no impact on the detail. This is a common detail in the metal decking industry. Please confirm the proposed column angle support sketch is acceptable.</div>					<div>ANSWER: Please reference detail 1/S1-5001. T-1336	SSS - API 5L X65 Pipe to A216 WCC Casting (Field Weld) PQR	Closed	CR	04/17/2014	04/27/2014	04/29/2014
From: Webcor Construction LP Gregory Kemerer						
REQUEST: Skanska is currently procuring weld test plates for qualifying field welds to API-5L Grade X65 pipe. For this, we propose to use API 2W plate. Whereas API 5L is strictly a pipe specification, API 2W is a plate specification but is commonly rolled and welded to create API 5L pipe. Below is a direct comparison between API 5L Gr. X65 allowable chemical and mechanical properties with our proposed API-2W plate material. Values for the plate are taken directly from the MTR for the plate we propose to use (attached and highlighted). All values for the API 2W plate we propose to use meet the requirements of the API 5L Grade X65 specification. Please confirm it is acceptable to use the API 2W plate for our PQRs. T-1367	SSS - IFRM Prime Coat Requirement	Closed	CR	05/06/2014	05/16/2014	05/12/2014	
	From: Webcor Construction LP						Gregory Kemerer
	REQUEST:						
	Specification section 07 81 23 (Intumescent Fire Resistive Materials), issued with Field Order 00027, lists three acceptable basis of design manufacturers for IFRM systems. Additionally, specification section 07 81 23, 1.7.C.2 states that the intumescent fire protection system is to be from a single source, indicating that the prime coat Skanska shop applies must be from the same manufacturer as the subsequent coats that are field applied.						
	Per the monthly schedule delivered to TJPA, the IFRM contractor is not to be selected until 10/16/14.						
	Skanska requires direction as to which of the three approved basis of design manufacturers will be used on subsequent coats in order to obtain a recommendation from that intumescent coating manufacturer as to the appropriate primer to be utilized.						
	Alternatively, priming of IFRM steel can be removed from Skanska's scope and added to the scope of the IFRM contractor. This will result in a cost increase.						
	Please provide direction.						
	following table, please confirm that the direction provided in the aforementioned RFI response is to install framing channels per 12/S1-5003. In some cases, the slab openings are only between 8"-12" wide. Otherwise, please indicate that it is acceptable to provide rebar as shown in SKS-0354 per RFI T1366 instead.

T-1369	SSS - Weld Electrode Subcomponents From: Webcor Construction LP Gregory Kemerer REQUEST: During a Quality Control review, performed by Thompson Metal Fab for compliance with the "Buy America" clause of the Contract, a question was noted regarding the proposed use of ESAB Spoolarc F9A4-ENi4 Submerged Arc Welding (SAW) Electrode for the welding of the HPS70W steel in the Train Box Columns. The attached letter from ESAB, dated April 22, 2014, describes the process that ESAB employs in the manufacture of the referenced product. It notes the fact that the tensile and yield properties of the specific filler metal alloy required to meet the Contract specifications of 90XX are not offered or produced by any mills within the United States. The alloy is provided as a "Greenrod" and is acquired outside of the States. The cold drawing, proprietary processing and packaging of the product is done, by ESAB, wholly within the United States and uses, other than the alloy itself, domestically produced and acquired materials. The Certificate of Conformance from ESAB states that the product is manufactured in the United States (attached). An inquiry was made, by Skanska, to Lincoln Electric regarding a similar product classification that met the Contract requirement (F9A4-ENi5). Lincoln Electric advised Skanska that they also receive "Greenrod" and strip from sources outside of the United States for this product. A subsequent Quality Control review by The Herrick Corporation revealed a similar condition for the use of the Lincoln Electric product Outershield XLH-70, AWS	Closed	CR	05/07/2014	05/17/2014	05/21/2014
	<p>Due to the construction sequence, where the moment frame beams intersect a column support, the single-piece moment frame beam perimeter stirrups cannot be installed as shown in 2/S1-3600. Please confirm that it is acceptable to use an alternate 3-piece perimeter stirrup configuration where the moment frame beams intersect a column support. See the attached sketch for details</p>

REQUEST:			ANSWER:			
Following our discussion on the CP01 support stiffener welds at Thursday 05/01/14 structural issues coordination meeting, Skanska proposes to remove the "all-around" designation on the 3/4" PJP weld shown in section C 1/S1- 8001 and replace with 'four sides' written in the weld tail. The welds will terminate at the start of the clips at the internal corners. Please confirm this is acceptable. T-1379	BGP - Pit and Pile Discrepancy at GL 27/E	Closed	01	05/12/2014	05/22/2014	05/14/2014
From: Webcor Construction LP Claude Titcher						
REQUEST: Please reference attached contract drawings sheet S1-2026. The mat slab pit located at Gridline 27 and E has a width of 2'-6". The pile located within this specific pit (see marked up S1-2026 is a 36" pile as detailed. Please provide new dimensions for the pit incorporating the 36" pile.						ANSWER: Please reference attached contract drawings sheet S1-2026. The mat slab pit located at Gridline 27 and E has a width of 2'-6". The pile located within this specific pit (see marked up S1-2026 is a 36" pile as detailed. Please provide new dimensions for the pit incorporating the 36" pile.
