1. BBII's bridge design relies on ARUP's RFI response #T-0209.3 (Exhibit-B). Please confirm ARUP's RFI response #T-0209.3 (Exhibit-C) is applicable as the basis of the design for the Beale St. bridge, given unlike First and Fremont
Streets, the length of the Beale St. bridge is resting atop the East CDSM wall.

2. The decision to allow the North and South bridge abutments to be located atop the CDSM wall was predicated on
the CR #T-025 load testing reference RFI #T-0209.4 (Exhibit-D). Given the testing was performed on different

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Arup's response to RFI T-0209.3 may be used as one part of the Contractor's basis of design. Arup will review the design for conformance with these recommendations. Note that our review is only for conformance with the geotechnical recommendations; review for constructability, pedestrian impact, OCS pole locations, impact (or lack of) on extension of the trainbox, etc. are by others.

2. Our design recommendations were not informed solely by the load testing results.

3. Arup does not endorse any design decisions made by the Contractor. We will review the design for conformance with our recommendations

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

soldier
piles (by others) and differing soil conditions between Zone-1 and Zone-4, is the load capacity derived from the CR #T-
025 testing applicable given the different bridge location and configuration?

3. BBII's Beale St. bridge design relies on resting the length of the Beale St. bridge atop the East CDSM wall. As the
designer of the CDSM wall, does ARUP endorse further loading of the East CDSM wall with the forces imposed by the
Beale St. bridge?

T-0304.1 **BSE - Inquiries with Regard to Proposed Beale St Bridge Follow-Up** **Closed** **08/29/2012** **09/08/2012** **08/31/2012** **Potentially** ☐

From: Webcor Construction LP Kirk Nielsen **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

In follow-up to RFI T-0304:

- From the response to question #2 of RFI T-0304 it is understood that ARUP's design recommendations were not informed solely by the load testing results. However the original question remains, is the load capacity derived from the CR #T-025 testing applicable given the different bridge location and configuration?

- So the contractor can understand the parameters of what we are submitting, was the Shoring Wall Designed to withstand the loads imposed by the proposed Beale St. bridge?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Arup's recommendations in RFI T-0209.3 may be applied to the east CDSM shoring wall.

The CDSM wall was not designed to support vertical loads, but we have estimated its vertical load carrying capacity and outlined this in our response to RFI T-0209.3. If the bridge bears on the wall, we recommend that the Contractor monitor the wall for movements.

Reference: TG0300-206 Beale St. Bridge Structural Design

On 8/22/12 Beale St. Bridge submittal TG0300-206 was returned to W/O marked not reviewed. In lieu of piers the proposed bridge relies on the eastern shoring wall for structural support along the bridge. As a result, the design utilizes the additional capacity of the internal bracing to restrain lateral loads imposed by the bridge.

Upon W/O's review of BBII's Beale St. bridge design W/O encountered the following inquiries relative to below grade structure:

-Do the below grade foundation walls as designed have the additional capacity required to support the lateral loads imposed by the proposed Beale St. bridge?

-Will the below grade foundation walls be required to achieve additional strength prior to removal of re-bracing as a result of the additional laterals loads in which they are subjected by the proposed Beale Street bridge?

The Contractor shall demonstrate, through calculations and drawings, that the seismic load from the bridge has a complete load path from bridge to ground.

T-0306 **BSE - Pedestrian Connection Across the Construction Excavation at Beale St** **Closed** **08/23/2012** **09/02/2012** **08/29/2012** **Potentially** ☐

Co-Author:

REQUEST:

At the 8/27/12 TJPA Traffic Coordination meeting Balfour Beatty presented a construction plan for the proposed Beale St. bridge. In violation of Specification Section 01 15 70-2 the construction plan included reducing Beale St. down to two available traffic lanes for an approximately six week duration. Please confirm if this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor can temporarily reduce traffic lanes (including up to a full street closure) if they comply with Spec and SFMTA Blue Book requirements. Per Spec 01-15-70 TRAFFIC ROUTING WORK the Contractor would have to:

1. Submit a traffic control and detour plan.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

2. Submit a STP Request - Special Traffic permit Request.

SPEC Section 01 15 70 TRAFFIC ROUTING WORK

Paragraph 3.5 SPECIAL TRAFFIC PERMIT

A. Contractor shall apply for a Special Traffic Permit from the SFMTA, if any deviation from the traffic lane requirements (time, width, etc.), as shown in these Specifications, is required. If SFMTA approves the issue of the Special Traffic Permit, the Contractor shall pay the required fee to SFMTA, as specified in the Blue Book, and obtain the necessary permit.

The STP request would need to be reviewed and may be approved by TJPA Reps and SFMTA/MUNI.

REQUEST:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Spec. Reference: 31 00 00

In order to control surface water at final subgrade, Balfour Beatty would like the option of installing (a) trench drain(s) per the attached drawing as necessary around the perimeter of the excavation just prior to or once final subgrade is established. These trench drains will be filled with ¾" drain rock in accordance with specification section 31 00 00-3.16.A. These trench drains will be left in place during micro-pile installation and remain below the mud slab. Water will be pumped out of these trench drains using sump pumps and/or routed to dewatering wells in accordance with specification section 31 23 19. Please confirm that this is acceptable.

Installation of these drains is acceptable with regards to geotechnical engineering as long as it does not incur any additional costs to the owner.

Installation of these drains is not an appropriate mitigation for CDSM walls which are not watertight as specified in Section 31 56 13 Chapter 3.12 ACCEPTANCE CRITERIA, Item F. "Watertight" is defined in this same specification section as "no continuous running or seeping water from the shoring wall."

We have not reviewed this with regards to conflicts with non-geotechnical subgrade features.

T-0311.1 **Modified French Drains Zones 3 and 4** **Closed** **03/04/2014** **03/14/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:**

REQUEST:

Reference Documents
Specification Section: 31 63 33
Drawings: ASI #0097

Per 9/12/12 Turner BSE Progress Meeting, Adamsons Associates(AA) requested BBII to submit a RFI requesting distance tolerances for the proposed micropile layout relocations. Please see BBII's verbage below in response.

The response comments provided to submittal TA1020-316333A12.2 (TG0300-622.2) for micropile stated that the submitted micropile layout was unacceptable, but that the micropile locations shown in the TG0600 (ASI 0097) documents are acceptable. The attached marked up coordination drawings show the locations of the TG0600 documents micropile locations compared to various overhead horizontal and vertical obstructions. The obstructions considered in this comparison include trestle pile and bracing; internal bracing struts, supports, and pin piles; bridge piles; and the buttress walls. The submitted micropile locations are also shown.

The equipment that will be used to install the micropiles require 2.5 feet clearance from the center of the micropile hole to surrounding obstructions. The circles and arrows on the attached drawing indicate which micropiles do not have the required clearance and which direction of shift is preferred. The maximum shift is 4 feet, which occurs when a micropile is located directly below an internal bracing

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to use the first contractor-proposed approach (number 1), that of using the TG0600 documents for micropile layout and shifting the micropiles up to 4 feet, however such shifts will be subject to design verification and SEOR approval following our receipt of final proposed locations. Note that the shifting of micropiles shall adhere to submittal notes 2 and 3 on sheet ML-1 of Submittal TG0300-622.2 (TA1020-316333A12.2). Micropiles shall not be installed in the buttress shafts.

The alternative contractor-proposed approach (number 2), that of using the submittal (TG0300-622.2) layout and applying submittal notes 2 & 3 is not acceptable as the approach does not consider submittal note 1 (which addresses the density of micropile layout).

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

strut.

Please confirm that the micropile locations shown on the TG0600 documents are to be used for the micropile layout, and that a shift of up to 4 feet in the directions shown on the attached drawings is acceptable.

As an alternative, BBII would prefer to use the submitted layout which has fewer conflicts. Micropiles would be eliminated or added per notes 2 and 3 respectively on sheet ML-1 of the returned submittal. The submitted micropile layout contains 1858 each micropiles. The TG0600 documents contain 1860 each micropiles. By eliminating piles per comments 2 and adding piles per comment 3, the total quantity would be approximately the quantity in the TG0600 documents.

Please confirm which of the two alternative approaches to micropiles layout is acceptable, or if both approaches are acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0314	Permit Clarification	Closed	09/14/2012	09/24/2012	09/19/2012	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jack Adams

Co-Author:

REQUEST:

Reference Specification:
01 14 10 - 2 1.2A

Pursuant to specification section 01 14 10 - 2 1.2A, the Contractor is directed to obtain permits from the San Francisco Department of Building Inspection(DBI) for work including, but not limited to: Excavation, Structural, Architectural, Mechanical, Plumbing, and Electrical.

To date TJPA has been acting as the permitting authority, and has distributed permits for work contracturally required to be authorized by the DBI.

Please confirm that W/O is to obtain these permits through the TJPA, not the DBI.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This RFI is based on an incorrect reading of the Specification by the Contractor. Paragraph 1.2 states ¿ Application for permits, regulatory permissions, approvals, and request for compliance inspections shall be performed as follows and in accordance with Appendix A of this section (01 14 10/APA) and as stipulated in Section 00 07 00, General Conditions.¿

- Refer to specification 01 14 10/APA regarding application for permits.

- Specification section 01 14 10 Paragraph 1.2A actually requires the Contractor to obtain approvals from the San Francisco Department of Building Inspection, not permits.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0315	Performance Test Micropile Layout	Closed	09/17/2012	09/27/2012	09/27/2012	Potentially	☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Specification Reference: 02 41 01
Drawing Reference: D-2210

Demolition of the prototype shafts and the 80 Natoma CDSM wall are required in order to allow clearance for the geothermal piping. BBII proposes to only demolish portions of these structures which would interfere with the geothermal piping. The prototype buttress shafts would be demolished to elevation -41.42 with depressions cut out where the piping crosses. The 80 Natoma CDSM wall would be demolished to allow the piping to be installed. The CDSM piles would be otherwise cut off 4" below mud slab subgrade. See attached sketches.

Please confirm this is acceptable.

No. The excavation limits for BSE contractor 80 Natoma/Buttress prototype and CDSM prototype are to be demolished to a depth of -44'.5 in their entirety.

The demolition limits for BSE contractor are to be per contract. REF: BSE Drawing D-2210 and RFI 317.3 response.

CSM Prototype shoring wall -44'.5 +/- See D-2210 Note 10 for the entire length
CDSM 80 Natoma shoring wall -44'.5 +/- See D-2210 Note 11 for the entire length
80 Natoma Piles -44'.5 +/- See D-2210 Note 11 for the entire length
Buttress prototype shafts -44'.5 +/- See D-2210 Note 9: This is CHANGED from -41.5' (CR forthcoming) and is now to be demolished to a depth of -44'.5 for the entire length per this RFI series.

Additional Costs associated with ASI No. 0099 Field Order 08-04-CMGC-000-T-00014 which updated pit depths and locations impacting the Mat Slab (Transmitted to WOJV on 12/12/12) are a separate issue than this RFI.

REQUEST:

Pursuant to discussions with ARUP at the Turner weekly meeting held on September 12, 2012, BBII is requesting the following information regarding the additional excavation and bracing requirements along the A line adjacent to the western and eastern edges of 301 Mission:

-Limits of the work

-Sequence of demolition, excavation and bracing (waler and struts). ie .. do we excavate for installation of one strut or waler at a time or can we expose more than one strut or waler location concurrently.

-Wall support details, for example there were discussions as to maintaining a soil berm between different stages of the work. Please provide the width, height and length of berm or other support needed.

-Length of exposed wall area and duration of exposure

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Due to file size please find the response attached.

T-0321.1 **Additional Excavation and Bracing Constraints at A Line and 301 Mission** **Closed** **10/10/2012** **10/20/2012** **10/19/2012** **Potentially** ☐

REQUEST:

BBII would like to confirm the following direction received at TCCO's weekly meeting on October 10, 2012 in regards to the limits of the berm and sequence of work referenced in the response to RFI T-0321.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The sequencing of activities proposed by the Contractor adequately addresses our concerns regarding the Contractor's means and methods which in the other portions of Zone 3 have caused over 1.5

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

The following work will take place between CDSM beams 251 and 276 along the A-Line and the southern edge of Zone 3's trestle.

Demolition: Upon completion of the demolition and removal of the basement walls and footings BBII is to place an earth berm to elevation +10.00, extending 25 feet from the face of the CDSM wall into the excavation and having a 3:1 slope at the southern hinge point of the berm.

Bracing: Walers 24 and 48 as well as Struts 49 and 50 will be installed within a 6 working day window to address ARUP's concern of overexposure from the Millennium's Building's foundation pressure on the CDSM wall. During the installation of these walers and struts the berm as described in the demolition section above will remain between CDSM beams 260 and 271 until completion of the bracing of walers 24 and 48 and struts 49-50. The sequence will be repeated for installation of walers 25 and 49 as well as struts 51 and 52 with the exception of the earth berm easterly limit will be CDSM beam 276 (centerline of buttress A line pile).

inches of lateral movement into the excavation at locations where excavation has not even progressed past the first level.

Additionally, as discussed in the Movement Review Panel Meeting the morning of October 17, 2012, Arup asked the Contractor to consider excavation under the Fremont Street bridge to progress from south to north. The Contractor agreed that this would be beneficial and possible.

T-0322 **BSE - Dewatering Pipe Termination at System Removal** **Closed** **10/03/2012** **10/13/2012** **10/08/2012** **Potentially** ☐

From: Webcor Construction LP David Fields **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Upon system removal, specification 31 23 19 (BSE Documents) requires the contractor to fill dewatering pipes with grout, cut, and cap to an elevation 36" below subgrade. Sheet A1-8711 (Below Grade Documents) shows in detail the final configuration of the dewatering pipes and requires that they are capped at 8" below Top of Mat Slab elevation.

Will Cutting and Capping of the dewatering pipes be required at 36" below subgrade?

Assuming the dewatering pipes will be cut and capped at 8" below Top of Mat Slab elevation:
Is it acceptable to have a void space in the abandoned

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor shall follow the details on sheet A1-8711 of the Below Grade Package.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

dewatering pipes between the grout terminating 36" below subgrade elevation to the Bentonite at 14" below top of mat slab?

T-0322.1 **BSE - Dewatering Pipe Termination at System Removal Follow-Up** **Closed** **10/08/2012** **10/18/2012** **10/10/2012** **Potentially** ☐

From: Webcor Construction LP David Fields **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

In follow up to RFI T-0322:

Upon dewatering system removal BSE Specification 31 23 19 3.9 requires that abandoned piping be filled with grout to an elevation of 36" below subgrade elevation consistent with the originally specified cut and cap elevation. Below Grade Drawing A-8711 does not specify a grout requirement for the dewatering pipes.

Is it acceptable to have a void space in the abandoned dewatering pipes between the grout terminating 36" below subgrade elevation to the Bentonite at 14" below top of mat slab consistent with the current contract documents?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

No, a void space is not acceptable. The abandoned dewatering pipes are to be grout filled per specification 31 23 19. Follow detail 6/A1-8711 for dewatering pipe steel sleeve, waterproofing and mat slab block out. When the dewatering system is removed, the dewatering pipes are cut off, fully grouted to bottom of the block out and bentonite installed for the last 4" to the top of the sleeve. The a steel cap assembly is welded to the top of the sleeve and the mat slab block out grouted.

Please confirm the verbal direction given after the 1/17/13 8:30 Buttress Meeting that shaft E-4 is to be tangential rather than secant as described in RFI response #T-0323.1.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed. Supplemental shaft E-4 shall be install tangential to shaft E-3, with full penetration into bedrock, and with 6 ksi concrete.

T-0324 **BSE - Field Order T-00010R2 - Clouded Revisions** **Closed** **10/04/2012** **10/14/2012** **10/15/2012** **Potentially** ☐

From: Webcor Construction LP Joanne Filipas **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Stacy Wilson

Co-Author:

REQUEST:

Reference: Field Order T-00010R2, TJPA CADD Standards Manual dated 15Nov10 and Sheet A1-8711 attached.

