T-0511	BGP - Deneef Swellseal at Electrical Grounding System Boots	Closed	04/23/2013	05/07/2013	05/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Ian Corcorran To: Turner Construction Compan Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please reference SCCI RFI #130, Detail 5/A1-8710, and the attached letter. Detail 5/A1-8710 calls for 2" diameter, 18 ga galvanized steel boot to be adhered with trowelable grade adhesive and filled with urethane sealant. Submittal #TG0600-024 approved the use of Deneef Swellseal WA which is the product called out in Specifications 07 12 10. The attached letter Deneef/Grace technical letter dated 04/05/13 states that filling the entire boot with Deneef Swellseal is excessive and state that filling the entire boot with Swellseal WA is more than necessary and may affect the curing capability. Deneef/Grace suggests that the material be installed 2-3" deep and topped with a non-shrink grout such as "Rapid Set CT Construction Grout" or "Rapid Set Cement All" to contain it in the boot. The Manufacturer states that the waterproofing ability of the material in this configuration would not be compromised. Please review and advise.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The manufacturer's recommendations are acceptable. The question on RFI T-0511 is very similar to the question on RFI T-0496 and could have been consolidated in to one RFI, or better yet, this installation method should have been researched and proposed on the Waterproofing shop drawing submittal

T-0513	BSE - Steel plate at CDSM piles 738-739	Closed	04/24/2013	05/04/2013	05/08/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis		To: Turner Construction Compan Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Balfour Beatty Infrastructure, Inc. Shad Gardner							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Ref: Specification Section 31 56 13							
During leak grouting at level 5 excavation, a section of the CDSM wall panel between soldier piles 738-739 became dislodged, resulting in a high volume leak. In an effort to stabilize the damaged CDSM panel and stop the leak, BBII installed a steel road plate between soldier piles 738-739 and injected grout behind it.		It is acceptable to leave the steel plate in place as proposed in the RFI. This will result in the waterproofing membrane encroaching in on the foundation wall at pile 738. The foundation wall at pile 738 may be reduced to 34 5/8" thickness and the foundation wall vertical reinforcement shall be modified per proposed solution presented in RFI 0448.0 for wall thickness reduction up to 3" and applied between piles 737 and 739.					
BBII is concerned that removing the plate will likely cause the panel to become destabilized and could reopen the flow of water. BBII surveyed the face of the plate and found that at pile #738, the face of plate is 3' 0-5/8" back from the inside face of concrete wall and at pile #739 the plate is 3' 1-7/8" back from inside face of concrete wall. BBII proposes leaving the steel plate in place to maintain integrity of the CDSM panel. The edges of the plate may be grouted to provide a smooth transition to the CDSM wall for waterproofing.		W/O Note: Acceptable provided BBII take a survey of the face of the plate and provide coordinates.					
Please confirm this is acceptable							

T-0513.1	BGP - Steel plate (RFI #T-0513) encroachment between CDSM Piles No. 738 & 739		Closed	05/16/2013	05/26/2013	05/24/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Kirk Nielsen	To: Turner Construction Compan	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:								
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>				
<p>As depicted in attached SK-0153.1, the encroachment of the steel plate is primarily in the mat slab pour. WOJV is proposing to locally adjust the reinforcement in the mat slab pour to achieve the required cover. There will be no change to the reinforcement on the wall width.</p> <p>As a means of chamfering the offset the result of steel plates edges to the face of CDSM wall: WOJV is proposing to mechanically fasten expanded metal lath to the CDSM beams using powder activated fasteners. Rapid set mortar is then applied to the required depth ensuring all edges of the plates have a gradual slope back to match the existing face of the CDSM wall.</p> <p>Please confirm this is acceptable.</p>				<p>ARUP Response:</p> <p>This is acceptable however this work should be coordinated with other disciplines.</p> <p>Thornton Tomasetti Response:</p> <p>It is not clear from the RFI when the Contractor proposes "...no change to the reinforcement..." if this means the unmodified wall contract bars stay in original location or if the bars will move inward. Based on the provided encroachment info, there is still encroachment in the wall. If the bars are proposed to move inward, the thickness of the wall is reduced and therefore the original response of T-0513 shall apply.</p>

REQUEST:

Per the response to SCCI RFI #146 - Differential Movement in Waterproofing Layers, is movement expected and if so, how much movement is expected? If movement is expected, please provide Specification Section or Contract Drawing stating so.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

As with all buildings there is expected to be movement due to settlement and at this site hydrostatic uplift on the building after the construction phase dewatering is turned off as well as movement from seismic events.

Please reference the geotechnical report for information regarding these issues.

W/O Note: The Geotechnical report was included in TG06 package as a reference document.

T-0519	BGP - Waterproofing Detail Clarification at "Pressure Slab" Joints	Closed	04/25/2013	05/05/2013	04/29/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kody Cooper		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			

Co-Author: Shimmick Construction Company, Inc. Ben Gordon

REQUEST:

Please reference Specification Section 07 12 10 - 3.3.G and Detail 4/A1-8710. Detail 4/A1-8710 shows a typical waterproofing detail for cold joints (construction joints) at walls. Spec Section 07 12 10 - 3.3.G states the following: "Apply two 9" wide strips staggered 6 inches and 3 inches centered over the following joints:

1. Under cold joints in the pressure slab. Temporarily protect the exposed side with protection board until the adjacent slab is cast.
2. On protection boards to receive blindside waterproofing."

1. Please clarify what the "pressure slab" is referring to as there is no reference to "pressure slab" in the Contract Drawings.
2. Please provide a detail for waterproofing for this condition as a detail does not exist in the Contract Documents. Detail 4/A1-8710 does not reflect what is called out in Specifications Section 07 12 10 - 3.3.G for construction joints.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

1. The term "Pressure Slab" in Specification Section 07 12 10 is the 5' thick "Mat Slab" on the drawings.

2. The contract drawings and specifications cover the general requirements and waterproofing system parameters. Specification 07 12 10 - 3.3.G is clear regarding membrane configuration below cold joints. The contractor should provide a submittal detail following the waterproofing manufacturer's recommendations for this condition.

	<p>micropile location is within the geothermal area; however, it does not appear to impact geothermal piping. See attached sketch.</p> <p>Please confirm this is acceptable.</p>						
T-0522.1	BSE - Micropile Relocation- Performance Test Pile Zone 2 & 3 (Sequencing)	Closed	05/02/2013	05/12/2013	05/03/2013	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Lynn Kowallis Co-Author: Balfour Beatty Infrastructure, Inc. Brandon Miller	To: Turner Construction Compan Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
	REQUEST: Ref: Specification Section 31 63 33 1.1B This RFI supersedes RFI T-0522. DTDS proposes to reduce the design length of the Micropiles East of Gridline 17 (EG17) from 80 feet to 70 feet. DTDS has shown through testing and reduced post-grouting that a higher soil-grout bond than originally assumed in the design can be achieved in the field. DTDS will install two (2) performance test piles to verify the capacity of a 70 foot micropile EG17. One performance test pile will be installed in Zone 2 at gridline 17 between piles E005 and E008. The second performance test pile will be installed in Zone 3 at gridline 20 between piles E136 and E137. DTDS believes that 70 foot micropiles EG17 will still achieve the maximum required load capacity of 2.4 times Design Load (560 kip). The performance test piles will be installed with one (1) round of post-grout. Based on the results of the testing, additional post-grouting can be provided as necessary. Upon completion of the testing DTDS will submit revised micropile working drawings and calculation supplement. All production micropiles will continue to be proof tested per the Specifications. The performance test locations provided would supplant the performance test locations shown in the Contract plans for Zones 2 and 3. Please confirm this is acceptable.	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> The proposed relocation for the zone 2 performance test micropile is acceptable. The proposed relocation for the zone 3 performance test micropile is not acceptable. (The contract documents indicate the zone 3 performance test micropile to be located at GL E and to the east of GL 22. If the contractor desires to relocate the zone 3 performance test micropile, the proposed location will not be approved at locations west of GL 22.) Thornton Tomasetti does not object to the other aspects of the RFI except to note that the maximum required load capacity for the performance test remains at 2.8 times the Design Load (not 2.4), per the contract documents.

REQUEST:

As installed and or planned the current elevation of the A-level internal bracing walers conflicts with the TG06 wall termination elevations relative to the waterproofing overlap which was unspecified when the internal bracing was submitted. Please find attached RFI SK-527.1-1, WOJV proposes to:

1. Reduce the TG06 top of wall elevation 2'-0" to an elevation of +7.50' between approx. GL(s) 1 to 16-17.
2. Reduce the TG06 top of wall elevation 1'-0" to an elevation of +3.50' between GL(s) approx. GL(s) 16-17 to 25-26.
3. Reduce the TG06 top of wall elevation .75' to an elevation of +1.50' between GL(s) approx.. GL(s) 25-26 to 35.

This scope reallocation would exchange concrete rebar and waterproofing from TG06 to TG07 package, which assuming a prompt response, there is still time to do.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

W/O to coordinate.

W/O Comment: WOJV is herein amending the TG06 documents to reflect the top of wall elevations specified in above items 1-3. The TG06 Trade Subcontractor is to provide a credit for, to include however not limited to, the concrete rebar and waterproofing which has been deleted from the TG06 scope of work.

T-0527.2	BSE - Revision to Zone 4 Bracing Elevations Level A-D	Closed	05/28/2013	06/07/2013	06/11/2013	Potentially	<input type="checkbox"/>

---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

the spacing between Level A and B struts is only 8' O.C. (typically 12' to 14' elsewhere), which provides extremely limited clearance below Level A for excavation & demolition equipment at level 2 excavation. BBII requests the limit of level 2 excavation be extended to 7' below centerline of level B struts. (Note: the plans already allow for a +/- 2' variation in bracing elevation from those shown on sheet GT-1111. Therefore, BBII is only requesting two additional feet of excavation over what is allowed based on the contract drawings). Please advise if this is acceptable.

It is acceptable to overexcavate the center of the excavation below the centerline of the level B struts in accordance with the illustration titled Stage 5 on sheet GT-1111 of the drawings. Berms along the shoring wall must be maintained.

REQUEST:

Reference Specification: 01 31 26

SCCI is requesting access to the latest, most up to date Structural and Architectural Revit models from the designers. The 3D database would be used for reference only and will not be used for construction. SCCI understands that the 3D Database is subject to change as the project design evolves. As a user of this 30 database, SCCI accepts the risk and acknowledge that the data is subject to change. SCCI also acknowledges the terms and conditions outlined in the Transbay Transit Specification Section 01 31 26.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

The updated In-Progress Revit computer model will be issued to TJPA for review and comment on May 31, 2013. TJPA will forward this model to the Contractor for information, review, and comment. The Revit model is clearly clarified as not a Contract Document for use in construction. The documents issued on May 31, 2013 are not being issued for bid or construction. The Contractor shall determine when, for what purpose, and how the model is shared with their Sub-contractors.

T-0535	BGP - Elevator Opening Encroachment at Concrete Beam B131	Closed	05/07/2013	05/16/2013	05/09/2013	Potentially	<input type="checkbox"/>

	REQUEST: Ref Dwg. P1-2022, P1-6001 Please reference attached sketch SK-0163 and Contract Drawings P1-2022 and P1-6001. Drawing P1-2022 calls out Top of Concrete = -35'-8" and Finish Floor Elevation= -35'-5". P1-6001 Detail 8 shows top of sump grate frames to be flush with the surface in which it is embedded. It is unclear whether this is top of concrete or top of finish floor. SCCI has not been provided drawings to confirm topping slab extents. There shall be a 3 in vertical edge if sump pit frames are placed flush with top of mat slab concrete and a topping slab is placed in the future. See attached SK-0163 for details. SCCI intends to place top of sump pit frames flush with top of mat slab concrete. Please confirm this is acceptable.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> All sump pits and catch basins identified on plumbing drawings and located in the future track areas have the grating flush with top of concrete at elevation -35'-8".		
T-0539	BGP - ASTM 123 Galvanizing Variance	Closed	05/07/2013	05/17/2013	05/07/2013	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Kody Cooper	To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger		
	Co-Author: Shimmick Construction Company, Inc. Ben Gordon						
	REQUEST: Reference Specification: 05 05 15.3.3.B and the attached letter from AZZ Galvanizing The steel pipe penetration sleeves are to be coated under the Structural Shapes and Plate Material Category with a grade of 100 and 3.9 mils thickness per Tables 1 & 2 of ASTM A123. The first 2 shipments of steel penetration sleeves (approximately 12 pin pile and 17 trestle pile) were coated under the pipe and tubing material category with a Grade 75 per Table 1 of ASTM A123. This coating grade requires 3.0 mils per Table 2 - Coating Thickness Grade. SCCI is requesting that the Grade 75 be allowed for the first two pin pile in Area 1 that are fit and welded to the intermetallic layers having still penetrated the material and per the attached letter, the process used will insure a long service life. The average thickness for the specified pin pile above is 3.2 mils. Is this acceptable?	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> No		
T-0541	BGP - Protection Board Installation at SW Corner	Closed	05/09/2013	05/23/2013	05/13/2013	Potentially	<input type="checkbox"/>

T-0543	BGP - Galvanizing Varying Material Category Variance	Closed	05/09/2013	05/23/2013	05/21/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Ian Corcorran To: Turner Construction Compan Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Ref. Spec. 05 05 15- 3.3.B.2 Reference is made to Specification Section 05 05 15- 3.3.B.2 and the attached 'Ask Dr. Galv' galvanizing article. Section 3.3.B.2 states "When galvanizing assemblies of components of varying material category and material thickness, provide minimum coating thickness grade for all members equal to or exceeding the maximum highest material category coating grade." For the dewatering and piezometer mat slab penetration sleeves, A513 tube is being used, which has a Grade 75 designation per ASTM A123. Based on the above specification, Grade 100 must be followed because these sleeves have plate components. The reason Grade 75 is specified in ASTM A123 is that it is the minimum consistent attainable galvanizing coating for the thickness and chemistry of the material being coated. As an aluminum killed steel product, it is not a natural catalyst to galvanizing as silicon is per the attached article. To specify Grade 100 goes beyond A123 specifications. Therefore, SCCI requests Grade 75 be used, with a minimum coating thickness of 3.0 mils, for the dewatering wells and piezometer mat slab penetration sleeves. Please be advised if Grade 100 (3.9 mils) is required, the galvanizing process to attain the thicker coating can lead to embrittlement and delamination of the coating. Is Grade 75, with a minimum 3.0 mil coating thickness on the dewatering well and piezometer mat slab sleeve penetrations, acceptable?			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Per specification section 05 05 15 / 1.3 submit shop drawings of the galvanizing schedule, submit samples of the galvanizing, and submit monthly certificate signed by the galvanizer. If in the shop drawing process the Contractor submits a certificate signed by the galvanizer as required by specification section 05 05 15 / 1.3D stating the proposal above meets the recommendations of and is in compliance with the specified ASTM standard's minimum requirements, the Contractor's proposed galvanizing thickness will meet the design intent of the contract documents. The last galvanizer certificate received in the Transbay shop drawing process was dated January 4, 2013 and it is not clear if that shop drawing covers the item referenced in this RFI.

Co-Author: Shimmick Construction Company, Inc. Filip Filipic

REQUEST:

Ref. Dwg. S1-2030, 2/S1-3204, A1-2110

Reference attached contract drawings S1-2030, S1-3204 (detail2) and A1-2110. Structural drawings do not show the detail for termination of the 3 ft chamfer at the end of the south foundation wall. CD A1-2110 indicates that the 3 ft chamfer terminates at the face of the knockout wall.

Please provide details and where does the 3ft chamfer, at the West end of the South foundation wall, terminate?

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

The chamfer along the south foundation wall terminates at the face of the west knock-out wall as shown on sheet S1-2060 (Mat Top Reinforcement - Zone 10 Plan), and is not intended to show on S1-2030. Vertical bars of pilaster reinforcement extend to bottom of mat and the hairpins & cross-ties extend 12" below top of mat.

T-0549	BGP - Testing of WPM-1 Seams	Closed	05/13/2013	05/23/2013	05/14/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Robert Kjome	To: Turner Construction Compan	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author:

REQUEST:

During the 5/10/13 waterproofing meeting Jon Laurence (Laurenco) and Carl Keim (AAI) clarified that specification section 07 12 10.3.5.B (independent testing all seams) only applies to the Laurenco products i.e. membrane layers, butyl tape, and flashings. Please confirm.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

The Design Team confirms that statement in the RFI is correct.

T-0550	BGP - Request to Revise Lower Concourse Elevation	Closed	05/14/2013	05/24/2013	05/24/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Robert Kjome	To: Turner Construction Compan	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author:

REQUEST:

Reference Exhibits: A - G

The BSE IFC drawing S1-3201 (Exhibit-A) depicted the Lower Concourse slab at an elevation of -8'-8" between grid lines 9-3 and West of grid 3 & North of grid E.6.

Although specification section 01 13 00.1.3.H.3 precludes the TJPA from making scope changes in submittals, on 3/29/11 the TJPA returned submittal package ID TG0300-541/submittal ID TA2010-315500A10 (Exhibit-B) which included a note stating the Lower Concourse level slab varies as follows:

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

The contractor's suggestion to revise the Lower Concourse slab elevation is NOT acceptable. The contractor is to follow the elevations set out on the latest Below Grade Package documents.

T-0560	From: Webcor Construction LP Ian Corcorran Co-Author: Shimmick Construction Company, Inc. Ben Gordon	To: Turner Construction Compan Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger				
	REQUEST: Ref. Dwg. A1-2812, 1/A1-9214, 3/S1-3006 Revision 0 of A1-2812 previously contained dimensions for the elevator pit near gridlines 4-E.2; however, as a result of ASI 102 revision 1 of A1-2812 no longer contain the dimensions for the elevator pit and the referenced detail 1 of A1-9214 does not either. Please provide the dimensions of the elevator pit. Also, detail 3 of S1-3006 indicates that there is a change in the thickened section of the elevator but it does not appear that there were any changes made. Please confirm if there are changes to the thickened section.	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> The elevator dimensions have been revised and will be included in ASI 104. Please refer to the attached SKA 2709 (based on A1-9214) for revised dimensions. Thornton Tomasetti response: Detail 3 of S1-3006 is clouded because the pit depth and plan dimensions were revised in ASI 102. While the changes will require only minimal revision of the rebar lengths/bend locations/etc for rebar fabrication, and the structural intent of the rebar detailing remains unchanged, the mat depression region on 3/S1-3006 was clouded to alert the contractor to the need for these dimensional rebar detailing revisions due to the pit resizing. (We agree that on first glance there do not appear to be any revisions to the thickened section of the detail; the revisions are graphical only, and small enough that they are not noticeable except in an aligned overlay.)				
T-0561	BGP - Grade 60 ASTM A-615 Conforming Bar In-Lieu of ASTM A-706	Closed	05/16/2013	05/29/2013	05/29/2013	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Ian Corcorran Co-Author: Shimmick Construction Company, Inc. Andy Khuu	To: Turner Construction Compan Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger				
	REQUEST: Ref. Dwg. RE-2/S-0007 Gerdau proposes to use Grade 60 ASTM A-615 bar in place of Grade 60 ASTM A-706 material in the locations defined within RE-2 on sheet S-0007 which include foundation walls, columns and moment frame beams. The Grade 60 ASTM A-615 bar shall conform to the strength properties published in the attached ASTM specifications. This is not a request to replace all Grade 60 ASTM A-706 bars with Grade 60 ASTM-615. Is it acceptable to use ASTM-615 bars, when available, that would otherwise be wasted during the rebar fabrication process?	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> We will allow the use of A615 bars in lieu of A706 for inquired scope of elements provided that test data for the A615 bars meet ACI 318 section 21.2.5. Please submit test data that meets code requirements and identify where these bars will be used.

Co-Author:

REQUEST:

Spec. section 31 63 29.3.9.D states,

"Not less than 28 days after concreting is completed, perform HQ coring over the full depth of 10% of the shafts to verify the quality of concrete and test whether the shafts are free of defects. Provide these cores for inspection by the TJPA Representative. The TJPA's Representative will select the locations where coring shall be performed and will select the cores which will be tested for strength."

The aforementioned language in addition to spec. section 31 63 29.1.6.A which states:

"Perform work in accordance with ACI 301, except where otherwise specified. Specifications herein set minimum results required and references to procedures to establish minimum guidelines."

reads as if ACI 301 would be the specified standard for determining the required buttress concrete strength (specifically ACI 301 section 1.6.6.2) hence acceptance.

Please confirm what if not ACI 301 is the standard for determining the buttress concrete strength hence acceptance.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

ACI 301 is the standard.

	Shimmick Construction Company, Inc. Chris Williams						
	REQUEST: Ref: 5/E1-6001, E1-2202, E-0006 Per Plan Sheet E1-6001 , Detail 5. (attached) the embedded conduits for the fire managment system do not extend above or into the lower concourse floor slab. Additionally, on Plan Sheet E1-2202 for the lower concourse level, Sheet Note A (attached) states that the "scope of work on this sheet is limited only to grounding electrode conductors embedded in slab and main grounding bus (MGB) in the main electrical room." From these two notes, it is clear that the fire alarm system scope is limited to the train platfonn level. However, on Plan Sheet E-0006 (attached) General Note R., "For fire alarm devices, provide embedded boxes, conduit, and pull strings in the lower concourse slab for service to fire alarm devices for both levels". Please proved direction as to whether or not the fire alarm system conduit is to be installed in the lower concourse level slab.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The referenced detail is limited to the conduits for devices that are mounted on walls or columns at the Train Platform level. Refer to Sheet E-0006, Note R, for the requirements for the fire alarm raceways and boxes to be embedded in the Lower Concourse slab.		
T-0568	BGP - Monitoring Instrument Sleeves Detail	Closed	05/23/2013	06/02/2013	05/30/2013	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Robert Kjome	To: Turner Construction Compan Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger		
	Co-Author: Shimmick Construction Company, Inc. Ben Gordon						
	REQUEST: Reference Drawings: 3/A1-8711, 4/S1-3009 Detail 4 on SI-3009 does not apply to the monitoring instrument sleeves shown on A1-8711. The sleeves are continuous through the Mat Slab, and thus do not require a blackout. Please provide a typical mat slab rebar detail that is applicab le to the monitoring instrument sleeves referenced herein.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> As the contractor notes in this RFI, the blackout in the top region of the mat slab per 4/S1-3009 is not required at monitoring instrument sleeves. Contractor shall apply the rebar detailing of detail 7/S1-3009 to both the top and bottom of the mat at these sleeves.

REQUEST: Reference Drawing: A1-2122 Per the note on A1-2122, walls called out as "RCW" are reference drawings and not in TG06's scope of work. "RCW" walls are generally illustrated with dotted lines; however, when referencing the walls for the elevator pit and stairs near gridline 2E, the walls are called out as "RCW" but also illustrated with solid lines. Please confirm which walls are part of the TG06 package and which are RCW. Also, please confirm if the entire South wall of the fuel tank room is supposed to be "RCW" or if it is just the wall section as shown.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The walls at the elevator pit and stairs near gridline 2,E are part of the TG06 package. The entire south wall of the fuel tank room is also part of the TG06 package. The referenced enlarged detail 1/A1-9214 shows the solid walls without the RCW annotation. The RCW annotation has been removed from these particular walls on drawing A1-2122 and is included ASI 104.

Co-Author: Shimmick Construction Company, Inc. Chris Williams

REQUEST:

Reference Specification 26 05 34, 3.2 B.

The exact locations of the electrical equipment are to be provided by the TJPA through the RFI process. With the electrical equipment provided and installed at a later date under a separate contract, please provide the dimensions of the electrical equipment, boxes, and cabinets to allow for accurate electrical riser locations in the concrete slabs. The equipment, boxes, and cabinet dimensions in Zone 1, Area 1 are needed first with the areas to the east to follow.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

WSP Response: To address the specific information that is being requested, please identify which "equipment" is not sufficiently located in the drawings and requires clarification. Sheet E1-0006 notes specific requirements for coordinating the location of equipment and connections. Details on sheets E1-6001 and E1-6006 provide additional location requirements. Wireways have been indicated to position the conduits stubbing out of the slabs in the electrical rooms. Plans locate the embedded light fixture box layouts. Specifications 260502.3.4 require coordination of the work and contractor's coordination shop drawing layouts for review of the electrical room layouts.

T-0574	BGP - Field Galvanizing of Mat Slab Sleeve Penetrations	Closed	05/31/2013	06/10/2013	06/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Robert Kjome	To: Turner Construction Company	Gary Kruttschnitt	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author: Shimmick Construction Company, Inc. John Berggren

REQUEST:

Reference Specification Section 05 05 15-3.3.B

The shop applied coating thickness for the pin and trestle pile sleeve fabrications is determined to be 3.9 mils per Table 2 in ASTM A 123. Under Section 05 05 15-3.5 the repair/restoration field-applied coating thickness is specified to be 8.0 mils. For field touch-up of damaged areas Section 05 50 10-3.2.D states to apply a thickness of 2.5 to 3.5 mils. For the coating hold back areas for the sleeve field weld joints and for any damage coatings that may arise during installation - is a uniform required minimum field-applied thickness of 3.9 mils acceptable?

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

The question asks for clarification of the galvanizing coating repair thickness required for a specific location and for specific repair or touchup. The location noted in the question is not clear enough to answer the question. Resubmit the question with a more specific location noted. "Sleeve field weld joints and for any damage coating that may arise during installation" is too vague. Also, clarify if you are asking about field repair or field touchup of damaged zinc coatings.

The 8.0 mil repair thickness specified in section 05 05 15 applies to repair/restoration on most items as specified in 05 05 15 / 1.1.A: "zinc galvanic coatings applied in the shop or factory to surfaces of iron and steel installed at exterior locations and either totally or partially exposed to weather, humidity, moisture or precipitation; and elsewhere as indicated and specified." Specification Section 05 50 10 / 2.6 call for Hot Dip Galvanizing per specification section 05 05 15. Specification 05 50 10 / 3.2D applies to field touchup

---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

REQUEST:

Webcor is proposing to change the alignment of the Concrete Foundation wall on the west elevation along gridlines 1 & X1-1.

The Concrete wall which runs along gridline 1 would be offset into the structure by 0.2656' (3-1/8") (proposed Face of concrete Foundation wall would now be 15-1/8" of gridline 1). Similarly along gridline X1-1 the wall would also be offset into the structure by 0.1575' (1 7/8") these offsets would enable the contract reinforcement to be installed without the need for further modifications to the reinforcement due to encroachment of the CDSM piles.

See sketch SK-1 showing Cross section of concrete Foundation wall between CDSM piles 818 - 822 GL 1 in proposed revised location.

Please confirm if this is acceptable.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

For the pile encroachments at the Zone 1 West and South West CDSM walls, as described and illustrated in this RFI, the Design Team confirms it is acceptable to offset the alignment of the inside face of the Concrete Foundation Walls as the contractor proposes in RFI T-0576 BGP.

T-0579	BGP - Cross-tie Wall Reinforcing, Grade Conversion and Spacing Change	Closed	06/04/2013	06/14/2013	06/10/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Compan Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Andy Khuu							
REQUEST: Reference Drawings: S1-3201 Reference Specification: 03 30 20		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Based on a recently constructed mock-up of the 1st lift of typical wall reinforcing a potential problem with congestion has been identified. The contract drawings on sheet S1-3201 depict the typical wall reinforcing details include #8 horizontal wall reinforcing at 8" O.C. E.F. typical. Additionally, the #4 cross-tie spacing has been designed at either 6" O.C. or 12" O.C depending on the location (elevation) within the wall. With the non-uniform spacing of the cross-ties and horizontal bars, the cross-ties are secured only to the vertical bars and have the potential during concrete placement to shift or slide down the vertical bars until resting on the next adjacent horizontal bar. The inconsistent spacing of the cross-ties and horizontal bars congests the reinforcing configuration which may lead to potential problems when interfacing the concourse level reinforcing with the walls. In order to eliminate these potential problems Gerdau proposes to perform a grade 80 conversion of the cross-ties such that the size of the cross-tie remains as a #4 bar but the spacing of the cross-ties are installed with uniform spacing to the horizontal reinforcing at 8" O.C. within the designed 6" O.C. ranges or 16" O.C. within the designed 12" O.C. ranges.		Proposed modification to the spacing of the foundation wall cross-ties is not acceptable due to two reasons: 1) Per ACI 318, assumed yield strength for transverse reinforcement cannot exceed 60 ksi. 2) In zones where foundation wall cross-ties are spaced at 6"; the proposed change to 8" spacing violates the spacing requirements for transverse reinforcement of flexural members in ACI 318-11."					
Please advise if this grade and spacing change is acceptable.

T-0579.1	BGP - Horizontal Wall Reinforcing Equal Area Conversion	Closed	06/19/2013	06/29/2013	06/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Kruttschnitt Co-Author: Shimmick Construction Company, Inc. Ben Gordon			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference: S1-3201, Spec Section 03 30 20 Gerda (SCCI's subcontractor) has recently constructed a mock-up of the 1st lift of typical wall reinforcing and identified a potential problem with congestion and quality of the final designed product. The contract drawings on sheet S1-3201 depict the typical wall reinforcing details including #8 horizontal wall reinforcing which is designed at 8" O.C. E.F. Typical. Additionally, the #4 cross tie spacing has been designed at either 6" O.C. or 12" O.C depending on the location (elevation) within the wall. With the non-uniform spacing of the cross-ties and horizontal bars the cross-ties are secured only to the vertical bars and have the potential during concrete placement to shift or slide down the vertical bars until resting on the next adjacent horizontal bar. Additionally, the inconsistent spacing of the cross-ties and horizontal bars congests the reinforcing configuration which may lead to potential problems when interfacing the concourse level reinforcing with the walls. Gerda would like to propose an equal area conversion for the horizontal reinforcing from #8 @ 8" OC to #7 @ 6" OC in order to make the spacing between the horizontal bars and cross-ties uniform. Please confirm this is acceptable.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> TT does not see slippage of the cross-ties will be a concern if they are properly tied, and we don't see reducing the spacing of the horizontal bar from 8" to 6" will help the congestion issue raised. However, we don't take exception to the proposed change as long as it does not affect the cost and schedule.				
T-0580	BGP - Type 2 Coupler at Outside Vertical 4th Lift	Closed	06/04/2013	06/14/2013	06/08/2013	Potentially	<input type="checkbox"/>

	<p>Per coordination discussions with WOJV (email attached), SCCI is to install BBII Piezometer sleeves per Detail 6 of A 1-8711. In this detail, the sleeve is to be blocked out of the Mat Slab and poured back at a later date contrary to the piezometer/monitoring instrument detail 3 on A1-8711. Is it acceptable to eliminate the blockout portion of detail 3/ A 1-8711 and pour the BBII piezometers into the mat slab? The ARUP piezometers will remain operational (per Detail 3/ A1-8711) after the mat slab has been poured to monitor the water table levels.</p>				<p>accordance with detail 6/A1-8711. The timing to decommission the dewatering wells is stated in the specifications and the structural drawings.</p> <p>The piezometers installed by Arup shall be protected as they will be used until further notice. Refer to detail 3/A1-8711 for detail at the mat slab.</p> <p>If BBI installed piezometers, these will be sleeved and waterproofed in accordance with detail 3/A1-8711 and shall be decommissioned when directed by BBI.</p>

---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

BBI has discussed this with Viking Drillers and have confirmed they can abandon this well. BBI is proposing to cut the pvc casing flush with the top of mudslab, drill and epoxy #4 bars 2" down from top of casing with 3" embedment. The bars will be installed in the north, south, east, and west face through the casing and are installed to better ensure the dewatering well cement plug does not upheave. They will use Type II Portland Cement with a 5% bentonite content. Waterproofing will then be installed over the dewatering well, lapping as necessary to the adjacent waterproofing.

Please confirm that this is acceptable.

The Design Team proposes that the mud slab is to be broken out sufficiently to allow a 4" excavation below the underside of the mud slab. The dewatering well cut off and filled. Compressible material : 4" of Styrofoam installed into the excavation and over the plugged dewatering well. Then the opening in mud slab is to be repaired with reinforced concrete infill.

Note that BBII is still solely responsible for maintaining the dewatering.

Co-Author:

REQUEST:

Reference: RFI T-0584, Attached sketch

Please refer to RFI 584 and the attached sketch of the proposed block out in concrete partition walls as referenced in RFI 584. The 28" x 28" blockout in the mat slab will be transferred to the blockout of the wall and be 25" from the mat slab elevation to the top of blockout. This will create 3'-0" from top of penetration sleeve to top of wall blockout. We are proposing to use formsavers and the male ends will extend the length of the blockout.

Please confirm this is acceptable or provide acceptable solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposed block-out for the dewatering well & concrete partition conflicts is acceptable provided the following:

1. Confirm the vertical bar size for max height partition at these locations.
2. Extend the vertical bars in the block-out a min 4" into the top of mat.

Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Per the response to RFI T-567 (attached), please confirm that the only slab with embedded fire system conduit is the concourse slab. All stub ups or risers will either come up out of the concourse slab for the concourse level fire management system or drop down out of the concourse slab for the fire management system on the train platform level. Please confirm that the fire management system is not embedded in the mat slab.				This RFI gets into contractors' means and methods. The contractor can route the fire alarm conduit embedded in either the Lower Concourse slab or the Foundation Mat Slab as required to provide connectivity to the fire alarm devices shown on the electrical drawings.

Answered By: Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Ben Gordon

REQUEST:

Reference: 6/S1-3001, Attached Letter

The response to RFI T 0515 confirmed to coat the form saver couplers for future construction as specified in ASTM A 775. Per ASTM A 775, the standard coating thickness specifies a required thickness range by which different size bars are to be coated 7 to 12 mills for bar sizes 3 to 5 and 7 to 16 mills for bar sizes 6 to 18; however, detail 6 on S1-3001 indicates a 12 mill minimum coating thickness over the couplers. Per the attached letter from Stanley Johnson the Regional Manager for Erico (Lenton) the epoxy coated form-saver couplers specified for use cannot be procured with a guaranteed 12 mill coating but rather an epoxy coating that meets the requirements of the ASTM A 775 standard. Please confirm that supplying an epoxy coated form-saver coupler that meets the ASTM A 775 standard but may contain a mill thickness less than 12 is acceptable.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

We understand that the epoxy-coated form-saver couplers supplied by Lenton may contain a mill thickness less than 12 while still complying with ASTM A 775 and consider this acceptable.

T-0593	BGP - Concrete Clear Cover of Reinforcing Support Bars	Closed	06/06/2013	06/16/2013	06/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Robert Kjome	To: Turner Construction Company	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author: Shimmick Construction Company, Inc. Ben Gordon

REQUEST:

Reference: Drawing 5/S1-3001, Spec Section 03 30 20

Gerdau would like to confirm that non-contract reinforcing support (carry) bars are to maintain the required concrete clear cover as specified in detail 5 on S 1-3001 and not encroach upon the designated clear cover limits. See the attached sketch for reference.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Confirmed that the clear covers for carry bars shall achieve at minimum the clear cover requirements of 5/S1-3001.

We note that for concrete cast against waterproofing (which is the condition at the bottom of the mat) the required clear cover per 5/S1-3001 is 2" for #6 or larger bars, and 1.5" for #5 and smaller bars, unless otherwise noted. While the clear cover to bottom typical continuous bars is to be 3" per Mat Bottom Rebar Note 7 on S1-2022, the smaller clear cover of 5/S1-3001 is appropriate to use as a minimum clear cover for carry bars, provided that in doing so the 3" clear to typical continuous bottom bars per Mat Bottom Rebar Note 7 on S1-2022 is still achieved.

axle loadings for Sky Trak forklift model no. 8042. The forklift is intended for use on the concourse level deck for the installation of wall reinforcing steel.

Please confirm if it is acceptable to use noted forklift on top of concourse slab.

on top of the Lower Concourse slab. NOTE that this response is for the forklift and its carrying capacity only and does NOT consider additional construction loads that may be present at the time of this forklift use.

Please refer to original RFI T-0597 response for reference to Lower Concourse design loads.

T-0598	BGP - Fire Management System Class A vs. Class B		Closed	06/12/2013	06/22/2013	06/15/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Robert Kjome	To: Turner Construction Compan		Gary Kruttsch			
Co-Author: Shimmick Construction Company, Inc. Ben Gordon								
REQUEST:			SUGGESTION:			ANSWER:		
Reference: Attached Documents, E1-5201						Accept Suggestion: <input type="checkbox"/>		
<p>After consulting with Siemens on the fire management system a clarification is needed. The riser diagram on sheet EI-5201 shows Class A conduit routing for the train platform level and the lower concourse level. Using a Class A wiring layout limits the system to 3 or 4 strobe devices per circuit. Under the NFPA 130 6.3.3.2.8 specification, the embedded (note (1) of the specification) fire management conduit protects against the ASTM E119 fire conditions and Class A isn't required per NFP A specification. Is it acceptable to design the fire management conduit system to meet the NFP A 130 specification under Class B requirements and impliment 6 or 7 strobe devices per circuit instead of the 3 or 4 stobe devices per Class A. By implimenting a Class B system, the future fire management system (installed under a future contract) will be less costly all while meeting the the NFP A 130 requirements. Please advise.</p>						<p>WSP Response: We confirm the Specification requirements for Class A wiring shall apply. The design of the conduit systems shall be configured to achieve Class A wiring for the fire alarm communication circuits that will power the strobelights at the Train Platform Level and Lower Concourse Level. Although we have designed for embedded conduit where possible, we cannot assure in the future design that we can embed or provide approved fire rated cable from the source fire alarm panel to the end device, since the fire rated cable systems that were planned for extension of the circuits have had their listings voided. Embedment and layout for Class A wiring will provide the required protection to meet code and to provide the future flexibility for the life of the building.</p>

Reference: Attached Documents, Drawing A1-6231

Please reference the attached - clouded, Submittal TG0600- 110 BGP -Concrete Formwork Lift #1 sheet, comment regarding the elevation of the cast-in-place continuous concrete insert. The submittal comment requests an adjustment of the concrete insert elevations. In the attached RFI T-0506 the elevations of the concrete inserts were given to accomplish equal spacing as required by the drawings, as well as incorporate the agreed upon adjustments to the top and bottom insert. SCCI would like to verify that the given elevations of the cast-in members in the clouded section of RFI T-0506 are the correct elevations.

Accept Suggestion: ☐

Please refer to the attached SKA -2745 which confirms the elevations of the continuous concrete inserts.

T-0599.1	BGP - Horizontal Cast-In Inserts at EFCO Form Panels	Closed	11/19/2013	11/29/2013	11/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Jackson Tukuafu	To: Turner Construction Compan	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author: Shimmick Construction Company, Inc. Filip Filipic

REQUEST:

See attached photo and reference RFI 599.

Interior rib of the EFCO form panels lines up with the cast-in insert at EL -27.08'. SCCI intention is to bolt the inserts to the forms and this makes it difficult to properly secure the cast-in insert prior to concrete placement. SCCI proposes to lower or raise this insert 2" in order to properly secure it to the form.

Is this acceptable?

SUGGESTION:

ANSWER: Accept Suggestion: ☐

George Metzger
11/20/2013

RESPONSE:

It is acceptable to lower the cast-in insert as indicated in the RFI.

Cast-in insert at EL -27.08' can be lowered 2" to have a new elevation of EL -27.25' to coordinate with the formwork installation.

Co-Author:							
REQUEST: Reference Drawings: 3/A1-8711 and 6/A1-8711 BBII's dewatering wells and piezometers are installed per Detail 6 on Sheet A1-8711 which clearly shows how the wells and piezometers will be filled and capped after the dewatering has been decommissioned. Detail 3 on Sheet A1-8711 does not provide any indication that these piezometers will be plugged and/or filled. Does the design team intend on leaving these piezometer holes open after the dewatering is shut off? If not, please provide a revised 3/A1-8711 clarifying the design teams intent.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The monitoring instruments / piezometers will continue to function for a few years after the entire building has been completed, therefore will remain as shown on detail 3 / A1-8711. No additional detail is required at this time. The instrumentation cables are inside a 2" dia steel pipe. A seal between the sleeve and the pipe is provided by the two linkseals. When the instruments are decommissioned, the conduit is cut off and the opening sealed. Then a steel cap is fully welded to the ring flange at the top of the sleeve, which is flush to the top of the mat slab.

	REQUEST: Refer RFI T-0286 Specification Section 01 53 13 Please reference W/O RFI T-0286. For First and Fremont street BBII was directed to use a cable weight of 8.2 lb/ft to be used with the 6" conduit. BBII was supplied with a weight of 3 lb/ft for fiber cable used in 4" conduit (not PG&E conduit). BBII does not have a cable weight for 4" PG&E conduit. 1. Please confirm that the 6" PG&E conduit on Beale Street will contain a 8.2 lb/ft cable. 2. Please clarify the weight/ft of the cable used in the 4" PG&E conduit on Beale Street. This information is necessary to design the utility supports on the Beale street Bridge.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Based on the attached Reference Data table, the total wt. of rigid conduit + conductors: 4" dia = 19.7 plf; 6" diameter = 40.0 plf		

T-0604	#2 CPH Platform through Mat Slab in Zone 2	Closed	06/20/2013	06/30/2013	07/28/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Co-Author:	Robert Kjome	To: Turner Construction Compan Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
	REQUEST: Please see the attached shop drawings and layout of the construction personnel hoist (CPH) to be installed in Zone 2. The CPH elevated steel PLATFORM to be installed and later removed and poured back such as the trestle pile penetrations. All work dimensions have been coordinated with structure overhead into future bid packages as well as as-built information of internal bracing in the field. We propose to : 1) Lower the geothermal piping an additional 12" to maintain the same 15" deep trench under all concrete. This will be performed the same way they install the piping in the sump pits with correct bend radius. 2) Install at 19'-6" x 13'-0" x 16" thickened slab incorporated with the current 4" reinforced mudslab. The	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The proposed Zone 2 personnel hoist installation described in the RFI is acceptable to the Design Team.

T-0611.2	SSS - Grout Hole Options	Closed	08/28/2013	09/07/2013	09/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Robert Kjome	To: Turner Construction Compan		Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER:		Accept Suggestion:	<input type="checkbox"/>	
Reference RFI: T-0611.1			TT has previous responded to RFI 611.1.		TT's original response is excerpted below:		
Reference Sketch: Attached							
The response to RFI T-0611.1 does not address the question. If grouting of the void in the cast node per Option 1 is not permitted, then Option 2 should be applied to completely fill the pipe column and the void in the cast node with concrete. Please confirm this is acceptable.			"This is a contractor's means and method issue. Arup fire/blast engineer indicated that the fill needs to be concrete with carbonate aggregate with strength from 4000 to 6000 psi. From the IFC document, a 3" dia grout hole is to be provided for concrete pumping. If the pea gravel cannot travel thru the 1" dia hole in the bus deck cast node, a second group hole is needed above the bus deck node for pumping concrete above the bus deck. Using grout (with siliceous aggregates) is not permitted."				
			TT is not in the position to give instruction to the contractor on how to fill the pipe with pea gravel concrete, as it is contractor's Means and Methods as stated in the original response. Some other possible options are discussed below for contractor's consideration:				
			Instead of using a 3" grout hole above the ground floor node as noted in Option 2, the contractor can pour the concrete through a 3" hole above the bus deck node and let the grout flowing through the 1" hole in the bus deck node to the pipe below, and the existing grout hole in the ground floor node can be used as a vent hole.				
			The Contractor may decide to grout the pipe by pouring concrete from the top of the lower pipe before the bus deck cast node is welded.

REQUEST:

Please refer to T-0612.1 and drawing P1-3002.

The vent and trap primer lines within the mat slab at Room B2280 were revised in the Foundation Level Zone 02 Plumbing Plan PSK-2022 via RFI T-0612.1. The revised drawing did not include an enlarged plan detail.

Please provide the revised enlarged drawing plan shown on detail 1 of sheet P1-3002 for coordination.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

George Metzger
9/9/2013

RESPONSE:

See the attached drawing PSK-3002. CMGC should note that RFI's are answers to questions. The Contract Documents are not continuously updated to follow all questions and answers that arise during construction. All drawings that may relate to a RFI answer will not necessarily be updated when the RFI answer is provided.

T-0613	BSE - Excavation For Zone 4 Timber Pile Survey	Closed	06/24/2013	07/04/2013	07/28/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Robert Kjome	To: Turner Construction Compan	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author: Balfour Beatty Infrastructure, Inc. Kelly Phariss

REQUEST:

Please see attached BBII Letter 4225-000-1232.

1. In Zone 4, East of the buttress shafts, BBII would like to excavate down 3 feet within the 50' berm in order to uncover timber piles. Please confirm this acceptable.

2. Please confirm if the soils need to be immediately backfilled upon completion of the survey or if the excavated elevation can remain.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

ARUP Response:

This is acceptable east of the buttress and west of Beale Street only.

T-0614	BGP - C21 Column Vert Std. Hooks, Replace with HRC 555 T-head	Closed	06/24/2013	07/04/2013	07/28/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Robert Kjome	To: Turner Construction Compan	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author: Shimmick Construction Company, Inc. Ben Gordon

REQUEST:

Reference: Drawing S1-3302

Section 1 on sheet SI-3302 depicts a standard hook at the bottom of the #11 vertical for the embedded C21 column. Please confirm it's acceptable to replace the standard hook with an HRC 555 T-head similar to that of the typical vertical wall reinforcing.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

It is not acceptable to replace the standard hooks with heads in Detail 1/S1-3302. The possibility of using heads in the second layer of vertical bars in this detail was previously discussed with Seismic and Structural Review Committee (SSRC). Citing minimum clear spacing requirements between headed bars, SSRC recommended use of hooks in the second layer of

	<p>Option B</p> <p>WOJV proposal: (See Exhibit - B) Between CDSM piles 1 to 20-21 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear all the encroaching SP. This foundation wall area was originally a WR1 reinforcement area (#11@8"oc EF vertically) and would change to #11@6"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 see Exhibit - D.</p> <p>Between CDSM piles 20-21 to 22 WOJV is proposing to decrease the specified 36" wall thickness again to 33 5/8" to clear all the encroaching SP, originally this was a WR2 reinforcement area #11@6"oc vertically and would change to #11@5"OC the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit - E)</p> <p>Between CDSM piles 22 to 31 the reinforcement would remain unchanged as per the Contract Reinforcement. See Exhibit-G showing a detail of transition between modified reinforcement to contract reinforcement with a non-contact reinforcement lap detail.</p> <p>Either of these options if approved would be incorporated into the TG06 shop drawings</p> <p>Please confirm if either of these options would be acceptable</p>						
					original alignment on Gridline A before reaching the B1 Level.		
					OR		
					2) Any offset to the foundation wall face at B1 Level will require adjustment to space planning, coupler layouts, structural / service opening coordination and potentially may need further negotiations with Public Utility Companies i.e. it is not acceptable to simply 'shave off' a couple of inches from a room at this level.		
					Note that all transitions are to be smooth and not stepped.		
					Our comments for proposed Option B are as follows:		
					1) It is not acceptable to transition foundation reinforcement width and/or vertical rebar spacing within sections where specified foundation wall reinforcement is "WR2" or where there is an embedded column per construction documents. Provide uniform reinforcement width and rebar spacing within these regions. The transitions can be acceptable at the ends of (or just outside) these regions.		
					2) Foundation wall rebar WR2 and embedded columns are designed using vertical rebar spacing of 6" (see construction documents). Proposed changes to this spacing can negatively impact the constructability moment frame beam at the lower concourse level. As an example, see attached sketch which shows the rebar detail at the lower concourse moment frame beam and foundation wall. To assist in addressing these constructability issues it may be acceptable to move wall rebar a maximum of 3/4 inch as needed.		
					3) Use of tighter foundation wall rebar spacing than those specified in the construction drawings will negatively impact the constructability at the ground floor, where moment frame beams join the foundation wall. To assist in addressing these constructability issues it may be acceptable to move wall rebar a maximum of 3/4 inch as needed.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Documents: Exhibits A - C							
<p>This RFI is an additional request based on the response to RFI T- 621 option A (see exhibit - A) The original RFI T- 621 option A addressed the impact of the encroaching CDSM soldier piles on the north wall in slab in areas 3 and 4 by proposing to offset the face of concrete foundation wall by 0.1979' (2-3/8") into the structure. WOJV note the original response where it was acceptable to offset the foundation wall between B2 and B1 elevations but would have to transition back to design alignment between B1 and ground elevation however this transition back would not be possible as there are CDSM piles encroaching the full high of the foundation wall, with that WOJV is proposing the following possible solution, to continue the revised offset alignment between B1 and ground elevation however limiting it to an area between GL 1 and 2-3 (CDSM piles 1 to 21)full wall height , WOJV acknowledge the fact the PG&E transformer room need to remain at its current size but feel there may be some scope to slightly change the dimensions of the main switchgear room or the service corridor or both see exhibit B and exhibit C.</p> <p>This proposal if acceptable to offset the foundation wall would enable the contract reinforcement to be installed without the need for further modifications due to</p>		<p>PG&E Transformer Vault (B1223/4) shall remain the same size and shift south by 2-3/8". Main Switchgear Room (B1222) will absorb the 2-3/8" wall shift south. Floor opening in NW corner of Main Switchgear Room will shift south 2-3/8" with wall. North Electrical Room (B1289) shall remain same size and shift down 2-3/8" (with electrical slab opening). Landscape Storage (B1288) will accommodate the 2-3/8" wall shift south. Fire Main POE (B1290) wall will move 2-3/8" south. Plumbing Intake Room (B1229) shall absorb the 2-3/8" foundation wall shift south.</p> <p>Please also note that RFI 621 was on Area 3, not on 3 and 4 as indicated in RFI 621.1</p>

Co-Author:							
REQUEST: Please refer to RFI T-0621 Response Option B Responses #2 & #3. The RFI response states that it is acceptable to move vertical wall rebar a maximum of ¾" as needed to avoid clashes with horizontal mat reinforcing. As the vertical reinforcing is #11 bar (1 3/8") and the mat reinforcing is #10 (1 ½"), in the worst case a mat reinforcing bar will clash with the vertical bar when the layout ends up with both bars installed on the same centerline. Please confirm that in this case, the reinforcing can be moved the 1 3/8" to avoid the clash.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Moving the foundation wall vertical rebar more than 3/4 inch is not acceptable. Clashes between foundation wall vertical rebar and mat rebar, if any, can be addressed moving the mat rebar up to 1-3/8 inches.			
T-0621.3	BGP - Area 3 North Wall Verts Clearance Near GL 2	Closed	01/27/2014	02/06/2014	01/31/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Compan PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Reference: RFI T-0621.1 and drawing S1-3201. Due to the CDSM soldier pile encroachment, the area 3 North foundation wall reinforcement was moved 2-3/8" towards the center of the structure per RFI T-0621.1. During placement of a 4'-6" section (8 vertical bars) of the first lift of the foundation wall exterior vertical steel approximately 2'-0" west of GL 2, it was discovered that there was 1/4" to 1" of clearance between the waterproofing and vertical bars. The concern is once the cross-ties are placed between the vertical bar and		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 1/29/2014 It is acceptable to omit the cross ties in the region depicted in the RFI provided that additional ties be provided elsewhere as follows: Assume encroachment region measures L x h. For a distance equal to L/2 on both sides of the encroachment region, provide double the number ties over a height equal to 2 x h. Additionally, provide double the number of ties for a distance, L, and a height, h, directly above the encroachment. It is acceptable to secure the added ties to the wall

T-0622	BGP- CDSM Soldier Pile Encroachment Area 4	Closed	06/26/2013	07/06/2013	07/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Michael Spillane	To: Turner Construction Compan	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author:

REQUEST:

Reference Documents: Exhibits A - J

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north wall in slab area 4 as well as all levels of the encroachment into the foundation wall between CDSM piles 31 to 60 as well. Location Plan see exhibit - A
Exhibit - B ,C & J depict the location and degree in which the SP are encroaching

Option A

Webcor is proposing to change the alignment of the Concrete Foundation wall on the north elevation along gridlines A between gridlines 1 and 5 - 6 (CDSM piles 1 to 50)
The Concrete foundation wall which runs along gridline A between gridlines 1 and 5-6 would be offset into the structure by 0.1979' (2-3/8") the proposed Face of concrete Foundation wall would then be 2-3/8" off gridline A, this offset would enable the contract reinforcement to be installed without the need for further modifications to the reinforcement due to encroachment of the CDSM piles in concrete pour Areas 3 & 4. See Exhibit - J

Option B

WOJV proposal: (See Exhibit - B) Between CDSM piles 31-32 to 35 and 41-42 to 45-46 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear all the encroaching SP, originally this was a WR2 reinforcement area #11@6"oc EF vertically and would change to #11@5"OC the reduction in foundation wall

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Option A

For Option A the proposed revision is acceptable, with the following conditions:

The Train Box design is restricted at the B2 Train Platform Level by the Rail Vehicle Kinematic Envelopes (RVKE). The B1 Lower Concourse Level is strictly controlled by space planning constraints, particularly minimum requirements for Public Utility rooms, service rooms and associated structural and service coordination.

The CDSM wall zone described in this RFI is outside of the RVKE, therefore at the B2 level the foundation wall face can be offset as proposed. However, at B1 Level, the offset will affect Utility Room and Service configurations.

If Option A is adopted, either:

1) Provided the foundation wall configuration and structural design permit, the offset should only occur in this area at the B2 Level and transition back to the original alignment on Gridline A before reaching the B1 Level.

OR

2) Any offset to the foundation wall face at B1 Level will require adjustment to space planning, coupler

	<p>Based on the response to previous RFI's the number of encroaching beams in area 4 has been reduced mainly due to the decreased thickness of the waterproofing system and the contractor willingness to use some of the construction tolerances in an effort to mitigate some of the smaller encroachments. This has resulted in only one area where modified reinforcement will have to be installed; Between CDSM piles 47 to 49 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP number 48. This wall area was originally a WR1 reinforcement area (#11@8"oc EF vertically) and would change to #11@6"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing.</p> <p>In all other locations in area 4 the reinforcement would remain unchanged.</p> <p>See Exhibit-B showing details of transition between modified reinforcement to contract reinforcement.</p> <p>Please confirm if this solution is acceptable.</p>						
T-0622.2	BGP - Wall Vertical Reinforcement Spacing in Area 4	Closed	10/10/2013	10/20/2013	10/18/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Compan Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: RFI T-0622 and RFI T-0622.1.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
The Area 4 wall vertical reinforcement has been installed different from the layout in RFI T-0622.1.			George Metzger 10/16/20013				
Please confirm the revised vertical wall reinforcement spacing as shown in the attached sketch is acceptable.			RESPONSE: Revised vertical wall reinforcement spacing is acceptable as long as all vertical rebar have cross-ties. Please incorporate these changes into as-built drawings. Note that using tighter rebar spacing in foundation walls than required in construction drawings may negatively impact constructability at Lower Concourse and Ground Levels where beam and slab rebar is embedded into the foundation walls.				
Note that the wall thicknesses remain the same as approved in RFI T-0622.1.

T-0626	BGP- CDSM Soldier Pile Encroachment Area 5	Closed	07/02/2013	07/12/2013	07/10/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Reference Documents: Exhibits A - J			1-) It is not acceptable to transition foundation reinforcement width and/or vertical rebar spacing within sections where specified foundation wall reinforcement is "WR2" or where there is an embedded column per contract documents. Provide uniform reinforcement width and rebar spacing within these regions. The transitions can be acceptable at the ends of (or just outside) these regions. In Area 5, this comment applies near GL 8, North Wall.				
This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north & south walls in slab area 5 as well as all levels of the encroachment into the foundation wall between CDSM piles 60 to 81 on the north elevation and 702 to 732 on the south elevation. For Location Plan see exhibit - A.			2-) Per Exhibit D, encroachments for some piles seem very small (for example, pile 61). For small encroachments, a 'no remedy' approach can be followed as long as the actual construction is executed within the tolerances specified in the contract documents (see specifications for information on construction tolerances).				
Exhibit - B, & C depict the location and degree in which the SP are encroaching			3-) Mock up specimen is being developed for a location where an embedded column is used within the foundation wall. Embedded columns include two layers of #11 rebar with 6" spacing. The contractor proposes to use #11 @5" in lieu of WR2 foundation wall reinforcement (#11 @6") at a number of locations to remedy encroachment issues. If this option is adopted, the tightest foundation wall reinforcement will become #11 @5". Revise the foundation wall mock up specimen shop drawings to include #11 @5" single layer foundation wall vertical reinforcement.				
For this RFI, the combined layers of the water proofing system had been assumed to be 2" thick, which is subject to change, this may increase or decrease the number of encroaching piles depending on the thickness of the system used.			4-) Foundation wall rebar WR2 and embedded columns are designed using vertical rebar spacing of 6" (see construction documents). We note that proposed changes to this spacing can negatively impact the constructability of the foundation wall joints at mat, lower concourse and ground levels (e.g, installing beam rebar, foundation wall dowels at the mat). An example was provided with our response to RFI T-0621.				
WOJV proposal North elevation on gridline A: (See Exhibit - B) Between CDSM piles 60 to 62 and 69 to 71 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 61 & 70, originally these were WR1 reinforcement area's #11 @8"oc EF vertically and would change to #11 @6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit - D). Between CDSM piles 76 to 78-42, WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 77. This foundation wall area was originally a WR2 reinforcement area (#11 @6"oc EF vertically) and would change to #11 @5"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit - E).							
WOJV proposal on the South elevation: (See Exhibit - B & F) Between CDSM piles 704 to 706, WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 705, originally this was a WR1 reinforcement area #11 @8"oc EF vertically and would change to #11 @6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit - D).

REQUEST:

Reference Documents: Exhibits A & D

This RFI addresses the previous comments to RFI T-626 see exhibit - D.

Exhibit - A shows the revised Plan view with modifications made. Exhibit -C depict the degree in which the SP are encroaching in area 5.

Based on the response to the previous RFI the number of encroaching beams in area 5 has been reduced mainly due to the decreased thickness of the waterproofing system and the contractor willingness to use some of the construction tolerances in an effort to mitigate some of the smaller encroachments. This has resulted in only one area where modified reinforcement will have to be installed this is Between CDSM piles 73-74 to 78 on the north wall elevation WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP number 77. This wall area was originally a WR2 reinforcement area (#11@6"oc EF vertically) and would change to #11@5"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing.

In all other locations on the north and south walls of area 5

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

1-) See our response to RFI T-0622.1.

2-) Revised reinforcement detail near GL 8, North wall is acceptable.

REQUEST:

Reference Documents: Exhibits A - J

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north & south walls in slab area 6 as well as all levels of the encroachment into the foundation wall between CDSM piles 81 to 104 on the north elevation and 679 to 703 on the south elevation. For Location Plan see exhibit - A.

Exhibit - B, & C depict the location and degree in which the SP are encroaching

For this RFI, the combined layers of the water proofing system had being assumed to be 2" thick, which is subject to change this may increase or decrease the number of encroaching piles depending on the thickness of the system used.

WOJV proposal North elevation on gridline A: (See Exhibit - B) Between CDSM piles 82 to 84 and 102 to 105 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 83 & 103, originally these were WR1 reinforcement area's #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit - D).

WOJV proposal on the South elevation: (See Exhibit - B &

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

It is not acceptable to transition foundation reinforcement width and/or vertical rebar spacing within sections where specified foundation wall reinforcement is "WR2" or where there is an embedded column per contract documents. Provide uniform reinforcement width and rebar spacing within these regions. The transitions can be acceptable at the ends of (or just outside) these regions. In Area 6, this comment applies near GL 9, South Wall. Solutions at all other locations are acceptable. However, as indicated in response to RFI T-0626, use of #11@5" for foundation wall vertical reinforcement can negatively impact constructability.

T-0629	BGP - Clear Cover on Concourse Slab	Closed	06/28/2013	07/08/2013	07/01/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Compan Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Reference: Drawing S1-3500, Spec Section 03 30 20, 03 20 00			Concrete cover is for protection of reinforcement against weather and other effects. The cover is prescribed for 3 classes of structural members in ACI				

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>Detail 1 on S 1-3500 calls out for 3/4" clear cover on top and bottom of the lower concourse slab. ACI codes 301 and 318 specify 3/4" minimum cover for #11 bars and smaller, in slabs that are not exposed to extreme environment. Even though lower concourse is designed to eventually be enclosed with the rest of the superstructure, it will be exposed to the weather elements during the construction of the project. With that said, inadequate cover over rebar can cause plastic settlement cracking. SCCI is concerned that the 3/4" clear cover in the concourse slab could cause this plastic settlement cracking.</p> <p>Please confirm that the clear cover on the lower concourse slab is 3/4" minimum?</p> <p>Please specify what is the maximum clear coverage of the lower concourse reinforcement?</p>						
					<p>318, a) concrete cast against and permanently exposed to earth, and b) concrete exposed to earth or weather, and c) concrete not exposed to weather or in contact with ground. The concrete slab at the lower concourse level, even though will temporarily exposed to weather during construction like any other building structure, is usually categorized as type c condition, which requires a 3/4" minimum cover per ACI 318, Section 7.7.</p> <p>The statement of "inadequate cover over rebar can cause plastic settlement cracking" is not totally correct, as the ratio of cover to reinforcing bar diameter is only one of many factors that contributes to the plastic settlement cracking. The amount of settlement tends to be proportion to the depth of concrete, i.e., the deeper the section the greater the settlement. Hence, plastic settlement usually occurs in a much thicker slab with much heavier top rebars. With only a 12" thick slab at the lower concourse level, we don't anticipate that plastic settlement cracking becomes a problem, as long as good construction practices are follow. Those practices include, but not limited to the following:</p> <p>Use mixes with lower bleeding characteristics.</p> <p>Wet the subgrade or formwork before placing concrete to avoid excessive water loss from the base of the concrete.</p> <p>Set all formwork accurately and rigidly so that it will not move during concrete placement</p> <p>Place concrete in the deep sections (beams or columns) first and let it settle prior to placing and compacting the top layers (ensuring two layers blend together)</p> <p>Fully compact the concrete</p> <p>Follow the requirements of hot weather concrete placement specified in the Specifications.</p> <p>Cure the concrete promptly and properly.</p>

purposes, example RFI 490. Should the typical mat slab reinforcing when laid out at 8" O.C.E.W. or some other reinforcing designed within the mat slab conflict with the micropile asbuilt, is it acceptable to displace the reinforcing from the designed spacing layout such that it is repositioned to either side of the micropile? Additionally, please confirm if reinforcing in direct contact with the micropile is acceptable? Should the displacement of the reinforcing to either side of a micropile not be acceptable please provide direction.

shift will not cause unforeseen conflicts that impact the placement of column dowels, mat headed shear reinforcement, or any other mat or wall reinforcement detailing. Where such a shift will impact the placement of other reinforcement, contractor shall not shift the mat bar out of typical spacing, and instead may resolve the conflict by either of the following methods:

a) Treat the micropile obstruction sim to a typical opening per the Typical Slab Opening Detail found on 1/S1-3501 (i.e. add 2 bars of same dia and grade as the bar being interrupted, one to either side of the conflicting micropile).

b) Shift the conflicting bar only locally, up to +/- 4" from the typical as permitted above, splicing back to typical spacing (with non-contact splice either side of micropile) as required to avoid any conflicts with other mat reinforcement that may occur due to the shift.

Mat rebar shall not be in direct contact with the micropile or gage steel boot that functions as part of the waterproofing assembly, but rather achieve min 1.5" clear btwn rebar and micropile steel. Refer to 2/A1-8711 for waterproofing assembly info.

T-0632	BGP - Geothermal Field 7 & 8 Manifold Riser Layout	Closed	07/02/2013	07/12/2013	07/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Jackson Tukuafu	To: Turner Construction Compan	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author: Shimmick Construction Company, Inc. Ben Gordon

REQUEST:

Reference: Attached Photos

The initial geothermal riser/manifold layout for Fields 7 & 8 placed the field 7 & field 8 risers between soldier piles 176-177 and 177-178 respectively. To avoid conflicts with the riser install and the temporary 1st bridge, is it acceptable to move the field 7 riser to the CDSM wall panel between piles 172 and 173 and the field 8 riser to the CDSM wall panel between piles 173 and 174? See attached photos. Additionally, SCCI is looking to relocate the temperature

SUGGESTION:**ANSWER:**

Accept Suggestion: ☐

It is not acceptable to locate the risers for fields 7&8 as suggested between soldier piles 172-173-174. Riser for field 7 can be located between piles 174 and 175. Riser for field 8 can be located between piles 175 and 176.

It is not acceptable to re-locate temperature probe pipe between 171 and 172. It is acceptable to locate the probe east of risers 7 and 8 between soldier piles 178 and 179.

T-0633	BGP - ASI#104 Clarifications	Closed	07/03/2013	07/13/2013	07/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Compan Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference: ASI 104s				See below GM/TT comments. WOJV comments included.			
SCCI is in receipt of ASI #104 on June 25th, 2013 in CR#T-071. Please clarify the following:				1.			
1) Per Sheet S-2202 to S-2211, the additional internal walls at the concourse are shown to be in solid line, for Zone 2-7, 10-11. Note 7 on S1-2022 refers us to the architectural drawings for CMU and concrete partition layout dimensions, joint locations, and CMU thickness. However, the corresponding Architectural drawings issued in ASI #104 for wall at concourse (A-2222 and A-2223), only depicts changes in Zones 2 and 3.				a. WOJV to confirm this item. JT/WOJV - Confirmed.			
a) A-2222 and A-2223 depicts the revised concourse walls to be RCW- please confirm that the internal concourse walls are not in TG-06 scope and additional scope to TG-06 contract will only be the additional couplers for added wall.				b. WOJV to confirm this item. JT/WOJV - Confirmed, same as 1a.			
b) Please confirm that there are no internal walls to be constructed in TG06's scope at concours level.				c. We assume the RFI means sheet range starting with S1-2202 and not S-2022. These lower concourse partition walls are supposed to be dashed. WOJV to confirm these are NOT part of the TG06 package. JT/WOJV - Price all internal walls below the concourse level.			
c) Please confirm that the internal concourse walls shown as solid lines in drawing S-2022 to S-2211 are supposed to be shown as 'dotted' or 'ghost' lines in ASI #104.				d. WOJV to confirm this item. JT/WOJV - Provide dowels for all CMU walls shown on the concourse level and below.			
d) In multiple drawings (e.g: S1-2204), at the middle top of the page, the word "Future" has been deleted. Original drawings show "Future CMU walls, TYP". ASI #104 structural drawings deleted the word "Future" . Please clarify if the CMU walls at the concourse are in TG06's scope.				e. Sheets A1-2224 through A1-2231 have been issued with 100%CD Phase 1 documentation.			
				2. "manufacturer" refers to cooling tower manufacturer as the support framing is labeled for the cooling tower. JT-WOJV - An MEP subcontractor is projected to awarded in March 2014. Please remit an RFI isolating the details of the cooling tower pier, dimensions, etc.

	discrepancies in ASI #104, the architectural drawings for Zone 4 thru Zone 11 (A1-224-2231, A1-2844-2846, A1-2848-2851) are not included in ASI 104. The architectural drawings are critical for SCCI's coordination and pricing of interior wall layout on the concourse level in conjunction with the corresponding structural drawings released in CR T-071 - ASI #104. Although, the design team provided their response to these discrepancies in RFI T-0633 by referencing "100% CD Phase 1 Documentation," the drawings have yet to be released for construction. 1. As per request by the design team, please release the following most-up-to date drawing sheets via this RFI : A1-2224 - 2231, A1-2844 - 2846, A1-2848 - 2851. 2. Please confirm the aforementioned drawings are to supersede current drawings in trade group package TG06.0.			indicated on RFI T-0633.1 SKAs-2825 to 2830 based on A1-2224 to A1-2231 Wall Plans SKAs- 2831 to 2834 based on A1-2844 to A1 -2847 Slab Edge Plans SKA-2835 to 2836 based on A1-2850 to A1-2851 Slab Edge Plans Although requested in the RFI, drawing A1-2848 does not exist in the drawing set. The information contained in the above noted SKAs supersedes the above noted Wall Plans and Slab Edge plans.

Co-Author: Shimmick Construction Company, Inc. Ben Gordon									
REQUEST:			SUGGESTION:			ANSWER:			Accept Suggestion: <input type="checkbox"/>
Please refer to RFI response T-0608 and T-0448.5.						The details provided in RFIs T-608 and T-448.5 were developed by WOJV.			
The approved typical CDSM encroachment wall reinforcement detail at the SW corner, West of GL 6 found in RFI T-0608 does not include the concourse level spandrel beam/wall interface.						Submit RFIs regarding CDSM encroachment at spandrel beam/wall interface for specific locations similar to prior encroachment RFIs. Include detailed backup and proposed solutions.			
Please provide a detail depicting an acceptable configuration at the concourse level which includes the spandrel beam/wall interface.									

T-0638	BGP - Mat Slab U Bars in Modified WR-2 Reinforcement Areas		Closed	07/16/2013	07/26/2013	07/23/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Michael Spillane	To: Turner Construction Compan	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:								
REQUEST:		SUGGESTION:			ANSWER:			
Reference Documents: Exhibits A - E					Accept Suggestion: <input type="checkbox"/>			
The contractor has highlighted a potential conflict with the uses of #11@5"OC vertically at the areas where CDSM piles at encroaching in WR-2 reinforcement areas.					Either of the options presented in this RFI are acceptable where the #11@5" rebar is used. The "candy cane shaped bar" should include 180-deg standard hook (refer to detail 4/S1-3001 in contract drawings). Note that this RFI seems to focus on the constructability of the U-bars. However, if the top mat rebar was projected on Exhibits D or E, clashes with the 5" spaced foundation wall vertical rebar (inner face) can also be seen."			
Exhibit - A is a vertical cross section through the modified WR-2 area								
Exhibit - B is a cross section showing the potential conflict with verts @ 5"OC								
Exhibit - C is a cross section showing the original design with verts @ 6"OC								
Exhibit - D & E depicts possible solutions

Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: S1-3003, Spec Section 05 50 10		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please reference attached Pile Sleeve pictures, shop drawings, and product data/MSDS for Bituthene Liquid Membrane and Sikaflex Ia. Weld access holes (see photos) allow us to weld the penetration sleeves together in a continuous vertical weld (see shop drawings). SCCI proposes sealing access holes prior to pouring the mat slab. SCCI suggests sealing access holes on the piezometer lower rings (see Photo #1) with Bituthene Liquid Membrane Coating (see attached data) prior to installing the Preprufe Detail Patch per Option C of Grace substitution. SCCI suggests filling all other access holes (typ. trestle piles & monitoring instruments) in the intermediate rings (see Photos #2 & #3) with Sikaflex Ia Premium Sealant (see attached data & MSDS) prior to mat slab pour. Please confirm this is an acceptable solution.				All contractor means and methods holes in all locations of the steel sleeve elements are to be welded watertight closed. The waterproofing details are to follow the waterproofing manufacturer's instructions.			
T-0641	BGP - Level D Internal Bracing Removal	Closed	07/16/2013	07/26/2013	07/19/2013	Potentially	<input type="checkbox"/>

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Company Gary Krutsch **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Reference Document: Exhibit A

Level D internal bracing removal in areas where walers are not connected together.