T-1379.1	BGP - Pit and Pile Discrepancy at GL 27-E	Void	01	05/21/2014	05/31/2014	
From: Webcor Construction LP Claude Titcher						
REQUEST: SCCI is in receipt of RFI T-1379. SCCI disagrees with the response provided in the aforementioned RFI. S1-2026 illustrates a 30" wide pile in a 30" wide pit at gridline 27/E. However, Submittal #TG0300- 284.4, which was reviewed and approved by the design team, shows the previously mentioned trestle pile as a 36" wide pile. It has also been confirmed in the field this pile is 36" wide pile. Please provide applicable details (similar to D4 on SI-3009 & D2 on SI-3007) for permanent elements in the mat slab construction, including but not limited to galvanized sleeves and structural steel reinforcing, for the pit at GL 27/E which contains a 36" wide pile, not 30" as shown on the design drawing S 1-2026. T-1387	SSS - Erection Plan Temporary Lugs	Closed	CR	05/12/2014	05/22/2014	05/23/2014
From: Webcor Construction LP Gregory Kemerer						
REQUEST:			ANSWER:			
During a recent structural issues coordination meeting, Skanska raised a concern regarding a submittal response received with package TG0701-29. Specifically, Skanska flagged a comment that indicated our temporary erection aids at the exterior moment frame columns needed to be located 36" below the moment frame beam to column connection at the bus deck level and also 36" away from the weld joint between the column and cast node/transfer girder at ground level. See attached drawings for ease of reference.			During a recent structural issues coordination meeting, Skanska raised a concern regarding a submittal response received with package TG0701-29. See attached drawings for ease of reference.			
As discussed during the meeting, please confirm that this is not mandatory; and, if Skanska opts to leave the lugs as shown on the attached documents, it is acceptable. From: Webcor Construction LP Stephanie Azzolino						
REQUEST: See attached CD RFI # 415 SK1 to SK3 for item 2. 2) The noted bolts for the W27x84 beams are not accessible from the back side as shown in SK3. Please supply an alternate detail.						ANSWER: See attached CD RFI # 415 SK1 to SK3 for item 2. 2) The noted bolts for the W27x84 beams are not accessible from the back side as shown in SK3. Please supply an alternate detail.
T-1403	BGP - Partition Wall Construction Joints	Closed	01	05/15/2014	05/25/2014	05/23/2014
From: Webcor Construction LP Claude Titcher						
REQUEST: Please confirm the following items are acceptable regarding partition wall construction joints. 1. To provide the 3/8" gap for the vertical CJ's, SCCI intends to place felt board in the joint with a 3/4" chamfer (see attached drawing). Once the walls on either side of the CJ have been poured, the felt board will be trimmed down to the end of the chamfer and the edges of the joint will be caulked. Please confirm this is acceptable. 2. With the exception of the tank walls, SCCI intends to pour the Train Level Partition Walls that go all the way to the Lower Concourse (~28'-11" tall) in two lifts with one horizontal CJ. SCCI proposes prepping the joint by roughening it with 1/4" amplitude. Please confirm this is acceptable. T-1412	SSS - Pipe Wall Thickness Tolerance	Closed	CR	05/23/2014	06/02/2014	05/28/2014
From: Webcor Construction LP Gregory Kemerer						
REQUEST:			ANSWER:			
Per conversation during "Transbay structural issues review" meeting on 5-20-2014, the wall thickness tolerance of spec 05 15 22 was discussed. Per design team, this tolerance is intended to apply to the ends where the pipe would be welded, and a less restrictive tolerance would be acceptable throughout the length of the pipe, provided that the wall thickness is greater than nominal, not less.			Per conversation during "Transbay structural issues review" meeting on 5-20-2014, the wall thickness tolerance of spec 05 15 22 was discussed. Per design team, this tolerance is intended to apply to the ends where the pipe would be welded, and a less restrictive tolerance would be acceptable throughout the length of the pipe, provided that the wall thickness is greater than nominal, not less.			
The manufacturer of the spun-cast pipe has produced all product to date with dimensions that meet the 05 15 22 spec for 12" at each end. Throughout the remainder of the pipe, the wall thickness is greater than nominal (typically by about 0.090"), and in all cases falling within the tolerance of API-5L.			The manufacturer of the spun-cast pipe has produced all product to date with dimensions that meet the 05 15 22 spec for 12" at each end. Throughout the remainder of the pipe, the wall thickness is greater than nominal (typically by about 0.090"), and in all cases falling within the tolerance of API-5L.			
See attached depiction of the pipe tolerances.			See attached depiction of the pipe tolerances.			
Please confirm that wall thickness tolerance noted in spec 05 15 22 is intended to apply to the ends only, and that the wall thickness throughout the remainder of the pipe may be greater by as much as is allowed by API5L, but shall be no less than the nominal wall thickness.			Please confirm that wall thickness tolerance noted in spec 05 15 22 is intended to apply to the ends only, and that the wall thickness throughout the remainder of the pipe may be greater by as much as is allowed by API5L, but shall be no less than the nominal wall thickness.