Field Order T-00010R2 included the TG06 Below Grade IFC drawings and specifications. It is unclear what revisions are to be incorporated by the TG03 contractor as the revised drawings do not included revision blocks and clouds consistent with the TJPA CADD Standards. For example, sheet A1-8711 (attached) was Issued For Construction with the TG03 BSE package. The revisions to this drawing through the design development and issuance with the TG06 bid/construction set are not clouded and the revision block does not include all previous revision descriptions. The revision block on the final Issued for Construction drawing should read as follows and all changes from the Rev 0 IFC issuance should be clouded in accordance with the TJPA CADD Standards:

No Date Description
Ä0 12/10/2010 Issued For Construction - Buttress/Shoring/Excavation
ÄA 4/18/2012 Issued for Bid - Below Grade Package
ÄB 8/17/2012 Issued for Bid - Below Grade Package - Addendum #2
Ä1 8/30/2012 Issued for Construction- Below Grade Package

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The Issued For Construction drawings and specifications adhere to the TJPA CADD standards. Revision blocks and clouds are not used between Issued for Construction and Issued for Bid drawings. Furthermore, [For Reference Documents] may not require revision blocks and clouds; refer to Figure 6-1 of the TJPA CADD standards manual regarding SD and DD revision sets as an example. Contact the TJPA engineering staff regarding proper interpretation and use of the TJPA CADD standards. A workshop can be offered for project participants to provide clarity in drafting and CADD requirements.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please confirm any previously issued IFC drawings that have since been revised will be re-issued consistent with the TJPA CADD standards. Also, please confirm all packages going forward will be in accordance with the TJPA CADD standards revision provisions.

T-0324.1 **Field Order T-00010R2 - Clouded Revisions** **Closed** **10/17/2012** **10/27/2012** **10/23/2012** **Potentially** ☐

REQUEST:

In follow up to RFI response #T-0324 and the 10/17/12 BSE meeting it was clarified by AAI that what W/O was requesting in RFI #T-0324 was actually a "revision set for TG03". Please provide.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per Ed Sum, TJPA: "No"

T-0325 **BSE - Excavation Sequence Relative to Installation of Struts 10 & 11** **Closed** **10/05/2012** **10/15/2012** **10/11/2012** **Potentially** ☐

From: Balfour Beatty Infrastructure, Inc. Ural Yal **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

In an effort to expedite the installation of struts 10 & 11 at level D to help reduce eastward movement of the A-line wall, BBII proposes the following:

Excavate to level D for struts STD-10 and STD-11, and notch along the wall so that waler WD-05 may be installed, leaving the berm present beyond the notch. Excavate on the south side to the end of waler WD-67. Excavation to install strut STD-12 will proceed once enough struts have been installed at level C to advance the level D excavation to strut STD-12 per the specifications.

A sketch has been attached for reference. Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

We cannot respond to this RFI as the sketch shows an unsafe slope at the excavation.

T-0326 **Available Power Source for First Street Traffic Signal** **Closed** **10/15/2012** **10/25/2012** **10/19/2012** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jack Adams

Co-Author:

REQUEST:

First Street Bridge Temporary Traffic Signal is due to be activated on 10/24/2012. The traffic signal controller cabinet requires electrical power to activate the signal. Being that BBII will not be drawing power off site temporary power (Skids 3 and 4), please advise and provide direction for the use of an available power source.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Specification 01-53-13 for Temporary Bridge does not require Traffic Signals at Trestle/Bridge intersection.

Existing Traffic Control (Cristy Box) infrastructure available in the north sidewalks of both First and Fremont Street. These are the closest traffic control infrastructure from the Temporary Bridges with conduit/boxes that contained previous traffic control signal wiring. There is also existing Traffic Control (Cristy Box) infrastructure available at the intersection with Howard Street.

First Street Bridge: WOJV Contract (RUP Project) did remove and salvage traffic signaling equipment and protected the infrastructure (boxes, conduits under sidewalk). Refer to RUP Drawing U-3301. Therefore believe it is in Webcor/BBII's scope to determine the best available power source.

Fremont Street Bridge: WOJV Contract (RUP Project) did remove and salvage traffic signaling equipment and protected the infrastructure (boxes, conduits under sidewalk). Refer to RUP Drawing U-3302. Therefore believe it is in Webcor/BBII's scope to determine the best available power source.

All work performed shall meet Specifications particularly with regard to sidewalk and street restoration upon install of underground electrical (conduits etc.)

REQUEST:

There are no dimensions shown for placement of the ground rods. Should we scale off the drawings or will a drawing be produced reflecting dimensions?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The placement of the ground rods and the ground ring does not require exact dimensioning. The ground rods are regularly spaced around the building perimeter at the building column lines approximately forty five feet on center. The rods are shown approximately two feet

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

inside the foundation wall, but they can be closer to the foundation wall if the layout is coordinated with the geothermal system piping, micropiles and foundation wall supports.

Per Section 26 05 01, provide Contractor's Coordination drawings for review.

T-0328 **BSE - Re-Bracing Elevations** **Closed** **10/17/2012** **10/17/2012** **11/01/2012** **Potentially** ☐

From: Webcor Construction LP David Fields **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Drawing GT-1112 stage 13 shows a maximum of 16' or 17' between level B struts and the lower level of rebracing. For Case West, level B supports are at elevation -3 ', resulting in the lower level of rebracing supports at elevation -20'. Internal bracing drawing sheet SH-4000 shows W21 strut support members on the underside of level C bracing. In order to install the lower level rebracing and accommodate the existing level C bracing, the lower level bracing will need to be installed at elevation -22'.

Similarly, the top level of rebracing is called out in stage 15 to be 3' below level A bracing. Top level rebracing will need to be 5' below level A bracing in order for struts to be clear of the overhead strut supports.

Please confirm that the 17' and 16' maximum dimensions in stage 13 and 3' maximum dimension in stage 15 will not be required if the rebracing design calculations show that it is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Constructructability issues shall be reviewed by Webcor / Obayashi. This is acceptable pending review of submittal.

Reference sketches: SCCI #1, SCCI #2

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Proposed construction joint between gridlines G & K

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Reference Drawing: S-0007
Reference Specification: 03 30 20

Per note CJ-2 on sheet S-0007 No horizontal construction joints will be permitted unless specifically shown in the drawings or approved in writing. Please confirm that the longitudinal construction joint shown between gridlines G and K is acceptable as it follows the micropile construction sequence and it will help the schedule with re-bracing in the Southwest Corner.

(assumed to be along grid J) is acceptable for the mat and Lower Concourse slab, however, please note the following comments:

1. Proposed construction joint(s) is not a horizontal joint.

2. Mat Pour Layout:
a) Per spec 03 30 20 3.2.B.1, joints in slabs "...shall be located within the central third of the span."
b) Per spec 03 30 20 3.2.A.4 "Foundation wall, lower concourse floor slab, and ground floor construction joints shall align with the location of the mat slab joint below."

3. Lower Concourse Pour Layout:
a) Per spec 03 30 20 3.2.A.4, max spacing of construction joint in Lower Concourse slab is 60 ft.
b) See comment 2a.
c) See comment 2b.

4. These proposed construction joints shall be included in a submittal per specifications.

T-0330 **BSE - Mud Slab Vapor Retarder** **Closed** **10/30/2012** **11/09/2012** **11/09/2012** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Drawing : A1-8711 S1-3003
Reference Specification: 03 30 00

Specification 03 30 00.3 .I.E, Vapor Retarder Placement:: See Division 7, Thermal and Moisture Protection, describes installation of vapor retarder. Specification 03 30 00.3 .4.A.13 states "Place vapor retarder directly below slabs on grade as specified in contract documents."

Vapor retarder is not referenced on Detail 5, Mud Slab Detail, on sheet S1-3003, or on any of the slab penetration details on sheets A1-8711 and S1-3003 .

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Vapor Retarder is not required for the Mud Slab.

REQUEST:

SUGGESTION:

ANSWER:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Is utilizing the mat slab for re-bracing reactions (via rackers) acceptable provided it meets the provisions set forth within 31 55 00 1.5 Q in regards to connections, penetrations, imbeds, and restoration?

Accept Suggestion: ☐

Structurally, it is acceptable to utilize the mat slab for re-bracing provided provisions in specification article 1.5.Q are met as well as specification article 1.5.R, which shall also apply for the mat (i.e. reactions shall not exceed capacity of mat). Submit re-bracing for review per submittal process, including calculations that show reactions onto permanent structure do not exceed capacity of permanent structure.

Contractor shall outline to TJPA if there will be a cost and schedule reduction for this Proposed Alternate. Contractor shall outline any perminent impact on the finished building related to this proposal. See specification requirements regarding Proposed Alternates.

Contractor shall submit further information on this Proposed Alternate for review prior to full acceptance of this direction.

T-0333.1 **BSE - BSE - Utilization of the Mat Slab for Re-Bracing Reactions Follow-Up** **Closed** **11/07/2012** **11/17/2012** **11/13/2012** **Potentially** ☐

From: Webcor Construction LP David Fields **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor Construction LP Robert Kjome

Co-Author:

REQUEST:

Response to RFI T-0333 stipulates that the contractor:

"..submit further information on this proposed alternative.."

This statement implies that the utilization of the mat slab for rebracing reactions is a deviation from what is required by contract. Please identify the primary method the rebracing design is to employ in order resist gravity, seismic, or other additional loading to be resisted and/or provide restraint against buckling, torsion, or other function as necessary per the design to provide required capacities of elements.

SUGGESTION:

T-0333.2	BSE - Utilization of the Mat Slab for Re-Bracing Reactions Follow-Up	Closed	11/09/2012	11/19/2012	11/20/2012	Potentially	☐

From: Webcor Construction LP David Fields **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

RFI T-0333 inquired if utilizing the mat slab for re-bracing reactions was acceptable provided it meets the provisions set forth within 31 55 00 1.5 Q in regards to connections, penetrations, imbeds, and restoration.

The response stated that structurally it was acceptable provided the contractor outline if there will be a cost and schedule reduction pursuant to the specification requirements for "Proposed Alternatives". W/O is unable to locate a specification provision for "Proposed Alternatives" in the TG03 or TG06 contract documents.

Is utilizing the mat slab for rebracing reactions acceptable pursuant to the TG03 or TG06 contract documents?

If acceptable, please identify the specification section for "Proposed Alternatives" within the TG03 or TG06 documents so cost and schedule reduction proposals can be provided pursuant to the applicable requirements.

Additionally, please identify the TG03 and/or TG06 contract requirements for secondary bracing (31 55 00 1.3D) geometry.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

TT Response: As stated in the original RFI T-0333 response, "...specification article 1.5, which shall also apply for the mat (i.e. reactions shall not exceed capacity of mat). Submit re-bracing for review per submittal process, including calculations that show reactions onto permanent structure do not exceed capacity of permanent structure."

URS Response: If the load capacities to be provided by re-bracing elements are less than the design loading for bracing elements removed, then speficically identify this in the re-bracing submission. Any reduction of this loading requires specific explanation and specific review and approval.

Co-Author:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Reference Specification: 03 30 00

Please confirm it is acceptable to displace a top mat 4th layer contract reinforcing bar and a bottom mat 2nd layer contract reinforcing bar one bar diameter every 6' - 0" +/- oc to support the mat reinforcing. A sketch is attached for reference and to graphically represent the proposed bar configuration.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is not acceptable to displace/deviate mat rebar from contract layout.

NOTE: The RFI sketch does not graphically represent the orientation of mat reinforcement. See "Mat Bottom Rebar Notes" on S1-2022 and "Mat Top Rebar Notes" on S1-2052 as well as detail 3/S1-3005 for orientation of layers of mat reinforcement.

T-0336 **BGP - Wall Dowels Standard Hooks** **Closed** **11/05/2012** **11/15/2012** **11/10/2012** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Specification: 03 20 00
Reference Drawings: SI-3201

Contract drawing S1-3201, Section 1 depicts the #11 vertical wall dowels with a terminator, typ. embedded into the mat foundation rather than a standard hook. Shimmick is requesting the option to utilize a #11 standard hook (1' - 7") orientated inward or a terminator as shown at these locations. Please verify that either option is acceptable for use.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor-proposed #11 standard hook for wall vertical bars is not acceptable as the inside wall bar would need to be hooked towards the outer bar and would result in congestion. Please provide vertical wall bars with terminators per contract drawing.

T-0337 **BGP - Bottom Mat Reinforcing Clear Cover to Edge** **Closed** **11/06/2012** **11/16/2012** **11/12/2012** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Specification: 03 30 00
Reference Drawings: S1-3201

Contract drawing S1-3201 depicts the clear cover to the mat reinforcing as 6" along the edge. Please verify it is acceptable to extend the bottom mat reinforcing closer to the edge such that the clear cover along the edge is 2", the same as it is for the vertical wall reinforcement.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor - proposed modification to clear cover at mat edge is not acceptable as it would result in a congestion condition. Please provide contract drawing clear cover.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0338	BGP - Mat Reinforcing Clear Cover, Exterior Face Wall Vertical Clear Cover.	Closed	11/06/2012	11/16/2012	11/10/2012	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Specification: 03 20 00
Reference Drawing: S1-3001 / S1-3201

Please confirm the clear cover to the bottom mat reinforcing is 3" as called out on contract drawing sheet S1-3001, typical detail 5. Additionally please verify if the outside face vertical reinforcing bars can be lifted such that clear cover to this bar is 6" from the concrete below as it is for the inside face vertical bar as depicted on contract drawing S1-3201.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The 3" clear cover listed in detail 5/S1-3001 is for "concrete cast against and permanently exposed to earth", which does not apply to the mat. Bottom mat reinforcement clear cover is confirmed to be 3" per "Mat Bottom Rebar Notes" (note 7) on S1-2022.

The outside face vertical reinforcement bars may not be lifted. Provide contract drawing clear cover.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0339	BGP - Wall Reinforcing Clear Cover	Closed	11/06/2012	11/16/2012	11/15/2012	Potentially	☐

T-0340	BGP - IDEA Machine	Closed	11/06/2012	11/16/2012	11/15/2012	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Specification: 03 20 00
Reference Drawings: N/A

Shimmick would like to request the use of the Schnell IDEA Machine. The IDEA Machine pre-assembles grade beam, columns or other "boundary" type elements by a process of resistance welding three (3) 1/4" ASTM 82 wires to the ASTM A706 reinforcing ties. This process provides a more secure and accurate tie configuration with

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It will be acceptable to use contractor-proposed use of machine-welded holding wires to column ties and beam stirrups only provided the following conditions are met:

1. Column ties and beam stirrups must be ASTM A706.

2. Holding wire bars shall conform to ASTM A82 or

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

a more effective and timely installation. Attached is CRSI's engineering data report #53 which provides an in-depth explanation of the process as well as their acceptance of the same. Also attached is a reference list of recent projects where this process has been approved and utilized as well as a testing report from Christensen Materials Engineering. Please confirm if this is acceptable.

A496.

3. Holding wires are only allowed to be welded to column ties and beam stirrups #5 or smaller.

4. Holding wires are not to eliminate any longitudinal bars or interfere with flow and placement of concrete.

5. Verification tests: Contractor shall submit results of verification tests conducted during the month of tie/stirrup production from a Certified Testing Laboratory for review. Tests shall be performed on 3 samples of bar sizes to match project conditions. Samples shall have a gage length of 24 bar diameters with the holding wire weld located in the middle quarter of the length. Test the samples in tension and report elongation of the sample at fracture, the location of the fracture and the type of fracture. Test and production bars to be welded shall be ASTM A706.

6. Production tests: If verification tests are acceptable, production tests will be required only if there is deviation from the accepted process or if the inspector identifies potential defects.

7. Fabrication shall conform to the following:

a.) Holding wire welds shall be located a minimum of 2 tie/stirrup diameters away from bends and/or cold-worked regions of stirrups.

b.) Maintain a minimum clear cover from the face of the concrete to the ties/stirrups as noted on the drawings and maintain clear cover to holding wire as required by ACI 318.

c.) If field installation requires adjustment of tie/stirrup locations due to mis-coordination or mis-placement, adjustments/corrections shall be responsibility of Contractor.

d.) Holding wires shall be located a minimum of 2 inches clear from main longitudinal bars.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

e.) Longitudinal steel may NOT be welded to ties/stirrups.

8. Submit this weld procedure with applicable concrete reinforcement submittal.

T-0341 **BGP - One Piece Ties** **Closed** **11/06/2012** **11/16/2012** **11/10/2012** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Shimmick would like to request the use of the "one-piece" or "serpentine" ties at this project. These ties are made by an automatic bender that bends a column or boundary element tie from one continuous piece of rebar. The end result is the same perimeter and cross tie configuration as the design in the contract documents. Please confirm if this procedure is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The contractor-proposed approach to use "one-piece" / "serpentine" ties is acceptable as long as contract document rebar configuration is provided. Submit per reinforcement submittal process

---

T-0341.1 **BGP - Type D8 Column Serpentine Ties** **Closed** **12/04/2013** **12/11/2013** **12/10/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please refer to drawing S1-3305 and RFI T-0341.

The response to RFI T-0341 accepted the use of one-piece/serpentine ties for the columns as proposed by Gerdau. Gerdau has found that the fabrication of a single piece serpentine tie for the type D8 column could pose safety risks. Therefore, Gerdau is proposing to fabricate the type D8 column ties with two pieces of serpentine ties. See the attached Gerdau sketch SK- T-0341.1 for details.