Due to the curing requirements of the concrete in the mat slab, the contractor is proposing to have a "hopscotch" sequence to the mat slab pours, as an effort to mitigate delays. The removal of the level D bracing will follow the pour sequence, however as shown in Exhibit A which is a north wall elevation, what is the maximum clear distance horizontal between the construction joint in the mat pours and the next level D internal bracing strut/waler. This becomes an issue when trying to schedule the bracing removal with the mat and wall pours. WOJV understands that this is for areas where the walers are not connected together.

Once the parameters for the bracing removal have been established the contractor will create a plan and sequence for each pour area on the removal of the internal bracing where the walers have being connected together.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

This work should be coordinated between the internal bracing designer and the structural engineer.

T-0642	BSE - Steel Plates at CDSM Piles 167-168	Open	07/17/2013	07/27/2013	07/18/2013	Potentially	<input type="checkbox"/>

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Company Gary Krutsch **Answered By:** Turner Construction Company Stacy Wilson

Co-Author:

REQUEST:

Reference: Spec Section 31 56 13

During leak grouting at level 5 excavation, a section of the CDSM wall panel between soldier piles 167-168 became dislodged, resulting in a high volume leak. In an effort to stabilize the damaged CDSM panel and stop the leak, BBII installed a steel road plate between soldier piles 167-168 and injected grout behind it.

BBII is concerned that removing the plate will likely cause the panel to become destabilized and could reopen the flow of water. BBII surveyed the face of the plate and found that at pile #167, the face of plate is 1/2" out from the

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

W/O to resubmit once the encroachment requirement is determined.

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:			
Reference Documents: Exhibits A - G				Accept Suggestion: <input type="checkbox"/>			
Further to response to RFI T-609 (see exhibit - F) this RFI shows the areas of foundation wall in pour area 3, north and west walls which will have greater than 6" of clear cover to the vertical reinforcement for location plan see exhibit - A & C				The clear cover between the waterproofing system and vertical reinforcement as presented in Exhibit B of this RFI is acceptable. We note that the reference to RFI T-0448.5 in Exhibit B in is incorrect. RFI T-0448.5 is not relevant to this zone.			
Exhibit - B & C depict the amount and location of the foundation walls which will have greater than 6" of clear cover to the vertical reinforcement							
Area of concern is the west wall along gridline 1 where the alignment of the foundation wall was moved by 3-1/8" per RFI T-576 see exhibit - E due to encroachment issues on CDSM piles see exhibit - G for information on the encroaching piles in this area as a result of this move there are large areas which will have greater than 6" of clear cover.							
This RFI assumes that the solution to encroachment on the north wall Area 3 RFI T-621.1 (see exhibit D) is to move the wall 2-3/8" to offset the encroachment is acceptable.							
Please confirm that the clear cover between the waterproofing system and the vertical reinforcement outlined at these locations is acceptable

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: Spec Section 05 50 10				The angled stud in the interior of the angle requires a different type of ferrule (heel) to address the angled condition. The alternate means used to attach Nelson studs for angles in this RFI is acceptable provided that at least 2 studs per angle have been verified by bend test per specification section 03 20 00 2.2.C.2, which references AWS D1.1-2010 (Paragraph 7.8 for testing requirements).			
While attaching the 3/4" diameter by 8" Nelson Studs to the 8" X 4" X 1/2" angle it was determined the studs were not fusing to the base metal (angle). To maintain the procurement schedule of this fabrication needed for the Zone 1 - Area 03 Mat Slab placement, our fabricator (Gerlinger Steel) used the fillet weld method performed under the attached Welding Procedure Specifications

T-0656	BGP - Shear Wall Dowel and Shoring Pipe Bracing Conflict	Closed	07/24/2013	08/03/2013	08/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Compan Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: Drawing S1-3001, Spec Section 03 30 20				The contractor proposed lap splice length is acceptable only at locations where the conflict exists.			
A few potential conflicts exist between the typical shear wall vertical dowels and the 36" OD shoring Pipe Struts in Area 1. See attachment for locations of conflict.							
Based on Detail A shown in S1-3260, the typical shear wall verts will be lap spliced.							
Per the schedule in Detail 1-S1-3001, the #9 vertical shear wall reinforcement requires a 63" lap splice, which places the top of dowel at elevation -30'-5".							
The centerline of Level D diagonal bracing atop Area 1 is shown to be at EL -29'-0" and the bottom of the 36" OD pipe strut at level D is at EL -30'-6".							
The pipe strut will potentially encroach on the shear wall dowels since the vertical spacing is #9 at 10" OC.							
Please confirm that a 60" lap splice is acceptable at locations where conflicts exist, if not please provide souldtions.

Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: Drawing S1-3201, Spec Section 03 30 20 Per Section 1 on S1-3201, the mat slab reinforcing is shown with 6" of clear cover from the outside face of the concrete wall. When the outside face wall and mat foundation step in and out due to CDSM encroachment, the 6" clear dimension shown on 1/S1-3201 will be encroached upon. Please confirm this is acceptable. This would apply in any area where the wall thickness is being reduced due to encroaching CDSM Pile.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Encroachment into the 6" clear dimension is acceptable as long as mat rebar does not conflict with the foundation wall vertical reinforcement at the outer face. To avoid this conflict, clear dimension between the mat slab reinforcing and outer face of the concrete wall shall not be less than 4". For future reference, note that the condition at the embedded columns within the foundation walls is different. That condition is illustrated in detail 1/S1-3302 of the construction drawings and the question included in this RFI does not cover that condition.

T-0661	BSE - Access trestle penetration sleeve	Closed	07/30/2013	08/09/2013	08/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Compan Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST: Reference Drawings: 4/A1-8711, Attached Sketch 2 bump outs have been installed onto the South side of the access trestle in Zone 2 (see attached sketch). Each bump out has 4 trestle piles identical to the trestle piles supporting the rest of the access trestle. Please confirm it is acceptable sleeve and waterproof the 8 piles (2 bump outs - 4 trestle piles ea.) per detail 4/A1-8711. The bump outs will be removed prior to the concourse slab.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> It is acceptable to sleeve the 8 piles for the access trestle extensions (bump outs) as shown in detail 4/A1-8711. Part of this RFI is for a waterproofing system proposed by the Contractors, not the system designed by the Architect. The Contractors should have their engineer who prepared this waterproofing system design respond to this RFI. Until that is done, the Contractor should confirm all waterproofing system questions and details with the waterproofing manufacturer (with copies to the TJPA and its consultants and the Architect). Contractor shall submit dimensioned locations of bump out piers and size for review of introducing sleeved penetrations into the mat. Prior to submitting dimensioned locations, Contractor shall review for, including but not limited to, mat conflicts with other work and mat exclusion zones.

T-0662	BGP - Clarification for the Response to RFI T-0631 Micropile Conflict	Closed	08/01/2013	08/11/2013	08/05/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Compan Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference: Spec Section 03 30 20, Attached sketches				1. Confirmed.			
Per discussions on 7/31/13 between members of TT, Webcor, Shimmick and Gerdau please confirm the following clarifications and intent of method "B" as it relates to the response issued for RFI 631 reviewed via teleconference.				2. Confirmed.			
1. The clear cover of 1 1 /2" as described in the response to RFI 631 has been eliminated. The reinforcing bars may come into contact with the micropile and the waterproofing wrapped around the lower portion of the micropile.				3. Confirmed.			
2. At the contractor's discretion, he/she may displace the typical contract bar +/- 4" from the called out spacing as required to avoid clashes with the installed micropile. The displacment of the typical reinforcing may be either for the full length of the bar or weaved around the clashes depending on the specific condition. If this solution is incorporated and results in the typical reinforcing being displaced such that the end of the bar is not in the typical alignment a non-contact lap splice with the next adjacent designed/detailed bar is acceptable. Should the displacement of the typical contract bar to resolve the clash with the micropile result in another clash with another element of the reinforcing design this condition will be addressed through the RFI process upon recognition. See attached sketch #1 for reference.							
3. At the contractor's discretion, he/she may cut the typical contract bar creating a gap in the bar to allow for the clashing micropile. Should this be the selected method to resolve the clash a lap splice bar of the same grade and bar size will be required at either side of the gap. The splice bar may be a non-contact lap splice. See attached sketch #2 for reference.

	<div>Reference Drawing: S1-3003 Reference Submittal: TG0300-620.1</div> <div>Detail 1 on S1-3003 shows a 12"x12"x2" plate under the domed nut on top of the micropile. Note 1 on S1-3003 states that "the contractor is responsible for the design of the pile to meet the design load requirements ... as stated in the project specifications." Submittal No. TG0300-620.1 was returned "No Exceptions Taken" and did not include the plate under the domed nut as it was not a part of BBII's micropile design. Please confirm that it is acceptable to move forward with approved Submittal No. TG0300-620.1 without the 12"x12"x2" plate.</div>						Confirmed that contractor-designed micropile without the plate is acceptable.
T-0664	BGP - Conflict Between Pit Reinforcing & Trestle/Pin Piles	Closed	08/05/2013	08/15/2013	08/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Compan Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER:				
Reference: Drawing S1-2022, Attached Photos			Accept Suggestion: <input type="checkbox"/>				
During the installation of the pit reinforcing between GL 1.4-2.3 and D.4-F a conflict was discovered between trestle/pile and the tail of the #11 pit reinforcing that extends beyond the limit of the pit out and into the main mat slab. Gerdau proposes to trim the tails of the conflicting rebar (Flame Cut) such that clearance can be maintained to the sleeve around the piles.			The tails of pit reinforcement that are extending beyond limits of pits and are in conflict with trestle/pin piles may be trimmed for only the 4 of the 5 locations identified in the RFI.				
Please confirm this is acceptable or provide direction on how to proceed. This conflict is expected to occur at future pits too.			For the 5th location at trestle pile located at D.4-4.4 (which is within the pit depression), see attached SKS-0281.				
			Note that flame-cutting that has been allowed is limited to applications of this RFI only.				
			For future pits within the remainder of the Project, when the tails of pit reinforcement that extend beyond the limits of the pits that conflict with trestle/pin piles/bridge piers, Contractor shall coordinate with as-built locations and apply detail similar to 1/S1-3007 (where bars interrupted by trestle/pin/bridge pier shall turn up).

From: Webcor Construction LP Jackson Tukuafu			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Webcor/Obayashi (W/O) is in receipt of attached Adamson Associates, Inc. (AAI) response to RFI T-0666 - BSE - Elevator Pit Dimensions Between GL1.4 and GL 2.				The design team believes the elevator pit dimensions noted in the contract documents are coordinated with the requirements of the alternate elevator manufacturers noted in the specification. The CMGC shall confirm the work of adjacent trades have been coordinated between shop drawings and existing field conditions. The CMGC shall coordinate with the TJPA to hire Sub-contractors at the required times to ensure that construction work and shop drawings of adjacent trades are completed in time to coordinate between trades.			
This response is unacceptable. The Architect has sole responsibility for confirming that the pit dimensions of all elevators and escalators will accommodate the Architect's proposed elevator and escalator systems.							
Until a 100% IFC set is completed by the Architect, W/O has no definite knowledge of the Architect's proposed elevator and escalator systems. This issue has been discussed verbally for over 2 years, during which the Architect has maintained that they have full responsibility for designing all pits and openings to fit their proposed elevator and escalator systems. W/O is unable to even start the RFQ/Bidding process for hiring sub-contractors until the 100% IFC Contract Drawings are finalized by the Architect and approved by the owner; therefore, it is impossible for W/O to hire/coordinate sub-contractors prior to pouring of the elevator pit in the mat slab.							
The same applies to all pits and openings throughout the design documents, only the Architect is capable of confirming that these dimensions are acceptable for all of the Architect's proposed elevator/escalator systems.							
Please confirm all elevator pits and slab openings are acceptable as currently shown on the contract documents.

Please include slot excavation, back-fill and compaction requirements in the the affected buttress'.</p>						
T-0668	BGP - CIDH Temporary Bridge Pier Sleeve Detail	Closed	08/05/2013	08/04/2013	08/08/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Compan Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Please refer to drawing S1-3003, A1-8711, SCCI RFI #269 with asbuilt information of CIDH Piles at First Street, and ACI 117-90 section 3.4.1.2			Utilization of concrete piles for the bridge piers was chosen by the contractor to suit their means and methods. The sleeve shown on the architectural and structural drawings provide details of sleeving penetrations to permit expected movement and provide a waterproofing interface. Sleeves at bridge piers were indicated on the Bridge shop drawings and the requirements for field measurements before fabrication were indicated on the metal sleeve shop drawings.				
The typical 48" diameter bridge pier detail (6/S1-3003) and waterproofing detail (4/A1-8711, 5/A1-8711 and 6//A1-8711) are designed for a steel assembly i.e. bridge pier, piles for shoring, bracing and trestle columns, pin piles and dewatering wells. As a result, the means of achieving the shown steel pipe sleeve is attainable.			New details will not be provided. CM/CG to provide means and methods of adapting concrete pier to suit mat slab waterproofing metal sleeve details.				
As per submittal package TG0300-201.3, the 48" temporary bridge piers are designed as CIDH (cast-in-drilled piles) piles and not steel. Specifications for concrete construction tolerances in ACI 117, section 3.4.1.2 allow for horizontal dimension of unformed members cast against soil for greater than 2 ft. but less than 6 ft. allow for +6" and -1/2".							
The penetration sleeves for these piles have been fabricated.							
Proposed Solutions:

T-0669	BGP - Foundation Wall Vertical CJ	Closed	08/06/2013	08/16/2013	08/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Compan Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: Spec Section 033020, Attached Drawings		Option 2 will be acceptable (reduce the depth of the foundation wall vertical construction joint to 1.5").					
See attached sketch of the vertical foundation wall CJ.							
During construction of the high congestion mockup SCCI has discovered a constructibility issue with the construction of the foundation walls, more particularly, the vertical construction joints. Vertical construction joints are to be constructed as prescribed on Detail 2 of the S 1-3001 CD.							
The designed vertical reinforcement consists of the following:							
a. WR-1 with #11 vertical bars 8" OC, haunch #10 bars 8" OC, and #4 cross ties 6" or 12" OC.							
b. WR-2 with #11 vertical bars 8" OC, haunch #10 bars 8" OC, and #4 cross ties 6" or 12" OC.							
c. WR-2MOD (CDSM Encroachments) with #11 vertical bars 5" OC, haunch #10 bars 8" OC, and #4 cross ties 5".							
When rebar configurations noted above are implemented, even with ACI allowed tolerances included, it will conflict with construction ofthe waterstops, hydrophilic hoses and

forming of the vertical CJ.

As a possible solution to this issue SCCI suggests the following:

1. Eliminate a column of cross ties at the construction joints to allow construction of the vertical CJs per Det. 2 on SI-3001
2. Reduce the depth of the vertical construction joint to 1.5" (similar to horizontal CJ).

Please advise.

T-0670	BGP - Mat Slab Control Joints 2	Closed	08/06/2013	08/16/2013	08/20/2013	Potentially	<input type="checkbox"/>

Reference: Spec Section 03 30 20, Attached Sketches								
Please see attached sketches of mat slab CJ layout. SCCI has discovered conflicts between the CJ formwork and reinforcing steel, pin pile. SCCI proposes to modify the mat slab construction joint to clear the conflicting reinforcing steel and pin pile, as shown on the attached sketches.								
		Contractor-proposed CJ layout as presented in the RFI is acceptable.						
		Although the contractor has not inquired yet, one N-S line of shear reinforcement for the column at F-4 will conflict with the joint key. Contractor may shift this one conflicting line of shear reinforcement max of 3" to clear the key.

T-0671	BGP - Control Joint Amplitude	Closed	08/08/2013	08/18/2013	08/12/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Compan Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: Drawing S1-3001		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
See attached contract drawing S1-3001 regarding vertical and horizontal control joints of the foundation walls. SCCI is requesting acceptance to eliminate amplitude on the face of the control joint keyway where hydrophilic waterstop and injection hose is to be installed. Amplitude will remain on the diagonal portions of the CJ. This RFI is intended to clarify the use of this procedure for foundation walls only.		For vertical and horizontal control joints at the foundation wall, see response to RFI T-0630.					
T-0672	BGP - Fire Management Device Layout	Closed	08/08/2013	08/18/2013	08/14/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Compan Gary Krutsch		Answered By:Turner Construction Comp Jeff Thiel			
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: As discussed in the fire management coordination meeting on Monday 8/5, the contract plan device layout does not meet code for current draw. The stub ups from the mat slab to the devices shown on the contract plans at every other column will not be sufficient enough to meet code requirements for the future fully occupied space. If stubbed up at every other column, the consequences are having circuit runs that will end up doubling when the devices are added in the future. Siemens recommends that the stub ups are made at every column which will reduce the total current draw when devices are added in the future.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please advise.		The fire management system of design is a performance based design as per Section 28 30 01-1.1C of the contract documents. The contractor is responsible for the design of the system, including stub ups and device layout, as required to adhere to all applicable code requirements.					
T-0673	BGP - Displacement of Cap Bar for Support	Closed	08/12/2013	08/22/2013	08/13/2013	Potentially	<input type="checkbox"/>

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: S1-3600, Attached RFI 069				RFI was retracted in Constructware. This RFI will be responded to internally. Per meeting between TT, WOJV and SCCI on 08/08/2013, TT rejected the proposed alternative.			
See attached Gerdau's RFI#069							
At the contractors option, Gerdau is requesting to displace one top cap bar every 5' OC within the moment frame beams for support. Allowing the displacement of one top cap bar would reduce congestion near the top of the beam.							
Please confirm that this is acceptable.							
<hr/>							
T-0675	BGP - 400 Series HRC Couplers Assembly Procedure	Closed	08/12/2013	08/22/2013	08/16/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Compan Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: Spec Section 03 30 20				As previously stated in response to the Request for Substitution, the assembly of the couplers shall be per manufacturer's installation procedures.			
SCCI is in receipt of the approval to SCCI's Request for Substitution TG0600-077 .1 to approve the use of HRC 400 Series Couplers at Vertical Walls. The comment on the approved Request for Substitution noted that assembly of the couplers is to be completed using strict adherence to the manufacturer's installation procedures.				The manufacturer has stated that hand tightening is allowed with the use of qualified operators, therefore it is confirmed that hand tightened procedure is acceptable. Contractor shall submit operator qualifications for personnel that will be performing the hand tightened procedure.			
HRC, the manufacturer of the couplers has provided installation instructions, video footage of performance testing, test result and an operator qualification procedure, all supporting the assembly of the of the 400 serious couplers installation is acceptable with "hand tightened" procedure.							
Please confirm that the assembly of the 410/420 couplers "hand tight" is acceptable based on this manufacturer's recommendation as it was not directy addressed in the returned submittal comments.							
Video of the performance testing can be viewed : http://youtu.be/M5pFkjOgdN8

T-0676	BGP - Mat Slab Construction Joint at 3ft Chamfer	Closed	08/13/2013	08/23/2013	08/22/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu			To: Turner Construction Compan Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: Drawing S1-3201, Spec Section 03 30 20 See attached sketch of the mat slab wall CJ interface, reference Contract Drawing S 1-3201 , and RFI T- 0669. During layout of the bulkhead for the mat slab SCCI has discovered a constructibility issue with the construction ofthe mat slab CJ keyway as depicted on Detail 3 on SI-3001 , at the mat slab interface with the foundation walls. Reinforcement bars that are in conflict with the 10" deep keyway are: a.# 4 U-bars as depicted on detail3 on SI-3201. These bars are spaced 6" OC vertically and 5", 6" or 8" OC horizontally with the respect of the type of wall (i.e. WR-1, WR-2, or WR-2MOD) b. 3ft chamfer face bars- #10 at 8" OC per detail 1 on SI-3201 When rebar configurations noted above are implemented, even with ACI allowed tolerances included, it will conflict with construction of the waterstops, hydrophilic hoses and forming of the mat slab CJ. As a possible solution to this issue SCCI suggests the following: 1. Eliminate a section of#4 U-bars and 3' chamfer face bars to allow constuction of the vertical CJs per Det. 3 on SI-3001 2. Transition mat slab keyway to match the foundation wall vertical keyway at 1 1/2" depth (reference RFI T-0669). Please advise.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Contractor-proposed Option 2 is acceptable (transition mat keyway depth for extent shown on RFI sketch).

T-0684 **BGP - Couplers for Future Construction**

Closed

From: Webcor Construction LP Robert Kjome

To: Turner Construction Compan Gary Krutsch

08/19/2013 08/29/2013 08/28/2013 Potentially ☐

Answered By: Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Filip Filipic

REQUEST:

Reference: Drawing S1-3206, Spec Section 03 30 20

See attached photo of the form savers that are going to be used for the coupler for future construction as depicted on Detail 4 of S1-3206, and Detail 6 of S1-3001.

SCCI believes that Detail 6 on S1-3001 is not applicable due to the following:

1. As shown on the attached photo, epoxy coated form savers have tin cap incorporated into the coupler body. This tin cap will protect the rebar until the future construction.
2. Whatever tar is intended to be used with form savers in not compatible with the Grace waterproofing.
3. Detail 6 on S1-3001 is a detail for the slabs, where future walls are to be constructed.

SCCI proposed to install the coupler for future construction as shown on Detail 4 S1-3206 with form savers set against

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Thornton Tomasetti does not object to the contractor's proposal, contained in RFI T-0684 BGP, regarding couplers for future construction.

The proposal contained in this RFI also concerns a waterproofing system proposed by the Contractors, not the system designed by the Architect. The Contractors should have their engineer who prepared this waterproofing system design respond to this RFI. Until that is done, the Contractor should confirm all waterproofing system questions and details with the waterproofing manufacturer (with copies to the TJPA and its consultants and the Architect).

REQUEST:

Reference Sketch: attached
Reference Email: attached

The micropile designer has confirmed that it is not necessary to extend the micropile to within 6" of the top of concrete and that the 5' embedment in the sump pit is adequate. Please confirm that this is acceptable to the design team.

SUGGESTION:**ANSWER:**

Accept Suggestion: ☐

This is acceptable with the design team.

T-0690	SSS - Stainless steel welded to cast iron	Closed	08/23/2013	09/02/2013	09/05/2013	Potentially	<input type="checkbox"/>
---------------	--	---------------	-------------------	-------------------	-------------------	--------------------	--------------------------

From: Webcor Construction LP

Robert Kjome

To: Turner Construction Compan Gary Krutsch

Answered By: Adamson Associates, Inc. George Metzger

Co-Author:**REQUEST:**

Reference Drawing: 1/S1-6056

A number of details throughout structural steel drawings indicate stainless steel welded to cast iron or mild steel, see detail 1, 2/S1-6056 as one example. If two metals are fused, cast iron welded to stainless steel results in carbon migration. The chromium in the stainless and carbon in the steel have affinity for each other at elevated temperatures that results in carbon and chromium combining to form chromium carbide. This turns the welded area into hard and brittle material with a potential for rust that overtime has a high possibility to crack and fail.

For Det. 1 and 2 on S1-6056 the added tension from cables may contribute to failure. The proposed solutions include:

1. Use stainless steel instead of mild steel for the bottom connection plate thus welding stainless steel to stainless steel. Where the bottom plate has to connect to structural steel use bolted connection with thin dielectric isolator between two surfaces.
2. Replace welded connection to bolted connection with an isolator.
3. Use galvanized and painted plate instead of stainless steel plate.

SUGGESTION:**ANSWER:**

Accept Suggestion: ☐

The inquired connection can be executed in the way shown. Welding stainless steel to carbon steel is an established method, which can be done using an appropriate welding method. As with all welding methods, there are certain points to be considered, such as:

- The fabricator to be approved for welding stainless steel to carbon steel and/or cast steel (qualification submittals)
- The welder to be approved for welding stainless steel to carbon steel and/or cast steel (qualification submittals)
- Surface preparation before welding necessary (welding procedure submittals)
- Selection of weld filler material (welding procedure submittals in combination with structural design verification)
- Surface preparation after welding (welding procedure submittals)
- Coating of weld and stainless steel member 30mm beyond weld (welding procedure submittals)

Co-Author: Shimmick Construction Company, Inc. Chris Williams

REQUEST:

In the MEP meeting on 9/4/13, the response to RFI T-0693 was clarified. To confirm conversations with the WSP Electrical Design representative, the only conduits to be embedded in columns per the RFI T-0693 response are to be fire management conduits per the locations depicted in the response. All other conduits (power recepticals etc) are to be stubbed up on the face of the columns and are not to be embedded in the column.

SUGGESTION:**ANSWER:****Accept Suggestion:** ☐

With reference to RFI T-0693, all other conduits (power receptacles etc.) are to be stubbed up adjacent to the face of the columns and are not to be embedded in the columns. The conduits and receptacles will be surface mounted on the post-installed steel jackets. Note that the conduits are to be stubbed up with 5" between the conduit face and the concrete column face, to allow for the post-installation of the steel jackets. There are also plumbing risers on a number of the steel jacketed columns. The pipe risers should be positioned relative to the columns in accordance with the plumbing documents, but should not be closer than 5" to the concrete column, to permit post installation of the steel jackets.

T-0694	Additional Rebar Conflict for Plumbing Trim at GL2/D.4	Closed	08/26/2013	09/03/2013	08/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Jackson Tukuafu	To: Turner Construction Company	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author: Shimmick Construction Company, Inc. Ben Gordon

REQUEST:

Please refer to drawings 1/A1-2122, 1/S1-3501 and attached Gerdau sketch SKS-1

Due to the density of the typical N-S top mat bars (#10) and additional bars (#11) near the elevator pit at Gridlines 2 and D.4, the additional trim rebar per 1/S1-3501 for interrupting the bars over the plumbing opening cannot be installed to the East of the plumbing opening within 3" of the opening. The alternative solution would be to install the additional steel in a new layer below the top mat; however, due to proximity of the piping to the steel the bars cannot be placed below the top mat. Gerdau proposes the following options:

- A. Omit the additional trim bars to the East of the trimmed opening.
- B. Relocate the additional trim bars approximately 3'-0" East of the opening where the rebar spacing would allow for additional steel.

Please advise if proposed options are acceptable.
(see attached SKS-1)

SUGGESTION:**ANSWER:****Accept Suggestion:** ☐

Contractor-proposed option to omit additional trim bars to the east of the trimmed opening is acceptable for the cut plumbing opening at Grid 2/D.4. Added trim bars to the west of the opening will remain as placed.

T-0695	BGP - Additional Rebar Conflict for Floor Sink Trim GL B.7/2.7	Closed	08/26/2013	09/02/2013	08/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Compan Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: See attached Gerdau's RFI #72, 1/S1-3501, A1-2122, attached Gerdau sketch SKS-1 Due to the density of the typical N-S top mat bars (#10), additional N-S top mat bars (#11) and pin pile trim steel (#11 with lap splices directly over floor sink) near the floor sink at Gridlines 2.7 and B.7, the additional trim rebar per 1/S1-3501 for interrupting the bars over the plumbing opening cannot be installed on either side of the plumbing opening. The alternative solution would be to install the additional steel in a new layer below the top mat; however, due to the proximity of the plumbing piping to the steel the additional bars cannot be placed below the top mat. Also, the additional bar to the East of the opening would conflict with the pin pile. Gerdau proposes to cut top mat bars to allow for the floor sink installation and omit the additional trim bars. Please advise if the proposed solution is acceptable.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Per SKS-0282 (attached), Pin pile add bars will be calculated as ½ the number of interrupted bars each side in lieu of ½+1 bars. This eliminates (2) pin-pile add bars being interrupted by the drain. One wall add bar interrupted by the drain will be cut short at the northern limit of the drain and not be considered interrupted by the drain. Reinforcing west of the drain centerline, but within the cut zone, will be jockeyed west so that no bars are required to be cut. Reinforcing east of the drain centerline, but within the cut zone, will be jockeyed east so that no bars are required to be cut. A single typical mat bar will remain within the cut zone and may be cut. Congested reinforcing east of the cut zone will be jockeyed east aided by the partial (or complete) removal of a plumbing add bar. Clear spacing of 1db to be maintained between all bars except where lap spliced. In displacing bars to achieve the configuration shown in the SKS, resulting non-contact lap splices will be tolerated up to 6".

	<p>Reference Drawings: A1-2863, S1-2303, S1-5000 Reference Sketch: attached</p> <p>There are many conflicts in the plans where the top of concrete and the top of the transfer girder in that given area does not leave the amount of space required under the Metal Deck Schedule on 2/S1-5000.</p> <p>For Example: Using the Top Of Concrete (TOC) and Top Of Steel (TOS) elevation from sheet S1-2303 a clash occurs between the slab (S3 - TOC: 19.00') and Transfer Girder TR9 (TR9 - TOS: 18.37'). The 10" that the S3 deck requires in the Metal Deck Schedule on 2/S1-5000 cannot be maintained over the Transfer Girder. Please clarify.</p>						<p>Refer to details that have been cut on plan across the transfer girders as applicable in the Superstructure IFC/ASI 105 issue.</p> <p>Example: See section detail 8/S1-3705 that is cut at gridline 9 & D.4 on S1-2303 (included in the RFI).</p>
T-0699	BGP - Catch Basin Requirements From: Webcor Construction LP Jackson Tukuafu Co-Author: Shimmick Construction Company, Inc. Filip Filipic REQUEST: See attached page from DBI's standard catch basin detail, and reference drawings P1-6001 and P1-2022 thru 2030. On 08/26/2013 during pressure testing inspection of the drainage lines in mat slab areas 1 and 2, the SFDBI Plumbing Inspector pointed out that all catch basins in the mat slab should be constructed per city standard catch basin details. However, the contract drawings do not show catch basins details with cleanouts, vents and trap primer connections per the City Standard details. Please confirm the attached SFDBI city standard catch basin detail is to supersede all catch basin details currently shown in trade group package TG06.0 drawing set. Please include revised plumbing drawings incorporating the City Standard details.	Closed To: Turner Construction Compan Gary Krutsch	08/27/2013	09/06/2013	09/30/2013	Potentially	<input type="checkbox"/>
			Answered By: Adamson Associates, Inc. George Metzger				
		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
			As discussed in our review meeting with the SFDBI Plumbing Inspectors, the catch basin which are actually points of collection, will be installed as shown on contract documents.

T-0704.1	SSS - Built Up Plate Fabrication for W40x503	Closed	09/16/2013	09/26/2013	09/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Robert Kjome	To: Turner Construction Compan	Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference RFI: T-0704				Flange and web thicknesses are confirmed. The beams shall be 42" deep, the flanges shall be 16-3/8" wide. The plates shall be ASTM A572, GR 50 per General Notes SS-1. Web to flange welding shall be with double 5/8" fillet welds for 4 ft from each end of each flange plate and double 3/8" fillet welds in between.			
The built up beam will consist of 1 9/16" webs and 2 3/4" flanges. Please confirm that these plate sizes are appropriate.				W40X503 are also used at Roof and Ground Levels. W/O to coordinate RFI T-0704-SSS and T-0704.1-SSS responses with other sub-contractors, as needed.			
The web to flange weld was not addressed on returned RFI T-0704. We would suggest a 3/8" double fillet weld to join the web and flanges.							
Please confirm or provide an alternate detail.							

T-0705	BGP - Haunch Reinforcement at Double Waler Condition			Closed	08/29/2013	09/08/2013	09/02/2013	Potentially	<input type="checkbox"/>

---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

The condition was observed at Grid 2/ A and will likely repeat at other double waler locations. The typical resolution to the condition shall be to adjust the position, where required, so that the interfering tail clears the double waler web. As a result the 1-1/2" clear cover will deviate up to 4-112" of clear cover. The plan location of the tail shall remain as close as possible per the placement drawings. See the attached Photo for further details.

The 1-1/2" clear spacing shall remain at locations unaffected by the reduced clearance of the double-wlaer. For pieces not yet fabricated and delivered, please refer to RFI T-0603 as the proposed solution to conform to the 1-1/2" clear cover.

Plases confirm the revised haunch reinforcement clear clover as coordinated in the field is acceptable.

T-0709	BGP - Mat Slab Added Steel Interference	Closed	09/03/2013	09/16/2013	09/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Drawing S1-3003 and Spec Section 03 20 00 See attached Gerdau Sketch SK-77, BM-3b, BM-3t				The rebar conditions for bars at pin/trestle piles are addressed in typical details 2 & 3 on S1-3003 as well as details 4 & 7 on S1-3009 - these also apply to the inquired add bars in the RFI. The contractor-proposed use of spliced hook at these locations is acceptable.			
Due to the location of select trestle and pin piles, the #9@16" (bottom mat) and #11@16" (top mat) added North-South layer reinforcement cannot be installed at the desired spacing. The proposed solution is to cut the added #9 or #11 bars, where interrupted by a pile, and add a hook of equal size or greater (#11 hook max) with a lap splice similar to the hooks used for the trestle and pin pile trim steel.							
Please confirm if this is acceptable.

	<p>D. Cosmetically a 2 inch radius will look much more presentable in the as cast state.</p> <p>E. The 1 inch radius will require either chill sand in the radius, a metal chill made in the mold, or solidification cracking brackets as heat sinks to equalize the solidification temperatures and add strength to prevent hot tearing during solidification. Additional grinding of these areas will be necessary to meet visual acceptance criteria.</p> <p>F. Items A, B, and E will add costs to the manufacturing process of the casting.</p> <p>Our purpose is to point out the effects of the 1 inch radius design request and make sure that the designers are aware of the potential impact of having the smaller radius versus the 2 inch radius in the original designs that were reviewed. Bradken Atchison can certainly produce the 1 inch radius and manage the effects the 1 inch radius causes, but producing that design will have cost impacts to the casting process.</p>						
T-0712	BGP - Jitter Bug Finish on Mat Slab Surface From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Compan Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Ben Gordon REQUEST: Reference Spec Section 033020.3.6.B.I.c. See attached photos for a visual reference. Please reference TG06.0, BGP contract specifications 033020.3.6.B.I.c. SCCI is proposing to finish the top surface of the Mat foundation Slab, as a "Jitter Bug" finish. All other finishing requirements will remain the same. Is this acceptable?	Open	09/03/2013	09/13/2013	09/04/2013	Potentially	<input type="checkbox"/>
			Answered By: Adamson Associates, Inc. George Metzger				
			ANSWER: Accept Suggestion: <input type="checkbox"/> The proposed ¿Jitter Bug¿ finish is not acceptable. Future requirements for the train bed are unknown and the proposed finish may not be acceptable in some instances. Use the stiff broom finish per specification section: 03 30 20.3.6.B.1.c

REQUEST:

Reference Drawing: 3/S 1-3001
Reference Spec: 03 20 00

Per field coordination with the on-site structural engineer the following conditions are to be confirmed as acceptable:

1. In the Northwest corner of Area 3, corner bars matching the size, spacing and lap splices of typical horizontal reinforcing are installed in-lieu of bent typical horizontal bars. See Bar A in sketch FC-1
2. In-lieu of hooked haunch horizontal bars, straight bars of the same size have been installed with the required embedment. See Bar B in sketch FC-1.
3. At the intersection of the North and West haunch bars, the haunch bars along the North (Bar D) wall have been trimmed at the approximate intersection with the West (Bar C) haunch bars. Reference sketch FC-2. The observed condition is acceptable, but at future locations within the intersection of two haunches the detail for BarE will be used unless BarD already has 42" of embedment.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

The field conditions as described in the RFI are confirmed as acceptable.

At future locations where dewatering wells interrupt haunch bars, use detail for bar E in sketches FC-3 or FC-4 if the haunch bars do not have 42" of embedment into the mat slab.

T-0723	BGP - Couplers for Future Walls	Pending	09/05/2013	09/13/2013	09/05/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Marina Rosso		To: Turner Construction Compan Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST: Reference Det. 6 on S1-3001 See attached photo of the form savers that are going to be used as couplers for future walls. As discussed in area 3 Mat Slab meeting on 9/4/2013 SCCI is proposing to installing all formsavers for future walls in the Mat slab flush with the top of the Mat slab, to EL -35.67'. As shown on the attached photo, epoxy coated form savers have tin cap incorporated into coupler's body. This tin cap will protect the rebar until the future construction, and will substitute "tar" shown on Det. 6 on S1-3001. Is this acceptable?		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Epoxy-coated form savers shall be installed at the top of the mat slab as discussed on site in the RFI for locations where Detail 1/S1-9051 is applicable and may remain attached to the field observed 2x12 lumber, which shall be chaired to the target elevation. The form-saver/ lumber assembly is not applicable to any wall where there is a keyed joint or waterstop, such as the water tank walls. The arrangement is not acceptable for any "future wall" where the form-saver warranty will not cover corrosion protection for the construction interval without supplementary surface measures to be approved by the design team.

T-0725	BGP- CDSM Soldier Pile Cut-Off	Closed	09/06/2013	09/16/2013	09/18/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane		To: Turner Construction Compan Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger				

Co-Author:**REQUEST:**

In Detail 2/A1-8710 (see attached) it's not clear as to the final cut-off elevation for the CDSM wall shoring piles. Currently CDSM shoring piles extend up past the existing grade and future TG12.1 Civil Site Work Trade Contractor will be responsible for cutting off the CDSM wall shoring steel piles to the final elevation. WOJV propose that the cut-off elevations for the shoring piles be established at 3" above the train box lid i.e. at the top of concrete protection slab. See attached sketch SK -1.

If the shoring piles are to be cut off below the train box lid as currently shown in detail 2/A-8710, the waterproofing membrane could be compromised by the heat generated by the cutting torches which will have to be used to cut these large steel piles, also this detail does not address the instances where the shoring wall is shared with further new projects i.e. 181 Fremont street in Zone 4 and 101 1st street in Zone 3.

It is preferable that the shoring piles be cut-off 3" above the top of the train box lid to ensure that the waterproofing system isn't compromised and omits the need to pothole around 861 CDSM piles which are in close proximity to adjacent property and live traffic.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/17/2013

RESPONSE:

The soldier piles are within the City Public Right of Way. Obstructions either have to be at least 4' below the surface or be protected with 1" thick steel plates (similar to the Train Box Lid). Leaving the soldier piles in this Public Right of Way may compromise agreements that have been established with the City.

Either the piles will need to be cut down below the 4' depth entirely or the vertical flange adjacent to the Train box is left in place and the opposite (outside) flange and the web are cut down to 4' below the finished surface. Leaving the inside flange in place to the top of the Train Box Lid could facilitate support for the vertical waterproofing assembly.

Co-Author:

REQUEST:

Further to response to RFI T-725.1 TG07.2 trade package requires the cut off elevations for the 861 CDSM pile around the perimeter or the train box taking into account but not limited to, San Francisco city requirements for beam cut off in a public right of way, the elevation of utility's entering the train box structure, bridge structures and ramps as well as pedestrian stair towers 201A and 201B and passenger elevator 201 foundations on the west side of zone 1, Another item which will also need to be take into account is where the CDSM shoring wall is shared with adjoining Projects i.e. 181 Fremont street in Zone 4 and 101 1st street in Zone 3.

Please provide in Tabular format a list of the final cut-off elevations for each individual CDSM pile.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

As discussed with the design team and the TJPA, Tabular format a list of the final cut-off elevations for each individual CDSM pile does not exist. The CDSM Wall cut-off elevations are by contractor means and methods with the elevation determined by the contractor based on the various components of the Transit Center building construction for example; contractor formwork, waterproofing and re-construction of adjacent streets/sidewalks.

Where CDSM wall is shared with adjoining Projects i.e. 181 Fremont street in Zone 4 and (Salesforce Tower) 101 First street again the CDSM Wall cut-off elevations are a contractor means and methods with the elevation determined by the contractor to construct the Transbay Transit Center.

For future bid packages, the Construction Manager can coordinate with the City of San Francisco for the requirement for removal. For example the City DPW states sheet piling and laggin"shall be cut off at least 3 feet below pavement subgrade with the upper part removed."

Answered By: Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Ben Gordon

REQUEST:

Please refer to attached excerpt from specification section 033020, Article 3.3 - D.

The referenced specification section requires mixed discharge concrete "...be completed within 1-1/2 hours or before the drum has revolved 300 revolutions, whichever comes first..." However, Cemex the concrete supplier has performed the set time test to evaluate the time at which the onset of hydration occurs for mix #1557217 (Protection Slab Mix) as per the attached Cemex letter dated August 26, 2013.

As per the attached test result by Cemex, please confirm it is acceptable to extend the concrete delivery to two (2) hours in lieu of 1-1/2 hours as specified.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It will be acceptable to extend the concrete delivery time as proposed in the RFI.

The contractor shall be responsible for providing an end concrete product that meets the specifications.

Co-Author:

REQUEST:

Reference Drawing: S-0007

Please identify what are considered "LATERAL SYSTEM MEMBERS" as called out in the GENERAL NOTES SS-9, B "REGARDLESS OF THICKNESS ALL TRUSSES, LATERAL SYSTEM MEMBERS (INCLUDING COLUMNS, BRACES, ETC.): 20FT-LB @ 70 DEG. F."

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Lateral system members refer to members of the seismic framing. Following members constitute the seismic frame: Members designated as SLRS or SFRS in the drawings, members in "seismic frame elevations". See plan notes to locate "seismic frame elevations".
As called out in Specification 05 12 10 (Structural Steel - Additional Seismic Requirements) Section 2.1.A.1, "Heavy sections shall be supplied with CVN testing in accordance with AISC 341". Therefore, requirements of SS-9B need not be applied and CVN testing requirements can be limited to heavy sections (shapes) per the AISC 341 requirements. As noted in General Notes GR-2, AISC 341-10 is the governing provision.

REQUEST:

Please reference attached drawing S1-2057 and S1-3007.

The bridge pier pile (4'-0" diameter) near grid E/34.5 is shown in SI-2057 to be offset from the typical row of piles shown along gridline 34.7. In addition, detail 1/SI-3007 depicts the pile being located within the pit that is located at gridline E/34.5. However, as per BBI's Beale Street Bridge drawings and as-built conditions, the aforementioned bridge pile is installed in line with the other piles on gridline 34.7.

Please confirm the as-built location of the bridge pier is acceptable and the sump pit detail shown in 1/SI-3007 is no longer applicable.

RESPONSE:

This topic has already been addressed in past RFI's. Please refer to responses for RFI T-0264.7 BSE as well as RFI-0264.3 BSE.

T-0742	BGP- CDSM Soldier Pile Encroachment Area 9	Closed	09/20/2013	09/30/2013	09/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Michael Spillane	To: Turner Construction Compan	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author:

REQUEST:

Reference Documents: Exhibits A - G

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) and steel plate on the north & south wall in mat slab pour Area 9 as well as all levels of the encroachment into the foundation wall between CDSM piles 164 to 188 on the north elevation and 595 to 618 on the south elevation for Location Plan see exhibit - A Exhibit - B, & C depict the location and degree in which the SP are encroaching
WOJV proposal North elevation on gridline A: (See Exhibit - B) Between CDSM piles 167 to 168 WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching Steel plate attached to SP 167 & 168, originally this was a WR1 reinforcement area #11@8" oc EF vertically and would change to #11@6" OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).
WOJV proposal on the South elevation: (See Exhibit - B) Between CDSM piles 611-612 to 613-614, WOJV is proposing to decrease the specified 36" wall thickness to

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

George Metzger
9/25/2013

RESPONSE:

The contractor proposed revisions to foundation wall reinforcement due to encroaching CDSM Piles (and added steel plates) in Area 9 are acceptable. Note that reducing the spacing of embedded column vertical reinforcement from 6 inch to 5 inch may negatively impact the installation of embedded column cross-ties which are #5 per construction drawings.

Michael Spillane

To: Turner Construction Company Gary Krutsch

Answered By: Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Reference Documents: Exhibits A - I

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north & south wall in mat slab pour Area 10 as well as all levels of the encroachment into the foundation wall between CDSM piles 164 to 188 on the north elevation and 571 to 595 on the south elevation for Location Plan see exhibit - A
Exhibit - B & C depict the location and degree in which the SP are encroaching

WOJV proposal North elevation on gridline A: (See Exhibit - B) between CDSM pile 200-201 to 206, WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 206. This foundation wall area was originally a WR2 reinforcement area (#11@6" OC EF vertically) and would change to #11@5" OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.3 option 2 (Exhibit -E).

WOJV proposal on the South elevation: (See Exhibit - B) Between CDSM piles 574 to 576 and 587 to 588 - 589 WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 575 & 588, originally these were WR1 reinforcement areas #11@8" OC EF vertically and would change to #11@6" OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

Between CDSM piles 588-589 to 591, WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 589 & 590. This foundation wall area was originally a embedment column with reinforcement in this area was a double layer of #11@6"oc EF vertically and would change to #11@5" OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.4 option1 (Exhibit -F).

In all other areas without CDSM pile encroachment issues the reinforcement will remain unchanged as per the Contract drawings.

See Exhibit - G, H & I showing details of transition between modified reinforcement to contract reinforcement.

These solutions if approved would be incorporated into the TG06 shop drawings.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

George Metzger

9/25/2013

RESPONSE:

The contractor proposed revisions to foundation wall reinforcement due to encroaching CDSM Piles in Area 10 are acceptable. Note that reducing the spacing of embedded column vertical reinforcement from 6 inch to 5 inch may negatively impact the installation of embedded column cross-ties which are #5 per construction drawings.

T-0756	BGP - Structural Slurry Primer in Mat Slab	Closed	09/24/2013	10/04/2013	09/25/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please refer to the attached letter, authored by Rober Foley (CEMEX QC), dated September 17, 2013. With limited site access, many Mat Slab pours will require a larger than normal amount of slick-line. To ensure that no slick-line gets plugged, SCCI is proposing to prime the slick-line with a structural slurry that will reach and exceed the specified design strength for the Mat Slab. A miniscule percentage of this primer will be deposited into the mat slab. This percentage would amount to .01 to .02 percent by volume. Please confirm the proposed SCCI method of slick-line priming is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 9/24/2012 RESPONSE: Any material that is not the approved mix design for the mat slab, including slick-line primer, shall not be placed in the mat slab.

Reference detail 5/S1-4205 showing the link brace detail at the roof along column lines B and H. In the IFC documents, the beam size was increased from W21x55 to W24x55, causing the MC10x41.1 brace (increased from M8x22.6) to foul the beam flange. See CD RFI 020 SK 1 & SK2 attached for reference and advise on resolution for the foul noted.				A portion of the W24x55 bottom flange and a portion of the web (up to 1" from the bottom of the beam) may be coped to clear the double channel braces.			
T-0764	SSS - Built-Up Beams - Plate Yield Strength	Closed	09/26/2013	10/06/2013	09/30/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Compan Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please reference contract sheet S-0007, specifically structural steel note SS-1, which indicates that plates used for flanges in built up beams shall meet the criteria of ASTM Designation A572-50 (UNO) and have a maximum yield point of 58ksi.				The maximum yield strength specified on General Note SS-1 is to ensure the strong column/weak beam condition is met. Hence, this requirement may be relaxed to applicable to steel plates for seismic moment frame beams only.			
The plate mills will not guarantee material that meets the A572-50 criteria and further restricts the yield to a maximum of 58ksi. The plate mills will guarantee material that will yield within the range of 50ksi - 65ksi. Attached you will find correspondence with two major US steel mills for reference.				From our past experience, the maximum yield of 58 ksi is a very reasonable target. Also, the lab tensile tests commonly show a lower yield than what is provided on the mill certifications (around 2- 6 ksi lower).			
Please confirm, for the plates used for flanges in built-up members produced from A572-50 material, that a yield range of 50ksi - 65ksi is acceptable.				However, we understand that this is still a risk to the steel contractor even though it is only applicable to the seismic moment frame beams. We agree to relax this requirement further accepting the yield strength up to 65 ksi as requested

Reference Drawings: S1-2305, S1-2306, and S1-2307					Accept Suggestion: <input type="checkbox"/>		
As indicated on the sketches attached, there are beams which have not been located on the referenced drawings. The dimensions provided and clouded in red are taken from the latest Revit model. Please verify all clouded dimensions required to located the steel in question.					Beam locations are identified on structural drawings by:		
					1) Dimensions to nearest gridlines,		
					2) Dimensions to Edge of slab (Coordinate with architectural edge of slab drawings per sheet note on first zone plan of each level to identify beam locations),		
					3) Dimensions shown on partial plans,		
					4) Special symbols such as asterisks (*) adjacent to beam size tags in combination with sheet notes. See 3a) and 3b) for examples.		
					a) Ground level: Beams supporting W systems are identified with asterisks. Sheet notes are provided on S1-2305, S1-2306 and S1-2307 stating that the locations of such beams need to coordinated with TG08.1 package.		
					b) Roof park Level: Sheet note 5 on S1-2602 states that for beams with a specific connection symbol, beam locations need to the coordinated with TG08.1 package.		
					5) General note GR-13 on S-0005 which states "Assume equal spacing between established dimensions, if not indicated on drawings".		
					6) General notes GR-11 through GR-16 shall apply.		
					Considering the above guidelines, please resubmit RFI 769 and 770 if further clarification is needed. We will clarify beam locations other than those covered by the above guidelines.

T-0771	SSS - Lower Concourse Anchor Bolt Details	Closed	09/30/2013	10/10/2013	10/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Please reference Drawing S1-5051 and confirm the following in regards to the column base details:			The numbering of the response below matches with the numbering of the RFI.				
1) Confirm it is acceptable to oversize the holes for anchor bolt penetrations through base plate per AISC's 13th Edition Table 14-2 (reference CD RFI 016 SK2 attached).			1. Confirmed the holes may be oversized per AISC's 13th edition, Table 14-2.				
2) Confirm the hole sizes indicated in Part 1 are acceptable for anchor bolt penetrations through the horizontal column stiffener.			2. Confirmed.				
3) Confirm it is acceptable to supply a 1/2" x 4" x 4" (A36) plate washer above the column stiffener with a 1/16" oversize hole.			3. Washer thickness shall be in accordance with AISC's 13th edition, Table 14-2.				
4) Confirm it is acceptable to locate the grout holes typically as shown on CD RFI 016 SK3.			4. Grout hole locations and procedure shall be confirmed by the mock-up.				
5) To aid in the alignment of the thread bar anchor rods during concrete operations, please confirm it is acceptable to provide one 1/2" thick anchor plate at the base of the thread bars with size to match the base plate in lieu of four separate 1/2" x 4" x 4" anchor plates.			5. 1/2" anchor plate matching the base plate at the bottom of the anchor bolt is not acceptable as it will affect the consolidation of the concrete.				
6) Confirm the thickness of the stiffener for Type II and Type III column bases is to be 2".			6. Confirmed, the stiffener is 2" thick.				
7) Confirm an anchor bolt projection of 2.5 x AB dia. above the plate washer on top of the column stiffener is acceptable. See CD RFI 030 SK3 for reference.			7. Contractor to verify with the anchor rod suppliers for the length of the hex nut. Recommend projection = washer thickness + hex nut length + 1.5x d Minimum to account for construction tolerance				
8) Confirm an anchor bolt extension of 2.5 x AB dia. below the bottom plate washer is acceptable. See CD RFI 030 SK3 for reference.			8. See response to question #7.				
9) Confirm that the 1" cover as shown on CD RFI 030 SK3 is acceptable.			9. Confirmed the 1" clear is acceptable.				
10) Confirm that the anchor bolts shall be installed wrench tight.			10. Confirmed that wrench tight is adequate.

T-0775	BGP-Concrete strength requirement for bracing Removal	Closed	09/30/2013	10/10/2013	10/10/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane		To: Turner Construction Compan Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
In accordance with Spec section 31-55-00 1.4 J the contractor is to submit concrete strength results to the design team prior to the removal of internal bracing. In order to fulfill this requirement the contractor has asked the following questions.				George Metzger 10/9/2013 RESPONSE: The response of this RFI is limited to the scope of the removal of the lowest level D temporary shoring struts:			
1. What is the criteria for bracing removal for instant if the average strength of the concrete cylinders tested is calculated to be above the design strength can the internal bracing be removed?				1. The criteria for removing the shoring struts is defined in general note FO-5 on sheet S-0005 of the TG03 BSE documents: " F0-5 Do not remove temporary shoring struts against foundation walls until the foundation wall and mat concrete has attained 100% of its design strength."			
2. Is there any tolerance on the design strength requirement for bracing removal, for example if the concrete has reached 90% of design strength could the bracing be removed? Obviously this could have a positive effect on the construction schedule.				For consideration of bracing removal prior to 56 day concrete cylinder tests, design strength may be considered achieved when all earlier tested cylinders meet ACI 318 acceptance criteria. For this purpose, "test" in ACI will not be required to be the average of multiple test results of a particular batch.			
				If the results of the concrete cylinders meet ACI criteria and averages (as defined by ACI) exhibit values above design strength, the element may be considered to have attained its design strength.			
				2. The lowest level brace D may be removed when the concrete strength has reached 90% of design strength. Note that this is a relaxation of the contract document criteria and limited to the removal of the

Please reference drawing E1-2026 and Spec Section 26 05 34.				George Metzger 10/10/2013			
As per spec section requirement 26 05 34 - Raceways and Boxes, Article 3.2 - B, please confirm the proposed "...location of outlets, fixtures and equipment..." layout as shown in the attached SCCI sketch SK-RFI-337 for Electrical Room B2640 in Area 15 is acceptable.				RESPONSE: WSP has reviewed these layouts for conformance with electrical equipment locations and layouts are in conformance with the Contract Documents. As noted in response to RFI 0665.1, documentation should be presented on CAD for review and approval, hand sketches are not acceptable.			
Please advise.

Please reference RFI #T-0778, drawing EI-2026, and Spec Section 26 05 34.				George Metzger 10/29/2013			
RFI #0778 response proposes layout for electrical equipment and box layout in Electrical Room B2640 - Area 08 in CAD format. See attached.				RESPONSE: WSP cannot review these layouts because walls have not been properly coordinated. Refer to markup from AAI. Further submissions of equipment layouts should be submitted as shop drawings on CAD backgrounds for proper coordination.			
Please confirm layout is acceptable.

T-0783	BGP- CDSM Soldier Pile Encroachment Area 11	Closed	10/18/2013	10/28/2013	10/24/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Michael Spillane	To: Turner Construction Compan	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author:

REQUEST:

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north & south wall in mat slab pour Area 11 as well as all levels of the encroachment into the foundation wall between CDSM piles 188 to 236 on the north elevation and 548 to 571 on the south elevation for Location Plan see exhibit - A

Exhibit - B & C depict the location and degree in which the SP are encroaching

WOJV proposal North elevation on gridline A: (See Exhibit - B) between CDSM pile 234 to 236, WOJV is proposing to decrease the specified 36" wall thickness to 34' to clear the encroaching SP 235. Originally this was a WR1 reinforcement areas #11@8"oc EF vertically and would change to #11@6" OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

WOJV proposal on the South elevation: (See Exhibit - B) Between CDSM piles 548 to 551 WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 550, originally this was a WR1

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

George Metzger

10/23/2013

RESPONSE:

The contractor proposed revisions to foundation wall reinforcement due to encroaching CDSM Piles in Area 11 are acceptable.

reinforcement areas #11@8" oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

In all other areas without CDSM pile encroachment issues the reinforcement will remain unchanged as per the Contract drawings.

See Exhibit - E & F showing details of transition between modified reinforcement to contract reinforcement.

These solutions if approved would be incorporated into the TG06 shop drawings.

Please confirm if these solutions would be acceptable.

T-0784	BGP- CDSM Soldier Pile Encroachment Area 12			Closed	10/18/2013	10/18/2013	10/24/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Michael Spillane	To: Turner Construction Compan		Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:									

REQUEST:

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north elevation in mat slab pour Area 12 for location Plan see exhibit - A. This RFI is subject to revision as the current survey data available does not recorded positioning of the CDSM beams at the lowest mat slab elevation.
Exhibit - B, & C depict the location and degree in which the SP are encroaching

WOJV proposal North elevation on gridline A: (See Exhibit - B) between CDSM pile254 to 257, WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 255 & 256. Originally this was a WR1 reinforcement areas #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

The South elevation has no encroaching piles and

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

George Metzger

10/23/2013

RESPONSE:

The contractor proposed revisions to foundation wall reinforcement due to encroaching CDSM Piles in Area 12 are acceptable. We note that the survey data for CDSM piles near the mat level is not provided in this RFI. Once that information is available, the encroachment information and therefore the foundation wall reinforcement in Area 12 may require further revision.

	5160 STEEL, OIL QUENCHED FROM 830C, 650C TEMPER OR DIN 34 CRNIMO 6 + QT CODE EN 10083". The pin manufacturer, Dyson Corp., indicates this material is not available and suggests a substitution to ASTM-A540 grade 823, class 5 (see attachment).			A540 grade B23, class 4.			

T-0787	SSS - Charpy V-Notch Impact Testing Requirements	Closed	10/04/2013	10/14/2013	10/10/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Compan Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger				

Co-Author:

REQUEST:

Please confirm the following regarding the Charpy V-Notch (CVN) testing requirements for the project:

- The members identified on the attached sketches (SFRS - SK) are the only members that are part of the Seismic Force Resisting System (SFRS/SLRS/MF/BF) and are CVN tested in accordance with AISC 341-10 "Heavy Section" definition.
 - o Except from AISC 341-10: "For structural steel in the SFRS, hot rolled shapes with flanges 1-1/2" thick and thicker shall have a minimum CVN toughness of 20 ft-lb at 70°F, tested in the alternate core location as described in ASTM A6 Supplementary Requirement S30. Plates 2" thick and thicker shall have a minimum CVN toughness of 20 ft-lb at 70°F, measured at any location permitted by ASTM A673, Frequency P, where the plates is used for the following:"
 - Members built up form plate
 - The steel core of buckling restrained braces
- SFRS/SLRS/MF material will use the "Heavy Section" definition from AISC 341-10: hot rolled shapes with flanges 1-1/2" thick and thicker and plate 2" thick and thicker.
- Non SFRS/SLRS/MF material will use the project specification, Section 05 10 00, Part 1, 1.2, C.6, "Heavy Section" definition: hot rolled shapes with flanges exceeding 1-1/2" thick and plates exceeding 2" thick.
- Non SFRS/SLRS/MF material will be CVN tested in

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

- 1-) In elevation sheets S1-4101 through S1-4116; moment frame columns, transfer girders and tapered roof girders are part of Seismic Framing (SFRS). In this RFI, only moment frame beams are highlighted by the Contractor as SFRS in these sheets. As indicated in Sheet S1-2302 (see Sheet Notes), Sheets S1-4101 through S1-4116 include "superstructure transverse seismic frame elevations".
- 2-) RFI correctly highlighted all the members in the "longitudinal seismic framing elevations" as SFRS. This was also indicated in Sheet S1-2302 (Sheet Notes).
- 3-) Buckling Restrained Braces are part of SFRS. If core plates within the BRBs 2" or thicker (unlikely since the specified BRB steel core area is relatively small), AISC 341-10 Heavy Section CVN requirements will apply.
- 4-) Ground Level Gridline G beams between Gridlines 12 and 16.9 are SFRS. Note that RFI correctly highlights these beams as SFRS in longitudinal seismic framing elevation views. However, they were not shown as SFRS in the plans.
- 5-) 2nd Floor Gridline D beam between Gridlines 16 and 16.9 is SFRS as indicated in construction drawings.
- 6-) For pipe columns (large diameter tubular sections),

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Company Gary Krutsch **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Filip Filipic

REQUEST:

Refer to the attached sketch 131003_S105-S106 South Radius.

In Areas S105 and S106, EW top mat reinforcing makes an increasingly acute angle with the south wall. This eventually prevents the reinforcing from penetrating the haunch and wall reinforcing curtains to reach the edge of the mat.

Per field coordination, please confirm it is acceptable to terminate EW top mat reinforcing in a hook prior to reaching the edge of the mat slab provided the following provisions are as followed:

- All terminating EW top mat reinforcing shall be hooked
- Where the angle becomes such that the mat reinforcing cannot penetrate the inner wall reinforcing. The reinforcing may terminate immediately in front of the wall reinforcing inside the haunch. This is labeled Zone 1 in the sketch.
- In Zone 1, single haunch bars that interfere with penetration of mat reinforcing into the haunch shall be relocated to allow penetration. Relocation will be to the nearest adjacent placement opportunity without regard to the 8" spacing module. Clear spacing, however, between haunch bars shall be maintained.
- The total number of haunch bars will remain unchanged.
- In Zone 1, provide a curved band of reinforcing at the typical size and spacing of the mat within the wall.
- Where the angle becomes such that the mat reinforcing cannot penetrate the haunch without relocating more than one haunch bar, reinforcing may terminate at the toe of the haunch. This is labeled Zone 2 in the sketch.
- In Zone 2, provide a curved band of reinforcing at the typical size and spacing of the mat within the haunch.
- Zone 1 and Zone 2 bands will overlap typical reinforcing by the distance LTS.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

George Metzger
10/4/2013

RESPONSE:

It is acceptable to terminate EW top mat reinforcing of Areas S105 and S106 prior to reaching the edge of the mat as described in the RFI.

T-0796	SSS - Transfer Girder Stiffener Thickness	Closed	10/07/2013	10/17/2013	10/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Drawings: S1-4300, S1-4308, S1-5052					Accept Suggestion: <input type="checkbox"/>		
For columns above transfer girders Detail 1/ S1-5052 calls out thicknesses of "X=1 1/2" for t/c <2 or t/c=2" and "X=2" for t/c >2". For columns that are below transfer girders 4/ S1-5052 calls out "2 1/2" thk stiffener PL ea side, typ. (see note 3)". Note 3 states "Stiffeners required UON in transfer girder elevations".					When a below grade column is present immediately below an above grade column, full depth stiffeners that line up with the flanges of the column above are used within the transfer girder. Therefore, Details 1, 2 or 6/S1-5052, which are for above grade columns, govern the thickness of the full height stiffeners. This condition is indicated by Note 4 of Detail 1/S1-5052 which states, the stiffeners are half-depth UON in transfer girder elevations. For information not shown in Detail 2 and 6/S1-5052 (see Note 2 in these details), Detail 1/S1-5052 is referred to as correctly understood by the contractor.		
Where columns are directly above and below a transfer girder and full height stiffeners are shown per transfer girder elevations, please advise on what thickness these full height stiffeners should be.					Note that where the above grade columns are connected to the transfer girders via castings, different details apply and stiffener requirements are different. Refer to corresponding details from Transfer Girder elevations.		
*Please note that 1/S1-5052 is also referred to on 2 and 6/S1-5052.							

T-0797	BGP - Mat Slab Construction Joint Conflicts in Area 8	Closed	10/08/2013	10/18/2013	10/16/2013	Potentially	<input type="checkbox"/>

REQUEST:			SUGGESTION:		ANSWER:		
Please refer to attached photos, excerpt drawing CJ-05 from submittal package TG0600-030.3 and SCCI sketch SK-0341.					Accept Suggestion: <input type="checkbox"/>		
The east side of the mat slab construction joint of Area 8 (S108) has several constructability issues with the mat keyway and other project structure elements. The following are identified conflicts and SCCI proposed remediation:					George Metzger 10/15/2013 RESPONSE:		
1. The current east construction joint layout in Area 8 falls within the row of micropiles as shown in attached Photo-1 and Photo-2. SCCI intends to jog the joint an addition 12" +/- to the East of GL 16.6 to clear the micropile conflict					1. We assume the RFI means to state the proposed shift is "... 12"+/- to the East towards GL 16.6..." (and not "...12"+/- to the East of GL 16.6...") as graphically depicted in the RFI sketch SK-341. This is acceptable.		
2. The east construction joint of area 8 currently jogs thru the thickened slab section at GL 16.6/G.3. SCCI intends to shift the joint Eastward to capture the thickened section					2. The proposed jog around the pit/thickened slab is not acceptable as proposed. However, an acceptable alternative would be to turn the CJ westward along (or parallel) to GL F.7 within S108 and then turn 90 degrees south to align with the CJ on the west side of wall W160.

REQUEST: Please refer to attached SCCI sketch SK-345 and drawing (CJ-05) excerpt from submittal package TG0600-30.2. The east side of the mat slab construction joint of Area 10 (S110) has several constructability issues with the mat keyway and other project structure elements. SCCI proposed to install the CJ between area 10 and 11 as shown on the attached sketches. Please confirm the revised construction joint layout as shown in the attached SCCI sketch SK-345 is acceptable.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 10/15/2013 RESPONSE: The proposed mat joint between S110 and S111 is acceptable. Refer to RFI T-0798 for the joint on west side of area 10 between S110 and S111.

T-0804	SSS - W21 Beam Substitution	Closed	10/08/2013	10/18/2013	10/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Compan Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger				

Co-Author:

REQUEST:

With reference to the W21x44 and W21x50 beams shown on Dwgs S1-2302 to S1-2307 (Ground Level), S1-2402 to S1-2407 (Second Level), Dwgs S1-2502 to S1-2507 (Bus Level) and Dwgs S1-2602 to S1-2607 (Roof Park Level), these beams have relatively narrow flanges. These beams sizes are problematic with regard to stability during erection for spans over 30 feet in length. The substitution of the W21x48 for the W21x44 and W21x55 for the W21x50 would resolve the stability issue. Please advise if these substitutions are acceptable.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

In general, where there is no shaft opening or recess on either one or both sides of the W21, the proposed substitutions for temporary erection stability are acceptable as long as there is no additional cost to TJPA. However, where there is an opening or recess on either one or both sides of the W21, substituting W21x44 or W50 with a beam with wider flange might negatively affect the edge clearance. Skanska may decide to move the beam to gain the same edge distance and submit the revised framing plan (with dimensions) as a RFI.

T-0805	BGP-Area 7 level D bracing removal	Closed	10/08/2013	10/18/2013	10/21/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane		To: Turner Construction Compan Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger				

Co-Author:

REQUEST:

Further to response to RFI T-0641 please find attached supporting information from the internal bracing designer (PB&A) see exhibits B this information is a three dimensional structural analysis of the CDSM wall and bracing system. WOJV is proposing the removal of the level D bracing in area 7 and also the bracing which spans across the Construction joints between Areas 6 & 7 and Areas 7 & 8 waler (WD-09 to WD-12, & WD-60 to WD-63 as well as struts 20-25 level D See SK-1 2 & 3 in exhibit A) The removal of this bracing will allow all the first lift of wall to be completed in area 7 and mitigate any possible delays to the construction schedule.

As part of this bracing removal process, WOJV will also put a monitoring plan in place to monitor the CDSM beams which will be unsupported by either the concrete of the mat

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

George Metzger

10/17/2013

RESPONSE:

For the condition where the Level D bracing will be removed above a poured mat slab that has not reached adequate strength, the structural engineer should comment as to the appropriateness of this.

Where mat slabs are not yet poured, Level D bracing removal will allow additional movement and pose a risk of cracking and loss of watertightness of the CDSM material as compared to the sequence illustrated on drawing GT-1112. Therefore we recommend that the early removal of the Level D bracing not be done.

T-0811	SSS - Fitted Stiffeners	Closed	10/10/2013	10/20/2013	10/17/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Robert Kjome	To: Turner Construction Compan		Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:			
Reference: Attached sketch				Accept Suggestion: <input type="checkbox"/>			
Spec 05 10 00 - 16 N states: "Stiffeners: Fitted stiffeners shall be ground to fit closely against flanges."				1.) When a stiffener is called out in the drawings as "fitted" stiffener, it shall be ground to fit closely against the flanges as indicated in the specification. In following cases, "fitted" requirement can be disregarded and stiffeners can be constructed using standard AISC fabrication tolerances: a-) When stiffeners are welded to beam/column flanges using CJP welding. b-) In Sheets S1-8001, S1-8002, S1-8003. c-) In Detail 1/S1-5013.			
1. Please clarify which stiffeners are fitted stiffeners as this terminology does not appear to be noted in the structural drawings.				2.) If a stiffener is not called out as "fitted", use of standard AISC fabrication tolerances for construction is acceptable.			
2. Confirm it is acceptable to provide the shear plate height as d-2tf minus 1/16" for fabrication tolerance.							

T-0812	SSS - Pipe Column Connections to Cast Nodes	Closed	10/10/2013	10/20/2013	10/18/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Robert Kjome	To: Turner Construction Compan		Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please review attached sketches with details on S1-4020 and cast node details for pipe connections to cast nodes.				1. As noted on details on Sheet S1-4020, the center line of the pipe is not in line with the center line of the cast node. Since the cast node ears are casted to be perpendicular to the cast node axis, the pipe end need to be bevel cut to match face of the case node geometry.			
1. Work points for 32" diameter basket column to cast node connections have been offset from the theoretical work line as noted on design sheet S1-4020. Verify ends of 32" pipe will need to be bevel cut to match face of cast node geometry.				2. Scribe line if needed shall be laid out and scored into the casting by Skanska as a part of means and methods. The depth and thickness of the scribe line shall be submitted for review. Scribe line if added, shall not affect the appearance of the cast node nor			
2. Where necessary bevel cuts are required at each end of the 32" diameter pipe we propose to add a scribe line along the top surface on centerline of the pipe to facilitate

REQUEST: Reference Drawing P1-2022 between Line C/4-5 Per drawing P1-2022, a 6" sanitary line and vent connection is shown inside the Area 4 stairway. WOJV recognizes the need to flush the sprinkler system and/or needed drain. However, per CBC Code 2007 section 1020.1.2, plumbing line or drains are not listed under Penetrations. Please confirm the plumbing line detailed inside the Area 4 stairway will comply with the referenced code section.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 10/30/2013 RESPONSE: There are a number of sprinkler drains that terminate with an indirect waste connection and they are located in the level B2 stairwells outside of the exit path radius. The dedicated indirect waste connections for the sprinkler drain risers are an integral part of the sprinkler system just as much as the sprinkler drain riser itself.