T-1419	SSS - Bus Deck Cast Node Dimension Confirmation	Closed	CR	05/23/2014	06/02/2014	06/04/2014
From: Webcor Construction LP Gregory Kemerer						
REQUEST: The structural issues meeting on 5/15/2014 reviewed potential changes to the cast node machine shop drawings. Due to the sand inclusions in the 35A and 35B cast nodes, further machining of the pad surfaces is required. This will result in a dimension of 16" from the W0 work point in lieu of the initial dimension of 17" (see attached sketch). Cast Connex has proceeded to make the 16" revision to the cast node machine shop drawings. Please confirm this is acceptable, and update the structural drawings to match. T-1468	SCS - WPS Qualification - Lenton Weldable Couplers	Closed	01	06/23/2014	07/03/2014	07/03/2014
From: Webcor Construction LP Claude Titcher						
REQUEST:		ANSWER:				
The Lenton welding information provides guidance for qualification of processes; however there are inconsistencies when trying to fulfill AWS D1.1 (2010) requirements. The materials used for manufacturing weldable couplers size #9-11 are Grade 1030/1035. These grades of material are not listed in AWS D1.1 (2010) Table 3. 1, although Grade 1030 is listed in AWS B 2.1 Table D.1 as a Group 2 material (table attached). In order to move forward with welding the Lenton weldable couplers to the Transfer Girders, TMF proposes that FCA W Grade 70 filler material to be used manufacturer ESAB 7100 Ultra, Classification E71 T-9, AWS Specification AWS 5.20"D". One mockup of the actual coupler welded to a Group 2 plate and macro etched would be provided as a supplement. T-1473	BGP - Lower Concourse Service Corridor Dimensions on West Wall	Closed	01	06/25/2014	07/05/2014	07/02/2014
From: Webcor Construction LP Claude Titcher						
REQUEST:			ANSWER:			
Please reference RFI T-0576 regarding the offset of the West Foundation Walls to account for the CDSM Encroachment. The west wall (GL 1) was offset 3 1/8" to the east while the southwest wall (GL XI-1) was offset 1 7/8" to the northeast. Currently there are no dimensions explicitly shown in the contract drawings for the width of the service corridor that runs along the very western edge of the Lower Concourse in Area 1 and 3. However there is a dimension shown on A1-3006 & A1-7004 that shows the eastern face of the service corridor at 5' to the west of GL 1.4 which translates into a service corridor width of 9' -8 7/8". Is it the designers intent to offset the service corridor walls similar to the foundation walls to maintain the 10' corridor width, or is it the designers intent to shrink the width of the service corridor and keep the interior walls in place? Please provide dimensions for the service corridor width.			Please reference RFI T-0576 regarding the offset of the West Foundation Walls to account for the CDSM Encroachment. T-1473.1	BGP - Lower Concourse Service Corridor Dimensions on West Wall	Closed	01	07/07/2014	07/17/2014	07/15/2014
From: Webcor Construction LP Claude Titcher						
REQUEST:			ANSWER:			
With the response from RFI T-1473 and the contract drawings, SCCI has enough dimensions to model the service corridor running north-south in Area 3. However there is not enough information to model the alignment of the service corridor running northwest-southeast. Please provide a work point with dimensions somewhere along the east face of the service corridor (preferably at the southernmost point of the service corridor at Shear Wall 390A) or provide an angle at which the service corridor changes direction above Gridline K. T-1476	SCS - Concrete Form Support Using CDSM Piles	Closed	01	06/30/2014	07/10/2014	07/09/2014
From: Webcor Construction LP Claude Titcher						
REQUEST: Shimmick is planning to use a similar form system for the fourth lift of the foundation wall to that used on the second wall lift. However, the second wall lift form system is a cantilever system and is supported by 1 row of anchors, exerting significant force on the wall lift below. Shimmick proposes to add a tie to the top of the forms and connect to the CDSM soldier piles in addition to using the third lift anchor to provide better support. The soldier piles extend above the ground level and this added tie would not affect the waterproofing (installed by others). See the attached marked up drawings for reference Please confirm it is acceptable for the fourth lift form system to tie to the CDSM soldier piles.						ANSWER: Shimmick is planning to use a similar form system for the fourth lift of the foundation wall to that used on the second wall lift. However, the second wall lift form system is a cantilever system and is supported by 1 row of anchors, exerting significant force on the wall lift below. T-1483	BGP - Dimension to Door on North Vehicle Ramp Wall	Closed	01	07/01/2014	07/11/2014	07/07/2014
From: Webcor Construction LP Claude Titché						
REQUEST: The door in question is at the east end of the north Vehicle Ramp Wall. There is a dimension on AI-2853, dimensioned at 7'-5 7/4" from GL 6 to the end of the wall and it is shown without a door attached. On all other drawings a door is shown at the east end of the wall, but there are no other dimensions indicating the east-west location of the door. Please confirm if it is the designer's intent to have the door placed on the end of the wall shown in AI-2853 so the east face of the door is 6'-5 1/4" off of GL 6 or if the door is to be placed per scale at 6'-3" off of GL 6.					ANSWER: The door in question is at the east end of the north Vehicle Ramp Wall. There is a dimension on AI-2853, dimensioned at 7'-5 7/4" from GL 6 to the end of the wall and it is shown without a door attached. On all other drawings a door is shown at the east end of the wall, but there are no other dimensions indicating the east-west location of the door. Please confirm if it is the designer's intent to have the door placed on the end of the wall shown in AI-2853 so the east face of the door is 6'-5 1/4" off of GL 6 or if the door is to be placed per scale at 6'-3" off of GL 6.