Please confirm the alternate serpentine ties as shown in the attached sketch is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
12/9/2013
RESPONSE:
Proposed serpentine tie configuration for Tie Type D8 will conflict with anchor bolts for the steel column above. Refer to Sheet S1-3305 for the design tie configuration for Column C7 (Tie Type D8). However, proposed Serpentine tie configuration can be used up to an elevation within the column where anchor bolts are not present. Where anchor bolts are present, loose ties that confirm with the design configuration shall be used to clear the anchor bolts. Note the following anchor bolt embedment lengths for different anchor bolt configurations:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

- For Column C7 with Type T anchor bolts, anchor bolts are embedded 3'-8" from the top of the Lower Concourse Moment Frame beam.
- For Column C7 with Type TT anchor bolts, anchor bolts are embedded 6'-8" from the top of the Lower Concourse Moment Frame beam.
- For Column C7 with Type TTT anchor bolts, anchor bolts are embedded 20' from the top of the Lower Concourse Moment Frame beam.

See Sheet S1-5051 for further information on anchor bolts.
Also, per RFI T-0924, it is acceptable to eliminate/lower column cross ties that interfere with the shear key block out. (Ties and hoops that do not interfere shall remain.) This information should also be considered in finalizing the detailing/fabrication of the column ties near the top of the concrete columns.

T-0342 **BGP - Mat Slab Reinforcing and Lap Ratio** **Closed** **11/06/2012** **11/16/2012** **11/20/2012** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

In follow up to the 10/31/12 Value Engineering prosal meeting, please confirm it is acceptable to change the grade 60 #11 bars to grade 75 #10 bars in the mat slab reinforcing.

Please provide the increased lap ratio required for the change in grade and bar size.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is structurally acceptable to change the grade 60 #11 bars to grade 75 #10 bars for the mat slab reinforcement.

Tension lap splice length for #10, grade 75, category 1*, top bars*, f'c 5 ksi = 115 in.
Tension lap splice length for #10, grade 75, category 1*, other bars*, f'c 5 ksi = 89 in.

(* = See 1/S1-3001 for notes/definitions)

Per discussion at 11/16/12 VE meeting, CR for VE items will be issued in the future.

T-0345	BSE - CDSM Wall Parallel Stiffness for Bridge Design	Closed	11/13/2012	11/23/2012	11/15/2012	Potentially	☐

From: Balfour Beatty Infrastructure, Inc. Ural Yal **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Specification Reference: 01 53 13.1.3D

BBII has recently received information in a non bridge design related correspondence that could impact the already designed, permitted, and constructed First and Fremont St. Bridges. In an ARUP memo dated October 5th, 2012 bullet #2 states:

"The Contractor has verbally attested that they designed the diagonal corner braces using an interpretation of Note 11 on sheet GT-1111 which yielded a key assumption which is that the CDSM wall is infinitely strong and infinitely stiff. This assumption is an inaccurate and unreasonable interpretation of this note and in no way does the note infer this".

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to Note 5 on GT-1111 which requires the Contractor to analyze the soldier piles if the soldier piles are subjected to loads other than those shown on the drawings. Refer to the Contract Documents for the design strength of the CDSM material.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Although this comment is in reference to the internal bracing design, it also relates to the temporary bridge design. As noted on page 156 of the First and Fremont St Bridge structural calculations (attached), this same interpretation of note 11 on GT-1111 was used for the abutment shear key design. The Bridges have been designed, reviewed and approved by DPW under with the assumption that no additional deformation occurs at the base of the abutments. If in fact the CDSM wall is truly NOT infinitely strong or infinitely stiff parallel to the wall, BBII requests a value from the CDSM engineer of record that can used in our re-evaluation of the First and Fremont Bridges to ensure the existing design remains in compliance with the design criteria. Additionally this value would be used in the re-design of the Beale St. Bridge.

T-0346 **BGP - Mat Slab Maximum Aggregate Size** **Closed** **11/15/2012** **11/25/2012** **11/21/2012** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Specification Reference 30 30 20

Shimmick is requesting approval of 1 inch nominal maximum aggregate size in lieu of the 3/4 inch nominal maximum aggregate size for the Mat Slab concrete. Shimmick's backup data indicates that concrete made with larger aggregate size (1 inch instead of 3/4 inch) produces lower drying shrinkage values mainly due to a reduction in the water consumption of the mix and a reduction in paste content.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor-proposed use of 1" nominal max aggregate size for the mat slab concrete is acceptable. Submit mix designs through submittal process.

Jeff Thiel Per discussion at 11/16/12 VE meeting, a CR for VE items will be issued in the future.

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

Reference Specification: 03 30 20.3.2.A.3

Per specification 033020.3.2.A.3 the maximum construction joint spacing in the mat slab is 120 feet (E/W direction), 3.2.A.4 maximum construction joint spacing in the foundation wall, lower concourse slab, ramp slab, interior walls,and the ground floor concrete slab is 60 feet. Foundation wall, lower concourse floor slab, and ground floor construction joints shall align with the location of the mat slab joint below and 3.2.B.1 construction joints in floor slab shall be located within the central third of the span. Due to the moment frames along grid lines V, W, and X being angled Shimmick see's the attached drawings as the only viable contruction joint layout to comply with all set forth specifications. Please advise if the mat slab, foundation wall, and lower concourse construction joint layout is acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

RFIs shall be used for interpretation or clarification of the Contract Documents. RFIs requesting acceptance of items required to be submitted through the submittal process are inappropriate for the RFI process and will be rejected.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0349.1	BGP - Construction Joint Layout	Closed	11/26/2012	12/06/2012	12/07/2012	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Per specification 03 30 20.3.2.A.3 the maximum construction joint spacing in the mat slab is 120 feet (E/W direction), 3.2.A.4 maximum construction joint spacing in the foundation wall, lower concourse slab, ramp slab, interior walls, and the ground floor concrete slab is 60 feet. Foundation wall, lower concourse floor slab, and ground floor construction joints shall align with the location of the mat slab joint below and 3.2.B.1 construction joints in floor slab shall be located within the central third of the span.

Due to the beam configurations at the South West radius of the train box the following deviations from the aforementioned requirements will be required:

1.) A construction joint will need to pass through a Moment Frame Beam along Grid Line X near Grid Line H in the attached sketch.

2.) Slab construction joints at two locations will not align

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Q1.) Contractor-proposed construction joint through the Lower Concourse MF beam is acceptable provided it is located in the middle third of beam span.

Q2.) Construction joints shall align with mat slab and wall construction joints.

Additional comments:

A.) The mat construction joint at GL 1-J shall align with a wall construction joint.

B.) Include overlay of trestle pier layout in formal joint layout submittal.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

with the mat slab or wall construction joints along the radius wall between Grid Line Wand Grid Line 5.

Please confirm these proposed deviations would be acceptable pending evaluation of a full contract joint location submittal.

T-0350 **BGP - Mat Slab Penetration Waterproofing** **Closed** **11/21/2012** **12/01/2012** **11/28/2012** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Specifiction Reference: 07 12 10
Drawing Reference: A1-8711

Please reference Drawing Sheet A1-8711, Laurenco E-Mail and Stamped Shop Drawing Details. Penetration details on drawing sheet Al-8711 call for 4 inch wide butyl tape to wrap around the mat slab penetrations prior to pouring of the mud slab. The specifications call for all shop drawings to bear the manufacturer's stamp of approval. Laurenco (manufacturer) has indicated that they require the butyl tape to extend 4 inches minimum past the top of the mud slab. Please review and advise as this does not match the as bid details.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

As recommended by the waterproofing manufacturer's (Laurenco) specifications and written recommendation for the waterproofing system as you outline in the RFI question, the TJPA representative does not object to extending the butyl tape 4 inches minimum past the top of the mud slab.

T-0350.1 **BGP - Mat Slab Penetration Waterproofing** **Closed** **12/06/2012** **12/16/2012** **12/13/2012** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Specification:07 12 10
Reference Documents: A1-8711

Futher to the engineers response to RFI T-0350, the extension of the butyl tape conflicts with the casings that are required around the dewatering wells, trestle piles, bridge piles, and pin piles. Please provide revised details at each of the aforementioned locations to accommodate

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For details 2, 3 and 5 on A1/8711 the butyl tape can extend 4" above the mud slab. However on details 4 and 6 on A1/8711 the butyl tape at the penetration does not 'tie off' on to the waterproofing membrane. For these details the waterproofing does not engage with the butyl tape at the mud slab penetration, the steel sleeve is in the same plane as the butyl tape, therefore the butyl tape cannot extend above the mud

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the extended butyl tape.

slab. The details will not be revised.

The Contractor's shop drawing submittal is to be revised to show the butyl tape's relationship to the waterproofing membrane and other elements of the assembly. Submit the revised shop drawing with manufacturer's recommended detail for the butyl tape for TJPA Representative review.

T-0350.2 **BGP - Mat Slab Penetration Waterproofing** **Closed** **12/20/2012** **12/30/2012** **12/21/2012** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Drawing: A1-8711

SCCI would like to confirm conversations concerning the Butyl tape and Mud Slab Penetrations. From the meeting held 12/19/2012, the design Engineer mentioned that the Butyl tape at the Mud Slab Penetrations does not serve as a waterproofing purpose, but rather a bond breaker between the concrete and the steel penetrating through the mud slab. Because of this, the Engineer stated the Butyl tape did not need to be extended above the Mud Slab and could stop at the penetration slab.

Please confirm.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

With the exception of the tie down WP detail 2/A1-8711, the Butyl tape at the Mud Slab Penetrations does not serve a waterproofing purpose, but rather a bond breaker between the concrete and element penetrating through the mud slab. On 2/A1-8711 the butyl tape does engage the waterproofing and must extend above the mud slab.

T-0351 **BGP - Grace Eclipse Floor 200** **Closed** **11/26/2012** **12/06/2012** **11/26/2012** **Potentially** ☐

Reference Specifications: 31 23 34 3.3 F
23 57 34 3.1 D
23 57 34 1.2 A.3

Per Specification 31 23 34, page 6, paragraph 3.3, F., soil is to be compacted to 95% maximum dry density. Specification 23 57 34, page 4, paragraph 3.1, D., S3H is

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per spec section 23 57 34 loose soil shall be used by the geothermal contractor to backfill the trenches where the HDPE ground loops are located to avoid any damage to the pipes during the process. Once the trenches have been backfilled per section 23 57 34 and the piping is protected the soil can be compacted as required by section 31 23 34.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

to backfill per IGSHPA with loose soil.

Please confirm S3H is to backfill the geothermal loop per IGSHPA standard section 23 57 34, page 1, 1.2, A. 3.

T-0356.1 **BGP - GEOTHERMAL - Loop Soil Compaction Conflict in Specifications** **Closed** **01/22/2013** **02/01/2013** **01/29/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

Please refer to attached excerpts from spec section 23 57 34, 31 23 34 and RFI response to T-0356.

The RFI response to T-0356 (SCI-017) requires the backfill of the trenches to meet specifications section 23 57 34 and 31 23 34. However, the two sections are in conflict with one another. Section 23 57 34-3.1, D, requires geothermal loop trenches to be filled with loose soil and then apply water to settle the loose soil. Section 31 23 34, notes that flooding or jetting with water is not allowed.

Therefore, the work sequence directed in RFI T-0356 to meet "...spec section 23 57 34 loose soil shall be used by the geothermal contractor to backfill the trenches where the HDPE ground loops are located to avoid any damage to the pipes during the process. Once the trenches have been backfilled per section 23 57 34 and the piping is protected the soil can be compacted as required by section 31 23 34..." are not feasible.

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Wetting of backfill not required.

Co-Author:

REQUEST:

Reference S1-3003:

The existing piles are to be wrapped with a 10 Mil polyethylene (for 30" & 36" sleeves) or 112" compressible material (for 48") slipsheet between the sleeve and the piles. Because of the minimal distance between the sleeve weld and the existing pile, the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to provide a 4" vertical break in the slipsheet at the sleeve joint to avoid burn damage.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

slipsheet at the weld locations will be damaged from the heat of the welding. Is this acceptable?

If the slipsheets cannot be damaged by the heat of the welding, can the slipsheets have a 3" or 4" vertical break in them at the locations of the vertical welds to avoid the bum damage? This would create two slipsheet breaks or gaps per pile penetration. Is this acceptable?

T-0362 **BGP - Wall Vertical Reinforcement at 3rd Level Bracing** **Closed** **01/07/2013** **01/17/2013** **01/11/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor Construction LP Robert Kjome

Co-Author:

REQUEST:

Reference Drawing: S1-3201
Reference Specification: 03 30 01

Please reference attached sketch of the shoring wall section and CD S1-3201.

To allow required access and sequencing for installation of the wall waterproofing and reinforcing steel, an additional row of type 2 mechanical couplers will be required on the back face walls directly below 3rd level of bracing.

This will allow the following:
1. "Blocking out" the waterproofing at the waler beam packing locations will be avoided.
2. Provide required access for waterproofing installation.
3. Reduce the time installed waterproofing is exposed on wall before concrete pours.

Please provide your approval of this additional row of couplers.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger 1/10/2013 Contractor-proposed additional row of type 2 mechanical couplers is acceptable.

Jeff Thiel 1/10/2013 Changes outlined in this RFI response shall be done at no additional cost to the owner.

T-0363 **BGP - Slab Penetration Sleeve Thickness** **Closed** **01/09/2013** **01/19/2013** **01/18/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Reference Drawings: A1-8711 and S1-3003

Plan sheet A1-8711 details all of the slab penetration sleeves to be fabricated of 3/8" steel. Plan sheet S1-3003 details only the pin pile, trestle pile, and 48" bridge pier sleeves to be fabricated of 1/2" steel. Please confirm that it is acceptable to fabricate all penetration sleeves of 3/8" steel like that shown on A1-8711.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The steel plate thickness shown on the Structural Sheet S1-3003 was revised from 3/8" thick to 1/2" thick as a part of Addendum #1. In addition, galvanization was called for. This change was incorporated into the IFC set.

For the Mat Slab penetrations not covered on sheet S1-3003, the 3/8" thick sleeve (with galvanizing) as shown on A1-8711 is acceptable.

T-0364 **BGP - WPM-1 ASTM 6769 & Blindside Waterproofing Application** **Closed** **01/15/2013** **01/24/2013** **01/25/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

Please refer to Specification 07 12 10 3.3 and Drawing 1/A1-8710.

Section 3.3 of the specifications require that all work be performed in accordance with ASTM D6769 (Application of Fully Adhered, Cold-Applied, Prefabricated Reinforced Modified Bituminous Membrane Waterproofing Systems). The WPM-1 vertical application (071210-1.1, A.2) is a blind-side WP application; however, the ASTM D6769 is written to address positive-side WP application.

1. Please confirm the blind -side WP application is covered under the ASTM D6769 requirement or provide the applicable ASTM requriement to perform the blind-side application.
2. Please confirm which section of the ASTM D6769 requirement is applicable to blind-side WP application.
3. The ASTM D6769 section 11.7 requirement to "backfill vertical waterproofing installation within 24 h of protective board installation..." isn't feasible due to the extensive work sequence to install concrete reinforcement, form and place the foundation wall. Please confirm this section of the ASTM requirement is not applicable to blind-side WP applications.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Paragraphs 11.4.1.1, 11.6 and 11.7 are not applicable to the blindside installation.

2. Paragraphs 11.4 1.1 through 11.4.1.4 relating to a one ply application are not applicable to the 2 ply vertical installation specified and indicated on this Project.

3. Paragraph 11.4.1.1, 11.7 is not applicable to blindside installation.

All other paragraphs apply where they do not conflict with the Project Specifications or the manufacturer's printed recommendations and specifications. In those cases, the Project and manufacturer's specifications are to be followed.

REQUEST:

Reference Specification: 22 13 01 , 3.2
Reference Drawings: P1-6001

In Section 3.2 C, Supports, the support spacing for all horizontal cast iron no-hub pipe is specified to be 10 feet maximum, and within 6 inches at each side of each joint; however, the support spacing for all horizontal cast iron hub and spigot type pipe is not provided.

Please provide the required support spacing for the horizontal cast iron hub and spigot type pipe.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The required support spacing for horizontal hub and spigot cast iron piping is the same as for the no-hub piping.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0369	BGP - REBAR - Headed Steel Bar Shear Conflict in Mat Slab	Closed	01/21/2013	01/31/2013	01/25/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to attached drawing S1-3005 and S1-2022.