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Per S1-5012 for the typical bolt beam connections please refer to sketches CD RFI # 079 SK1 to SK3 for items 1 to 7:

- 1) Confirm the noted dimension may be 1 3/4" in details 1 & 2/S1-5012 to match 3/S1-5012.
- 2) Confirm the noted dimensions are acceptable for details 1, 2 & 3/S1-5012.
- 3) Supply plate thickness.
- 4) Supply welding for shear plate to column.
- 5) Confirm dimensions are acceptable.
- 6) Confirm dimensions are acceptable.
- 7) Supply plate thickness.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed. Vertical bolt edge distance 2db can be changed to 1 3/4" in details 1 and 2/S1-5012 if the bolt diameter is not more than 7/8".

2) Confirmed. The noted dimensions are acceptable for details 1, 2 and 3/S1-5012. Note that the distance between the centerline of the bolts and the face of the column is 3".

3) Plate thickness is 3/4" as noted on Superstructure ASI 106 drawings.

4) Welds between shear plate and column are double sided 5/16" fillet welds as noted on ASI 106 drawings.

5) Confirmed. Noted dimensions are acceptable.

6) Confirmed. Noted dimensions are acceptable.

7) Plate thickness is 1" as noted on Superstructure ASI 106 drawings.

T-0824 **SSS - Bottom Flange Connection Plate**

Closed

10/11/2013 **10/21/2013** **10/22/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch

Answered By: Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Per detail 6/S1-5015 for the bottom flange connection plate please refer to sketches CD RFI # 069 SK1, SK2 & SK3.

1) Access for field welding the web extension plate per 6/S1-5015 is a problem at the noted location as well as other similar locations.

Confirm the web extension plate may be typically omitted when the dimension shown as 1 3/4" is 3" or less.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Access for field welding of the web extension plate per 6/S1-5015 is a problem at the following locations:

1) Location highlighted in SK1 in the RFI

2) At GLs 6/C.3 and 6/F.7

3) At GLs 9.9/C.3 and 9.9/F.7

4) At GLs 20.1/C.3 and 20.1/F.7

5) At W40x149 beams framing into moment frame beams between GL 32.4 and 33.2 (Total 8 brace locations).

Provide brace detail per sketch SKS-0290 (attached) at locations listed in 1, 3 and 4 above. Braces at locations listed in 2 and 5 are not required.							
T-0825	SSS - W30 Beam to Girder where bf exceeds 22	Closed	10/11/2013	10/21/2013	10/17/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Compan Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
On S1-2505 along grid line 20.1/E.6 where the W30x108 beam frames into the MF girder please refer to sketches CD RFI # 076 SK1 & SK2 for items 1 & 2 noted below.				1) Provide double angle connection per 1/S1-5010 at the two W30x108 beams that frame into the Moment Frame beam at GL 20.1. For the four shear plate connections at the W30x108 and W40x149 beams on GL 21, provide connections per 1/S1-5011. There are no other locations where a shear plate connection per 1/S1-5011 is specified and where support beam flange width is greater than 22".			
1) The noted "MF" beam is a BU-44x24x1.25x2.75. Detail 1/S1-5011 does not apply as "bf" exceeds 22". Please supply a typical connection for a round circle on plans when the "bf" exceeds 22 (work with item 2 on SK2)				2) See response to 1.			
2) Please note that if a full depth shear plate is used it will foul the beam extension plate per 6/S1-5015. Please clarify.

T-0828	SSS - Locations for Scratch Plate for BRBs	Closed	10/14/2013	10/14/2013	10/17/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Compan Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Please reference the sketch attached and verify the proposed scratch plate end locations and surface locations are acceptable.					Accept Suggestion: <input type="checkbox"/>		
					The locations of the BRB scratch plates are acceptable with following modification: Move the scratch plate from the BRB in Detail H/S1-4150 to one of the BRBs in Detail F/S1-4150. Mount scratch plate near the top of the brace, on near side.		
T-0829	BSE - Voids Across Top of CDSM Wall on the West side of Zone 1	Closed	10/15/2013	10/25/2013	10/21/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Compan Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Photos: attached					Accept Suggestion: <input type="checkbox"/>		
There are a number of voids that run across the top of the CDSM wall on the West side of zone 1 (see attached photos). During prior conversations between W/O and Arup there has been discussion of filling these voids with material. Please provide the material and application desired by the design team to fill these voids.					The voids do not need to be filled at this time.		
T-0830	SSS - Type T, TT, and TTT Base Plate Anchor Rod Location Confirmation	Closed	10/15/2013	10/25/2013	10/21/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Compan Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Detail 7 on S1-5051 provides locations where type TT and type TTT base plate anchor rods will be installed. There are other details throughout the plans that contradict the columns base plate anchor rod locations provided in 7/S1-5051. For example: 7/S1-5051 shows a column at gridline 10.1/G.3 as having a type TTT base plate anchor rod detail; however, 1/S1-3610 shows the column at 10.1 and G.3 as having a type T base plate anchor rod detail.					Accept Suggestion: <input type="checkbox"/>		
Please confirm that detail 7/S1-5051 provides the correct base plate anchor rod detail for each of the columns.					1) Confirmed that 7/S1-5051 provide correct anchor rods information.		
Please provide a type T base plate anchor rod detail.					2) Type T anchor rod details are provided in Detail 3 & 5/S1-5051 (see the note stating "TYPE T thread bar anchor shown, for Type TTT threadbar anchor see 4/S1-5051, for TYPE II threadbar anchor see 6/S1-5051).

T-0836	BGP - Sump Pit Rebar Tail and Trestle Pile @ GL 18.5/E - Area 9	Closed	10/17/2013	10/27/2013	10/23/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Compan Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: RFI T-0644 Three of the sump pit lower mat #11 tails near grid line 18.5/E are in conflict wit the nearby trestle pile. The bars have been trimmed to clear the trestle pile and provide an LTE of 34" instead of 60" as required per plans. Typically, a bent bar would be spliced to the interrupted bar as required in SKS-0281 in the response to RFI T-066; however, the trimmed bars have a 70" length which would not beet the 78" LTS requirement. Gerdau propose to leave the 3 ea trimmed bars as-is and not incorporate an additional spliced bent bar. Please confirm if this is acceptable.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 10/22/2013 RESPONSE: Provide spliced bent bar as indicated in RFI T-0664 and that RFI's accompanying Sketch SKS0281. Lap length may be reduced to 69". The total length of bent bar extending beyond the intersection with the bottom mat reinforcing shall be 60". The bent bar may be rotated so that the tail clears the layer of mat top reinforcing.

REQUEST:		SUGGESTION:	ANSWER:	Accept Suggestion:	<input type="checkbox"/>		
As per the Contract Drawings and Specifications all high strength bolts shall be A325, A490 & A354 BD. All TC bolts shall additionally conform to ASTM F1852 & F2280.			We assume the term "Standard AXXX" used in this RFI refers to high-strength bolts with Hex Heads that will be pre-tensioned using acceptable methods per Specification Section 05 10 00 - 3.2.K (other than TC). If this is not the case, please resubmit the RFI with additional clarification. Responses to individual items in RFI as follows:				
1. We propose to use TC bolts for all connections (shop & field) 1-1/8" diameter or less (unless galvanized). All galvanized bolts to be standard A325.							
2. All bolts 1-1/4" to 1-1/2" diameter to be standard A490.							
3. All bolts larger than 1-1/2" diameter to be standard A354 BD							
			1.) As indicated in Specification Section 05 10 00 - 3.2.K.1, it is acceptable to use TC bolts. Bolt specification shall be as indicated in the construction drawings. Standard A325 is acceptable for galvanized

T-0845	SSS - Welding Type 61 Roof Nodes to Roof Beams	Closed	10/21/2013	10/31/2013	11/05/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Compan Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Drawings: S1-4205, S1-5132, S-0007					Accept Suggestion: <input type="checkbox"/>		
Reference is made to sheet S1-5132, Detail 1, Side View D which specifies a bevel of 1" x 45 degrees for the weld joint for Type 61 roof nodes to the roof beam.					Effective weld size required for this joint is 1". According to the welding procedure indicated in this RFI, corresponding bevel size at this joint would also be 1".		
Sheet S-0007, General Note SC-4 states that weld sizes shown are considered effective weld sizes. Prequalified weld joint BTC-P4-GF (attached for reference) states that the effective weld size shall equal the bevel size for flat and horizontal weld positions.							
These welds are intended to be performed in the horizontal or flat position. Based on the information provided above, please provide the required effective weld size at the area in question and confirm the bevel size is to match the specified weld size.							
T-0846	SSS - Grade 60 A615 Threaded Anchor Rod	Closed	10/21/2013	10/31/2013	10/23/2013	Potentially	<input type="checkbox"/>

	<p>SCCI is requesting to re-route all 2" dewatering well lines as proposed in the attached drawings and depicted in the attached photo. The SCCI proposed re-route is to eliminate any potential conflicts with future work (bracing removal, wall waterproofing, rebar, and form/pour/strip). Upon completion of the use of the dewatering system, the line will be cut below the sleeve, capped and grouted in with the trestle block-out pour back. The line will be poured in place with the future mat and concourse slabs and all 3 wall lifts. The line will also be capped at the top of the final wall lift.</p> <p>Please confirm the proposed dewatering well re-route as shown in the attached file is acceptable.</p>						<p>Routing the temporary dewatering system within the permanent foundation wall will not be permitted.</p>
T-0849	BGP - Mat Slab Layer 3 Lap Splice Relocation in Area 11 thru 16	Closed	10/21/2013	10/31/2013	10/23/2013	Potentially	<input type="checkbox"/>

REQUEST: Please refer to drawing S1-2052.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Due to limited access between the waterproofing and access trestle, Gerdau proposes to shorten the mat slab typical layer three (North-South) 67'-0" bars at Areas 11 through 16. This requires the lap splice location to be moved from the center of column line, as specified on Note 1 of the Mat Top Bar Notes in S1-2052, to the location shown in the attached Gerdau sketch SK-99.					George Metzger 10/22/2013 RESPONSE: It is acceptable to move the reinforcing splice from the center of the column line as indicated in the RFI.		
Please confirm the revised lap splice detail shown in Gerdau sketch SK-99 is acceptable.

	<p>representatives, WOJV is asking for all future mat slab pours that one of the two concrete test cylinders allotted for the 28 day compressive strength test could be tested at 14 days instead, This information will be used to assess the concrete strength for the level D bracing removal.</p> <p>Please confirm if this would be acceptable.</p>		10/24/2013 RESPONSE: At 14 days it is acceptable to test (1) of the (2) concrete test cylinders allotted for 28 day compressive strength testing by the Specifications.				
				All future mat slab pours will have a sample set for testing consisting of (1) cylinder for 7, 14, and 28 days followed by (3) cylinders for 56 days. (1) additional cylinder per set shall be retained in reserve for later testing if required. The total number of cylinders taken per sample set shall remain at (7).			
T-0852	SSS - Weld Returns at EBF Link Beams	Closed	10/24/2013	11/03/2013	10/25/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Compan Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>			
Detail 3 on sheet S1-4205 indicates the weld requirements from the underside of the EBF link beam (28" W) to the roof node (24" W). Detail 3 requires a 3 ½" reinforcing weld to be returned (boxing) 6" at each interior corner of the welded roof node. The distance from the roof node to the edge of the girder flange is only 2" on each side based on the dimensions noted above (reference drawings attached).			It is acceptable to use 1-1/2 inch reinforcing fillets at the 6 inch returns provided that welding pass is continuous from the 3-1/2 inch thick region into the 6 inch returns.				
Please confirm it is acceptable for the returns running longitudinal to the direction of the EBF Beam to be made as 1 ½" reinforcing fillets, while the weld running transverse to the girder flange remain at 3 ½" as specified. Reference the attached detail showing this condition.

<div>In order to facilitate self-supporting erection of the transfer girders during temporary conditions prior to the completion of the field welded splice joints, please confirm it is acceptable to utilize a temporary connection plate that will bolt the two transfer girders together while the weld takes place, as shown on the attached sketches GS-1.0 and GS-2.0. The temporary connection plate will be removed and open holes will be permanently filled with A325 bolts.</div> <div>Acceptable for the bolt diameter (1-1/8") and spacing (6") shown in sketches GS-1.0 and GS-2.0.</div>							
T-0854	SSS - Type 4 Drag Connection (Y)	Closed	10/25/2013	11/04/2013	10/29/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Compan Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
For Type 4 Drag connection (Y) per detail 1/S1-5019 please refer to sketches CD RFI # 082 SK1 to SK3 for items 1 & 2 noted below. Note sample location is on S1-2402 near grids 2/C.3 shown on SK2.				1a) At Ground Level: Provide b = 18" per schedule in 1/S1-5019 for all Type 4-(Y) drag connections.			
1) See SK2 & SK3 and confirm this 18" applies at all locations noted as "Y" on plans as this will place the bolts exceedingly outside the supporting beam profile.				2b) At Second Level: There are 14 locations between GL 2 and GL 3 where Type 4-(Y) drag connections per Detail 1/S1-5019 are to be provided. At 8 of these 14 locations the supporting girder is a W30x99. At these 8 locations, provide b such that the beam end is 1" outside of the W30x99 flange as indicated in SK3 of the RFI. Provide b = 2" at the remaining 6 locations.			
2) Please clarify which plan drawings this note applies to.				2) Note applies to Ground Level plans.			
T-0855	SSS - Double Angled Connection	Closed	10/25/2013	11/04/2013	10/29/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Compan Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
For the double angle connection at the Transfer girders per detail 12/S1-5010 please refer to sketch CD RFI 085 SK1 for the following question.				Confirmed. It is acceptable to use 1) 1" gap between the face of the girder web and end of the beam and 2) 2" distance between the bolt centerline and the beam end as shown in SK1.			
Based on the 3" bolt location from the face of girder web, confirm it is acceptable to use a 1" gap between the girder

	as shown when the connection angles encroach into the beam "k" area beyond A.I.S.C. allowable limits.			required with the reduction in number of bolts per (see 1a). b) W24x68, W27x84, W30x90, W33x118, W36x135, W40x297: The encroachment of the angle into the "k" region is less than the maximum allowed per AISC 360-05, Figure 10-3. Cutting the bottom flange flush as shown in the RFI is not required and not acceptable. c) W40x149, W40x183, W40x199: Acceptable.			
				For connections to TPG3: 1) a) W14x22: Provide one less bolt than that required by 1/S1-5010. All other connection parameters including edge distance on the connection angles shall be per 1/S1-5010. b) W24x68: Acceptable. c) W27x84: There is no W27x84 framing into a TPG3. d) W40x392: The connection is per detail 8/S1-5032 as noted on Sheet S1-2604 near GL 14/D. In addition, gravity moment connection is shown at the ends of these beams where they connect TPG3. Therefore, flanges of the W40X392s are to be welded to TPG3 per detail 4D/S1-5010. 2) a) W14x22: Cutting the beam bottom flange is not required with the reduction in number of bolts (see 1a). b) W24x68: The encroachment of the angle into the "k" region is less than the maximum allowed per AISC 360-05, Figure 10-3. Cutting the bottom flange flush as shown in the RFI is not required and not acceptable. c) W27x84: See 1c. d) W40x392: See 1d.

---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

Reference sheet S1-2606 for the BU beam to column connection at grids 31/D.4 and 31/E.6. Please confirm it is acceptable to reduce the "Lev" dimension indicated on 3/S1-5011 from 5" to 2 ¾" in order to clear the BU flange to web weld as indicated in CD RFI 092 SK1 & SK2.

If this is not acceptable, please provide an alternate detail for this condition.

Accept Suggestion: ☐

Provide 10 bolt rows ("M" = 10) and vertical bolt edge distance, Lev = 4" for connections at all BU56 beams where 3/S1-5011 is applicable.

T-0865	SSS - Clarifications for Kicker Brace at Ground Level	Closed	10/28/2013	11/07/2013	11/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Compan	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author:

REQUEST:

Please refer to detail 6/S1-5022 and verify the kicker brace requirements at ground level as noted on CD RFI 093 SK1 to SK3 and in the items below:

- 1) Confirm the alternate bracing connection proposed in CD RFI 093 SK1 is acceptable.
- 2) Supply the weld size and length for brace angles to ½ inch plate.
- 3) Confirm the work point location indicated is acceptable (intended to match S1-5015 details).
- 4) Confirm the reference to S1-2304 should be added to the referenced detail and the reference to S1-2307 should be deleted.
- 5) Confirm detail 6/S1-5022 applies only to grid lines 16.9, 19.1, 24.9 & 27.1 on the Ground Level as referenced on plans.
- 6) Confirm detail 6/S1-5022 is typical for all braces along grid line 16.9, similar to grid line 19.1.
- 7) Confirm detail 6/S1-5022 is typical for all braces along grid line 27.1, similar to grid line 19.1.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Locate the top gusset plate such that the centerline of kicker angle divides the gusset plate into a 1:3 ratio (3":9") at the top of the plate.

2) Provide a weld size of 5/16" with a minimum length of 4" on each side of the kicker angles.

3) Confirmed.

4) Correct references are S1-2304 and S1-2306 (updated in ASI 106 drawings).

5) Detail 6/S1-5022 is applicable at Gridlines 16.9 and 27.1 at Ground Level. Detail 9/S1-5022 is applicable at Gridlines 19.1 and 24.9.

6) Refer to SKS-0297 (attached) that shows applicable bracing type along GL 16.9 transfer girder. As indicated in the sketch, the bracing along GL16.9 is either transfer girder brace per 5/S1-5015 or kicker brace per 6/S1-5022. Same sketch can be used to identify the bracing type along 19.1 transfer girder by replacing 6/S1-5022 with 9/S1-5022.

7) Refer to SKS-0298 (attached) that shows applicable bracing type along GL 24.9 and GL 27.1 transfer girders. As indicated in the sketch, the bracing along GL 27.1 is either transfer girder brace per 5/S1-5015

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Refer to details 7 & 8/S1-5010 regarding bending radius requirements for skewed beam connections. The radius indicated in CD RFI 095 SK2 is per A.I.S.C. (2.5t for A572 GR50 material). Please confirm it is acceptable to proceed per this criteria.				The minimum inside bending radius for a A572 GR 50 plate up to t = 1" is 1.5t per AISC 360-10 Table 10-13, if the bend line is perpendicular to final direction of rolling. These values need to be increased 50% if the bend lines are parallel to the final direction of rolling. 2.5t inside bending radius proposed by the contractor is acceptable for the condition presented in SK2, where t = 1/2". In general, it is acceptable to proceed with the minimum bending radii specified in AISC 360-10 Table 10-13.			
T-0867	SSS - W24 Skewed Beam Connections at Grid 6.C.3	Closed	10/28/2013	11/07/2013	11/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Compan Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Refer to drawing S1-2303 (CD RFI 096 SK1) indicating the portion of the W24x68 running between GL C.3 and GL 6. CD RFI 096 SK2 shows the tight design requirements for this beam run connecting to TR6. Please advise if this portion of the W24x68 beam can be eliminated due to the tight design requirements. If eliminating this portion of the beam is not acceptable, please provide an alternate connection detail to TR6, as detail 8/S1-5010 will not work at this location.				The portion of the W24x68 beam indicated in the RFI can be eliminated.

This is a follow-up RFI to RFI T-0868.1 (SK 135.1, CD 097.1) See attached CD RFI # 097.2 SK1 to SK3 for items 1 to 3:			1) Confirmed.				
1) The section looking west on SK1 as modeled on SK2 is not what is shown in detail 4/A1-7550 (SK3) as referenced in T-0868.1 #4 response. Confirm the structural drawing SK1 & SK2 as shown are correct.			2) Confirmed.				
2) As per Thornton Tomassetti's revised email response to RFI T-0868.1 (see SK4), the bent plate should be added at knock-out slab edge as shown on 4/A1-7550 (SK3). Please confirm.			3) Provide bent plate per typical edge of slab detail 8/S1-5000.				
3) On 4/A1-7550 (SK3) there is gauge or bent plate shown at the pit slab edge. Please verify if bent plate should be provided or will this be gauge plate?

REQUEST:

Please refer to similar RFI T-0838 and T-0838.1.

The structural drawings for the lower concourse (SI-2202 through SI-2207, framing plans) do not include dimensions for the slab openings. Scaled dimensions from these drawings conflict with many of the dimensions provided on the architectural slab edge plans (AI-2842 through AI-2847).

Please see attached for observed conflicts (highlighted). Please confirm that the dimensions shown on the architectural plans at the slab openings are correct.

SUGGESTION:**ANSWER:****Accept Suggestion:** ☐

George Metzger
11/18/2013

RESPONSE:

The attached SKAs are provided to clarify and confirm current slab openings as well as setting out of couplers at the Lower Concourse Level.

1. For setting out of slab openings at the Lower Concourse Level, refer to the Lower Concourse Level Slab Edge Plans (SKA-2916 to SKA-2923).

2. For Setting out of PH1 walls at the Lower Concourse Level, refer to the Lower Concourse Level Zone Plans (SKA-2900 to SKA-2907) and Enlarged Plans (SKA-2924 to SKA-2945).

3. For setting out of couplers for PH2 walls, refer to the Lower Concourse Level Wall Plans (SKA-2908 to SKA-2915).

Note: The "Wall Plans" show wall starter couplers installed in the Below Grade Package, however the "Wall Plans" provide coupler setting out dimension for Phase 2 walls only. For coupler setting out for walls and curbs constructed in Phase 1, refer to the wall types and dimensions shown on the Lower Concourse Level Zone Plans.

REQUEST:			SUGGESTION:		ANSWER:		
SCCI is in receipt of RFI response T-0879. TT's response does not fully address the conflict brought up in the original RFI. TG06.0 contract drawings do not show a curb at the edge of the elevator openings at the lower concourse level.					Accept Suggestion: <input type="checkbox"/>		
Please address and provide details regarding the embed in question in RFI T-0879.					George Metzger 12/6/2013 RESPONSE: As indicated in the response to RFI T-0879, the end of the beam and the embed will be cast into the wall curb. The sketches provided with the response to RFI T-0879.1 illustrate the relationship of the beam and the future wall curb. The concrete curb on the elevator shaft walls in Phase 1 will be extended under the future W-5 cladding and its supporting walls in Phase 2. The HSS rail support embed is within the concrete curb zone for both phases.		
					Refer to the following attached SKAs:		
					1. SKA-2958 to SKA-2962 - Lower Concourse Zone Plans showing locations of the Service and Passenger Elevators.		
					2. SKA-2963 to SKA-2967 - Enlarged Plans of Service and Passenger Elevators showing Partition Types with Concrete Curbs.		
					3. SKA-2968 - Section Detail at Service Elevator Shaft at Pit showing HSS elevator rail support beam.		
					4. SKA-2969 - Concrete Curb Schedule.

REQUEST:

Please refer to drawing S1-3304 to S1-3306.

Please confirm if it is acceptable to replace the typical T9 column ties (90° or 135° bend on either end) with T12 ties (135° bends on both ends). See the attached SCCI sketch SK-101 for further details.

SUGGESTION:**ANSWER:****Accept Suggestion:** ☐

George Metzger
11/12/2013

RESPONSE:

It is acceptable to replace T9 column ties with T12 for Column Types C1 and C2. Note that the location of the second cross-tie from each end is not shown correctly in SK-101. In SK-101, these two cross-ties shall be flipped to clear the shear plates for the steel column base plate at Lower Concourse Level. Refer to Sheet S1-3304 of the construction drawings where the column reinforcement details Type A1 (for Column C1) and Type A2 (for Column C2) are shown. Refer to Sheet S1-5051 of the construction drawings for information on steel column base plate details.

T-0883**SSS - Brace Beam Connection Details****Closed****From:** Webcor Construction LP

Robert Kjome

To: Turner Construction Company Gary Krutsch**11/05/2013****11/15/2013****11/18/2013****Potentially** ☐**Answered By:** Adamson Associates, Inc. George Metzger**Co-Author:****REQUEST:**

Please review sketch CD RFI 059 SK1 and details 1/S1-5016 and 1/S1-5018 for type 1 - drag connection details on brace beams at the Bus Deck Level framing plan.

1). Please verify the bottom flange of brace beams noted in detail 1/S1-5016 can be cut flush to the beam web on both sides of web allowing beam to be erected between the shop welded connection plates on the cast node.

2). Verify the diagonal bracing beam web connection plate noted in detail 1/S1-5018 can be shifted to the acute angle side of the connection as indicated in the attached sketch and bottom flange cut flush to the web to allow beam to be dropped into location in the field.

3). Please provide welding details for the relocated web connection plate to the supporting grid beam as connection plates will overlap at these locations.

4). Please verify if additional bolts are required connecting the flange plate where the dimension to the plate edge and

SUGGESTION:**ANSWER:****Accept Suggestion:** ☐**RESPONSE:**

1) Acceptable. See response to RFI T-0869 for the extents of the bottom flange cope.

2) Moving the web connection plate on the other side of the beam is acceptable however, the shear plate shall still be welded to the north-south girder not the east-west running beams as shown in SK1 of this RFI. With this modification, the diagonal beam centerline will not coincide with the connection work point. This eccentricity shall be minimized as permitted by the connection geometry and shall not exceed 1". The question regarding flange coping is not clear, please provide a sketch that shows the intended coping. Note that there are bolted flange plates top and bottom.

3) Use of PJP welding (full web thickness) is acceptable where the shear plates are welded to the girder web. See also response to 2nd question.

4) Additional bolts are not required.

SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed the bottom flange cut flush to the beam web is acceptable.		

T-0884	BGP - Column Dowels at GL 5/H	Closed	11/06/2013	11/06/2013	11/13/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Jackson Tukuafu	To: Turner Construction Compan		Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger	
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER:			Accept Suggestion: <input type="checkbox"/>
Please refer to attached drawing S1-2022 and SCCI sketch SK-102.				George Metzger 11/12/2013			
The dowels for the column near gridlines 5/H were not installed to the required D4-1 configuration and has been casted in concrete. 4EA perimeter vertical bars were omitted from the column but the spacing/grid was maintained per the D4-1 layout. In addition, 16EA dowels were installed at the interior of the column as depicted in SK-102.				RESPONSE:			
Please advise on how to proceed.				At Column C3 near GL 5/H, design works despite the 4 dowels Contractor did not install (shown as "X" in the RFI). Therefore, it is acceptable to construct the column without these 4 bars. The extra dowels inadvertently installed by Contractor at the column interior (bars not in Construction drawings) are not needed and shall be abandoned.

	<p>2) Confirm the increased thickness and placement of the continuity plate are acceptable to allow for beam over roll. [Reference CD RFI 080 SK1]</p> <p>3) Please confirm the continuity plate dimensions noted on CD RFI 080 SK2 are acceptable. Note that the "a" dimension shown is defined as ½(bf-tw).</p> <p>4) Please confirm the dimensions and weld prep indicated for the Type 4 Drag connection are acceptable. [Reference CD RFI 080 SK3]</p>				<p>continuity plate thickness match the thickness of the moment frame beam flanges as shown in relevant details in Sheet S1-4201 and S1-4203. However, at joints GL 32.4/D.4 and GL 32.4/E.6 at Second Level where Detail 5/S1-5012 is called out, continuity plates at the beam bottom flange (bottom continuity plate) shall be 2 1/2" thick. In addition, at GL 32.4/D.4 locate the bottom continuity plate such that top of the continuity plate is aligned to top of the bottom flange of the BU40 Moment Frame Beam. At GL 32.4/E.6 locate the continuity plate such that bottom of the continuity plate is aligned with bottom of the bottom flange of the BU 40 moment frame beam. The reason this is needed is that although the moment frame beam is 40" deep in both cases, the perpendicular beam sizes are different at GL32.4/D.4 (W40x294, d = 40 3/8") and GL32.4/E.6 (W40X199, d = 38 5/8") therefore continuity plates need to be thick enough to pick up both the moment frame beam and the perpendicular beam bottom flanges.</p> <p>3) Confirmed.</p> <p>4) Confirmed.</p>		
<hr/>							
T-0887.1	SSS - Moment Beam to Column Web Connection Clarifications	Closed	12/11/2013	12/21/2013	12/16/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Compan Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
After reviewing the response to item 2 on SK RFI 104 we believe a thickness increase should be allowed for the bottom continuity plate to allow for mill tolerance of rolled sections as per AISC Table 1-22(attached).		Confirmed that it is acceptable to increase the bottom continuity plates by 1/4"					
1) Due to mill tolerances the actual depth of a beam can over run in depth from -1/8" to +1/8" at the beam centerline.							
2) Due to mill tolerances the axis of the flanges in relation to the beam web can have an out of square effect of as much as 5/16" from toe to toe of the beam flange.

REQUEST: Please reference detail 9/S1-3701 and the noted grid lines G.9.9 and G.10.1 on S1-2303 and provide clarification on the following items. Refer to CD RFI 105 SK1 through SK3 for additional information. 1) Confirm the headed studs in the transfer girder per 11/S1-3701 may be located as shown. 2) Confirm the slope of MFB 6 is 1.097° as indicated in CD RFI 105 SK2 or advise otherwise. 3) Provide the vertical dimension indicated on CD RFI 105 SK2 to located PL 1 ½" x 14" x 2'-6" (added in ASI 106). 4) Confirm it is acceptable to locate the first row of holes 6" above the underside of the transfer girder as indicated in CD RFI 105 SK2. 5) Provide the vertical dimension required to locate the row of 3" dia. holes indicated in CD RFI 105 SK2. 6) The hole indicated fouls the stiffener as shown in CD RFI 105 SK3. Confirm the spacing may be reduced to 5" at this location to clear the stiffeners and weld for the stiffeners to the beam web. 7) The two holes indicated on CD RFI 105 SK3 are located directly adjacent to the stiffeners with no clearance. Please advise if this condition is acceptable or if the holes are to be shifted to avoid the stiffeners. 8) Provide the vertical dimension required to locate the 3" dia. holes as indicated in CD RFI 105 SK2. Please verify the other holes in this row are to be located per the angle and spacing in items 2 & 7.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
		TT's response: 1). Confirmed 2). 1.06 degree 3). Center line of the plate at EL.15.66 (for bottom bars in 48' deep beam) 4). Confirmed 5). Center line of the holes are at EL. 14.66 (for bottom bars in 60" deep beam). 6). Confirmed 7). Confirmed that the holes are to be shifted to clear the stiffeners. 8). The 2 holes in column can be shifted as noted in item 7). The holes in this row may be located per items 2 & 7 (following the slope of the concrete beam, center line of the hole at 1.75" above the bottom of the MFB6.

	<p>Please reference grid C.9.9 and C10.1 for the transfer girder to moment beam connection shown on S1-2303 and provide clarification on the following:</p> <p>1) Confirm the noted angle (1.2°) is the correct slope for MFB 1 (per Revit Model). If not, please provide the correct angle. [Reference CD RFI 110 SK1 & SK2]</p> <p>2) Confirm the depth of MFB1 is 48" at this location in accordance with 6/S1-3600. [Reference CD RFI 110 SK2]</p> <p>3) Confirm the noted elevation. [Reference CD RFI 110 SK2]</p> <p>4) Provide the width and length of vertical slots to be provided at the 18" stiffeners. [Reference CD RFI 110 SK2]</p> <p>5) Provide the vertical dimension required to locate the #10 bar shown and subsequently the 2" dia. holes through the beam web (SK3), the vertical slots through the 18" stiffeners, and the 3" diameter holes through the 2'-9" stiffeners.</p> <p>6) Confirm the bar indicated represents the beam top bar and that the dimension indicated (3 1/16") is correct. Note this dimension is based on 5/S1-3600. [Reference CD RFI 110 SK2]</p> <p>7) Confirm detail 6/S1-3705 accurately reflects the number of headed studs and spacing required. Otherwise, please provide the requested A, B, C, & D dimensions.</p> <p>8) Detail 4/S1-3705 indicates that 3-3" diameter holes are to be provided in the web stiffeners on each side while only two #10 bars with terminators are indicated to be provided. Further, the section cut 6/S1-3705 (issued with ASI 106) calls for #9 bars at this location. Please clarify the intent of this detail as it pertains to the rebar configuration and stiffener hole details.</p> <p>9) Provide the dimension required to located the first 2" dia. hole from the end of TR9.9 and TR10.1 and confirm the spacing of the remaining holes is to be 8" OC as noted on 6/S1-3705.</p> <p>10) Confirm the dimensions indicated are accurate or provide the required dimensions at this location. The dimensions shown are based on detail 5/S1-3600 and should be confirmed based on the answer provided in Item 8.</p>								
					<p>1). The slope shall be 1.30 degree at Grid 9.9 and 1.16 degree at Grid 10.1 per top of concrete slab elevations noted on the plan. Revit model (and other electronic files) shall not be used for establish dimensions.</p> <p>2). Confirmed that the MFB1 is 48" deep per beam schedule on S1-3600.</p> <p>3) Top of concrete is at 17.59 at Grid 9.9 and 17.55 at Grid 10.1</p> <p>4). The bottom of the slots are at 2" from the bottom of the concrete beam to allow the beam bottom bars to go through.</p> <p>5). The center line of the beam bottom bars shall be at 2.375" above the bottom of the concrete beam (1 1/2' cover + diameter of the ties + 1/2 of the longitudinal bar diameter).</p> <p>6). The dimension shall be 3.8125" per 5/S1-3600 (2 3/4" cover+ tie diameter+ 1/2" longitudinal bar diameter)</p> <p>7). A=15", B=5, C= 12", D= 16".</p> <p>8). Only one hole each side is needed in vertical stiffeners to allow the #10 bars to go through. See 6/S1-3705 for locations of the hole.</p> <p>9). First hole is 6" from the end of beam. The holes are at 8" on center to match with the tie spacing noted on beam schedule.</p> <p>10). The 2 9/16" dimension noted shall be changed to 3", the 1'-07/17" dimension shall be changed to 1'-0" (for a total beam width of 30" as noted in the beam schedule).</p>

REQUEST:		SUGGESTION:		ANSWER:			
Further to email from the design team (Lee Ishida of Thornton Tomasetti) dated 09/03/13) "the design team wants to pursue with option on SK-2, provided the layout of the pin-pile columns has been coordinated with the moment frame beams so that the block-outs indicated in the sketch do not interfere with the moment frame beams" this option on SK-2 will be used where the strut support beams of the trestle and the internal bracing system are in conflict with the concourse slab, on the other conflicts around the perimeter CDSM wall where the lookout supporting the walers are in conflict with the waterproofing lap length requirements, the lookouts will be relocated above the walers to achieve the necessary lap requirements.				Accept Suggestion: <input type="checkbox"/>			
Please confirm if this is acceptable.							
<hr/>							
T-0892.1	BGP Level B bracing - Concourse Slab elevation conflict gridline 1-9	Closed	11/13/2013	11/23/2013	12/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Michael Spillane	To: Turner Construction Compan	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:			
The answer to RFI T-0892 does not answer the intended question, it was not a question on waterproofing requirements, the intended question was to confirm that the design team wish to proceed with the preferred option on sketch SK-2 i.e. to moving the conflicting Level B internal bracing elements to the revised location above the struts or walers whichever is applicable, if this is an acceptable solution, WOJV will proceed and engage the contractor and the Engineer of record for the bracing system to elaborate on this design and install these fixes in the field. WOJV have already established the waterproofing lap length requirements in coming up with these fixes.				George Metzger 11/19/2013 RESPONSE: Having been provided with only schematic representations of the proposed excavation bracing relocation, SK-2 appears to be a preferred solution. Excavation shoring design is a contractor provided item and it is up to contractor to determine the particular temporary configuration that will produce the finished structure as designed. This includes due regard to number and location of block-outs which should not encroach upon the moment frame beams. To this point, we note that pin-piles 19-22 are in close proximity to gridlines (and moment frame beams). This also may be the case for pin-pile 6 and 18. Note that past discussions also included the possibility of removing pin-pile 8 prior to Lower Concourse construction. In any case, any change to the excavation bracing shall be formally submitted for			
Please confirm that this is the preferred solution.

T-0904.1	SSS - W-1 Glazing Connection Clarifications	Closed	12/12/2013	12/22/2013	12/30/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: As a follow-up to Webcor/Obayashi RFI T-0904 (SK RFI 182), please see attached CD RFI 136.1 SK1 and SK2 in reference to the following: 1) T-0904 Item 5: The response references the stiffener in detail 1A/S1-8001, while the question is regarding the 1" plate wedged between the BU-Beam web and the 2 ½" thick plate per detail 7/S1-8001. The top and bottom edges of the 1" plate are close to the bolts as shown on SK2. If this is the intent, confirm items 1a and 1b on SK2: a. Confirm the 1" edge distance is sufficient. b. Confirm it is acceptable to notch the 1" plate with partial 1 9/16 dia. holes at 4 locations to accommodate the bolts. 2) T-0904 Item 2: The response does not clarify the requested hole diameters. Please confirm the holes are 1 9/16" diameter for "CP2" connections.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) No, the 5" dimension shall be changed to 1". 2) Hole diameter shall be 2 1/16" to allow 1/2" erection tolerance. Also, refer to Detail 1/S1-6097 for the center line of the bolt group.				
T-0905	BGP - Light Column Anchor Bolts Conflict with Rebar	Closed	11/15/2013	11/25/2013	11/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please refer to attached drawing S1-3009, S1-6008. SCCI encountered potential conflict between anchor bolts of light column (layout depicted in 2/S1-6008) with light column rebar as shown in 1/S1-3009. Please find attached model depicting conflict between bundles of 2 ea rebar #11 @ 16" OC with the layout of the anchor bolt. Please advise and provide parameters with which the rebar may be moved to clear the anchor bolts.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/25/2013 RESPONSE: In order to avoid conflict with the light column anchor bars detailed on S1-6008, the bundled #11 bars depicted in Section 1/S1-3009 may have their number take precedence over spacing. Any bundle may be moved from the typical 1 ½-4 ½ module by up to 11-7/8 ½. The minimum clear spacing between any two adjacent bundles shall be 1-3/8 ½. The maximum spacing between any two adjacent bundles shall be 23-3/4 ½. The particular arrangement of bundled bars is at the contractor's option per the rules described above. One potential allowable arrangement is presented in the Sketch SKS-0299 (attached).

T-0906	BGP - Omitting the Grout Port at all Applicable Column Base Plates	Closed	11/15/2013	11/25/2013	12/12/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Compan Gary Krutsch Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please reference column base plate details on Sheet S1-5051. SCCI proposes to permanently remove the grout ports used to grout the column base plate as shown in A/S1-5051 . SCCI believes the 2" grout holes and 3" perimeter clearance is sufficient to grout voids underneath and around the base plate and shear keys. The blockouts will be grouted from the holes and/or perimeter and the hose removed as the voids are filled up. Please confirm it is acceptable to remove the grout port depicted in A/S1-5051, typical at applicable column base plates.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/19/2013 RESPONSE: Contractor proposed grout procedure is acceptable, pending on the successful grout procedure mock up.				
T-0907	BGP - Haunch Reinforcement Embedment Detail in Area 9	Closed	11/15/2013	11/25/2013	11/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Compan Gary Krutsch Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Shimmick Construction Company, Inc. Scott Bunnell							
REQUEST: Please refer to drawing S1-3201 and attached SCCI sketch SK-RFI-383. The haunch bars in Area 9 were fabricated to a shorter length than required. Per discussions with TT Engineer in the field, Gerdau proposes to raise the lowest point of the haunch bar 6" from the designed location. As a result, the haunch would have a 64" embedment into the mat slab and 29" minimum embedment into the foundation wall. Refer to attached sketch for further details. Please confirm the revised haunch reinforcement detail in Area 9 as depicted in the attached sketch is acceptable .		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/18/2013 RESPONSE: The reduction in length is acceptable for use in Area 9 with the following conditions: 1. The top of bar embedment into the wall shall comply with RFI T-0702 and T-0716. 2. The bottom of the bar shall be chaired as required above the lower mat. 3. Embedment into the mat shall conform to RFI T-0710 and T-0762.				
T-0908	BGP - Column Base Plate Shear Key Block-out Dimension	Closed	11/15/2013	11/25/2013	11/20/2013	Potentially	<input type="checkbox"/>

	<p>Please refe to attached detail A on sheet S1-5051.</p> <p>Please confirm it is acceptable to reduce the overall 14" shear key block-out dimension to 10"; therfore, allowing for 2-inches of clearance all around the shear key as discused and coordinated during the 11/12/2013 mock-up review. See attached detail A/S1-5051 for mark-ups.</p> <p>Please note the revised column base plate block-out is typical for Type I and II.</p>		George Metzger 11/18/2013 RESPONSE: Acceptable				
T-0908.1	BGP - Concrete Beam Top Bar Spacing and Layering	Closed	11/22/2013	12/02/2013	12/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Compan Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please refer to drawing S1-3400 and RFI T-0908. In order to clear the 10" shear key block-out as approved in RFI T-908, please confirm it is acceptable to place the additional short bars in a typical concrete beam in a second layer. Also, please confirm it is acceptable to increase the space between the top and short bars near the center of the beam to 10". Please reference the attached photo for more details.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 12/3/2013 RESPONSE: - This response addresses Lower Concourse Level concrete beams framed to concrete columns with steel columns above only. Reinforcement information for these beams is provided in Sheet S1-3400. - Where the beam has more than 6 top bars over the column, place the top bars in 2 layers. A minimum of 6 bars (long bars placed first) shall be placed in the top layer and the remaining bars shall be placed in the 2nd layer. When the concrete beam and the steel column centerlines coincide or slightly offset from each other, It is acceptable to increase the space between concrete beam top bars to 10" to clear the shear key block out. - For beams B30, B66, B71 and B76 provide 6-#11 Right End Top LONG Bars and 6-#11 Right End Top SHORT Bars. Place short bars in second layer, with a clear distance of 1" or db, whichever is greater. - All other conditions shall be reviewed separately.

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference Specification Section 07 09 16 - 2.6.A.1.

The aforementioned section states, "Provide joint assemblies in single lengths between changes in direction with vulcanized, mitered comers where joint changes directions or abuts other materials."

1. Please confirm that this is in reference to the Omega Seal gasket, and not the clamping system and embedded steel.
2. Please confirm that it is acceptable to use clamping components with 4'-0" maximum lengths with butt joints not to exceed 1/8".
3. Please confirm that it is acceptable to use 14' max lengths on steel embed with butt joints not to exceed 1/8".

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

George Metzger
11/25/2013
RESPONSE:

AAI Response:

1. Confirmed. The Specifications Section 07 09 16-2.6.A.1 refers to the Seal gaskets and not the clamping system and embedded steel.
2. For Clamping component lengths, contractor to coordinate with manufacturer of Double Seismic Joint Seal complete with clamping assembly.

TT Response:
3. Acceptable.

	tabs and bolts. Also, provide welding instructions (if necessary). 2. The same detail shows pipe penetrations through the seismic joint at both levels. Plumbing drawings show a 4" "SAN/ AD" running parallel to the seismic joint. Please confirm this pipe penetrates the joint. If so, provide locations off of grid and pipe sleeve dimensions. Also, provide details on how to seal this penetration (watertight). 3. Detail 4/S1-3010 shows a 3/4" dia Headed Stud at 12" oc, with 6" embed. Is this to be one row as the drawing shows? 4. Detail 4/S1-3010 also calls for 4" diameter hole at 2'-0" oc. What is the purpose of these holes? If the clamping system is continuous, then what will support the rod at the hole locations? Please clarify.						
	and ensure compliance with the specification. Contractor to coordinate components specified under this section, including Double SJ Seal c/w Clamping Assembly, SJ Cast-in Galv Steel Frame and Stud Assembly, and Waterproofing Assembly, which are closely integrated with materials and assemblies specified in other Specification sections and require close trade coordination to complete the overall Seismic Joint Assembly. 2. For Seismic Joint Drain locations, refer to SKA-2949. Pipe sleeves are not required around the pipe penetration. Drains to be provided with clamp frames / flanges for clamping the waterproofing system, creating a seal around the pipe penetration at the Seismic Joint. TT Response: 3. Confirmed. 4. The holes are to ensure that concrete fills all the way up to into the curb and allows for the use of a concrete vibrator. Refer to Double Seismic Joint Seal with Clamping Assembly Manufacturer for bolt spacing. Coordinate concrete fill holes to avoid interference with bolts of the clamping system.						

T-0914	SSS - Detail Clarifications for Edge of Slab Supports		Closed	11/18/2013	11/18/2013	Potentially	<input type="checkbox"/>
From:	Webcor Construction LP	Gregory Kemerer	To:	Turner Construction Compan	Gary Krutsch	Answered By:	Webcor Construction LP Gregory Kemerer
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please reference details 2, 3, 7, and 9 on S1-5001 and CD RFI 120 SK1-SK2 for the following items: 1) Details 2 & 7/S1-5001 appear to indicate the same condition, however the required deck angle supports are different. Detail 2 shows the configuration of 3/8" bent plates while Detail 7 shows a different configuration. of L6x4x5/16 angles. Please confirm it is acceptable to proceed with the deck supports per detail 7. 2) If detail 7/S1-5001 is acceptable, confirm the deck				1) Detail 2 shows deck support at exterior column while Detail 7 is to show the slab reinforcement. However, for deck support, either the deck support shown on detail 7 can be used to replace the 3/8" angle shown on Detail 2 at contractor's discretion. 2) Confirmed 3) Horizontal leg to have a dimension so that the edge angle will have 1 1/2" bearing similar to detail 8/S1-5000. Vertical leg shall be not less than 4".

	connection per S1-5010 will not work as the bolts will foul the beam web on the opposite side. We propose to relocate the beam per the proposed dimensions shown or connect these beams with shear plates per S1-5011. Please review and advise how to proceed.						6" from GL F and is aligned with the W21x50 on the west side of GL 9. Similarly, the W24x68 and W24x55 beams on the two sides of GL 9 between GL D.4 and D are aligned.
T-0919	SSS - Beam Bottom Flange Bracing Connection	Closed	11/18/2013	11/28/2013	12/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Compan Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Refer to the beam bottom flange bracing connection detailed on 8/S1-5015 and CD RFI 127 SK1 & SK2 for the following items: 1) In order to support erection requirements, please confirm it is acceptable to: a. Typically locate the bolts shown 3" from the underside of the top flange and 3" from the face of the beam web as indicated in CD RFI 127 SK2. b. Typically locate the bolt 3" from the top of the flange indicated. c. Typically locate the bolt outside the beam profile as shown to make the brace erectable. 2) Confirm the stitch plates should be ½" thick to match the ½" thick gusset plates at each end. 3) Please confirm that it is acceptable to provide slotted holes in the brace at the end connections.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) It is acceptable to typically locate bolts as shown in SK2. However, the slope of the kicker angle shall be such that the centerline of the angle should pass through the centerlines of the beam web and flange similar to that shown in 7/S1-5015 at both top and bottom ends. 2) Confirmed. 3) Slotted holes are not acceptable. Bottom flange bracing detail 8/S1-5015 applies only at beams with the "dashed arrow" symbol (See Note 1 on 8/S1-5015). Bottom flange bracing of 2nd floor and bus deck level spandrel beams is to be provided per S1-8020 as noted on typical sheet notes on S1-2402 and S1-2502 (See Note 3).			
T-0919.1	SSS - Detail Clarification at Angle Brace	Closed	12/31/2013	01/10/2014	01/13/2014	Potentially	<input type="checkbox"/>

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	1) Confirm it is acceptable to locate the brace at the bevel shown to fit the steel framing in lieu of the 2:1 bevel per 5/S1-5015. 2) Confirm it is acceptable to locate the brace at the bevel shown to fit the steel framing in lieu of the 2:1 bevel per 5/S1-5015. 3) Confirm it is acceptable to increase the thickness of the full depth shear plate to 1" per 5/S1-5015 and connect the kicker brace to the full depth shear plate as shown. 4) Confirm that it is acceptable to typically apply item 3 at other similar conditions.				3) Acceptable. 4) Acceptable. One general comment that is applicable to all sketches include in this RFI is that where shallower beams are supported by deeper girders. Coping the bottom flange of the shallow beam is not allowed per details 1/S1-5010 and 1/S1-5011.		
T-0920.1	SSS - Kicker Connection Clarifications From: Webcor Construction LP Gregory Kemerer Co-Author: Skanska USA Civil West California Dis Ryan Clayton REQUEST: Per the response to Webcor RFI T-0920 (SK RFI # 172) it was confirmed acceptable to increase the full depth shear plate from 3/8" to 1". Upon further review of this location there would be an issue where a 1" thick shear plate would foul the bolts connecting the top flange of the Transfer Girder to the Cruciform column base plate. 1). Please confirm it is acceptable to center the 3/8" shear between the bolts and move the beam 5/8" south from its original location. 2). Please confirm the 1" gusset plate welded to the bottom flange of the beam can be moved off the center line of the beam to line up with the 3/8" full depth shear plate. The gusset would move 7/16" from the centerline at this location. 3). If it is acceptable to line up the gusset with the full depth shear plate, there will be a 5/8" discrepancy between the two plates. Please confirm if stitch plates with varying thicknesses can be used to make up the difference. 4). Confirm that it is acceptable to typically apply the above items at other similar conditions. Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Per details 8 & 10/S1-5001, refer to sketches CD RFI 121 SK1 for items 1 & 2:

- 1) Confirm the noted area indicates that the concrete slab is not required and the edge plates may be terminated as shown.
- 2) Confirm the noted area indicates that the concrete slab is not required and the edge plates may be terminated as shown.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

The noted area does require concrete slab. Note that this detail is for the slab reinforcement at an edge column condition and the detail note references to ¿see typical slab edge details for additional information¿. Refer to detail 2/S1-5001 for additional info regarding edge of deck at exterior columns.

The noted corner area does require concrete slab. Note that this detail is for slab reinforcement at a corner column condition and the detail note references to ¿see typical slab edge details for additional information¿. Refer to detail 3/S1-5001 for additional info regarding edge of deck at exterior corner columns.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to CK RFI 125 SK1, SK2A, SK2B, SK3, and SK4 requesting clarification at the Bus Deck level on the following:

- 1) Confirm the noted connection should be a moment connection.
- 2) At the noted location, two supports for CP5 connections are required adjacent to Grid 9. Based on the CP5 detail requirements, a 1 ¼" horizontal stiffener should span from shear plate to shear plate per 1B/S1-8003; however, because these two connection points span the same beam, the horizontal stiffener would foul the incoming beam to shear plate connection, as there is a horizontal stiffener welded on both sides of the shear plate. Please provide a solution for this condition.
- 3) Confirm the vertical spacing of the 1 ¼" horizontal stiffeners is acceptable to accommodate the connection bolts on the incoming beams.
- 4) In the beam connection shown in detail 1/S1-8003, the required shear plate will foul the 2" web reinforcement plate required per 1/S1-5017. Please confirm the shear plate is to be welded to the 2" web reinforcement plate with a ½" double fillet weld per 1/S1-8003 or provide an alternate connection detail.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

1. Yes, the connections shall be a moment connection as shown on Detail 1/S1-8003 and as denoted on the plans.
2. The horizontal plates shown on 1B/S1-8003 are eliminated (see ASI 109).
3. See response to item 2)
4. Is this question related to the vertical shear plate? If so, Confirmed that the shear plate may be welded to the 2" web reinforcement plate with 1/2" double fillet weld as shown.
5. 3/4" partial pen weld at the bottom flange called out may be replaced by a partial penetration weld with an 3/4" fillet weld overlay built-up.
6. Confirmed.
7. Confirmed.
8. Confirmed.
9. See ASI 109 for bolt hole dimensions.
10. Use 2 1/16" holes for 1 ½" bolts to allow for ½" field tolerance.

Combined with RFI T-0922.1

T-0923	SSS - W-1 Glazing System CP6 Connections	Closed	11/19/2013	11/29/2013	12/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Gregory Kemerer	To: Turner Construction Compan	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							

REQUEST:

Refer to CD RFI 128 SK1 through SK4 in response to the following regarding the W-1 glazing system connection "CP6" at the bus deck level:

1) The indicated CP6 connections foul the beam connections as indicated in SK3A and SK3B. Please provide a solution to this condition.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

1. The double stiffeners (1" thick) shown on 4/S1-8003 will be revised to single 1 1/2" thick stiffener (centered to the W1 support). If the connection for the beam supporting crash rail posts fouls the stiffener and kicker for W1 support, adjust the beam supporting the crash rail post slightly (less than 3") so it is in line with

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please refer to drawing S1-3300 and attached SCCI sketch SK-RFI390 SCCI has located a potential conflicts with the column rebar and the column anchor bolts as depicted in the attached sketch. Please advise.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/27/2013 RESPONSE: The conflicts between the column ties and anchor bolts indicated in the RFI can be resolved with modifications to column ties as outlined in Sketch SKS-0300.				
T-0927	BGP - Injection Hose Testing Criteria	Closed	11/21/2013	12/01/2013	12/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Webcor Construction LP Jackson Tukuafu			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Scott Bunnell							
REQUEST: Please reference attached Grace/DeNeefTechnuical Letter, Submittal TG0600-0025, and Spec Section 03 15 00, 3.4, A. Spec Section 03 15 00, 3.4, A states, "After concrete has cured for a minimum of 30 days, test the integrity of the entire hose system by compressed air. Ensure that a positive pressure can be maintained for at least 5 minutes." Page 14 of the "Applicator Manual" included in Submittal TG0600-0025 states that "each section of INJECTO should be pressure tested with water to a minimum pressure of 1 00 psi, to insure migration of water through the entire joint. If excessive water leakage out of joint is observed, this may indicate the presence of honeycombs or voids and should be noted on job report..."		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 1/29/2013 RESPONSE: Air is specified, rather than water because the injection hose is flanked with hydrophilic water stops. If the hose leaks, it will activate the water stops and the leaks in the hose will go undetected. Contractor shall use air to test the hoses as specified.

<p>In addition, the attached Grace/DeNeef Technical Letter also notes that the INJECTO should be tested with water (not air).</p> <p>Please confirm that it is acceptable to test the integrity of the INJECTO hoses with water as required by the manufacturer.</p>							
T-0927.1	BGP - Injection Hose Testing Criteria	Closed	01/06/2014	01/16/2014	01/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Compan Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please reference attached Grace/DeneefTechnical Letter and RFI #T-0927 response. RFI T-0927 response states that "contractor shall use air to test hoses as specified," but the specifications call out several different types of injection hoses. Although, air testing may be suitable for other products specified, Grace/Deneef requires water testing for the INJECTO Tube system. The attached technical letter from Grace/Deneef states that "INJECTO is an open system, and any air pumped in will begin to flow immediately through the 35 micron filter and polypropylene mesh out into the concrete." Please review and confirm that water testing is acceptable for the Deneef INJECTO Tube system on the TTC project.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 1/17/2014 RESPONSE: H&B does not disagree with deNeef that air will flow into the concrete. We also assume that water will also flow as readily into the concrete as air. What is the water test intended to demonstrate? The requirement in the specifications was in response to a Webcor comment during the design phase on the system and specification. The reason air was specified, rather than water is that the injection hose is flanked with hydrophilic water stops. If the hose leaks, it will activate the water stops and the leaks in the hose will go undetected.

T-0935	BGP - Lower Concourse Typical Moment Frame Beam Dimensions From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Compan Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto REQUEST: Please refer to drawing S1-2204 and S1-2205. Plan sheets S1-2204 and S1-2205 show 8 Moment Frame Beams (MFB) from GL 14 to GL 20.1 designated as typical. There are no section views of these beams which show the dimensions, as the other MFB have. Please provide both the Width and Depth of the typical MFB in the lower concourse level.	Closed	11/22/2013	12/02/2013	11/25/2013	Potentially	<input type="checkbox"/>
			Answered By: Adamson Associates, Inc. George Metzger				
			ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/22/2013 RESPONSE: Typical lower concourse moment frame beam details are in Sheet 1/S1-3600. Corresponding cross-section detail is in Detail 2 of the same sheet. Beam width and depth info are provided in the cross-section detail.				
T-0936	SSS - HSS Hanger Connection Clarification From: Webcor Construction LP Gregory Kemerer To: Turner Construction Compan Gary Krutsch Co-Author: Skanska USA Civil West California Dis Ryan Clayton REQUEST: Refer to S1-2403 (CD SK1) which indicates the edge detail between grids 8 & 9.9 is to be constructed with an L5x5x3/8 angle per 9/S1-5000. Please confirm it is acceptable to extend the W24x68 beam to the edge of slab, eliminate the L5x5x3/8, and connect the HSS 5" hanger to the W24x68 similar to the detail shown on 1/S1-5020 or provide an alternate detail for this connection.	Closed	11/22/2013	12/02/2013	12/04/2013	Potentially	<input type="checkbox"/>
			Answered By: Adamson Associates, Inc. George Metzger				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Not acceptable. Provide the edge of slab support detail per 9/S1-5000 except: 1) Weld the gusset plates to the HSS column 2) Stop the 3/8" bent plate short at the HSS column face. The 3/16" field weld at the bent plate edge is not required 3) Coordinate with RFI T-0901 for information missing on 9/S1-5000 Note that the back span kicker angle is not required at posts or columns as noted on 9/S1-5000.

T-0937	SSS - SMRF Flared End Connection	Closed	11/22/2013	12/02/2013	12/02/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Compan Gary Krutsch Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Refer to the SMRF flared end connections detailed in CD RFI 144 SK1 to SK5 and clarify the following:				Confirmed that the beam flange width is as shown in elevation drawings. Flared beam flange is 6" wider (3" flare on each side) than the beam flange width shown on elevation drawings. Therefore, depending on the location, flared beam flange width is either equal to the column flange width or smaller.			
Detail 9/S1-4202 indicates that the flared beam flange is to be the same width as the column flange while detail 5/S14202 does not match this detail and indicates a narrower flared beam flange. Please confirm that the beam flange width is as noted on the elevation drawings and the flange width shall increase at the flared ends to match the column width per detail 9/S1-4202.							
T-0938	BGP - One-Way Slab Shrinkage and Temperature (S&T) Bars at Columns	Closed	11/22/2013	12/02/2013	11/25/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Webcor Construction LP Jackson Tukuafu Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please refer to drawing S1-3500				RESPONSE: RFI T-0938 BGP - One Way Slab Shrinkage and Temperature Bars			
In order to alleviate congestion in a condition where columns cross lower concourse support beams, please confirm that it is acceptable to eliminate the top and bottom shrinkage and temperature bars for the one-way slabs up to 12" from the face of support column.				George Metzger 11/25/2013 RESPONSE: Contractor's proposal to eliminate the one-way slab temperature & shrinkage bars adjacent to the moment frame beams (up to 12" from the face of the beam) is acceptable.			
T-0939	SSS - Connection Clarifications at Moment Beams	Closed	11/25/2013	12/05/2013	12/06/2013	Potentially	<input type="checkbox"/>

From: Webcor Construction LP Gregory Kemerer To: Turner Construction Compan Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: 1. Please supply the material manufacture(s) for the "SEAL RING" a catalog cut or other information. Additionally, please supply the specifications for the material, size necessary to fit specified tube and other information necessary to install the seal rings.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1. Seal ring is to stop grout from entering steel tube as well as to limit spread of corrosion protection. This requires a rubber O-ring or possibly just denso tape to seal the gap. Additionally, please add a second seal ring between the PE-Tube and the shrinkable tube, to also inhibit the spread of corrosion protection.

T-0947	SSS - Continuity Plate Foul at Column Web	Closed	11/25/2013	12/05/2013	12/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Kruttsch Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Refer to grids 11/D and 11/F on B/S1-4106 at Level 2 as indicated on CD RFI 173 SK 1 & SK2. The continuity plate required per 4/S1-5012 will foul the WT in the column web at the location indicated on CD RFI 173 SK2. Please confirm it is acceptable to supply (2) continuity plates, one on each side of the stem of the WT, or provide an alternate detail for this condition.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> At the two locations indicated in the RFI (GL 11/D and 11/F), it is acceptable to provide a single continuity plate placed between the WT and beam bottom flange. Plate to be provided near side and far side (both sides of the column web) and detailed per 5/S1-4202.			
T-0948	SSS - Connection Clarifications at Beams to Transfer Girder	Closed	11/25/2013	12/05/2013	12/06/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Kruttsch Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: On S1-2303 at grids 11/C @ beams to transfer girder refer to sketch CD RFI 178 SK1: The bolts thru the column cap plate & Transfer Girder per 4/S1-5052 are fouling the 3" connection plate as shown. Please supply a solution.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The conflict between the base plate bolts and the perpendicular drag beam plate at GL11/C can be resolved per modifications outlined in Sketch SKS-0306.			
T-0948.1	SSS - Connection Clarifications at Beams to Transfer	Closed	02/03/2014	02/13/2014	02/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company PHIL MILITELLO Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Per the response to Webcor RFI # T-0948 (SK RFI # 227) the cap plate length was revised to suit a shear plate fouling issue at the cap plate bolts. Please verify the sketch from Thornton Tomasetti SKS-306 can be applied at grids 8/G on S1-2303 and we can adjust the plate length for this similar condition. Refer to sketches CD RFI 178.1 SK1 & SK2 showing a 6 1/4" adjustment at one side of the cap plate.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> At GL 8/G transfer girder, it is acceptable to increase bottom base plate length by 6-1/4" on the north side and 4" on the south side (plate flush with the end of the transfer girder). It is also acceptable to conceptually apply the solution provided in SKS 306 for RFI T-0948. As indicated in this sketch, one of the stiffeners on the north side can be omitted. All other 18" long stiffeners, machined geometry and the bolts to be moved 6-1/4" outwards from the plate center (both on the south and north sides).			
T-0949	SSS - Stair ST304 Framing and Connection Clarifications	Closed	11/25/2013	12/05/2013	12/19/2013	Potentially	<input type="checkbox"/>

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
For Stair ST304 refer to sketches CD RFI 179 SK to SK6 for items 1 to 6:				1) Beam locations and slab opening have been changed in ASI 109 and Concrete IFB Addendum #1 drawings. Beam flange does not extend beyond slab edge.			
1) The noted beam flange extends into the slab opening for ST304 by 1/2" as shown. Confirm this is acceptable or supply revised dimensions on 1/S1-7008 or A1-2863.				2) Edge of opening and stair post locations have changed. See updated ASI 109 drawings and SKS-0312 submitted with response to RFI T-0955.			
2) This stair post is currently located 1 1/2" from the edge of slab. This does not agree with typical connection detail 1/S1-7600 which shows the stair post extending past the edge of slab 1/2" max. Please confirm this is the intent and supply a new connection detail for the post to the slab or supply revised dimensions for the stair post locations in detail 1/S1-7008 or the slab opening location on drawing A1-2863 to conform to detail 1/S1-7600.				3) See response to 2).			
3) Similar to item 2 on SK3. Please clarify.				4) See response to 1).			
4) The noted beam extends into the slab opening for ST304 by 2 1/2" as shown. Confirm this is acceptable or supply revised dimensions.				5) See response to 2).			
5) Please supply a connection detail for the noted stair post as 1/S1-7600 does not apply and 10/S1-7600 will not work as the BU WT will only partially fit on the TR11 flange.				6) See response to 2). Detail 1/S1-7600 shall apply.			
6) Confirm detail 10/S1-7600 may be applied at the noted location to connect the stair post to the supporting beam.							
<hr/>							
T-0950	SSS - Stair & Elevator Connection Clarifications		Closed	11/25/2013	12/05/2013	12/09/2013	Potentially <input type="checkbox"/>

	3) Confirm it is acceptable to substitute the L3x3 angle with L5x3 angle. The connection with the L3x3x3/8 angle is not possible as the brace angles will foul the horizontal legs as shown.						
	4) Confirm the same dimensions may be used when detail 2D/S1-7600 occurs.						
	5) Confirm this is the correct interpretation of the weld for the angles to the HSS beam.						
T-0951	SSS - Knock-Out Slab Clarification	Closed	11/25/2013	12/05/2013	12/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
On S1-2303 there is a detail 7/S1-5004 shown near grids F/11 to supply bent plate to support the permanent slab. This is a general bent plate detail for the knock-out areas and does not provide enough detail at the stepped Transfer Girder. Please see the following questions below:		1) The low permanent slab and new supporting beams are not required.					
1) Please verify if bent plate is required parallel to the Transfer Girder along grid 11 to support the permanent slab at the knockout areas? If yes, will new beams be needed to support the bent plate and slab? Please provide size and location if new beams are needed at these areas. See RFI 185 SK1 & SK2.		2) Step in slab does not need to encase the transfer girder. The top slab stops at the step and is supported by edge of slab detail similar to 9/S1-5000 (See attached sketch SKS-0315). There will be architectural wall between the high and low slabs as shown in the sketch.					
2) Please verify step in slab from grid D to F along grid line 11 will incase the Transfer Girder? Will headed studs be required at the transfer Girder web? If so, please provide size and spacing. See RFI 185 SK1 & SK2.		3) The edge of knock-out slab is 1' - 9" away from GL 10. With a 36" wide flange of the transfer girder, the edge of knock-out slab is 21- 36/2 = 3" outside of the flange edge. The small overhang of the slab is to be supported per detail 8/S1-5000.					
3) Please verify it is the designs intent to have the edge of the knock-out slab extend past the edge of the Transfer Girder flange at grid line 10.1? If yes, please provide details to support the edge of the permanent slab at these locations. See RFI 185 SK1.		4) Bent plate and edge of slab detail per 8 or 9/S1-5000 shall apply not only at the members highlighted in yellow but also at portion of the W21x50 beams below the escalator pits. Coordinate with response to RFI T-0868.1.					
4) Please confirm only steel highlighted in yellow will		5) See response to 4). Coordinate with response to RFI T-0868.1.

T-0952	BGP - Use of historical concrete strength test results	Closed	11/27/2013	12/07/2013	12/05/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane		To: Turner Construction Compan Gary Krutsch		Answered By:Webcor Construction LP Jackson Tukuafu			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Further to discussion with Thornton Tomasetti field personnel.				George Metzger 12/4/2013 RESPONSE:			
WOJV is asking for the remainder of the Mat slab pour, that the requirements per specification Section 31 55 00 1.4J may be deemed satisfied after 14 days to start removing the level D bracing based on historical data of the 284 concrete strength test results completed to date.				The RFI does not stand as written. The historical mat slab break data is sufficient only to waive the specification requirement that the TJPA Representative review and approve strength test results prior to removal of bracing (Section 31 55 00 1.4J). It is permissible that Webcor-Obayashi review the 14 day results to determine early brace removal provided they establish and submit acceptance criteria.			
Please confirm if this would be acceptable

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
On S1-2603 at grid 11/D, refer to sketches CD RFI 189 SK1 to SK3 requesting clarification on the column continuity plate requirements per the following:				1) Continuity plate per 5/S1-4202 is not required at the highlighted location. Provide 1/2" thick horizontal stiffeners plates at the top on each side of the column web. Provide a CJP weld to column flange and web. Provide a three sided double fillet weld "S" = 5/16" at the bottom horizontal stiffener plate as shown on 3/S1-5013.			
1) Detail 5/S1-4202 requires the continuity plate thickness be equal to or greater than the beam flange. Please confirm that the W40x593 beams (replaced with BU plates with 3 1/4" flanges) require 3 1/4" continuity plates per this detail.				2) Acceptable.			
2) Due to the continuity plate thickness and double weld preps, please verify the revised corner access hole sizes indicated on SK3 of 2 1/2" and 2 3/4" are acceptable.				3) Confirmed.			
3) Please confirm the proposed weld indicated on SK3 for the continuity plate is acceptable.

T-0966	SSS - Cruciform Column Splice	Closed	12/04/2013	12/14/2013	12/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Compan Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
At multiple cruciform column locations (S1-4301 thru S1-4308 at Grids C & G), detail 2/S1-4350 has a 24" wide column flange flaring out to 36" flange at the connection to the cast node & transfer girder. It is the preference of the fabricator to utilize a CJP spliced flange plate where the flare (radius) starts. Please confirm this is acceptable.				It is acceptable to use CJP spliced flange plates in the exterior MF Columns (Gridlines C, G, C.3, F.7) at Ground Level, however, the splice plane shall be a minimum of 2dc (dc = MF column depth) away from the top of the cast node. Note that MF column flange width is not always 24", refer to elevations S1-4101 through S1-4116 for MF column sizes. Splices shall conform with the requirements of 1/S1-5050.			
T-0967	Procedure for the removal of the level D bracing	Closed	12/05/2013	12/15/2013	12/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane		To: Turner Construction Compan Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Procedure for the removal of the level D bracing:				George Metzger 12/6/2013 RESPONSE: Confirmed			
Webcor-Obayashi will review the 14 day compressive strength reports issued by the independent test lab (ISI) for the applicable pour area. In the review WOJV is to ensure that the "lower-bound" concrete strength exceeds 3000psi at 14 days. "Lower-bound" will be understood as the mean minus one standard deviation. If the calculated lower-bound strength <3000 psi, the bracing removal would not continue until results are received satisfying the lower bound criteria. Further, If any single compressive strength test is < 2500 psi, the bracing removal would not continue until results are received satisfying the minimum strength criteria.							
Please confirm if this would be acceptable

Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Following discussions on the light column cast node weld prep, please confirm approval for use of joint B-U4a-GF in the flat position as a shop weld and that this joint is not prohibited under clause 2.18 - Prohibited Joints and Welds.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> As per AWS D1.1, clause 2.17, flat position V-groove or U-groove welds are practicable.		
T-0969	SSS - Filler Metal Usage on Group IV Grade HPS70W Material	Closed	12/06/2013	12/16/2013	12/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Compan Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Observation: Job specifications and Code AWS D1.1, Table 3.1, matching strength filler metal combinations for Group IV material, specifies for use an E91XTX for FCAW and F9XX for SAW process(s). Concern: ASTM A709GR 70W material hardening during welding (alloying up) as each weld layer is deposited (in 2" to 4" material thickness). An increased hardness value is expected and the actual concern is that, in this instance, the E91XX specified will create an overmatching filler metal condition during the welding process. Review: The AWS D1.1 2008 edition in table 3.1 for ASTM A709 Grade HPS70W specified a minimum of 70 ksi Yield Point and 90-110 ksi Tensile Range. In comparison, the AWS D1.1 2010 edition, a revision was made on this same material and the Tensile Range was dropped to 85 ksi minimum and maximum to remain at 110 (85-110). Research: Currently for seismic application, the filler metal companies have seismic testing certificates for E81XX and F8XX electrodes. The Tensile test range for AWS D1.8 requirements is 80ksi minimum, but the manufacturers' test results consistently come in at 88 to 95 ksi, which would meet the 85-110 ksi range for the material. The two manufacturers contacted, ESAB and Lincoln, are willing to do seismic testing (test data) for the purpose of supplying AWS D1.8 seismic certificates to meet the E91XX requirements. However, when reviewing the current test data from the manufacturer, the test tensile range is 90-110 ksi, but the results are 97-110 ksi.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The proposed under match the base material and filler metal is not acceptable. The AWS electrode specification A5.29 for FCAW doesn't change, so the electrode classification as noted by the D1-code committee (E9xxx) shall stay. The contractors supplier is welcome to certify-by-test their electrode E8 as a E9 and provide the documentation as-such and submit it for approval.