T-1487	SSS - Shear Plate Weld Connection Clarification	Closed	CR	07/02/2014	07/12/2014	07/14/2014
<div><div>From: Webcor Construction LP</div><div>Gregory Kemerer</div></div>						
REQUEST:			ANSWER:			
<p>For roof level shear plate connection details at GL11D & GL11F, S1-2603 refers to 3/S1-5013. This detail calls for a 3sided PJP weld at the shear plates, with a t-1/8 bevel (t=shear plate thickness). The shear plate located at the center of the web has a thickness of 2 ½", which results in a 2 3/8" bevel. The column web at this location has a thickness of 1 ¼"; the stiffener plates top and bottom have a thickness of ½". A 2 3/8" PJP weld will greatly distort the ½" stiffener plates. The weld size should not exceed the thickness of the thinnest member. Also, Detail 3/S1-5013 refers to Connection Detail 4/S1-5013 which in turn refers to Shear Connection Detail 3/S1-5013. Since both sides of the shear plate are accessible (note 1), is a ½" fillet both sides as shown in 3/S1-5011 acceptable for this location?</p>			<p>For roof level shear plate connection details at GL11D & GL11F, S1-2603 refers to 3/S1-5013. The group of walls also do not show up on any other architectural or structural drawings. Please provide dimensions to the east-west future CMU walls coming off the south radius wall on D206 near Gridline 5.5-K as marked in the drawings attached.
T-1501	SSS - Edge of Slab Plate Termination Clarification at GL 7 From: Webcor Construction LP Gregory Kemerer REQUEST: See attached CD RFI # 466 SK1 & SK2: With the sloping slab per A/A1-7106 (SK2), it is not clear where to terminate the edge plates per 8/S1-5000. Please clarify and supply the missing dimension.	Closed	CR	07/08/2014	07/18/2014	07/18/2014
						ANSWER: See attached CD RFI # 466 SK1 & SK2: With the sloping slab per A/A1-7106 (SK2), it is not clear where to terminate the edge plates per 8/S1-5000. Please clarify and supply the missing dimension.
T-1502	SSS - Decking Around Bus Deck Level Crash Rails From: Webcor Construction LP Gregory Kemerer REQUEST: With reference to the Bus Deck Level crash rail post detail 1/S1-8000, the post base plate is 18"x30" and spans or overhangs the width of the supporting beam allowing no bearing for the deck. As a result along grid lines B & H where the deck runs parallel to the support beam, our decker is required to provide a gauge support angle and flashing where required around the base plate, see details 1 & 2 on SK1. At grid lines 1.1 & 33.5 where the deck runs perpendicular to the support beam, a beam flange extension is required to achieve the 3" end bearing requirements for the S8 slab, see detail 3 on SK1. Please confirm these details are acceptable or provide an alternative detail for the deck support around the crash rail base plate.	Void	CR	07/09/2014	07/19/2014

T-1504	BGP - Lower Concourse Future Wall FS Conflicts	Closed	01	07/09/2014	07/19/2014	07/09/2014
From: Shimmick Construction Company, Inc. Sylvia Hartanto						
REQUEST:			ANSWER:			
Per attached correspondence, WOJV has directed SCCI to install future wall formsavers according to the details attached that clarify the Contract Drawings. However, due to congestion created by the increased amount of reinforcing within the beam components, ample space to install the future wall formsaver bars at the design spacing does not always exist. See attached pictures.			Per attached correspondence, WOJV has directed SCCI to install future wall formsavers according to the details attached that clarify the Contract Drawings. However, due to congestion created by the increased amount of reinforcing within the beam components, ample space to install the future wall formsaver bars at the design spacing does not always exist. See attached pictures.			
Because the CMU contract has not been solicited or awarded, please confirm that it is acceptable to offset the bars out of alignment +/- 4" in attempts to maintain proper spacing, and/or increase or decrease the specified spacing +/- 6" such that the future wall formsaver bars can be installed and the correct number of dowels is maintained. The same flexibility is also requested for the "ends, intersection and corner" detail per the attached document. T-1518	BGP - Partition Wall Pilaster Ties From: Webcor Construction LP Claude Titcher REQUEST: As discussed onsite with the SEOR, please confirm the following for partition walls: 1. All isolated pilasters have ties over their entire height 2. All pilasters thicker than the adjacent integral wall have ties over their entire height- Please note that this is added scope to TG06 Contract 3. Pilaster that are the same thickness as the adjacent integral wall require ties only for the lengths defined in Note 3 of Detail 9/SI-9050 4. Where ties are present at a pilaster base, the ties are not required to penetrate the supporting slab or foundation. 5. Ties may be built up from stirrups and hairpins containing 135 hooks. Please reference the attached drawings, S1-9050.	Closed	01	07/15/2014	07/25/2014	07/21/2014
						ANSWER: As discussed onsite with the SEOR, please confirm the following for partition walls: 1. All isolated pilasters have ties over their entire height 2. All pilasters thicker than the adjacent integral wall have ties over their entire height- Please note that this is added scope to TG06 Contract 3. Pilaster that are the same thickness as the adjacent integral wall require ties only for the lengths defined in Note 3 of Detail 9/SI-9050 4. Where ties are present at a pilaster base, the ties are not required to penetrate the supporting slab or foundation. 5. Ties may be built up from stirrups and hairpins containing 135 hooks. Please reference the attached drawings, S1-9050.

T-1532.1	SSS - Deck Support Angle at Column Base Plate	Closed	CR	07/31/2014	08/10/2014	08/18/2014
From: Webcor Construction LP Gregory Kemerer						
REQUEST:			ANSWER:			
This is a follow-up to the response of RFI T-1532.			This is a follow-up to the response of RFI T-1532.			