Detail 3 on sheet S1-3005 depicts the full size T-head bars as they interface with the mat reinforcement. The same detail includes additional reinforcement depicted at column locations. The reinforcement (open circles) is shown between the typical main mat reinforcement and others are aligned with above layers one and two of the main mat reinforcement as defined in note 4 and 6 on sheet S1-2002. As a result, the clearances created by the #10 main mat reinforcement being spaced at 8" O.C. and the 3" square heads at the ends of the #8 T-heads (refer 2/S1-3005) do not allow enough of a clearance to install the headed bars into position. Refer to the annotations in the attached drawings.

Please advise.

SUGGESTION:

Gerdau proposes to place the added reinforcement directly in line and above the main mat reinforcement in both directions as required. The suggested proposal may require several additional layers of steel to accommodate the total quantity of added bars at each column. Furthermore, it is unkown whether another conflict is created at the column dowel T-heads.

ANSWER: **Accept Suggestion:** ☐

Contractor-proposed placement of additional mat bottom rebar to an upper layer is not acceptable. Placement of the vertical headed bars is construction means and methods. However, it is acceptable to move the additional mat bottom rebar horizontally a maximum of 3/4", as required.

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

Specification Section 07 12 10, 3.2

The concrete surface profile (CSP) required by the waterproofing manufacturer Laurenco, ranges between a CSP level of 2 and 4 as defined by the International Concrete Repair Institute (ICRI) of technical guide "Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, and Polymer Overlays." The ICRI defines the levels of CSP as 1 (nearly flat) to CSP Level 9 (very rough). The Laurenco waterproofing system requires "a good wood screed or broom finish...often referred to as a 'sidewalk' finish..Do not use a steel trowel finish." See attached excerpt of the manufacturer specification.

1. Please confirm the ICRI CSP requirements as it relates to surface finish, flatness and levelness are to supersede the varying ASTM F-value requirements setforth in specification section 033000-3.6, B1 or provide a revised specification section 033000 incorporating the ICRI

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. ICRI CSP requirements are not appropriate for the mud slab. The mud slab in being poured, not repaired. The International Concrete Repair Institute CSP scale is used for existing concrete surfaces when they are being acid etched, ground or shotblasted. The appropriate finishing for the mud slab is described in the BGP Specification 03 30 00 Cast in Place Concrete 3.6 Concrete Finishes and calls for compliance with the American Concrete Institute concrete finish recommendations ACI 302.1R and ACI 304R, with dimensional tolerance limitations given by ACI 117.

2. Specification 03 30 00, 3.6 C stipulates: Finish for monolithic slab surfaces to be covered with membrane i.e. the entire mud slab is covered with membrane, is to be a Float Finish. Note that 3.6 C. 1.d for Float Finish has the same finish surface values as 3.6 D. 3., which is the finish for Pedestrian Sidewalks and

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

requirement.

2. Please confirm a wood screed or broom finish is accpetable for the mud slab.

Ramps and this criteria is compatible with the Waterproofing Manufacturer's requirement for a good wood screed finish (a good "sidewalk" finish).

No revisions to the specification are required.

T-0371 **BSE - Micropile W154 & W236 Bent After Install** **Closed** **01/22/2013** **02/01/2013** **01/29/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Specification: 31 63 33
Reference Drawings: Sheet ML-1 (Approved Micropile Layout submittal.)

The top 5ft of micropile W154 is out of plumb by approximately 8% and micropile W236 is out of plumb 2.5%. It appears that the piles have been hit by a piece of equipment and bent near subgrade. BBII recommends the piles should be left as-is. Please confirm this is acceptable.

BBII will take steps to ensure this does not happened again. The importance of taking special care to avoid damaging permanent work will be an emphasized topic in tool-box talks for crews running equipment near micropiles.

In the event that a micropile becomes bent in the future, please provide the design teams percentage of tolerance that the micropile can be out of plumb.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Any micropiles that have experienced an impact shall be rejected and re-drilled in new locations. Contractor to submit new locations.

T-0371.1 **BSE - Micropile W154 & W236 Bent After Install** **Closed** **02/04/2013** **02/14/2013** **02/06/2013** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Ref: Specification Section 31 63 33 3.2.L

BBII is in receipt of reply to RFI T-0371, which suggests that piles which have experienced an impact be rejected and re-drilled. Acceptance of piles is based on specification 31 63 33 3.2.L. Per the recommendation of the Micropile Engineer (Drill Tech's Steve McCullough) and the anchor bar manufacturer (DSI), the piles were bent back to plumb and retested on 02/01/2013. Attached are the passing proof test results for the piles in question. Please confirm that these piles are accepted.

The piles are confirmed to be Rejected and shall be replaced with new piles. The concerns include, but not limited to, the following:
* de-bonding of bars and grout
* cracking of the grout that may compromise its ability to provide corrosion protection of the bar
* the ULTIMATE uplift capacity of the pile might have been compromised, which cannot be verified by the proof test

Unless the contractor can provide sufficient evidence that addresses the concerns listed above and approved by TJPA, the piles shall remain as Rejected. It should also be noted that the contract documents call for a coupler at the mud slab level to allow the projected portion of the bars be dissembled to avoid the exact problem. If BBI cannot prevent the micropile from being hit again, BBI shall install the coupler as shown and take down the portion of the bar above the coupler as soon as the pile is proof tested and re-install the bars above the coupler at a later time.

T-0371.2 **BSE - Micropile W154 & W236 Bent After Install** **Closed** **02/08/2013** **02/18/2013** **02/11/2013** **Potentially** ☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

BBII is in receipt of reply to RFI T-0371.1, which confirms that piles W154 and W236 are rejected. Per response to RFI T-0371, BBII proposes piles W154R1 and W236R1 be drilled at the locations on the attached drawing. Piles W154 and W236 will be cut off at bottom of mud slab and the mud slab blackouts poured back.

Please confirm that these pile locations and method of pile abandonment are acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Thornton Tomasetti does not object to new locations of micropiles W154R1 & W236R1 as proposed, as well as the method of abandonment for piles W154 & W236 as proposed.

T-0376	BGP - Column Spiral Reinforcing in Lieu of Individual Ties	Closed	01/24/2013	02/03/2013	01/30/2013	Potentially	☐

From: Webcor Construction LP Joanne Filipas **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference S1-3300 & S1-3304

Gerdau is requesting the use of spiral reinforcing in lieu of the #6 individual stirrups/hoops that are shown on contract drawings Sl-3300 and Sl-3304 detail 1 for column types B1, B2 and B3. The spiral reinforcing would be #5 and maintain 3.5" pitch for the B1 column, 3" pitch for the B2 column and 4.5" pitch for the B3 column. Please confirm the use of spiral at the pitch indicated is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The size/spacing proposed by the contractor does not meet the volumetric ratio of spiral or hoop reinforcement requirement in ACI 318 therefore the request is declined in current form. For columns C10 and C11, if the contractor prefers to use #6 spirals with the spacing specified for column ties in Sheet S1-3300, that is acceptable to the SER. The tightest spacing specified in S1-3300 along the column height shall govern.

If spiral reinforcement is used for Column C12, the size and pitch of the spiral shall be #5 and 3", respectively, for the full column height.

In addition, if spiral reinforcement is used, detailing requirements in ACI 318 Section 7.4 shall be fully met.

Co-Author:

REQUEST:

Ref: Submittal Pakage TG0601-009.1 - 235734-003.1

Upon staking layout of micropiles in Northwest corner of Zone 1, BBII discovered two micropiles that require relocation.

1. Pile W013 is too close to installed dewatering well. BBII proposes moving this pile 4' Southwest. This does not appear to conflict with Ghex shop drawings revision date 02/04/13.
2. Pipe W198 is too close to overhead struts and strut supports. BBII proposes moving this pile 2' Northwest. This appears to eliminate the need for a "jog" in the Ghex piping as shown on Ghex shop drawings revision date 02/04/13.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Thornton Tomasetti does not object to moving micropiles (W013, W198, W031, W047) as proposed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Upon drilling two piles in the NW corner of Zone 1, Drill Tech discovered unforeseen obstructions below grade (reference COM1741 sent 02/04/2013). Relocation of these micropiles is required.

1. Pile W031 encountered an obstruction below grade which did not allow installation of the anchor bar in the drilled hole. After discovery of the obstruction, the pile was relocated 2' Northwest of its
planned location. Installation of the micropile was completed on 02/01/2013. This does not appear to conflict with Ghex shop drawings revision date 02/04/13.
2. Pile W047 encountered an obstruction below grade which did not allow the micropile hole to be drilled past approximately 12'. BBII proposes to relocate this pile 2.8' Southwest. This appears to conflict with Ghex piping shown in Ghex shop drawings revision date 02/04/13 and may require the addition of a "jog".

Please confirm these changes are acceptable.

Co-Author:

REQUEST:

Ref: Specification Section 03 30 20 1.7.F.3.i

Please reference attached ACTM C 157, pages from SEONC San Francisco Bay Area Concrete Aggregate Report 2008, and Specification Section 03 30 20- 1.7.F.3.i. ASTM 157 section 4.3 states that if the condition of mixing, curing sampling and storage other than specified in the test method are required, they shall be reported but are not to be considered as standard conditions of this test method. In section 6. Sampling, it requires samples from

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The project specification specified that the shrinkage tests shall be in accordance with ASTM C157 with modified SEONC Recommendations.

It is recognized that the field sampled tests will not necessarily correlate closely with the trial batch test results, which should be anticipated before bidding.

In accordance with SEONC, field sampled test will be used for the evaluation of the specified limits as

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

batches made in the laboratory and the Note 2 states that field cast specimens can show up to twice as much drying shrinkage as laboratory cast specimens from the same materials and proportions. Furthermore, SEONC 2008 states that "actual shrinkage of the concrete in service and in field-cured tests will not necessarily correlate closely with the trial batch test results." For these reasons SCCI believes that shrinkage tests from samples at the job site can not verify the
specified shrinkage limit and can not be compared with the laboratory tests.

Please confirm that shrinkage results from the samples taken in the field will not be directly compared to laboratory tests, and consequently used as basis for rejection of material.

specified. However, rejection of a concrete pour will not be based on shrinkage test of field samples alone.

T-0390 **BGP - Floor Drain FD-1 Clarification** **Closed** **02/12/2013** **02/22/2013** **02/20/2013** **Potentially** ☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Ref: P1-0051

The "Drains and Cleanout Schedule" on drawing P1-0051 calls Floor Drain FD-1 to be Mifab F-1000-S with a grate size of 6" in diameter. Per the manufacturer, F-1000-S has a square grate.

1. Is the floor drain grate to be round with a 6" diameter or square?
2. If it is square, then what are the dimensions of the square grate?
3. The remarks for FD-1 specifies a "Clamping Device." Is the "Clamping Device" referring to a membrane clamp?

Please advise

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. The floor drain grate is square.
2. The square grate dimensions are 6"x6".
3. Yes. This floor drain will be used extensively throughout the project. The membrane clamp will be used where there is a membrane.

T-0391 **BGP - Zone 2 Sump Pit Depth** **Closed** **02/13/2013** **02/23/2013** **02/19/2013** **Potentially** ☐

Reference A-2224 and A-0022

Sheet A-2224 shows future CMU partition walls as type .6. Per the masonry partition schedule there is no .6 type.

Please confirm these walls are partition type 6.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐
We confirm these walls are partition type 6. Note for all CMU wall type tags on the drawings showing a dot prefix e.g. .6, the dot is to be ignored.

T-0393 **BGP - Reinforcement anchoring stagger and clearance for "addl bottom bars"** **Closed** **02/15/2013** **02/25/2013** **02/27/2013** **Potentially** ☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:
Reference 3/S1-3006

1. Confirm there is no stagger for the reinforcement anchoring.
2. Provide the minimum clearance for the reinforcement anchoring to the "addl bottom bars".

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐
1. Confirmed, no stagger for bottom of column vertical bars.

2. The column bars extend down to (sit on top of) the mat bottom bars (and "addl bottom bars").

T-0394 **BSE - Micropile Relocations at Beale Street** **Closed** **02/19/2013** **03/01/2013** **02/22/2013** **Potentially** ☐

Co-Author:

REQUEST:

Ref: P 1-0051

The "Drains and Cleanout Schedule" on drawing P 1-0051 calls for Floor Sink FSK-2 to be Mifab FS 1700-1 -FLC-5. This model is not available per discussions between SCCI and the manufacturer.

Please confirm required floor sink model.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to the attached cut sheet.

T-0396 **BGP - Curb Frame Steel and Anchor Clip Requirements** **Closed** **02/19/2013** **03/01/2013** **02/28/2013** **Potentially** ☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Ref: 8/P1-6001

Detail 8 on drawing PI-6001calls out a "Heavy duty galvanized steel custom made curb frame embedded in concrete." Please provide the following information:

1. Thickness of steel for curb frame.
2. Anchor clip details (size, spacing, connection to curb frame).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. The curb frame thickness is 5/8".

2. The anchor clips are 2"x 6"-2", they are welded to the frame. There will be two anchor clips on each side of catch basin/pit.

This are minimum requirements for the custom made curb frame. Contractor to submit shop drawing for review.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0396.1	BGP - Drainage Pits Embedded Frame Details and Curb Frame Steel and Anchor C	Closed	03/04/2013	03/14/2013	03/08/2013	Potentially	☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Ref: 8/P1-6001, DS-0001, RFI # 396

Detail 8 on P1-6001 does not specify the thickness of the frame material, nor any of the Specs and Addendums. Based on RFI 396, Designer specified for the frames to be 5/8" thick. However SCCI believes that ¼" thick frame is adequate to satisfy "heavy duty requirement". SCCI's has estimated the Work to fabricate the embedded grate frame out of the stock angles (2x2x¼" and 3x2x¼"), per attached SCCI's drawing DS-0001. Further to RFI 396, please answer the following:

1. Can stock angle sizes noted above be used for construction of the embedded frames?
2. Could Nelson studs be used in lieu of the anchor clips, as noted on the attached drawing?

Please note that increase of the material size consequently increases the cost of furnished material, and therefore will constitute a compensable change.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. The required thickness of the frame material is 3/8" and not 5/8" as previously provided in response to RFI T-0396. The construction of the frame is very clearly shown in detail 8/P1-6001. Welded stock angle iron is not acceptable.

2. Nelson studs can be used in lieu of anchor clips.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0396.2	BGP - Drainage Pits Embedded Frame Grates	Closed	03/22/2013	04/01/2013	04/01/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Filip Filipic

REQUEST:

Reference Specification: 23 13 01
Reference Drawings: P1-6001
Reference RFIs: T-0396, T-0396.1

Detail 8 on CD P1-6001 does not provide enough details for assembly and fabrication of the embedded frames. SCCI's drawing attachment in the RFI 396 series provides such details.

As per our discussion with the SER(Structural Engineer of Record) on 3/21/2013, see attached revised SCCI's drawings of the embedded grate assemblies. As discussed SCCI has revised the weld detail between the two angles to be used to fabricate the embedded frames. Weld is changed to T-joint, PJP double bevel groove weld per AWS D1.1 (references 8-56, table 8-2 from AISC Steel

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The construction of the embedded frame is clearly shown in detail 8/P1-6001 as a formed frame. The proposed assembly including two angles with double bevel groove weld is acceptable. Contractor to provide submittal for frames and grates.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Manual 13th ED.)

Is it acceptable to construct the embedded grate frames per attached detail?

T-0397 **BGP - RCW Dimension Clarification** **Closed** **02/21/2013** **03/03/2013** **02/28/2013** **Potentially** ☐

From: Webcor Construction LP Joanne Filipas **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference A1-2123 and attached.

Between gridelines 12-13 and G-H there appears to be two conflicting dimensions. Please confirm the 7'3" dimension is from gridline H to the work the point.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

On A1-2123, between gridlines 12-13 and G-H, we confirm the 7'-3" dimension from gridline H to the work point is correct. The dimensions are not conflicting. The 7'-1 3/8" dimension from gridline H is to the South West corner of the train platform knee wall. The platform is curved, which accounts for the slight difference in dimension between the corner and the work point.

T-0398 **BGP - Vehicle Ramp Concrete Corbel Dimension** **Closed** **02/21/2013** **03/03/2013** **02/28/2013** **Potentially** ☐

Co-Author:

REQUEST:

Reference S1-3010, A1-8881, & A1-8882

The detail 4/S1-3010 does not appear to be coordinated with the details shown on A1-8881 and A1-8882. Please revise accordingly.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

We have reviewed the structural and architectural details for the Seismic Joint on GL 35. Attached SKA-2594 and SKA-2595 show the coordination modifications made to drawings A1-8881 and A1-8882, which will be issued with the next Below Grade Package ASI.