<p>Conclusion: TMF and their welding consultants believe that starting with a near Minimum Tension ksi (under match in classification/specification) that allows the use of E81TXX or F8XX electrodes with current seismic certificates would be best for the welding of the A709 HPS70W material due to the 2-4" thickness in this application.</p> <p>Please confirm this proposal is acceptable.</p>

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please refer to drawing S1-5052 and S1-5050.		3.) Please consider the option of pre-tensioning from the bottom. This item may be discussed further in next structural issues conference call.					
Refer to attached sketches CD RFI 099 SK1 & SK2 for items noted below.		5.) Confirmed.					
3) To allow sufficient clearance to position a hydraulic tensioning device we require a dimension of 30"h instead of the 24"h indicated on 3/S1-5050, please confirm this is acceptable.		6.) Confirmed.					
5) Confirm Section C shows the 3" thick plate only.		7.) Confirmed. No welding required to WT, direct bearing. WT surface shall be milled as called out in the detail.					
6) Confirm the 2 1/2" thick bearing plate is shaped as shown.		10.) See our comment to RFI Question #3.					
7) Confirm the 2 1/2" thick plate is welded on 3 sides as shown. Supply the welding requirement for the 2 1/2" thick plate to the WT below if required.		12.) No welding required.					
10) To allow sufficient clearance to position a hydraulic tensioning device we require a dimension of 30"h instead of the 24"h indicated on 3/S1-5050, please confirm this is acceptable.		13.) Confirmed. Note that the coupler should clear the base plate by a minimum of 1-1/2 inches.					
12) Provide the weld requirements for the 4" plate to the column web.		14.) It is acceptable to use larger washers at Contractor's option.					
		15.) Use of 2-1/2" dia rods is acceptable at the Contractor's option, pretension shall be kept the same. Note that there are some steel rod vendors that can provide larger jacking force for 1-3/4 diameter rods. One example is Dywidag, which shows a jacking force of up to 330 kips in their catalogue for 1-3/4 diameter rods.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Following the response to RFI T-0970 and after further review of #3 & 10, we agree the rods can be pretensioned from the bottom. Candraft have run a sanity check at several locations to confirm there is adequate clearance for the tensioning device and will continue to do so as other locations are detailed. Any interference will be addressed in future RFIs.		Acceptable to use standard flat washer at the bottom of the pretension rod.					
Please confirm it is acceptable to use a standard flat washer in lieu of the plate washer as the holes are not oversized and this will also allow for easier workability during the pretensioning operation from the bottom (see Dyson catalog cut attached). If this is acceptable the 24" dimension indicated from bottom continuity plate to top of built up T & TT (on 3/S1-5050) and the 6x6x2" plate washer under the top nut will not require to be changed (as per #3, 10 & 14 RFI T-0970). Please confirm this proposal is acceptable.

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
The contract documents do not contain a specific material grade for the nuts for large diameter pin connections (6, 7 and 8" diameter pins). In SK RFI 169A (T-0974), our detailer asked for clarification on the material grade for these nuts. It was confirmed that A668 Cl. M would be acceptable. Given the function of these nuts are to hold the pin in place and not apply a clamping force to the assembly, we do not consider that these nuts need to be a high strength forged material. Please refer to AISC Table 15-8 which shows a thin cap plates for pins overs 10" in diameter which reinforces this position.				Confirmed.			
Please confirm it is acceptable to use A572 Gr.50 plate to fabricate these nuts.							
<hr/>							
T-0975	SSS - Vertical Clearances at Tapered Girder Kicker Connections in S1-5015	Closed	12/09/2013	12/19/2013	12/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Gregory Kemerer	To: Turner Construction Compan		Gary Krutsch		
Co-Author: Arup		Rich Coffin					
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Please refer to drawing 4/S1-5015, S1-2602				1) Providing a 3' clear distance between the gusset plate shown on SK-1 may be reduced to 1", hence the minimum clearance (11 3/8") required to provide the kicker brace per 4/S1-5015 may be reduced further.			
Please refer to sketch CD RFI # 071 SK1 - SK3 for items 1 & 2:				2) Brace is required. The vertical clearance shown on SK3 corresponding to the location shown on SK2 is not correctly determined. The tapered girder is much deeper (about 54" deep) at the brace location shown on SK2. Note that the tapered girder depth increases from 40" at the ends to 60" at the mid span per S1-4200.			
1) As shown, 11-3/8" is the minimum vertical clearance required to provide the kicker brace connection per 4/S1-5015. Please confirm criteria as shown is acceptable.							
2) Per item 1 on CD RFI 071 SK1, detail 4/S1-5015 cannot be applied in the noted case on SK3 and other similar cases when the vertical clearance is less than 11-3/8".							
Please confirm if bracing is required at these locations, if so supply a typical alternate detail.							
<hr/>

T-0981	SSS - Cast Node Erection and Fabrication Work Points	Closed	12/09/2013	12/19/2013	12/13/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Gregory Kemerer	To: Turner Construction Compan	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

It is requested that work points be added to the Cast Connex machine drawings and Bradken Cast Nodes as outlined on the marked up Cast Node drawings attached. These external "physical" work points will be used to reestablish the "non-physical" internal work points set during the pre-machining of Cast Nodes at Bradken. These external work points will be used to aid the following construction activities:

- 1) Shop fabrication of shear plates and pipe columns
- 2) Shop trial assembly and QC dimensional inspections
- 3) Field assembly and final QC dimensional inspections

Please confirm each work point will be precision punch marked and highlighted with paint marker for easy identification.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Webcor needs to liaise with Bradken to determine if they are willing and able to punch these marks on the castings, and what (if any) the cost and schedule impact would be. If Bradken can complete the work, then Cast Connex is willing and able to update the machining drawings (at Skanska's cost). The cost for Bradken's additional work will have to be taken care of between Skanska and Bradken and not the TJPA.

T-0982	SSS - Elevator Rail Support Connection Clarifications	Closed	12/09/2013	12/19/2013	01/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Robert Kjome	To: Turner Construction Compan	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer to Elevator Rail Support drawings S1-7130 through S1-7139 and provide clarification on the following:

- 1) At locations where the HSS members span two equally sized support beams, please confirm connection detail 1/S1-7630 typically applies and the HSS member is to be located direction under the beams. Refer to SK1, SK2, SK5, SK6, and SK7 for reference.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

See attached comments on RFI sketches, RFI_T_0982 sketches w comment.pdf

1. See TT comments on RFI sketches.
2. When HSS is to connected to bottom of W beam use detail 1/S1-7630. At the end where HSS is framed into the web of a beam, provide a double angle

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
On S1-2303 there are two W33x118 beams between grids D.8/E.2 that connect to the stepped Transfer Girder along grid line 11. These connections should be typical double angle shear connections, but due to the location of the stiffeners for the Moment frame column cap/base plate there is a fouling issue. Please see the following questions below: 1) Please verify a partial full depth shear plate connection similar to detail 2/S1-5011 can be provided at these locations in lieu of the double angle shear connections. The shear plate cannot be full depth as it will foul the bolts connecting the Transfer Girder bottom flange to the column cap/base plate. See CD RFI 204 SK1 to SK3. 2) If a shear plate connection is acceptable at these locations, please verify plate thickness & welding per 2/S15011. See CD RFI 204 SK1 to SK3. 3) The numbers of bolts in a single row per the schedule on 2/S1-5011 cannot be provided if bolt spacing and edge distance are to be maintained due to the difference in elevation between the Transfer girder and W33 beam.				1) Acceptable. 2) Acceptable. 3) Acceptable. Provide 3" horizontal spacing between the two vertical bolt columns. 4) Provide plates welded to the transfer girder bottom flange and the W33x118 beam web as shown in attached sketch SKS-0314 in lieu of the angle braces at the two W33x118 beams highlighted in the RFI.

Refer to CD RFI 199 SK1 requesting clarifications for dimensions and connections at Elevator PE202 as follows:			1). Please refer to the attached A1-2892 2014JAN06 for the dimension of the raised elevator cap and EOS				
1) Detail 8/S1-5004 shows the edge of slab is to be 1'-0" from the toe of the WF beam, but based on the dimensions shown on S1-2502, the 1'-0" requirement is met only on the west side of the elevator opening. The north, south, and east sides do not meet the 1'-0" requirement. Confirm the dimensions to locate the elevator opening WF perimeter beams are correct as indicated on S1-2502.			2). See the green markups on the sketch submitted with RFI T-0987				
2) Please supply the missing dimensions to locate the HSS 12x6x1/2 on four (4) sides of the elevator opening.			3). The HSS 12 x 6 shall be supported by W16 at the south and W27 at the north. The TOS for the HSS 12 x 6 shall be at 1-1/4" below the TOP of the W27. Use double angle bolted connection (L 4x4x3/8" with 3-1" dia A325 bolts, which pipe sleeve inside the HSS to allow for pretension). Similar double angle connections may be used to connect the HSS at the corner, except one side of the double angle shall be welded to the face of the HSS with 5/16" fillet weld with 5/8" return.				
3) Please clarify how the HSS12x6x1/2 perimeter members are supported and connected to each other at the corners.			4). Confirmed				
4) Confirm edge plate per 8/S1-5000 is required on 4 sides of the elevator opening as none are indicated on detail 8/S1-5004.

T-1000	SSS - Machine Lower Nozzles Perpendicular to Pipe	Closed	12/10/2013	12/10/2013	01/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Kruttsch			Answered By: Turner Construction Company Stacy Wilson				
Co-Author: Arup Rich Coffin							
REQUEST: Please refer to drawing S1-5111 thru S1-5133. In recent meetings, Webcor/Obayashi has made it clear that the same Bus Deck Cast Node geometry will be used at multiple locations even though the angle of the lower Basket Columns changes at each Node. This adds a level of complexity and cost to the joint between the Cast Node and Basket Column Pipe due to the kink imposed on that joint as a result of the following: - The Lower Pipe Columns will be required to be "miter cut" instead of a traditional square cut end. (Please note Spec Section OS 10 00, paragraph 3.2.M.1 states "Bearing ends of columns shall be milled or sawn square perpendicular to axis of the column.") - Miter cut Pipe will have an ellipse cross section and will not match the circular Casting Node. - Backing bars used to full pen weld the Pipe Column to the Cast Node would need to be custom machined to match the ellipse Pipe and circular Node to eliminate weld gaps. This significantly increases the complexity and risk for successfully welding the joint, and reduces the adjustability for fit up of these joints in the shop and the field. This kink can be accommodated either by machining the nozzle of the Cast Node to be perpendicular to the pipe, or by machining the pipe end at a mitered angle to match the Cast Node. Since this joint on the Cast Node is already being machined, Skanska/OIW believes that the more desirable			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The contract drawings at bid time clearly showed that the centerline of the pipe is not in line with the centerline of the cast node nozzle, that the same cast node is to be used at multiple locations, and that the cast nodes were not miter cut to be perpendicular to the incoming pipe. The reference to Spec section 05 10 00 noted in this RFI regarding bearing ends does not apply for this condition as the pipe to cast node connections are not \angle bearing \angle connections, they are a fully welded connections as shown on the contract documents. This \angle kink \angle between the topside of the ground floor basket column and the bottom-side of the bus deck cast node \angle resulting from the building \angle s geometry and the use of the same cast node type in multiple locations \angle can be accommodated by either miter cutting the pipe or the cast node. However, the contract documents, including those available during bid, clearly show that the bus deck cast nodes were not going to be miter cut, and so miter cutting of the basket column pipe members by the Steel Contractor is necessary to accommodate the building \angle s geometry. The specified miter angle does not exceed 1.5-degrees in any location. Miter cutting a 32-inch diameter steel pipe by 1.5 degrees results in an elliptical cross-section having a major diameter of 32 / cos (1.5°) = 32.011-inches and a minor diameter of 32-inches. This results in a minimal mismatch in cross-sectional dimension / shape between the outside and

	<p>and less expensive option is to machine the nozzle of the Cast Node perpendicular to the axis of the Basket Column Pipe . As the nozzles will each be custom machined regardless, machining them to match the pipe axis should be a relatively low cost change .</p> <p>Skanska/OIW requests that the lower nozzle of each Bus Deck Cast Nodes to be machined perpendicular to the axis of the adjoining lower Basket Column Pipe. A negative response will result in a cost increase and a time increase.</p>				<p>inside faces of a mitred pipe member and the cast node. Based on this geometry, a two-inch wide backer bar sized properly would only show a gap of about 2/100ths of an inch, nominally. A split-ring backer bar could also be employed, which would provide some additional adjustability for this joint in the field.</p> <p>There is no objection structurally or architecturally for the miter machining of either the nozzle of the bus deck cast node to be perpendicular to the pipe, or miter machining the pipe end at an angle to match the Cast Node. However, if Skanska seeks this additional miter machining of the bus deck lower nozzles on the Cast Nodes, all related costs and schedule will be the responsibility of Skanska. Skanska would need to provide the requested miter angle for each Cast Node for incorporation into the casting machining drawings. Additional costs including drawing time would need to be paid for by Skanska.</p> <p>Skanska will be responsible for all costs associated with the miter machining of either the nozzle of the Cast Node or the pipe to be perpendicular or coplanar. If Skanska opts to have the lower nozzle ends of the bus deck nodes mitered, Skanska will need to coordinate with the CM/GC to make an agreement with Bradken for this change to Bradken's scope of machining work for the bus deck cast nodes. Skanska will also be responsible to absorb any schedule impact without delaying the overall project schedule. NOTE: If miter cutting the bus deck cast node nozzle is selected, machining would need to be performed by a third party as Bradken does not have this capability. Be aware that those costs for machining, trucking, and for handling the cast nodes would be Skanska's. Custom miter cutting each nozzle end would also require additional geometric inspection of the cast nodes, the cost for which would be borne by Skanska.</p>

---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

REQUEST:

At a sample location on S1-2503 at grids 9/F refer to sketches CD RFI 150 SK1 & SK2 as noted below.

As the sloping BU beam rises 1/2" above the opposite BU beam, the thickness of the top continuity plate will be increased to 3-1/4". Confirm this is the design intent and should be applied typically at similar conditions.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

For the conditions described in the RFI, continuity plate thickness shall be per construction drawings (no need to increase thickness). At the condition described in the RFI (1/2" difference between the top of flange elevations), line the continuity plate up with the non-sloping MF beam. At Bus Deck Level joints at GL 2/D.4, 2/E.6, 3/D.4 and 3/D.6, the difference in elevation of MF beams on each side of the column is 2". At these joints, slope the continuity plate between the top flanges of the two beams (no need to increase thickness).

T-1004	SSS - Pins at Roof Clevises and Perimeter Bus Deck	Closed	12/10/2013	12/20/2013	12/12/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Gregory Kemerer	To: Turner Construction Compan	Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer to the the following: S1-5017, S1-5131, S1-5132, S1-5133, 05 10 00 - 2.3.J & 3.2.B.2.

Paragraph 3.2.B.2 specifies the holes for the pins shall be no more than 1/32" over the diameter of the pin. Paragraph 2.3.J specifies the pins to be Hot Dip Galvanized (HDG). This combination will lead to interference at assembly due to the following factors:

- 1) Tolerance in bored hole diameter of 0.010 (+0/-0.010)
 - 2) Tolerance of Pin diameter of 0.010 (+/-0.005)
 - 3) Tolerance of galvanize thickness at pin of 0.012 (+/-0.006/side x 2)
 - 4) Tolerance in thickness of primer at pin holes of 0.002 (+/-0.001/side x 2)
- The stack-up of tolerances is 0.034" which is greater than the specified 1/32" maximum clearance.

Skanska/Oregon Iron Works is requesting approval to supply the pins and bored holes to the following nominal values and within the tolerance identified above. These values are measured after machining and prior to coating.

1. 7" diameter pins:
 - a. Pin diameter = 6.906" (bored holes -1/8")
 - b. Bored holes = 7.032"
2. 8" diameter pins:

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Per Specification 05 10 00, the pin is to be measured by a ring gage after galvanizing. The 1/32" tolerance is for pin after galvanizing. We don't feel a chrome coating is equal to the specified galvanized coating. Chrome coatings do not have the construction industry track record that galvanizing has. Skanska has not provided a substitution request with technical data showing a chrome coating has the same performance as galvanizing.

<div>a. Pin diameter = 7.906 (bored holes -1/8") b. Bored holes = 8.032" Note that zinc coating is not a hardened material, and the coating on the pins will be prone to galling while attempting to install in a horizontal position. Skanska/OIW suggests investigating alternate pin coatings; for example, a hardened chrome coating has tightly controlled thickness tolerance and will not gall.</div>

Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Per detail At the light column bases refer to sketch CD RFI 167 SK1 for items 1 & 2: 1) Confirm the CJP weld designation applies to the 1" thick web and the 2" thick flanges to the column base plates. 2) Supply the weld requirements for the 1" shear key web to the 2" shear key flanges.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) confirmed. 2) Weld requirement for the 1" shear key web to the 2" shear key flanges: double fillet welds with w = 0.5" on each side.		
<hr/>							
T-1034	SSS - Material Grade and CVN Requirements	Closed	12/12/2013	12/22/2013	12/12/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: 1. At 1/S1-4205 EBF LINK BEAM DETAIL, there is a section 4/S1-4205 that cuts an EBF LINK BEAM CROSS SECTION. The same section 4/S1-4205 is cut on 2/S1-4205 BRACE DETAIL. Please confirm that EBF link beams are where the 4/S1-4205 section is shown, and that they will be ASTM A709 grade 50 and other built-up beams at the roof park perimeter will be ASTM A572 grade 50 per SS-1/S-0007. 2. Please verify if bus deck built-up plates that are ASTM A709 grade 50 plates less than 2" thick part of the SLRS should be CVN tested 25 ft.-lb @ 70 degrees F. 3. Please supply CVN testing requirements, if any, for secondary material steel (i.e. stiffeners, connection plate,			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1. The requirements for ASTM A709 Grade 50 material for the link beam is for the region between the diagonal work point as shown in Detail 1/ S1-4205. At the contractor's option, steel plate beyond the splice point outside of the A709 grade 50 plate may be ASTM A572, grade 50. 2. CVN should be per requirements in the respective ASTM specification and Specification 05 10 00. For a member that is a part of SLRS (or SFRS), see 05 12 10 for additional requirement for CVN testing. Also, the testing temperature for weld metal is not 70 deg F, it should be in accordance with AWS D1.1 and 1.8 (for SLRS), assuming LAST=25 deg F per specification 05 12 10, paragraph 2.1.C.3.

T-1037	SSS - Typical Kicker Brace Detail	Closed	12/12/2013	12/22/2013	12/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Compan Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Reference the bracing connection details provided on S1-5015. At conditions where a full depth shear plate and bracing are required, there is consistently a conflict between the bottom gusset plate and shear plate. Based on the weld requirements for the kicker brace connection, the following is proposed to avoid this conflict: 1) Connect the kicker directly to the shear plate 2) Eliminate the bottom gusset 3) Offset the top gusset (below the beam) by the width of the beam web to align with the shear plate 4) Match the thickness of the gusset and stitch plates to the shear plate thickness 5) Shape the bottom of the shear plate, where necessary, to achieve the required angle brace weld Please confirm this is an acceptable typical solution for the conditions shown in the sketches attached and at other typical locations where bracing and a full depth shear plate are required.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Acceptable. 2) Acceptable. 3) Acceptable. 4) Reducing the top gusset plate thickness to match the full depth shear plate thickness is not acceptable. See response to RFI T-0920.1 where stitch plates with varying thickness were allowed to be used when the full depth shear plate and gusset plate thickness did not match. The same solution can be applied at all similar locations. Alternatively, the full depth shear plate thickness can be increased to match the gusset plate thickness. 5) Acceptable. It is typically acceptable to apply solutions 1) through 5) at locations where there is a conflict between the bottom gusset plate and full depth shear plate at the transfer girders.

T-1039	SSS - Stitch Bolts on Kicker Braces	Closed	12/16/2013	12/26/2013	12/30/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Compan Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Details 4, 5 & 7/S1-5015 do not show a stitch bolt requirement for the kicker braces. At a sample location and detail shown on sketches CD RFI 066 SK1 & SK2 please confirm none are required or supply the necessary information.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Refer to Section 3/S1-3703 that is just above the SK2 section cut, where the Section RFI 066-SK2 was cut. In addition to Section 3/S1-3703 refer to Section 6/S1-5022, which provides information on the stitch plate.	
<hr/>							
T-1039.1	SSS - Stitch Bolts on Kicker Braces	Closed	02/03/2014	02/13/2014	02/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino			To: Turner Construction Compan PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: The response to T-1039 references details 3/S1-3703 & 6/S1-5022 for stitch plate information although these sections are only cut at Ground Level at Fremont & First Street. Please confirm the response is intended to indicate stitch plates are required at all kicker brace locations including details 4, 5 & 7/S1-5015 as per details 3/S1-3703 & 6/S1-5022. If so please confirm detail 8/S1-5015 can also be used for the stitch plate detail.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed. Stitch plates are required for kickers where Details 4, 5 and 7/S1-5015 are applicable, except where the kicker is shorter than 1.5'. Stitch plate details provided in 8/S1-5015 can be used at locations where kickers are required except that the stitch plate thicknesses shall match those of the gusset plates in the details. Stitch plates can be either welded (as shown in 8/S1-5015) or bolted (as shown in 6/S1-5022) to the kicker angles. For kickers shorter than 3' but longer than 1.5', provide a single stitch plate centered on the kicker angles.

T-1041	SSS - CJP Weld Prep between Ground Level Cast Node and Transfer Girder	Closed	12/17/2013	12/27/2013	12/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Kruttsch			Answered By: Turner Construction Company Stacy Wilson				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Our fabricator Thompson Metal Fab has requested a 2" 45° bevel be incorporated into the ground level cast node machining drawings. This weld is detailed on 6/S1-4350. See attached sketch for bevel detail. Please confirm approval for weld prep detailed in attached sketches.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> The 2" 45 degree bevel to the ground cast nodes is acceptable to incorporate into the machined drawings per CCX. The additional Cast Connex detailing, Bradken additional machining, and any other follow on expenses or schedule delays due to this change will be borne by Skanska and not the TJPA. George Metzger 12/18/2013 RESPONSE: Cast Connex, It makes sense to have Bradken to put in this bevel as detailed on the structural drawings. Please coordinate with Bradken for this work.				
<hr/>							
T-1042	BGP - Geothermal Manifold Locations for Fields 3, 4, 5, 6, 7, 8, 9, and 10	Closed	12/17/2013	12/27/2013	01/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Per the drawings, the manifold is to be located at an elevation no greater than 14' below finish grade (street) elevation. Per conversations in the preparatory DFOV meeting and other coordination meetings, the Engineer planned to have the manifold in a specific location. Attached are elevation drawings for Field 3, 4, 5, 6, 7, 8, 9 and 10 Manifolds. Please confirm that the attached elevation details work with the designer's intent for the manifold locations for said Fields. Note that Riser 10 has been relocated approximately 4' East between piles 231 and 232 to allow for the required 10' minimum spacing for future column installation.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 1/7/2014 RESPONSE: Riser penetrations into the building must occur within the beam space of the ceiling of the lower concourse level. The elevations shown on the sketches fall below the beam pockets and conflict with future emergency ventilation ducts within the building. Elevations shall be modified and resubmitted to verify that the pipes enter the building within the beam space. Risers 7 & 8 may be greater than 14'-0" below finished grade and should be reviewed by ARUP for confirmation.

T-1049	BGP - Column Base Plate Clearance Lower Concourse Slab	Closed	01/14/2014	01/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Adib Sassine		To: Turner Construction Compan Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author:

REQUEST:

Ref: 1 and 3/S1-5051, S1-3600, S1-2205

To erect and plumb Lower Concourse Column with base plates Types I as shown on schedule 1/S1-5051 and II at 7/F.8 shown on detail 5A/S1-5051, erection aids will be required at the base plate. However, due to the depression, rebar running thru the depression and based on our experience with the grouting at column base plate mock-up, allowable clearances to set these base plates may not be adequate. As an example, column at GL C/24.9, the bottom of type I C base plate is within 1" from the top of rebar and does not have adequate area for shim packs.

Question # 1:

To provide adequate erection aids, please review the following options and advise as to which one is acceptable:

Option 1: Lower rebar around the base plate area by 1" to allow for 2" clear between rebar and bottom of base plate. Install 4 shim packs for erection purposes under each corner of the base plate on top of level concrete surface.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Question 1, Option 1: Lowering the MF Beam reinforcing is not acceptable. Erection aids are contractor's means and methods.

Question 1, Option 2: The reinforcing adjustments allowed are contained in RFIs 908.1, 917, 924, 925 and 1015. Erection aids are contractor's means and methods.

Question 1, Option 3: Raising the column base plates is not acceptable. Erection aids are contractor's means and methods.

Question 2: Increasing the plan dimension of the column base plate block-out to 6" all around is acceptable.

Co-Author:							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
The response to RFI T-1052 (SK RFI 309.1), states that "The 5/16" fillet weld is on 2 sides only (not all around as stated in this RFI). The width of the stiffeners can be reduced to match the W27 beam flange width. Don't see a problem in performing the double fillet weld, however, a CJP weld to replace the double fillet weld is acceptable." The original question asked permission to use a PJP weld in lieu of the double fillet weld, not a CJP weld. Please clarify the following:			Questions 1 and 2 appear to be asking the same thing.				
1) Skanska disagrees with the note that the referenced weld is shown as being required on 2 sides only. Please review the attached SK2 and confirm the welding locations as shown are acceptable.			Welding per SK2 is will be acceptable.				
2.) As there is insufficient landing to perform the 5/16" fillet as originally detailed, please confirm the welding as per CD RFI 240.1 SK2 is acceptable.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
On S1-2602 to S1-2607 along lines B & H the bottom flanges of the sloping W40x264 moment beams are deeper than the BU 40 girders by 5/16" of an inch as noted on sketch CD RFI # 217 SK1.			1) The top of steel for the slope W40 may be set to match the BU40 girder at the tip of the flange, thus, avoid the need for the 1/2" connection plate.				
1). To accommodate for the depth discrepancy verify a 1/2" plate can be added to the bottom of the BU 40 girders and the welds as noted on sketch SK1.			2) 1 3/4" bevel for 1 1/2" effective PJP weld is acceptable.				
2). Also for the top & bottom flange welds for the W40x264 sloping beams verify the CJP weld noted on the sketch SK1.			3) See response to Item 1).				
3). Option # 2 is to move the work points of the W40x264 beams up 5/16" thus flanges would then be flush for both W40 & BU 40 members.

	<p>2.) The Carboline Pyrocrete 40 product does not require the use of a primer, however the published data sheets state that "Pyrocrete 40 neither promotes nor prevents corrosion". It is understood that the manufacturer finds application of Pyrocrete 40 to bare steel to be acceptable on the building interior, but recommends the Owner's consideration of a primer on steel exposed to corrosion. Please advise which areas, if any, are required to be primed prior to application of the Carboline Pyrocrete 40 product.</p> <p>Please note that application of a primer for areas receiving any of the three SFRM-1 products will incur additional costs and schedule impacts, as these areas were originally specified to be bare steel per 05 10 00-3.2.P.3b.</p>

REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Details 5, 6, and 7/A1-8662 indicate "12 inches of fireproofing required on stiffener fins, typical."			1) Refer to 'Fire Protection Matrix & Schedule' per attached A1-8662 for UL Assembly listings. Refer to drawings A1-9317, A1-9351 and A1-9354 for related details.				
1) Please provide a UL assembly # and details for conditions where cruciform columns are enclosed with exterior wall cladding or interior furred-out walls.			2) The 'stiffener fins' as noted on sheet A1-8662 are added to the Ground Level columns to increase weak axis bending stiffness of what are known as the cruciform columns on the Structural drawings. These stiffeners are provided for vibration control and being non-load carrying elements they do not require fire protection from a code perspective. As typically recommended by the fire protection manufacturer, non-load carrying attachments be fire proofed to the same level as the protected structural elements to mitigate 'thermal bridging'.				
2) Structural drawings reference cruciform columns while A1-8662 references "stiffener fins." Please advise if the A1-8662 drawings are intended to show the cruciform columns, and provide revised drawings as necessary. Please provide the applicable UL assembly for cruciform columns with any revised details.							
3) Please advise if the cruciform columns are to be fireproofed SFRM-1 per spec section 07 81 00			3) Confirmed

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Per the response to Webcor's RFI # T-1061 (SK RFI # 180B.1) we have complied with the geometry for the weld access hole size per AWS D1.8, section 6.10. Using this formula we have shown the connection on CD RFI # 134.2 SK1 for a BU column with a 3 1/2" thick web. Please confirm the remaining 5 1/2" web material as shown on SK1 is acceptable.				Confirmed that it is acceptable to use AWS D1.8 for WAH geometry and confirmed that the 5 1/2" remaining web material for the column with 3 1/2" web thickness is acceptable.			
T-1062	BSE - Timber Pile Removal from CDSM Wall	Closed	01/03/2014	01/02/2014	01/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Compan Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc. Danny Walsh							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
BBII has located portions of timber piles in several CDSM wall panels along gridline A in zone 3 at excavation levels 4 and 5, between soldier piles 255-257 and 259-261. BBII believes any attempt to remove the piles has the potential to damage the CDSM wall. Given that there is no issue with water intrusion at the pile locations and the CDSM material is in good condition, BBII believes the best course of action is to leave them in place. To ensure a smooth surface for waterproofing, the piles have been ground down so that they are recessed from the face of wall. BBII will then patch over the panel to bring it flush with the CDSM piles. (Patching has already occurred on a portion of the affected areas - see attached photos of panels before and after the above procedure.)				ARUP Response: We take no exception.			
Please confirm this is acceptable				Adamson Associates, Inc. Response: The CM/GC shall confirm the waterproofing subcontractor/manufacturer and the contractor's waterproofing system designer accept the site conditions

T-1073	SSS - North Exit Mezzanine Support	Closed	12/30/2013	01/09/2014	01/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Compan Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Please refer to detail 1/S1-2252 in regards to the following clarifications for the North Exit Mezzanine: 1.) Please provide connection details for MC4x13.8 channels framing into the W12x40 beam, CMU wall, and adjacent MC4x13.8 members. 2.) Please confirm how MC4x13.8 channel, east of GL 24, is supported at east end. 3.) Please provide the required dimension to locate the east end of the W12x40 member. 4.) Bracing for the W12x40 appears to be located slightly west of CL 23. Please provide the indicated dimension to locate bracing. Verify that this is the only location to receive bracing along the length of the W12x40. 5.) a. Please confirm the splice locations indicated on SK1 for the W12x40 beam are acceptable. Note that the splice just west of CL 23 may need to be shifted slightly depending on the response to item #3. b. Please provide a splice detail for the W12x40. Note that bolted splice connections are preferred.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1. For MC4 to W12, weld channel with 5/16 fillet weld to 3/8" thick plate welded to underside of W12 beam (use 1/4" fillet weld, NS/FS). See 4/S1-5032 for graphic reference. For MC4 to CMU wall refer to updated version of sheet dated 12/13/2013 Issued for Bid Addendum #1. For MC4 to perpendicular MC4, use 1/4" fillet weld all around. 2. Refer to 12/S1-9001. 3. End of W12 is at EOS. Refer to architectural drawings for EOS. 4. Dimension to locate bracing in SK1 is 2'-9" west of gridline 23. Locate second set of bracing at 6'-9" west of gridline 24. 5a. Acceptable, however adjust as necessary for brace locations identified in response 4. Locate splice in middle third of spans between hanger locations and avoid locations 3 ft within brace locations. 5b. Refer to T-0979 SSS RFI response for splice information.

T-1078	SSS - Machine Type 1 Drag Connection Pads	Closed	01/02/2014	01/12/2014	01/15/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Compan Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
<p>The Type 1 Drag Connection shear plates are shown on drawing S1-5016 to be oriented perpendicular to the connection face of the cast node and further they are shown to be centered with respect to the width of the connect ion face. OIW has discovered that this is in error; the shear plates are neither centered on the face nor do they project perpendicular from the face. These conditions significantly increase the complexity of this welded joint.</p> <p>OIW would like to use a CNC milling machine to prepare the surface of the Type 1 Drag Connection pads on the cast nodes in order to provide a perpendicular surface for the shear plates to attach to. Please see attached sketch showing proposed machining.</p> <p>1. Please indicate if it is acceptable to machine these surfaces.</p> <p>2. Please indicate if there is adequate stock to allow machining of these surfaces or if additional stock must be added.</p>				<p>The contract drawings at bid time clearly showed orientation of the connection pads of the cast node. Since the cast node contract drawings and the cast node shop drawings (which are also a part of bid documents), were provided, it is clear that the Drag Connection shear plates steel connections (angle and centering) to the castings would need to be cut by the contractor prior to fit-up for welding. The design intent was clearly depicted on the contract documents. The angle of the connection pads (F5 and F6) are provided in the cast node schedules; refer to 1/S1-5121, for example. Each cast node type is used in multiple framing locations as noted on the cast node designation sheets (S1-5110, S1-5120, and S1-5130). The cast node shop drawings, which are also a part of the bid documents, show that the face of the drag pads are cast perpendicular to the axis of the pad and were provided in the as cast condition (not a machined condition). From the framing plans (Sheets S1-2502 thru S1-2507), Skanska should be able to see that the diagonal beams are framed into the same cast node type at various angles, resulting in a condition that requires some connection plates to be appropriately fabricated. There are many details in the structural set which graphically show the connections not to be concentric and normal to the drag pads on the bus deck nodes. Detail 1 on S1-5030 is one example where the design intent is visually evident without having to correlate information on more than one drawing.</p>

REQUEST:			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>		
The response to Skanska RFI 294 (W/O T-1078) states that machining the internal drag pads is Contractors means and methods. In order to simplify modelling, detailing, fabrication and welding of the drag pads, Skanska's fabricator OIW intends to machine the internal drag pads.						Confirmed that the "minimum 1-inch extrusion" dimension called out for the bus deck cast nodes in contract drawings can be less than 1 inch as needed by machining of these pads by the Contractor.

REQUEST:

Bracing removal/re-bracing sequence on the East end of Zone 4
WOJV is proposing the following sequence for the re-bracing/ Bracing removal for the East side of Zone 4 See sketches SK1, 2, 3 & 4 attached.

For level D strut removal see sequence on attached sketch SK1. WOJV is proposing to remove level D bracing in two defined areas.

1. Remove level D Cross lot struts and walers from west to east direction once the mat slab beneath has been place, cured and reached adequate strength.
2. Remove level D struts and walers from south east and north east corner's once the mat slab beneath has been place, cured and reached adequate strength.

For level C strut removal see sequence and defined areas

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

The propopsed method is not acceptable. Both sets of diagonal bracing, on the north side and the south side, and the first few cross lot braces work in conjunction as a group. Any one part cannot be removed until the rebracing is complete for the entire group.

T-1092	SSS - Ground Level Cast Nodes	Closed	01/09/2014	01/19/2014	01/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Compan PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

In recent meetings, Webcor/Obayashi has made it clear that the same Ground Level Cast Node geometry will be used at multiple locations even though the angle of the lower Basket Columns changes at each Node. This adds a level of complexity and cost to the joint between the Cast Node and Basket Column Pipe due to the kink imposed on that joint as a result of the following:

- The Lower Pipe Columns will be required to be limiter cut" instead of a traditional square cut end. (Please note Spec Section OS 10 00, paragraph 3.2.M.1 states 11Bearing ends of columns shall be milled or sawn square perpendicular to axis of the column.")
- Miter cut Pipe will have an ellipse cross section and will not match the circular Casting Node.
- Backing bars used to full pen weld the Pipe Column to the Cast Node would need to be custom machined to match the ellipse Pipe and circular Node to eliminate weld gaps. This significantly increases the complexity and risk for successfully welding the joint, and reduces the adjustability for fit up of these joints in the shop and the field.

This kink can be accommodated either by machining the nozzle of the Cast Node to be perpendicular to the pipe, or by machining the pipe end at a mitered angle to match the Cast Node.

Since this joint on the Cast Node is already being machined, OIW believes that the more desirable and less expensive option is to machine the nozzle of the Cast Node perpendicular to the axis of the Basket Column Pipe. As the nozzles will each be custom machined regardless,

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Per Contract, RFIs shall not be used as a vehicle for requesting cost and schedule increases which appears to be the purpose of this Skanska/OIW statements; "A negative response will result in a cost increase and a time increase" are examples.

The contract drawings at bid time clearly showed that the centerline of the pipe is not in line with the centerline of the cast node nozzle, and that the cast nodes were not miter cut to be perpendicular to the incoming pipe. The reference to Spec section 05 10 00 noted in this RFI regarding bearing ends does not apply for this condition as the pipe to cast node connections are not "bearing" connections, they are a fully welded connections as shown on the contract documents.

This "kink" between the bottom-side of the ground floor basket column and the top-side of the ground floor cast node - resulting from the building's geometry and the use of the same cast node type in multiple locations - can be accommodated by miter cutting either the pipe or the cast node. However, the contract documents, including those cast node shop drawings available during bid, clearly show that the ground floor cast nodes were not going to be miter cut, so miter cutting of the basket column pipe members by the Steel Contractor is necessary to accommodate the building's geometry.

Miter cut of the cast node is not acceptable architecturally. The specified miter angle of the pipe does not exceed 1.5-degrees in any location.. Even

See attached CD RFI # 264.1 SK1 to SK3 for items 1 to 4:
At GL 22/G detail 9/S1-3702 is noted as typical at Grids 19.9 & 20.1 on S1-2305. However, TR19.9 & TR20.1 do not match the information as shown in detail 9/S1-3702 due to the MFB1 concrete beam & BU girder depth. See SK3 for the outline of the MFB1 and please provide direction for the following items at Grids 19.9 & 20.1.
1) The number of headed studs requested in detail 9/S1-3702 will not fit TR19.9 & TR20.1. Supply the number of h

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

The top of the beam is at 16.07', and the bottom of the concrete beam is at 12.07'. The top of Transfer Girder is at 17.60', which allows 5.3' high region for 5 rows of studs at 6" spacing (out to out distance of 2'-0"). Lower the stud group so that that top row is 6" below the top of concrete beam.

2). The 2 1/2" plate is incorrectly shown graphically. The end of the plate is to flush with the end of the transfer girder web.

REQUEST:

See attached CD RFI # 265 SK1 & SK2 for items 1 to 3:

- 1.) Supply the location of the braces from grid 'C' considering the dimensions on TR14 shown on SK2 and the connection for the braces to the girder per 8/S1-5015.
- 2.) Supply the underside of slab elevation at the brace located per dimension supplied in item 1.
- 3.) Supply the underside of slab elevation at the brace located per dimension supplied in item 1.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

1). The braces may be connected to the first Transfer girder bottom flange stiffeners away from the column.

2). The bottom of slab elevation equal to top of slab (16.81' as noted on the plan) minus 10"

3). See response #2.

REQUEST: Type III column base detail 8/S1-5051 indicates an embedded plate, as the package delineation line shows the ½" thick embedded plate is not in Skanska's scope of work. TG06 trade subcontractor will be required to coordinate locating the shear studs to clear the congested rebar at these locations. The embedded plates will be supplied and installed by others and Skanska will field weld the L4x3 to the embedded plate as indicated on SK1. Please confirm this is acceptable.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed.			
T-1103	BGP - Increased Slump Specification Limit for Mixes with High-Range Water Reduc	Closed	01/13/2014	01/23/2014	01/15/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Compan PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please reference attached letter Authored by Robert Foley, CEMEX QC Manager, dated 1/2/2014 and TG06.0 technical spec section 033020.2.3.F.1.b. SCCI and CEMEX are proposing the following guidelines regarding slump of cast-in-place mix designs that contain 30% or higher fly-ash (CM) and HRWR: 1. Maximum 8-inch slump will continue to be the target slump for delivery of concrete mixes with HRWR. 2. 9-inch and higher slump will be considered an action limit. Whenever slump of consecutive loads exceeds 9 inches, actions wiJl be taken to reduce subsequent slump measurements. 3. Batches with slump as high as 10.5 inches will be accepted provided the batch weights are evaluated to		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 1/15/2014 RESPONSE: The revised guidelines are not acceptable. Acceptability is governed by the limits in the approved mix design submittals and the project Specification within ACI 117 tolerances.

With reference to pretensioned rods required as per schedule 3/S1-5052 please review the following:		Confirmed that the pre-tensioned rods are to receive fire proofing; they shall not be galvanized.					
As the pretensioned rods on the cruciform columns are to receive a fireproof coating please confirm the rods are to be supplied plain (no finish required) as per General Note SS-10 - All steel members and embedded steel angles and plates not painted, coated with fireproofing, nor protected by concrete cover, shall be hot-dipped galvanized.							
Please confirm this is acceptable.							
T-1109.1	SSS - Pretension Rod Finish Requirement	Closed	01/27/2014	02/06/2014	02/12/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Compan PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
The response to RFI T-1109 (attached) indicates that the pretensioned rods are to receive fireproofing.		The pre-tensioned rods are to increase the bending stiffness of the column in a seismic condition and are considered non-gravity load carrying elements which do not require fire protection from a code perspective. As typically recommended by the fire protection manufacturer, non-gravity load carrying attachments be fire proofed to the same level as the protected structural elements.					
1) Please provide the UL assembly for the rod fireproofing. 2) Please confirm that the rods will be Sprayed Fire Resistive Materials SFRM-1 to match the column fireproofing system.		Confirmed.

	<p>spacing from 10 feet on center to 5 feet and less may also cause problems such as communication between piles.</p> <p>Significant additional costs and schedule delays will result should DTDS have to change our procedure and/or equipment to drill through buttress pile concrete and/or remediation grout. Delays will also be realized should DTDS have to change our drilling sequence to mitigate problems that may arise from the reduced pile spacing.</p> <p>Should detrimental issues arise, DTDS proposes to drill, install, and grout micropile dowels in the center of the existing buttress piles as an alternative to drilling adjacent to buttress piles. A micropile dowel could take the place of a micropile as necessary. A dowel would consist of the same #20 Gr. 80 reinforcing bar used for the micropiles. A six- inch diameter, 20 foot long hole would be drilled in the center of the buttress pile. An additional drill rig will be required to perform the drilling. A 25' bar would be set with centralizers and tremie grouted with the same grout used for the micropiles. Based on an assumed minimum Buttress pile concrete and grout strength of 3,000 psi, the developmental length (ld) of a #20 bar is 182.5 inches (15.2 feet). 20 feet embedded would develop the yield strength of the #20 bar (393 kip) and exceed the design micropile load of 308 kips.</p> <p>$ld = (80,000 \text{ psi} / (20 * \text{sqrt}(3000 \text{ psi}))) * 2.5 \text{ in} = 182.5 \text{ in}.$</p> <p>Accepting this alternative would mitigate delays and extra costs that will result should buttress pile concrete and/or grout be encountered while drilling adjacent to these piles.</p> <p>Please confirm that this alternative micropile procedure is acceptable.</p>

T-1117	BGP - Geothermal Trench Backfill and Compaction Requirements in Zones 3 & 4		Closed	01/16/2014	01/26/2014	01/24/2014	Potentially <input type="checkbox"/>
From: Webcor Construction LP		Jackson Tukuafu	To: Turner Construction Compan	PHIL MILITELLO			
Co-Author: Webcor Construction LP		Jackson Tukuafu					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
<p>There are areas in Zone 3 (and perhaps in Zone 4) that Geothermal trenches will be trenched through that Arup identified as unsuitable soils (high in bay mud) , which is of such nature as to be incapable of being compacted to specific density using ordinary methods of optimum moisture content. Additionally, there are areas in Zone 3 (and perhaps in Zone 4) that Geothermal trenches will be trenched through that Arup identified as in-situ suitable, which are incapable of being compacted.</p> <p>- Spec. 23-57-34 Ground Loop Heat Exchanger states "placing and compacting soils the loop installation, the trenches shall be back filled per IGSHPA with loose soil minimizing air gaps or voids and then marked with warning tape. After bedding around the loop and header piping, the backfill shall be watered to settle the loose soil to ensure there are no air gaps along the length of the pipe."</p> <p>- Spec. 31-23-34 Trenching and Backfill states "All backfill</p>				<p>George Metzger 1/23/2014 RESPONSE: Backfill with Native Soil to replace the unsuitable material is acceptable to WSP. Reference RFI 356.1 for relaxation of wetting requirement.</p>			

<i>Number</i>	<i>Subject</i>	<i>Status</i>	<i>Date Created</i>	<i>Date Required</i>	<i>Date Answered</i>	<i>Cost Impact</i>	<i>Proceed</i>
	<p>will be placed in horizontal layers not more than (8) inches thick before compaction, and each layer shall be satisfactorily compacted by mechanical means. Flooding or jetting will not be allowed. Compact soil to not less than 95 percent maximum dry density according to ASTM D1557.</p> <p>Is the following procedure acceptable for placing and compacting soils in the Geothermal Piping trenches in the areas with unsuitable soils (high amounts of bay mud), and suitable in-situ non-compactable as identified by Arup?</p> <ol style="list-style-type: none">1. After the Geothermal piping is installed and tested, these trenches will be filled with available approved suitable materials from onsite excavations or 300 psi CLSM as approved by the TJPA Rep.2. Geothermal piping trenches soils will be placed per Geothermal Spec. 23-57-34 Ground Loop Heat Exchanger which states "the trenches shall be back filled per IGSHPA with loose soil minimizing air gaps or voids and then marked with warning tape."3. Soil bedding and backfill around the loop and header piping, shall be placed to ensure there are no air gaps along the length of the pipe (water will not drain well, so will be used sparingly and only if necessary).4. All backfill will be placed in horizontal layers not more than (8) inches thick before compaction, and each layer shall be satisfactorily compacted by mechanical means (e.g. pogo stick/power puff tools) .5. Flooding or jetting will not be allowed.6. Soils will be compacted using steps above and best construction practices.7. Trench fill and adjacent areas will not be tested to verify the "not less than 95 percent maximum dry density" according to ASTM D1557. The TJPA Reps will not perform density and moisture content tests specified in the Trenching and Backfill Spec. 31-23-34. In lieu of testing, the TJPA Geotechnical Inspection and Testing Agency will perform full time inspection of the fill and compaction process to verify procedure steps are followed, the suitability of the fill and that soils compaction is achieved.

T-1118	BGP - Knockout Wall Neoprene Pad Width Clarification	Closed	01/17/2014	01/27/2014	01/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Compan PHIL MILITELLO Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Please refer to attached drawing S1-3204. Details 1, 2, and 4 on S1-3204 call out a 1/4-inch x 8-inch continuous neoprene pad to be placed between the shear wall pilaster and the knockout wall. The bearing surface of the pilaster is 12-inches, so the 8-inch pad will no adequately cover the bearing surface. Please confirm that this is the designer's intent. If not, SCCI proposes using a 1/4-inch x 12-inch continuous neoprene pad to provide more adequate coverage of the bearing surface.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The following options are acceptable: 1. As per design documents, an 8" continuous neoprene pad may be used. Center the pad on the supporting corbel. The Knockout wall concrete shall not be permitted to directly contact the supporting corbel concrete. As part of contractor's means and methods, 2" foam (or equivalent) strips may be used on either side of the neoprene pad to prevent concrete to concrete contact. 2. A 12" continuous neoprene pad may be used.				
T-1119	BGP - Column Steel Jacket Details	Closed	01/17/2014	01/27/2014	01/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Compan PHIL MILITELLO Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Please refer to submittal package TG0600-905 and RFI T-0693 regarding the "steel jackets" that certain columns are to receive. 1. Please clarify "Coordination" notes shown on attached excerpt drawing S101.0 of TG0600-905 by providing applicable details that show the steel jackets. The applicable architectural drawings currently in the Construction Drawing Set dated 07/17/2013 - Issued for Construction do not show steel column jackets. However, similar drawings issued in Issued For Bid - Addendum #1 dated 12/13/13 (not issued to construction) appear to show column jacket and details. See attached drawing A1-2103 from each drawing update set. 2. Please provide further details that SCCI should be aware of when it comes to these steel jackets and columns to be constructed, including but not limited to, items embedded in the columns that will utilized for steel jacket construction			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 1/27/2014 RESPONSE: 1. Contractor to coordinate surface mounted boxes and embedded conduit routing for columns that receive steel jacketing (ref to TG0600-905 and RFI T-0693). 2. Refer to detail 6/S1-3503 for structural details pertaining to steel jackets issued with ASI 106 dated 09/20/2013. Refer to the following SKA-2922 to SKA-3003 for locations and details of columns with steel jacketing.

T-1120	BGP - Horizontal Hooks in Shear Walls 2nd Lift and Above	Closed	01/17/2014	01/27/2014	01/20/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Compan PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please refer to attached drawing 4/S1-3261. Please confirm if it is acceptable to replace the shear wall horizontal bars which have a 90-degree hook with a 180-degree hook. See attached drawing for more details. This change will only be applied to the second lift of shear walls and above (approx. EL. -20.56 and above).			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 1/20/2014 RESPONSE: Contractor proposal of 180deg hooks for shear wall horizontal bars is acceptable.				
T-1121	SSS - Bus Deck Level Edge of Slab Plate Clarification	Closed	01/17/2014	01/27/2014	01/31/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Compan PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: See attached CD RFI 233 SK1 to SK3 for reference. After reviewing the structural steel documents for TG 07.1R, a detail is not provided for deck support around the bus deck level cast nodes. Please confirm that the intent is to utilize, 12 gauge sheet metal, in these areas as shown on 1/S1-5001. The sheet metal will follow the contour of the cast node, providing a 1" gap per A1-2893 (SK2).			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Architectural slab edge plans A1-2892 to A1-2897 layout all the locations and provide the slab edge heights of the slab edge plate. Additionally detail 4/A1-8376 shows the typical cast node slab edge plan detail and it references section details 4/A1-8675, 3/A1-8376 and 2/A1-8376, which show the conditions around the cast node and gap required - see markup on enclosed CD RFI 233 SK3. Closure plate (curved at the back of the cast node) may be a 12 gage sheet metal, but it should be welded to the end of edge angle at the seam. The edge angle shall be extended to meet with the curved closure plate.				
T-1122	SSS - Edge Plate Detail at Steel Drag Beam	Closed	01/17/2014	01/27/2014	02/03/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Compan PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger

	Z angle is ½". 1.) Please advise if it is acceptable to use the detail approved in RFI T-1032 (for sloping conditions), shown on SK RFI 266.1 SK1, at all locations where "S" is less than 4". 2.) Please advise if it is acceptable to use a Z angle at all locations where the "S" dimension is greater than or equal to 4" and the required thickness is ½", in lieu of the bolted connection. 3.) Please advise if it is acceptable to use the detail approved in RFI T-1032 (for sloping conditions), shown on SK RFI 266.1 SK1, at locations where "S" is greater than or equal to 4" and the required thickness is 3/8", in lieu of the bolted connection. 4.) Note that based on the bending radius and edge distances shown in 4/S1-5022, the minimum height for bolted connections is 4 ¾" as indicated on CD RFI 215.1 SK1 attached. If the bolted connection is required, please verify the maximum height "S" for the bent plate detail in 4A/S1-5022 may be increased to 4 ¾".						
				2). Z section is acceptable, but it limits any field adjustment that the bolted connection can provide. It is Skanska's decision which way is preferable. 3). See Response to #2. 4). Angles can be used in lieu of bent plates to address the clearance issue raised. Also see response to #2 & #3.			

T-1122.1	SSS - Edge Plate Detail at Steel Drag Beam	Closed	02/05/2014	02/15/2014	02/14/2014	Potentially	<input type="checkbox"/>
From:	Webcor Construction LP	Gregory Kemerer	To:	Turner Construction Compan	PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>	
Detail 4 on S1-5022 calls for a double bent plate for slab support where "S" is less than or equal to 3". However, the minimum overall height for a double bent angle of the required thicknesses is 4" and the minimum overall height for the bolted connections is 4 ¾". Further, it has been determined that the minimum overall height for the detail proposed for sloping conditions is 2".						1). As noted in the response to RFI T-1122.0, the weld of the bent plate to the horizontal plate shall be a continuous 1/4" double fillet weld, not a 3" long weld at 12" on center.	
For instances where the difference between the underside of the slab and top of beam is less than 2", please confirm it is acceptable to use an angle as depicted in CD RFI 279 SK2. Otherwise, please provide an alternate detail for this condition.						2). For the instance where the difference between the underside of the slab and top of beam is less than 2", follow the detail in the attached sketch.	
A sample location of this condition has been included in

1) Confirm the noted are acceptable location dimensions for the headed studs per 7/S1-3702 SIM.				2). Confirmed.			
2) Confirm the noted are acceptable location dimensions for the 2" dia. holes per 7/S1-3702 SIM.				3). Center of the 2" holes is 3'-3 1/2" below top of steel at the beam end, and 3'-0" below top of steel near the end of concrete beam.			
3) Supply the location of the 2" dia. holes from top of girder as shown.				4). Confirmed.			
4) Confirm the headed studs and 2" dia. holes may be moved as necessary to avoid fouling the stiffeners.							
T-1124.1	SSS - Plate Grade Substitution	Closed	02/21/2014	03/03/2014	03/03/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Compan PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
In response to RFI T-1124 & the Structural Coordination Meeting on February 6, 2014:							
The moment frame columns and light column base plates are identified on the structural drawings for TG07.1R as material grade ASTM A572 Grade 50. Please confirm that it is acceptable to use ASTM A572 Grade 42 modified to achieve a minimum specified yield strength of 50 ksi for all plate exceeding 4 1/2" in thickness at these locations.						Acceptable to use ASTM A572 GR42 with 50 ksi min yield strength for moment frame columns. The light column base plate was already called out as ASTM 572 GR42, therefore 42 ksi yield is acceptable as indicated in contract drawings.	
Please note that the mill certification will read ASTM A572-Gr 42 but the reports will indicate a yield strength of 50 ksi.

T-1141	SSS - AECS at Grand Hall and Shaw Alley Bridge	Closed	01/27/2014	02/06/2014	02/12/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Compan PHIL MILITELLO		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: 1. Reference drawing A1-8661, issued for construction, which appears to have information missing for the Grand Hall AECS requirements. Please reference details E, F, and G on A1-8661 attached and clarify the AECS requirements at the noted locations. 2. Detail C on drawing A1-8661 indicates that the HSS 16x16x5/8" member supporting the Shaw Alley Bridge is AECS. However, details C and D on A1-8662 indicate that the HSS 16x16x5/8" member, BU girder, and HSS 5x1/2" posts at the Shaw Alley Bridge are to receive IFRM-1. Please clarify the coating requirements at the Shaw Alley Bridge.		SUGGESTION:		ANSWER: 1. Refer to attached drawing A1-8661. Details E, F, and G are not used, there are no additional AECS requirements. 2. Correct, Detail C on drawing A1-8661 identifies AECS requirements for the Shaw Alley Bridge. To clarify, IFRM-1 coating as indicated on details C and D of sheet A1-8662 for the HSS member, BU girder and HSS posts are the required coatings on these structural members.		Accept Suggestion: <input type="checkbox"/>

	<p>Please refer to drawing E1-2026.</p> <p>In Zone 4, an overlapping series of concrete buttress piles were poured along the North Wall of the excavation, extending towards the south wall.</p> <p>In this area, the final grade of the excavation will be the concrete buttress piles. The attached photo shows the buttress pile layout with the grounding ring/ground rods overlayed on it. The ground rods need to be driven 10' deep. Please confirm that the rods which conflict with the buttress piles could be moved away from the north CDSM wall and to the void area of the buttress piles as shown in the attached SCCI sketch SK-SCCI_RFI421.</p>				<p>RESPONSE</p> <p>George Metzger</p> <p>1/31/2014</p> <p>WSP does not object to moving ground rods inward; however, contractor shall maintain separation between ground loop and geothermal piping. The photo submitted does indicate this separation.</p>		
T-1143	BSE - Reduced Micropile Testing Requirement in Unsuitable Material Areas	Closed	01/27/2014	02/06/2014	01/28/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Stephanie Azzolino	To: Turner Construction Company		PHIL MILITELLO	Answered By: Turner Construction Company Jack Adams	
Co-Author: Webcor Construction LP		John Reynolds					
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Balfour Beatty Infrastructure Inc. (BBII) has experienced complications with micropile testing in geothermal field 11 due to unsuitable material. In an effort to minimize additional cost and maintain schedule, Webcor/Obayashi Joint Venture (WOJV) requests the testing requirement be reduced in unsuitable areas to test one (1) in five (5) micropiles. To date, all micropiles have passed the testing requirement. WOJV proposes to test seven (7) of the remaining 31 micropiles in geothermal field 11. The micropiles selected to be tested will be approved by a TJPA representative.		No. Per discussions with TJPA, AAI and T-T the following response is provided.					
		The contract Specification Section 31-63-33 Drilled Micropiles is clear; All Micropiles shall be proof tested. Paragraph 3.2H Proof and performance Testing in accordance with ASTM D3689 "Standard Test Method for Individual Piles Under Static Axial Tensile Load" SubParagraph 8 states "Proof tensile load testing shall be performed against reaction piles or cribbing in accordance with ASTM-D3689. Existing footings, piles, or other structures shall not be used as reaction points for load testing. An adjacent production micropile in a group may be used as reaction pile. If cribbing is used, the contractor's attention is drawn to the presence of poor bearing soils and underground utilities, which may require special measures to protect against settlement and damage."					
		Also; Requests such as these should be accompanied by the [Drilltech] Pile Test Engineer's written recommendation.

	Emergency Equipment Storage.						
	DWG E1-4103 indicates the F15 fixtures in Zone 3 up to Gridline 9 are to be fed from Panel EDMH-B1-A-EMG in Electric Room B1496. This is the same panel as indicated in Zones 1 and 10, but a different room is specified. Room B 1496 is not shown on the drawings.						2. Sheet E1-4103 has been revised. Refer to attached sheet dated 01/23/2014 for revisions. Per circuiting note on E1-4103, the type F15 fixtures up to gridline 9 on the Train Platform Level are to be fed from Panel EDMH-B2-A-EMG-1 located in Electric Room B2280 on Train Platform Level.
	DWG E1-4103 and DWG E1-4104 indicate the F15 fixtures in Zone 3 past Grid Line 9, and the F15 fixtures in Zone 4 are to be fed from Panel EDMH-B1-B-EMG in Electric Room B1322. SKE-02-3201 issued with ASI 104 does not have a Panel EDMH-B1-B-EMG in Rm B1322.						3. Sheets E1-4103 and E1-4104 have been revised. Refer to attached drawings E1-4103 and E1-4104 dated 01/23/2014 for revisions. Type F15 fixtures in Zone 3 and Zone 4 are to be fed from Panel EDMH-B1-B-EMG located in Electric Room B1325 on Lower Concourse Level.
	DWG E1-4105 and DWG E1-4106 indicate the F15 fixtures in Zone 5 and Zone 6 are to be fed from Panel EDMH-B1-C-EMG in Electric Room B1541. Plan sheet E1-3204 Detail 6 referenced does not seem to be included in the contract drawings.						4. Sheets E1-4105 and E1-4106 have been revised. Refer to attached sheets E1-4105, E1-4106, and E1-3204, Detail 6 dated 01/23/2014 for revisions. F15 fixtures in Zones 5 and 6 are to be fed from EDMH-B1-C-EMG in Electric Room B1563 on Lower Concourse Level.
	DWG E1-4107 indicates the F15 fixtures in zone 7 are to be fed from EDMH-B2-D-EMG in Electric Room in Electric Room B1644 in Lower Concourse. Per the "Equipment Naming" char on DWG E1-0010, the B2 in the panel name indicates that it is on the Train Platform Level. However, the room number indicates that it is indeed on the Lower Concourse level.						5. Sheet E1-4107 has been revised. Refer to attached sheet dated 01/23/2014 for revisions. Type F15 fixtures are to be fed from Panel EDMH-B1-D-EMG located in Electric Room B1644 on Lower Concourse Level.
	1. Please provide an enlarged room plan showing the location of each of the following panels: EDMH-B1-A-EMG, EDMH-B1-B-EMG and EDMH-B1-C-EMG						6. Refer to attached drawings dated 01/23/2014 for enlarged plans requested (Panels clouded in blue). EDMH-B1-A-EMG is now EDMH-B2-A-EMG-1.
	2. Please confirm that panel EDMH-B1-D-EMG is in ROom B1644 per detail E1-3203 (dated 8/30/12) on that the panel was incorrectly labeled EDMH-B2-D-EMG on E1-4107						7. Refer to revised sheets E1-3203 and E1-4107. Revised sheets dated 01/23/2014 are attached

	Ref: E1-2202, E1-3201 Electric Rooms B1222 and B1223 on plan sheet EI-2202 (Issued in ASI 104) and rooms B1560 and B1561 on plan sheet EI-2205 (Issued in ASI 104) do not match the enlarged room plans shown on EI-3201 (IFC) and EI-3202 (IFC) respectively. Please issue revised electrical drawings including, but not limited to EI-3201 and EI-3202.						
					The requested updated drawings will be issued in a forthcoming ASI 0112 scheduled for issue on 02/24/14.		

T-1145	BGP - Plumbing and Floor Drawing Detail Discrepancies		Closed	01/27/2014	02/06/2014	02/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Jackson Tukuafu	To: Turner Construction Compan		PHIL MILITELLO			
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto								
REQUEST:			SUGGESTION:			ANSWER:		
Please refer to attached drawing A1-2224, A1-2844, A1-2225, A1-2845, A1-2846, A1-2226 and excerpt from spec section 22 05 30, 3.2.						Accept Suggestion: <input type="checkbox"/>		
Details for plumbing and floor drains in the drawings for the Lower Concourse have the following discrepancies:						1. 2 PLBG penetrations on A1-2224 (refer to SKA-3021) have been removed and are coordinated with A1-2844 (refer to SKA-3029).		
1. Drawing A1-2224 left of gridline (GL) 13 between GL B - GL C shows two plumbing details and in drawing A1-2844 these plumbing details are not shown						2. PLBG annotation on A1-2225 (refer to SKA-3022) revised to FD and is coordinated with A1-2845 (refer to SKA-2845).		
2. Drawings A1-2845 and A1-2225 between GL 22 - GL 23 and GL G - GL H where A1-2845 shows a plumbing (PLBG) detail and A1-2225 shows a floor drain (FD) detail						3. PLBG annotation on A1-2226 (refer to SKA-3023) revised to FD and is coordinated with A1-2845 (refer to SKA-2845).		
3. Drawings A1-2846 and A1-2226 between GL 29 - GL 30 and GL G - GL H where A1-2846 shows a plumbing (PLBG) detail and A1-2226 shows a floor drain (FD) detail						4. PLBG annotation on A1-2225 (refer to SKA-3022) is coordinated with A1-2845 (refer to SKA-2845).		
4. A plumbing detail shown in drawing A-2225 on GL G between GL 24 - GL 24.9 is not shown in drawing A1-2845.						5. For Pipe Sleeve Schedule - Refer to PSK-0051.		
5. Furthermore, the PLBG callouts in all the Architectural and Structural drawings do not include the size for each pipe or sleeve. Plumbing sleeve details in spec section 22 05 30 - 3, do not state the required clearance spacing needed.						For updated Lower Concourse plans, refer to attached SKAs:		
						SKA-3011 to 3018 - B1 Zone Plans,		
						SKA-3019 to 3026 - B1 Wall Plans,		
						SKA-3027 to 3034 - B1 Slab Edge Plans.

Co-Author:							
REQUEST: As discussed in the 3.24.2014 submittal TG0600-121 comment review meeting, please issue current design drawings P1-2202 through P1-2211 so that the size of plumbing pipes that pass through the concourse slab can be ascertained for the purposes of sizing the plumbing penetration sleeves per PSK-0051 (issued in RFI 1145rev0). The -8.30.2012 Issued for Construction - Below Grade Package- P1-2202 through P1-2211 pipe plans do not match up to the current sleeve layout as shown in sheets A1-2842, A1-2843, A1-2844, A1-2845, A1-2846, A1-2850 & A1-2851. The size of the Concourse level slab sleeves required in the above mentioned A1-2800 series drawings cannot be determined without the current coordinated plumbing design.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Refer to ASI 112, ASI 113 and Addendum #2 for the most current plumbing drawings as of this date. RESPONSE: 3-28-14 Judy Long: Refer to the attached ASI 112, ASI 113 and Addendum #2 plumbing drawings for the most current plumbing drawings as of this date. These drawings will be issued on April 1, 2013 as "Issued for Construction" documents.		
T-1146	SSS - W16 connection fouls W33 connection at grid 14F	Closed	01/27/2014	02/06/2014	02/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: On S1-2304 there are W16's centered under CMU wall connecting into a W40 along grid F near grid 14. The drag connection for the W33 connecting into the Transfer Girder and the W16 connections will foul each other. Please verify the following: 1. Per the schedule on 1/S1-5010 the W16 connections should be three bolts. Please verify it is acceptable to reduce the bolts from three to two bolts? 2. Please verify it is acceptable to move the drag connection down to clear the two bolt W16 connection? 3. Please verify coping the bottom flange of the W16's to clear the W40 drag connection is acceptable?			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Acceptable. 2) Acceptable. 3) Acceptable.

	centrifugal cast process as defined in the project specifications section 05 15 22. Please see attached letter of compliance from the pipe manufacturer confirming chemical composition to meet mechanical requirements. Please confirm this is acceptable.					Contractor provided that all mechanical properties (yield strength, tensile strength, elongation, CVN toughness) of the supplied material meet those outlined in specification 05 15 22 (Centrifugally Cast Steel Pipes). However, the Contractor assumes all responsibility for ensuring that the material is adequate from a weldability perspective. Since this is not a prequalified base material, welded joints will need to be qualified per AWS. We recommend that joint qualification is performed in advance (before pipes are manufactured) in order to minimize risks related to weldability and joint adequacy.

There are 5 grounding PUC risers terminating in the SFPUC Grounding EAST room B1441, however Detail 4 on E 1-6006 indicates seven(7) ground rod risers which are to be welded to the mesh ground grid. Please confirm the number of grounding risers in the East room B1441.

SUGGESTION:**ANSWER:****Accept Suggestion:** ☐

Five (5) grounding risers are required to be terminated within east SFPUC room. This clarification was included in detail 5/E1-3212 within Issued for Bid package - Addendum #1, dated 02/21/2014

T-1156	BGP - Lighting and Telecom Layout Drawing Discrepancies (A vs E)	Closed	02/07/2014	02/17/2014	02/19/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Claude Titcher	To: Turner Construction Compan	PHIL MILITELLO	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author:**REQUEST:**

There are some discrepancies between the Train Platform Level Lighting Plans(E Drawings) and the Lower Concourse Level Slab Edge Plans(A Drawings). Please provide direction and revised drawings for the following instances.

1) The Lighting Plans show two exit signs in close proximity, yet on the Slab Edge Plan only one EJB layout is shown:

AI-2844/EI-4104 at approximate Grid Lines:

-14.5/F
-16.6/A.6
-16.7/F

AI-2850/EI-4110 at approximate Grid Lines:

-2.8/V.8

2) The Slab Edge Plan shows EJB layout, yet there are no fixtures on the Lighting Plan:

AI-2842/EI-4102 at approximate Grid Lines:

-1.6/C.5
-2.7-3.5/C.3 (Three EJBs in a row)
-4.5/C.3 (Two EJBs)

AI-2846/EI-4106 at approximate Grid Lines:

-25.7/F.I
-26.6/C.5
-26.7/A.6

3) The Lighting Plan shows fixtures, yet there is no layout on the Slab Edge Plan:

AI-2845/EI-4105 at approximate Grid Lines:

SUGGESTION:**ANSWER:****Accept Suggestion:** ☐

Please refer the following SKAs, ESKs and TE1 pdfs:

SKA-3059 to SKA-3066 for Lower Concourse Slab Edge Plans

T-1161	BSE- Replacement and Removal of Waler Lookouts GL 9.5 West	Closed	02/11/2014	02/21/2014	02/18/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Robert Kjome	To: Turner Construction Compan		PHIL MILITELLO	Answered By:Turner Construction Comp Stacy Wilson	
Co-Author: Balfour Beatty Infrastructure, Inc.		Danny Walsh					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Due to a revision in the concourse slab elevation, waler lookouts from gridline 9.5 west must be removed to allow for construction of the slab. BBII's EOR for the internal bracing has approved the use of additional 6x6x3/8" angle braces to replace the lookouts in conflict. Reference the attached RFI response, supplemental calculations, and details from PB&A.				The following is URS' comments on the PB&A's response to the RFI.			
Please confirm it is acceptable to proceed with removal of the lookouts per PB&A's RFI response.				It is not acceptable to proceed with removal of the lookouts per PB&A's RFI response until the following items are resolved. Please revise and resubmit the RFI response with the following items addressed.			
				1. The drawings do not show the sequence of installing new items and removing existing items. The construction sequence is required to ensure proper load transfer from removing elements to new load-carrying elements. Information provided for construction must clearly identify details and sequencing. There should be nothing left to interpretation by field personnel. This includes all detailing as well as full identification of what is to be installed and where, and what is to be removed, with clear identification of what is required prior to removal, and when (relative to installation of new bracing elements). The specific degree of finalization for installation of the new installed bracing elements prior to removal of lookouts is required. This includes identification of the specific inspections required to be complete prior to allowing any removal of existing lookouts to occur.			
				2. For welding of an angle brace to a waler, please show clarification of welding to provide full compliance

	<p>beam away from the pipe strut. The angle brace is move from the waler beam flange for accessibility per sketch SK-1 attached.</p> <p>3. Either an identical WF beam or an angle brace as proposed for a replacement element of the existing lookouts is to be attached to WF soldier pile beams above a waler according to the RFI. However, a number of soldier piles already connect angle braces, and those soldier piles with an existing brace may have a difficulty to accommodate an additional WF beam or angle. Lookouts were placed at least 4 per waler and one on each side of a strut per the drawings and calculations, and the same number and locations of replacement elements are required.</p> <p>Please verify the existing angle braces are to be used as a part of the lookout replacements or the same number of new angle braces as the existing lookout beams are to be added in addition to the existing angle braces. Please verify the proposed replacement elements can be installed without a conflict of existing angle braces.</p> <p>PB & A response: At least the same number of replacement WF beams as that of the existing lookouts shall be installed. For the replacement angle option, minimum 4 additional angle braces excluding the existing ones are required.</p> <p>Please confirm it is acceptable to proceed with removal of the lookouts per PB&A's RFI response. Note that the RFI response provided by PB&A has been amended to address comments from urs in response to RFU T-1161.</p>

Please reference attached sketch SK1:				The weld should be a single bevel groove weld. The detail shown on attached sketch CD RFI 183.2 SK1 will not work because it does not include the 3/4" plate shown on 3/S1-7630.			
The detail on 3/S1-7630 calls for a flare bevel complete penetration weld. Skanska believes that this is not a flare bevel condition and proposes the use of a CP weld with a ¼" root and 30 degree weld prep with full backing plate.							
Please confirm this is acceptable.