As per the response, restricting welding to only the girder flange creates several issues: 1. See detail 17 on SK1 - an additional 4" would be required on the vertical leg of the angle to allow welding to the girder flange. This creates a 12" vertical leg, welded at the bottom toe to the girder and supporting a 13" concrete slab. Our decker does not believe this is adequate support. This occurs at 9 locations. 2. See detail 5 & 17 on SK1 - overhead welding will be required from the underside to weld to the girder flange. Detail 5 occurs at 67 locations and 17 occurs at 9 locations. Our decker will incur additional labor and equipment costs for this work. If welding to the base plate is prohibited, an alternative solution which will have lower additional cost impact is to use Hilti pins to attach the gauge angle to base plate or girder flange. See attached product data and application details. See attached SK2 for clarification. Please confirm if welding to the column base plate is prohibited, Skanska can use Hilti pins as per SK2. T-1536	SCS - Concrete Cover & Tolerance on Foundation Wall Terminator Rebar	Closed	01	07/24/2014	08/03/2014	08/04/2014
From: Webcor Construction LP Claude Titcher						
REQUEST: Drawing SI-3201 and other similar foundation wall sections call out a 2" concrete cover on the terminators of the foundation wall vertical rebar. These vertical bars have no adjustability because one end is a terminator and the other end is a male coupler end. The elevation of the top of terminator will be dependent on the coupler elevation above the Lift 3 Foundation Wall. The ground floor slab is 10" thick and sloped along the top of foundation wall. To allow for maximum deviation to accommodate for the slope of the slab, tolerances in rebar fabrication and location from the previous wall lifts and the final wall lift: 1. Shimmick proposes to change the concrete cover from 2" to 5" and increase the tolerance to 2.5". Please confirm this is acceptable. 2. If the proposal is not acceptable, please provide a concrete cover and tolerance that is acceptable.						ANSWER: Drawing SI-3201 and other similar foundation wall sections call out a 2" concrete cover on the terminators of the foundation wall vertical rebar. These vertical bars have no adjustability because one end is a terminator and the other end is a male coupler end. The elevation of the top of terminator will be dependent on the coupler elevation above the Lift 3 Foundation Wall. The ground floor slab is 10" thick and sloped along the top of foundation wall. To allow for maximum deviation to accommodate for the slope of the slab, tolerances in rebar fabrication and location from the previous wall lifts and the final wall lift: 1. T-1547	BGP - Seismic Joint Deformed Bar Anchor Variance	Closed	01	07/25/2014	08/04/2014	07/25/2014
From: Webcor Construction LP Claude Titcher						
REQUEST: Please reference Detail 2, Sheet S 1-3205. Please clarify the following deformed bar questions: 1. 1" diameter deformed bar is a non-standard diameter for deformed bar. This will require the bar to be specially manufactured which could take up to 4 weeks to procure. 3/4" diameter deformed bar is the largest standard size readily available. Is it acceptable to use 3/4" diameter in lieu of 1" diameter deformed bar? 2. The detail depicts a head on the end of the deformed bar. Headed deformed bar is also non-standard (see attached Nelson Stud Deformed Bar Product Data) and currently found to be unattainable. Is it the intent of the engineer to include a headed deformed bar anchor? Is it acceptable to use a standard A 108 bar per ASTM A496 as detailed in the attached product data? T-1558	BGP - Bracing removal sequence on the East end of Zone 4	Pending	01	07/25/2014	08/04/2014	
From: Webcor Construction LP Claude Titcher						
REQUEST:		ANSWER:				
Bracing removal sequence on the East end of Zone 4 WOJV is proposing the following sequence for the bracing removal for the east side of Zone 4. See sketch SK1, attached.		Bracing removal sequence on the East end of Zone 4 WOJV is proposing the following sequence for the bracing removal for the east side of Zone 4. See sketch SK1, attached.				
Sequence 1. Remove level D struts and walers from within the green clouded area up to GL- 32.2 once the mat slab beneath has reached adequate strength. 2. Remove level D struts within the Blue clouded area STD-65 to 74, 82 & 83 and all corresponding walers once the mat slab beneath has reached adequate strength, the sequence for de-stressing will be the diagonals struts should be all de-stressing prior to the 4 remaining cross lot struts (STD-65,66,67 & 68).		Sequence 1. Remove level D struts and walers from within the green clouded area up to GL- 32.2 once the mat slab beneath has reached adequate strength. 2. Remove level D struts within the Blue clouded area STD-65 to 74, 82 & 83 and all corresponding walers once the mat slab beneath has reached adequate strength, the sequence for de-stressing will be the diagonals struts should be all de-stressing prior to the 4 remaining cross lot struts (STD-65,66,67 & 68).				
For the remaining levels A, B and C WOJV is proposing to follow a similar removal sequence as Level D		For the remaining levels A, B and C WOJV is proposing to follow a similar removal sequence as Level D				
Please confirm if this sequence would be acceptable.		Please confirm if this sequence would be acceptable.

REQUEST:			ANSWER:			
Please reference Contract Drawing S1-3010 and Submittal TG0600-051 .1.			Please reference Contract Drawing S1-3010 and Submittal TG0600-051 .1.			
Please clarify the following:			Please clarify the following:			
1. Sheet 8.01 of Submittal TG0600-05 l.1 calls for a M30x4-1/2" stud welded to the embed. Due to the unavailability of M30x4-1/2" studs, please confirm it is acceptable to fillet welding M30x4-1/2" long cut pieces of fully threaded rod.			1. Sheet 8.01 of Submittal TG0600-05 l.1 calls for a M30x4-1/2" stud welded to the embed. Due to the unavailability of M30x4-1/2" studs, please confirm it is acceptable to fillet welding M30x4-1/2" long cut pieces of fully threaded rod.			