S1-3010 compared to A1-8881:

1. 4/S1-3010 does not include/detail part of the seismic joint below the 5' Mat Slab (these parts was shown on Architectural details).

2. 4/S1-3010 shows deformed bar anchors welded to the joint where as A1-8881 details shows different embeds. Embed anchors have been removed from the architectural drawings as anchoring / attachment is per the structural drawings.

3. 4/S1-3010 shows plate with hole to fully cover top of curb of gutter where as architectural details shows the plate with equal length same as other side of seismic joint, this has been adjusted.

4. Note that the water stop injection hose locations have been adjusted.

S1-3010 compared to A1-8882:

1. Dimension on A1-8882 should be 3'-0" instead of

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

2'-11 5/8". I will adjust dimension on sheet.

T-0401 **BGP - Dimension Clarification between Column and Slab at Ramp** **Closed** **02/21/2013** **03/03/2013** **02/28/2013** **Potentially** ☐

Co-Author:

REQUEST:

Reference 4/S1-3210 and attached.

Please provide dimension between the ground level slab and parapet wall footing.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The gap width dimension is specified on plan S1-2310.

T-0403 **BSE - Mud Slab Flatness and Levelness Testing** **Closed** **02/21/2013** **03/03/2013** **02/27/2013** **Potentially** ☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference: 03 30 00 3.6.C.1.d

In follow up to the Turner's request, please confirm this specification section does not apply to the mud slab and no flatness or level testing is required.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Though flatness or levelness of all concrete pours is expected, FF and FL testing of the mud and protection slabs using special inspectors is not required.

The mud slab is to have falls to drain, as suggested by Webcor, for water management during construction. Also, it is important that the mud slab does not have step-offs or alignment issues between pours that

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

would create voids or cause the waterproofing membrane to tent.

T-0404 **BGP - Replacement of Lap Splice with Mechanical Couplers** **Closed** **02/22/2013** **03/04/2013** **03/06/2013** **Potentially** ☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Ref: S1/3201

Please verify that it is acceptable to replace a lap splice with an approved mechanical coupler (500 series coupler) as needed to support the means and methods of construction. The current location being considered is the outside face wall vertical lap splice between the dowel extending from the mat slab and the typical wall vertical reinforcing at the bottom of the wall. See attached plan sheet S1-3201 to reference the proposed location. Should this be acceptable please verify:

1. The mechanical coupler can infringe upon the 2" clearance as the diameter of the coupler is greater then that of the actual reinforcing.
2. Also verify that the couplers can be installed at one typical elevation similar to that of the other couplers depicted on the inside face wall curtain.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to replace the lap splice with an approved Type 2 mechanical coupler, however, the clear cover to the coupler shall not be less than 1.25" with a tolerance of minus 0".

T-0404.1 **BGP - Replacement of Lap Splice with Mechanical Couplers** **Closed** **02/22/2013** **03/04/2013** **03/27/2013** **Potentially** ☐

The cap would maintain a 135 degree hook on one side and 90 degree hook on the other and placed in an alternating fashion.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The inquired stirrups are for beams that are not in the TG06 package. There is a note on the detail that states "This Detail For Reference

---

T-0409 **BSE - Micropile W226 Relocation (Due to Overhead Obstruction)** **Closed** **02/27/2013** **03/09/2013** **03/04/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Balfour Beatty Infrastructure, Inc. Brandon Miller

REQUEST:

Reference Specification: 31 63 33
Reference Dwg: Attached sketch

Micropile W226 as laid out does not have adequate overhead clearance to be installed. BBII proposes moving Micropile W226 North 12' to provide adequate clearance. An alternate relocation position for Micropile W226 could be 4' East and 4' North.

W/O recommends relocating the micropile North in order to avoid conflict with geothermal.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Shifting W226 north 12' as proposed is acceptable provided W227 will also be shifted 2' north (otherwise W226 and W227 are too close together).

Shifting 4' East and 4' North (5.66' Northeast) is not acceptable as this proposed location would conflict with the mat shear reinforcement.

T-0409.1 **BSE - Micropile W226 Relocation (Due to Overhead Obstruction)** **Closed** **03/04/2013** **03/14/2013** **03/05/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Specification Reference: 31 63 33
Specification Drawings: Attached BBII sketch

Micropile W226 as laid out does not have adequate overhead clearance to be installed. BBII previously asked to move the pile 12' North. BBII understands that this location would be too close to pile W227 which is already installed. BBII now proposes to move the pile 10' North and 1' West. This does not appear to conflict with geothermal piping.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Thornton Tomasetti does not object to relocating micropile W226 as proposed (10' North and 1' West).

T-0410 **BGP - Lower Concourse Top of Slab between Gridlines 3-9** **Closed** **02/27/2013** **03/09/2013** **03/05/2013** **Potentially** ☐

12/10/10 Issued for construction BSE drawing S1-3201 shows lower concourse top of slab to be 8'-8" between gridlines 3-9. 11/27/12 Issued for construction per ASI 100 BGP Drawings S1-2202 and S1-2203 shows lower concourse top of slab to be 5'-5" between gridlines 3-5 & 8-9. Gridlines 5-8 shows top of slab at 5'-10".

Please verify the elevation of the lower concourse top of slab between gridlines 3-9.

between gridline 6-8 and not 5-8 as the RFI states.

T-0411 **BGP - Welding for Pentration Sleeves** **Closed** **02/28/2013** **03/10/2013** **03/08/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor Construction LP Robert Kjome

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

Reference Specification: 05 50 10
Reference Submittal No: TG0600-036

Per the Submittal TG0600-036 comments, the intermediate ring, 3" horizontal weld must have a removable backer bar. Is it acceptable to have a double beveled groove weld replace the single bevel groove with a back bar? Eliminating the backer bar in this weld and having a double beveled groove instead is more efficient.

Secondly, the Submittal TG0600-036 comments address the field welding of the penetration sleeve collars to be conducted after the trestle pile is to be removed. Is it acceptable to weld a full collar with cap in the shop? The assembly would arrive onsite to be welded in place as originally intended by the designer.

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. At intermediate ring, for 3" horizontal weld, contractor may substitute double beveled groove weld to replace single bevel groove with back bar, as proposed.

2. However, the contractor's proposal to pre-assemble the collar ring and the cap plate in the shop is not acceptable. The contract documents indicate that the collar ring and cap plate are two separate pieces to be sequentially field-welded into place. The collar ring is first field welded to the sleeve, and then secondly the cap plate is field welded to the collar ring. The contractor's proposal to pre-assemble the collar and cap into one unit makes it impossible to field weld the collar/cap assembly onto the sleeve because there will be insufficient clearance for welding (mat rebar will already be placed and the mat concrete poured with only a small blockout surrounding each sleeve, making it impossible to weld any pre-assembled collar/cap onto the sleeve from the outside). While this construction sequence is ultimately a construction sequence and means and methods issue that should be commented by W/O, it is the opinion of the design team that contractor's proposal is not feasible.

7/P1-6001

Per the response to RFI T-0414 (SCCI RFI #55), the EOR states the following:
"Penetrating through the protection slab is not acceptable. Contractor shall submit information to TJPA Representative describing how the installation will occur to ensure the attachment system and work method will not penetrate the protection slab and impact the waterproofing system."

SCCI proposes the following:
The pipe support assembly will be anchored to the Protection Slab with the use of 2 ea- 1/2" diameter Hilti KWIK Bolt TZ or Hilti KWIK Bolt 3 expansion anchors. Holes will be drilled to the manufacturer specified minimum required hole-depths of 2-5/8". In order to prevent over-drilling through the 4" Protection Slab and damaging the waterproofing membrane, SCCI will use roto-hammers equipped with depth-gauges (see attached information for Hilti TE-50 manual). The depth-gauges will be set prior to drilling and checked periodically during drilling operations.

Please confirm if this is acceptable. If this is not acceptable, then please provide complete design details for Detail 7 on P1-6001

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is acceptable for 4" thick protection slab. However the protection slab slopes and from 4" max. the thickness becomes much less at lower points. In this case, the drilled hole is getting too close to the membrane and a pipe support with a grouted plate at the bottom will have to be used.

Contractor to develop a protocol to verify the depth of the drilled holes at all locations and submit for review.

T-0414.2	BGP - Cast Iron Pipe Support	Closed	05/02/2013	05/15/2013	05/13/2013	Potentially	☐

From: Webcor Construction LP Ian Corcorran **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Andy Khuu

REQUEST:

Reference: RFI T-0414 and T-0414.1

Per the response to RFI T-0414.1, the Designer states that the protection slab will be sloped with a 4" maximum slab thickness. SCCI does not plan to pour the protection slab with a slope. SCCI plans to pour the protection slab level and keep the protection slab consistently 4" thick.

The Designer suggests using a pipe support with a grouted plate for scenarios where the drilled holes may get too close to the membrane. It would appear that grouted plate would still require some type of embedded anchor. By adding the grout, the manufacturer's embedment depth for the anchor is shortened and the tensile (pull-out) strength will be reduced.

An alternative method to anchoring the pipe supports would be the use of 1/2" short drop-in anchors (see attached Red Head Multi-Set II information) which requires 1" of embedment into concrete. The holes would be drilled using a Depth Charge drill bit which is a 1" long bit with a shoulder to prevent over drilling.

Confirm if this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposed attachment method is acceptable.

T-0416	BGP - Geothermal Loop Pneumatic Testing Pressure	Closed	03/01/2013	03/11/2013	03/06/2013	Potentially	☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Per specification 23 57 34, 3.2, C

Per specification 23 57 34, 3.2, C, all individual loops shall be pressure tested at 100 PSI for 30 minutes before installation. The moisture content from the Hydrostatic test of the loop can compromise the fusion weld. As discussed in the DFOW meeting, S3H is recommending pneumatic testing of the pipe at 80 PSI. Upon complete installation of the loops and header piping, the complete sub group will be hydrostatically tested as specified. Please see attached documentation from Manufacturer regarding Pneumatic Testing and confirm pneumatic testing is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Pneumatic Testing to 80psi is acceptable.

T-0419	BGP - Foundation Walls Formwork Ties	Closed	03/07/2013	03/17/2013	03/12/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

Reference Specification: 03 10 00 2.2.B.7.E
Reference Drawings: See attached sketchs.

Please reference attachments and Specifications Section 03 10 00 2.2 B.7.e: "when removed, ties shall not leave holes larger than one inch diameter in concrete surface".

For the foundation walls formwork SCCI would like to utilize concrete inserts that will be used in subsequent concrete lifts. See attached sketches for conceptual/preliminary formwork design. Concrete inserts need to be rated for up to approximately 35 kips SWL (safe working load). As a result of this, the concrete ties need to have 1.5" to 2" outside diameter.

For the formwork involved with the 3ft thick foundation walls SCCI requests variance from the specifications referenced above and be able to use these bigger form ties. For all other interior walls including the shear walls, SCCI will comply with the Specification referenced above.

Is this acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The use of any type of form tie/insert for the foundation wall is prohibited per specification 03 10 00 B.5 and B.7.a.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0419.1	BGP - Foundation Walls Formwork Anchors	Closed	03/14/2013	03/28/2013	03/26/2013	Potentially	☐

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference RFI: T-0419
Reference Specification: 03 10 00-2.2 B.8.A, ACI Formwork Manual

There has been a misinterpretation of the specifications that were used to classify the referenced RFI No. 419.

Concrete inserts intended for use with wall formwork design depict Specification Section 03 1 0 00 2.2 B.8.A "Anchorages".

Per ACI Formwork Manual: "A concrete form tie is a tensile unit adapted to holding concrete form secure

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It will be acceptable to use these contractor-proposed concrete formwork anchors.

Form anchors are not to penetrate full depth of the concrete wall.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

against the lateral pressure of unhardened concrete, with or without provisions for spacing the forms to a definite distance apart, and with or without provision for removal of metal to a specified distance back from the concrete surface." (ACI Formwork Manual 4-35)

"Form anchors are devices used to secure formwork to previously placed concrete of adequate strength; they are normally embedded in concrete during placement." (ACI Formwork Manual 4-36)

To reiterate, SCCI intends to utilize concrete inserts/anchors per attachments to secure and anchor the wall forms in place. Use of concrete inserts/anchors will leave 2" hole that will be patched once the form system is removed.

Is this acceptable?

T-0420 **BGP -Geothermal Loop Air Pockets** **Closed** **03/06/2013** **03/17/2013** **03/11/2013** **Potentially** ☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Ref: M-0006

Per contract, the geothermal lines are to run below the elevator and sump pits. This will cause a difference in elevation across the a geothermal pipe loop. This will create high points in the loop for bodies of air to gather or get traped. These air bodies or pockets can coalesce in stagnant water and potentially compromise the hydraulic stability. Typically air elimination systems are implimented at high points to remove these bodies of air after the initial flush/blowout.

Please advise how to handles these bodies/pockets of air.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

WSPFK Response: Air elimination devices are not feasible in a ground loop. Manual air vents will be provided inside the building in a future package.

T-0421 **BGP- Geothermal CDSM Grout** **Closed** **03/06/2013** **03/17/2013** **03/13/2013** **Potentially** ☐

Co-Author:

REQUEST:

Reference Drawings: S1-2024,S1-2027, 7/S1-3010, A1-2817
Reference Specificaiton: 31 00 00
Reference Submittal: TG0300-340.1

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed that BBII shall use the revised 20'-3 3/4" dimension, enlarging the pit equally to the north and south as stated on the submittal.

2) The dimensions noted for the GL35/C pit in returned submittal TG0300-340.1 are not new

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

The response to Mud Slab Rebar Shop Drawings Submittal TG0300-340.1/TA1020-32001A06.1 provided new dimensions for depressions in the trainbox subgrade. Per 00 07 00 Part 6.02.A, BBII would like to clarify which dimensions are to be used for construction.

1. Sheet MS-4 of submittal shows subgrade depression between Grid lines 18 & 19 between Gridlines B & C having dimension of 20 '-0' x 40'-4". This is consistent with the dimensions provided on sheet S1-2024 Revision 2 dated 11/27/2013. The review comment by TT revises the 20'-0" dimension to 20'-3". Please confirm which dimension is to be used.

2. Sheet MS-7 of submittal shows subgrade depression at Gridline 35 between Gridlines B & C as having dimensions of 22'-1 3/4" x 18'-6 3/4". This geometry is base on the size of the pit shown on A1-2817 Revision 1 dated 11/27/2012 and 7/S1-3010 Revision 0 dated 08/30/2012. The Submittal response comments provided show a new overall dimension of 19' -9" and a specific offset to Gridline 35. Please confirm which dimensions are to be used.

3. Sheet MS-7 of submittal shows subgrade depression between Gridlines 34 & 35 at Gridline E. TT comment calls out 3'-0" from eastern limit of depression to Gridline 35. This dimension was not provided on sheet S1-2027 Revision 2 dated 11/27/2012. Please confirm this dimension is to be used.

4. BBII understands that dimensions provided on this submittal are to bottom of Mat Slab concrete, and that each dimension should be increased to account for thickness of protection slab and waterproofing. Please confirm that an additional 0'-7" is the correct dimension for this adjustment.

dimensions. Rather, they are the same dimensions as communicated on A1-2817 Revision 1 dated 11/27/2012 and 7/S1-3010 Revision 0 dated 08/30/2012. The sloping regions of the bottom surface of the thickened mat shall slope at a 1 to 1 slope, and remain 5'-0" MIN from the interior pit boundary as noted on 7/S1-3010. Thus, with these constraints the bottom of mat thickening dimension will be as marked up in the returned submittal (16'-9" from GL 35 to the western limit of the GL35/C depression). The 3'-0" dimension is the dimension from GL 35 to where the 1 to 1 slope turns vertical at the expansion joint/edge of mat. Returned submittal and contract documents do not conflict.

3) Confirmed that BBII shall use the 3'-0" dimension to GL 35 as noted in returned submittal TG0300-340.1 for the eastern limit of the GL 34-35/E depression.

4) The perpendicular dimension from the underside of the mat slab to the top of the mud slab is 4 1/2". This is 4" for the protection slab thickness, plus a 1/2" for the waterproofing zone.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Reference Drawings: A1-8711
Reference Photo: Attached

Per plan sheet A1-8711 , Detail 3 & 6, the dewatering well and monitoring instrument pipes are plumb coming out of the mud slab. Additionally, these details do not show couplers or varying diameters on
the dewatering wells or monitoring instruments. Currently almost all of dewatering wells have varying diameters with couplers and are almost all out of plumb. The monitoring instruments also seem to be
out of plumb. To avoid the plumbness and varying dewatering well pipe diameter issues, is it acceptable to cut the dewatering well pvc pipe at or close to the mud slab elevation to avoid conflict
with the dewatering sleeves? How should SCCI handle the sleeves for the monitoring instruments that are out of plumb? Please advise.