Per field discussions with ARUP, Airco is to hand tamp (not use the jumping jack) the geothermal trench only to ensure "tight" compaction. ISI will be onsite to visually verify the compaction efforts.			ARUP Response:				
Per field walk on 02-13-14 ARUP has classified the top portion of Geothermal Field #10 and #11 as oversaturated/unsuitable/partially contaminated due to the inclement weather (rain from 02.06.14 through 02.09.14). It is recommended to scrape off the top layer immediately prior to the rat slab rebar install.			Contractor should first perform the required treatment of wet soils resulting from unfavorable weather conditions specified in Spec. 31-23-34.				
Please confirm it is acceptable to pour the rat slab in this area thicker to compensate for the scraped off unsuitable material.			It is acceptable to pour the mud slab in this area thicker to compensate for the scraped off unsuitable material. However; Geothermal Piping must have suitable soils cover of minimum of 6" above top of geothermal piping within header trenches/trenches.				
			Adamson Associates Response:				
			CMGC shall verify the waterproofing sub-contractor, waterproofing manufacturer, & sub-contractor's waterproofing designer approve the proposal in this RFI to confirm the mud slab will provide a suitable installation surface for the waterproofing system.

Skanska proposes the erection aids detailed in attached sketches to position 8 No. W10 system support posts. Please confirm no exceptions are taken to hole locations and quantity drilled to accommodate these erection aids.

SUGGESTION:**ANSWER:****Accept Suggestion:** ☐

TT takes no exception to the proposed erection aids as shown in the sketches attached to this RFI.

T-1178	BGP - Concourse Typical Blockout Detail at Deck Penetrations	Closed	02/19/2014	03/01/2014	02/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Claude Titche	To: Turner Construction Compan	PHIL MILITELLO	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author:**REQUEST:**

Please see attached concourse deck typical blockout detail at pile penetrations.

SCCI proposes to construct the temporary pile penetrations as shown in the attachment.

Please confirm this is acceptable.

SUGGESTION:**ANSWER:****Accept Suggestion:** ☐

The accompanying calculations only include the required development lengths for the additional bars placed with couplers. The additional bars are placed at a lower level due to the form saver that reduce slab flexural capacity, therefore, additional bars are needed to make up for the reduced flexural capacity. A calculation justifying the number of additional bars required shall be submitted as a shop drawing for review.

For the case when the blockout is unfilled, the calculation was incorrectly done assuming #6 bar for calculating the moment capacity instead of #5s actually specified for RCS1. Update this calculation and resubmit for review, or clarify that shoring will be required while the blockout is unfilled.

Note that the application of the blockout detail at the specific field condition shall be incorporate into all applicable reinforcing submittals. Additionally a complete set of calculations addressing all temporary blockout conditions is required for submittal.

T-1182	BGP - Mat Slab - Top Rebar Splice Location at Light Tower Anchor Bolt	Closed	02/21/2014	03/03/2014	03/28/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: See attached sketches. To accommodate the installation of Light Column Anchor Bolt assemblies, SCCI proposes to locally move the splice location of the top mat slab rebar towards the West. Please confirm that this is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> It is acceptable to locally move the top reinforcing lap splice west as described in the RFI. Along the bars affected it is also acceptable to maintain a lap splice in the original plan location to avoid excessive lengths of bar to the east.		
T-1183	SSS - Interference at GL15	Closed	02/21/2014	03/03/2014	03/04/2014	Potentially	<input type="checkbox"/>

Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: On the attached sketches CD RFI # 298 SK1 & SK2 the double angle connections per S1-5010 are not possible at the noted location as the W16 & W24 are off-set 2 7/16" from each other. Confirm it is acceptable to supply full depth shear plates as shown with plate thickness, welding and bolts per S1-5011			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Not acceptable. Provide double angle connection per 9/S1-5010 at the W24 beam. Provide shear plate connection at the W16 beam per 2/S1-5011 with 6 bolts (2 vertical rows of 3 bolts each).		
T-1184	SSS - Steel Connection Interference GL 15D	Closed	02/21/2014	03/03/2014	03/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: At grid line D/15, the W40 to column connection will conflict with the W16 connection to the W40 (SK2). Please confirm it is acceptable to connect the W40 (SK1 & SK2) to the indicated column as shown, using 3 rows of 4 bolts in lieu of the 2 rows of 6 bolts per 5/S1-4206.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Not acceptable. Provide a shear plate connection per 1/S1-5011 at the W16 beams that are next to the W40 drag connection on both sides of GL D. Drag connection at the W40 beam shall be per 5/S1-4206 as noted on construction drawings. Note that the W40 beam is framed into the transfer girder and not a column as stated in the RFI.

	REQUEST: On the attached sketches CD RFI # 300 SK1 & SK2 the 11 bolts per 2/S1-5011 will not fit in a single row in the beams. Confirm it is acceptable to locate the bolts as shown at 13 locations along Grid line 19.1.	SUGGESTION:	ANSWER: Confirmed	Accept Suggestion: <input type="checkbox"/>			
T-1186	SSS - W14 Connection Detail Between 19.9 & 20.1	Closed	02/21/2014	03/03/2014	03/04/2014	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Stephanie Azzolino	To: Turner Construction Compan PHIL MILITELLO	Answered By: Adamson Associates, Inc. George Metzger				
	Co-Author: Skanska USA Civil West California Dis Ryan Clayton						
	REQUEST: See attached sketches CD RFI # 301 SK1 & SK2 for items 1 & 2: 1) Supply a connection detail for the noted W14x61 to the Transfer Girder (both ends). 2) Confirm the W14x61 is located at elevation T/SLAB 18.22" minus S1 slab (7 1/2") per S1-2305.	SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>	1) The T/steel of the W14 beam shall be 16' - 6 1/2". Provide connection to the transfer girder per 9/S1-5010 except that there is no WT at this beam. 2) See response to 1). Note that the beam is supporting W-3 anchorage cables and not the composite deck. The t/steel of the beam does not need to be flush with the bottom of the slab.		
T-1186.1	SSS - W14 Connection Detail Between 19.9 & 20.1	Closed	06/11/2014	06/21/2014	06/25/2014	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Gregory Kemerer	To: Turner Construction Compan PHIL MILITELLO	Answered By: Adamson Associates, Inc. George Metzger				
	Co-Author: Skanska USA Civil West California Dis Ryan Clayton						
	REQUEST: As per the response to RFI T-1186 item #2, the W14 beam is supporting W-3 anchorage cables and not the composite deck. Please confirm the (6) shear studs as indicated on the framing plan drawings are not required as the beam T/Steel elevation is 4" below the composite deck. If required, please provide details for the composite deck at this location.	SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>	Confirmed that the shear studs are not required at the W14 beams indicated in the RFI.

T-1188	SSS - Finish Requirements at Basket Columns	Closed	02/21/2014	03/03/2014	03/03/2014	Potentially	<input type="checkbox"/>
<div><div><div><div><div>From: Webcor Construction LP</div><div>Stephanie Azzolino</div></div><div><div>To: Turner Construction Compan</div><div>PHIL MILITELLO</div></div><div><div>Answered By:Adamson Associates, Inc.</div><div>George Metzger</div></div></div><div><div>Co-Author: Skanska USA Civil West California Dis</div><div>Ryan Clayton</div></div></div><div><div>REQUEST:</div><div>A1-8660 conceptually indicates the boundaries of Category 2 and Category 3 AESS requirements for the basket columns. Based on this information and the documents provided for the TG07.1R trade package, SK1 has been provided to depict Skanska's understanding of the basket column finish requirements. Please review the following and confirm the various finish boundaries associated with the basket columns: 1) Confirm the Category 2 AESS boundary is from the Ground Level cast node to the end of the pipe column from the Ground Level to the Bus Deck Level as indicated in SK1. 2) Confirm the Category 3 AESS begins at the Bus Deck level cast node and extends through the pipe column to the Roof Level cast node as indicated in SK1. 3) Confirm the AESS boundary ends at the Roof Level cast nodes and that the Roof Level connection plates are to be delivered on site in the bare steel condition to receive SFRM. 4) Confirm the AESS boundary at the Bus Deck cast nodes extends to the cast node pad, with all shear plates, reinforcement plates, and perimeter beams to receive SFRM as indicated in SK1. 5) Confirm these boundaries can be typically applied to all perimeter basket columns at North, South, East, and West</div></div><div><div>SUGGESTION:</div><div></div></div><div><div>ANSWER:</div><div>Accept Suggestion: <input type="checkbox"/></div><div>1. Boundaries indicated on SK RFI 418 SK1 generally appear to be OK. However, this information should be confirmed by the CM/GC, as this RFI states "by others", which is information for the CM/GC. All this information should be clearly submitted for review in shop drawing submittal per drawings and specification 05 12 14 Paragraph 1.4. Additionally, see added notes on your SK RFI 418 SK1 attached. The elements currently highlighted in cyan color in the enclosed sketch should be AESS category 3 per A1-8660 and finished per specification section 09 97 16. 2. See response to item 1) above. 3. This statement is incorrect. Cast node connecting plates are AESS members that should be prepped and finished per specification section 09 97 16. SFRM fireproofing should be applied to perimeter beam per A1-8662 and details in sheets A1-8611 and A1-8612. 4. Please submit shop drawings submittals per specification 05 12 14 Paragraph 1.4 and as noted on item 1) above.</div></div></div>

T-1189	SSS - Missing Dimensions and Connection Details	Closed	02/24/2014	03/06/2014	03/06/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Compan PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:			SUGGESTION:		ANSWER:		
1) Work with SK2 and provide the missing dimension. 2) Detail 10/S1-7600 will not work as the noted posts are off-set from the beam. Provide a connection detail. 3) Supply the missing dimensions.					Accept Suggestion: <input type="checkbox"/> 1) Missing dimensions have been provided on the attached sketch SKS-0332. 2) Beams shall be centered on the highlighted posts and detail 10/S1-7600 shall apply as noted on the drawings. See SKS-0332 for reference. 3) See response to 1).		
T-1190	16" Slab Negative Moments at North-South Walls	Closed	02/24/2014	03/06/2014	02/26/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Compan PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Please reference attached Memo from seers consulting Engineer. There is a certain concern that once the LL= 150 PSF is imposed on the LCL deck there will be excess negative moments generated at the interface between weak axis of the supported slab and wall-spandrel beam. This may require additional top reinforcement in the weak axis of the one-way slab. Please confirm that there are no additional bars neded at the LCL spandrel/wall interface, and that loading Table from S-1002 applies.					Accept Suggestion: <input type="checkbox"/> No additional bars are required at the LCL spandrel/wall interface. Loading on S-1002 applies.

T-1194	BGP - Unmarked Members on S1-2203	Closed	02/24/2014	03/06/2014	02/25/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher			To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST: Reference attached CD S1-2203 It is unclear what the clouded member along the South foundation depicts. Is this member a wall of concourse beam? Please clarify, and provide dimensions, offsets, and type.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Clouded members are future walls, as defined by legend on S-0010. Wall size and layout is provided in architectural drawings. See A1-2223 for wall plan and A-0022 for wall type.		
<hr/>							
T-1194.1	BGP - Unmarked Member on S1-2203	Closed	02/27/2014	03/09/2014	03/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher			To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST: The response to RFI T-1194 conflicts with Submittal TG0600-364 response. RFI T-1194 response noted that the curved member shown is future CMU wall. However, response to TG0600-354 submittal noted that the member is Curved Concrete Beams- CB24, CB55 and CB15. Please clarify and provide latest drawings to reflect noted change shown in Submittal TG0600-354 if the curved member is a beam.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Response to RFI T-1194 does not conflict with notes on Submittal TG0600-364. Curved Concrete Beams CB24, CB55 and CB15 noted on submittal TG0600-364 are members to support future walls.		
<hr/>							
T-1194.2	BGP - Unmarked Member on S1-2203	Closed	03/10/2014	03/20/2014	03/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher			To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST: Refer to RFI's T-1194, T-1194.1, and ASI 106 S1-2203 Based on previous RFI T-1194-series responses SCCI still doesn't have contract drawing that depicts details of the curved members, deck beams along B65 (South spandrel beam). The most current version of S1-2203, that is available to SCCI does not specify beam type, nor radius of these curved members.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Per Structural Issues Review Meeting 03/13/2014, it was agreed that Sheet S1-2203 would not be re-issued in response to this RFI. The requested information is provided as follows: -Curved CB24 spans between GL 8 and GL 9 -Curved CB55 spans between GL 9 and GL9.9 -Curved CB15 spans between GL10.1 and GL11

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
<p>Where trestle piles protrude through the lower concourse deck, block-outs in the concrete slab will be installed and interrupted deck reinforcing will be spliced with formsavers. For bars near the extents of the trestle pile, please confirm if it is acceptable to shift the typical deck bars (#8 and #9) beyond the allowed placing tolerances to avoid interruption of the bar. If acceptable, please provide tolerances for shifting of the bar and minimum clear spacing between rebar similar to conditions listed in the response to RFI T-0631. See attached sketch for details.</p>			<p>It is acceptable to shift Lower Concourse reinforcing for the purpose of minimizing the number of reinforcing intersections with openings, block-outs, and other obstructions thereby minimizing the attendant cutting of reinforcing and the addition of trim steel. The following shifts are acceptable:</p> <p>1. Any single bar may be shifted to within a bar diameter of an adjacent bar so long as the resulting gap between any two adjacent bars does not exceed 12".</p> <p>2. Any group of bars may be uniformly shifted to within a bar diameter of an adjacent bar so long as the resulting gap between any two adjacent bars does not exceed 12".</p> <p>3. Any single bar may be removed from a module so long as it is replaced midway between adjacent modules and the resulting gap between any two adjacent bars does not exceed 12". An equivalent shift of two bars resulting in the same configuration is also allowed.</p> <p>4. Lap splices may be offset up to 6" provided that the resulting gap between any two adjacent bars does not exceed 12".</p>

	<p>in the attached sketch due to a shop fabrication error (see attached photo). Per AWS DI .1, the pre-qualified joint designation B-U2a-GF for FCAW allows a 65 degree groove angle with detail and fit up tolerances. The welded joint is approximately 15 degrees out of tolerance and is on one side of the sleeve only (2 joints per sleeve).</p> <p>Due to the member considered as non-structural, SCCI requests this joint to be acceptable as welded at this location only. SCCI will adhere to Spec Section 05 50 10 - 2.5.C.2 - "Weld mat foundation sleeve components continuously and test their water tightness by filling with water. Monitor water level for 48 hours minimum. Dry and correct faulty welds and re-test until proven watertight." Is this acceptable?</p>

T-1222	SSS - Filler plate weld access at CP2 connection	Closed	03/07/2014	03/17/2014	03/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Compan PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Please reference Details 4 and 7 on sheet S1-8001.			Welding of the vertical stiffener should be done prior to installing the filler plate, hence there should be no weld access issue.				
Detail 7 specifies a 1" thick filler plate between the beam web and the 2 1/2" thick backing plate. Detail 4 Section E notes 1" typical from the edge of the fill plate to the adjoining stiffener or beam web. 1" opening does not allow for adequate access to perform the welding.			The proposal to increase the 1" gap to 1 1/2" gap is acceptable.				
Oregon Iron Works(OIW) is requesting that all filler plates for CP2 connections have a minimum clearance of 1 1/2" from any adjoining edges. Additionally, OIW is requesting that this minimum clearance be applied to any similar areas that exhibit this limited access for welding.

	REQUEST: At SE401 see attached CD RFI # 317 SK1 to SK5 for items 1 to 7: 1) It is not clear what is meant by the noted slope designation. Confirm the roof slab slopes and the top of pad slab is EL 56'-11 per A1-2894 (SK3). 2) Confirm the noted dimension is 1'-2 3/4 per 8/S1-5004 (SK4). 3) This note is pointing to the edge of slab and giving a top of steel elevation. Work with SK5 and clarify. 4) Confirm the noted dimensions should read 1'-9 & 9'-2 per 1/S1-7113 & RFI T-0965 (SK251, CD 200). If not, clarify. 5) The noted HSS members are not shown on S1-2504 (SK1) or 3/S1-7113 (SK2) but this detail is referenced on both plans noted above. a) Please confirm the HSS members are required. b) If yes, supply the size. c) Supply the horizontal locations on plan d) Supply the elevation e) Supply connection details f) NOTE: the elevator post connections per 1/S1-7600 may foul the HSS members (work with SK5) 6) Confirm the slab edge plate terminates below the 10" raised slab as shown. 7) Confirm detail 1/S1-7600 with the full depth stiffener and kicker brace applies in the noted cases with no elevator post on top of the beam.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) The roof slab does not slope. T/Slab of the elevator shaft roof slab is 56' - 11" as noted on A1-2894. 2) Confirmed. 3) The note is pointing to the horizontal steel beams shown on 8/S1-5004 and notes the T/steel of these members. 4) No. The 10'- 3" and 1'-3" dimensions noted on A1-2894 are correct. The edge of slab for SE 401 at the top of the elevator shaft size increases at the top of the elevator shaft. Also see revised dimensions in the attached sketch SKS-0333. 5a) Yes, beams are required at these locations. These members shall be W18x50 beams. Refer to attached sketch SKS-0333. Note that there are four beams ,one on each side of the shaft. 5b) See response to 5a). 5c) Centerlines of the W18 beams shall be 3 ¾ from the edge of the elevator shaft opening (see note on sketch SKS-0333) . 5d) Elevation is 54' - 5" as noted on 3/S1-7113 (see note on sketch SKS-0333). Also see response to 3). 5e) Connection at the elevator machine support beams is shown in the attached sketch SKS-0333. 5f) See response to 7. 6) Confirmed. 7) The elevator rail posts shall be connected to the depressed W18x50 beams per 1/S1-7600. See detail in attached sketch SKS-0333.

T-1224	BGP - Concourse Top Bars at Column Embedded Plates		Closed	03/10/2014	03/20/2014	03/18/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Claude Titché	To: Turner Construction Compan		PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger		
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto								
REQUEST:			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>		
<p>Reference: SKS-0324 and SKS-0325</p> <p>Per SKS-0324 and SKS-0325, where the top bars for the concourse slab intersect type 1 B and 1 C embedded base plates, the bars are to be trimmed and supplemented with a matching slab dowel in MF beam layer 1. The typical deck top reinforcing consists of a continuous run of #9 bars @ 12" and alternates with a #9 x 28'-0" long bars@ 12". See attached sketch for details. To avoid trimming a 28'-0" bar and splicing it with a 17'-0" bar, please confirm if it is acceptable to relocate the #9 x 28'-0" top bars@ 12" to the MF beam layer 1. The continuous #9 bars@ 12" will remain at 3/4" from the top of concrete and trimmed according to SKS-0324 and SKS-0325.</p>						<p>It is acceptable to relocate the discontinuous T2 bars to the lower layer with the typical continuous T1 bars remaining in the top layer. We note that the RFI mentions the matching dowel length as being 17'-0". For RCS1, this would be a #9 bar with a splice length of 122" for Top Bar, Category II. Given a 42" base plate and either a 3" or 6" oversized block-out, the minimum length of the dowel would be 292" (24'-4") or 298" (24'-10"). The appropriate splice category and block-out size shall be considered when determining the length of the matching dowel.</p> <p>Alternatively, the Contractor may place the T2 bars that conflict with the base plate in the lower layer.</p>

REQUEST:

SCCI performed a survey of the CDSM Soldier Piles approximately March 2013 for the North of Area 3 and West of Area 3 and Area 1. SCCI re-surveyed the soldier piles again this year (March 2014) and have found that the Soldier Piles in the area have displaced into the structure by approximately 1.5" at both the North Wall and the West wall. Please find attached survey information and the changes noticed in the past year.

1. Please confirm that the additional encroachment and future potential movement of wall into the structure will not cause conflict with current and future rebar installation.

2. Please confirm and demonstrate that the future potential movement will not cause additional stress to the Wall Lift 1, which will be poured in the next week.

3. Please confirm that future potential CDSM movement in this area will not impact any of SCCI's future permanent work.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

It is requested this RFI be withdrawn as discussed with Turner.

WOJV - 4/23/14

In addition to this WOJV request more information and request that each CDSM wall pile is resurveyed after the level C bracing is removed prior to waterproofing . Two points per pile one at top elevation (similar elevation of the previous surveys) and the other at an elevation of approximately -16'. This survey information should then be then sent to both WOJV and the design team highlighting any additional encroachment which has not been already taken in to account with the current RFI for the relevant area.

REQUEST: See attached CD RFI # 327 SK1:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
The deck support detail per 4/S1-7660 & 10/S1-5002 will not work at the noted location.			For deck support at the W16 beam highlighted on SK1, provide a continuous 8x4x7/16 angle (LLV) welded to the beam bottom flange at the beam web centerline. Weld between the angle and beam flange shall be a double sided fillet weld with size and spacing as indicated on 10/S1-5002. The deformed bars anchors shall be welded to the vertical leg of the angle.				
Please supply a detail for this deck support.

T-1239.2	SSS - Deck Support Details at Protected Zones	Closed	04/21/2014	05/01/2014	05/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company PHIL MILITELLO	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Please reference RFI T1239 response. The L3x3x12ga proposed to support the deck will have an approximate span of 8'. This is a concern for 12 gauge material to carry 7-1/2" of nominal weight concrete over an 8' span. 1) We propose to span the gauge angle from the L4x4 where it terminates on the girder web at the protected zone, which will shorten the span of the angle by approximately 3'. See SK1 for clarification. Please confirm this is acceptable. 2) A closure piece will need to be added and tack welded to the girder web. This was previously closed by the removed L4x4. Please confirm this is acceptable. 3) Confirm 1 & 2 are acceptable at similar conditions.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Confirmed. 2) Tack weld the closure piece to the metal deck. 3) Confirmed.

Co-Author: Shimmick Construction Company, Inc. Filip Filipic		Answered By:Adamson Associates, Inc. George Metzger					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference atached contract drawings.		Confirmed, there is an offset between CB16 Curved beam and CB7 Curved beam. Please see the attached SKA-3105~SKA-3111 for clouded dimensions.					
Latest CDs S1-2203, S1-2210, and S1-2211 have added curved CB16 and CB&B7 downturned beams which appear to be concerntric to South spandrel beam B65. However, no dimensions have been provided, i.e. radius, offset etc. Furthermore, CD s1-2211 shows tat CB16 and CB&B7 do not follow the same radius. There appears to be an offset between the CB16 and CB/B7 at the MFB at GL 6, and the offset dimensions are not shown. If architectural drawings are used to find the missing radius (reference SKA-3017 and SKA-3026), one can find that the future partition walls at the South corridor have R=647' - 7 1/2" on both East and West side of MFB at GL6. This implies that the partition walls in this area would off center (non-concentric), and the South corridor would taper (or narrow) Down towards East. SCCI. believes that this was not designer's intent.		CB16 Curved beam between gridline 5 and 6 to follow radius of curved beam CB16/partition to the west.					
Please provide accurate and consistent dimensions and offsets for the LCC beams and future partition walls.

T-1258	SSS - Stair and Elevator SFRM Clarification	Closed	03/18/2014	03/28/2014	03/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Compan PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Reference is made to the Fire Proofing Schedule on A1-8662 where Note 2 indicates that all elevator and stair structures are to use SFRM. It appears that architectural drawings, issued for reference, indicate various HSS posts are to receive alternate coating systems or finishes. For example: - Detail 3 on A1-7576 indicates two HSS "Divider Beams" to be painted to match shaft walls - Detail 1 on A1-7870 indicates HSS outriggers are to be galvanized Please confirm that all stair and elevator members are to receive SFRM. This is inclusive of framing which extends above the Roof Level and west of Grid 1.		SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/> Not all stair and elevator steel members are to receive SFRM, it is only when a steel member interrupts a rated wall assembly that a fire resistance rating is required for the steel. The various HSS members referenced are not part of the building structural frame nor do they interrupt a rated wall assembly, therefore no fire resistance rating is required at these locations.

	center of the supporting posts or supply the location dimensions. 2) The (6) W10x22 beams in question are also in Skanska's scope. Please supply the requested dimensions (4 total). 3a) W/O agrees that the stringer is to be designed by the stair supplier, however, we anticipate that it is to be connected to the W12x14. Typically the stringer is connected to the bent plate that is part of the W12x14. This member would also include web stiffeners. If a typical detail is not available, please provide stiffener details and leave the stringer connection to be designed by the stair supplier. 3b) See above, the offset dimension for bent plate should work with 3a. 3c) Please provide location of stringers as requested.			moment connected W10x22 beam shall be aligned with the stringer coming from above at the landing per 10/S1-7601. 3a) Stiffener plates are not required at the W12x14 beam. 3b) The W12x14 beam centerline to the edge of slab distance shall be 4". We anticipate that the stringer will be connected to the bent plate. 3c) Refer to Architectural drawings A1-7007, A1-7501, A1-7502, & A1-7503 for stair 304 stringer locations.

From: Webcor Construction LP Gregory Kemerer To: Turner Construction Compan PHIL MILITELLO Co-Author: Skanska USA Civil West California Dis Ryan Clayton			Answered By:Adamson Associates, Inc. George Metzger				
REQUEST: See attached CD RFI # 344 SK1 to SK3 for items 1 to 5: 1) RFI T-1111 (SK 327, CD 254) confirmed the edge plate to match the thickness of the slab but the approval comment of CS2 drawing 4714 requests a bent plate as shown in SK3. Which is correct? 2) The detail on SK3 is per approval mark-ups on CS2 drawings 4766 & 4767 (noted with an arrow) with references to detail 2/S1-7661 but the approval comments do not occur on the other beams at the yellow walls. Confirm the detail on SK3 applies at all (8) beams next to the concrete walls noted in yellow. 3) Confirm the wall terminates at the lower slab. 4) This detail is per approval mark-ups on CS2 drawings 4766 & 4767 with references to detail 2/S1-7661. Detail 2/S-7661 is not referenced on S1-2403 or 2/S1-7302. Confirm the detail as shown is acceptable. 5) Confirm edge plate per 8/S1-5000 is not required.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Provide edge closure plate per typical detail 8/S1-5000 as noted in response to RFI T-1111. The tall bent plate and 3/8" stiffener plate per comment and markups on CS2 shop drawings are not required. 2) Response in 1) also applies at the 8 beams highlighted in yellow on SK1. 3) Confirmed. 4) See responses to 1) and 2). 5) Confirmed. The edge closure plate is required per typical detail 8/S1-5000, hence, there should be no cost and schedule increase.				
T-1269	SSS - GL 15 Dimension Clarifications	Closed	03/21/2014	03/31/2014	03/31/2014	Potentially	<input type="checkbox"/>

REQUEST: See attached CD RFI # 348 SK1 to SK3 for items 1 to 8: 1) Supply location of sloping W16 beams from face of concrete wall. 2) Confirm location of W44x335's is acceptable as shown or supply the location. 3) Confirm HSS8x8x5/8 post locations are acceptable or supply the locations. 4) Clarify/supply edge plate requirements for the 'S4' slab at EL. 74'-10 as well as the sloping 'S4' slab. 5) Confirm dimension is acceptable or supply dimension. 6) Confirm dimensions per A1-2904. 7) The connection for the W40 to the HSS8x8 per 6/S1-7661 will not work at the corner. Supply an alternate connection. 8) It appears this detail will not work with the elevations noted. Please supply an alternate detail.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Locate the sloping W16x26 beams as close to the center of the concrete walls as possible without conflicting with the W27x84 beams above at the roof level. 2) The noted dimension shall be 1' - 1". Note that the 8x8x5/8 posts are to be connected to the top of the W44x335 per 10C/S1-7630, except that the 8x8x5/8 posts will be partially welded to the flange due to offset between the posts and the W44 beam centerline. Provide bottom flange bracing for the W44x335 girder per 4/S1-5015 at the W14x61 beams (total 4 locations). 3) Confirmed. 4) Provide edge plate per typical edge of slab details on S1-5000. Also refer to response to RFI T-1279. 5) Confirmed. 6) Confirmed. 7) Connection at the W40 framing into the HSS post shall be similar to 8/S1-5012. 8) Provide a full depth shear plate connection per 1/S1-5013 at the two W10 beams except, 1) cope only one side of beam flange at top and bottom and 2) Provide 4 bolts at the connection (2 vertical rows of 2 bolts each) with a 3" horizontal spacing between the bolts. Bottom flange brace per 2/S1-7604 is not required at these connections.

1) The WT5x15 interferes with the connection for the W10x22 to the HSS12x6x5/8 post. Please supply a solution.				1) We assume that the "interference" noted in item 1 refers to the accessibility issue for bolt tightening. If the WT5x15 restricts the accessibility for bolt installation, the nuts may be tack welded to the beam web and bolts may inserted from the other side and tightened once the beam is in place. Or, bolts may be tack welded to the beam web on the WT side and nuts may tightened from the other side once the beam is in place.			
2) Confirm the connection for the W10x22 to the HSS6x6 post is acceptable as shown or supply a new detail.				2) Acceptable, except, provide a 1/4" fillet weld on three sides			
T-1281	SSS - W8, W12 Connection Clarifications	Closed	03/24/2014	04/03/2014	04/16/2014	Potentially	<input type="checkbox"/>

REQUEST: This is a follow-up RFI to RFI T-1281 (SK 467, CD 350) See attached CD RFI # 350.1 SK1 & SK2 for items 1 & 2: 1) It is not clear where the posts per 1/S1-8006 are to be located. Work with SK2 and clarify where the posts are located on Grid 16.9 relative to the east-west beams west of Grid 16.9. 2) Confirm it is the intent to have the noted dimensions as shown or should they be the same?		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Provide HSS posts per 1/S1-8006 centered at WP41, WP46 and at midpoints between WP42 & WP43 and WP44 & WP45. Concrete fins are also to be provided at these locations as shown in detail 1/S1-8006. Adjust the W21x50 beam locations west of GL 16.9 to align with the post and fin wall locations. 2) The dimensions shown in SK1 and SK2 per S1-6043 are incorrect. Revised dimensions were provided on Sheets S1-6040 (detail 6) and S1-6043 (detail 1), issued in package TG08.10 DB IFB Addenda #11 on 5/16/2014. Revise the dimensions to match the current drawings.

REQUEST: See attached CD RFI # 350.2 SK1: 1). The dimensions provided in 1/S1-6043 and 6/S1-6040 are not the same. Provide the clouded dimensions to the posts from the grids as shown. 2). In conjunction with question # 1 and the response to RFI # T-1281.1, the drawings from TG08.10 DB IFB Addenda # 11 (5/16/14) have not been issued for construction. Please issue these drawings for construction or supply them as sketches in response to this RFI.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1). CD RFI # 350.2 SK1 is OLD information that was correctly answered in previous RFI. 2. All drawings previously issued with DB Addendum 11, which are in the hands of the CM/GC are being issued "for construction" dated 07/11/14 in ASI 0120.

T-1282	BGP - Lower Concourse - Latest Drawing Request	Closed	03/25/2014	04/04/2014	03/28/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Per the meeting between TCCO, WOJV, SCCI, and AAI on Monday 3/24/14, it was made clear that AAI believes that all documents have been issued to WOJV in order for construction of the lower concourse deck. WOJV stated that there are currently drawings out to bidders (for TG 07.2 /TG10 MEPS Series) and in Pre-Construction, but that WOJV has not been provided direction by TJPA/TCCO to proceed with construction in the field, nor to utilize the most current drawing sets. Prior to this meeting, WOJV requested that all IFB drawings be issued as an ASI's in order to coordinate with current and continuing construction. ASI's 112 and 113 drawings were issued, however they are not complete per our initial request. AAI has responded to RFI's and submittals referring to sheets that have yet to be issued for construction. This has caused confusion and frustration for all parties. Therefore, in lieu of continuing to request ASI's to address this specific issue at the lower concourse, WOJV/Turner have agreed to utilize the RFI process to construct the lower concourse deck.					See the "Issued for Construction" drawings dated April 1, 2014 for the most current drawings.		
For the list of series of drawings below, please note and/or provide the latest drawings or ASI(s) that should be used to construct the lower concourse deck. We understand that there are drawings issued for pre-construction, that will not be issued for construction for multiple bid packages. For those cases, TJPA/TCCO needs to inform and provide WOJV with the set of the most current and coordinated drawings to be used for construction of the lower concourse, including (but not limited to) blockouts, deck penetrations (such as MEPS), beams, dowel/formsaver locations, and electrical conduit locations.					RESPONSE: Judy Long 3/28/14 The drawings, some issued with ASI 115, forthcoming CR-104, are attached for your use and coordination with construction.

T-1283	SSS - Drag Beam Double Connection	Closed	03/25/2014	04/04/2014	04/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Compan PHIL MILITELLO				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton			Answered By:Adamson Associates, Inc. George Metzger				
REQUEST: See attached CD RFI # 354 SK1 to SK3 for items 1 & 2: 1) Confirm the double angle connection per 5v/S1-5026 (SK2) occurs at all locations noted with an arrow on SK1 (16 total). 2) The double angle connection per 5v/S1-5026 & 6/S1-5026 does not allow access to install the threaded rod nuts (4-3/4" long x 4-1/2" wide) and washers in the field. Please confirm it is acceptable to provide two elongated hand holes (6" wide x 10" long) in each full height shear plate either side of the beam. Due to the restricted access, the post tensioning operation will need to be done from the top of the rod, contrary to the response to RFI T-0970.1. This will require the 6x6" oversized washer to be installed at the bottom and the standard flat washer to be installed at the top. Please confirm this is acceptable			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Confirmed. 2) Providing a hole in the stiffener plates for access to threaded rod nuts is acceptable in concept. Hole shall not be located near the top of the stiffener plate. Final review of the hole location to be done with review of shop drawings. Cloud the hole locations on shop drawings to call the attention of the reviewer. Post tensioning from the top of the rod is acceptable at these locations.

REQUEST:

This is a follow-up RFI to RFI T-1289 (SK 487, CD 367)

See attached CD RFI # 367.1 SK1 to SK3:

The indicated dimensions between the stair stringers supplied in above noted RFI SSK-0341 & SSK-0342 (see SK1 & SK2) will not work. The width of the flange on the C12x20.7 = 3" and therefore the stringers will foul with the 2 3/4" dimensions supplied. See SK3 and clarify the dimensions between the stringers.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

1/CD RFI 367.1 SK1: The dimensions noted on this detail are not correct, see the original SSK-0341 issued in response to T-1289.0 where the dimensions from gridline to stringer face of web is noted as 4 ¼". Architectural detail 8/A1-7503 notes the stringer clear spacing as 2 ½". The Stringer having a 3" width, the total dimension from face of web to face of web equals 8 ½". See response 4 below for clarification on the 7" dimension.

2/CD RFI 367.1 SK1: The 2 ¾" dimensions are noting the location (center line) of the W10x22, not the stringer web face. To locate stringers refer to response

REQUEST: See attached CD RFI # 359 SK1 to SK5 for items 1 to 7: 1) Confirm that only steel visible inside the slab opening between the slab edges is IFRM-1 and the unexposed portion of these members is SFRM. If not, supply specific information for the extent of IFRM-1 including the beam end connection per 5/S1-5017. 2) Supply specific information for the extent of IFRM-1, including the beam end connection per 8/S1-5025. 3) Supply specific information for the extent of IFRM-1, including the beam end connection per 9/S1-5025. 4) Supply specific information for the extent of IFRM-1, including the beam end connection per 7/S1-5012. 5) Per S1-2606 & A/S1-4114, this beam is cantilevered over columns on each end. Supply specific information for the extent of IFRM-1 on each end of the cantilevered portion of the beam (Ref: A/S1-4114). 6) Confirm that only steel visible inside the slab opening between the slab edges is IFRM-1 and the unexposed portion of these members is SFRM. If not, supply specific information for the extent of IFRM-1 including the beam end connection per 4/S1-5012. 7) Detail 4/A1-8663 indicates that four MF Beams at the W-12 glass floor are to receive IFRM-1 coating. The MF beam along GL 19.1 is not indicated to receive IFRM coating, but spans a similar opening adjacent to the W-12 system. Please confirm that the beam indicated on SK4 along GL 19.1 is to receive SFRM and not IFRM-1.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Confirmed. 2) Refer to 4/A1-8178 & 4/A1-8180. 3) Refer to 4/A1-8178 & 4/A1-8180. 4) Extent of IFRM-1 occurs only at exposed steel in visible areas between edges of slab. 5) Extent of IFRM-1 occurs only at exposed steel in visible areas between edges of slab, including cantilevered portions of the beam up to the slab edge. Columns are SFRM, full height to the bottom of the beam. 6) Confirmed - Reference Architectural details 2, 3 & 4/A1-8615 (IFC submission - 03/31/2014). See A1-8614 for detail Elevations. 7) Beams at 19.1, 19.9, 20.1, 21, & 22 have IFRM-1. See A/A1-6005; 1 & 2/A1-8614; and 2, 3 & 4/A1-8615. Note: Second Level beams with exposed surfaces shall receive IFRM-1 - Reference S1-2402 W40x297 at gridline 3 (two locations): refer to 2 & A/A1-7310, 1/A1-8152, and 2/A1-8176. Reference S1-2406 MF at gridline 28: refer to 1/A1-7306, A/A1-7307 and 4/A1-7836.			

T-1296	BGP - Concrete Plant Recertification Test Batch	Closed	03/31/2014	04/10/2014	04/02/2014	Potentially <input type="checkbox"/>
From: Webcor Construction LP Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto		To: Turner Construction Compan PHIL MILITELLO		Answered By: Adamson Associates, Inc. George Metzger		
REQUEST: The 4th review comment to SUBM TG0600-095 (document enclosed as reference) states after plant recertification a "test batch" will be prepared and tested for accuracy. Attached is SCCI's concrete supplier (CEMEX) responses to the submittal review comments.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> After further discussion with Bob Foley of CEMEX, we are satisfied with the corrective actions CEMEX has already taken. The proposed plant visit and batch constituent verification are not required.

Regarding the test batch, is it acceptable to either:

1) Have an Owner's representative perform a plant visit during production operations to observe batching tolerance during normal business hours?

or

2) Neither perform the test barch nor plant visit?

T-1297	SSS - EoS Bent Plate at Knock-out Slab GL11-12	Closed	03/31/2014	04/10/2014	04/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Gregory Kemerer	To: Turner Construction Compan		PHIL MILITELLO	Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:		ANSWER:			
See attached CD RFI # 378 SK1 & SK2: The knock-out slab extends 1 1/4" onto the flange as shown. Confirm that is acceptable or provide alternate direction.				Accept Suggestion: <input type="checkbox"/> Move the East-West direction W21x50 beams to GLs D.8 and E.2 so that the slab will overhang the beam flange.			

T-1298	SSS - Lift Eyes on Ground Cast Nodes	Closed	03/31/2014	04/10/2014	04/09/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Gregory Kemerer	To: Turner Construction Compan		PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California Dis		Ryan Clayton					
REQUEST:		SUGGESTION:		ANSWER:			Accept Suggestion: <input type="checkbox"/>
The contract drawings indicate that lift eyes will be provided for shop handling:				George Metzger			4/9/2014
"Provide picking eye(s) as required for the handling of the cast node in the foundry AND the shop of the steel fabricator. Picking eye(s) to be located withing the interior of the casting's nozzle(s)"				Taping holes at the back side of the cast node for erection is a means and methods issue.			
The lift eyes that were cast into the back side of the ground level cast nodes have now been machined off by Bradken, leaving only the lift eyes inside the nozzles. In order to safely handle these castings, new lift features need to be added to the back side to replace those that were machined off.				Stacy Wilson			4/9/2014
				To note, the referenced Cast Connex report was in regards to the roof nodes, not the ground floor nodes. In addition, the contract drawings never called for eyes

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>OIW notes that if the castings are picked using only the lift eyes inside the nozzle, the center of gravity causes the castings to rotate into an unworkable position. Some other manner of rigging must be employed in order to manipulate the castings into positions required for shop fabrication work. CastConnex noted exactly the same issue in their Release 1 Pre Shipping Inspection Summary, even noting that the improvised and awkward handling was causing damage to the castings:</p> <p>"The lifting lugs are located inside the nozzle-end on these parts making the machined nodes difficult to manipulate. Often the parts have to be lifted using straps thru the pin hole causing some broken edges on the radius of the pin hole."</p> <p>To facilitate handling the cast nodes in the shop in a way that is safe and that avoids damaging the castings, OIW proposes that drilled and tapped holes be added. The attached sketches (2773-SK-401 and 2773-SK-402) show a proposed arrangment of these holes. Note that the proposed locations are in areas that will not be visable in the final product, and also are in areas of minimal stress. OIW requests that the engineer of record review the attached drawings and determine if the proposed modifications to the cast node are acceptable.</p>						
	<p>on the backside of the ground floor nodes, therefore at the contractor's option, the addition of drilled and tapped holes shall come at no cost to the TJPA.</p>						

T-1299	SSS - Off-Set Beam Connection Modification at PE 403/404		Closed	04/02/2014	04/12/2014	04/11/2014	Potentially	<input type="checkbox"/>

for off-set beam connections with double angles per 1/S1-5010.							
T-1300	SSS - Carboline AEES Primer	Closed	04/02/2014	04/12/2014	04/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Compan PHIL MILITELLO	Answered By:Turner Construction Comp Stacy Wilson				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Specification section 05 10 00-2.2.B.2.b indicates that Carboline Carbozinc 621 is to be used for non-galvanized steel to receive high performance coating. Reference is made to the letter provided by Carboline attached, which publishes that this (nearly obsolete) product has a recoat window of only 2-3 hours, which cannot be achieved on the Transbay project since subsequent overcoats will be installed in the field by others.				RFI is rejected per Specification Section 01 10 40 1.6 C 2 a. "RFIs shall not be used for the following; the TJPA will not reply and will reject the RFI: Product or material Substitution".			
Carboline has provided information and validation for use of the Carbozinc 859 Organic Zinc Rich Epoxy as a replacement for Carbozinc 621, which provides protection and performance equal to or greater than Carbozinc 621. The Carbozinc 859 product provides an unlimited recoat window, allowing for intermediate and top coats to be applied by others in the field, in accordance with the project's schedule and contractual requirements.							
Please confirm the Carbozinc 859 product is acceptable for use as the AEES primer.							
Note: Specification section 09 97 16-2.2.A states that the listed manufacturers are acceptable subject to conformance to requirements of Drawings, Schedules and Specifications. For this reason, Carbozinc 859 is proposed as the recommended product by the basis of design manufacturer, Carboline, rather than a product substitution.

T-1304	SSS - Follow-up to CS3 Approval Comments	Closed	04/04/2014	04/14/2014	04/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Compan PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Please review and confirm the items below regarding the TG0701-075 SSS - Structural Steel Shop DWG (CS3) GL 12-13 approval comments: 1) Drawing 2669 ~ the noted beam is not sloping per S1-4004. Confirm the drawing is correct as submitted and no action is required. 2) Drawing 2707 ~ the noted beam is not sloping per S1-4015 (S1-4004 is not the correct drawing reference). Confirm the drawing is correct as submitted and no action is required. 3) Drawings 2706, 2710, 2713AB ~ the 3 1/16" dimensions are necessary as the beam webs vary in thickness. The 3" dimension on the angles has been used at the thickest beam web. Confirm the drawings are correct as submitted and no action is required. 4) Drawings 3792, 3793 & 3794, 4933, 4935, 4994, 4995, 4998 ~ The top cope on the right end is correct as shown. The Approver's reference to a 2" flange is incorrect as the TPG1 on Grid 13 has a 3 1/2" thick flange per S1-4200. We have limited the clearance at the top to 1/4" be able to fit the number of bolts per S1-5010. Confirm the drawings are correct as submitted and no action is required. 5) Drawings 4832 & 4924 ~ RFI T-0857 (SK 117, CD 089) asked for permission to cope the beam as shown on the submitted drawings on SK2 item 1 and the cope was approved in the response. Cutting one side of the flange is not sufficient to clear the brace. Confirm the drawings are correct as submitted and no action is required.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Confirmed. 2) Confirmed. 3) Confirmed. Note that there is another comment on sheet 2706 for which the sheet needs to resubmitted for record. 4) Confirmed. 5) Confirmed.

Co-Author:

REQUEST:

Grace requires that there be a minimum 8" clear horizontal plane to allow for the waterproofing membrane transition. Dewatering sleeve #38 is located on the edge of a sloped mat slab depression. Please confirm it is acceptable to lower the flat the mud slab to provide a sufficient horizontal plane to accommodate waterproofing. Sides of depressions will be sloped at 45deg.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

The TJPA Representative does not object to the Contractor's proposal to adjusting the mud slab as described at Dewatering sleeve #38 to suit the waterproofing manufacturer's requirements.

T-1321	BGP - Geothermal Riser Location Field 14	Closed	04/14/2014	04/24/2014	04/22/2014	Potentially	<input type="checkbox"/>

Co-Author: Shimmick Construction Company, Inc. Ryan Brekke

REQUEST:

Please confirm the riser for Geothermal Field 14 is to be located between Soldier Piles 349 and 350. In addition, please confirm the temperature probe in Geothermal Field 14 is to be located between Soldier Piles 350 and 351.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

WSP take no exception to the proposed location of the Riser and Temperature probe.

T-1322	SSS - West Zone Bus Level and Roof Level Grade Clarifications	Closed	04/14/2014	04/24/2014	04/25/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Compan PHIL MILITELLO	Answered By: Adamson Associates, Inc. George Metzger				

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 383 SK1 to SK3 for items 1 to 3: Drawings A1-2502 (SK1), A1-2892 (SK2), A1-2951 (SK4), and 1/A1-2951 (SK5) show a valley. A valley is not shown on S1-2502 and S1-2602 and it is not clear what the intent is for the structural framing:
1.) In order to keep the diagonal brace framing along Grid H in one plane (shown in blue), it is necessary to introduce a valley as indicated by the red line. If not, twisting will be introduced into the framing and connection details
3/S15025 at Grid 1.4 and 1/S1-5018 at Grid 2. Per Note 6 on S1-2602 the beams are canted to match the slope of TPG1 on Grid 2 but the BU-40 on Grid 1 is horizontal. This will result in the beams having to twist. To avoid this a valley as shown on the architectural drawings is required. Please confirm a valley as indicated by the red line is

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

1.) A valley is not required. See specific comments for Bus Deck and Roof Park Levels below:

At Bus Deck Level, an additional top of steel elevation is provided within the deck zone bounded by Gridlines 1&2 and E.6&H. Top of Steel at Gridline 2/G can be calculated as 55' 10 3/8" by linear interpolation using the top of steel information provided at Gridlines 2/E.6 (at column face) and 2/H. At GL 1.4/G top of steel can be assumed the same as 2/G therefore the diaphragm truss is in single plane. Metal deck will need to be slightly warped at other parts of this zone, where two way slopes are present. Ultimately, thickness of the structural topping slab can be adjusted locally to achieve the slab slopes per architectural drawings.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>	
Bus Deck Level drawings S1-2502 thru S1-2507 indicate an S8 type slab, as per metal deck schedule 2/S1-5000, S8 is a 10" structural slab with 4" second pour topping slab. Sheet note #6 on S1-2502 indicates "shear studs are to extend a minimum of 2" into the second pour UON. See detail 9/S1-9004 for perimeter EoS conditions" (S1-9004 has not been provided).						Confirmed. Note that the 4" second pour topping slab is part of the structural slab and studs are to be extended 2" into this 4" topping slab as shown on 4/S1-5003. Studs do not extend into the architectural topping slab. Also, the correct detail reference for perimeter EOS condition is 9/S1-5004.	
Drawings A1-2892 thru 2987 show a 1" topping slab

T-1324	SSS - BRB Clevis Plate Detail	Closed	04/14/2014	04/24/2014	04/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Compan PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Skanska is the process of incorporating the AAN BRB Shop Drawings from Star Seismic into the Tekla model.			Provided dimensional deviations from contract documents are acceptable at all locations except for BRBs at GL 4-5/F; 28-29/D.4, 29-30/D4 and 30-31/D.4.				
During the integration process we have identified a deviation from certain dimensions shown in the contract documents. Specifically, the 2" dimension shown from edge of clevis to top of concrete at the ground level connection and the 5" dimension shown from edge of clevis to the bottom flange of W section above.			At GL 4-5/F, provide bottom clearance between 2" and 3" (2" ideal) and a top clearance between 5" and 6" (5" ideal).				
Below, is a table showing the "As Detailed" dimensions at each BRB.			At East Building BRBs (28-29/D.4, 29-30/D4 and 30-31/D.4), it is not clear from the RFI that the contractor understood the design intent at the bottom clevis plates. At the bottom, 2" clearance to the clevis plate applies from the top of the finished floor (not the top of structural concrete slab) since these braces are exposed. See BRB elevations (S1-4150) and the corresponding detail (1/S1-4206) for this info. Note that the finished floor at this location slopes down to East and this information shall be coordinated per civil/landscape drawings as applicable. For these BRBs, top clearances indicated in the RFI are acceptable in current form.				
Please confirm that the 2" & 5" dimensions shown on S1-4206 are not controlling dimensions and the lengths of the BRB's from WP-WP as designed, detailed and approved, control.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Skanska has incorporated the response to RFI T-1324 into the drawings and made the necessary adjustments, while maintaining the required stiffness factor, at gridlines 28-29/D.4, 29-30/D4 and 30-31/D.4. These adjustments have been submitted under submittal package TG0701-415.4.

However, after discussions with Star Seismic, at GL 4-5/F the stiffness factor plays a limiting role into modifying the length of the brace. Please see the attached stiffness and over strength analysis, provided by Star Seismic, and confirm that the brace lengths may stay the same as previously approved in TG0701-415.2.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

GL 4-5/F dimensions shall be as indicated in RFI T-1324. It is acceptable to have a stiffness ratio of 11% as shown in the calculation submitted by the Contractor. We also note that there may also be other ways to achieve the required pin-to-pin dimension and the required stiffness multiplier called out on the contract drawings. Also, it is not clear why the yield zone length is reduced by 16" whereas the pin-to-pin dimension is reduced by 6" in the calculation. With a longer yield zone length a lower stiffness multiplier can be achieved.

T-1325 **BGP - Partition Wall Details From ASI 110**

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:			SUGGESTION:		ANSWER:		
Please reference RFI #T-0440 and #T-0440.1 responses and the attached Contract Drawings S1-3410, SI -2203, and SI-2204.					Accept Suggestion: <input type="checkbox"/>		
The detail for the glass guardrail embed depicted in 7/SI-3410 calls for a 3/8"x7" embed with an 8" minimum coverage for the top embed and a 6 1/2" minimum coverage for the bottom embed. The guardrail embeds located at B1 beams on the east side of openings between GL 11/12 and D.8/E.2 (SI-2203) and GL 18/19 and B/C (SI-2204) will not have minimum sufficient coverage due to the 18" beam depth of B1 beams (see attached photo).					Bottom embed plate at B1 members not required. Additional supporting member to be included as part of Phase 2 scope. Top embed plate at B1 to be placed with 8" min coverage and align with top embed at supporting concrete girders.		
Please provide a detail for glass gaurdrail embeds at the B1 beams. Please note, these specific embeds have been fabricated and are onsite

T-1336	SSS - API 5L X65 Pipe to A216 WCC Casting (Field Weld) PQR	Closed	04/17/2014	04/27/2014	04/29/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Compan PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Skanska is currently procuring weld test plates for qualifying field welds to API-5L Grade X65 pipe. For this, we propose to use API 2W plate. Whereas API 5L is strictly a pipe specification, API 2W is a plate specification but is commonly rolled and welded to create API 5L pipe. Below is a direct comparison between API 5L Gr. X65 allowable chemical and mechanical properties with our proposed API-2W plate material. Values for the plate are taken directly from the MTR for the plate we propose to use (attached and highlighted). All values for the API 2W plate we propose to use meet the requirements of the API 5L Grade X65 specification. Please confirm it is acceptable to use the API 2W plate for our PQRs.				Contractor's request is not acceptable in current form. Please provide additional information. Is this request for welding qualifications only? Which grade of API 2W is to be used? Provide API 2W corresponding specification with the RFI or mill report that shows that the material qualifies for API 5L X65 use. Verify if the material that is being proposed to be used for welding qualifications is subject to Buy America clause or not. If it is, please verify it complies with it.			
T-1337	SSS - Train Box Column Cap Plate at GL18	Closed	04/17/2014	04/27/2014	04/29/2014	Potentially	<input type="checkbox"/>

	shown on sketches CD RFI 394 SK1 to SK3. Due to the large tapered girder and the requirement of a moment connection at these locations the doubler plate size has been modified to allow for the 11/16" all around fillet weld called for in detail 8/S1-5032. 1) Confirm that doubler plate modifications shown on CD RFI 394 SK2 are allowed. 2) Confirm that doubler plate modifications shown on CD RFI 394 SK3 are allowed.			2-) Confirmed.			
T-1339	SSS - Deck Support Steel at Step in Slab GL 12-14	Closed	04/17/2014	04/27/2014	04/30/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Compan PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:		ANSWER:			
Refer to SK-1 thru SK-3 for 3 locations at step in slab between GL 12 - 14: 1) At section A-A on SK-2 an extended WT will expose the flange through the concr etc. Confirm a bent plate as per SK-3 is acceptable. 2) At section B-B on SK-2 support is required at the extended upper deck over the W12x14 (A4987). Confirm a WT can be added per section B-B.				Accept Suggestion: <input type="checkbox"/> 1) Confirmed. Provide a 3/8"x3" full depth stiffener at the W24 beam (same side as the bent plate). Provide 1/4" double sided fillet welds for the stiffener (3 sides - web, flanges). The stiffener shall be located at the middle of the bent plate span. 2) WT is not required. Provide an 18 gauge Z-shaped closure plate to close between the upper and lower decks.			
T-1339.1	SSS - Deck Support Steel at Step in Slab	Closed	05/23/2014	06/02/2014	06/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Compan PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:		ANSWER:			
RFI SK534 (T-1339) addressed steps in the ground floor slab which occurred between grid lines 12-14. This condition also occurs between the following grids: 2-3, 3-4, 8-9 & 9-9.9 (16 locations).				Accept Suggestion: <input type="checkbox"/> Provide a WT per 4 or 5/S1-5002 at locations where the distance between supporting beams is greater than 3'. At other locations where the distance between beam is less than 3', a Z closure plate is sufficient, however, the Z closure plate is not correctly shown on SK3. See attached sketch SKS-0357 for correct

	<p>Item #1 added a 3/8" bent plate to support the upper level deck and can be applied at two locations between grid 2-3 as indicated on SK1. At the other 14 locations the step is similar to item #2 of T-1339 which added an 18 gauge Z closure. At grid 12-14 the perpendicular support beam is located within 1'-9" of the step, at the 14 locations listed above the support beam varies from 2'-0" to 6'-0" and at two locations at grid 2-3 no support beam is provided. Refer to SK3 for clarification.</p> <p>Please confirm the 18 gauge Z is sufficient to carry the load of the deck at the 14 locations or provide an alternative detail.</p>

T-1339.2	SSS - Deck Support Steel at Step in Slab	Closed	06/18/2014	06/28/2014	07/09/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company PHIL MILITELLO	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
<p>The response to RFI T-1399.1 indicated the zee closure was incorrectly shown on SK-3 and shall be supported on the lower beam, not on top of the deck. We agree the closure would be best supported on the lower beam, however the closure was placed on top of the deck so that the lower deck could bear 3" on the beam as is required for a type 3 deck as per 2/S1-5000.</p> <p>SSK-0355 revises the closure so that the bottom leg is underneath the lower deck and the top leg is above the upper deck. This creates several problems for installation. The most significant being that the closure now needs to be installed before the deck. Typically closures are installed after the deck so that the deck can be used as a working platform. SSK-0355 would require the installation of the closure on open iron, which while possible is not a safe working practice.</p> <p>Option 1: As a proposed solution to the issues indicated above, we propose to increase the beam size at the step from a W12x14 to W12x26 which has a 6-1/2" wide flange.</p>				<p>extents of the Z closure plate.</p> <p>Option 1 is not acceptable.</p> <p>Option 2 is acceptable. The 3" minimum bearing requirement may be waived and a bearing of 1-3/4" is acceptable at locations where detail B on SK-1 is applicable.</p>

---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

We would also revise the zee shaped closure to a cee shaped closure with the top leg placed underneath the upper deck (see detail A SK-1). Also at locations where a WT will be added, a W12x14 will only be left with about 1-3/4" of exposed beam flange for bearing, instead of the required 3", increasing this to W14x26 will provide the required bearing (see detail B SK-1).

Option 2: As an alternative, at locations where the top deck spans less than 3' the top deck load will be primarily supported by the upper WF beam. As detailed in SK-2 the zee plate will only act as a closure with minimal deck support and can be installed after the deck if allowed to bear on top of the lower deck. Note: this alternative does not provide a solution of the 1-3/4" bearing issue on detail B SK-1.

Please confirm if option 1 or 2 is acceptable.

T-1340	BGP - Mechanical Room B2228 Pier/Wall Location	Closed	04/18/2014	04/28/2014	04/30/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company PHIL MILITELLO	Answered By: Adamson Associates, Inc. George Metzger				

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please see attached drawing showing the location of the west wall in the IDF Room B2228 located in the Area 3 mechanical rooms. Typical pier width dimensions for the mechanical rooms are 24" and are not typically dimensioned out in the plans. Based on scaling, the pier in the northwest corner of Room B2228 is 16"x28". However, this pier was labeled as a 16"x24" pier in the rebar shop drawings (see Submittal TG0600-301.2) and as a result the dowels for the west wall were placed 4" to the west to align with the pier edge.

Please confirm that this new location is acceptable.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

The west wall of IDF Room B2228 at the B2 level cannot be moved 4" to the west to align with the 16x24 pier due to Building Code Accessibility and Egress requirements for the adjoining room at Phase 2 build-out.

	<p>#4/0 grid to #6 mesh with #1 stranded Cu conductor (typical). Refer to Detail 1/EI-3212." Detail 1/EI-3212 does not show a #1 copper conductor connecting the grid to the mesh. Please confirm the 4/0 grounding grid is to be connected directly to the grounding mesh.</p> <p>2) Please see the attached Detail 5/EI-3212. Please identify which part of the grounding grid system the highlighted portion belongs to and provide the proper wire size.</p> <p>3) Detail 5/EI/3212 designates the embedded conductors going to the battery rack as #2. Please confirm this means #2 AWG copper conductors. In addition, no designation is provided on Detail 4/EI-3212 at the pigtail which appears to be for the battery rack in B1289. Please confirm this is pigtail is to be #2 A WG conductor as well.</p>				<p>connected. Additional connections to the #4/0 grid are required from remote parts of the mesh. These interconnections shall be made with #1 bare CU connections.</p> <p>2) The Detail 5/ E1-3212 did not convey a numbered note for this connection. Similar to the response to question 1, this connection refers to additional bond points (using #1 bare CU conductors) between the #4/0 ground grid and the grounding mesh.</p> <p>3) Yes, the callout refers to using #2 AWG bare CU to the battery racks. The pigtail in Detail 4/E1-3212 is also required to be #2 AWG bare CU to the battery rack.</p>

T-1348.2	BGP - SFPUC Electric Room Copper Mesh	Closed	06/09/2014	06/09/2014	06/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché		To: Turner Construction Compan PHIL MILITELLO		Answered By:Turner Construction Comp Judith Long			
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
The response to RFI T-1348.1 stated the #6 mesh shown on EI-3212/Detail 1 is to be interconnected to the grounding grid at "several locations" and that the #4/0 grid could be "directly connected" where it crosses or contacts the mesh. This response also stated that all other connections are to be #1bare CU connections.				George Metzger: 6/13/14 Per TJPA(Guy HOLLins) direction, this RFI shall be redirected to the TJPA to forward to SFPUC for response.			
1) Please provide the exact quantity of connections which are required from the #4/0 grid to the #6 mesh.				Matt Ho 6/17/14:			
2) Please provide the interval distance between required direct connections from the #4/0 grid to the #6 mesh.				1) RESPONSE: Referring to Details 4 and 5 on Sheet E1-3212 for the West and East Switchgear Rooms, we count 16 locations in the West room and 17 locations in the East room that offer an opportunity to connect the #6 mesh to the #4/0 grid. These locations include all interconnections of the #4/0 grid to ground riser conductors, grid cross connections, grid to pigtails (for equipment grounds), and grid to ground test bar connections.			
3) Plan sheet shows six (6) total #1 "remote connections" in each room. Please confirm this is the proper quantity required.				2) RESPONSE: As noted above, the recommended connections to the mesh do not need to be evenly

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
See attached CD S 1-2202 and sketches.				Confirmed.			
Trestle pile No. 88 at GL F5 encroaches into the B52 beam by approximateley 6". In liue of creating the blockout in this beam SCCI proposes to shift the beam 8" to the North. Whith the approval of the beam moving concept, following items will be taken into consideration:				Ethan Heinrich 4/24/14		Response to RFI comes at no cost to TJPA.	
1. Adjacent beam B51 , to the West, has long bars and short bars. these will be placed in to layers.							
2. Southmost B51 bars (one long and one short) will miss B52, but continue into the slab. These will not be contained in B52 tie set.							
3. Add (1) # 10 long bar on the left of B52 with a hook to the far side of the MFB. Place in the corner of the B52 tie set.							
Please confirm if this is acceptable.

	<p>See attached CD RFI # 410 SK1 for items 1 & 2:</p> <p>1) The Architectural Slab Edge Drawings indicate round slab openings greater than 8".</p> <p>Confirm structural perimeter steel is not required at all round openings or supply a detail.</p> <p>2) It is not clear what is meant by large openings. Does detail 12/S1-5003 apply to all rectangular/square slab openings shown on the Architectural Slab Edge Drawings?</p> <p>Please clarify.</p>						<p>1) For openings greater than 8" and up to 2' provide rebar as shown in the attached sketch SKS-0354.</p> <p>2) The large opening detail applies for openings that are greater than 2' but limited to the dimensions specified on 12/S1-5003.</p>
T-1366.1	SSS - Slab Opening Clarifications	Closed	06/02/2014	06/12/2014	06/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company PHIL MILITELLO		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Refer to attached CD RFI 410.1 SK1:				1) The 2' dimension limit stated in the response to RFI T-1366 is the larger of the dimensions of the rectangular openings. So for a rectangular opening where one side is over 2' and the other side is less than 2', detail 12/S1-5003 shall apply.			
1) The response in RFI T-1366 (SK 551, CD 410) does not address rectangular slab openings where one side is less than 2'-0 and the other side is over 2'-0. See the example slab openings and clarify the perimeter steel requirement for all rectangular slab openings where one side is over 2'-0 and the other side is less than 2'-0.				2) Confirmed.			
2) The noted slab openings along with other slab openings shown on the Architectural Slab Edge Plans are NOT shown on S1-2302 and other structural plans. Confirm the slab openings on the Architectural Slab Edge Plans supersede the structural plans with updated structural drawings to follow.

	<p>For each of the minor slab openings included in the following table, please confirm that the direction provided in the aforementioned RFI response is to install framing channels per 12/S1-5003. In some cases, the slab openings are only between 8"-12" wide. Otherwise, please indicate that it is acceptable to provide rebar as shown in SKS-0354 per RFI T1366 instead.</p>						<p>For openings highlighted in green, the perimeter steel per detail 12/S1-5003 is not shown on floor plans because 12/S1-5003 is a typical detail. We disagree with the claim that the perimeter steel for these openings constitutes a change order.</p> <p>Some of the openings highlighted in red are shown on both architectural and structural drawings. These openings are noted in the schedule shown on attached sketch SKS-0369. Other openings that are missing from the structural drawings will be added in a future ASI.</p>
T-1367	SSS - IFRM Prime Coat Requirement	Closed	05/06/2014	05/16/2014	05/12/2014	Potentially	<input type="checkbox"/>
<p>From: Webcor Construction LP Gregory Kemerer</p> <p>To: Turner Construction Compan PHIL MILITELLO</p> <p>Co-Author: Skanska USA Civil West California Dis Ryan Clayton</p>		<p>ANSWERED By:Turner Construction Comp Stacy Wilson</p>					
<p>REQUEST:</p> <p>Specification section 07 81 23 (Intumescent Fire Resistive Materials), issued with Field Order 00027, lists three acceptable basis of design manufacturers for IFRM systems. Additionally, specification section 07 81 23, 1.7.C.2 states that the intumescent fire protection system is to be from a single source, indicating that the prime coat Skanska shop applies must be from the same manufacturer as the subsequent coats that are field applied.</p> <p>Per the monthly schedule delivered to TJPA, the IFRM contractor is not to be selected until 10/16/14.</p> <p>Skanska requires direction as to which of the three approved basis of design manufacturers will be used on subsequent coats in order to obtain a recommendation from that intumescent coating manufacturer as to the appropriate primer to be utilized.</p> <p>Alternatively, priming of IFRM steel can be removed from Skanska's scope and added to the scope of the IFRM contractor. This will result in a cost increase.</p> <p>Please provide direction.</p>		<p>SUGGESTION:</p> <p>ANSWER: Accept Suggestion: <input type="checkbox"/></p> <p>TJPA has rejected this RFI per 01 10 40 1.6 C 2 c.</p>

T-1368	BGP - Moment Frame Beam Perimeter Stirrup at Column Supports	Closed	05/06/2014	05/16/2014	05/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:			SUGGESTION:		ANSWER:		
Due to the construction sequence, where the moment frame beams intersect a column support, the single-piece moment frame beam perimeter stirrups cannot be installed as shown in 2/S1-3600. Please confirm that it is acceptable to use an alternate 3-piece perimeter stirrup configuration where the moment frame beams intersect a column support. See the attached sketch for details					Accept Suggestion: <input type="checkbox"/>		
					Confirmed		
T-1369	SSS - Weld Electrode Subcomponents	Closed	05/07/2014	05/17/2014	05/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Turner Construction Company Jack Adams				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:			SUGGESTION:		ANSWER:		
During a Quality Control review, performed by Thompson Metal Fab for compliance with the "Buy America" clause of the Contract, a question was noted regarding the proposed use of ESAB Spoolarc F9A4-ENi4 Submerged Arc Welding (SAW) Electrode for the welding of the HPS70W steel in the Train Box Columns. The attached letter from ESAB, dated April 22, 2014, describes the process that ESAB employs in the manufacture of the referenced product. It notes the fact that the tensile and yield properties of the specific filler metal alloy required to meet the Contract specifications of 90XX are not offered or produced by any mills within the United States. The alloy is provided as a "Greenrod" and is acquired outside of the States. The cold drawing, proprietary processing and packaging of the product is done, by ESAB, wholly within the United States and uses, other than the alloy itself, domestically produced and acquired materials. The Certificate of Conformance from ESAB states that the product is manufactured in the United States (attached).					Accept Suggestion: <input type="checkbox"/>		
An inquiry was made, by Skanska, to Lincoln Electric regarding a similar product classification that met the Contract requirement (F9A4-ENi5). Lincoln Electric advised Skanska that they also receive "Greenrod" and strip from sources outside of the United States for this product.					The Contract Documents are clear, and the Buy America requirements can reasonably be derived from a review of the Contract Documents. RFI are not an appropriate request to the TJPA for interpretation if products meet the Buy America Certification.		
A subsequent Quality Control review by The Herrick					The Contractor shall submit the Buy America Certification and the Prime Contractor is responsible for ensuring that lower tier subcontractors are in compliance.		
					REF: SECTION 00 08 13 - SPECIFIC PROJECT REQUIREMENTS		
					SECTION 00 08 13 - USDOT REQUIREMENTS FOR AGREEMENTS WITH THE TJPA		

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>Corporation revealed a similar condition for the use of the Lincoln Electric product Outershield XLH-70, AWS classification E70T-1C-H8, FCAW process weld electrode. Once again, Lincoln has indicated that "Greenrod" for weld electrode products may not be domestically available and may be sourced from throughout the world. However, the manufacturing process, like ESAB, is done wholly within the United States. The Certificate of Conformance from Lincoln also states that the product is manufactured in the United States (see attached certificate and letter dated 04/28/2014).</p> <p>The CFR Part 661.5 of the Clause gives the following definitions:</p> <p>c) The steel and iron requirements apply to all construction materials made primarily of steel or iron and used in infrastructure projects such as transit or maintenance facilities, rail lines and bridges. These items include, but are not limited to, structural steel or iron beams and columns, running rail and contact rail. These requirements do not apply to steel or iron used as components or subcomponents of other manufactured products or rolling stock, or to bimetallic power rail incorporating steel or iron components.</p> <p>d) For a manufactured product to be considered produced in the United States:</p> <p>(1) All of the manufacturing process for the product must take place in the United States; and</p> <p>(2) All of the components of the product must be of U.S. origin. A component is considered of U.S. origin if it is manufactured in the United States, regardless of the origin of its subcomponents.</p> <p>Skanska has interpreted this clause to indicate that both ESAB and Lincoln supply welding electrodes for this Project that are wholly manufactured within the United States and that they satisfy the requirement of the "Buy America" clause.</p> <p>Please confirm that the use of manufactured weld electrodes on the Project for which the manufacturer is providing a Certificate of Conformance indicating that the entire manufacturing process is performed in the United States, but may contain alloy material produced elsewhere, meet the intent of the Contract "Buy America" clause.</p>

Answered By: Webcor/Obayashi Joint Venture Spencer Sayles

Co-Author:

REQUEST:

Please reference RFI T-1227.1 - SFPUC Plate Grounding.