2. Submittal TG0600-051.1 requested design to determine bar lengths for the hooked #6 welded rebar. Please provide missing lengths for the hooked welded #6 rebar.			2. Submittal TG0600-051.1 requested design to determine bar lengths for the hooked #6 welded rebar. Please provide missing lengths for the hooked welded #6 rebar.			
3. Please clarify the (. 11 7) at the double flare bevel weld on the hooked #6 rebar and the deformed #6 bar. It is SCCI's understanding the 3/8" is the weld size and the 5 is the weld length. What is the (.117) referring to?			3. Please clarify the (. 11 7) at the double flare bevel weld on the hooked #6 rebar and the deformed #6 bar. It is SCCI's understanding the 3/8" is the weld size and the 5 is the weld length. What is the (.117) referring to?			
4. See attached SI-3010. The east embed top vertical leg appears to be welded to the horizontal leg with a square bevel and convex weld with a fillet on the other side. Typically, a square bevel has a given dimension that depicts the gap between plates. As no dimension is given and the other side is a fillet weld, it appears to be a flat fillet laid down on the joint, with no gap. Please confirm this is the design intent.			4. See attached SI-3010. T-1584	SCS - Wall Construction Joint - Moment Frame Beam Conflict	Closed	01	08/04/2014	08/14/2014	08/18/2014
From: Webcor Construction LP Claude Titcher						
REQUEST:			ANSWER:			
See attached diagram of a wall lift construction joint overlay on the ground floor plan. Per Specification Section 03 30 02 - 3.2, Foundation wall and ground floor construction joints shall align with the location of joint below in TG06 and will not impair the strength of the structure. A conflict occurs at the noted areas of the attached diagram, where the wall joint placed according to specification, will intersect at a moment frame beam. SCCI proposes to move wall construction joints in order to avoid conflicting with the moment frame beams.			See attached diagram of a wall lift construction joint overlay on the ground floor plan. T-1591.1	SCS - Pendulum Bearing Test Results	Closed	01	09/10/2014	09/20/2014	09/25/2014
From: Webcor Construction LP Claude Titcher						
REQUEST:						
RFI T-1591 response noted two requirements to waive the testing requirements.						
1. Provide specifications for the product that is intended to be used in the project that meets the design requirements outlined in the contract documents. See attached preliminary Pendulum Bearing product information and drawing.						
2. Provide test data for a bearing that is comparable in size and performance to those intended to be used in this project tested with conditions that are comparable to the design requirements. Please see attached additional performance test results from other bearings of comparable size and performance. Also reference T-1591 for previously submitted test results.						
Please confirm that the mentioned test reports could serve as evidence of the proper functioning of mageba pendulum bearings, as well as the fulfillment for the testing requirements in the specifications.

T-1611	SSS - Mis-Drilled Holes in Transfer Girder A628	Closed	CR	08/14/2014	08/24/2014	08/28/2014
From: Webcor Construction LPGregory Kemerer						
REQUEST:			ANSWER:			
Skanska's transfer girder fabricator, TMF, has drilled girder A628's top flange hole pattern 5/16" north of the designed location. Please confirm it is acceptable to offset the hole pattern and machined grooves on the column base plate to account for the offset on the girder. This will allow the column to be positioned at the required location while accommodating the offset holes. The girder short stiffeners will also need to be shifted 5/16" to allow bolt clearance. See attached 628AC & 628AB for as-built hole locations, also see attached p4284 for proposed offset on column base plate. From: Webcor Construction LP Gregory Kemerer						
REQUEST:			ANSWER:			
At grid C3 the BU perimeter beam butts into the transfer girder TR3. The deck support angle in the web of the BU beam stops back 4' 9-5/16" from the center of the girder. This results in a region of about 4'-4" without deck support at an end bearing.			At grid C3 the BU perimeter beam butts into the transfer girder TR3. The deck support angle in the web of the BU beam stops back 4' 9-5/16" from the center of the girder. This results in a region of about 4'-4" without deck support at an end bearing.			
Design drawings do not provide a specific detail for this condition. Deck support at column detail 1/S1-5001 should not be used as this detail typically only supports one or two flutes of deck. The condition described above has 4 ½ unsupported flutes in an end bearing condition with 10" of nominal weight concrete. This is too much for a 12 gauge angle. Please advise. T-1625	SCS - Embedded Column Inner Vertical Bars at Foundation Walls	Closed	01	08/19/2014	08/29/2014	08/22/2014
From: Webcor Construction LP Claude Titcher						
REQUEST: See attached marked up contract drawings. The TG0600 rebar subcontractor is using HRC 420 friction welded standard couplers at the top end of the 3rd lift foundation walls and embedded columns C21, C33, C34 vertical bars. The inner set of embedded column vertical bars are indicated in sections as having a 90 degree SH tail at the top of bar. It isn't possible to install the bar with the 90 tail into the 3rd lift HRC 420 standard coupler as the tail of the bar needs to spin circular to engage the threads into the coupler with the final tail orientation dictated by torquing of the bar into the coupler. A possible solution to this issue is to utilize the HRC 555 Forged head in lieu of the 90 degree tail. The top of the inner vertical bar 555 head could be held 4" below the top of the outer vertical bar 555 head for concrete encapsulation. Please confirm that the proposed solution is acceptable for the typical embedded column in foundation walls.						