No. It is not acceptable to cut the dewatering pvc pipe at or close to the mud slab elevation. The cut off must be well above the elevation of the waterproofing spiral wrap and ring plate.

The varying diameters and plumbness of each of the penetrating devices / pipes will require field measurement and shop drawings prepared showing adaptation of the sleeve detail to each unique situation.

T-0425 **BGP -Geothermal Trench Methods** **Closed** **03/08/2013** **03/18/2013** **03/19/2013** **Potentially** ☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Specification: 31 23 34 3.3 F

Per Coordination Meeting March 6, 2013, S3H Inc. is looking to install the geothermal loop at a depth of 2' below the Mat slab. After the loop installation, the trenches will be back filled with 8" of loose native soil to protect the pipe. This 8" lift will be watered to settle the loose soil around the pipe. Upon watering and settling of the loose 8" lift, the remainder of the trench will be backfilled with native soil and compacted to the relative density of the surrounding soil per specification.

Please confirm.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Item 1. F+K response: Depth of trench for geothermal piping shall be per mechanical drawings and specifications.

Item 2. Arup response: 8" of loose satisfactory soil material is per specification 23 57 34 paragraph 3.1.D.

Item 3. Arup response: The remaining backfill shall be compacted to 95% as required in the specifications.

T-0426 **BGP - Welded Wire Mesh in Sump and Elevator Pits** **Closed** **03/11/2013** **03/21/2013** **03/26/2013** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Robert Kjome

To: Turner Construction Compan Gary Krutsch

Answered By: Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

Reference Drawing: S1-3004

SCCI is requesting to use welded wire mesh (specification attached) at the sloped surfaces of the sump and elevator pits. The welded wire mesh will inhibit concrete settlement towards the bottom of the pits during placement. Please advise if this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Adding reinforcing into the protection slab is a means and methods proposal that falls under the Contractor's responsibility to work out issues related to this. If the Contractor elects to use reinforcing in the protection slab, he should bear responsibility for ensuing damage to the membrane should it occur. This includes use of inappropriate chairs as well as unrolling mesh with the wire ends facing down, traffic over the membrane during the installation, use of hooks to pull up the mesh and similar activities that could promote damage to the membrane assembly and subsequent leaking.

The membrane manufacturer should be apprised of the Contractor's intention to use the reinforcing insofar as it may affect the warranty. For record purposes, submit details and shop drawing for the protection slab reinforcing to the TJPA Representative (Architect). The proposal for this should be outlined in the waterproofing pre-construction meeting on March 27, 2013.

T-0435	BGP - Flame Cutting of Reinforcement	Closed	03/11/2013	03/25/2013	03/22/2013	Potentially	☐

From: Webcor Construction LP Ian Corcorran **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Andy Khuu

REQUEST:

Reference Specification: 03 20 00-3.1.6.A

Project specification section 03 20 00-3 .1.6 states "Do not heat or flame cut bars;" however, this statement is a subpart to section 03 20 00-3.1.6. "Bend bars cold." It is unclear if the statement regarding to heating and flame-cutting of bars exclusively applies to bending of bars. Please confirm that heating and flame-cutting for purposes other than that of bending of bars is permitted.

Also, please refer to the attached section from CRSI which states that flame-cutting of bars have no adverse effects on
reinforcement.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Heating and flame-cutting of bars is prohibited unless approved by EOR

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0435.1	BGP - Flame Cutting Follow-Up to RFI 435	Closed	05/02/2013	05/10/2013	05/14/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Andy Khuu

REQUEST:

Reference: RFI T-0435, 03 20 00-3.1.6.A

The response to RFI T-0435 indicated that heating and flame cutting of reinforcing is prohibited unless approved by the EOR and per further discussion about this matter with the engineer it was requested that specific applications be submitted for further review. The following is a list of those applications:

1. Penetrations in Slabs, Walls or Decks. Torch used to cut opening into reinforcing based on final asbuilt layout of penetration.

2. Support Bar. Torch used to trim or remove support/give-away bar due to conflict or other project need.

3. Column Rack/Crush Bar Removal. Torch used to remove rack and crush bars from columns to allow for tremie insertion and additional open space through center of column after column erected into place.

4.Unforeseen Conflicts. Project conflicts that are identified

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. From the 05/09/2013 W/OJV Assist Meeting, it was discussed the intention for the need to flame-cut at penetration openings was for trimming straight bars around mat openings or pit edges to achieve proper clear cover that will be spliced with an "L" bar as detailed in contract documents & reflected in the rebar shop drawings and that the use of cutters or saws are not applicable/practicable. It will be acceptable to trim the ends of the Mat and Lower Concourse slab straight bars at openings and pit edges via flame-cutting to achieve detail intent.

2 & 3. Handling of construction aids is means and methods and we do not have any comments.

4. See response to item 1 regarding what will be allowed. For the CDSM shoring wall pile conflict application, it was discussed at the 05/09/2013 W/OJV Assist Meeting that flame-cutting would not be required for necessary adjustments at the mat and that the edge mat bars could be slid inward as required. While we are in support of facilitating

during the course of work and require trimming or removal of reinforcing steel to correct condition. Example CDSM pile conflict.

Please confirm the use of a torch/flame is allowable for the applications listed above.

construction efforts, the term "unforeseen conflicts" is too vague to allow a blanket approval. If there are other repetitive and already known conditions that the contractor finds flame-cutting necessary, please submit for review with detailed description.

General comments:

A. Flame-cutting shall not damage the work of other trades, such as but not limited to: Waterproofing, formwork, etc.

B. Flame-cutting shall not compromise design intent of reinforcement detailing.

REQUEST:

Ref: Drawings S1-2052 through S1-2061, 1/S1-7004, 12/S1-7602, 3/S1-3006, S1-3004, S1 -3008.

Please reference attached drawings of Mat Slab openings and Embeds. Drawings S1-2052 through S1-2061 show the locations of openings in the Mat Slab. At gridlines 1.8-E on drawing S1-2052 there is an elevator opening. Detail 1 on Drawing S1-7004 is the elevator opening from S1-2052 and shows the opening having two L8x4xl/2 full length embeds at the Mat Slab. See Detail 12 on attached drawing S1-7602 for embed. S1-2052 and detail 1 on S1-7004 both have cut lines referencing Detail 3 on S1-3006 showing the Mat Slab Pit details at this location. There are additional elevator openings on drawings S1-2054, Sl-2055 and S1-2057. These" openings reference drawings S1-3004 and S1 -3008. Detail I on S1-7004 does not

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed, the only elevator pit that gets embedded angles is the one located at gridlines 1.8-E, and as shown on 1/S1-7004.

See the attached sketch SKS-0184, where the reference for the lengths of these embeds have been modified.

The other elevator pits referenced in this RFI are not fully constructed as part of the Below Grade Package, and the tops of these elevator pits and additional embedded angles will be installed in a future package that includes the train platforms.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

correspond to the openings on S1-2054, S1-2055 and S1-2057. Therefore, the only elevator opening that has L8x4xl/2 full length embeds on the Mat Slab is located at gridline 1.8-E.

Please advise if this is correct.

T-0439.1 **BGP - Mat Slab Elevator Opening Embeds** **Closed** **03/29/2013** **04/08/2013** **04/09/2013** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Jesse Dillon

REQUEST:

Reference Drawings: 7/S1-3410, S1-2202-2207, S1-2210, S1-2211

Please reference attached drawings of Concourse Level glass guardrail embeds and openings. Detail 7 on drawing S1-3410 is the typical PL 3/8x7 glass guardrail embeds for escalator and stair openings. The detail states that the guardrail embeds are continuous. It is unclear what the boundaries of the guardrail embeds are. SCCI has determined that no guardrail embeds are necessary at the opening locations where future CMU or concrete walls shall be constructed flush with the opening. Also, the guardrail embeds can be terminated at the escalator openings where the opening is reduced. Attached drawings Sl-2202 through Sl-2207, Sl -2210 and S1 -2211 show the limits SCCI has determined the glass guardrail embeds shall be installed. Please advise if these locations are accurate and the only locations the guardrail embeds shall be installed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The markups on the RFI sketches have interpreted the locations of glass guardrail embeds at openings correctly with the exception of GL 34 south opening where the west side of the opening does not have a future wall and will require a guardrail embed.

T-0440.1 **BGP - Glass Gaurdrail Embeds** **Closed** **08/05/2013** **08/15/2013** **08/16/2013** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Reference Specification: 03 30 20 3.2
Reference Sketch: CJ-03 (Mat Slab pour S112)

SCCI has revised the construction joint layout to address CJ submittal comments, and has modified locations of the CJ's to have all concourse CJ's line up with the wall CJ's, be under 60' long, and fall within center third of the span (as specified). As a result of trying to maintain the wall and concourse CJ's within the specified parameters one of the Mat slab pours (S112) will need to extend to 121', which is 1' over the specified length.

Is it acceptable to have pour S112 (that falls between grid lines 22 and 26) 121' long (East-West direction)?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Yes this is acceptable for pour S112.

Provide updated Construction Joint Layout submittal reflecting these changes.

T-0446 **BSE - Micropiles W390 & W393 Relocation (Overhead Obstruction)** **Closed** **03/18/2013** **03/28/2013** **03/19/2013** **Potentially** ☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Balfour Beatty Infrastructure, Inc. Brandon Miller

REQUEST:

Ref: Submittal TG0300-622.4 and TG0601-009.1

Micropiles W390 and W393 cannot be installed as laid out due an overhead obstruction. BBII proposes moving W390 West 16" to provide adequate clearance. BBII proposes moving W393 West either 10" or 2'-10" to provide adequate clearance. The proposed location for Micropile W390 will be South of the geothermal area. The proposed locations for Micropile W393 will be within the geothermal area; however, the proposed
locations do not appear to impact geothermal piping and the 12" minimum clearance between pipe and piling will be maintained (Note 4 on Geothermal Submittal sheet GT-Zone-02).
See attached sketch.
Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Thornton Tomasetti does not object to shifting Micropiles W390 and W393 as proposed.

T-0447 **80 Natoma Shoring Beam in Sump Pit** **Closed** **03/18/2013** **03/28/2013** **03/20/2013** **Potentially** ☐

Co-Author: Balfour Beatty Infrastructure, Inc. Kelly Phariss

REQUEST:

Reference RFI: T-0317.3
Reference Photo: attached

BBII has confirmed that the 80 Natoma H pile (shown in attached photo) has been demolished to the -44.5 ft required per Sheet D-2210 and RFI T-0317.3. Please provide depth that BBII must demolish the attached 80 Natoma H pile so not to conflict with geothermal piping.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

BBII IFC drawing D-2210 shows 80 Natoma Shoring wall to be removed to elevation -44'-6" also GT-2101 shows the Subgrade elevation of Pits to be -44'- 9" .

Deeper removal of the 80 Natoma wall beams are not required in order to allow clearance for the geothermal piping. The TG06 Contractor has taken these into account (Refer to Geothermal Loop Piping Submittals)

T-0448 **CDSM Soldier Pile Encroachment** **Closed** **03/19/2013** **03/29/2013** **03/27/2013** **Potentially** ☐

From: Webcor Construction LP Kirk Nielsen **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Documents: Exhibits A-H

In follow up to the 3/13/13 meeting with AAI and TT regarding the CDSM soldier pile (SP) encroachment WOJV's proposal for mat slab area #1 (Exhibit-A) is as follows:

Marked up sheets SH-2000 (Exhibit-B) and SH-2001 (Exhibit-C) depict the location of the encroaching SPs and the degree in which they are encroaching.

Predicated on SE stamped detail A/SLC.1 (Exhibit-D):

A. At (4) SPs 753, 761, 765, & 787, WOJV is proposing to decrease the wall thickness to 34-1/2" with #11 rebar spacing to 6" o.c. between the centerline of the (2) adjacent piles. For example, as depicted in SK-T-0448.1 (Exhibit-E) SP #753 encroaches 1-1/4". WOJV would reduce the wall thickness while reducing the rebar spacing to compensate for the reduced wall thickness to clear the encroaching SP as depicted in SK-T-0448.2 (Exhibit-F).

B. At SP 819 WOJV is proposing to decrease the wall thickness to 33 3/16" with #11 rebar spacing to 6" o.c. between the centerline of the (2) adjacent piles. Similar to above, as depicted in SK-T-0448.3 (Exhibit-G) SP #753 encroaches 2-3/16". WOJV would reduce the wall

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to reduce the foundation wall thickness with reinforcement spacing reduction as proposed for the 5 inquired locations.

Note that this is not a pre-approval for future conditions that may arise. W/O shall coordinate these approved modifications with shop drawing preparation.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

thickness while reducing the rebar spacing to compensate for the reduced wall thickness to clear the encroaching SP as depicted in SK-T-0448.4 (Exhibit-H).

WOJV did review the possibility of cutting the W21x201 flanges to accommodate the encroachment however, this high risk remedy was ruled out as it could jeopardize the project shoring system.

Please advise.

T-0448.1 **BGP - CDSM Soldier Pile Encroachment, mat areas 1&2 all levels (Exhibit-A).** **Closed** **04/26/2013** **05/06/2013** **04/26/2013** **Potentially** ☐

REQUEST:

Reference: Previous RFI #T-0448, Related RFI #T-0530.

Previous RFI response #T-0448 only addressed the impact of the encroaching CDSM soldier piles (SPs) on the first or bottom wall segments. This RFI addresses the encroaching SPs in mat slab areas 1&2 at all levels of wall. This RFI shall supersede previous RFI response #T-0448.

Please see attachment SK-1 for RFI T-0448.4 questions.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Foundation wall modification proposals 1-10 are not acceptable. Comments are as follows:

A.) This RFI supersedes RFI #T-0448. The proposed rebar scheme in this RFI differs from previously suggested solution without providing calculations that show proposed additional rebar compensates for reduction in moment and shear capacity of the foundation wall cross-section due to shoring encroachment.

B.) Reinforcement for knock-out walls (west of mat slab area #1) differ from those in typical foundation walls (e.g., see S1-2060 for section call out). Provide solutions for knock-out walls.

C.) Provide an elevation sketch that shows the proposed vertical extent and detail of added rebar.

D.) Lap splices are not allowed in additional rebar. Use Type 2 mechanical couplers.

E.) Provided generic cross-section detail is insufficient to show the actual location of the added rebar in plan. The extent of the applied options should be shown on plan for clarity.

F.) Reference SK1 is not included in this RFI.

G.) Maximum encroachment dimension provided for SP(s) #737-739 does not match maximum dimension provided in SK-2 and SK-3, please reconcile.

H.) Do not refer to a superseded RFI (in SK-3 comments column for pile 819).

I.) Coordinate all modifications with future shop drawings for TG06.

REQUEST:

Reference Documents: Exhibits A - G

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the South wall in slab area 1 & 2 as well as all levels of the encroachment into the foundation wall between CDSM piles 733 and 772. (Exhibit A)

Exhibit B & Exhibit C depict the location and degree in which the SPs are encroaching.

WOJV proposal: Between SPs 733 and 772 (which is the intersection of the South and West wall) WOJV is proposing to decrease the specified 36" wall thickness to 33 1/8" to clear all the encroaching SPs. WOJV would reduce the thickness while reducing the rebar spacing to compensating for the reduced wall thickness predicated on SE stamped Detail A/SLC.1 (Exhibit D) this modification would clear all the encroaching SP/steel plate issues between 733 & 772, See Exhibit E, F, & G.

This modification, if approved, would be incorporated into the TG06 shop drawings.

Please confirm if this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposed modification to foundation wall reinforcement is acceptable. W/O to coordinate these changes with TG06 contractor, including previously-approved mat rebar shop drawings for this zone.

Co-Author: Shimmick Construction Company, Inc Jesse Dillon

REQUEST:

Ref: RFI T-0453, AI-7401, SK-115

Please reference attached drawings. RFI T-0453 stated that the L8x8x1 1/8" shall be bent to match the angle at which the Vehicle/Bike ramp beams meet the wall. At the western most beam the acute angle at which the beam meets the wall is 56 degrees and the obtuse angle is 124 degrees. See attached marked up Contract Drawing AI-7401 for angle measurements. Bending the 1 1/8" thick legs of the L8x8 is not feasible and would structually stress the member. SCCI proposes to weld two 1 1/8" plates together to fabricate the angles. See attached drawing SK-115 for details. The additional two beam members shall be fabricated per the measured angles.

Please advise if this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to weld two 1 1/8" plates together to create the (2) angles for the western most beam, provided a complete-joint-penetration (CJP) weld is used.