Please confirm the SFPUC Transformer mounting plate is to be installed by a future contractor and SCCI is only to stub the grounding conductor into each corner of the Electrical Room(see Note 1 on Plate Sheet EI-2203).

If SCCI is to install this SFPUC Transformer mounting plate, provide the specifications, including but not limited to material type, size and thickness.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

It is confirmed that SFPUC Transformer mounting plate in transformer vault room elevated slabs will be supplied and installed by future contractors. However, SCCI BGP base bid scope needs to be increased from the corner of the three electrical rooms originally bid in BGP. This increase shall be priced and coordinated as described in RFI 1227.1 sketch in order for grounding conductors to be embedded in the structural Concourse slab. Grounding conductors must be extended from the corner of each Electrical Room to each future pad location and stubbed up so that transformer mounting plates can be connected by future electrical contractor. Please provide a sketch and product detail of how BGP electrical intends to implement this grounding extension so that SFPUC review can proceed as described on new sheets E1-3208, E1-3209 and E1-3210

IFC drawings (dated 3.31.2014) issued in Field Order 27 contain updated electrical drawings. BGP contractor should review these drawings for any modifications to Electrical scope bid during TG06. This is to include Grounding and embedded conduit for F-15 EJB conduit. New electrical scope other than that described above is not currently requested at this time.

REQUEST:		SUGGESTION:		ANSWER:			Accept Suggestion: <input type="checkbox"/>
Please reference attached SI-2026, SI-3007, SI-3009, SCCI Mat Slab Comprehensive Drawing S113.0, Gerdau Mat Slab Rebar Shop Drawing, and Sketch 113-001.				Confirmed for dimensions assumed. Notify design team field representative(s) of any changes resulting from as-built pile survey.			
For constructability reasons, SCCI proposes to enlarge the pit at GL 27/E in order to facilitate the installation of the trestle pile sleeve and cap. Please see sketch 113-001 for details and dimensions. Rebar would be altered to accommodate enlarged pit dimensions. See sketch 113-001 for rebar details for pour-back portion of pit once pile is removed.							
Please confirm this is acceptable.							

T-1380	SSS - Field Weld Access at Deck Support Angles	Closed	05/12/2014	05/22/2014	05/27/2014	Potentially	<input type="checkbox"/>

	<p>of 4" clearance from top of deck flute to underside of flange for placement of concrete.</p> <p>Where the bottom flute does not overhang the toe of the angle and shifting the deck creates a loss of bearing at another location, a 12ga min flashing will be welded to the angle and deck bottom flute, see detail 3 & 4.</p> <p>Please confirm items 1 & 2 are acceptable.</p>						
T-1381	SSS - CVN Testing For Secondary Material	Closed	05/12/2014	05/22/2014	05/23/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company PHIL MILITELLO	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:	ANSWER:				
<p>The response to RFI T-1034 indicates that secondary steel components (stiffeners, connection plates, continuity plates, etc.) are to be CVN tested in accordance with their respective ASTM specification. In the CS05 (TG0701-077) and CS07 (TG0701-079) submittal packages, Skanska's detailer inadvertently tagged the spandrel shear plates and web reinforcement plates at the Bus Deck level to receive CVN, Frequency P testing. These same components were not tagged for CVN testing in the CS1, CS2, CS3, CS4, and CS6 packages and the drawings were approved with no comment on the CVN requirements.</p> <p>For the subject material, the governing ASTM 572 specification indicates that supplementary CVN, Frequency P testing is not required unless specifically indicated in the contract documents. In accordance with the response to RFI T-1034, Skanska has proceeded without CVN-P testing for the following secondary components: (Note that the material listed has been ordered without Frequency P testing.)</p> <ul style="list-style-type: none">Bus Deck Spandrel PlatesBus Deck Web Reinforcement PlatesBus Deck Drag Connection PlatesRoof Level Fabricated Nodes (as per submittal package TG0701-097.1)Other secondary materials (stiffeners, connection plates, continuity plates, etc.)			Confirmed.

T-1387	SSS - Erection Plan Temporary Lugs	Closed	05/12/2014	05/22/2014	05/23/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Compan PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
During a recent structural issues coordination meeting, Skanska raised a concern regarding a submittal response received with package TG0701-29. Specifically, Skanska flagged a comment that indicated our temporary erection aids at the exterior moment frame columns needed to be located 36" below the moment frame beam to column connection at the bus deck level and also 36" away from the weld joint between the column and cast node/transfer girder at ground level. See attached drawings for ease of reference.				Confirmed.			
As discussed during the meeting, please confirm that this is not mandatory; and, if Skanska opts to leave the lugs as shown on the attached documents, it is acceptable.

T-1389	SSS - Stud Comment Clarification on Decking Drawings	Closed	05/13/2014	05/23/2014	05/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: With reference to the Linden Steel decking drawings the reviewer's comment references general note DK-5 - Distribute steel studs uniformly over beam span unless otherwise noted on drawings. Maximum spacing of ¾ inch headed studs shall not exceed 24" on center (one stud every 2 feet) unless otherwise noted. As per note 1 on 1/S1-5000 - "See general notes for headed stud size and maximum spacing. Number of studs is indicated on the framing plan." Linden has modeled their drawings as per note 1, referring to the general notes for size and spacing requirements and the framing plans for stud quantities indicated on each member as per the Steel Beam Legend on S1-2302. If a stud quantity is not indicated on a beam member, no studs are provided. Please confirm this interpretation is correct. If additional studs are required on members that are not currently identified please provide revised drawings identifying beams and quantities required.			SUGGESTION:		ANSWER: While the maximum stud spacing requirement of 24" noted in General Note DK-5 is the design intent, we understand that the Note 1 on 1/S1-5000 is somewhat conflicting. We agree to handle the 24' spacing requirement on a case by case basis, by marking on the shop drawings where this requirement is to be enforced to minimize the impact. We will re-submit the metal deck shop drawings for clarification.		
					Accept Suggestion: <input type="checkbox"/>

T-1409	TR1.4 Transfer Girder 72" X 40" CBM Welded Couplers/Bars	Closed	05/19/2014	05/29/2014	05/19/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché		To: Turner Construction Company PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please clarify the designer's intent:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> As noted on the plan, the slab west of Grid 1.4 has a step at Grid E. As noted on the plan, along Grid 1.4 , top of slab is at 20.23 north of Grid E and at 21.21 south of Grid E. As noted on the plan, along Grid 1 (top of concrete wall), top of slab is at 20.03 north of Grid E and 21.00 south of Grid E. The 72x40 concrete beams are to have a slope per elevation noted on plan.				
Sheet S1-2302 indicates that the 2 northerm 72"x40" CBM beams east of Grid 1.4 are sloping and references Section 1/S1-3700 which indicates that the CBM beams are level. The 2 southern 72 "x40" CBM beams east of Grid 1.4 are not indicated as sloping and reference Section 1 /S1- 5023 that indicates that the beams are sloping. Please clarify the details for the welded couplers and #11 bars for the 72"x40" CBM beams at east side of TR1 .4. Section 2/S1-7605 indicates 17-#11 bars top and bottom, one added set of 17-#11 bars 3" below the top bars, and 4-#11 side bars.The details shown in Sections 1/SI-5023 and 9/SI-3700 indicate that the top and bottom 17-# 11 bars are connected to the transfer girder by welded couplers or bars. Please verify that only the top and bottom #11 bars connect to the transfer girder by welded couplers or bars.

T-1412	SSS - Pipe Wall Thickness Tolerance	Closed	05/23/2014	06/02/2014	05/28/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Compan PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Per conversation during "Transbay structural issues review" meeting on 5-20-2014, the wall thickness tolerance of spec 05 15 22 was discussed. Per design team, this tolerance is intended to apply to the ends where the pipe would be welded, and a less restrictive tolerance would be acceptable throughout the length of the pipe, provided that the wall thickness is greater than nominal, not less.				Confirmed.			
The manufacturer of the spun-cast pipe has produced all product to date with dimensions that meet the 05 15 22 spec for 12" at each end. Throughout the remainder of the pipe, the wall thickness is greater than nominal (typically by about 0.090"), and in all cases falling within the tolerance of API-5L.							
See attached depiction ofthe pipe tolerances.							
Please confirm that wall thickness tolerance noted in spec 05 15 22 is intended to apply to the ends only, and that the wall thickness throughout the remainder of the pipe may be greater by as much as is allowed by API5L, but shall be no less than the nominal wall thickness.

T-1425.1	SSS - Edge of Slab Angle at Seismic Joint GL10 & 20	Closed	06/30/2014	07/10/2014	07/09/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Gregory Kemerer	To: Turner Construction Compan	PHIL MILITELLO	Answered By: Adamson Associates, Inc. George Metzger			

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 433.1 SK1 & SK2 for items 1 & 2:
1) Confirm the outline of top of slab/edge plate at grids B & H at the expansion joints.
2) Confirm the edge plate support detail at the 1/1/4" connection plate is acceptable as shown or supply an alternate detail.
3) The 10" on SK2 indicates top of roof floor slab. Confirm the bent plate will stop at top of slab OR is an additional 8" required to the concrete key location.
4) For detail 9/S1-5000 now required at the Seismic joints, verify the 8'-0 Max spacing for the angles can be increased to 8'-6 in order to line up with the back span beam spacing per design.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

1). Confirmed. However, the requirement for the closure plate and other misc. steel per Detail 9/S1-5000 noted in TT's previous responses to RFI 1425.0 may be waived to negate SKANSKA's claim of added scope. If the closure plate is not provided by SKANSKA, the concrete contractor shall provide proper forming/shoring for supporting wet weight of the concrete while pouring slab concrete. How to support the wet weight of the concrete when placing the slab is the contractor's means and methods.

2). Confirmed, also see the response to comment #1.

3). It is W/O's option to stop the vertical leg of the closure plate at the top of slab (additional forming is required to retain the concrete while placing the slab), or stop the vertical leg of the closure plate at the concrete key location (additional forming not required).

4). Confirmed that the outrigger spacing may be increased to 8'-6" to be in line with the back span beam spacing.

T-1437	BGP - Shear Wall Column Vertical Splice at 3rd Lift	Open	06/03/2014	06/13/2014	06/06/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché		To: Turner Construction Compan PHIL MILITELLO		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Reference: RFI T-0620 For constructability purposes, the shearwalls require horizontal construction joints at the same elevations as the foundation wall construction joints. All vertical reinforcing has been detailed with HRC mechanical couplers with the exception of the 3rd lift of the shear wall column located adjacent to the knockout wall. Please confirm that it is acceptable to splice the verticals in the shear wall column with a Dayton Superior Barlock D250SCA coupler		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Acceptable provided that the coupler is a Type II coupler, such as Dayton Superior Barlock L-Series. The coupler proposed in the RFI does not qualify. The contractor shall plan for the installation of the coupler by taking into account the length of the coupler, the length of the reinforcing stub to be spliced, and the available clearance. The coupler may need to be preinstalled with the stub or a blockout created depending on the proximity of the obstruction to the planned construction joint. The detailer shall account for the increase in effective bar diameter at the mechanical coupler with respect to ties and clear cover.

See attached CD RFI # 449 SK1 & SK2:
Please confirm the location of the slab opening on SK1 as it is currently located over a kicker brace and not indicated on the structural drawings.
Please provide revised structural drawings indicating all slab openings required.

Accept Suggestion: ☐

Slab opening locations per A1-2862 govern. Move the kicker brace so that it is in between the two openings. Structural drawings will be updated in a future ASI to show the two openings.

Note: Small openings in slabs are to be coordinated between sub-contractors by GC and included in the contract as defined in Contract Documents.

T-1439	SSS - Oversized Holes in Cruciform Column Base Plate	Closed	06/04/2014	06/14/2014	06/12/2014	Potentially	<input type="checkbox"/>
---------------	---	---------------	-------------------	-------------------	-------------------	--------------------	--------------------------

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company PHIL MILITELLO

Answered By: Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Due to the thickness of the cruciform column base plate and the transfer girder top flange connection (7-1/2" to 9-1/2" thick). Please confirm it is acceptable to provide oversized holes in the base plate only at the slip critical connection as per AISC (see SK1). This will allow additional tolerance for threading the 2-1/2" diameter post tensioned rods varying from 14' to 38' long through the 7-1/2" to 9-1/2" thick steel.

Note: The transfer girder top flange will remain a standard size hole (d+1/16").

SUGGESTION:

ANSWER: Accept Suggestion: ☐

Using oversized holes in the SFRS bolted connection indicated in the RFI is not acceptable. It is acceptable to achieve additional tolerance for the post-tensioned rods by using oversized holes for these rods within the base plate.

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>On Thursday, May 22, 2014, there was slurry intrusion through dewatering well #34, from the Transbay Tower Project. After the Transbay Tower Project placed a lean mix to plug the slurry intrusion, only water has come out of the well at a pressurized rate, not yet experienced on this project prior to the event.</p> <p>The water in this well has been confirmed acceptable by the SFPUC to discharge into the City's combined sewer system, on 6/5/14. A plug has been placed in this well in order to keep the jobsite from flooding due to the volume of water pushing through the well. We want to replace the dewatering pump in this well, but are concerned that we may end up dewatering the Transbay Tower Project and possibly draw the water table on their project outside of the requirements of our specification.</p> <p>1) Please confirm that it is acceptable to re-install the dewatering pump in well #34. 2) Please let us know if there are certain steps or durations that you want us to pump in an effort for ARUP to monitor the water table on Transbay Tower's Project and/or other adjacent properties. 3) Please confirm that in performing this activity, we are not held to the requirement of Spec Section 31 56 13-13.F.1. in regards to "The performance of the shoring wall shall be such that the groundwater levels around the excavation are maintained within 3 feet from the pre-excavation levels" since there is the potential of us drawing their groundwater through our well.</p>						<p>1. It is acceptable to reinstall the dewatering pump in well #34. 2. Access has been provided to the global analyzer. Please watch carefully the affects from dewatering in wells P-03DS and P-6MS. These have currently not shown any change in the piezometric elevation since May 22. 3. The specification will not be relaxed at this time.</p>

T-1447	SSS - Column Connection by Bi-Fold Door Support	Closed	06/10/2014	06/20/2014	06/26/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Compan PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Please refer to the response to T-1402 (SK RFI 558B) and see attached SK 1: The W27x84 beams have a depth of 26.7 inches. In order to access the bolts as suggested in the response, both the top and bottom flanges will need to be coped. The bottom flange supports the Bi-Fold Door Supports at these locations. Please provide the minimum distance between the ¾" cap plate and the cope for the bottom flange of the W27x84 beams.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Provide a minimum distance of 1" between the cap plate and cope of the bottom flange of the W27x84 beams.	
T-1448	SSS - Shear Stud Layout at Column Base Plate	Closed	06/10/2014	06/20/2014	06/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Compan PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Reference drawing S1-2304 at grid line 16G, section detail 9/S1-3702 indicates 7 rows of 6 studs on the top flange of the transfer girder. At this location and at 5 other typical locations along grid line G the transfer girder top flange is covered by the column base plate. See SK1 for clarification. Please provide a layout detail for the 42 shear studs if they are to be welded to the column base plate.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The 42 (3/4" headed) studs shown on the top of beam flange may be deleted.

T-1449	SSS - North Exit Mezzanine Hanger Detail	Closed	06/10/2014	06/20/2014	06/25/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Compan PHIL MILITELLO Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: See attached sketches CD RFI # 456 SK1 to SK3 which reference the hanger and brace location that clashes with the lower concourse column at grid C/21. The hanger and brace per 1/S1-2252 are directly in line with the cap plate bolts at grid C/21. Please provide an alternative connection detail.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The hanger shall be connected to the cap plate similar to the detail at the bottom of the hanger as shown in detail 9/S1-5028. The 2" distance between the ends of the gusset plate and angle may be increased to clear the bolts at the cap plate. The V-shaped angle braces at the location highlighted in the RFI may be deleted.			
T-1450	SSS - HSS Brace Gusset Plate Connection	Closed	06/11/2014	06/21/2014	06/26/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Compan PHIL MILITELLO Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: See attached CD RFI # 455 SK1: Details 4, 5 & 7/S1-7632 (7/S1-7632 shown) show the 1/2" x 3" stiffener PL above the beam to be parallel with the offset line opposed to the brace connections below the beam where the stiffener PL is not parallel to the offset line. Please confirm it is acceptable to locate the 1/2" x 3" stiffener PL based on the horizontal and vertical weld length for the gusset plate to the beam/column as shown in the example from the model.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Acceptable. As shown for the bottom connections, the details do not require the offset lines and the stiffeners to be parallel.

From: Webcor Construction LP Claude Titché		To: Turner Construction Company PHIL MILITELLO	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: At Gridline 8.9/A one of the 4" 90 degree telecom sweeps conflicts with an existing internal bracing strut (See attached photo). This sweep was changed from an original 30" radius sweep to a 36" radius sweep. Please confirm which option SCCI is to proceed with: 1)The first telecom sweep could be installed 7'-1" West of GL 9 (instead of 5'-7" shown in comprehensive layout drawing) and the remaining 2 installed with the specified 1' -6" offset. 2)The 36" radius telecom sweep could be replaced with the original 30" radius telecom sweep at this location only.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Please proceed with option 1: The first telecom sweep could be installed 7'-1" West of GL-9 (instead of 5'-7" shown in comprehensive drawing) and the remaining two installed with the specified 1'-6" offset.			
T-1461	BGP - CMU Pier Sizing	Closed	06/17/2014	06/27/2014	06/25/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché		To: Turner Construction Company PHIL MILITELLO	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Detail 9 on plan sheet S1-9000 shows the CMU pier sizing based on wall height and door opening width. The height of the CMU wall significantly affects the CMU pier sizing. The AI-9240 drawings which were provided in the response to RFI T-1410 are the only drawings which show possible CMU wall heights, however those heights are only based on scale dimensions. Please provide the heights of the CMU walls or confirm SCCI is to assume the maximum CMU wall height of 26'-8" for all CMU walls.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> CMU wall limiting height varies according to the Masonry Partition Schedule shown on A-0022 issued with the Main Package IFC dated March 31, 2014. CMU wall heights can be established using information provided on Structural and Architectural drawings (slab thickness, beam depths, TOC floor elevations).

T-1468	SCS - WPS Qualification - Lenton Weldable Couplers	Closed	06/23/2014	07/03/2014	07/03/2014	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Claude Titche To: Turner Construction Compan PHIL MILITELLO				Answered By:Adamson Associates, Inc. George Metzger		
	Co-Author: Shimmick Construction Company, Inc. Ben Gordon						
	REQUEST: The Lenton welding information provides guidance for qualification of processes; however there are inconsistencies when trying to fulfill AWS D1.1 (2010) requirements. The materials used for manufacturing weldable couplers size #9-11 are Grade 1030/1035. These grades of material are not listed in AWS D1.1 (2010) Table 3. 1, although Grade 1030 is listed in AWS B 2.1 Table D.1 as a Group 2 material (table attached). In order to move forward with welding the Lenton weldable couplers to the Transfer Girders, TMF proposes that FCA W Grade 70 filler material to be used manufacturer ESAB 7100 Ultra, Classification E71 T-9, AWS Specification AWS 5.20"D". One mockup of the actual coupler welded to a Group 2 plate and macro etched would be provided as a supplement.	SUGGESTION:	ANSWER: Acceptable.	Accept Suggestion:	<input type="checkbox"/>		
	Please confirm this is acceptable.						
T-1469	BGP - Seismic Joint Rebar and Continuous Plate Conflict	Closed	06/23/2014	07/03/2014	06/26/2014	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Claude Titche To: Turner Construction Compan PHIL MILITELLO				Answered By:Adamson Associates, Inc. George Metzger		
	Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto						
	REQUEST: Please reference the attached drawings, S1-3010 and S1-3206. The continuous plate and rebar clouded in the attached drawings is conflicting. Please provide a minimum clearance between the rebar and continuous plate.	SUGGESTION:	ANSWER: To clear the reinforcement, reduce the steel plate width from 3 inches to 2 inches at the highlighted location. For the similar plate on the opposite side of the joint, reduce 3 inch width to 2 inches for symmetry.	Accept Suggestion:	<input type="checkbox"/>

T-1470	BGP - Steel Jacket at Column GL1.4/D.4	Closed	06/24/2014	07/04/2014	06/25/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché			To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference attached drawings. The column at Gridlines 1.4/D.4 requires steel jacketing as called out in AAI comment in Submittal Package TG0600-141 sheet G101.0. During the TG0600-141 coordination meeting held on 6/18/14 it was confirmed that the typical sleeve detail as shown on 3/A1-9208 will apply. Sheet A1-2102 implies a one-sided sleeve on the south face of column, sheet A1-9214 implies a two piece sleeve, and sheet 3/A1-9208 shows the typical detail with no modifications. Please confirm a detail specific to this location showing how the jacket is to be wrapped and interfaced with adjacent partition walls.					The column at gridlines 1.4/D.4 requires 6'-0" high steel jacket all around the column with ring plate base, post-installed studs at the Mat Slab. The concrete wall located at 2 sides of column terminates 3/8" before the steel jacket face, 3/8" before and above the ring plate base, and 3/8" before the concrete column face (above steel jacket). Please refer to dwg sheets 3/A1-9208 for detail plan and 2/A1-9213 for section.		

T-1471	BGP - Seismic Joint Bottom Embed Plate at Pits	Closed	06/24/2014	07/04/2014	07/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché			To: Turner Construction Company PHIL MILITELLO			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Please reference attached Contract Drawings and photos. The east face of the north pit along GL 35 is scaled at 6'-8" from face of CDSM wall (S1-2027 attached). The as-built dimension ranges from 5'-0" to 5'-11" (S1-2027). Also, the center pit is scaled at 5'-8" to face of CDSM wall while the as-built is 5'-3" (S1-2027). Detail 4 on S1-3010 includes a scaled dimension of 5'-0" from face of CDSM wall to the inside face of the west half of the seismic embed (See S1-3010 attached). Therefore, the bottom embed plate will need to extend 2'-6" beyond the 5' dimension per Detail 7 of AI -8881 (attached). Since the as-built dimensions of the edge of pits range from 5'-0" to 5'-11" from face of CDSM wall, the bottom embed plate will overhang the pit depression 2'-6" to 1'-7". The plate could be reduced up to 1'-11" (2'-6" minus the 8" for clamping detail) to accommodate the edge of pits and allow for waterproofing clamping detail. Is this acceptable? Please provide further details at locations where encroaching pits do not allow for sufficient room for bottom					The embed plate for the center pit at GL 35/E: It is acceptable to reduce the plate to 5'-7" minimum length to accommodate the edge of pit and clamping detail. Provide grout for vertical transition of WPM. The embed plate for the north pit at GL 35/B-C.3: The vertical surface of the mud slab should be adjusted to reflect what is depicted on engineering drawings (7/S1-3010) and read in combination with architectural drawings (A1-8881). The contractor may reinforce and anchor additional concrete to the side of the pit. Alternatively, they may opt to remove the existing mud slab concrete locally leaving exposed reinforcing to lap splice or mechanically splice to and pour concrete on area removed. The plate at this location shall be reduced to 5'-7" minimum horizontal length to accommodate the clamping detail.

embed plate and clamping assembly.							
T-1471.1	BGP - Seismic Joint Bottom Embed Plate at Pits	Open	07/28/2014	08/07/2014		Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche		To: Turner Construction Compan PHIL MILITELLO	Answered By:				
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>			
Further to the response to 1471 please find attached embed plate layout with cross-sections at the pit locations. It will be necessary at the pit locations to also infill and adjust the mud slab vertical/sloped face in order to accommodate the embed plate and clamping detail of the SJ embed.							
Please confirm if this is acceptable.							
Note: all infill material used is to be approved by the WPM manufacturer							
T-1472	BGP - Pier and Opening Sizes on Deck D207-D209	Closed	06/24/2014	07/04/2014	07/30/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche		To: Turner Construction Compan PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>			
Because the specific sizes are not noted on the Contract Drawings provided, and wall heights are not shown on the Contract Drawing (Refer to RFI T-1472), please confirm Pier and Opening Sizes for Deck D207 to D209 are per the attached drawings.				Pier and opening sizes without mark ups for Deck D207 to D209 are confirmed. Refer to attached PDF (AAI Response) for AAI notes and mark ups.

<i>Number</i>	<i>Subject</i>	<i>Status</i>	<i>Date Created</i>	<i>Date Required</i>	<i>Date Answered</i>	<i>Cost Impact</i>	<i>Proceed</i>
	<p>Please reference RFI T-0576 regarding the offset of the West Foundation Walls to account for the CDSM Encroachment. The west wall (GL 1) was offset 3 1/8" to the east while the southwest wall (GL XI-1) was offset 1 7/8" to the northeast. Currently there are no dimensions explicitly shown in the contract drawings for the width of the service corridor that runs along the very western edge of the Lower Concourse in Area 1 and 3. However there is a dimension shown on A1-3006 & A1-7004 that shows the eastern face of the service corridor at 5' to the west of GL 1.4 which translates into a service corridor width of 9' -8 7/8". Is it the designers intent to offset the service corridor walls similar to the foundation walls to maintain the 10' corridor width, or is it the designers intent to shrink the width of the service corridor and keep the interior walls in place? Please provide dimensions for the service corridor width.</p>						<p>The location of interior walls of rooms along the west and southwest service corridors shall be maintained. The service corridor widths shall be reduced by 3 1/8" on the west and 1 7/8" on the southwest.</p>
T-1473.1	BGP - Lower Concourse Service Corridor Dimensions on West Wall	Closed	07/07/2014	07/17/2014	07/15/2014	Potentially	<input type="checkbox"/>
<p>From: Webcor Construction LP Claude Titché</p> <p>To: Turner Construction Compan PHIL MILITELLO</p> <p>Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto</p>			<p>Answered By:Adamson Associates, Inc. George Metzger</p>				
	<p>REQUEST:</p> <p>With the response from RFI T-1473 and the contract drawings, SCCI has enough dimensions to model the service corridor running north-south in Area 3. However there is not enough information to model the alignment of the service corridor running northwest-southeast. Please provide a work point with dimensions somewhere along the east face of the service corridor (preferably at the southernmost point of the service corridor at Shear Wall 390A) or provide an angle at which the service corridor changes direction above Gridline K.</p>	<p>SUGGESTION:</p>	<p>ANSWER: Accept Suggestion: <input type="checkbox"/></p> <p>For the alignment of the service corridor that runs along the west side of the Lower Concourse, as requested in this RFI, please refer to the work points and dimensions in the attached SKA-3865.</p>

	<p>Shimmick is planning to use a similar form system for the fourth lift of the foundation wall to that used on the second wall lift. However, the second wall lift form system is a cantilever system and is supported by 1 row of anchors, excerpting significant force on the wall lift below. Shimmick proposes to add a tie to the top of the forms and connect to the CDSM soldier piles in addition to using the third lift anchor to provide better support. The soldier piles extend above the ground level and this added tie would not affect the waterproofing (installed by others). See the attached marked up drawings for reference</p> <p>Please confirm it is acceptable for the fourth lift form system to tie to the CDSM soldier piles.</p>

T-1483	BGP - Dimension to Door on North Vehicle Ramp Wall	Closed	07/01/2014	07/11/2014	07/07/2014	Potentially	<input type="checkbox"/>
<div>From: Webcor Construction LP Claude Titcher</div> <div>To: Turner Construction Company PHIL MILITELLO</div> <div>Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto</div> <div>ANSWERED BY: Adamson Associates, Inc. George Metzger</div>							
REQUEST: The door in question is at the east end of the north Vehicle Ramp Wall. There is a dimension on AI-2853, dimensioned at 7'-5 7/4" from GL 6 to the end of the wall and it is shown without a door attached. On all other drawings a door is shown at the east end of the wall, but there are no other dimensions indicating the east-west location of the door. Please confirm if it is the designer's intent to have the door placed on the end of the wall shown in AI-2853 so the east face of the door is 6'-5 1/4" off of GL 6 or if the door is to be placed per scale at 6'-3" off of GL 6.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> For door location with updated dimension at the east end of the north and south Vehicle Ramp walls, refer to SKA-3747 & SKA 3748.

T-1488	SSS - NDT of Centrifugally Cast Pipes	Closed	07/02/2014	07/12/2014	07/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Compan PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Specification 05 15 22, section 2.1.A.3 indicates magnetic particle testing (MT) shall be performed according to the criteria of ASTM A903, which in turn indicates that liquid dye penetrant testing (PT) may be performed, not in lieu of but in addition to MT, to give further information in cases where the MT results may be unclear. Please confirm if PT is an acceptable NDT method per ASTM A903, in addition to the MT already prescribed. For clarification, no reduction in the amount of MT is requested.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Acceptable at Contractor's option. When available, include dye penetrant test (PT) data as part of NDT submittals.			
T-1489	SSS - Pin Coating Clarification	Closed	07/02/2014	07/12/2014	07/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Compan PHIL MILITELLO		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Structural Steel Specification - 05 10 00, states that the pins for the basket columns, a Type 2(M) drag connection, are to be galvanized to class A or Class B-1 per ASTM A153. After reading this note, and looking through all of the applicable details, Skanska interpreted all of the remaining drag connection pins to be provided as bare steel. In the response to the submittal package TG0701-60.1 SSS - PIN Drawings (Central Zone), drawing A9312, a Type 2 (N2) drag connection at GL 11, was marked to receive a galvanized coating. Similar pin connections occur at GL 21 & GL 22 (Type 2-P) and GL 28 (Type 2-N2). Does the design team want these pins galvanized too? If so, please provide the standard required.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Contractor's interpretation of the corrosion protection/finish of remaining pins (other than the Basket column pins) is not correct. AESS elements documented to receive IFRM should receive IFRM in all instances (pins are included), both as fire protection method and as a corrosion prevention measure. The Design Team as the TJPB Representative will offer this as Contractor's Option; to hot dip galvanize ALL the remaining pins (other than the Basket column pins), or apply the intumescent coating system over non-galvanized steel, in either option, the tolerances required for installation of pins is a means and methods solution the responsibility of the contractor

REQUEST:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Per the breakout meeting held after the TTC progress meeting on 7/9 @10:30, and email correspondence between Adib Sassine and Walter Melville (Attached). Please confirm the following items regarding the grounding mesh in electrical room B1441 at Grid Lines 15/G.5.			1) WSP has no exceptions to this proposal, subject to SFPUC acceptance.				
- Due to constructability issues please confirm that the attached PUC approved alternate detail is acceptable and will be incorporated into lower concourse electrical room B1441 at GL15/G.5			2) WSP has no exceptions to this proposal, subject to SFPUC acceptance.				
- The attached alternate detail incorporates a 4/0 field fabricated grid in lieu of the original #6 mesh and 4/0 ground ring. Please confirm that the alternate detail 4/0 grid will suffice to also act as the ground ring, and all pigtailed can be attached to the grid.			3) WSP has no exceptions to this proposal, subject to SFPUC acceptance.				
- Please confirm the grounding grid spacing is 4' on center with connections to mat rebar at 8' on center.			4) WSP has no exceptions to this proposal, subject to SFPUC acceptance.				
- Please confirm that cadweld or use listed irreversible compression connections to cross-grid and ground mat at 8' on center minimum is acceptable.			5) WSP has no exceptions to this proposal, subject to SFPUC acceptance.				
- Please confirm ground potential rise study at each switch gear room is not required.			6) Refer to SFPUC response.				
- Please confirm which specification governs, IEEE142 per Transbay Transit Center contract documents or per PUC referenced specification IEEE80, which will require "Ground Grid Test". (See attached email).			7) WSP has no exceptions to this proposal, subject to SFPUC acceptance.				
- Please confirm the layout of grid does not extend past the walls in South Electrical room B1441.			8) WSP has no exceptions to this proposal, subject to SFPUC acceptance.				
- Please confirm that exothermic or irreversible compression connections listed for concrete encasement are required for all pigtailed main grid connections, (outside edge to cross members, corners, and main cross connectors), and connections to building ground wires (shown with "G" on plan).			9) WSP has no exceptions to this proposal, subject to SFPUC acceptance. SFPUC to confirm if inspection by other parties is required.				
- Please confirm that SFPUC and DBI will be the only entities inspecting the grounding grid.

T-1504	BGP - Lower Concourse Future Wall FS Conflicts	Closed	07/09/2014	07/19/2014	07/09/2014	Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. Sylvia Hartanto		To: Webcor/Obayashi Joint Ventu Spencer Sayles	Answered By:Webcor Construction LP Claude Titcher				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Per attached correspondence, WOJV has directed SCCI to install future wall formsavers according to the details attached that clarify the Contract Drawings. However, due to congestion created by the increased amount of reinforcing within the beam components, ample space to install the future wall formsaver bars at the design spacing does not always exist. See attached pictures.				Confirmed.			
Because the CMU contract has not been solicited or awarded, please confirm that it is acceptable to offset the bars out of alignment+/- 4" in attempts to maintain proper spacing, and/or increase or decrease the specified spacing +/- 6" such that the future wall formsaver bars can be installed and the correct number of dowels is maintained. The same flexibility is also requested for the "ends, intersection and corner" detail per the attached document.							
T-1505	SSS - Stiffener Plate Location at TR13	Closed	07/09/2014	07/09/2014	07/18/2014	Potentially	<input type="checkbox"/>

T-1507	BGP - Seismic Joint Removable Corbel Connection Variance	Closed	07/11/2014	07/21/2014	07/23/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Compan PHIL MILITELLO			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Per contract drawing S1-3205, the removable W14x61 steel corbel and WT8X28.5 angles it connects with are to be fabricated with a 2" vertical slotted hole.					1.) Not acceptable.		
In order to eliminate the lead time of field measured fabrication of the corbels after concrete formwork removal from the SJ assembly, the contractor is proposing either or preferably both of the following modifications:					2.) The beam portion of the corbel may be coated for corrosion protection rather than galvanized. Refer to specification section 09 97 13, part 3.6, item E for acceptable coating types.		
1. Change the slotted hole from vertical to horizontal (east to west) direction on the angles and or the steel corbels 2. Change the finish of the removable W14X61 steel corbel only from galvanized to primed steel (all other embedded metals would remain galvanized per the contract drawing).							
Please confirm if either of these proposals would be acceptable?

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

REQUEST:

See attached CD RFI # 513 SK1 & SK2:
The 3" plate per Type 61 on S1-5132 extends 3" past the end of the Girder. Please confirm that is the intent or supply a solution.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Provide 25" long cap plate (in lieu of 28") to prevent the 3" extension past the end of the Girder.

T-1526	SSS - Dimensional Adjustment to Avoid Fouling BU-Box Beam at Bus Ramp Suppo Closed				07/18/2014	07/28/2014	07/29/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Gregory Kemerer	To: Turner Construction Compan		PHIL MILITELLO				
					Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California Dis Ryan Clayton									

REQUEST:

See attached CD RFI # 515 SK1 & SK2 for items 1 & 2:
1) The web reinforcing plate will foul the BU-Box Beam 'B' if extended past the flange cope 1'-0 per S1-5017. Confirm the 1'-0 dimension may be reduced to 9 3/4" as shown or supply an alternate solution.

2) The web reinforcing plate will foul the end plate for the WF beam if extended past the flange cope 1'-0 per S1-5017. Confirm the 1'-0 dimension may be reduced to 6 1/4" on both sides or supply an alternate solution.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

1) Confirmed.

2) Confirmed.

T-1527	SSS - PE201 & ST201A Welding Clarifications at WF			Open	07/18/2014	07/28/2014	Potentially	<input type="checkbox"/>

REQUEST: See attached CD RFI # 504 SK1 & SK2 for items 1 & 2: 1) The bolts will not be erectable if left inside the profile of the column as shown in detail 4/S1-5033. Confirm it is acceptable to locate the bolts as shown. 2) Confirm it is acceptable to locate the cap plate per 11/S1-7605 as shown and weld the L4x4x1/4 per 4/S1-5033 as shown.		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
<hr/>							
T-1532	SSS - Deck Support Angle at Column Base Plate	Closed	07/19/2014	07/29/2014	07/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Compan PHIL MILITELLO		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: Per detail 1/S1-5052 when the column base plate and the transfer girder flange is the same width, there is no deck support for the length of the column base plate when the deck sits at the same level as the girder. Please confirm it is acceptable to provide a gage angle to support the deck around the column base plate. The gauge angle will be welded after the column to girder connection is made to avoid the angle and weld interfering with the connection. See attached SK1 & 2 for clarification.		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
				Using gage angle for connection to the metal deck around the base plate is acceptable, however, the gage angle is to be welded to the transfer girder flange, not the base plate. Extend the vertical leg of the gage angle down as needed.

T-1536	BGP - Concrete Cover & Tolerance on Foundation Wall Terminator Rebar	Open	07/24/2014	08/03/2014		Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Compan	PHIL MILITELLO	Answered By:			
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
<div>Drawing SI-3201 and other similar foundation wall sections call out a 2" concrete cover on the terminators of the foundation wall vertical rebar. These vertical bars have no adjustability because one end is a terminator and the other end is a male coupler end. The elevation of the top of terminator will be dependent on the coupler elevation above the Lift 3 Foundation Wall. The ground floor slab is 10" thick and sloped along the top of foundation wall.</div> <div>To allow for maximum deviation to accommodate for the slope of the slab, tolerances in rebar fabrication and location from the previous wall lifts and the final wall lift: 1. Shimmick proposes to change the concrete cover from 2" to 5" and increase the tolerance to 2.5". Please confirm this is acceptable. 2. If the proposal is not acceptable, please provide a concrete cover and tolerance that is acceptable.</div>

T-1547	BGP - Seismic Joint Deformed Bar Anchor Variance	Closed	07/25/2014	08/04/2014	07/25/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché		To: Turner Construction Compan PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please reference Detail 2, Sheet S 1-3205.				1). See response to #3			
Please clarify the following deformed bar questions:				2). The detail was drawn graphically incorrect, see response to #3			
1. 1" diameter deformed bar is a non-standard diameter for deformed bar. This will require the bar to be specially manufactured which could take up to 4 weeks to procure. 3/4" diameter deformed bar is the largest standard size readily available. Is it acceptable to use 3/4" diameter in lieu of 1" diameter deformed bar?				3). Using 1" (#8) welded rebars is acceptable as long as ASTM A706 bars are used. Submit weld detail with the seismic joint shop drawings for review.			
2. The detail depicts a head on the end of the deformed bar. Headed deformed bar is also non-standard (see attached Nelson Stud Deformed Bar Product Data) and currently found to be unattainable. Is it the intent of the engineer to include a headed deformed bar anchor? Is it acceptable to use a standard A 108 bar per ASTM A496 as detailed in the attached product data?							
3. If the 3/4" diameter deformed bar is unacceptable, is it acceptable to use 1" (#8) welded rebar in lieu of the 1" deformed bar? Furthermore, will the rebar require headed reinforcement?

	<p>Please reference Detail 3 of A1-8881, S1-2027, and the attached Drawings.</p> <p>Please confirm the protection slab is to stop 5" east of GL 35 as scaled on attached Detail 3 of Sheet AI - 8881.</p> <p>Please confirm it is acceptable to eliminate the 12" section of protection slab against the east CDSM wall.</p> <p>Please reference attached drawing S1-2027. If the protection slab is required to end 5" east of GL 35, the slab will be poured halfway up the slope on the center and north pits as depicted in S1-2027. Is it the engineer's intent to end the slab halfway up the pit? If not, please provide details of protection slab location at the seismic joint at the center and north pits.</p>						<p>1. Confirmed, the protection slab may stop 5" east of GL 35. Protection of the membrane is a means and methods issue and is the contractor's responsibility and does not require our comment.</p> <p>2. It is acceptable to eliminate the 11" protection slab against the east CDSM wall. Protection of the membrane is a means and methods issue and is the contractor's responsibility and does not require our comment.</p> <p>3. For the North and Center pits along GL 35, where the embed plates are shortened in accordance with RFI-1471, the protection slab will terminate at the vertical face of mud slab.</p>
T-1549	BGP - 3rd Wall Lift Vertical Unistrut Spacing Tolerance	Closed	07/25/2014	08/04/2014	07/29/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché		To: Turner Construction Compan PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Vertical Unistrut embedded in the 3rd wall lift is spaced at 10' O.C. per plan drawing AI -6231. Due to locations of wall bulkheads, form work panel ribs, and other embedded items, the contractor requests a tolerance of plus/minus 4" off the 10' O.C. spacing. Please confirm if this is acceptable and if not, please provide an acceptable lateral tolerance.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed. It is acceptable to have +/- 4" off the 10'-0" spacing of the vertical Unistrut at the Lower Concourse foundation walls.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton							
REQUEST: See attached CD RFI # 516 SK1 to SK3: The L8x4x1/2 is insufficient for the HSS10x10 posts in SE201 & SE202. Please supply an alternate detail.		SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>			
T-1552	BGP - Pit Rebar in South Pit at GL 35	Closed	07/25/2014	08/04/2014	07/29/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Compan PHIL MILITELLO	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please reference Contract Drawings SI-2027, SI-3010, SI-3004, and the attached drawings. Sheet S1-2027 depicts the east edge of the south pit 2'-5" west of GL 35. As-built location of east edge of south pit is 1 '-0" west of GL 35. The south pit at GL 35 has typical pit rebar per Detail 4, S1-3004. Typically, the pit rebar extends 4' beyond the edge of pit and 4' in height (see attached drawing SI- 3010). At the as-built location of the pit, pit rebar will extend into the seismic joint gap by approximately 14" as depicted in the attached drawing. Please provide alternate pit rebar detail for the south pit at GL 35. Please note, pit rebar for all pits in Area 16 have been fabricated.		SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/> The condition is analogous to the pits shown to the north, detailed in Sections 7/S1-3010 and 1/S1-3007. Contract documents instruct the contractor to verify field dimensions, coordinate the drawings, and apply similar detailing. It is acceptable to apply the aforementioned details or for the contractor to provide an alternative equivalent detail for acceptance through the RFI process. It is possible that pit has been placed too far east. Contractor to verify plan location of pit and the ability to comply with contract documents for the 5'-0" minimum clearance requirement between the bottom edge of sump and nearest face of waterproofing.

domestically. Please advise.

T-1558	BGP - Bracing removal sequence on the East end of Zone 4	Open	07/25/2014	08/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Claude Titche	To: Turner Construction Compan	PHIL MILITELLO	Answered By:		

Co-Author:

REQUEST:

Bracing removal sequence on the East end of Zone 4
WOJV is proposing the following sequence for the bracing removal for the east side of Zone 4.
See sketch SK1, attached.

Sequence

1. Remove level D struts and walers from within the green clouded area up to GL- 32.2 once the mat slab beneath has reached adequate strength.
2. Remove level D struts within the Blue clouded area STD-65 to 74, 82 & 83 and all corresponding walers once the mat slab beneath has reached adequate strength, the sequence for de-stressing will be the diagonals struts should be all de-stressing prior to the 4 remaining cross lot struts (STD-65,66,67 & 68).

For the remaining levels A, B and C WOJV is proposing to follow a similar removal sequence as Level D

Please confirm if this sequence would be acceptable.

REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
At TR8 near grid line G refer to sketches CD RFI 220 SK1 to SK3 for items 1 to 3: 1) Confirm the headed studs as shown are correct (work with item 2). 2) Detail 2/S1-5023 is referenced with a "SIM' designation and it is not clear what is required on grid 8 for the additional headed studs shown in detail 2/S1-5023. Confirm the headed studs as shown on SK3 are acceptable or supply a clarifying detail specifically for this location showing the stud locations. 3a) Confirm the 2" dia. hole locations as shown on SK3 are acceptable to clear the bolts in the bottom flange and the stiffeners. 3b) Detail 2/S1-5023 shows the holes at 5" OC but this contradicts the 6" OC shown in detail 7/S1-3701. Confirm the spacing shown in item 3a above is acceptable. 3c) Confirm the 3" dia holes are not required at grid 8 as they are not shown in detail 7/S1-3701. Supply location dimensions if they are required.					RFI was re-named. See RFI T-1024 response.

REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference RFI U-101, Sheet U-3021 The RFI response U-101 dated 02-28-2011 eliminates the CB #501 from the RUP contractor's scope of work. However there has been no replacement or adequate surface water control system neither suggested nor installed to replace the CB # 501. BBII recommends that this catch basin # 501, be installed per the original design to control surface water. Please confirm it will installed.					CB#501 was deleted from RUP due to unforeseen field conditions. For RUP, runoff from adjacent area to drain south to existing CB at STA 4+20. Existing CB at STA 4+20 to remain in place and active at completion of RUP. BSE Contractor to provide stormwater control on site accordance with BSE documents.

REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
We need direction for the electrical installation inside the new concrete stem wall. We are planning on installing the formwork for the south-side of the wall starting Wednesday morning. As such, we need to install the electrical conduits and boxes tomorrow, Tuesday, at the latest to meet our schedule. Please provide detailed information on the entire conduit run and the elevation of the boxes. It is our understanding that we are completing abandoning the originally anticipated electrical lighting work as anticipated in our contract documents.			The question stated "It is our understanding that we are completing abandoning the originally anticipated electrical lighting work as anticipated in our contract documents." However there are no electrical drawings in the contract documents. This RFI was recieved at 4:28pm, the day before the wall was to be closed up, and requests an answer by tomorrow, which is not enough time to review. Due to the timing of this RFI, it was not submitted to the design team, but instead a meeting was held with URS in the field for direction. For record, see the attached inspection report and email for what is to be done.				
TRANSWORLD 026.1	301 Mission Wall - Framing Modifications and Base Plate Conflict	Closed	05/06/2011	05/16/2011	06/01/2011	Potentially	<input type="checkbox"/>

	been discussed in the weekly 301 Mission Wall subcontractor meeting with URS, Turner, Transworld, TJPA and Webcor-Obayashi. 1.) In two of the four stucco slot locations, field conditions show that a portion of the base plate conflicts with the stucco slot. This base plate encroaches into the stucco panel per dimensions shown on the attached sketch. Please advise. 2.) The structural steel had been relocated to CL of the wall (per RFI T-0098) and therefore studs around the steel per B/A-6000 could not be set per plan. Transworld has installed hat channel metal framing to the face of the structural steel tube using fasteners into the structural steel as per RFI T-0106 as well as modified the boxed framing per attached sketches around the perimeter of the wall. Sizes of metal framing were used to align with adjacent framing per plan. This work is currently installed, please confirm framing modifications per attached marked up details are acceptable. 3.) Blocking a the top of the wall at the north side (between the framing and 8"x 8" tube steel) was not installed, as there was no room between the framing and steel. Framing was attached directly to the tube steel. See attached. Please confirm that the framing modifications in item 2 and 3 are acceptable and provide direction at the base plate conflict per item 1.

TRANSWORLD 038		Concrete mix design for concrete repair work		Closed	06/08/2011	06/18/2011	06/08/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		David Hungerford		To: Webcor Construction LP		David Hungerford		Answered By: Webcor Construction LP David Hungerford	
Co-Author:									
REQUEST:		SUGGESTION:				ANSWER:		Accept Suggestion: <input type="checkbox"/>	
<p>This is to respond to submittal title TA1010.S-5000.A01 Rapid Set for Concrete Repair (TCI #31)</p> <p>Please identify a product or a custom mix design that would meet these specifications. In our past practice we have successfully used the suggested grout product as a concrete patch. In our investigations with suppliers and other contractors, it seems that the general conclusion is that using a grout product (such as the one proposed) would be the appropriate product for this application and condition. The proposed grout seems to offer greater strength and structural performance than the original concrete that has since been removed.</p> <p>Is there another product that you could identify that would achieve these specifications? Since we are not the project designers, we can only suggest those products that would generally be used and accepted in our standard of practice It was based on this standard of practice that we submitted the RapidSet grout product.</p>						<p>The submittal response referenced in this RFI is incorrect. The suggested product was never submitted past Webcor-Obayashi's possession. Due to compliance with the direction given per response to RFI T-0130, a submittal was not required.</p> <p>An email chain was generated from conversations between W/O and Turner, then a message sent between Turner and URS, which relayed the product type and an email chain starting from URS was recieved noting that the material is not acceptable. Upon further review of codes, the material is acceptable, which had been discussed in the weekly subcontractor meeting held on Monday June 6, 2011.</p> <p>This RFI is no longer valid. Transworld is to submit products that will be used to repair this condition, per sub meeting.</p> <p>Transworld is aware of this and is submitting product for review.</p>

REQUEST: Reference Sheet U-3107 and Trinet RFI 059.1 This is a follow up to the engineer's response to Trinet RFI #59 (RFI#U-0066). Upon further evaluation of the 4" fire service connection at 83 Minna by Tom Farhnam (SFWD Senior Inspector), the water department proposed the attached installation detail for an 8"x4" tee in the 8" main, to be performed by Trinet, and the connection detail to the existing 4" service, to be performed later by the SFWD crew. This change was proposed to avoid conflicting utilities running along the south side of teh new 8" main. AECOM's Design Engineer, Eric Zagol, was advised of the changed design plan proposed by SFWD in the field on 12/28/2010. Please confirm if the attached plan is acceptable and approved for construction.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Construct water serve lateral in accordance with contractor's attached plan and note the following: 1. Provide full joint restraint in accordance with contract documents 2. Provide 4" DI pipe for the section labeled "9" DI NIPPLE"

Reference Sheet U-2008 and Trinet RFI 63				As determined during a site visit on 1/10/11 with W/O, Turner, AECOM and Tishman Speyer, the exposed wall is an abandoned sidewalk basement wall. Remove and dispose of existing abandoned sidewalk basement wall as required (approx. 1.5 feet in depth) to construct proposed AT&T vault.			
During our potholing on Minna St. for the proposed AT&T vault in the sidewalk (Stn. 3+72), we encountered an existing subsurface foundation and slurry shoring wall. The top of the subsurface foundation is at a depth of approximately 4' from the top of the sidewalk and is in conflict with the installation of the proposed AT&T vault. Installation of the proposed AT&T vault in accordance with the plans will require partial demolition of the existing foundation wall encountered. Please advise.							
U-0071	Existing fittings at tie in location for Minna St. 8 in. Water Main (Stn. 9+30)	Closed	01/10/2011	01/20/2011	01/12/2011	Potentially	<input type="checkbox"/>

U-0077	Fire Hydrant Installation at Minna St Stn. 0+90	Closed	01/12/2011	01/22/2011	01/14/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-3107					Accept Suggestion: <input type="checkbox"/>		
With reference to the fire hydrant at Minna St. Stn. 0+90, (northeast corner of Second St. and Minna St.) General Note #5 on sheet U-3107 directs Trinet to "replace in place existing fire hydrant."					As discussed on site with Daniel Helminiak (SFPUC Inspector) and those mentioned above, the proposed construction sequencing of the fire hydrant at Minna St. STA 0+90 is acceptable.		
Per on site field discussions with Eric Zagol from AECOM, Robert Friend from Trinet and Mario Saldana from W/O, it was determined that the existing hydrant would remain in place until after the new water main connections are performed by CDD crews. After which the existing hydrant will be removed and new hydrant and lateral piping will be installed and tested.					Coordinate with Daniel Helminiak (or assigned SFPUC Inspector) and the SFWD to ensure the fire hydrant is properly decommissioned by SFWD and SFFD following main connections by SFWD and prior to abandonment of the existing main in Minna Street by SFWD prior to fire hydrant installation by Trinet. Coordinate with SFPUC inspector to ensure SFWD and SFFD installs a black hydrant "donut" on the existing fire hydrant and new fire hydrant prior to the new fire hydrant being placed in service. Coordinate the removal of the "donut" once new fire hydrant is in service.		
Please confirm if this is acceptable. An expedited response is requested.

Reference Sheet U-2008					Accept Suggestion: <input type="checkbox"/>		
The existing 4" water service found at Stn. 5+37 has been confirmed abandoned by SFWD personnel through on site investigations. Since the service is determined to be inactive, Trinet intends to not provide service from the new main for this 4" service as discussed in the field, with Eric Zagol from AECOM, Mario Saldana from W/O, Dan Helminick from SFWD and Robert Friend from Trinet. In addition, Dan Helminick from SFWD requested to have the service tee installed in the new 8" main which was to provide service for this 4" lateral removed and straight pipe installed. Please confirm if this is acceptable.					Existing 4" water service at STA 5+37. Subsurface utility investigations should have been performed and submitted prior to installation of water main to determine status of existing lateral in accordance with U-3108 General Note No. 3. It is acceptable to remove the 8"x8"x4" tee installed and replace with straight pipe per the request of SFPUC SFWD inspector.		
The 6" water service lateral found at Stn. 5+30 has been confirmed as an active fire service to 2 Shaw Alley by SFWD personnel through on site investigations. Trinet					Provide 6" water service later at STA 5+30 per contract documents.		
					AECOM suggests that there is no change in contract price to perform this work.

U-0079	Fremont St Temp Water Line Installed over AT&T Duct	Closed	01/17/2011	01/27/2011	01/19/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Compan Michelle Smith			Answered By: AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST: Reference Sheet U-3123 and attached detail During Trinet's installation of the temporary water line in Fremont St., Trinet encountered an existing AT&T duct that was in direct conflict with the temporary water line. Trinet was directed by Eugene Chu of SFWD/SFPUC to run the temporary water line over the existing AT&T duct using 45 degree bends. This resulted in less cover for the piping than what is required by the Water Department. Due to the lack of cover, Trinet was directed to install a 1/2in steel plate beneath the concrete base along the trench as depicted in the attached detail. The plate was approximately 2ft wide by 6ft long and extended to the limits of the installed 45 degree bends. Please provide confirmation that this is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> It is AECOM's understanding that Trinet encounter an existing PG&E electrical duct (4-4") crossing the water alignment feeding 301 Mission property and not an AT&T duct as referenced above. It is also AECOM's understanding that Trinet encountered an existing PG&E electrical duct (8-3") parallel to the water alignment which is ultimately to be abandoned by PG&E and demolished by Trinet. Both PG&E ducts are shown in the plans. Per sequencing shown on U-1123, the water line should be constructed after PG&E completes their work on Fremont Street. Given the fact that the PG&E duct parallel (8-3") has not been abandoned by PG&E, and given the fact the option to go under the existing 4-4" PG&E duct per plans is not feasible because the existing 8-3" PG&E duct is not demolished, and given the fact that the new water main is a temporary condition, the above mentioned installation proposal is acceptable. AECOM suggests no additional cost to contract price to perform this work.

	Trinet requests an expedited response.				Plan #87,184 included in the contract documents to a 5-foot diameter precast concrete manhole with a temporary 24" PVC pipe connection to the existing 36"x54" brick sewer per SFDPW Standard Plan #87,197 is acceptable. Provide flexible pipe connections to the 5-foot diameter precast concrete manhole as shown in SFDPW Standard Plan #87,181. As per the response to RFI U-0080 and U-0021, please provide a markup of U-3021 indicating the size, and horizontal and vertical location of the utilities identified in conflict for review. This request is now 7 weeks outstanding. AECOM suggests a cost credit for the substitution of the 5-foot diameter precast concrete manhole for the larger cast in place Modified Box Manhole per contract documents.		
U-0081	Water Main Alignment - Howard St STA18+72 and STA19+98	Closed	01/19/2011	01/28/2011	01/24/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-3119 and attached drawing Please confirm that it is acceptable for M Squared to install the new 12in water line in a straight line as sketched on the attachment. Contract Drawings show the pipe offsetting between Sta 18+72 and Sta 19+98. Due to existing utilities discovered in potholes the 12in line will be installed 18ft from centerline. Also, please confirm the elevations of the water line can be raised dependant on the depths of the existing utilities Also, the referenced drawing has a discrepancy shown between the 12in water line bend station called out and the location shown in plan view. Please confirm that the first 45degree bend is located at 18+72, and not 18+27.					Accept Suggestion: <input type="checkbox"/> 1. Contract Drawings indicate an offset to avoid a bus island, as shown on the plans, that was to be constructed as part of the Transbay Temporary Terminal Project. AECOM received confirmation from Philip Sandri TJPA/PMPC that the bus island was deleted from the Transbay Terminal Project. It is acceptable to eliminate the offset and construct water main between STA 18+72 and STA 19+98 at 18ft from centerline. 2. Elevations of the water line can be raised dependant on the depth of the existing utilities. Minimum depth of cover shall be 18-inches below the bottom of the concrete base pavement section per DPW Order No. 176,707 or 28" which ever is greater.

Co-Author:		ANSWER:		Accept Suggestion:		<input type="checkbox"/>	
REQUEST:		SUGGESTION:		For general materials, please follow the specification requirements regarding delivered materials in 01 16 00 1.6D.			
Reference Specifications Section 33 31 10, 1.4.E		For materials falling under specification section 33 31 31, section 1.4C determines that all piping is SUBJECT to inspection by TJPA and/or DPW. This means that all piping is to be made available upon delivery if TJPA/DPW deems it is necessary to inspect the material. Contractor to inform TJPA of all deliveries and assure the storage facility is accessible. TJPA will inform contractor if material will be inspected prior to installation. When TJPA determines that additional labor is needed to move materials around for inspection, please reference 1.4E, which states that contractor is to furnish labor as needed to assist TJPA with this effort.					
Please clarify if TJPA or DPW is going to complete the inspection of the pipe as described in the referenced specification section.		There is no ¿HOLD POINT¿ for TJPA or SFWD to inspect materials at manufacturer or upon delivery. TJPA/DPW intends to inspect the materials deliveries of each subcontractor until such time as a confidence level is built that subcontractor and W/O are ensuring the proper amount of quality control through their own material inspections.					
		Per specification Section 01 14 00 1.4, W/O shall verify all dimensions in the field and shall check all field conditions continuously during construction, including materials. Any inspection of materials by TJPA, DPW, or any other agency does not alleviate the subcontractor or W/O of the responsibility of performing your own quality assurance measures, or

REQUEST:

Reference Sheet U-2007 and attached drawings

During layout for the installation of the new 18in Sewer Main on Minna St., Trinet observed that the alignment of the 18in Sewer Main is in conflict with existing PG&E MH #1355 at STA 1+77.50, which is to remain in place. The center line of the new sewer main is 0.10ft north of the outside edge of the manhole wall, as depicted in the attached drawing. The north side wall of the manhole is constructed on top of the existing 3ft x 5ft brick sewer. The brick sewer structure extends approximately 16in into the vault along its entire length. The brick sewer therefore cannot be demolished without undermining the north wall of the electric vault. Eric Z. of AECOM was notified of this issue via phone call on 01/21/2011.

Please advise:

1. How should Trinet proceed with the installation of the new 18in VCP Sewer at this location?
2. How should Trinet proceed with the demolition ofthe

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

	required for construction of the TTC Building. Please confirm.				02/10/2011 - Eric Zagol - The construction sequence constraint has been removed per GENERAL NOTE 8 on U-0008 (rev. 2 01/31/11) and as detailed in SFDPW BOE AWSS drawings (rev. 1 01/31/11) MA-0, MA-5, MA-6, MA-8, MA-10, MA-11 and MA-19. TJPA is currently coordinating with SFPUC to determine when AWSS improvements, other than the improvements required to abandon existing AWSS mains on First and Beale streets, are required to be complete.		
U-0093	46 Minna 6in FS Water & 1in Copper Water Service Lateral at STA 5+17 Tie-In	Closed	02/03/2011	02/13/2011	02/07/2011	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Nhi Tran To: Turner Construction Compan Michelle Smith		Answered By:	AECOM Technical Service	Eric Zagol		
	Co-Author:						
	REQUEST: Reference Sheet U-3108, attached sketches, and material information sheets At 11:30am on 2/2/2011, Michelle Smith (Turner), Eric Zagol (AECOM), Guy Hollins (TJPA), Rick Bowling (46 Minna Property Manager), Dan Helminiak (SFWD Inspector), SFWD water department crew, Robert Friend (Trinet), Jason Dunne (Webcor Obayashi), and Mario Saldana (Webcor Obayashi) met to discuss the 6in Fire Service Lateral and 1in Water Service Lateral for the 46 Minna building. SFWD has proposed the new tie-in pipe configuration. 1. New 6in Fire Service Lateral Tie-in at 46 Minna St (See Attachment A) - Old existing fire service lateral is to be cut out of the existing water main up to the gate valve as shown in the sketch, and replaced with straight pipe. A new 10in hole is to be core drilled into the existing basement wall 22in east of the existing service lateral to incorporate the new 6in fire service lateral. SFWD will run the new 6in fire service lateral through the hole and Trinet is to provide Link Seals (see attached material information sheets) to seal the space between the new pipe and wall hole.	SUGGESTION:	ANSWER:	Accept Suggestion:	<input type="checkbox"/>	AECOM has coordinated with SFPUC Engineering (Chi Yu, Division Manager) and SFPUC inspector (Eugene Shu) and the direction agreed to is as follows: 6-inch Fire Service Renewal - 1. Coordinate with SFWD for the shutdown of the existing 6-inch fire water service. Shutdown by SFWD. SFWD to coordinate shutdown with SFFD. 2. Neatly remove existing fill material between the existing pipe and wall penetration to dislodge and free the existing pipe such that it can be removed by SFWD. 3. SFWD to cut and remove existing pipe. 4. Remove excess fill material to create flat even surface for link seal type pipe sleeve. 5. SFWD to install and connect new service. 6. Restore wall per SK-U-0005 attached. 1-inch Water Service Renewal - 1. Coordinate with SFWD for the shutdown of the

U-0100	Minna St MH#207 Proposed Relocation	Closed	02/18/2011	02/28/2011	02/22/2011	No	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran		To: Turner Construction Compan Michelle Smith	Answered By: AECOM Technical Service Eric Zagol				

Co-Author:

REQUEST:

Reference Revised Sheet U-3009 and attached sketches

The current location of MH#207 at STA 9+25.87 will place a cap on the existing water main (installed by SFWD on 02/17/2011) in Trinet's excavation. Trinet is concerned that the old water main may not be adequately restrained and could create a dangerous condition for their excavation for MH#207. Trinet proposes to move MH#207 4 feet west to STA 9+21.87 +/-, as shown in the attached sketch, so that the cap is outside of Trinet's MH excavation. The revised invert elevation for the new MH location is shown on the attached sketch.

Please confirm if this is acceptable,

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Proposed design change is acceptable.

AECOM suggests no change to contract price for this modification.

REQUEST:

Reference Sheet U-3021, attached sketch, and USA ticket

During excavation for CB#501, Trinet encountered what appears to be a PG&E vault (shown in plans as EMH 7712), PG&E Duct (Shown in plans as 1- 2" & 4-6" EP), 2-2" steel conduits (not shown in plans), and a concrete shoring wall (not shown in plans).

- The 2-2" steel pipe is in conflict with Trinet's installation of CB#501, and will need to be relocated or abandoned to facilitate the installation of the catch basin. Trinet has done their due diligence (2nd and 3rd No Response follow ups) and these lines were not marked by the owner through USA (attached). Trinet requests direction on the relocation/abandonment of these utilities.

- Trinet proposes to move CB#501 two-feet north to avoid the conflict with the existing EMH 7712. Please advise if this is acceptable.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Pending approval by the TJPA, a deductive CR will be issued.

02/28/2011 - Eric Zagol

Following AECOM's review of the Transbay Transit Center Project 50% construction documents (rev. 12/20/10), further review of the Existing Terminal Ramps & Demolition Plans Project construction documents, and AECOM's understanding of the demolition of the existing Terminal "hump" structure and the timing of such demolition, CB#501 is no longer required.

Delete catch basin #501 and associated 10-inch sewer lateral.

U-0102	First St. CB#206 in Conflict with (E) Subsurface Conc. Structure / Duct Bank	Closed	02/23/2011	03/05/2011	03/04/2011	Potentially	<input type="checkbox"/>
From:	Webcor Construction LP	Nhi Tran	To:	Turner Construction Compan	Michelle Smith	Answered By:	Turner Construction Comp Daphne Faulkner

Co-Author:

REQUEST:

Reference Sheet U-3009 and attached sketch and photo

During Trinet's excavation for replacement of CB#206 on the northwest corner of First St. and Minna St. (at STA 9+31), they encountered a concrete subsurface structure or concrete encased duct bank not indicated on the contract drawings. The existing catch basin is approximately 30in deep and is constructed on top of the existing concrete structure/duct bank (see attached drawing).

Trinet requests direction on the demolition of the existing catch basin and the installation of the new catch basin CB#206.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Pending approval by the TJPA, a deductive CR will be issued.

03/04/2011 - Eric Zagol

As determined during a site visit on 3/3/11 with Trinet, AECOM and W/O; existing unforeseen conditions including an abandoned sub-sidewalk basement wall along Minna Street, an active sub-sidewalk basement wall for the 100 First St. property, and an abandoned telecommunications concrete duct along First Street create a situation where the installation of a new catch basin would require an extensive amount of unforeseen demotion.

Co-Author:							
REQUEST: Please clarify the following items relating to the re-design of CB#206: 1) The only specification section addressing mortar coating is in 33 31 10 Paragraph 2.1.I, which specifies a "Wet Spray Mortar" application. This process would be cost prohibitive for coating only one catch basin. Trinet proposes the use of "SikaTop 123 Plus" mortar - product data sheets are attached. Please advise if this product is acceptable or specify an alternate material. 2) The RFI response directs Trinet to use ductile iron pipe for culvert runs with less that 3' of cover. If 22.5% DI bends are required to construct the culverts Trinet would prefer to use Mechanical Joint Fittings. Please advise if these are acceptable.		SUGGESTION: Eric Zagol 4/12/2011: 1) SikaTop 123 Plus mortar is acceptable. 2) MJ DIP for 22.5 degree fittings is acceptable for culvert runs with less than 3 feet of cover. REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-3021 and attached sketch					Accept Suggestion: <input type="checkbox"/>		
In order for Trinet to avoid a conflict with the existing PG&E duct along the west wall of their excavation, Trinet adjusted the south end of the MH#502 structure by 7 inches to the east (as shown in attached sketch). MH#502 is still aligned to incorporate the connection to the existing brick sewer, and the alignment of the new 24-inch VCP run is unaffected by this change. Trinet will adjust rebar as required to maintain the required spacing and clearances.					The sketch referenced above is based on CCSF DPW Standard #87,184 that shows the minimum reinforcing plan for the connection to the existing 3'x5' brick sewer. Provide reinforcing for connection to 3'x5' per CCSF DPW Standard.		
Please confirm if the adjustment of MH#502 is acceptable.					Confirm that the manhole is being constructed per CCSF DPW Standard #87,182 as shown in Detail 10 on U-5001.		
					Provide width of west wall and location of reinforcing steel at 3'x5' brick sewer connection and 24-inch VCP sewer connection for review.

REQUEST: Reference sheet U-3124 and attached photo See the photo attached. The proposed location for the FH on Beale St at ~Sta 2+20 is in between a driveway for a parking garage and a driveway for a loading dock. Per discussions with Eric Zagol, please confirm the FH is to be relocated to the East side of Beale St as highlighted by the green line on the attached drawing. Please advise.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Construct FH lateral and FH on the East side of Beale Street at STA 2+04 as shown on SK-U-0008 attached.			
U-0109	First St Sewer Grade Change To Conform to Existing 3'x5' Brick Sewer	Closed	03/02/2011	03/14/2011	03/03/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran		To: Turner Construction Compan Michelle Smith		Answered By:AECOM Technical Service Eric Zagol			
Co-Author:							
REQUEST: Reference Sheet U-3021, U-3009, and attached sketch This RFI confirms modification discussed in the field by Trinet and discussed with the Design Engineer, SFDPW, and W/O personnel. Trinet's field survey shows the existing 3'x5' brick sewer on First Street to be approximately 11-inches lower than the grade depicted on the drawings. Trinet also checked the elevation of the existing SSMH (10-feet north of MH#501) and confirmed that it is approximately 11-inches lower than what is shown		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Construct MH#502 at First St. STA 4+98 as shown on U-3021 to match the invert elevation of the existing 3'x5' brick sewer, elevation 6.77 as determined in the field by contractor. Construct MH#501 at First St. STA 4+45 as shown on U-3021 with an invert elevation of 7.58 as determined by contractor. Construct MH#207 per RFI-U100.			