					ANSWER: See attached marked up contract drawings. REQUEST:			ANSWER:			
See attached CD RFI # 561 SK1 to SK4 for items 1 to 20: 1) Confirm all dimensions shown in a green rectangle box. 2) The noted W12x40 appears to be shown as one continuous beam from west of Grid 22 to east of grid 24. Supply splice locations and a splice detail. 3) Confirm the CMU wall aligns with the west edge of the slab opening or supply more information. 4) Confirm it is acceptable to locate the MC4's 1" from edge of slab openings. 5) It is not clear where the MC4 is located. Is it backed against the CMU wall? Please provide more information and connection details. 6) The location of the hangers are not correct at the locations noted as a red rectangle box based on the concrete beam locations per RFI T-1010 (SK 287, CD 230). Confirm the updated dimensions are correct. 7) Confirm connection is per 9/S1-5028. 8) Supply a connection detail. 9) Supply a connection detail for MC4 to MC4. 10) Confirm all W12x40's and all MC4x13.8's are located vertically per 4/S1-5032 (SK3). If not, supply more information. 11) The location of the hangers are not correct at the locations noted as a red rectangle box based on the concrete beam locations per RFI T-1010 (SK 287, CD 230). Confirm the updated dimensions are correct. 12) Confirm the CMU wall aligns with the east edge of the slab opening or supply more information. 13) Confirm dimension to edge of slab. 14) Confirm MC4 is located 1" west from the edge of slab or supply more information. 15) Confirm the underside of the slab is typically at the top of the bottom flange of the W12x40's or supply more information. 16) Supply a connection detail for the MC4 to the W12x40. 17) Supply a connection detail for the MC4 to the CMU wall. 18) Please supply dimensions for hooked deformed bars. 19) Confirm stud spacing to avoid the bending radius. 20) Confirm 1 1/4" I/S cold bending radius.			See attached CD RFI # 561 SK1 to SK4 for items 1 to 20: 1) Confirm all dimensions shown in a green rectangle box. 2) The noted W12x40 appears to be shown as one continuous beam from west of Grid 22 to east of grid 24. T-1647	SCS - 12" Thick Partition Walls over 24' height	Closed	01	08/25/2014	09/04/2014	08/27/2014
From: Webcor Construction LP Claude Titcher						
REQUEST:			ANSWER:			
Partition walls taller than 24'-0", as indicated in Section 3/S1-9050, have vertical reinforcing of #7 bars @12" centers. Section 4/S -9051 indicates that the vertical bars will have a 90 degree tail at the top end of the bar. The standard tail length for #7 bars is 14" and will not fit within the 12" thick walls. Rotating the #7 bar tails to clear the concrete face by 1 1/2" clash with one another. Harris Rebar requests permission to utilize #7 straight vertical bars with a #5 'U' shaped cap with 30" lap@ 6" centers at the top of walls. Is this acceptable?			Partition walls taller than 24'-0", as indicated in Section 3/S1-9050, have vertical reinforcing of #7 bars @12" centers. Section 4/S -9051 indicates that the vertical bars will have a 90 degree tail at the top end of the bar. The standard tail length for #7 bars is 14" and will not fit within the 12" thick walls. Rotating the #7 bar tails to clear the concrete face by 1 1/2" clash with one another. Harris Rebar requests permission to utilize #7 straight vertical bars with a #5 'U' shaped cap with 30" lap@ 6" centers at the top of walls. Is this acceptable?			
In order to minimize multiple varying lengths of the #7 vertical wall bars, the #7 threaded vertical dowel bar length will be increased from 49" to 56". The #7 wall vertical bar will be held up to the top of wall elevation, less clear cover, and maintain a minimum 49" lap splice at the Concourse Level. Is this acceptable?			In order to minimize multiple varying lengths of the #7 vertical wall bars, the #7 threaded vertical dowel bar length will be increased from 49" to 56". T-1650	SCS - Requesting Approval for Precast Panels in Lieu of Cast-In-Place	Closed	01	08/27/2014	09/06/2014	09/15/2014
From: Webcor Construction LP Claude Titcher						
REQUEST: See attached Exhibits A through D as a possible means of precast installation method. Using a precast yard facility in lieu of concrete cast in place will reduce the construction duration for the scallop, perimeter, and sky light elliptical wall operations since production can start prior to the construction start date. Precasting concrete elements also results in a better final product. Quality advantages of using a precast yard facility over cast in place methods are improved formwork design, curing procedures, temperature control, and form striping methods since work space, formwork weight, formwork relocation and reassembly, and hoisting equipment restrictions are greatly reduced if not eliminated. shimmick requests approval from the engineer to allow precast manufactured panels in lieu of the cast in place walls shown on S1-2752 & S1-3282 scallop walls, S1- 2602 stair well, S1-2603 elliptical skylight, S1-2604 light column opening, S1-2606 stair shaft, and S1-2607 elevator shaft. T-1655	SCS - Additional Information Needed to Cut CDSM Soldier Pile Beam.	Closed	01	08/28/2014	09/07/2014	08/28/2014
From: Shimmick Construction Company, Inc. Henry Chiang						
REQUEST:			ANSWER:			