T-0453.2 **BGP - Clarification of Vehicle/Bike Beam End Support** **Closed** **10/02/2013** **10/12/2013** **10/16/2013** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

Reference Specification:055010-3.2.C
Reference Drawings: S1-3003
Reference Photo: attached

Please reference Sheet S1-3003 of the Contract Drawings and Spec Section 055010-3.2.C SCCI spot checked two of the existing dewatering wells for plumbness and found them both to be approximately 3/4" over 48" out of plumb (see attached photos). With this existing condition, SCCI can not adhere to the plumbness tolerance (1/16") for installation and maintain the required 1/2" maximum gap between sleeve and casing per Section 2 of Sheet S1-

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For the existing dewatering wells, we will not object if the maximum gap between sleeve and dewatering well casing exceeds 1/2" for those dewatering wells found to be out of plumb.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

3003. SCCI suggests increasing the diameter of the sleeve and granting a variance on the 1/2" gap tolerance per Sheet S1-3003. SCCI will maintain adherence to the installation tolerances in Spec Section 05 50 10.

T-0455.1 **BGP - Dewatering Well Above Grade PVC Pipe** **Closed** **03/29/2013** **04/08/2013** **04/02/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

Reference Drawings: A1-8711

Per discussion in the pre-installation and preparatory DFOW meetings for the metal fabrication penetration sleeves, the PVC dewatering casing above the mud slab can be cut just above or at top of mud slab elevation to avoid varying diameter issues. Without the dewatering casing present above mud slab grade, the varying casing diameter issues and plumbness issues are solved. The to avoid debris entering the dewatering casing, the casing would not be cut until the penetration sleeve is to be installed. Please confirm per the discussions in the meeting that cutting the casing is acceptable. Please note that the grouting back of the dewatering casing shortly after the decommissioning of the dewatering pump will be uniform (without segregation) for both below mudslab elevation and above.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The description contained in RFI T-0455.1 is acceptable. Note that dewatering casings that require to be cut, should be cut above the top of mud slab (not at the top of mud slab).

T-0456 **BGP - Mass Concrete Temperature Monitoring Equipment Installation in MAT Slab** **Closed** **03/25/2013** **03/25/2013** **04/03/2013** **Potentially** ☐

REQUEST:

Reference Specification: 03 30 20 (3.11.A & 1.3.A.8)

Per Specifications 03 30 20 (3.11.A & 1.3.A.8), SCCI will install temperature monitoring devices at specified locations and depths. These instruments use RFID Tag technology for communitcation with the data logger. The

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Thornton Tomasetti does not object to proposed method presented in RFI.

GC to coordinate waterproofing requirements with waterproofing subcontractor and submit proposed waterproofing details in the shop drawings.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

RFID transmiter, which is wired to the temperature monitoring device, will be elevated out of the concrete. SCCI will tie a 1/4" diameter fiberglass, or similar non-corrosive, rod to the reinforcing mat. The temperature monitoring RFID transmitter will then be elevated clear of the Mat Slab. Once Thermal Monitoring activities are complete, this non-corrosive rod and cable will be cut flush with slab. Reference attached brochure and SCCI sketch.

Is this method acceptable?

T-0457 **BGP - Mat slab changes per Field Order 11 (Future ASI 102)** **Closed** **03/25/2013** **04/04/2013** **04/03/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Filip Filipic

REQUEST:

Reference RFI: T-0415
Reference Field Order No. 11 (Future ASI 102)

Field Order No.11 (Future ASI 102) is still in the design stage, and without the Contract Drawings incorporating the field orders SCCI cannot plan the work. More specifically, are there any changes to the foundation (Mat slab) resulting from Field Order 11 (Future ASI 102)?

For example:
If there are changed/added drainage pits in the SCCI's Area 3 (Mat slab pour # S103; GL A thru J, and 1 thru 3.5), geothermal work cannot begin until such changes are incorporated.

Please confirm that Field Order No.11 (Future ASI 102), or any other forthcoming Field Order has no changes in the Mat slab drainage system (drainage pits, thickened sections, etc.), that would impact the subgrade work.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Regarding ASI 102
For the Mat slab GL A thru J and 1 thru 3.5 drainage pits are not expected change, with the exception of the small sump pit in the elevator pit GL 1.4 to 2, E.6 which was shown on the attachments responding to RFI T-0415 BGP. Within the mat slab (not affecting slab thickenings) floor drains and floor sinks have been relocated at the Fire Pump and Domestic Booster and Irrigation Pump Rooms and a floor drain will be added at the electrical room located GL 1.4 to 2, B to C.

T-0458 **BGP - Concourse Slab CJ Layout** **Closed** **03/26/2013** **04/05/2013** **04/04/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Andy Khuu

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Reference Specification: 03 30 20
Reference Drawings: CJ-05 and CJ-22

In order to meet the Joints in Concrete specifications (03 30 20-3.2), SCCI's revision of Construction Joint (CJ) Layout Submittal requires the CJ between concourse slabs D116 and D117 (see atttached reference drawing CJ-22) to be 2'-10" outside of the required center third of the span (reference 03 30 20- 3.2.B.1). Please advise if this is acceptable.

If the above is not acceptable, then SCCI proposes to move the CJ line (between D116 and D117) 2'-10" to the East. Since mat slab S108 (see attached reference drawing CJ-05) is currently 120'-0" wide, it will be increased to 122 '-1 0" wide. This would be wider than the maximum width of 120' -0" as specified in 03 30 20-3.2.A.3. Please advise if this alternative is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The second option (that will result in a larger mat pour) is acceptable.

T-0459 **BGP - Waterproofing and CJ Concourse Slab Layout Conflict** **Closed** **03/27/2013** **04/06/2013** **04/01/2013** **Potentially** ☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference Specification: 07 12 10
Reference Drawings: A1-2203 and S1-3201

Please reference Al-2203 and Sl-3201 of the Contract Plans and the attached drawings. The current elevation at the bottom of the 2nd level bracing lookouts is at approximately -5.13, WEST of Grid 9 (see concourse slab drawing). The proposed top of concourse slab elevation is to be -5.42, WEST of Grid 9. Per the WPM-1 waterproofing system, the minimum overall tie-in dimension needed for the succeeding lift is approximately 1 '-11" (see attached waterproofing drawing).

The current elevation at the bottom of the 2nd level bracing lookouts is at approximately -6.15, EAST of Grid 9 (see concourse slab drawing). The proposed top of concourse slab elevation CJ is to be -7.67, EAST of Grid 9. Per the WPM-1 waterproofing system, the minimum

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is a contractor coordination issue. CM/GC to coordinate this work between their sub-contractors and show the proposed solution in the coordinated shop drawings.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

overall tie-in dimension needed for the succeeding lift is approximately 1 '-11" (see attached waterproofing drawing).

In both locations, the minimum required dimension (1 '-11") to tie-in to the next lift of waterproofing can not be reached with the current location of the 2nd level bracing lookouts and the proposed concourse slab elevations. SCCI is restricted in location for the CJ due to the absolute concourse slab location and elevation.

Furthermore, a similar conflict exists in the 1st foundation wall lift and the 3rd level of bracing lookouts (see 1st wall lift drawing). With SCCI's current location of the CJ, there is virtually no room to allow for the waterproofing overlap to occur. SCCI fully understands its freedom to manipulate the location of the CJ's by lowering it approximately 2'. This will potentially change BBII's rebracing plans.

Please advise.

T-0460 **BGP - Waterproofing and CJ at Mat Slab Conflict** **Closed** **03/27/2013** **04/06/2013** **04/01/2013** **Potentially** ☐

T-0462	BGP - Grounding Wire Penetrations in Mud & Protection Slab	Closed	03/28/2013	04/07/2013	04/10/2013	Potentially	☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Ref: 5/A1-8710 and Submittal Package TG0600-023.1 sheet 5.07, Specification Section 26 05 27

The contract plans and specifications call for the grounding wire to be bare copper. At the locations in which this grounding wire penetrates the mud & protection slab, the waterproofing supplier (Laurenco) requires the ground wire penetration to be solid metal or a rod. Laurenco has stated that if the electrical grounding penetration through the slab is wire as shown in the plans and specifications, the waterproofing system will leak.
Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For each of the grounding electrode conductors that penetrate the waterproof membrane, in order to provide a smooth impenetrable surface, splice a solid copper 4/0 grounding conductor per the attached detail sketch ESK-20 using Erico Cadweld mold #PTC-2P2L or equal. Refer to the attached revised waterproofing detail 5/A1-8710 for waterproofing of these spliced conductors.

Jeff Thiel 4/10/2013 Pending TJPA approval, a CR for this work is forthcoming.

T-0463	BSE - Micropiles W400 & 417 Relocation	Closed	03/28/2013	03/29/2013	04/01/2013	Potentially	☐

From: Webcor Construction LP Ian Corcorran **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Balfour Beatty Infrastructure, Inc. Brandon Miller

REQUEST:

Reference Specification: 31 63 33

Micropiles W400 and W417 cannot be installed as laid out due to an overhead obstruction (Geotechnical Instrumentation Pipes).

BBII proposes moving W400 South 5' and W417 South 3' to provide adequate clearance. The proposed locations for Micropile W400 and W417 will be within the geothermal area; however, the proposed locations do not appear to impact geothermal piping.

See attached sketch.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Thornton Tomasetti does not object to moving micropiles W400 and W417 as proposed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0464	BGP - Clarification of Curing and Thermal Protection Methods	Closed	03/28/2013	04/07/2013	04/09/2013	Potentially	☐

REQUEST:

Ref: Specification Section 033020.2.11.D, and 033020.3.7.A.c
Ref: Submittal TG0600-201.1

Reference Mass Concrete Plan prepared by CTL Group, Submittal Package TG0600-201.1, item 033000-011.1, page 10 - Curing. This paragraph state " ... slab placement will be cured in a method that
does not artificially excessively decrease the surface temperature of the concrete placement. This means that continuous wetting of the concrete should he avoided."

Reference specification section 033020.3.11.D. This paragraph states "Thermal Blankets are required to insure minimal thermal cracking."

Reference specification section 033020.3.7.A.C. This paragraph calls for "Moist curing of the Mat Slab by means of continuously covering the slab with water."

Reference attached letter " Wet Curing Mat Slab", author Bob Foley, CEMEX QC Manager Bay Area.

SCCI intends to cure the Mat slab per recommendations of CLT Group Mass Concrete Plan. Due to the high risk of thermal cracking, SCCI intends to utilize impermeable insulated curing blankets and not cover the slab with water.

Is this acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposed method of curing is not acceptable as it does not meet the specifications for moist curing. The intent is to keep the surface continuously wet to ensure minimal cracking and with the use of thermal blankets to minimize temperature differential.

T-0464.1 **BGP - Mat Slab Curing Techniques** **Closed** **04/26/2013** **05/06/2013** **05/08/2013** **Potentially** ☐

REQUEST:

Reference Specification: 03 30 20

Please reference TG06.0 Contract Specifications 03 30 20.3.7.5.b.3 and Project Meeting with Thornton Tomasetti (SER), held Thursday, April 25.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposed method of moist curing for the mat slab is acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

SCCI intends to Moist cure the Mat Foundation Slab using the above referenced method found in the contract specifications and discussed in the above mentioned Project meeting.

Please confirm this method is acceptable.

T-0465 **BGP - Relocation of Geothermal Risers Due to Leaking CDSM Wall** **Closed** **03/28/2013** **04/07/2013** **04/04/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

Reference photo: Attached

As seen in the picture attached, water is leaking through the surface of not only the CDSM panel that the geothermal riser is laid out on, but the various adjacent CDSM panels as well.

Please confirm that SCCI can move the Field 1 risers location between Piles 35 & 36 and the Field 2 risers location between Piles 38 & 39. Both of these new locations appear to be leaking less than the original riser locations.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Field 1 Risers should be located between east of soldier Pile 36 (between 36 and 37) as indicated in RFI T-0437 BGP. It is acceptable to locate Field 2 risers between 38 and 39.

T-0466 **BGP - Ground Rod for SFPUC** **Closed** **03/29/2013** **04/08/2013** **04/10/2013** **Potentially** ☐

Co-Author: Webcor Construction LP Joanne Filipas

REQUEST:

In follow up to the 3/28/2013 OAC, PCP informed us that the SF PUC requires a ground rod to be installed. Please provide all necessary information including but not limited to rod type, length, and location.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Add new ground rods and grounding electrode conductors for SFPUC utility requirements per the attached drawings. This grounding system shall not connect to the other building grounding systems except for the soldier pile connections. All other related details shall apply. Coordinate grounding conductors to rise in the foundation wall for extension into the Lower Concourse slab.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Jeff Thiel 4/10/2013 Pending TJPA approval, a CR for this work is forthcoming.

T-0466.1 **BGP - Ground Rod for SFPUC** **Closed** **04/11/2013** **04/21/2013** **04/23/2013** **Potentially** ☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

Ref: RFI T-0466, RFI T-0442

SCCI is in receipt of the response to RFI T -0466 concerning the addition of SFPUC grounding rods/grids. In order to price this change SCCI and its electrical subcontractor need the following information:

On Drawing SKE-021, Note 8, please provide a location on where to terminate each of the four 4/0 cables at the lower concourse slab. A revised SKE-024 drawing showing the exact stub up locations and dimensions is needed to accurately price and construct this change.

On Drawing SKE-022, Note 3, please again advise where to terminate the four 4/0 cables at the lower concourse slab. A revised SKE-024 drawing showing the exact stub up locations and dimensions is needed to accurately price and construct this change.

Please confirm that the details from the RFI T -442 response will apply to these penetrations.

Please confirm that there only two areas (detailed on SKE-021 & SKE-022) that will require the additional SFPUC grounding.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Please find the attached drawings to clarify the ground rod locations. The ground rods are noted to be approximately ten feet on center. Coordinate the specific placement of the rods and GEC to avoid the geothermal piping. We have included Lower Concourse drawings to indicate the grounding electrode conductors that will route into the Lower Concourse slab. Exact dimensioning of these conductors in the foundation wall and slab are not required, Contractor to coordinate exact locations with underground piping in this area. The GEC will be extended to bond to a ground grid at the four corners of the new Electrical Rooms B1289 and B1441. Additional slab details for the mesh and GEC bonding will be provided in an upcoming drawing issue.

2. Yes, the details from RFI T-442 will apply to these and all grounding conductor penetrations of the waterproof membrane. See SKE-025 for the connection detail referenced on sheet E1-6006, detail 2.

3. Yes, the two locations are the only known new SFPUC grounding locations. Please note that the ten foot ground rod separation shown on SKE-021R1 at the transformer vaults has been increased.

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

Reference Specification: 23 57 34, 31 23 34

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is acceptable west of gridline 7.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Per discussions with the designer (ARUP), the CDSM wall will continue to move until the mat slab has been placed. With the geothermal pipe riser being installed much ahead of the mat slab, there is a good chance that the riser chase pour back will be jeopordized by the wall movement. Per specification 31 23 34, 3.2, B, the geothermal riser pipe chase cannot remain open for longer than 10 calendar days. Is it acceptable to extend this duration to account for the wall movement until the mat slab is poured?

Please advise.

T-0469 **BGP - Embed Nail Holes** **Closed** **04/01/2013** **04/11/2013** **04/11/2013** **Potentially** ☐

Co-Author: Balfour Beatty Infrastructure, Inc. Danny Walsh

REQUEST:

BBII has received COM1902 directing BBII to re-design the east end shoring utilizing similar waler connections provided in the attached sketches.

Prior to commencing re-design, BBII requests the following information from the Shoring wall EOR so our Bracing EOR can properly evaluate the interaction

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Regarding permissibility, see Note 11 on Sheet GT-1111.

Regarding the CDSM wall stiffness, see the response to RFI T-0345.

Regarding the CDSM wall allowable friction, see the

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

between the Bracing system and wall.

Will it be permissible to shed the bracing loads from the transverse end wall (line 35) into the longitudinal CDSM wall (A&J Lines)? If this is acceptable please indicate if there are any limitations, restrictions, or design assumptions regarding the amount of load that can be shed over a given length of wall.

response to RFI T-0427.