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>During our excavation for the joint trench on the east end of Minna St. (STA 9+29) Trinet encountered the (E) 8" water main in Trinet's trench line, approximately 1 foot from our termination point. The existing alignment is different from what is shown in the contract drawings. The drawings do not show the water line crossing the joint trench. The alignment and grade of the water main changed in Trinet's excavation to avoid the adjacent catch basin. A 22.5 degree elbow is located in the center of the joint trench excavation. The elbow is rolled up to accommodate the grade change and there is a thrust block under the footing. Trinet does not believe that it would be safe to excavate under the water main for Trinet's duct bank without having the line shutoff. Extending the PG&E ducts to FOC will also place the connection point for PG&E's extension of the duct bank directly under the water main fittings and elbows. There is adequate clearance to install the 4" gas line above the water main and extend it out to FOC per contract. The top of the water main is 49" below FG at the south side of the joint trench, at the location of the ags line.</p> <p>Trinet proposes to terminate the concrete encased duct bank approximately 5 ft. back from FOC. This would allow adequate room for Trinet to mandrel the ducts after the joint trench is installed without undermining the water main. PG&E could then extend their duct bank under the water main to connect to Trinet's water main. Please advise.</p>				<p>Horizontal (from a known point i.e. FOC along First St.) and vertical location of "top of water main". Horizontal (from a known point i.e. FOC along First St.) and vertical location of water line at "22.5 degree elbow". Determine if the water main is mechanically restrained with tie rods at each bend in questions. Approximate size of existing concrete thrust block a the "22.5 degree elbow".</p>

U-0114	PG&E Abandonment Schedule for Natoma St. at Second St.	Closed	03/09/2011	03/19/2011	05/07/2011	Potentially	
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Kruttsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			ANSWER:				
Reference Sheet U-1110 and U-2010			Accept Suggestion: <input type="checkbox"/>				
On 03/04/2011, M Squared met with a PG&E representative on site at Natoma and 2nd Street. The PG&E representative confirmed that none of their utilities had been abandoned in the area, and that the PG&E representative would be unable to provide a schedule for this abandonment.			Eric Zagol 3/18/2011 ***5/5/11 UPDATE***				
Per note 2 on sheet U-1110, the services for 77 Natoma and 83 Natoma were to be terminated by Feb 2011. To date, this work does not appear to be completed. In PG&E's letter to the TJPA regarding their schedule, there is no reference to work on Natoma Street at 2nd St.			77 Natoma and 83 Natoma services have been terminated, refer to USR Nos. 11 and 13 as executed by W/O, Turner and PG&E on 4/21/11.				
M Squared is unable to proceed with their sewer and water utility installation on Natoma St. west of shoring wall until PG&E has completed abandonment of their existing utilities.			As of 5/4/11, PG&E estimates that Natoma Street will be de-energized by 5/21/11. Coordinate USRs for the remaining electric ducts with Turner and PG&E.				
Please provide M Squared with an updated schedule for all PG&E's termination/abandonment work at 2nd and Natoma St.			***3/18/11 RESPONSE***				
			Per demolition and construction sequencing shown on sheet U-1110, water and sewer work shall commence after PG&E has completed their Phase I relocations in First St., Natoma St. and existing electric ducts are abandoned by PG&E.				
			PG&E services to 77 Natoma and 83 Natoma have been terminated as part of the Existing Terminal & Ramps Demolition Project. USRs for these services are currently being prepared by the TJPA's Representative (Turner). The USRs shall indicate the service conduits and cables that are abandoned subject to demolition as indicated in sheet U-1110.				
			To facilitate schedule, AECOM has requested PG&E to de-energize Natoma St. to the extent possible in an effort to re-sequence construction of the sewer. PG&E's response and schedule of abandonment is forthcoming.				
			As shown on U-3110 the water line could be constructed prior to PG&E abandoning their facilities. Pothole to confirm the water line can be constructed as shown on U-3110.				
U-0115	AWSS Cap Work Sequence on First St	Closed	03/07/2011	03/17/2011	03/15/2011	Yes	<input type="checkbox"/>

---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

Co-Author:**REQUEST:**

Refer to Sheets MA-5, MA-8

There are two caps that are required to be installed in order to shutdown the AWSS service on First St between Mission to Howard St. Per the construction schedule, both caps were supposed to be worked on simultaneously. Please confirm per a conversation in the field on 03/07/2011 with inspectors Michael Smith (SFDPW) and Dan Helminak (DPW), only one AWSS cap can be installed at a time.

SUGGESTION:**ANSWER:**

Accept Suggestion: ☐

The below response was copied into Constructware on behalf of Michael B. Smith SFDPW/BOE/Mechanical (see attached, "RFI U-0115 1490J Phase I First Street BOE Response 03 11 11")

"Installing/capping of the AWSS lines at two locations in sequence instead of simultaneously was a decision made by the SFWD/CCD together with SFFD. Please contact Dan Helminiak of SFWD/CDD at (415) 420-4821 for further information" - Michael B. Smith SFDPW/BOE/Mechanical dated 03/11/2011

03/14/2011 - Eric Zagol

Michael Smith from SFDPW BOE will respond to this RFI.

U-0116	Abandoned 6" Fire Water Service Thru 100 First St Basement Wall	Closed	03/18/2011	03/28/2011	03/21/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Nhi Tran	To: Turner Construction Compan	Michelle Smith	Answered By: AECOM Technical Service Eric Zagol			

Co-Author:**REQUEST:**

Refer to sheets U-1109 and U-3109

An abandoned existing 6" fire water service lateral was discovered while demolishing the old 8" water main running down Minna St. The 6" fire water service lateral was not shown on the plans and there were no existing water valve covers to indicate the existence of this line. The abandoned lateral penetrates the foundation wall entering the basement to 100 First St at Station 7+36.

Please provide direction for plugging the void that will be left after 100 First St management removes the 6" water lateral pipe. A roughly 1ft x ft x 1ft deep square opening will remain after the fire water lateral pipe is removed.

SUGGESTION:**ANSWER:**

Accept Suggestion: ☐

Contractor had knowledge of existing abandoned 6-inch fire water service at STA ~7+35.

Existing abandoned 6-inch fire water service at STA ~7+36 was exposed and potholed by Trinet on 11/19/2010 and included in Submittal TG0405-024 Item No: UA0000-020630A01.0 as Pot Hole No. 29.

Cut and plug abandoned 6-inch fire water service in accordance with specification section 02 41 00 3.6 at face of curb along the North side of Minna St.

Please clarify why private property improvements are being requested.

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Sheet U-3022 shows MH601 @ Sta 0+70 on Fremont Street. This location is also in the middle of the crosswalk on Fremont Street. USA markings show the existing traffic signal conduits crossing thru the center of the manhole. By moving the manhole approx 8', north the conflict with the traffic signal conduits would be avoided and it would also avoid having a manhole cover in a crosswalk. Please advise on how you would like to proceed.				Move proposed sewer MH north to STA 77.56 to avoid existing Traffic Signal conduit conflict as shown in SK-U-013 attached. Construct 10-inch CB culvert lateral as shown SK-U-013 attached.			
U-0121	AWSS Caps at Beale Street	Closed	03/31/2011	04/10/2011	04/06/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo		To: Turner Construction Compan Michelle Smith		Answered By:AECOM Technical Service Eric Zagol			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
1 - Current bid documents for Trade Group TG04.2R (AWSS system at Mission Street) call for capping of the AWSS system on Beale Street near the intersections with Howard Street and with Mission Street. Because of delays in the bid schedule for TG04.2R, the construction schedule dictates that these caps be completed well before the anticipated start of the TG04.2R field work. Please provide details so as to allow this capping work to be done in advance of the awarding of the TG04.2R scope of work.				Pothole the existing AWSS gate valve at the Beale at Mission street proposed cap location as shown on M-6 (Rev No. 1, 1/31/11) to determine if the existing gate valve has lugs. SFWD to inspect condition of gate valve once excavated, coordinate with SFWD inspector accordingly.			
2 - Please confirm whether the material required to do this work is available at the City of San Francisco.				Details for the capping work at Beale and Mission, and Beale and Howard will be provided following gate valve inspection.			
3 - Please provide direction as to how this scope of work should proceed.

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please note that on RFI #U-0123 the location of the fire service was incorrectly drawn. The fire service is actually located around Sta 2+35.				Eric Zagol 4/15/2011: Per response to RFI U-0123, coordinate with SFWD Inspector to confirm the 4" DIP is the active fire water service to 85 Natoma Street.			
M Squared potholed at Sta 2+35 and discovered a 4" ductile iron pipe which is believe to be the active fire service for 85 Natoma Street.				Once confirmed, provide and install 8"x8"x4" tee and 4" gate valve.			
Please advise.				Connection to existing 4" DIP fire service by SFWD. Excavate and shore for connection in accordance with the contract documents. Coordinate with SFWD Inspector for connection by SFWD.

U-0124	Conflict Between New 24" Sewer and existing AWSS Line on Beale	Closed	04/07/2011	04/17/2011	04/28/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Colin Azevedo	To: Turner Construction Compan		Michelle Smith	Answered By: AECOM Technical Service Eric Zagol	
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
M Squared has confirmed that the 14" AWSS Line shown on sheet U-3024 is in conflict with the proposed 24" VCP on Beale Street. The AWSS line is shown on the plan view but not on the elevation view on sheet U-3024.				Eric Zagol 4/26/2011: Construct temporary 2-10" VCP and new SMH as shown on revised U-3024 (rev 2 4/26/11) and SK-U-0018. Construct SMH #701 to allow for future 24" VCP connection as indicated.			
M Squared also shot the elevation of the existing sewer manhole. The elevation is 4.60, and not 4.70 as shown on the plans. The invert of the 14" AWSS is 6.2. (See attached)				Relocate AWSS line in Howard St., not included in package. Design forthcoming potentially to be included in TG04.2R.			
Please advise.				Following relocation of the AWSS line, construct 24" VCP sewer per contract documents.

REQUEST: Per the response to RFI#U-0124 a design to relocate the AWSS line @ Howard and Beale is forthcoming. Please advise the status of this design.		SUGGESTION: Eric Zagol 7/20/2011 Design is being performed by SFDPW BOE and will be tracked and issued via a forthcoming ASI. Schedule will be discussed with SFDPW BOE on 7/22/11. An update will be provided in the RUP OAC on 7/26/11.		ANSWER: Accept Suggestion: <input type="checkbox"/> RFIs U-128.2 and U-124.1 were responded to in July of 2011 and provided temporary solutions to utility conflicts with a full resolution planned to come via future ASI. ASI 21, which addresses these issues, was uploaded to Constructware on 3/21/12 by Eric Zagol for design approval. A CR for this work will be issued in the near future.			
U-0125	Precast Catch Basin Bases	Closed	04/08/2011	04/18/2011	04/13/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Compan Michelle Smith		Answered By: AECOM Technical Service Eric Zagol					
Co-Author:							
REQUEST: In lieu of a cast in place base per CCSF DPW Standards, M Squared would like to propose the use of a precast catch basin. The catch basin barrel is attached to the precast base and it comes as one single unit. Before installing the precast catch basin base with barrel, M Squared will place a minimum 6" compacted level layer of crushed rock as the sub base. The proposed material specifications are attached. Please confirm if this method is acceptable.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Eric Zagol 4/12/2011 Precast catchbasin base is approved with conditions specified. The 5 foot catchbasin barrel shall be attached to the base section to form a monolith structure with the same dimensions, compressive strength and reinforcement as the CCSF DPW Standard cast in place base. Provide a minimum 6" level layer of uniform compacted crushed rock as the sub base.

Co-Author:

REQUEST:

Plan Sheet U-3007 shows MH#201 to be installed in the center of the crosswalk @ Minna and Second Street. The City of San Francisco typically avoids locating manholes in crosswalks, whenever possible, for ADA considerations. Please advise if MH#201 should be installed outside of the crosswalk.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Eric Zagol 4/13/2011: Sewer manhole location can not be adjusted due to an existing 8-inch Water and 4-inch HP Gas main. Construct manhole at the location per Plans.

In lieu of CCSF DPW Standard MH cover, provide an ADA complainant cover that meets the following specifications:

1. MATERIAL - The cast iron shall be in accordance with ASTM "Standard Specifications for Gray Cast Iron Castings" Designation A 48, Class 30. The tensile strength shall be considered the primary test for qualification.
2. FINISH- STANDARD FINISH SHALL BE RAW, AS CAST, AND YIELD A MINIMUM COEFFICIENT FOR FRICTION OF .6 OR BETTER IN WET OR DRY CONDITIONS.
3. CASTINGS - SHALL BE FREE OF BLOW HOLES, FLASHING, GRIND MARKS, AND OTHER SURFACE BLEMISHES.
4. Cover shall incorporate a "pic-hole" for lifting purposes.
5. ADA COMPLIANCY- CASTINGS SHALL HAVE HOLES NO GREATER THAN ½" IN THE DOMINANT DIRECTION OF MOTION, NO VERTICAL RISE OF GREATER THAN ¼", IF THE RISE IS GREATER THAN ¼" THE RISE/RUN RATIO NEEDS TO BE 1;2 AND THE MAXIMUM HEIGHT SHALL BE 1/2".
6. Cover shall BE MADE TO FIT EXISTNG FRAMES

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
OR be MACHINED to FIT EXITING FRAMES PER SFDPW STANDARD PLAN 87,190. 7. Cover should be MADE of quality EQUAL TO OR GREATER then THE PRODUCTS MADE BY D&L Foundry or Equal, see attached product data sheet.

Co-Author:

REQUEST:

Trinet has been advised by Mission Clay (the VCP manufacture) that the hydrostatic test described in the SF Standard Specification Section 319.02 is primarily for cast iron or ductile iron pipe and is not recommended for clay pipe. The National Institute of Clay Pipe and Mission Clay recommend a low pressure air test in accordance with ASTM C 828. See attached copy of ASTM C 828. Trinet proposes using this low pressure air test in lieu of the 10psi hydrostatic test called for in the standard specifications. The low pressure air test will allow test on pipe runs with no service laterals ie: MH501-502, 206-207, 203-204, 202-201. Please advise if this is acceptable.

With regards to the three remaining pipe runs that have lateral connections, please provide direction of how to plug the laterals if required to test the main lines.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

=====UPDATE 5/23/2011=====

Kevin Chiu 5/23/2011 Below are links to devices for testing newly installed sewer pipes, specifically for main lines with active lateral connections that have been suggested within conversations between SFDPW, SFPUC and AECOM

http://newsite.cherneind.com/pneumatic/Long_Test_Ball_MS2_Test_Ball/

http://www.munipipe.com/chemical_grouting.html

<http://veoliaes-is.com/Services/Environmental-and-Waste-Management/Total-Sewer-Management/Chemical-Grouting>

Whether or not the contractors decide to utilize these devices is still up to them, as these are suggestions, not specifically required devices to be used for testing. It is the contractor's responsibility to perform testing on newly installed main lines, laterals, and manholes with their own means and methods while still protecting new and existing utilities.

=====

Eric Zagol 5/10/2011 ASTM C828 air test is an acceptable method to test sewer pipe in lieu of hydrostatic testing.

REQUEST:			SUGGESTION:		ANSWER:		
While planning for the water tie in at Howard and Beale the Water Department discovered that there is an existing bypass line that will connect the existing water system (which is to be abandoned) to the new water system. This bypass is not shown on the plans. The Water department has requested that the existing bypass be excavated and plated so it can be cut and capped while they have the line shut down for the tie in on the new system at Howard and Beale the night of 05/04/2011.					Accept Suggestion: <input type="checkbox"/>		
Please advise.					Eric Zagol 5/4/2011 RFI is not accruate and locations are incorrect.		
					Based on a field meeting with W/O ,SFWD Inspector and AECOM on 5/3/11, SFWD identified an unforeseen existing bypass pipe and gate valve that connects the existing 8-inch main in Fremont Street (to remain) to the existing 8-inch main in Howard Street (to be abandoned). The existing 8-inch main in Howard Street will be abandoned once the new 12-inch main is Howard is active.		
					Once the new 12-inch main in Howard Street is placed into service and the existing main is abandoned, the existing bypass and gate valve from the existing 8-inch active Fremont main will be connected to the abandoned Howard Street main. To mitigate the situation the SFWD proposes to cut and cap the existing bypass such that the existing Fremont main is not connected the abandoned main in Howard Street.		
					Coordinate with SFWD to locate existing bypass and define the limits of excavation required to cap the existing bypass.		
					Excavate to expose bypass. Shore and plate per specifications. Restore per specifications.		
					Cutting and capping of the existing bypass will be by SFWD.		
					Kevin Chiu 5/4/2011 Pending approval by the TJPA, a CR will be issued.

U-0139	Existing Water Line on Beale in Conflict with New Sewer	Closed	05/09/2011	05/09/2011	05/10/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Today while trying to execute the USAR for the existing 12" water line on Beale Dan Helminiak with SFWD informed Webcor/Obayashi and M Squared that the existing water line will remain active until the water tie in at First and Natoma is completed and the existing 8" is capped at First and Howard as shown on sheet U-3116.					Accept Suggestion: <input type="checkbox"/>		
The water tie in and capping of the existing line on First Street is currently being delayed by separate issues and it is unclear when this work will be completed.					Eric Zagol 5/10/2011 Please clarify the question(s).		
Dan Helminiak suggested that the existing 8" water line running down Howard could be capped by the water department at one of the existing tees which would allow the decommissioning of the existing line on Beale.					Subject states "Existing Water Line on Beale in Conflict with New Sewer". Per U-1124 Demolition and Construction Sequence order, Beale Street sewer is to commence after existing water main in Beale Street is abandoned. Please clarify where and what the conflict is.		
Please advise.					Also, please confirm the following:		
					1. Is the new 12" main along Howard Street between First and Main streets active? 2. Is the new 12" main along Beale Street north of Howard Street active? 3. Is the new 12" main along Beale Street south of Mission Street active?		

U-0139.1	Cap (E) Water on Howard @ Beale	Closed	05/16/2011	05/26/2011	05/24/2011	Potentially	<input type="checkbox"/>

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
-New 12" water main along Howard between First and Main is active. -New 12" water main along Beale Street North of Howard is active. -New 12" water main along Beale Street South of Mission is active.					Accept Suggestion: <input type="checkbox"/>		
Per U-1124 Demolition and Construction Sequence order, Beale Street sewer is to commence after existing water main on Beale is abandoned. - The old water line on Howard Streets and Beale Streets is currently not active because the valves on the line at First and Howard are currently shutdown. Dan from the water department has expressed his concern that anyone can just open these valves and fill the old line along Howard Street. He is also concerned that the valve is not 100% closed and that the SFWD cannot get a complete shutdown on the old line. This means when M Squared					Eric Zagol 5/23/2011 Coordinate construction of the cap on the old Howard St. main at the intersection of Main St. with SFWD as shown on U-3119.		
					Coordinate construction of the cap on the old Howard St. main at the intersection of First St. with SFWD as shown on U-3116 (latest rev per SK-U-0003 1/28/11).		
					Per discussions with SFWD inspector, the old Howard St. main has been capped at Main St, Beale St. (south of the cross) and at the Fremont St. by-pass connection by SFWD. Additionally, the two line gates at First and Fremont streets are closed and have been filled with concrete.		
					The caps at Main, Beale, Fremont in combination with the closed line gates at First St. will allow sewer installation on Beale St. to proceed.

	removes the old water line on Beale Street in order to install the new sewer, it is possible that there will be a constant flow of water in the old line. The suggestion from Dan is to cap the old water line on Howard Street so that When M Squared removes the old line on Beale Street there will be no possibility of water flow. A cap on the line at Howard would also confirm for definite that the old line on Howard and Beale Street is "abandoned". Please provide direction for capping the existing water line on Howard so the sewer installation on Beale can proceed.						
U-0140	Proposed Changes by BLHP to S/L Conduit Run @ 2nd & Minna	Closed	05/11/2011	05/21/2011	05/20/2011	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Colin Azevedo To: Turner Construction Compan Gary Krutsch					Answered By: AECOM Technical Service Eric Zagol	
	Co-Author:						
	REQUEST: During a field meeting on 5/10/2011 with Eric Zagol, AECOM and Robert Kawano, BLHP to discuss the alignment of the conduit run from 2nd St to the relocated S/L pole @ Stn 2+89, Robert Kawano asked that a splice box be installed in the sidewalk downstream from the connection point to PG&E's manhole. The box would serve as the connection point for BLHP to PG&E's power supply from 2nd St for the street light. Because of an existing sidewalk basement, which is located along the north side of Minna, east of 2nd St., it was agreed in the field that the splice box should be placed in the sidewalk just west of the new fire hydrant located @ Stn 0+93. There is already a pocket constructed in the sidewalk basement to accommodate the fire hydrant and Trinet will locate the splice box within this pocket structure. A sketch is attached depicting the proposed alignment of the conduit run and the additional splice box as discussed in the field. Please confirm this is acceptable.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>		
					Eric Zagol 5/19/2011 Per BLHP's request, furnish and install a CCSF DPW precast pullbox, cover, and lid per CCSF DPW Standard Plans and Specifications between the PG&E supply point and the relocated street light pullbox along Minna Street east of Second Street. Location; confirm that a sidewalk pullbox will fit in the knock out space above the 121-123 Second St. sidewalk basement adjacent to the newly installed fire hydrant prior to construction. Maintain minimum bends in conduit run per Specification 33 71 00.

Co-Author:**REQUEST:**

In the response to our RFI # U-0016, Trinet was directed to connect the street lighting conduit on the west end of Minna into PG&E MH #1319 on 2nd St. At a field meeting on 5/10/11 with Eric Zagol and Robert Kawano, to discuss the alignment of the street lighting run for the relocated light on the west end of Minna, Eric advised that PG&E was contemplating a change in the connection point for this conduit run from MH 1319 to MH 1320. MH #1320 is located to the south of 1319 and further west towards the middle of 2nd St. Please confirm the connection point on 2nd St for the street lighting conduit.

SUGGESTION:**ANSWER:** **Accept Suggestion:** ☐

5/26/11 UPDATE

Supply point has been confirmed as PG&E EMH 1320. Coordinate connection location with PG&E Field Engineer.

Eric Zagol 5/19/2011 Related to Joint Trench changes and PG&E's de-energization of Minna Street after the response to RFI U-0016 was provided, PG&E has revised their electrical plans with respect to EMH 1319 and has indicated that the preferred location for new street light power would be EMH 1320.

In accordance with U-3201 Note 7, AECOM considers this RFI as the request to coordinate connections with BLHP and PG&E through the TJPA representative for new street light circuit connections. AECOM and the TJPA Representative are in the process of coordinating Street Light Service Orders with BLHP and PG&E. Once the Service Order is processed the final connection point will be provided.

U-0142	Concrete Specifications for Sidewalk Replacement @ 555 Mission	Closed	05/16/2011	05/26/2011	05/18/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo		To: Turner Construction Company Gary Kruttsch		Answered By: Turner Construction Company Kevin Chiu			

Co-Author:**REQUEST:**

The sidewalk concrete @ 555 Mission (on Minna) is not the typical San Francisco sidewalk mix design. It is a colored concrete with what appears to be a sandblasted finish. Please provide the concrete specifications for repair and/or replacement of the sidewalk in this area.

SUGGESTION:**ANSWER:** **Accept Suggestion:** ☐

Kevin Chiu 5/18/2011 Sidewalks shall be constructed of a dark gray, Hi-con @ 5 lbs. per cubic yard carbon black based concrete finish, with 25 to 30 lbs. per 100 square feet of silicon carbide sparkle grains. The surface of the concrete shall be washed and rinsed using a stiff brush, and if necessary shall be sandblasted to remove the concrete surrounding the aggregate to minimum depth of 1/8 inch.

U-0143	Demolition of PG&E Duct Bank Alongside (N) 18" Sewer Main on Minna	Closed	05/16/2011	05/26/2011	05/20/2011	Potentially	<input type="checkbox"/>

REQUEST: During excavation and shoring for installation of the 18" Sewer main along Minna St., between the (E) electrical vault @ Stn 1+80 (demolished) and (N) manhole # 201, Trinet was unable to save the entire length of the existing PG&E duct bank (currently abandoned), which runs along the south side of the sewer trench. Between stations Stn 0+95 and 1+25 (approx.) the duct bank had veered into the sewer trench and had to be demolished - see attached sketch. Please review and advise.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Eric Zagol 5/19/2011 U-1107 (rev 2 3/16/11) indicates that the existing 6-4" PG&E duct is to be protected in place. 2 of the 6 existing 4" conduits will be utilized by PG&E to provide temporary construction power to W/O Skids 1 and 2 along Minna Street. Mandrel existing conduits east of STA 1+25 to STA 1+70 (where new conduit caps were to be installed per contract) to confirm that the existing conduits that were to be protected in place have no blockages. Coordinate with PG&E as STA 0+95 is exposed to determine which 2 of existing 4" conduits will be utilized for temporary construction power. Furnish and install 2-4" conduits concrete encased to replace those that were removed during sewer construction. Connect new conduits to existing that will remain to provide temporary construction power.		
U-0143.1 (E) PG&E Duct Bank from EMH #1320 to Demolished EMH #1355 Closed			06/14/2011	06/24/2011	06/14/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Compan Gary Krutsch			Answered By: AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST: After further investigation of the existing PG&E duct bank between EMH #1320 and demolished EMH # 1355 (@ Anchor & Hope), Trinet found that there is only one unobstructed conduit between the two manholes. The unobstructed conduit is the one that already had a pull rope in place. Trinet had demolished a section of this conduit during excavation for sewer MH # 201 because it was in conflict with the shoring. Trinet replaced the damaged section (approx. 8 LF) on Saturday 6/1, and reconnected the pull rope in the conduit run. A sketch of the conduit run, depicting the section replaced, is attached. Please review and advise if one 4" conduit will be adequate from EMH #1320 to the west end of demolished			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Eric Zagol 6/14/2011 PG&E plans to use the existing conduit package to provide temp power to Skids 1 and 2. Mike Balmy of PG&E was notified and has confirmed that only 1-4" unobstructed conduit is required between EMH1320 and the cap at demolished EMH1355 for future temp power service.

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
PG&E confirmed the location of the inside of the east wall of PG&E manhole 1702 at Howard and Beale Street. Allowing for a 12" thick wall, the vault will be in conflict with the proposed alignment of the future 24" VCP, even with moving the alignment 1' further east as directed in RFI U-0124. The conflict could be avoided by moving the alignment another 6" further east. However this will cause a conflict between manhole #701 and the existing 14" AWSS. Additionally the Verizon duct bank conflict increases(RFI#U-0137). Please advise.				Eric Zagol 5/19/2011 As discussed in the field on 5/18/11 with Jason Dunne (W/O) and Noel McCarthy (MSquared) the exact location of the existing PG&E MH outside wall and the existing AWSS is currently unknown.			
				Adjust locations of MH#701, MH#702, MH#704 and sewer alignment east as required (~6" as mentioned) for the 24" VCP installation (new and future) to avoid the existing PG&E MH however not in conflict in conflict with the existing 14" AWSS line.			
				Note, the existing AWSS line will be abandoned North of Beale Street STA 1+10.			
				Confirm alignment (2-10" VCP and future 24" VCP) will clear existing AWSS valve at STA 0+70.

confirm pavement reconstruction can proceed per the attached detail..

ACWS between STA 2+30 and First Street shall be based on U-5101 Detail 6 and the limit of excavation required to do perform the Demolition and New utilities work in Minna Street. Conform to final saw cut lines as indicated in Detail 6.

U-0147	Existing Top-Of-Curb Grades @ Minna Driveways for 575 Mission Building	Closed	05/27/2011	06/06/2011	06/01/2011	Potentially	<input type="checkbox"/>
--------	--	--------	------------	------------	------------	-------------	--------------------------

From: Webcor Construction LP Colin Azevedo To: Turner Construction Compan Gary Krutsch

Answered By:AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

The existing driveways entering the 575 Mission St building, are depressed between 2 ½" to 3" below the adjacent top-of-curb and sidewalk grades - see attached drawing depicting the driveways. This condition seems to be a consequence of repeated overlaying of Minna street, which has resulted in a curb height in many areas far less than the City standard of 6 inches. The street grade along the north side of Minna along the 575 Mission building ranges from 3 ½ to 4 ½ inches below top-of-curb grade.

SUGGESTION:

Trinet has been directed in the field by Jason Chin, and by the Engineer in RFI #U-0146, to construct the new roadway with finish grade at curb line 6" below top-of-curb grade. This is consistent with City standard plan # 87,169. The new roadway grades will result in 3" to 3 ½" of exposed curb height at the driveways to 575 Mission, which is considerably deeper than the 1" called for in the San Francisco standard plans for driveway construction (plan # 87,171). It will also not be possible to raise the street grade at the driveways without impeding road runoff drainage and causing ponding.

Please review and advise.

ANSWER:

Accept Suggestion: ☐

Eric Zagol 5/31/2011 Restore pavement along existing curbs and driveways along the north side of Minna St. in accordance with Contract drawings and DPW Order No. 176,707 (and latest revision 178,940) Section 12 to match existing flow line elevations at curbs and driveways shown on U-1001. 6-inch curb and driveways along Minna St. will be reconstructed at a later date as part of the Transit Center Project.

U-0148	Pavement Reconstruction Plan for West End of Minna Street - Stn 2+15 to 2nd St	Closed	05/27/2011	06/06/2011	06/07/2011	Potentially	<input type="checkbox"/>

U-0151	Additional Sewer Lateral Connection for 100 1st Street	Closed	06/02/2011	06/12/2011	06/08/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Compan Gary Krutsch			Answered By:AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Trinet has discovered an additional sewer lateral for the 100 1st Street building which was not connected to the new 24" sewer main - see attached sketch. The lateral is located at sta. 7+09 and services a single toilet and the rear of the building. This lateral was not shown on the plans and there was no vent in the sidewalk to indicate the existence of a lateral. Trient potholed the lateral in the sidewalk and a 4" cast iron lateral, a 4" cast iron trap and a 4" cast iron vent pipe capped 2' below grade. Please confirm Trinet is to tie the lateral into the new 24" sewer main on Minna. Also, please advise what is to be done with existing cast iron trap and vent pipe assembly which are not up to current DPW standards.				Eric Zagol 6/8/2011 In accordance with U-3000 General Note 12, contractor was to verify that there are no active sewer lateral connections to the existing sewer prior to sewer demolition.			
				Please provide the elevation of the existing sewer lateral and the location of existing 4" cast iron vent pipe for review.			
				Renewal of this lateral will be discussed with TJPA and 100 First St. property owner, final direction forthcoming.

	<p>additional information relating to the 2nd sewer lateral connection for the 100 1st St building. Trinet also clarifies the issue of the existing 4" trap on the line, which was raised in the original RFI.</p> <p>The sewer lateral is located @ Stn. 7+09 and the invert elevation of the 4" cast iron sewer lateral pipe at face-of-curb is 14.6'. The elevation for the top of the new concrete encased ductbank @ Stn 7+09 is 13.85'. The sewer lateral was therefore not in conflict with the new joint trench utilities.</p> <p>With regards to the existing 4" trap on the line, Trinet checked with the SF Plumbing department which advised that a 4" cast iron trap was adequate for a 4" sewer lateral. The existing trap was therefore in compliance with the SF plumbing code. Trinet advised Jason Chin of this in the field and he agreed that the trap did not need to be replaced.</p> <p>The 4" cast iron vent pipe for the trap did not extend to street level but was capped-off approximately 18" below grade. Per field discussions with Jason Chin, Trinet extended the trap vent piping to grade and installed a street vent frame & cover in the sidewalk.</p>						<p>1. Reconnect existing lateral to new 24" Minna St. sewer in accordance with SFDPW Standard Plan 87,196.</p> <p>2. Extend fresh air inlet and air inlet cover to existing sidewalk grade.</p>

From: Webcor Construction LP Co-Author: REQUEST: This RFI is a follow-up to discussions in the field with AECOM and the SFDPW Inspector and Trinet, regarding Trinet's inability to perform a pressure test on sewer manholes 501 & 502 on 1st St. due to field conditions. MH #502 is constructed around the existing 3x5 brick sewer on one side (per SF Standard Plan #87,184) and Trinet has no means of plugging the brick sewer effectively to withstand a pressure test. In the case of sewer MH #501, the original design was similar to MH #502 and a pressure test would not have been possible. The revised design (see attached drawing) includes a temporary 24" corrugated PVC pipe stub extending south from the manhole and connecting to the existing 3x5 brick sewer. The inside of the temporary 24" pipe stub is also corrugated, and therefore cannot be sealed with an inflatable pipe plug, as would be required to perform a pressure test of the manhole structure. Please confirm that a pressure test will not be required for sewer manholes 501 & 502 on 1st St.	Jonathan Flaming	To: Turner Construction Compan Gary Krutsch			Answered By: AECOM Technical Service Eric Zagol		
		SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Eric Zagol 7/8/2011 Confirmed. Pressure tests for sewer manholes #501 and #502 are not required due to the restrictive conditions.		

U-0158	MH #301 Location	Closed	07/15/2011	07/25/2011	07/20/2011	Potentially	<input type="checkbox"/>	
From: Webcor Construction LP	Colin Azevedo	To: Turner Construction Compan	Gary Krutsch	Answered By:AECOM Technical Service				Eric Zagol
Co-Author:								
REQUEST:	SUGGESTION:		ANSWER:					Accept Suggestion: <input type="checkbox"/>
During our sewer work at 2nd and Natoma M Squared discovered that the Telecom Vault shown on the drawings is in fact significantly larger in the field than is shown on the plans. In order to be able to shore for MH#301 construction M Squared has had to move the location of MH four (4) feet east along Natoma. As a result the jack and bore alignment is now a few inches south of what is shown on the plans.		Eric Zagol 7/20/2011 Adjustments proposed are acceptable.						
Please confirm that these adjustments are acceptable.		Since the adjustment pushes the MH and cover into the crosswalk path of travel, in lieu of CCSF DPW Standard MH cover, provide an ADA complainant cover that meets the following specifications:						
		1. MATERIAL - The cast iron shall be in accordance with ASTM "Standard Specifications for Gray Cast Iron Castings" Designation A 48, Class 30. The tinsel strength shall be considered the primary test for qualification.						
		2. FINISH- STANDARD FINISH SHALL BE RAW, AS

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
M Squared discovered an obstruction in the Beale Street investigative trench on station 2+55 approximately 25' west of centerline. The obstruction appears to be a 2'-3' thick concrete wall starting directly below the street base and extending down to an unknown depth. M Squared began demoing the obstruction yesterday believing it was part of a concrete encased PG&E trench. It is now known it is not part of any duct package. Please advise on how you would like to proceed.				Eric Zagol 8/1/2011 Unknown non utility structure. A similar structure was found in AECOM's subsurface investigation trench at Beale Street Station 2+80.52 as shown in Specification Section 020630 Appendix A.		Protect in place. Non utility structures (i.e. walls) within zone of CDSM shoring wall and Transit Center footprint are to be removed by Buttress/Shoring/Excavation (BSE) contractor.	
U-0162	Manhole #602 Orientation	Closed	08/03/2011	08/13/2011	08/09/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Jonathan Flaming	To: Turner Construction Compan		Gary Krutsch	Answered By:AECOM Technical Service Eric Zagol	
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
The PG&E manhole at Station 2+55 is actually further south than is shown on the drawings. As a result of this the new water main on Natoma Street was installed in a different alignment than shown on the drawings. In order to excavate and shore for the new Manhole #602, without damaging the new water main M Squared will have to install the manhole at a different alignment than what is shown on the plans. M Squared will maintain the correct internal manhole dimensions per DPW standard drawings.				Eric Zagol 8/9/2011 Construct sewer MH #602 to avoid existing water main as shown in the sketch provided. Maintain internal manhole dimensions, wall thickness, and steel reinforcement per DPW Standard Plans #87,182.			
Please confirm this is acceptable.

<p>- CB#703 was constructed in the location of the existing catch basin.</p> <p>- See attached profile with culvert elevations. Culvert was installed deeper as several utilities were lower than shown on the drawings.</p> <p>- Per M Squared's response to comments made in the RFI #U-0181, one of the duct banks shown on the drawings could not be located and was not as shown on the drawings. The alignment of the other duct bank is also different than what is shown on the drawings. (See attached) The depth of this duct bank at the point where M Squared capped it (3' south of the unknown concrete structure) was 6' 8" to the top. Its location/alignment beyond that point are unknown.</p>				<p>Please provide the invert elevation of constructed 10" culvert at CB#703. Based on the sketch provided in the RFI169.1, the 10" culvert was reversed slope. A culvert with reversed slope is not acceptable.</p>

M Squared's supplier, Control Systems West, have been coordinating with SFWD regarding which of the City's panels will be used for the TG04.2 project. Tom Reid with SFWD has designated 3 panels to be used for this project. These panels are to be picked up at SFWD, transported to Control Systems West for testing, programming etc and then returned to the job for use at 3 of the valve locations. As the panels have been selected M Squared would like to begin the process of getting the panels to their supplier so they can begin the work.				Jeff Thiel 9/26/2011 Contact Bill Gunn at (415) 706 0688 or WGunn@sfwater.org			
Please provide the name and contact information for the person with whom M Squared can coordinate the pick up of the 3 units.				Per Section 01 10 40, Coordination, Article 1.6 C, this RFI does not fall under the acceptable uses for an RFI as it is not being used for an interpretation of the Contract Documents.			
				RFIs used for questions regarding coordination will be rejected in the future.

U-0177	Ductbank Demo on Fremont St	Closed	10/04/2011	10/14/2011	10/10/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo		To: Turner Construction Compan Steve Cunningham		Answered By: AECOM Technical Service Eric Zagol			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
See attached sketch. The duct bank shown on Fremont Street to be demolished is in fact underneath the curb and gutter and portion of the sidewalk on Fremont St. In order for M Squared to remove this duct bank it will require us to close the west sidewalk on Fremont St, demo and remove the sidewalk, remove the ductbank and then replace the sidewalk. Currently the east sidewalk is closed also due to BBI activity.				Eric Zagol 10/6/2011 Coordinate with PG&E to confirm the duct indicated in the M2 sketch is PG&E's 6-6" duct from PG&E's EMH 7605. Demolish and remove the 6-6" duct segment between STA ~2+40 (at the gutter) and the demarcation line south of shoring wall. The intent is to remove the segment within Natoma Street. The segment south of STA 2+40 (STA 2+40 to STA 1+85) can be abandoned in place.

U-0180	Conflict with CB 305 From: Webcor Construction LP Colin Azevedo To: Turner Construction Compan Steve Cunningham Co-Author: REQUEST: While excavating to install CB305 M Squared encountered a large unknown concrete structure. The concrete structure is in conflict with CB305. CB305 cannot be installed as planned. See attached photo. Tsu-Ling with AECOM and Alberto with SFDPW reviewed the situation in the field and agreed the solution was to salvage the existing CB where CB 305 was to be installed. This work was performed on 10/7/2011 under the inspection of SFDPW. Please confirm.	Closed	10/10/2011	10/20/2011	10/17/2011	Potentially	<input type="checkbox"/>
			ANSWERED By: Webcor Construction LP Richard Buellesbach				
			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> As determined during a site visit on 10/7/11 with M Squared, AECOM, SFDPW and W/O; the existing unforeseen condition, a large concrete structure, is in conflict with CB 305 and the installation of a new catch basin would require an extensive amount of unforeseen demotion. In lieu of installing a new catch basin barrel to replace existing, modify the existing catch basin as follows: 1. Clean interior walls and bottom. 2. Apply 1/2" think uniform layer of mortar on interior walls and bottom. 3. Install cast iron trap. 4. Install pipe culvert and connect to MH#305 as shown in Plans. New culvert size and invert shall match existing culvert at catch basin. Use ductile iron pipe if depth of cover is less than 3 feet.

U-0182.4		AWSS - Final Design Route and Additional Fittings List at 2nd Street Intersection		Closed	03/14/2013	03/24/2013	03/21/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Jackson Tukuafu		To: Turner Construction Compan	Gary Krutsch				
Co-Author: M Squared Construction, Inc.		Aidan Foley							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>					
Refer to drawing MA-3 and MA-13				Michael Smith's (SFDPW) Response,					
Please refer to previous RFI 182 series for history.				"The suggested pipe layout based on recent excavations is acceptable.					
As M Squared must connect to an existing 16" line at 2nd & Mission Street, M Squared performed additional trenching which has now opened up the possibility of a different and more straight forward alignment for 2nd Street piping.				-Locate the 16" x 12" reducer North of the 16" tee and as close as possible to the tee."					
This new alignment shall replace the alignment sent in the previous RFI-0182.3.				Signed and Dated 3/18/13. (See Attached)					
1. Please confirm the new alignment shown in the attached M Squared sketch SK-008.3 is acceptable.									
2. Please confirm where the 16" to 12" reducer is to be located. The location of this reducer will decide whether M Squared will need to purchase two (2) more 16" 45-deg elbows or 12" 45-deg elbows.

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Steve Cunningham

Answered By: Webcor Construction LP Daniel Foudy

Co-Author:

REQUEST:

Due to the proximity of the electrical vault and the electrical concrete duct banks it is not possible to remove the existing 18" AWSS line and reconnect to the existing tee as shown on drawings MA-3 and MA-13. Please see attached pothole drawing. The restraining lugs on the east side of the tee are cast into the base of the electrical vault. The concrete duct bank on top of the AWSS line at the connection point combined with the electrical vault will not allow enough room for the plumber to burn out the old lead joint and cast the new one.
Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Michael Smith's (SFDPW) response,
"SFDPW Response:
This conflict between the existing AWSS line and utility vault/duct bank are unforeseen field conditions due to incorrect information being furnished to the City.
There are no design alternates at this location due to the necessity of removing the existing 18"x10" reducer at this location in order to install the 16" fittings to maintain the proposed 16" pipe size upgrade on Mission Street. The engineer will contact the owner of the utility in conflict with the AWSS facility for resolution."

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please refer to drawing MA-15 and response to RFI U-0190.				Jeff Thiel 11/21/2012 Response per Michael Smith (SFDPW),			
As a result of differing site conditions between Sta 8+50 and 9+00, the new location of the HP fire hydrant shown on drawing MA-15 is to remain in the existing location per response to RFI U-0190.				"Please find attached a sketch for changing the design for replacing the existing HP hydrant at the above location.			
Please provide a detail drawing showing the new hydrant lateral with all SFDPW requirements for HP hydrants in an areaway.				The existing hydrant is in an "areaway" since the property at this location has a basement that extends under the sidewalk.			
				The proposed new hydrant off the proposed 16" DI main will be replaced in this "areaway" structure. Please see attached sketch. The originally proposed hydrant lateral that bends 90-degrees as shown in the contract documents drawing MA-15 will be deleted from the work scope. There is no change in work for drawing MA-5. The attached drawing HPL-5142.1 is also shown on the AWSS standard drawings which are part of the contract work.

U-0191	Power Source at Location #1, #2 & #7	Closed	01/16/2012	01/26/2012	02/27/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo		To: Turner Construction Compan Steve Cunningham	Answered By:Webcor Construction LP Jeff Heath				

Co-Author:

REQUEST:

In order for the controller enclosures for the motorized gate valves at Location #1, #2 and #7 to be operational a power source will need to be provided at each enclosure location.

Please confirm that the owner has applied to PG&E for the power sources at these locations and advise on the status of these connections.

SUGGESTION:

ANSWER: Accept Suggestion: ☐

Revised Responce 2/27/2012

Jeff Thiel 2/23/2012 The TJPA has completed its application to SFPUC for power to AWSS facilities. The SFPUC has requested a minimum of four (4) weeks to make these connections. Sub contractor to coordinate meeting with SFPUC and PG&E prior to start of work.

Below is the MOP for coordinating power source connection as confirmed by Mathew Ho of the SFPUC.

1. Contractor to schedule coordination meeting with PG&E, PUC (Mathew Ho or Michael Mack) and Turner. Contractor to provide a construction schedule and set up Pre-con with PG&E (Per SFPUC request to inform them when Contractor expects to trench for electrical service and have the power pedestals installed)
2. Contractor to schedule PG&E trench inspection which is needed after contractor installs conduit but before closing the trench so that PG&E can prove the conduit via mandrel test (30days notice needed, Call PG&E inspection # 415-695-7519 and provide PM# located on drawing and provide PG&E job owner contact as Matt Herron)
3. PG&E to pull cables
4. Schedule a DBI inspection of the meter pedestal (Dave Green DBI 415-558-6654, forward PG&E a copy of the DBI green tag)

Co-Author:**REQUEST:**

Please refer to RFI U0191.1 and the attached drawings MA-1, MA-29 and MA-31.

1. As per response to RFI U-0191.1, the SFDPW-Bureau of Engineering sketches and letter for the AIC only addresses the motorized gate valve number 21 at Location #7. As new power service will be required at gate valve number 2, Location 1, please provide an AIC letter for this location.

2. Please provide a conformed drawing of the the PG&E clarification sketches provided in RFI U-0191.1 by revising the drawing sheet MA-29 and MA-31, respectively. It is unclear from the PG&E sketches whether the scope from the original contract drawings (MA-29 and MA-31) have changed.

SUGGESTION:**ANSWER:****Accept Suggestion:** ☐

Request 1. - Please see attached file for Location 1 labeled "555 Market St. AIC.pdf" letter.

Request 2. - Please see attached PDF file "comments_transbay.pdf" containing comments from Matt Herron of PG&E clarifying the scope of work for the PG&E power connection points at locations #1 and #7.

Also, please see information on location of manhole #5414 below per PG&E Matt Herron below;"The Vault 5414 is in the South Side, sidewalk of Market St. about 10' East of the West Property of 555 Market St. There are large vaults IFO 555 Market St. identified as 7300-P/7301-P/7302-P, Vault 5414 is roughly 30' West of those vaults."

Please contact Matt Herron of PG&E when sub-contractor is ready for a PG&E crew to mark the location for the core. Also, Please give Matt Herron two weeks notice when sub-contractor would like to core drill into the vault. This two weeks notice is to allow PG&E to set up and schedule a crew to standby for the core.

Co-Author: M Squared Construction, Inc.	Aidan Foley						

REQUEST:

The response to RFI #U-0191.2 does not answer the question posed in the RFI.

As mentioned in the previous RFI there appears to be a difference in the PG&E drawings provided in the original response and the contract drawings.

See attached M Squared's interpretation of these PG&E drawings. Please confirm if this interpretation is correct.

SUGGESTION:**ANSWER:****Accept Suggestion:** ☐

7/16/2012 Kenny Chin's (SFDPW) response,

"The interpretation of MA-31 is correct. The contractor shall route the conduit from the meter enclosure to vault 1813. The interpretation of MA-29 is correct. The contractor shall route the conduit from meter enclosure to vault 5414 but the contractor shall find out with PG&E which one is the exact vault 5414."

Co-Author:

REQUEST:

Current project drawings show that this project requires two (2) 14" Strong Backs and two (2) 10" Strong Backs to be used at different locations. Olympic Foundry does not produce strong backs and were unable to include them in the order to M Squared. M Squared has contacted several sources trying to locate the strong backs but have yet to find a supplier. Please advise if it is possible to purchase these from the City stock. If this is not possible M Squared will have no other option but to have them manufactured at a steel mill and this may take a considerably long time due to the lead time in the specialized steel.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Jeff Thiel 2/3/2012 Response per Michael Smith (SFDPW),

"We have been advised that the SFWD does not have the requested strong backs in their inventory.

-Typically strong backs were torch cut at local machine shops that handle larger fittings. Suggest contacting other contractors who have performed AWSS work for sources."

REQUEST:			SUGGESTION:		ANSWER:		
Please refer to attached detail 3/U-5001.					Accept Suggestion: <input type="checkbox"/>		
Detail 3 on sheet U-5001 which shows the connection detail for 12" HDPE to existing 10" steel, uses a 10" steel to 12" sleet reducer and then using a 12" steel to 12" HDPE Coupling in order to connect new sludge main to existing sludge main.					Proposed modification is acceptable.		
Our preference is to use a 10" steel to 10" HDPE coupling and then install a 10" HDPE to 12" HDPE Reducer. As the O.D of the existing sludge is unknown it will cause significant delay in the ordering of the 10" steel to 12" steel reducer as we will have to get the OD at the connection point and then order the material. Even with this piece of material, it will be extremely difficult to get a welder into the trench to weld the reducer on to the exiting pipe as a result of the amount of utilities which were discovered in potholing.							
The use of the 12" HDPE to 10" HDPE reducer eliminates the need for a welder in the trench.

	REQUEST: Specification section 02225 Section 3.7 C forbids the use of flooding or jetting in order to gain the necessary levels of compaction in the AWSS pipe trench. However due to the amount of utilities and duct packages in the trenches it will not be possible to gain the necessary levels of compaction under and around these utilities by utilizing the methods referenced in the specifications. By not gaining the necessary compaction around utilities it is possible that voids will occur over time causing the utility to be come unsupported and the street surface to sink. We are requesting the use of jetting (as described in Section 703.08 of the City and County of San Francisco Standard Specifications) as a method to gain the necessary levels of compaction for the AWSS trenches. Jetting has previously been utilized as a successful method of gaining compaction levels on several other Transit Center Utility Relocation packages. Please confirm that this proposed method is acceptable for use on this trade package. If not, please provide an alternative method for gaining the necessary compaction.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 6/11/2012 Michael Smith's (SFPDW) response: "Water jetting to compact soil will be approved for locations where there are adjacent utilities that prevent compaction by vibratory methods. Use vibratory compaction once the backfill is clear of utilities and up to finish grade under road base/paving."

U-0205	SLUDGE LINE - HDPE Hydrostatic Testing	Closed	06/22/2012	07/02/2012	07/05/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By:Turner Construction Company Jeff Thiel			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please refer to spec section 33 34 10-3.1 H				Eric Zagol 7/3/2012 It is acceptable to perform HDPE Hydrostatic Testing per HDPE pipe manufacturer's recommendations. The test phase shall be performed based on the specified "Test Phase - Alternate 2" in manufacturer's data sheet for 3-hour test.			
The method of HDPE pipe testing listed in the contract documents differ from the testing methods provided by the pipe manufacturer: The specifications call for the pipe to be filled 24hrs in advance and then the pipe pressurized to 115psi for a duration of 4hrs, The manufacturer's method involved filling the line with pressure for 3 hrs to allow expansion etc. in the pipe and then adding additional water, per Table 2 of the attached document. Once this additional water has been added the pressure can hold for the duration listed. Or alternatively allowing a 5%fluctuation in the pressure target for the test over 1 hour.							
Please see attached pipe manufacturer's data attached and provide direction. M Squared believe that the testing method in the specifications is not suitable for HDPE due to its flexibility and would be more suited to steel pipe.

U-0210	AWSS - 12" Water Conflict at 1st and Mission Street	Closed	07/26/2012	08/05/2012	08/10/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Compan Gary Krutsch	Answered By:Turner Construction Comp Jeff Thiel				
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: While performing the preliminary excavation across 1st and Mission street Intersection, M Squared's crew exposed a 12" water line that is running on top of the AWSS line for approx half of the intersection. Due to other utilities being present we are unable to excavate down to the AWSS main. M Squared met with SFWD crews on site and they have confirmed that the line is active, despite them agreeing with M Squared that the line sounded very hollow (an indication that it may be dead) M Squared believes that despite the presence of many unknown utilities they will still be able to remove and replace the existing AWSS main if this 12" water line can be abandoned or relocated. Please advise on how M Squared is to proceed.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Jeff Thiel 8/10/2012 Chi Yu's (SFWD) response, "SFWD will cut and cap both ends of the 12" line that is on top of the AWSS Main and restore the 12" main at the same location after the new AWSS line is in place." SFWD will require two weeks advance notice prior to starting this work.

U-0224	AWSS - Pipe Alignment between Fremont to Beale	Closed	02/06/2013	02/16/2013	02/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Kruttsch			Answered By: Turner Construction Company Jeff Thiel				
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: The existing AWSS main on Mission Street between Fremont St & Beale St is running through three (3) PGE vaults. By upsizing the AWSS main to 16" there is a possibility that the pipe will not fit back through the structures. By having PGE move/alter their facilities M Squared believes there will be significant project delays. M Squared will also inevitably have to install the new main within PGE structures, something the SFPUC prefers to avoid. M Squared believes it is possible to shift the alignment of the new 16" main further north to avoid all of these PGE vaults. See attached potholing results from potholing further north than the existing main. M Squared does not know yet if additional fittings will be needed to shift the alignment north, and then realign it back south at Beale Street. This will not be known until the trench has been excavated. Please confirm it is acceptable for the AWSS alignment to shift north as currently coordinated to avoid the delay impacts and vault conflicts.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Jeff Thiel 2/8/2013 Response per Michael Smith, (SFPDW) "Shifting the proposed AWSS alignment North is acceptable provided that there are no utility conflicts and the gate valve frames/covers do not end up directly in the gutter due to potential flooding of the vaults." Signed and Dated 2/8/13. (See Attached				

U-0225	AWSS - Lead Joint Clearances at Sta 6+30	Closed	02/08/2013	02/18/2013	02/13/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Kruttsch			Answered By: Turner Construction Company Jeff Thiel				
Co-Author: M Squared Construction, Inc. Stewart Mitchell							
REQUEST: Please refer to attached W/O Sketch SK-U-0225 and drawing MA-4. The newly installed fire hydrant lateral at station 6+30 is to connect to the existing AWSS main; however, the existing main pipe is "oval" shaped and the new pipe is circular. As a result of the differing pipe shapes, the minimum clearances for inserting the "hokum" to draw the lead in when heated are not achieved. The minimum clearance around the pipe required is 1/4". The existing fitting is part of a series of fittings needed to raise the fire hydrant lateral up in elevation to avoid a			SUGGESTION: Field conditions appear to indicate that where the existing laterals clear over the sewer, at the next joint there is a possibility of a full length pipe (12'-0") which takes you closer to the curb. There is a possibility to switch out the entire lateral to the fire hydrant. ANSWER: Accept Suggestion: <input type="checkbox"/> Jeff Thiel 2/13/2013 Response per Michael Smith (SFPDW), "Due to the unforeseen conflict between the existing AT&T duct bank which was poured directly onto the AWSS Hydrant lateral pipe, blocking access to the next two downstream lead joints, the contractor shall locate a lead joint South of the conflicting duct bank that is readily accessible for their plumber to melt the existing lead joint. The contractor shall then furnish and install ductile iron pipe and fittings to this accessible location in order to connect to the existing cast iron line. The alternate is for AT&T to relocate

	conflict with an existing sewer line. Moreover, there is a duct bank over the sewer and it was poured over the next fitting only compounding the conflict. Please advise.					their duct bank in order that there is a minimum 12" clearance between the duct bank and the existing AWSS pipe. Should the duct bank not be relocated, and due to the fact that there will be a minimum amount of cast iron pipe remaining in the hydrant lateral run, the contractor shall provide a cost for removing the remainder of the cast iron hydrant lateral and for replacing with ductile iron pipe and fittings. Replacing this remaining section of cast iron pipe and hydrant will be an improvement to the SFWD's facilities." Signed and Dated (See Attached)	
U-0225.1	AWSS - Lead Joint Clearances at Sta 6+30: SFWD Decision to Replace Full Lateral	Closed	03/11/2013	03/21/2013	03/28/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Compan Gary Krutsch			Answered By: Turner Construction Comp Jeff Thiel				
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST:			SUGGESTION:		ANSWER:		
As a result of several coordination efforts to discuss potential options, AT&T has chosen not to relocate their duct bank that is in conflict with the hydrant lateral at Sta 6+30. Instead they have agreed to compensate M Squared for the costs to connect to the next most southern joint.					Accept Suggestion: <input type="checkbox"/>		
1. Please confirm that this is acceptable, as the response to the previous RFI U-0225 mentioned the possibility of replacing the full lateral including the hydrant.					Jeff Thiel 3/26/2013		
2. Please advise whether the SFWD want to replace the full lateral. M Squared need to know so an agreement can be reached on materials etc.					Response per Michael Smith (SFDPW),		
					"CCSF SFWD (Dan Helminiak 420-4521) will coordinate with contractor to provide funding / materials to replace the remaining cast iron portion of the hydrant lateral."		
					Signed and Dated 3/19/13. (See Attached)

	REQUEST: Refer to drawing U-1002, U-2003, MA-15. M Squared is unable to trench to the connection point as shown on the attached M Squared sketch SK-047.1 and SK-047.2 on First Street due to the presence of two (2) PG&E duct banks in the trench. One duct bank is deeper than the other and is sitting directly on top of the AWSS Pipe that is required to be removed. Please provide direction to how M Squared will proceed.	SUGGESTION: Suggestion #1 - Remove existing gate valve and connect to the existing pipe (see attached SK-047.1). Install an IBeam behind the 16" Tee on Mission Street as an alternative restraint system. Please note: In order to perform Suggestion #1 an AT&T duct bank will need to be moved west 2' so M Squared can drill for the I-Beam. Suggestion #2 - If the AT&T duct bank cannot be moved install an offset from the 16" tee using 22deg bends to get back to original alignment. (see attached sketch SK-047.2)	ANSWER: Jeff Thiel 3/12/2013 Response per Michael Smith (SFDPW) " 1.) Proceed with suggestion No. 1. 2.) Should AT&T not be able to relocate their duct bank, proceed with suggestion No. 2. Replace 22.5 degree elbows with 11.25 degree elbows if fittings are available." Signed and Dated 3/12/13. (See attached) After further investigation while this RFI was being reviewed, it was found that the duct bank previously thought to be AT&T is owned by TCG. Do not proceed with either option until TCG has been notified of potential costs and has reviewed the proposed solutions.				

U-0226.1	AWSS - TCG Duct Bank at 1st Street Intersection	Closed	06/25/2013	07/05/2013	07/08/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Jackson Tukuafu	To: Turner Construction Company	Gary Kruttsch	Answered By: Turner Construction Company Jeff Thiel			
Co-Author: M Squared Construction, Inc.	Aidan Foley						
REQUEST: Please refer to response for RFI U-0226. As per response to RFI U-0226, M Squared is directed to "Remove the existing gate valve and connect to the existing pipe. Install an I-beam behind the 16" Tee...as an alternative restraint system" in order to avoid two PG&E duct banks in conflict with the AWSS. As a result of the I-Beam being installed at this location, a TCG duct bank would need to be moved 2-feet west. TCG has determined that the duct bank would take several months to re-locate their duct bank. Therefore, TCG has opted to avoid the conflict by pursuing the suggested 22deg bends as an offset from the 16" tee in RFI U-0226. Please confirm additional restraints are not required at the 22deg bends or provide all necessary restraints required to	SUGGESTION:	ANSWER: Response per Michael Smith (SFDPW), "The thrust blocks for the two (2) 10" 22.5 degree elbows shall conform to the thrust blocks for 16" pipe as shown on the AWSS standard drawings. Include "crossed" rebar with J-hook ends over the elbows. Schedule site visit to verify lack of access to (E) line north of proposed 10" connection location." Signed and Dated, see attached.

Co-Author: M Squared Construction, Inc.		Aidan Foley					
REQUEST:		SUGGESTION:		ANSWER:			Accept Suggestion: <input type="checkbox"/>
Refer to drawing MA-13, MA-3, MA-10							
Due to the presence of several PGE duct banks and the steam line that runs along 2nd Street M Squared feels it will be significantly difficult to modify a precast valve vault to fit into the area designated for the vault. As a result, M Squared proposes to construct a cast in place valve vault as has previously installed and approved on Market Street.							
1. Please confirm it is acceptable to install a cast in place vault at this location.							
2. Please advise if rebar detail attached is acceptable for use.							
		Jeff Thiel 4/22/2013 Response per Michael Smith (SFDPW),					
		"-Due to the existing conflicting/surrounding utilities in the proximity of the AWSS vault location, a cast-in-place concrete valve vault would be acceptable.					
		-The rebar drawings will need to be stamped again by the structural engineer. Please note that this valve vault is for a 16" gate valve with bypass valve (Two actuators)."					

U-0228	AWSS - Sidewalk Expansion Evaluation between First Street and Beale Street			Closed	05/31/2013	06/10/2013	10/18/2013	Potentially	<input type="checkbox"/>

U-0230	AWSS - AWSS Vault at 2nd Street	Closed	07/18/2013	07/28/2013	07/19/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu Co-Author: M Squared Construction, Inc. Aidan Foley			To: Turner Construction Company Gary Krutsch		Answered By: Turner Construction Company Jeff Thiel		
REQUEST: Due to the grade of the 16" AWSS gate valve, combined with the valve actuators the roof of the AWSS valve vault at 2nd Street will not be under the surface of the street. Previous AWSS valve vaults have 2" AC/8" concrete street base on top of the roof of the vault. If M Squared installs the vault roof and then covers it with 2" AC then there is a danger that future contractors will saw cut through the roof of the vault while cutting out their trenches. Our suggestion is to pour the vault roof to the same grade as the current street surface on 2nd Street. There does not appear to be any room for adjustment here and we are unaware of any other options in this case. Please confirm it is acceptable to construct the vault roof in this manner, with a concrete broom finish.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Response per Michael Smith (SFDPW), "M Squared shall proceed with constructing the valve box cover in a manner such that the portion to be located in the parking strip shall be flush with the surrounding concrete. For the portion of the cover to be located in the paved traffic lane, reduce top surface by 2". Place a sheet of 10 gauge galvanized sheet steel on recessed area of concrete cover. When repaving street, extend A/C paving over vault to provide paving flush with concrete portion of cover/manhole lid. Signed and dated. (see attached)		
U-0231	AWSS - Concrete Sampling for Kickers	Closed	07/25/2013	08/04/2013	08/02/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu Co-Author: M Squared Construction, Inc. Aidan Foley			To: Turner Construction Company Gary Krutsch		Answered By: Turner Construction Company Jeff Thiel		
REQUEST: The contract specifications require concrete sampling of all cast in place concrete on the AWSS project. However in the pre-construction QC meeting the City confirmed that the SFWD Inspector - Dan Helminiak is permitted to inspect all concrete thrust blocks. Due to the small size of the thrust blocks it is not practical for concrete samples to be provided to an inspection agency. Please confirm that per the agreement SFWD inspector can inspect all concrete used in the AWSS thrust blocks and that no concrete sampling is required.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Response per Michael Smith (SFDPW), "It is acceptable to the City for thrust blocks to be visually inspected by the SFWD inspector for compliance with the contract documents. No concrete sampling is required." Signed and dated. (See attached) (Jack Adams) Although the contract specifications require concrete sampling and testing of all cast in place concrete on the AWSS project, the City of SF Engineer of record has allowed visual inspection only by City SFPUC (SFWD) of these concrete thrust blocks. See attached from M. Smith CCSF PUC.

From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By: Turner Construction Company Gary Krutsch			
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: See attached sketches. Due to the proximity of PGE's Vault #1722 to the new AWSS line M Squared believes the following changes are needed to keep all pipe joints and fittings outside the limits of existing utility vaults. M Squared proposes installing the 14" x 12" reducer further east, until we are outside the limits of the vault. The pipe between the new cross piece and the new reducer will be 14-inch pipe, rather than the 12-inch shown on the plans. M Squared will be able to eliminate the need for the 12-inch sleeve here and tie 12-inch pipe into the existing main from the reducer. All joints will be restrained using stop collars. Please confirm that this configuration is preferred to in lieu having fittings and joints within the limits of the PGE Vault. Please advise.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Judy Long 12/18/2013 RESPONSE The proposed AWSS piping configuration is acceptable. Please have TJP&E follow up with PG&E for costs to perform additional work. Please have SFWD inspector/SFDPW Engineer inspect PG&E vaults after modifications are made to verify clearance requirements.

	<p>In order for this catch basin to be utilized the grate would need to be dropped approx. 5-inches, leaving a catch basin less than a foot deep. It is not possible to install a standard SF catch basin is this location and therefore M Squared suggest abandoning this CB. Alternatively, please provide grades for the restoration of the concrete bus lane to create necessary slopes to this catch basin.</p> <p>Please advise.</p>						
U-0239	AWSS - The Use of Sand Slurry Backfill at Mission and Main Street Phase	Closed	01/16/2014	01/26/2014	02/04/2014	Potentially	<input type="checkbox"/>
<p>From: Webcor Construction LP Jackson Tukuafu</p> <p>Co-Author: M Squared Construction, Inc. Aidan Foley</p>		<p>To: Turner Construction Compan PHIL MILITELLO</p>	<p>Answered By:Turner Construction Comp Judith Long</p>				
<p>REQUEST:</p> <p>Please refer to drawing MA-17.</p> <p>Due to the high number of utility duct banks on Main Street & Mission Street Intersection M Squared's crews effectively tunneled under sections of the street in order to install the new AWSS main. Where possible M Squared removed the street base and excavated as much as we could. The remainder of the trench was tunneled under duct banks and under the street, with the street base remaining in place.</p> <p>Now that all the AWSS main has been installed M Squared will shortly be faced with backfilling this intersection. There is currently only a small portion of trench that can be backfilled using conventional methods i.e ram compactor etc. The remainder of the trench will also not be suitable for backfilling using the jetting method as there will be no way to compact the area directly underneath the street base.</p> <p>M Squared is requesting permission to create several small holes (approx. 6" dia) in the street base, between some of the utilities and backfill the AWSS trench using a sand cement slurry backfill. See attached submittal sheets. This mix design is effectively sand and water, with just a minor amount of cement included to allow the sand to reach 95% compaction.</p>		<p>SUGGESTION:</p>	<p>ANSWER:</p> <p>Accept Suggestion: <input type="checkbox"/></p> <p>This is acceptable provided that the dried sand/cement mixture has a minimum density of 120 lb/ft3. Please provide test verification of this density with site test as continued from previous sheet: "witnessed by SFWD Inspector". Test can be performed at contractor's yard.</p> <p>Answered by: Michael B Smith SFDPW/IDC/EME</p> <p>Answered on: 1/31/14</p>

U-0240	AWSS - Concrete Mix and Slump at Parking Strip Placement	Closed	01/16/2014	01/26/2014	03/05/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Compan	PHIL MILITELLO	Answered By:Turner Construction Comp Judith Long			
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: Prior to replacing the 6ft wide parking strip on Mission Street at 1st Street it became apparent to us that the articulated semi trucks, buses and other larger vehicles would be unable to a make the turn from southbound 1st Street onto Mission Street if the 6ft wide parking strip was barricaded in order to let the concrete set. City standards call for the concrete to be poured with a 4inch slump, and that no traffic drive on the concrete for a period of 10 days. M Squared made the decision to add 2% calcium to the concrete mix to speed up the concrete setting process. M Squared used the same mix design as is used for the street base: - Bode Concrete Mix Design 604 - sidewalk, curb and gutter and parking strip. - Bode Concrete Mix Design 604CC - Street base The only difference between the 2 concrete designs is the added 2% calcium. The concrete was poured with an 8inch slump in order to allow the crew enough time to satisfactorily finish the concrete to the required surface. M Squared acknowledge that this is out of spec, however the concrete still reached over 4000psi, when specs required only 3000psi. M Squared believes that this will be required in the future on other portions of Mission Street on account of Mission St. being MUNI's busiest route. SFMTA have asked that M Squared minimize lane closures where possible. Please confirm that this 8inch slump is acceptable on Bode Mix 604CC (attached).		SUGGESTION:		ANSWER: Michael Smith 3/3/2014 RESPONSE: The 8" slump for the Bode Mix 604cc is acceptable. Michael B. Smith SFDPW/IDC/EME on 3/3/14			Accept Suggestion: <input type="checkbox"/>

U-0241	AWSS - Proposed Fire Hydrant Re-Location on Mission and Fremont Street	Closed	01/21/2014	01/31/2014	02/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company PHIL MILITELLO			Answered By: Turner Construction Company Judith Long				
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: As per AWSS Coordination Meeting on 01/17/2014, the location of this fire hydrant near the intersection of Fremont and Mission is potentially going to need to be moved to accommodate the new sidewalk expansion. The purpose of the RFI is for Michael Smith with SFWD to analyze, consider and direct the feasibility of relocating the fire hydrant further north. If the hydrant is to be located somewhere other than is shown on the drawing please provide a detail for this work as additional fittings may need to be ordered.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Per our site visit with M2 on 02/11/14, the proposed hydrant lateral shall be relocated to the west side of Fremont Street, north of Mission Street, barring any conflicting utilities. The hydrant shall be located immediately north of the replacement 10" gate valve. M2 shall verify the availability of a 10" hydrant tee with SFWD. Michael B. Smith SFDPW/IDC/EME 02/12/14

From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company PHIL MILITELLO			Answered By:				
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: Sheet MA-16 shows that the hydrant tee is to be rolled down 45-degrees in order to tie in to the lateral piping. However, when M Squared excavated this section, they discovered that the hydrant lateral piping is shallow and the main is approx. 2-feet deeper. In order to install the piping, the hydrant tee will need to be rolled UP 45 degrees. In addition to this M Squared will need to order a customized 8-inch DIP flanged spool to join the tee to the flanged 45-degree elbow. Please confirm it is acceptable to proceed with the customized flange or provide direction.			SUGGESTION: Roll the tee upward 45-degrees as required to suit field conditions. F/J pipe spool between TEE and flanged 45-degree elbow. Spool length shall be determined in the field to suit existing pipe alignments Michael B. Smith SFDPW/JDC/EME - 01/22/14. U-0244	AWSS - Gate Valve Vault at Sta 16+40 (West of Beale Street)	Closed	02/07/2014	02/17/2014	02/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Compan	PHIL MILITELLO	Answered By:City and County of San Fr:Michael Smith			
Co-Author: M Squared Construction, Inc. Chris Wallace							
REQUEST:		SUGGESTION:		ANSWER:	Accept Suggestion: <input type="checkbox"/>		
See attached photos of conflicts with gate valve vault at Sta 16+40.		This is Acceptable.					
Due to the unforeseen utilities in place, M Squared cannot install the concrete vault around the gate valve at STA 16+40. In order to avoid delays to the project M Squared reached out to the engineer of record to bring this issue to his attention. See attached email chain.		Please coordinate site visit with Engineer and Bill Gunn CF SFWD to review valve installation for providing design for modified valave box and gate valve support.					
As it appears M Squared is directed to return to 1st Street and work east again; M Squared will be unable to build any structure around the gate valve at Sta 16+40. Due to the flip flop of the schedule we will not be able to tie in at this point for several months so we suggest the following:		Michael. B. Smith SFDPW/IDC/EME 02/07/14					
- Install the gate valve at Sta 16+40 and direct bury the valve, leaving access to the gates with ductile risers and valve caps. FYI - these gates should not be opened anyway as the line will be out of commission during construction.							
- Re-excavate this gate valve when M Squared installs the pipe from Fremont St heading east and tie in the pipe to it then. In the interim M Squared will drive a sheet pile behind the gate valve and support it with a 1.5ton concrete block. This will prevent any gate valve movement.							
- As M Squared will be working their way from 1st St towards Beale Street, they should have several weeks in which to design some sort of modified manhole, custom sized vault in which to encase the valve.