<p>Direction provided is limited to: EXHIBIT A - TRADE SUBCONTRACTOR BID PACKAGE MANUAL AND FORMS, IV. SCOPE OF PACKAGE, D - 13. pg-13 - "Cut Interior Flange and Web of the CDSM Shoring Wall Steel Soldier Pile. Assume that the cutting of the pile will occur between 2' and 8' below the finish grade surface. The precise elevations for the cutting of the pile beams will be determined by a future design requirement."</p> <p>In order to perform this work the elevation of the cut is needed.</p> <p>Shimmick was informally provided a copy of the attached drawing from Webcor Obayashi Joint Venture which only identifies a vertical distance in elevation from finished grade elevations. Shimmick was then informed by WOJV that Thornton Tomassetti is currently making corrections to the site grading civil drawings C1-1000's to C1-8000's Rev 0 Dated 03/31/14 which show top of curb elevations. The civil drawings do not provide complete curb elevations to determine the elevation of the cut at all piles.</p> <p>1. Confirm that the attached drawing which identifies a vertical distance in elevation from finished grade elevation is to be used.</p> <p>2. Are the top of curb elevations in the civil drawings to be used as finish grade elevations for the depth of cut on the CDSM piles?</p> <p>a. Provide finished grade elevations for cutting the interior flange and web of the CDSM piles or provide a height from top of concrete elevations shown on the ground level deck on plans sheet A1- 2862 to A1-2781. Also, please provide a drawing identifying the type of cut required ie., horizontal, angling up, or angling down.</p>			<p>Direction provided is limited to: EXHIBIT A - TRADE SUBCONTRACTOR BID PACKAGE MANUAL AND FORMS, IV. REQUEST: The beam spacing does not meet the 6'-0 max. spacing requirement in 10/S1-5004. Please clarify the beam locations to match 10/S1-5004.						ANSWER: The beam spacing does not meet the 6'-0 max. spacing requirement in 10/S1-5004. Please clarify the beam locations to match 10/S1-5004.
T-1657	SCS - Lower Concourse MEP Room Construction Joints	Closed	01	09/03/2014	09/13/2014	09/12/2014
From: Webcor Construction LP Claude Titcher						
REQUEST: ASI 121 issued new wall CJ locations. Reference sheet AI-2203, Detail I/AI-3008 and B/AI-9240. A. On the south wall of the room at GL 13-B.2 there is a construction joint (see plan attached indicated as location "A") running through one of the MEP blocks outs. That creates a cantilever section below the beams cutout and above the MEP block out. Is that acceptable? If not, where should the CJ be relocated? B. On the same wall there is a construction joint (see plan attached indicated as location "B"), the distance between the MEP block and the construction joint is 5' 5/8", which is not enough to place diagonal trim bars on the comers of the MEP block out that are closer to the construction joint. Please provide detail for this location. C. In the same wall, the construction joints are not shown in the area cover by the spall plate, do the CJ's start at the top of the wall plates? Please confirm intent and provide further direction.						ANSWER: ASI 121 issued new wall CJ locations. Reference sheet AI-2203, Detail I/AI-3008 and B/AI-9240. A. T-1660	SCS - ST201 Thickened foundation wall	Closed	CR	09/04/2014	09/14/2014	09/12/2014
From: Webcor Construction LP Stephanie Azzolino						
REQUEST:			ANSWER:			
The contract drawings do not provide a section view for the foundation wall at Stair Tower 201. S1-2302 calls out the foundation wall as a uniform 3' thickness. S1-3201 provides a typical foundation wall section, shown with uniform thickness. Shimmick has been provided with updated sketches that call out a thickened foundation wall of 4' 3 1/2" at Stair Tower 201 as opposed to the uniform 3' thickness. Please see attached documents.			Please see attached documents.			
Pursuant to the response given in T-0774 WOJV is proposing the following means and method for precutting the interior flange of the CDSM beams in order to prevent damage to the waterproofing. Attached is a narrative along with a map of the locations, and depth wherein beams will be notched prior to installation of the waterproofing. T-1663	BGP - Construction Joint Between Walls W318 - W319 and W357-W358	Closed	01	09/05/2014	09/15/2014	09/12/2014
<div><div>From: Webcor Construction LP</div><div>Claude Titché</div></div>						
REQUEST:			ANSWER:			
In an effort to mitigate delays, WOJV is proposing moving the construction joint between walls W318 - W319 and W357-W358 2' to the west, See markup sketch attached, this move if approved would result in the contractor forming and pouring walls W318 and W358 prior to Deck pour D219. T-1667	SCS - Foundation Wall Conduit Penetration Locations	Closed	CR	09/08/2014	09/18/2014	09/08/2014
From: Webcor Construction LP Claude Titcher						
REQUEST: Reference drawings: A1-2862 to A1-2871, E1-2862 to E1-2871 and E1-3208 to E1-3210. Please see attached marked up drawings noting atypical set of conduit penetrations. A1-2862 provides a lateral distance relative to a grid line to set of conduits; however 3/E1-3208 details the set of conduits as not aligned. On top of this, the referenced drawings do not provide an elevation for the conduit penetrations. SCCO requires the locations of these penetrations to proceed with foundation wall rebar detailing. Please provide information on the location of the electrical conduit foundation wall penetrations.

T-1668	SSS - Weld Access Hole at Transfer Girder	Closed	CR	09/08/2014	09/18/2014	09/15/2014
From: Webcor Construction LP Gregory Kemerer						
REQUEST: Please confirm it is acceptable to provide weld access holes as indicated on 628BC per AWS D1.1 to adequately terminate the CJP weld to cast node. For plates not fabricated, confirm it is acceptable to omit the hole closest to the proposed access hole to maintain AISC min edge distance. This typically occurs at all cast node to girder connections.