Co-Author: M Squared Construction, Inc.		Aidan Foley						
REQUEST:			SUGGESTION:			ANSWER:		
Please refer to drawing MA-15 and attached M Squared sketch SK-TG04.2-069.						Accept Suggestion: <input type="checkbox"/>		
According to the plans the tee is to be rolled down, however the existing tee is rolled out flat and there are 2 x 45 degree elbows installed to raise the line over the existing brick sewer.						1. Please coordinate with the SFWD inspector to identify if the (e) SFWD line is abandoned. If abandoned, cut line as required.		
1. Due to existing utilities, the area is congested and has very minimal access. M Squared will need SFWD to determine which water line is live and allow M Squared to remove the abandoned water main to provide more space here.						2. Furnish/Install 45 degree elbows as required to match (e) horizontal alignment.		
M Squared is also unable to find a lead joint to connect the new pipe. M Squared has found, what appears to be some form of a repair coupling or sleeve on the existing line. There is one either side of the existing brick sewer main.						3. Proceed as required following lateral South to identify usable lead joint to connect to (e) line. We have forwarded RFI to SFWD for possible cost sharing to replace remaining lateral and hydrant. Will advise ASAP.		
2. Please advise how you would like M Squared to proceed. M Squared has already trenched 7-feet further south than is shown on the drawings.						Michael B. Smith SFDPW/IDC/EME 03/28/14

30100 - Transbay Transit Center Project

<i>Number</i>	<i>Subject</i>	<i>Status</i>	<i>Date Created</i>	<i>Date Required</i>	<i>Date Answered</i>	<i>Cost Impact</i>	<i>Proceed</i>
	<p>First Street:</p> <p>1. M Squared is able to install the gate valve and gate valve vault at the west side of 1st Street on Mission Street without impacting the new sidewalk expansion. The valve vault will be in the street and outside any sidewalk limits. The vault can be constructed once the street light conduit has been relocated. This work has already been coordinated with the City Street Lighting Division. Please advise on when the City will remove the conflict to install the gate valve/vault.</p> <p>Fremont Street (east side):</p> <p>2. See attached sketch. Due to the amount and location of existing utilities M Squared will be unable to install a gate valve vault of any kind at this location. It is also looking highly unlikely that M Squared will be able to install any gate valve at this location due to the utilities in the area. Please advise as to how M Squared will proceed.</p>				<p>The contractor shall fiels investigate installing the 16" gate valve and reducers directly east of the tee serving Fremont Street. Install riser and 23 1/2" square AWSS manhole cover above gate valve operating nuts similar to 10" AWSS gate valve. Notify engineer of any conflicts to performing the above work, and for direction for riser and manhole support.</p> <p>Michael B. Smith SFDPW/IDC/EME 03/28/14 Judy Long 3/28/2014</p> <p>REVISED 4/1/2014:</p> <p>Per Yesterday's coordination meeting with PG&E and Last night's site investigation by M2, there currently is no space to install a gate valve east of the main line tee at Fremont Street. In order to maintain water supply for SFFD, the contractor shall temporarily cap 16" tee on the east side until PG&E relocates conflicting duct banks. The contractor shall install 16" diam. nipple, 16" DI AWSS MJB flat cap and tie rods. Use steel spacers up against (e) 12" CI AWSS line. Have SFWD test completed line and place back into service.</p> <p>Per Michael B. Smith SFDPW/IDC/EME on 04/01/2014</p>		

U-0247	AWSS - PG&E Utility Conflicts at Fremont Intersection		Closed	03/27/2014	04/06/2014	04/18/2014	Potentially	<input type="checkbox"/>

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>			
Please refer to drawing MA-16 and attached M Squared sketch SK-TG04.2-071.				Judy Long 4/1/2014					
There are 3 duct banks exiting out of PG&E Vault #1669:				PG&E shall remove/relocate conflicting duct bank(s) as identified by the contractor in order to obtain the necessary working space and clearance as required to remove the (e) AWSS pipe and install the (n) pipe.					
1. PG&E Duct bank #1 runs from 1st Street down Mission to Fremont Street and has been in our trench all that time.									

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>It has not encroached on the AWSS Main alignment and there is enough clearance from AWSS main most of that time. It has impacted excavation but should not pose too much of a problem for pipe installation.</p> <p>2. PG&E Duct bank #2 sits on top of the existing 12" AWSS Main and runs directly on top of the AWSS Main for a large portion of the intersection. Due to this duct bank we are unable to excavate down to the AWSS Main, unable to remove pipe and will be unable to install new 16-inch AWSS.</p> <p>3. PG&E Duct bank #3 runs underneath the existing 12" AWSS main, it is concrete encased and part of the concrete encasement encroaches onto the existing 12" AWSS Main. This duct bank appears to leave our trench after 10ft or so.</p> <p>Where duct bank #2 and duct bank #3 cross each other there is only 11-inch between the two duct banks. Not enough space to install a 16inch pipe with tie rods and stop collars. The AWSS is pinched between these 2 duct banks for approx. 10ft with one duct bank on top of the 12-inch main and one touching the main from underneath. While all duct banks impede us it seems there is a higher chance of making this work with the removal of duct bank #2.</p> <p>Please provide direction on how to proceed or advise when PG&E will begin to remove their duct banks.</p>						
						PG&E shall demo portions of their electrical vaults that were constructed on the (e) AWSS pipe.	
						Currently should the (e) CI AWSS be comprimised, the SFWD would not be able to even access the fire fighting line due to the three conflicting PG&E duct banks surrounding the AWSS pipe. City Standards call for a minimum 12" seraration for utilities being installed in the proximity of the AWSS line.	
						Michael Smith 4/1/2014

<p>Question #2 - Currently there does not appear to be enough space to install the new 16" pipe WITH bell & stop collars through the utilities in the Fremont St intersection. There does appear to be space to install 16" pipe without the stop/bell collars on.</p> <p>- Our suggestion would be to install the 16"x10" tee and restrain that tee on one joint heading east. Install piping across the Fremont St intersection without stop/bell collars, delete the 16" GV at that location (we believe we will not be able to fit one anyway), and tie off the last piece of pipe coming into the hydrant tee east of Fremont Street.</p> <p>Please clarify if this is acceptable.</p>

Please refer to drawing MA-15 and attached M2 sketch SK-TG04.2-073.			Judy Long 7/7/2014				
1. Please confirm that it is acceptable to install the new hydrant at Fremont St. (Location #4, STA 12+50), 31" from face of concrete (FOC) at approx. STA. 7+15 on drawing MA-16. The revised location is a result of various conflict in the vacinity that prevent the hydrant from being installed as shown on MA-15.		Per our conversation on 7/7/14 with M2, the contractor shall investigate the use of using a hydrant riser and no elevation changes for lateral piping.					
2. Due to the 10" main being relatively deep, additional fittings will be required to install the hydrant at the revised location (STA 7+15). Please confirm it is acceptable to install the hydrant as shown in the attached sketch SK-TG04.2-073.		by: Michael B. Smith SFDPW/IDC/EME, dated 7/7/14

Transbay Transit Center – San Francisco, CA

Noise and Vibration Mitigation Management Plan

Webcor/Obayashi
September 07, 2012

GENERAL:

The Webcor/Obayashi (W/O or CM/GC) Noise and Vibration Mitigation Management policy that will be implemented on the Transbay Transportation Center Project will be an overall project policy, with each Trade Subcontractor contributing their specific plan as they come on board to the project. The primary function of this plan is to comply with Specification Section 00 08 13, 00 08 13/APB, the San Francisco Noise Control Ordinance, regulations and requirements and section 01 35 65, Specific Project mitigation measures and monitoring requirements as applicable to the various phases of work.

When required by the specifications, W/O will ensure its Trade Subcontractors comply with this plan as well as the San Francisco Noise Control Ordinance.

To expedite the project or minimize impacts, W/O will ensure that its Trade Subcontractors apply for written waivers of some of the noise requirements by application to the TJPA in accordance with Section 00 08 13 Specific Project Requirements when required by the specifications or contract. Written waivers shall be uploaded to Constructware by CM/GC. It is anticipated that some Work may require multiple shifts or for other reasons need to be performed outside of typical weekday daytime construction hours. Trade Subcontractors shall minimize construction activities during evening, nighttime, weekend, and holiday periods and shall obtain specific permits before performing construction in noise sensitive areas during these periods.

Night noise permits requests shall be submitted to the TJPA at least 7 days in advance of work. Noise permit request shall include:

1. Name of person in charge of work and phone number
2. Hours to be worked
3. Narrative of scope of work including necessity of doing work at night, maps, and truck routes
4. List of noise/vibration/light making equipment including make and model
5. Mitigation and monitoring methods being used

W/O will ensure that its Trade Subcontractors provide noise inspections and testing of equipment to ensure that all equipment onsite is in good condition and effectively muffled per manufacturer's recommendation. If inspection or testing documents are requested by the TJPA, or any of its representatives, W/O will require its Trade Subcontractors to provide requested documentation in a timely manner. Trade Subcontractors shall provide inspection and testing documents to CM/GC prior to start of work and as the equipment is replaced. CM/GC shall upload documents to a file location within Constructware.

W/O will ensure that its Trade Subcontractors minimize use of vehicle backup alarms and demonstrate how backup alarms will be minimized by using mitigation measures such as designing the construction site with a circular flow pattern that minimizes backing up of trucks and other heavy equipment. Trade Subcontractors shall submit quarterly reports of measures to reduce back up alarms. W/O shall upload these reports to a specific location within Constructware.

W/O will ensure that all its Trade Subcontractors' equipment onsite is equipped with broadband back-up alarms that will automatically adjust based on the ambient noise during nighttime hours (between 8 p.m. and 7 a.m.) when ambient noise is low. If safety considerations and applicable regulations will not allow use of broadband back-up alarms, Contractor shall request an exemption in writing to the TJPA

Representative including the applicable safety regulations (Cal/OSHA, OSHA). Trade Subcontractors shall comply with the TJPA's request for broadband back-up alarms for all work between 8 p.m. and 7 a.m. If requested by the TJPA or its representative, Trade Subcontractors shall provide W/O with equipment specifications showing broadband back-up alarms for submission via Constructware.

Through W/O's requirement of the submittals outlined in this noise and vibration plan, W/O will verify Trade Subcontractors' construction operations are performed in such a manner to minimize noise.

W/O will verify that its Trade Subcontractors perform noise monitoring to demonstrate compliance with noise limits and endeavor to minimize construction activities during off hours except for those required and deemed acceptable per the Contract Documents. Trade Subcontractors shall submit monthly monitoring reports to W/O for submission via Constructware.

W/O will verify Trade Subcontractors haul routes to ensure that they minimize noise intrusion into residential areas, and control noise during nighttime hours.

W/O will require all Trade Subcontractors to use procedures and equipment, when it would be effective, that produce lower noise levels than normal when required by the specifications or contract. W/O will require the Trade Subcontractor to submit manufacturer special noise control kit information. If none is available, then the Trade Subcontractor needs to submit a statement of this. Upon receipt and review of the information, W/O and the Trade Subcontractor will identify the events when the noise control measures should be used based on the specifications.

W/O will require all Trade Subcontractors plans to include use of temporary barriers near noisy activities as required by the specifications or contract. Such barriers shall be located close enough to the noise source to achieve noise attenuation. As necessary and when it is shown it would be effective, Trade Subcontractors shall construct shed-like structures or complete buildings to contain the noise from nighttime activities.

W/O shall require haul route map, plan and storage location to be part of Trade Subcontractor's plan and included within its submittal.

VIBRATION CONTROL

Vibration limits are based upon the Federal Transit Administration's Planning and Environment Transit Noise and Vibration Impact Assessment guidelines. W/O will require all Trade Subcontractors' to limit or prohibit use of construction techniques that create high vibration levels when it affects adjacent properties.

If construction techniques that create high vibration levels are used, W/O will require all Trade Subcontractors' to comply with the following additional restrictions:

1. Provide advance notice to TJPA of any vibration intensive activities. Perform vibration intensive activities only during daytime hours between 7 a.m. and 8 p.m. unless otherwise allowed by special permit or variance, as required by the specifications or contract. Perform vibration monitoring during vibration intensive activities during daytime hours between 7 a.m. and 8 p.m. unless otherwise allowed by special permit or variance, as required by the specifications or contract. Recorded data should be part of the Trade Subcontractor Daily report. A summary shall be submitted monthly and uploaded to Constructware.

2. Investigate alternative construction methods and practices to reduce the impacts if present and implement alternative methods and practices as reasonable.
3. Provide a plan to measure vibration levels including but not limited to measurement locations, times and metrics. Plan shall also include contingency plan if operations exceed the limits. This plan shall be uploaded into Constructware by W/O.
4. Limit or prohibit use of construction techniques that create high vibration levels.

Trade Subcontractors shall be responsible for providing technical information, as required by the specifications, in their plan. Trade Subcontractor's plan shall be submitted via Constructware for Record Only.

Transbay Transit Center – San Francisco, CA

Air Quality Plan

Webcor/Obayashi

January 16, 2012

GENERAL PLAN:

The Webcor/Obayashi (W/O) Air Quality Plan that will be implemented on the Transbay Transit Center Project will be an overall policy with each subcontractor contributing their specific plan as they come on board to the project. The primary function of this plan is to comply with the Bay Area Air Quality Management District regulations and requirements.

W/O will require its Trade Subcontractors to establish a plan that complies with all requirements set for in specification sections 00 08 13, and 01 35 65 prior to starting Work onsite. W/O shall check and verify trade subcontractor's compliance with air quality requirements on a daily basis. Any non-compliant trade subcontractors will receive both verbal and written notice through Safe Site One (W/O internal program). Additional, W/O will require trade subcontractors to demonstrate they are actively monitoring air quality by providing checklists or documentation on each Trade Subcontractors daily report. W/O shall verify its Trade Subcontractors Air Quality plan includes the following but not necessary limited to:

1. Specific measures to minimize impacts to sensitive receptors associated with exposure to respirable nuisance dust (PM10) and achieve a goal of No Visible Emissions.
2. W/O shall verify Trade Subcontractors comply with City Dust Control Order (DPW Order No. 171,378. Water active construction areas at least twice daily to control dust using non-potable water in accordance with San Francisco Ordinance 175-91
3. Identify specific measures to minimize dust generation; to reduce health risks to workers and the public.
4. Mist the immediate excavation area with a water spray to prevent airborne dust particles. Perform continuous water spraying during dust-generating activities. Mist or spray in such a way as to prevent puddling or generation of runoff, which could potentially reach storm drains or catch basins.
5. Minimize the amount of excavated material or demolished debris stored at the Site. Remove excavated material and demolished debris, with the exception of hazardous materials or suspected hazardous materials, from the Site no later than the end of each workday. If hazardous materials or suspected hazardous materials are stored on site, store such materials in accordance with all applicable California Environmental Protection Agency regulations, including providing storage in proper containers and protection from exposure to the elements. Remove such materials from the Site as soon as possible for disposal or recycling in accordance with applicable laws and regulations.
6. Wet all exposed soil surfaces at least 3 times daily during dry weather or more frequently if dust is blowing or if required by the TJPA. Immediately wet sweep serpentine residuals from the street.
7. Keep the Site and adjacent areas clean and perform wet sweeping at the end of each shift. Sweep daily (with water sweepers) all paved access roads, parking areas and staging areas at construction sites. Sweep streets daily (with water sweepers) if visible soil material is carried onto adjacent public streets.
8. Load haul trucks carrying excavated material so that the material does not extend above the walls or back of the truck bed. Wet before covering and tightly cover the surface of each load before the haul truck leaves the loading area. Cover trucks hauling soil, sand, and other loose materials or require trucks to maintain at least 2 feet of freeboard
9. Clean up spillage on City streets, whether directly or indirectly caused by Contractor's operations.

10. Minimize use of on-site diesel construction equipment, particularly unnecessary idling. Shut off construction equipment to reduce idling when not in direct use. Where feasible, replace diesel equipment with electrically powered machinery.
11. Retain receipts of ultra-low sulphur fuel (ULSF) purchase and equipment tuning and repair and make these available to the TJPA Representative or to the Federal Transit Administration (FTA) designee upon request.
12. Locate diesel engines, motors, or equipment as far away as possible from existing residential areas.
13. Properly tune and maintain diesel power equipment. To manufacturer's specification and frequency.
14. Suspend grading operations during first and second stage smog alerts, and during high winds (i.e., winds greater than 25 miles per hour).
15. Upon completion of the construction phase, buildings with visible signs of dirt and debris from the construction site shall be power-washed and/or painted (provided that permission is obtained from the property owner to access and wash the property with no fee charged by the owner). Trade Contractor shall request CMGC to contact Singer and Associates to notify property owners for access. If permission from property owners for access is not granted, Trade Contractor is not responsible for power-washing or painting.
16. Pave, apply water three times daily, or apply (non-toxic) soil stabilizers on all unpaved access roads, parking areas, and staging areas at construction sites.
17. If applicable, replant vegetation in disturbed areas as quickly as possible.

W/O will verify Trade Subcontractors comply with the requirements of the Bay Area Air Quality Management District (BAAQMD) Regulation 6 (for particulate matter and visible emissions), Regulation 7 "Odorous Substances," Regulation 11 "Hazardous Pollutants," and the California Health and Safety Code Division 26 "Air Resource", Chapter 3 "Emission Limitations," Section 41700 "Prohibited Conduct," and related regulations. Trade Subcontractors shall notify the BAAQMD 10 working days prior to commencing demolition or hazardous materials abatement work.

1. Such notification shall include the names and addresses of operations and persons responsible; description and location of the structure to be demolished or altered including size, age and prior use, and the approximate amount of friable asbestos; scheduled starting and completion dates of demolition or abatement; nature of planned work and methods to be employed; procedures to be employed to meet BAAQMD requirements; and the name and location of the disposal site.
2. The BAAQMD randomly inspects removal operations and will respond to any complaints received. Contractor shall cooperate with and facilitate all BAAQMD authorized inspections.\
3. Notifications shall be documented and provided to CM/GC for submission to the TJPA via ConstructWare.

Trade Subcontractors shall be responsible for providing technical information, as required by the specifications, in their plan. All trade subcontractors plans shall be submitted for Record Only via ConstructWare.

Transbay Transit Center – San Francisco, CA

Waste Management and Construction Debris Plan Revision 6

Webcor/Obayashi
November 7, 2013

GENERAL PLAN:

Webcor/Obayashi Joint Venture (Webcor/Obayashi) understands that the building contractor plays a critical role in the management of jobsite produced construction waste. Webcor/Obayashi has adopted a waste reduction and recycling policy that will be implemented on the Transbay Transportation Center Project. This policy will be an overall policy with each subcontractor contributing their specific plan as they come on board to the project.

The primary goal of the plan is to divert as much construction generated debris & unused material from landfills as possible. At a minimum, Webcor/Obayashi and its trade subcontractors will divert 75% of the waste generated on the construction project from landfills. Trade subcontractors Construction Waste Management Plan shall be prepared and submitted in compliance with the Owner's LEED project requirements and the requirements of the City and County of San Francisco.

The Trade Subcontractors are required to comply with Specification Sections 00 08 15, 01 74

00, and 01 81 13 as well as any or all of the procedures listed below. If a conflict in percentages exists between this section and Section 01 81 13, General LEED Building Design and Construction Requirements, the most stringent section shall govern.

- Use of approved debris haulers with documented recycling levels.
- Source separated debris boxes will be provided onsite for mixed debris and recyclable items such as lumber and wood related products, dirt, concrete and asphalt, cardboard & metals.
- Trade Subcontractors are required to handle and dispose of any generated hazardous waste.
- Requesting Trade Subcontractors and vendors to utilize reusable packaging when possible.
- Trade Subcontractor shall provide a Construction Waste Management Plan.

All Trade Subcontractors shall develop their own Waste Management and Construction Debris Plan that complies with the Contract Documents and this plan. Trade Subcontractors shall submit this plan in accordance with the specifications and it shall become part of Webcor/Obayashi's overall project plan. All technical requirements defined in the contract documents shall be fulfilled by Trade Subcontractors and submitted to the Construction Management Oversight (CMO) For Record Only through ConstructWare

Webcor/Obayashi will ensure the Trade Subcontractors are effectively implementing the procedures and are in compliance with Specifications.

Webcor/Obayashi will verify that after Award of Contract and before commencement of the Work at the site, the Trade Subcontractor conducts a Reuse/Recycle Assessment as part of their Solid Waste Management Plan (SWMP): Trade Subcontractor's assessment shall

estimate the types and quantities of materials for the Project that are anticipated to be feasible for source separation for recycling or reuse, either onsite or offsite, and note the procedures intended for a recycling, reuse, and salvage program. Documentation of the trade subcontractor's plan shall consist of the following:

- Trade subcontractor and vendor waste management strategies.
- Trade subcontractor required to provide a monthly summary of the total waste material with backup documentation (weight tickets) if processed offsite.
- The amount recycled (in tons), material types, recycling procedures, and processing facility locations to which materials were diverted if processed offsite.

Trade Subcontractor's Construction Waste Management Plan shall also include estimated wastes, disposal, and handling with the following:

A. List of materials that comprise source separated materials include, but are not limited to:

- Concrete, Wood, Mud, Mixed Aggregates, Yard waste, Metals, and Cardboard.
- Yard waste is not included in our overall diversion rate calculation on the template or corresponding spreadsheet per the requirements from the LEED BD&C v3.0 Reference Guide.

B. List of materials that comprise Miscellaneous Construction Debris include, but are not limited to:

- Wood, Scrap Metal, Drywall, Plastics, Film Plastics, Wire, Cable, Glass.
- The total quantity estimated, inception to completion Disposal.
- Total Project Generation, Diversion + Disposal.
- Project Diversion Rate.

Webcor/Obayashi will verify that Construction and Demolition Waste; Non-hazardous solid resources resulting from Trade Subcontractor's construction, remodeling, repair, and demolition operations for the Project are properly transferred to a C&D Recycling Facility. The C&D Recycling Facility shall be a facility that receives only C&D (construction and demolition) material. Trade Subcontractors shall provide Webcor/Obayashi a summary sheet, including all receipts for transport materials each month with the progress billing if any materials are processed offsite.

Webcor/Obayashi will verify that of the inevitable waste generated, Trade Subcontractor's reuse, salvage, or recycle as many of the waste materials as economically feasible.

Webcor/Obayashi will participate/attend a meeting with Trade Subcontractor, the TJPA Representative and representatives of the City's Solid Waste Management and recycling programs prior to commencement of work. Webcor/Obayashi will

ensure all Trade Subcontractors are made aware of the LEED requirements for C&D diversion before being allowed to work on the site.

Webcor/Obayashi will verify that Trade Subcontractors submit a Monthly Disposal and Recycling Summary Report; quantifying the construction and demolition waste generated and recycled, reused or disposed of at Class 3 Landfill. Contractor shall also send a copy of this report to the TJPA Representative and the SWMP to the City Government Recycling Coordinator. The Comprehensive Disposal and Recycling Summary Report shall be submitted quantifying the construction and demolition waste generated and recycled, reused or disposed of at Class 3 Landfill, on a monthly basis. This report is a condition of progress payment and failure to submit this information shall render the Applications for Payment incomplete. The Trade Subcontractors/trades are also responsible for contracting with a regional facility to haul any hazardous materials from the site. The Trade Subcontractor shall calculate the C&D diversion rate for both LEED requirements (excluding yard waste) and the requirements set by the City (including yard waste) for all materials processed offsite. The W/O LEED representative will screen every C&D Submittal and review Trade Subcontractor and lower-tier subcontractors C&D Plans for clarity, completeness, and compliance with City/LEED requirements.

Webcor/Obayashi will verify that Trade Subcontractors develop and implement procedures for source separation to the greatest extent feasible.

Webcor/Obayashi will verify the Trade Subcontractors plans develop and implement procedures for transporting commingled (mixed) construction and demolition waste that cannot be feasibly source-separated if the intent is to process it offsite instead of using debris boxes provided onsite.

Webcor/Obayashi will verify the Trade Subcontractors plans develop and implement procedures for Salvage and Reuse.

Webcor/Obayashi will verify the Trade Subcontractors plans develop and implement practices for this project that will reduce waste at the source.

Webcor/Obayashi will verify the Trade Subcontractors plans develop and implement procedures for materials that are recycled and/or reused onsite

Webcor/Obayashi will verify that Trade Subcontractors participate in reuse programs by reviewing each Trade Subcontractors Monthly Disposal report for any material processed offsite. For such reuse programs, Trade Subcontractor shall refer to the City's construction and demolition recycling program.

Webcor/Obayashi shall review the environmental goals of this Project with all Trade Subcontractors during the preconstruction meeting. Webcor/Obayashi shall make a proactive effort to increase awareness of these goals among the job site workers. Webcor/Obayashi will make a proactive effort to increase awareness of these goals among the site workers by requiring that each Subcontractor take Click Safety training prior to stepping on the jobsite. As part of this Click Safety training, there is a module dedicated to teaching and reviewing the

Exhibit P Construction Waste Management Plan

LEED requirements of the project during construction activity.

Webcor/Obayashi will verify that Trade Subcontractors are using registered transporters and registered facilities. Only registered transporters can remove mixed construction and demolition debris from the construction site, and they must take this material to a registered facility. NOTE: A Registered facility: is any facility that accepts mixed construction and demolition debris for processing and recycling must be registered with the City and County of San Francisco and must demonstrate an overall minimum recycling rate of 65% for mixed construction and demolition debris. A registered facility must have applied for and received a registration from the San Francisco Department of the Environment. Webcor/Obayashi will ensure that Waste Management Companies that service San Francisco and retained by the Trade Subcontractors are registered transporters and meet the City/LEED requirements. Trade Subcontractors shall refer to SFEnvironment.org for the City's most current list of registered transporters.

Webcor/Obayashi will verify that Trade Subcontractors are implementing the following:

1. Eliminate the procurement of unneeded supplies.
2. Reduce waste by printing and copying double-sided.
3. Submit all submittals, reports, and forms in electronic format (PDF) unless otherwise noted.
4. Fully participate in available and required recycling and composting programs.
5. Purchase products made with recycled content such as paper and recycled aggregate.

Webcor/Obayashi will verify that Trade Subcontractors shall submit:

1. Construction and Demolition Debris Management Plan.
2. Construction and Demolition Debris Recovery Monthly Summary Report and supporting documentation for any materials processed offsite.
3. Construction and Demolition Debris Recovery Final Report for all materials processed offsite.

Trade Subcontractor's plan shall comply with specification section 02 41 00. All Trade Subcontractors will remove and dispose of all waste materials from the site for off-site disposal in compliance with all applicable laws, ordinances, rules, and regulations. Webcor/Obayashi and all Trade Subcontractors will work with the TJPA representative so that the representative may characterize the waste materials as required by law to the extent required by Webcor/Obayashi's selected disposal facilities.

Trade Subcontractor's plan shall comply with specification section 01 15 00. Trade Subcontractor's shall perform work in a manner to minimize generation of dust, dirt, rubbish, and other debris, to prevent dust and debris from interfering with the progress of the work, and to keep dust and debris from accumulating at the work site or adjacent areas. Trade Subcontractor's shall remove debris and rubbish from the site on a daily basis.

Trade Subcontractor's plan shall comply with specification section 01 13 50, by preventing the mixing of hazardous and non-hazardous materials.

Trade Subcontractor's shall be required to provide technical information, as required by the specifications including compliance with the City and County of San Francisco Ordinance 27-Exhibit P

Construction Waste Management Plan

06, in their plan which will be submitted For Record Only to the CMO.

Mr. Rick Buellesbach
Senior Project Manager - Transbay Transit Center
Webcor/Obayashi Joint Venture
175 Beale Street
San Francisco, CA 94105

Re: Transbay Transit Center Quality Control Surveys
Subject: December 2011 Control Verification Survey Results

Dear Mr. Buellesbach:

The field work for subject surveys was conducted by Chaudhary & Associates December 5 - 8, 2011. The surveys included verification of Chaudhary & Associates control (as shown on the Survey Control Plan dated 11-10-2011), with the exception of control point 217 which was destroyed sometime between the November 2011 and December 2011 control verification surveys.

Horizontal control values for point numbers 54, 208, 209, 213, 101, 105, 215, and 227 were constrained in this control network horizontal adjustment. The elevation values remain unchanged from the November 2011 surveys. The table below shows both the 11-10-2011 and the 12-21-2011 values for the remaining control points. Because data values can be impacted by environmental factors (temperature and humidity), seismic activity, and the various combinations of back sight and foresight data available on any given day, only the values which differ by 0.01' or more are adjusted and shown on the following table (and updated on the 12/2011 control map to be sent to you tomorrow). Field note copies and Star Net Reports have been mailed to you.

SURVEY PROCEDURES

- 1) CHAUDHARY AND ASSOCIATES FIELD CREW LOCATED AND TIED OUT CONTROL BETWEEN APRIL 22-MAY 13, 2011. DIGITAL LEVELS WERE UTILIZED FOR THE VERTICAL COMPONENT, AND A TRIANGLE SB WAS USED FOR THE HORIZONTAL COMPONENT. CONTROL WAS ADJUSTED UTILIZING STAB-NET SOFTWARE.
- 2) THE 4 MAIN CONTROL POINTS SHOWN ON SHEET C-0100 OF PLANS (BEING PINS 54, 101, 105, AND 106) WERE USED TO ESTABLISH THE GRID. THE GRID WAS ADJUSTED TO BE THE MOST ACCURATE REPRESENTATION OF THE FIELD IN THE STAB NET ADJUSTMENT. A TOPCON DL-102 DIGITAL LEVEL WAS UTILIZED FOR THE VERTICAL COMPONENT.
- NOTE: CONTROL POINTS 220-226 WERE FIELD SURVEYED BETWEEN SEPTEMBER 9-14, 2011.
- 3) CENTERLINES AS SHOWN ON PLAN SHEET C-0100 TO BE FIELD VERIFIED.

GRID LINES TO BE SET BY PLACING A CUT X OR OTHER APPROPRIATE SURVEY MARKER ON THE EXTENSION OF SAID GRID LINES WHERE PRACTICAL, OR PER WEBCOR AUTHORIZATION.

Note: Coordinates are ground coordinates (see note 6)

SURVEYOR'S STATEMENT

I HEREBY STATE THAT THIS MAP CORRECTLY REPRESENTS A FIELD SURVEY MADE BY ME OR UNDER MY CLOSE PERSONAL SUPERVISION. THE CONTROL VALUES LISTED HEREIN WERE OBTAINED BY ME OR UNDER MY CLOSE PERSONAL SUPERVISION. I AM A LICENSED SURVEYOR IN THE STATE OF CALIFORNIA. MY LICENSE NUMBER IS 7759. MY EXPIRATION DATE IS 12-31-2011.

NOTES

- SEE ARCHITECTURAL PLANS FOR GRID LAYOUT AND DIMENSIONS.
- NAD 83 REFERS TO THE CALIFORNIA STATE PLANE COORDINATE SYSTEM. HORIZONTAL CONTROL FOR THIS SURVEY IS BASED UPON NAD83, CA ZONE 3, BPOCH 1991.36, GRID 03.
- UNITS ARE FEET AND REPRESENT GROUND (NOT GRID) DISTANCES.
- THE VERTICAL DATUM IS BASED UPON NAD 83.
- CONTROL VALUES BASED UPON FIELD TIES SURVEYED BETWEEN APRIL 22 AND MAY 13, 2011 BY C&A FIELD CREW.
- COORDINATES AS SHOWN REPRESENT GROUND COORDINATES AND WERE CONVERTED BY APPLYING A SCALE FACTOR OF GRID/999984.11. THE ORIGIN OF THE SCALING FOR THE ENTIRE PROJECT IS CONTROL POINT NO. 39 SEARCHED FOR AND NOT FOUND ON APRIL 23, 2011.
- BASIS OF ELEVATION IS DPM SURVEY CONTROL PT. NO. 54, BEING A C&A MAG NAIL AND WASHER IN THE CURB AT THE EASTERLY CORNER OF 2ND AND HOWARD STREETS. ELEV=25.36 NAD 83 VERTICAL DATUM. EAST 601093.602 (REFER TO NOTE 6 ON SHEET C-0100).
- CENTERLINE DATA DERIVED FROM PLAN SHEET C-0100.

Traffic Control Plan

Webcor/Obayashi

WO-TCP0001

REVISION 2

8/22/2012

GENERAL

The Webcor/Obayashi Joint Venture (W/O) Traffic Control Plan that will be implemented on the Transbay Transportation Center Project is an overall project policy, with each trade subcontractor contributing their specific plan as they come on board to the project. The primary function of this plan is to provide a framework to insure compliance with Specification Section 01 15 70. To assist in this effort, W/O has enlisted the services of a traffic control consultant (TCC) – Sandis Engineering. Award of this contract between Sandis Engineering and W/O was based on a competitive request for proposal (RFP) process referred to as TG05.4.

TCC is responsible for participating in all aspects of traffic control planning and implementation including, but not limited to:

- Traffic control design oversight;
- Coordination between trade subcontractor traffic control designs;
- Interface with City of San Francisco and other agencies as necessary;
- Participate in coordination efforts of the TJPA Representative;
- Oversight of implementation of approved traffic plans;
- Provide daily reports regarding status of traffic control measures;
- On call traffic control services as requested.

TRAFFIC PLAN REVIEW AND COORDINATION

TCC shall prepare a detailed “as built” traffic plan for approximately four blocks in all directions from the jobsite. This map will be based on SFMTA maps and will be augmented as appropriate per field review of existing conditions. This map will include all striping, signage, curb lines, curb cuts, curb painting, buildings and any other feature of the street layout and traffic control. Beyond the four block distance, the map will include street layout and striping configuration.

Once a trade subcontractor is under contract, W/O shall provide the trade subcontractor with the as-built plan in CADD format. The trade subcontractor will then be required to use this base map for preparation of all their traffic control plans. A summary of the below criteria can be found in the attached Traffic Control Plan Preparation Packet.

The trade subcontractor is required to prepare and submit a complete traffic plan consistent with requirements of the project specification and all requirements per the City of San Francisco. The submittal must be made in a timely fashion to allow for the review timeframe prescribed in the specifications plus an additional four weeks for review by the TCC.

Upon receipt of the submittal from trade subcontractor, W/O will forward it to the TCC for review. The plan will be reviewed for adherence to specifications and for compatibility with previously submitted plans. Comments will be returned to the trade subcontractor who will make modifications as is appropriate.

When the trade subcontractor’s traffic control plan is reviewed and coordinated with the TCC, it will be submitted to the TJPA Representative for approval. Submittal will be in compliance with Specification Section 01 15 70, paragraph 1.4B.

Upon approval by the TJPA Representative and SFMTA, the TCC will update the baseline traffic

control plan as appropriate. The baseline plan will be updated only when a change to the traffic pattern will be in place for three or more months. If the traffic control plan will be in place for less than three months, the plan will be superimposed over the base map for coordination but the baseline drawing will not be modified.

FIELD IMPLEMENTATION

It is intended that the TCC will maintain a regular, but not full time, presence on site. Similar to the traffic control design review, their scope of work is to review the trade subcontractor's adherence to city standards, project specifications and approved traffic control plans.

TCC review and assistance in field coordination includes but is not necessarily limited to:

- Perform site review of traffic control;
- Note traffic control deficiencies;
- Coordinate correction of site deficiencies with W/O and trade subcontractor;
- Provide daily report of traffic control observations and corrective measures;
- Attend site meetings as necessary to review short term Special Traffic Permit and coordinate between subcontractors and SFMTA;
- Miscellaneous coordination with SFMTA as necessary;
- Review of pedestrian protection as it relates to vehicle traffic;
- Provide traffic control devices and personnel as required to augment traffic control efforts;
- Confirm proper training of subcontractor flagging personnel;
- Provide continuous oversight of traffic control for major construction operations as determined by CM/GC.

TASKS NOT CURRENTLY ANTICIPATED BY TCC

Training of flaggers for the trade subcontractors although it is an option should it become apparent that subcontractor employees need additional training.

Coordination of the 10b police officers between subcontractors will be the responsibility of the CMO.

Pedestrian control unless it is specifically impacted by vehicle traffic.

TRANSBAY TRANSIT CENTER – TRAFFIC CONTROL PLAN PREPARATION PACKET

Overview

The purpose of this packet is to provide the contractor with the information necessary to prepare a Traffic Control Plan (TCP) for their work in accordance with the requirements of the Project Specifications and the City and County of San Francisco (CCSF). It includes procedures, timing, a base map, plan sheet template and examples for use when preparing and submitting Traffic Control Plans (TCPs) for review and approval. The documents included in the TCP Packet are described below.

Flow Diagram

The flow diagram included within the TCP packet identifies the specific components and required time intervals for TCP submittal, review and approval. Please note time requirements for Plan review and approval. No work will be allowed without an approved plan. It is the contractor's responsibility to anticipate and allow for required lead times.

Base Map File

The AutoCAD drawing of the Base Map file included in this packet represents the City of San Francisco street layout as of the date indicated on the Base Map file title block. ALL proposed TCPs shall be created using this Base Map file as a starting point. It is crucial that proposed TCPs be provided on the same coordinate system as the Base Map file so multiple approved TCPs can be overlain in a composite exhibit. TCPs prepared using a different base or plan template will be rejected.

TCP Standards

Design Standards

The Traffic Control Plans shall be prepared and submitted in accordance with the following documents:

1. Transbay Transit Center Project Specification Section 011570 – Traffic Routing Work, dated September 23, 2010. A copy of this specification is included in the TCP Packet.
2. City and County of San Francisco Regulations for Working in San Francisco Streets (Bluebook), 7th Edition dated October 2006. Refer to the following link for a copy of this document: <http://www.sfmta.com/bluebook>

CAD Standards

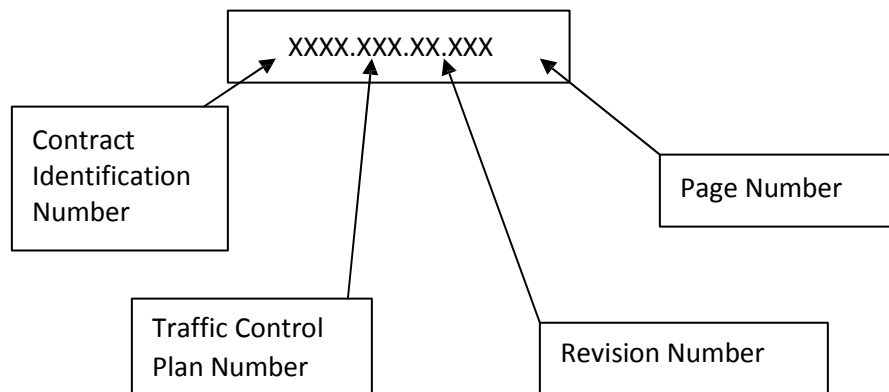

The sheet TCP-001 provides a template with title block, symbols, and specific details pertaining to the presentation and setup of drawings to be used when preparing a TCP. The CAD standards identified under the Vendor Submittal Instructions, including layering configuration, title block, and symbols, shall be referenced and followed when creating all TCP AutoCAD drawings. The contractor shall include additional signs in the form of blocks, notes, and details as needed.

TCP Samples

There are three sample Traffic Control Plans included in this packet. These samples provide an example of how the TCPs shall be set up and configured.

TCP Submittals

All proposed Traffic Control Plans shall be submitted at 1"=80' scale on 22"x34" sheet size in both pdf and AutoCAD 2007 formats. They are to be submitted electronically to Webcor-Obayashi's trade package project manager. An important item to be included on all TCP sheets is the submittal tracking number. The tracking number consists of four segments separated by a period. The first segment is the 4-digit contract identification number, the second segment the 3-digit TCP number (provided by Webcor), the third segment is the 2-digit revision number, and the fourth the 3-digit page number. Refer to the Submittal Tracking Number Diagram below for additional direction.

SHEET

VENDOR SUBMITTAL INSTRUCTIONS

TRAFFIC CONTROL PLANS SHALL BE SUBMITTED AS FOLLOWS:

- 1) FIVE (5) HARD COPIES
- 2) ELECTRONIC COPY IN PDF AND AUTOCAD 2007 FORMATS
- 3) 11"x17" SHEET SIZE
- 4) 1"=80' SCALE
- 5) SHEET NUMBERING "TCP-###"
- 6) ELECTRONIC FORMAT PER TEMPLATE PROVIDED: SINGLE CAD FILE CONTAINING MULTIPLE LAYOUT TABS WITH A SINGLE TCP PER TAB. THE TCP SHALL BE DRAFTED IN MODEL SPACE ON TOP OF THE STREET BASE FILE WITH NOTES/LEGEND IN PAPER SPACE. MODEL SPACE SHALL BE DRAFTED AS FOLLOWS:

a) EACH TCP PAGE SHALL CONSIST OF FIVE LAYERS WITH A PREFIX FOR THAT PAGE NUMBER. FOR EXAMPLE, PAGE 001 WOULD CONTAIN THE FOLLOWING LAYERS:

001-TCP-DIM

001-TCP-NOTES

001-TCP-SIGN

001-TCP-SIGNTEXT

001-TCP-STRIPELINE

001-TCP-WORKAREA

b) ALL SYMBOLS, BLOCKS AND DIMENSIONS SHALL MATCH THOSE ON THIS SHEET IN SIZE, COLOR, AND LAYER. CREATE NEW BLOCKS USING SIMILAR COLOR AND SIZE FOR SIGNS/DEVICES NOT SHOWN HERE.
- c) INSERT STANDARD TITLE BLOCK PER SHEET. USE ATTRIBUTE EDITOR TO FILL IN TITLE BLOCK WITH APPLICABLE INFORMATION.
- d) TABLES, NOTES, AND LEGENDS SHALL BE IN PAPER SPACE PER SHEET ON LAYER XXX-TCP-GENERAL, WHERE XXX IS THE PAGE NUMBER
- e) STANDARD TEXT STYLES, SIZES, DIM STYLES PER TEMPLATE
- f) STANDARD LAYER COLORS AND NAMES; AND CTB/PEN SETTINGS PER TEMPLATE
- g) FREEZE LAYERS IN VIEWPORTS AS NECESSARY TO ONLY SHOW THOSE NEEDED FOR THAT INDIVIDUAL SHEET.

7) REFER TO PROVIDED SAMPLE TCP PLAN FOR AN EXAMPLE OF THE FORMAT BEING IMPLEMENTED.

NOTE:

SHEET

Exhibit U Submittal Schedule

Trade Subcontractor's Schedule submission shall include a full submittal schedule per Specification Section 01 13 00 1.4 – Submittal Schedule.

1. All submittals are to be submitted to Webcor/Obayashi Joint Venture within 60 days of Award.
2. The Submittal Schedule shall contain additional data fields to indicate: 1) the duration in work days for procurement of the item starting from the date that the submittal is approved until the item is available for construction, and 2) the Activity ID of the earliest construction activity for which the item will be required (the submittal/procurement item's successor).
3. The Trade Subcontractor should use the attached data format, Submittal Schedule Excel Template, for the submission of Submittal Schedule as Microsoft Excel File. Contact Webcor/Obayashi Joint Venture to obtain the blank excel file of the Submittal Schedule.
4. The Trade Subcontractor shall show critical submittals in the Exhibit I Construction Schedule in addition to providing the comprehensive submittal schedule required herein. Critical submittals are those submittals considered vital to the timely progression of the project schedule. These items may include, but are not limited to, engineering submissions; long lead items; items required within the first 25% of Subcontractor's performance period; and items that are required for construction or installation of a task with less than 20 working days of total float in the overall project schedule. The last group of items may not be determined until after acceptance of the Trade Subcontractor Construction Schedule submission and its full incorporation into the project schedule. Therefore, the Subcontractor may be required to add items to its Primavera schedule file subsequent to approval of its Construction Schedule submission.

QUALITY COMMISSIONING PROCEDURES AND GUIDELINES

Exterior Skin and Waterproofing Systems

EXHIBIT "W"

The information, processes, techniques, material and other matters contained in the Quality Commissioning Procedures and Guidelines are proprietary, confidential, and unique to WEBCOR/OBAYASHI.

The Quality Commissioning Procedures and Guidelines shall only be used for WEBCOR/OBAYASHI only.

Any other use without the expressed written consent from an Officer of WEBCOR/OBAYASHI is prohibited. Any unauthorized use could give rise to liability under the California Civil Code Sections 3426 et seq. involving Uniform Secrets Act, the California Business and Professions Code Sections 17200 et seq. involving Unfair Competition and 17500 et seq. involving Unfair Practices, the common law of unfair competition and interference with contractual relations and prospective advantage.

QUALITY COMMISSIONING PROCEDURES AND GUIDELINES

Exterior Skin and Waterproofing Systems

- ✓ Roofs
- ✓ Decks
- ✓ Windows
- ✓ Curtain Walls
- ✓ Exterior Wall Systems (Precast, Stucco, EIFS, GFRC)
- ✓ Water Shedding Systems
- ✓ Flashings
- ✓ Expansion Joints
- ✓ Caulking, Sealants
- ✓ Primary and Secondary Water Barrier Systems
- ✓ Above & Below Grade Waterproofing
- ✓ General Waterproofing Systems

1.0 Purpose

The purpose of this procedure and guideline is to set forth a commissioning process, which will ensure that the building's exterior envelop and waterproofing systems perform and function in conformity with design intent and to provide a means of verifying the implementation of these systems based on the project specifications, design and applicable industry standards.

2.0 Definition of Commissioning

The term "Commission" refers to a Quality Assurance process by which the building's exterior envelop and waterproofing systems (i.e., below and above-grade waterproofing, decks, roofs, caulking, plaster, precast concrete and GFRC, curtain-wall, flashing, expansion joints, etc.) are provided, installed and tested in order to verify the systems perform in accordance with the contract documents and the design intent.

Commissioning entails the development of a clear and complete process that verifies the systems design and operational intent. It also is to verify that the exterior envelop and waterproofing systems and its components are installed according to the contract documents, manufacturer's recommendations and published industry standards and that the system receives adequate installation and performance inspections by the installing contractor.

The process must include verifying and documenting the installation steps, phases, and system performance with respect to the design intent and the contract documents. Commissioning is a team effort that requires cooperation by all parties to succeed.

3.0 Description of the Commissioning Process

Commissioning is a “**systematic**” process for achieving, validating and documenting the performance of building systems as so that it meets the design intent and requirements.

The process extends through all phases from design to occupancy, and extending through the warranty period. Numerous checks and inspections shall be performed at each stage of the process to ensure that established procedures are followed. The process also includes training of facility operational personnel to ensure continued efficient use of the exterior envelop and waterproofing systems as originally designed and installed.

This guideline provides a uniform, integrated and consistent approach for the commissioning of all waterproofing systems as well as assisting in insuring product and design compatibility. Since many building waterproofing systems are integrated, a deficiency in one system or component may result in sub-optimal performance and failure among others.

4.0 Commissioning Plan

Commissioning is a **“Quality Process”** for validating the system and component design performance.

The reports from the commissioning process are not just test reports, but reports that document design, installation, inspections, and particular tests and or evaluation procedures. The commissioning plan is continually updated to reflect changes in program and design of the waterproofing system(s). Commissioning reports shall document and record the results of the commissioning process.

Each Trade Subcontractor’s specific commissioning plan must be neatly organized in a consistent manner that reflects the nature of the building systems and their performance. The commissioning plan shall include schedules, requirements and procedures.

Trade Subcontractor(s) shall be responsible for the timely and efficient completion of all commissioning in accordance with the Subcontract Agreement.

At no time shall any work be permitted to commence without a WEBCOR/OBAYASHI’ approved Trade Subcontractor Waterproofing Commissioning Program.

Failure to do so may require Trade Subcontractor to assume all related costs and expenses in accordance with the Subcontract Agreement.

In addition, Trade Subcontractor may also be required to assume all related cost should WEBCOR/OBAYASHI find it necessary to develop, manage and or perform any Trade Subcontractor commissioning work.

5.0 Objectives

The fundamental objectives of the commissioning process are:

- 5.1 Create a procedure to verify and provide documentation that the waterproofing performance of the facility meet the design requirements.

- 5.2 Enhance communication by documenting data and decisions throughout all phases of the project.
- 5.3 Validate and report that the performance of waterproofing systems meets design intent.
- 5.4 Provide a means of Quality Control and Quality Assurance (QA/QC) throughout all phases of the waterproofing system(s) installation, inspection, and testing process.

6.0 Contractors Normally Participating in the Commissioning Process

- ✓ Waterproofing Consultant
- ✓ Architect
- ✓ Structural Engineer
- ✓ Mechanical
- ✓ Plumbing
- ✓ Electrical
- ✓ Fire Sprinkler
- ✓ Glass Systems
- ✓ Caulking
- ✓ Brick, Tile, Precast, GFRC, and Stone
- ✓ Fountains and Ponds
- ✓ Swimming Pools & Spas
- ✓ Roofing
- ✓ Insulation
- ✓ Flashing & Sheetmetal
- ✓ Waterproofing Contractors
- ✓ Concrete (If waterproofing admixtures are included by design)
- ✓ Stucco, EIFS, DEFS systems
- ✓ Elastomeric Painting
- ✓ Rough Carpentry (Wood cladding)
- ✓ Architectural Metal Cladding
- ✓ Expansion Joint Systems
- ✓ Water Tanks
- ✓ Special Systems or Components

7.0 Commissioning Team

The commissioning team members may consist of the following:

- ✓ WEBCOR/OBAYASHI - Project Team as required

- ✓ Owner - Designated representative of the owner, building operator/engineer, and/or the owner's construction management firm
- ✓ Engineers - Architect and Designers
- ✓ Waterproofing Contractor
- ✓ Waterproofing Consultant
- ✓ Flashing / Sheet Metal Contractor
- ✓ Exterior Skin Contractor
- ✓ Roof Contractor
- ✓ Glass and Curtain Contractor
- ✓ Caulking and Sealants Contractor
- ✓ Commissioning Agent (CA)
- ✓ Mechanical Contractor
- ✓ Plumbing Contractor
- ✓ Fire Sprinkler Contractor
- ✓ Electrical Contractor
- ✓ Testing Contractor
- ✓ Other as necessary

8.0 Meetings

Regularly scheduled commissioning meetings of **the entire team** shall be conducted for site coordination, communicating issues of concern, resolving conflicts, reporting on system process and status, identifying urgent work and all deficiencies.

Commissioning meetings are critical to the **Quality** of the commissioning process as well as timely completion of the project.

9.0 Trade Subcontractor Performance Requirements

- 9.1 Designation of the primary person who will be responsible, accountable, and act as the main contact person for all commissioning communications. Provide organizational chart indicating personnel who will be involved in the project. The chart should indicate factory, office, and on-site field personnel.
- 9.2 Review of drawings and specifications for completeness, appropriateness of details, and acceptance by Trade Subcontractor thereof.
- 9.3 Review WEBCOR/OBAYASHI standard details.
- 9.4 Preparing and submitting documentation of Trade Subcontractor's respective materials and systems to be integrated into the overall Commissioning Plan.
- 9.5 Submitting information on the intended commissioning protocol used on materials, and the integration into the system as a whole.
- 9.6 Provide a presentation of the commissioning process to WEBCOR/OBAYASHI, the Owner and or the owner's representatives. Demonstration shall indicate compliance with the Trade Subcontractor Commissioning requirements as outlined in this document.
- 9.7 Submitting shop drawings detailing waterproofing system layout as outlined in the contract documents. Shop drawings shall reflect all conditions present in the building, including but not limited to the following:
 - a. Conditions where different materials meet (i.e. windows to plaster or stone to plaster).
 - b. Corner conditions.
 - c. Conditions where vertical planes meet horizontal planes (i.e. soffits and sills).
 - d. Expansion joints and control joints.
 - e. Flashing.
 - f. Penetrations (i.e. Z-ducts, electrical outlets, louvers).
 - g. Conditions typically utilized by Trade Subcontractor's common practices.

Shop drawings shall include installation drawings indicating the planned sequence of installation of all components.
- 9.8 Providing means and method for preliminary testing of the exterior envelop and waterproofing systems with manufacturer's representative present as required:
 - a. Caulking: Include complete coordination with the caulking manufacturer's representative to assure compatibility of the caulking system with the

surrounding substrate and finishes. Trade Subcontractor shall submit caulking samples including manufacturer's specifications for materials, color, cleaning procedure, required primers, proper backer rod, installation procedures, testing requirements and results. Testing of caulking samples between all combinations of materials shall be performed by qualified testing agencies in direct accordance with A.S.T.M. Standard Test Method C794 (75), including seven (7) day immersion. A letter from the Caulking Manufacturer shall be submitted approving all testing procedures, the installation procedure and the use of the specified materials for the intended application. Any materials installed without such approval that may be in conflict with the approved procedures or of unacceptable color and appearance will be removed and replaced at the Trade Subcontractor's expense.

- b. Windows and Sliding Glass Doors: Assemblies shall be field tested in accordance with American Architectural Manufacturers Association (AAMA) 502-02 Voluntary Specification for Field Testing of Windows and Sliding Glass Doors using Test Methods A and B, testing a minimum of 1% of the products for air leakage resistance and water penetration resistance as specified for various stages of the product installation.
- 9.9 Reviewing all required testing under the witnessing of WEBCOR/OBAYASHI, Building Owner, and or the Owners representatives.
 - 9.10 Correcting all system deficiencies at Trade Subcontractor expense.
 - 9.11 Obtaining all required permits, code required inspections and final certifications.
 - 9.12 Preparing complete as-built record drawings made from an original set that has been marked up throughout the duration of the project. Drawings must indicate all work as it was actually installed showing change order revisions, field changes required to meet the working conditions, and any other items that will affect or reflected in the operation and maintenance of the facility.
 - 9.13 Obtaining all manufacturer's warranties and guarantees.
 - 9.14 Organizing the O&M manuals, if any, from suppliers and manufacturers.
 - 9.15 Performing any specified training for the facility's operational staff.

10.0 Information Management

The management and continued organization of the commissioning information shall be the sole responsibility of the Trade Subcontractor.

WEBCOR/OBAYASHI and the Trade Subcontractor shall mutually agree on the location where all the commissioning information and documentation shall be stored.

The Trade Subcontractor shall make every effort to continually update and manage the information throughout the commissioning process. WEBCOR/OBAYASHI and the Building Owner may review the commissioning information provided by the Trade Subcontractor at any time for updates, accuracy and completeness.

WEBCOR/OBAYASHI may elect to withhold or make appropriate adjustments to the Trade Subcontractor's monthly progress billing in the event the commissioning information or performance requirements as described in the Waterproofing Quality Commissioning Procedures & Guidelines are not being performed, managed and updated by the Trade Subcontractor.

11.0 Trade Subcontractor Commissioning Submittal Requirement

Each Trade Subcontractor has a responsibility to WEBCOR/OBAYASHI and the Building Owner to comply with the terms of the contract and to verify that the design intent of the waterproofing systems for the project is achieved.

Each Trade Subcontractor is required to provide two completed commissioning manuals containing the information outlined in Section 19 - Commissioning Binder Tab Index of this guideline. Each proposed formatted "3-ring" binder containing all information, including blank forms shall be provided to WEBCOR/OBAYASHI and the Owner for "**review and comment**" before the commissioning process begins, or by an agreed upon date.

WEBCOR/OBAYASHI, the Owner and the owner representative shall review the information and return it to the Trade Subcontractor within **two-week** time with all comments.

Each Trade Subcontractor shall make all required changes as agreed, to the commissioning manuals and resubmit them to WEBCOR/OBAYASHI within **two-weeks**.

Each Trade Subcontractor shall schedule and provide a formal demonstration of their commissioning process to WEBCOR/OBAYASHI, the Owner and the Owners representative after all required changes to the manuals have been satisfactory completed. Demonstration shall indicate compliance with the Trade Subcontractor Waterproofing Commissioning requirements as outlined in this document.

Each Commissioning Manual **shall be neatly organized** using appropriate tabs, dividers, table of content, index, etc. as required for easy referencing. Refer to Section 19 Commissioning Binder Tab Index for a standard binder organization. All Commissioning Manual(s) **must be user friendly**.

12.0 Commissioning Binder Tab Index

- Tab 1. Project design criteria specifications** – Provide information that describes the overall design criteria and performance requirements for the waterproofing system(s).
- Tab 2. Manufacture products and components** – Provide complete submittal list of all components that shall be contractually provided and installed.
- Tab 3. Manufacture installation instructions** – Provide manufacture documentation insuring that the system and components installation complies with all Manufacture requirements to maintain performance and guarantee obligations.
- Tab 4. Manufacture details** – Provide manufacture details or published industry standards for penetrations and terminations interfacing with other installed systems.
- Tab 5. Design transition review** – Provide design review comments and concerns on transition interfaces to other s or other compatibility issues.
- Tab 6. Quality Assurance / Quality Control Program** – Provide QAQC program with complete field inspections and checklists.
- Tab 7. Documentation** – Trade Subcontractor shall maintain a separate field binder documenting the QAQC inspections and field-testing for all installed work.
- Tab 8. Field mock-up and testing** – Provide information on mock-up or field performance tests that shall be preformed for all installed system(s). Provide manufacture recommendations or published testing standards used. If no performance testing is preformed, Trade Subcontractor shall provide documentation on how each system is performing in accordance to the documented design intent and contract warranty requirements.
- Tab 9. Schedule** – Provide schedule for, shop drawing devolvement, submittals fabrication, delivery and installation.
- Tab 10. Agency and factory test reports** – Provide all factory, agency, and field performance-testing reports on installed systems.
- Tab 11. Factory and Trade Subcontractor guarantee information** – Provide warranty responsibilities and durations for all systems and components installed.
- Tab 12. Owner Training** – Provide (O&M) and training for all required service and maintenance requirements as it extends throughout each system to maintain warranty. Include owner sign-off sheets verifying training.

- Tab 13. Attic Stock** – Provide list of spare material that shall be supplied by Trade Subcontractor to owner – Paint, applied materials, gaskets, handles, glazing, or patching products.
- Tab 14. As-Built Drawings** – Provide completed set of drawing and details accurately reflecting all installed and completed work.
- Tab 15. Material Safety Data Sheets** – Provide all Material and Data Safety Sheets (MSDS).

13.0 Identifying the Defects

It is the intent of the commissioning process to avoid defects in waterproofing systems. A standard of care exhibited during the commissioning process should anticipate potential defects and determine appropriate solutions prior to the installation of these systems. In the event that defects do occur, proper defect identification will help determine the repair needed and assist in selecting the appropriate method and materials.

It is important to acknowledge which factors have caused deficiencies in the waterproofing system and its components, and how a deficiency in one system may influence or amplify another. Careful and thorough defect identification is critical to obtain long-lasting, quality repairs. It is critical and necessary to eliminate the cause of the defect and not solely treat the symptom.

Each Trade Subcontractor shall be responsible for determining the cause and origin of various problems as it pertains to their contractual scope of work. Failure to do so may require Trade Subcontractor to assume all related costs and expenses for damages, repairs performed by others, testing, special inspections, and consultant fees.

14.0 Applicable Industry Standards

Unless the Contract Documents include more stringent requirements, applicable published construction industry standards shall be utilized. Where compliance with two or more standards is specified for quality or quantity levels, comply with the most stringent requirement.

Where sections of the specifications require that a product, material, installation, or test complies with a specified industry standard, the Trade Subcontractor shall obtain copies directly from the publication(s) source and include the information in the submitted commissioning information.

Each Trade Subcontractor engaged in construction on the project must be familiar with published industry standards applicable to their construction activity.

15.0 Schedules

An initial schedule shall be developed by the Trade Subcontractor identifying dates, times, and durations for shop drawings, approval of submittals, material fabrication, product delivery, acceptance, installation, testing and completion.

The schedule shall also include any commissioning task that shall be performed on waterproofing systems that may involve or affect other related building systems.

Each Trade Subcontractor shall update schedules, daily, weekly, monthly, or as required to keep WEBCOR/OBAYASHI and the Owner informed of the activities performed. This schedule will indicate appropriate milestones during the installation to allow WEBCOR/OBAYASHI and or the Owner the ability to observe and witness system installations prior to being covered up by subsequent s. The schedule will indicate milestone dates for Trade Subcontractor inspection and testing.

16.0 Execution of Inspections and Checklists

Trade Subcontractor and or vendors shall schedule initial inspections and checklist review with the commissioning team. The inspections and reviews shall be directed, executed, and documented by the Trade Subcontractor or vendor.

To document the process, the Trade Subcontractor performing the task shall provide and complete all documentation forms and checklists. (See attached sample checklist)

17.0 Field Inspections

One of the most important commissioning activities for waterproofing systems is field inspections. The field inspection process shall serve as a method and means of documenting the installation process as well as indicate variations between contractual design and construction.

Each Trade Subcontractor shall identify in detail the scope of their field inspections, and the types of field procedures that will be required to obtain the necessary information to provide a complete waterproofing quality control evaluation at the completion of the job.

18.0 Field Witnessing of Trade Subcontractor's Quality Control

WEBCOR/OBAYASHI, the Owner, consultants and the Architect reserve the right to witness the waterproofing system installation at any time. Spot checks shall be conducted on a random basis. If inconsistencies are discovered in quality, performance, or if commissioning information differs from those submitted, the Trade Subcontractor may be required to completely remove and remedy all conditions where the inconsistencies occurred at no additional cost or impact to the schedule.

Witnessing shall include all or part of, but not limited to the following:

- 14.1 Mock ups
- 14.2 Waterproofing component and system installation
- 14.3 System inspection and checks
- 14.4 Performance tests

14.5 Special Inspections

19.0 Documentation

Trade Subcontractor shall maintain a separate field binder documenting quality control inspections and field-testing for all installed work. Documentation shall include dates, quality control field checklist, reports with inspected locations defined by grid lines and elevations. Provide a dated photo log, documenting inspected areas and general sequence of installed work for the duration of the project.

20.0 Testing and Methods

The objective of field-testing is to correlate paths of moisture infiltration and to observe the source of damages. Moisture entering a building during extreme weather may be obvious, but the most reliable method to discover the infiltrating path is to recreate the leakage condition in a controlled manner. Testing also allows verification of the theory for the cause of leakage.

As all system and component tests are unique to some degree, there may not be one standard or method for testing that can be applied to all. There are several methods, standards, governing requirements, and manufacture recommendations, etc., which should be applied.

There are three types of acceptable testing methods that can be used during the investigation. All of which must be approved by WEBCOR/OBAYASHI. These testing categories include:

- ✓ Non-Destructive Testing
- ✓ Destructive Testing
- ✓ Laboratory Testing

20.1 Non-Destructive Testing

Non-destructive testing uses a variety of non-invasive tools. This type of testing causes little or no damage or interference to the building envelope. The various methods of non-destructive testing include:

- a. *Rilem Tube* - This calibrated device is adhered to exterior masonry walls to determine the porosity and condition of brick masonry units, mortar joints, head joints, and embedment joints.
- b. *Water Spray Rack (ASTM E1105)* - This test simulates a wind-driven rain condition on a facility. It can assist in determining the specific cause and origin of moisture infiltration when it is used to test independent components of the envelope. Spraying water over a large area in an uncontrolled fashion will not reveal specific causes of water infiltration.
- c. *Hose Spray Test (AAMA 501.2)* - This test method also simulates wind-driven rain in small segmented areas using a standard garden hose in which a calibrated nozzle is attached with a pressure gauge. The spray is

directed at a specific joint, crack, or defect to reveal potential moisture intrusion.

- d. *Differential Pressure Test (ASTM E1105)* - A pressure chamber is constructed on the interior of the facility at a specific location to test moisture driven through an assembly or component. The assembly or component is subjected to a negative force while simultaneously a spray rack is directed at the assembly to draw the moisture into the facility to simulate a negative pressure under a wind-driven rain condition.
- e. *Infra-Red Thermography* - Infra-red Thermography photographs the building exterior to determine the locations of wet components. Components, such as insulation and sheathing, etc., will act as heat sinks if they contain high levels of moisture. During the day, moist and dry components absorb heat. At night, the moist areas release the heat much slower than the dry areas. By reading the heat signature, Infrared Thermography will help expose the problem areas. Small test cuts may be required to verify moisture areas.
- f. *Soundings (ASTM D4580)* - There are different ways to perform sounding tests including the hammer tap test. In this test, a 16 oz. hammer is tapped against concrete for sound. A hollow sound indicates areas where the concrete has separated from the reinforcing steel, typically due to exfoliation or corrosion of the steel. Another method of sounding is to chain drag a heavy 15 ft. link chain along a concrete surface to listen for hollow sounds, indicating defective concrete. This method can cover larger areas effectively and is commonly used on parking garages and loading docks.
- g. *Pachometer Survey* - This test uses a magnetic device used to locate embedded steel reinforcement and help determine the concrete cover over the reinforcement. Generally, the Pachometer is fairly accurate when measuring ¼ inch to 3-inch thick concrete cover and when reinforcing placement is not too congested.
- h. *Poly-sheet Tape-down* - This test determines the presence of moisture coming through a concrete surface, typically a slab-on-grade type of assembly where the typical problem is tile or membrane separation from the floor. A 2' x 2' section of polyethylene is sealed to the concrete with duct tape and removed 24 hours later. If there is moisture beneath the polyethylene, it is a good indication that there is a vapor drive through the concrete section.
- i. *Glass-Slide Epoxy or Crack-o-meter* - This device is sealed in place over a crack and periodically checked to determine if any movement has occurred. If movement has occurred, the glass will crack or the meter will record movement.
- j. *Optical Illuminated Boroscope* - A boroscope is inserted into a 5/8-in. diameter pilot hole through an exterior wall system and allows the cavity walls of brick veneer, stud wall backup of exterior insulated finish systems (EIFS), or other types of constructions to be observed without large-scale destructive testing.

- k. *Smoke/Dust Tracer* - The smoke/dust tracer helps to find air infiltration. It is moved across the interior face of a window to observe the smoke and dust particles coming through the assembly.
- l. *Moisture Meter* - A Delmhorst meter is a digital device that detects the presence of moisture in various building components. This test is typically accompanied by a gravimetric analysis (oven drying of samples), which is used to confirm the results of the Delmhorst meter.
- m. *Flashlight and mirror* - These simple tools can be very useful to detect problem areas. Placing the mirror into the plenum or behind difficult-to-access areas with the flashlight will allow observation of concealed conditions.

20.2 Destructive Testing

When the main objective is to determine the existing composition and configuration of concealed assembly conditions, destructive testing may be warranted. The most common methods of destructive testing are test cuts and borings.

Any type of destructive testing must be reviewed and approved by WEBCOR/OBAYASHI.

- a. *Roof Testing* - Test cuts in the roof assembly may be necessary to determine the condition of the underlying insulation and substrate. Cutting into the system may help verify whether roofing problems are causing corrosion of the steel deck, or a spalled and cracked concrete deck, etc. Test cuts may also expose the as-built configurations of the flashing components at roof-to-wall locations, curb locations, etc. This information is critical to the appropriate remedial design and/or repairs.
- b. *Exterior Wall/Skin Testing* - Test cuts on exterior walls may be required to identify the origin of moisture infiltration. For masonry walls, it is most effective to make test cuts at window heads and sills, and at any through-wall flashing locations that may be suspected of allowing moisture intrusion. Masonry test cuts may expose defective through-wall flashing that is allowing moisture intrusion. Test cuts may also help determine the underlying conditions of the steel components in wall systems, including wall ties, reinforcing steel, sub-steel columns, etc.

20.3 Laboratory Testing

Destructive testing is also used to obtain samples for lab analysis. Samples of sealants, coatings, painted finishes, roofing materials, etc. can be sent to a laboratory to determine the presence of lead or asbestos. Samples of masonry or concrete can also be tested to help identify causes of moisture/air infiltration (descriptions of these analyses follow).

Laboratory testing may help obtain a better understanding of existing material types, presence of contaminants, and the possibility of hazardous components.

This type of testing can also provide valuable information concerning proper surface preparation, material selection, and implementation of repairs. The following laboratory tests are some of the more useful when performing building envelope evaluations:

- a. *Gravimetric Analysis* - This test will determine moisture content. After weighing and recording the in-situ existing sample, completely dry the sample in an oven and re-weigh it. The weight difference indicates moisture content and is particularly useful for insulating materials. Testing moisture contents of samples is critical to verify results from non-destructive moisture scans.
- b. *Petrography* - Petrography determines the “make-up” of concrete. This test will indicate the size and type of aggregate, air/void ratio, type of cement, and general mix design data of the concrete. Most materials testing lab can perform this test.
- c. *Air Entrainment* - Provides an indication of the existing concrete’s durability and freeze-thaw resistance. Air entrainment is generally indicated by petrography.
- d. *Presence of Carbonization* - Accomplished by spraying a solution of phenothelene on the concrete substrate and recording the depth of the solution’s color change. This will indicate to what depth carbon dioxide has progressed into the concrete. Carbon dioxide will degrade the cement matrix of the concrete and lower the pH level of it. The layer surrounding the reinforcement is then destroyed, allowing corrosion of the reinforcing steel. Corrosion by carbonization usually occurs over a broad area.
- e. *Chloride Ion Content* - Chlorides from marine atmospheres or mists from road salts entering the concrete substrate, and salts originally introduced to the concrete via admixtures or aggregates can promote accelerated corrosion of reinforcing steel, usually at concentrated or specific locations. The chlorides are not consumed in the corrosion process but rather act as catalysts in the process. The corrosion will progress along the reinforcing bars causing concrete de-bonding, cracking, and spalling.
- f. *Reinforcement Placement, Depth, Quantity, and Type* - This information may be established with the use of a Pachometer or similar electronic metal detector. It is useful in determining required steel replacement and structural capacities during engineering analysis phases.

21.0 Engineering Analysis

Using information obtained from the field, laboratory results, and collected data, a comprehensive engineering analysis may be required. The engineering analysis should include an assessment of field and laboratory data, structural analysis as well as the following:

- ✓ Thermal Analysis
- ✓ Drainage Analysis

- ✓ Vapor Drive Analysis
- ✓ Fire Rating Requirements
- ✓ Cost Estimations

22.0 Deficiencies and Non-Conformance

The Trade Subcontractor shall identify and list any outstanding deficiencies or procedures that were not completed successfully during any final testing. Documented deficiencies shall be submitted to WEBCOR/OBAYASHI within 48 hours of each test completion.

The Trade Subcontractor shall also provide in writing, the corrective action for each deficiency as required within 48 hours. The installing Trade Subcontractor and or vendor shall correct all outstanding issues or deficiencies in the materials or the installation of the materials and provide the commissioning team with dates and times for the required corrections and any re-testing.

23.0 Remedial Work

General considerations for the repair of defects and replacement of components should include the following:

- 23.1 Determine the effect, if any; the repairs have on the structure, surroundings, and operations of the building.
- 23.2 Ensure proper preparation of surfaces to be repaired and provide chemical and mechanical bonds for new materials.
- 23.3 Material selection should include an understanding of performance limitations and should rely on the products past acceptable performance. Material selections should include consideration of the following:
 - ✓ Compatibility
 - ✓ Maintenance
 - ✓ Life cycle

24.0 Project Commissioning Closeout

WEBCOR/OBAYASHI, the Owner, and/or the Owner's representative shall determine when the Trade Subcontractor commissioning process has been satisfactorily completed and when to submit the final report information and all other documentation to Webcor.

As part of the project turnover, the quality of all work will be reviewed to determine whether it is within specific and manufacturers' guidelines, industry standards, and code compliance.

WEBCOR/OBAYASHI, the Owner, and/or the Owner's representative consultant must be completely satisfied that the commissioning procedures have been performed accurately and professionally.

In the event the commissioning information or performance requirements outlined in the Waterproofing Quality Commissioning Procedure & Guidelines have not been met, WEBCOR/OBAYASHI may elect to withhold or make appropriate adjustments to the Trade Subcontractor's final billing.