To evaluate horizontal stress, see the guidance provided on Sheet GT-1110

T-0477 **BSE - Multiple Micropile Relocation (Below Grade Obstruction)** **Closed** **04/03/2013** **04/13/2013** **04/04/2013** **Potentially** ☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Balfour Beatty Infrastructure, Inc. Brandon Miller

REQUEST:

Ref: Submittal TG0300-622.4

While installing Micropile W454 as laid out in the approved submittal, BBII encountered a concrete obstruction 8' below grade and was unable to continue drilling at that location. Even though the micropile layout was approved in submittal TG0300-622.4, BBII suspects the drill rig encountered the CDSM Prototype wall as approximately shown in the attached drawing. BBII suggests relocating the micropiles as shown in the attached drawing to avoid the obstruction. The proposed locations for the micropile relocations will be within the geothermal area; however, the proposed locations do not appear to impact geothermal piping.
See attached sketch.
Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Thornton Tomasetti does not object to relocating micropiles W452, W454, W473, W475, W487, W488, and W500 as proposed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

cover for the headed shear reinforcement to be 0.75" and for overall length of the headed shear reinforcement to be 57" long. It is not clear if the same clear cover of 0.75" applies to headed shear reinforcement that is within a pit as shown in Sheet S1-3008/Detail 3. Note that typical rebar around the pits are called out to be 3" as shown on sheet SI -2063.

Please confirm top clear cover for headed shear reinforcement that is within a pit.

be 55.5" long at these locations.

T-0479 **BGP - Trestle/Pin pile in MAT Depressions** **Closed** **04/03/2013** **04/17/2013** **04/17/2013** **Potentially** ☐

From: Webcor Construction LP Ian Corcorran **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Ref. Dwg. S1-2022, S1-2027, S1-3004, S1-3006

Please reference Sheets S1-2022, S1-2027, S1-3004, and S1-3006 of the Contract Plans. The trestle pile at Gridline D.4 between 4 and 5 is located in the sloped section of the mat slab depression (see highlighted S1-2022). The mat slab depression section plans (S1-3006) do not incorporate this type of sloped pipe penetration. Furthermore, the pin pile between Gridline F.7 and G, just east of 34 is located in the sloped section of the mat slab depression (see highlighted S1-2027). The mat slab depression section plans (S1-3004) do not incorporate this type of sloped pipe penetration. Also, Sheet S1-3003 depicts all pipe penetrations on a horizontal surface only. Please provide a trestle/pin pile penetration detail located on an angle in a mat slab depression incorporating a revised waterproofing detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For trestle piles located at slab depression edge of slope or on face of slope, the flat mud slab has to be lowered to provide 18" clear horizontal to allow waterproof membrane transition. The sides of the depression for the sleeve should be sloped at 45 deg. The sleeves will need to be made longer to suit these situations. Refer to attached SKA 2676 and 2677.

Jeff Thiel 4/17/2013 Pending TJPA approval, a CR for this work is forthcoming.

T-0479.1 **BGP - Trestle and Pin Pile in MAT Depression Clarification** **Closed** **05/28/2013** **06/07/2013** **06/10/2013** **Potentially** ☐

Co-Author:

REQUEST:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Response to RFI T-0479 provides SKA-2676 and SKA-2677 which apply to two trestle piles in conflict with sloped portions of sump pits. BBII has identified several other pit locations which appear to have trestle piles, pin piles, or bridge piers located so that there is not 18" clear horizontal for waterproofing. Please clarify if the following slab penetration locations require the 18" clear horiontal for waterproofing. If so, please confirm that the details issued in RFI T-0479 can be used for the following locations:

1.) First St. Bridge Pier #5 at pit between Gridlines 17/18 at Gridline H
2.) Trestle Piles #53, #54, and #55 at pit between Gridlines 22.5/23.5 and D/F
3.) Fremont St. Bridge Pier #8 at pit between Gridlines 26/27 at E
4.) Trestle Pile #74 at pit between Gridlines 30/30.5 and D/E.
5.) Trestle Pile #80 at pit between Gridlines 32.5/33 and D/E
6.) Beale St. Bridge Piers #3 and #8 at pit between Gridlines 34/35 at Gridline E
7.) Pin Pile # 6 between Gridlines 4/5
8.) Pin Pile #14 between Gridlines 34/35 and F.7/H

The Design Team does not object to the contractor implementing the solution provided on RFI T-0479 at the locations mentioned in RFI T-0479.1 as a means of attaining the required 18" clear horizontal waterproofing surface. Note for implementation of this detail at pin pile locations, the contractor shall use 24" as the outside diameter of the pin pile sleeve, which is the size from the reviewed sleeve submittal.

T-0479.2 **BGP - Trestle and Pin Pile in MAT Depression Clarification** **Closed** **07/18/2013** **07/28/2013** **07/24/2013** **Potentially** ☐

Co-Author:

REQUEST:

Reference RFI T-0479 & T-0479.1

Grace requires that there be a minimum 8" clear horizontal to allow for the waterproofing membrane transition.

For trestle piles and pin piles located at slab depressions at the edge of the slope or on the face off the slope, please confirm that the flat mud slab can be lowered to provide 8" clear horizontal to allow waterproof membrane transition in lieu of the 18" described in RFI T-0479 and T-0479.1

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This RFI is for a substituted system that is not the system designed by the Architect, so the Architect cannot comment on design intent or other aspects of the substituted system. Per specification section 01 16 30 article 1.4/B and other associated specification sections the Contractor is to prepare all necessary documentation to support the contractor's substitution proposal which would include direction on the item noted in this RFI.

The Contractor should have the design professional

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

responsible for the substituted waterproofing design: (1) immediately prepare necessary design documentation for the substituted system including the impacts on adjacent trades as required by specification section 01 16 30 article 1.4/B.5, and stamp and certify that design to the Owner and the Architect; and (2) respond to Contractor submittals and manufacturer questions about the substituted system (with copies to the Owner and the Architect). Until that design professional's documentation, certification, and response process is in place, the Contractor should confirm all waterproofing system questions and details with the waterproofing manufacturer (with copies to the Owner and the Architect).

T-0480 **BGP - Future Train Platform Wall Dimension Conflict** **Closed** **04/03/2013** **04/17/2013** **04/16/2013** **Potentially** ☐

From: Webcor Construction LP Ian Corcorran **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Andy Khuu

REQUEST:

Ref. Dwg. S1-2054, S1-2055

Drawing S1-2054, at Grid line E/13 calls out Future Train Platform Room Walls to be 1'- 2" Typ, UNO. Drawing S1-2055, at Grid line C/22 calls out Future Train Platform RM Walls to be 1'- 0" Typ. UNO. Please clarify the proper dimension of the Future Train Platform RM Walls.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The note for future train platform room wall thickness apply per zone sheet. Therefore the future train platform walls are confirmed to be 1'-2" typ UON on S1-2054 and confirmed to be 1'-0" typ UON on sheet S1-2055. Note that for S1-2055, there are 2 future train platform rooms - one at gridline C between 21 and 22 and the other at gridline E west of 19.9.

minimum, reinstating a high congestion mock-up configured as follows:

1. The area to mock-up is indicated on marked up sheet S1-3202 (Exhibit-B).
2. The mock-up is representative of the location marked up on sheet S1-2204 (Exhibit-C) and configured as indicated on marked up sheet S1-3201 (Exhibit-D).
3. The mock-up is dimensioned as indicated on marked up sheet S1-3208 (Exhibit-E).

Please issue drawings for a smaller high congestion mock-up that the TJPA deems appropriate, if not indicated on the attached sheets.

T-0484 **BGP - Water Welding Test** **Closed** **04/05/2013** **04/15/2013** **04/18/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference Specification:05 50 10- 2.5.C.2

Per the discussions held at the Metal Fabrications Preparatory DFOW meeting, SCCI is requesting a variance from Spec Section 05 50 10 - 2.5.C.2. This Spec. is feasible in a shop environment prior to galvanization and an effective means to dry and remove water upon completion of testing. These sleeves will be continuously welded in the field both before and after the horizontal waterproofing is installed (depending on the type of sleeve), therefore making it very difficult to seal and handle the water upon completion of the test. Discussions were held regarding leaving the water between the sleeve and pile and evaporating over time. SCCI sees this as a concern due to the backside of the weld and the heat-affected zone will not be galvanized and will potentially become a point of corrosion. SCCI requests 100% visual inspection on both the root and cover passes in lieu of filling the sleeve gap with water. Is this request and variance acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The sleeve joints are to be water tight. Water testing of welds as required in the specification is to be executed. Please submit a test procedure description.

T-0486	BGP - Extended Time for Concrete Delivery	Closed	04/08/2013	04/18/2013	04/16/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference Specification: 03 30 20

Please reference 03 30 20.3.3.0, which states "Discharge of the concrete shall be completed within 1 1/2 hrs, or before the drum has revolved 300 revolutions, whichever comes first, after the introduction of the mixing waler to the cement and aggregates or the introduction of the cement to the aggregates."

Per ASTM C 94, these limitations are permitted to be waived by the purchaser if the concrete is of such slump or slump flow after the 1 1/2 hr time or 300-revolutionlimit has been reached that it can be placed, without the addition of water, to the batch. Based on the quality of the mixes; the retarding effects of admixtures and SCMs, and the project's mild climate; CEMEX does not believe that placing concrete after 90 minutes negatively affects the quality of the concrete. SCCI and CEMEX requests an extension of delivery time as outlined per the attached letter.

Please confirm the attached parameters are acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

ASTM C94 states "discharge of concrete shall be completed within 1 1/2 hour or before the drum has revolved 300 revolutions, whichever comes first, after the introduction of the mixing water to the cement and aggregates or the introduction of the cement to the aggregates."

CEMEX's statement in this RFI "CEMEX does not believe that placing concrete after 90 minutes negatively affects the quality of the concrete" does not provide sufficient support data to address the concern of the concrete initial set after the specified time limit and revolutions. In order to justify extending the mix time/revolutions specified, CEMEX shall run trial batches to proposed extended delivery time and perform necessary tests (initial set time, slump, compression, etc) to verify the quality of the concrete will not be negatively affected.

REQUEST:

Reference Specification: 033020

Pursuant TJPA's response to RFI T-0486 please reference attached letter from SCCI's concrete supplier Cemex. Cemex has performed the set time test to evaluate the time at which at which the onset of hydration occurs for mixes 1556034 and 1558218. For the two mixes referenced herein, is it acceptable to extend the concrete delivery times to 2 hours?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Extending the concrete delivery to 2 hours is acceptable as proposed in RFI T-0486 provided that the tested mixes match approved mix designs.

It is not clear that the tested mixes were the approved mix designs for the mat and foundation wall (we assume the RFI means 3'-0" exterior foundation wall and not any other wall or shearwall and our response only applies to this item) as the mix numbers and/or the mix descriptions do not match any approved mix design.

T-0486.2 **BGP - Extended Time for Concrete Delivery - Mat Slab** **Closed** **05/28/2013** **06/07/2013** **06/03/2013** **Potentially** ☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Ref: Specification Section 03 30 20 1.7 F 3 j 2
ASTM C 31

ASTM C 31 Identifies that concrete cylinders should not be transported until at least 8 hours after final set. Per ASTM C 31, Allowable field curing is 48 hours maximum. Typically test cylinders are transported within 24 to 48 hours after casting. Some of the mix designs approved for this project include High volume of Flyash (HVFA) and high dose of Shrinkage Reducing Admixture (SRA). This combination provides a concrete mix with retarded set and slow strength gain. In the interest of providing reliable test results, SCCI and CEMEX requests that transporting of cylinders representative of concrete mixes that include 25% flyash and/or addition of shrinkage reducing admixture be delayed until 3 to 5 days after casting. Protection and storage of cylinders in the field shall be in direct accordance with requirements outlined in section 10 of ASTM C 31. Is this extension of field curing duration acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

TT does not take exception to the delay of handling HVFA test cylinders as proposed in RFI 0488.

REQUEST:

Ref: A1-2812, A1-2821 A1-2842, A1-2843, A1-6231

Please reference the attached drawings regarding foundation wall concrete inserts. SCCI is requesting details clarifying the locations and scope of the horizontal concrete inserts on the mat slab level foundation walls and vertical concrete inserts on the lower concourse level foundation walls. The following issues have been discovered in the drawings:

1. A1-2843 has specified two contradicting lengths for the continuous vertical wall inserts as shown in the clouded

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Horizontal concrete inserts are to extend entire length of the South foundation wall. Refer to clarification on the attached sketch SKA-2690, which corresponds to sheet A1-2843.

2. There are no concrete inserts along the West foundation wall at B2 (Train Platform) level. Refer to clarification on the attached sketch SKA-2689, which corresponds to sheet A1-2842 for concrete inserts at the B1 (Lower Concourse) level.

3. Clarification notes have been added to SKA-2693,

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

sections.
2. A1-2812 and A1-2842 appear to indicate inserts along the West wall however there is no information declaring lengths and scope.
3. A1-2821 references detail 3 / A1-6231 which is not a detail that is shown on A1-6231.

which corresponds to A1-6231. Reference correction shall be made to read A, B, C/ A1-6231. Also, starting point for horizontal concrete insert has been added on SKA-2687, which corresponds to A1-2820.

Attached sketches, SKA-2687, SKA-2688, SKA-2689, SKA-2690, SKA-2691, SKA-2692 and SKA2693 are included for clarification purposes. Their corresponding sheets shall be formally issued as an ASI at a future date.

T-0496 **BGP - Deneef Swellseal at Micropile Boots** **Closed** **04/11/2013** **04/25/2013** **04/26/2013** **Potentially** ☐

From: Webcor Construction LP Ian Corcorran **To:** Shimmick Construction Comp Ben Gordon **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Ref Dwg. 2/A1-8711

Please reference Detail 2 of A1-8711 of the Contract Drawings and the attached letter from Deneef/Grace. Detail 2 of A1-8711 calls for a 6" diameter, 18 ga. galvanized steel boot to be adhered with trowelable grade adhesive and filled with urethane sealant. Submittal #TG0600-024 approved the use of Deneef Swellseal WA which is the product called out in Spec Section 07 12 10.

The attached Deneef/Grace technical letter dated 04/05/13, states that filling the entire boot with Deneef Swellseal is excessive and state that filling the entire boot with Swellseal WA is more than necessary and affect the curing capability.

Deneef/Grace suggests that the material be installed 2-3" deep and topped with a non-shrink grout such as "Rapid Set CT Construction Grout" or "Rapid Set Cement All" to contain it in the boot. The manufacturer states that the waterproofing ability of the material in this configuration would not be compromised. Please review and advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The design team does not object to your proposal.

The waterproofing manufacturer's field representative/installer are to construct a 10'x10' on site mock up of the full waterproofing assembly. Upon completion of the mock up (excluding any major waterproofing deficiencies), SCCI intends to utilize it as part of the permanent structure. Is this acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is suggested, but not a requirement, the mock-up is installed separate from the work to allow the mock-up to be referenced in the future. Installing the mock-up as part of the work has some benefits in uncovering additional site issues.

2. All shop drawings related to the waterproofing and the proposed materials to be used have not been submitted to the design team for review at this time. The mock-up shall utilize the materials confirmed in the shop drawing process. If the mock-up is constructed with the wrong materials, the mock-up may need to be reconstructed with the proper materials based on the TJPA Representative's determination as to the acceptability of the materials utilized in the mock-up.

3. The mock-up is scheduled to be constructed today. The overall waterproofing work may not happen immediately, in which case the mock-up may need to be replaced if it is not properly protected until the remainder of the work is installed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For details 6, 7, & 9 on S1-3204, 3/S1-3210 and 1/S1-3411 for both bottom and top support connections, provide 1"@4"oc max 1/8" fillet weld with 1" min at each corner along each side of the 10 gauge plate.

T-0503 **BGP - Geothermal Pipe Loop Bends** **Closed** **04/18/2013** **04/18/2013** **04/23/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

Per the geothermal pipe manufacturer's (Performance Pipe) recommendations, the geothermal pipe should not be bent in a radius smaller than 25 times the pipe diameter. For the geothermal pipe loops, this equates to a bend radius of 41.5". However, the goethermal design drawings depict the loops to be 60" on center that would leave a large overlap (in theory) of almost 24"/2'. To achieve a 41.5" radius, the trench spacing will have to be increased to 83" between the supply and return trench. Please note, that the pipe manufacturer discourage "bulbing" the end of the loop and recommended resolving

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

WSPFK Response: Maintain pipe manufacturers' minimum long term bend radius as required per specifications with loop arrangement as shown on contract documents. Large Radius bends following the manufacturers' minimum pipe bend radius are an acceptable practice per IGSHPA standards (IGSHPA Design Manual Section 7.6.2.1). James Bradshaw 4/19/2013

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the issue away from bending or "bulbing" the end of the pipe loop.

S3H Inc. is proposing to overlap half of a loop onto another such that the spacing between pipes remains at a 4' minimum (per RFI T-0493). This would create a 8' minimum distance between the supply side of a loop and the return side of a loop. In doing so, a portion of the two overlapping loops would be crossing. Is this acceptable? Please find attached drawing #1 as a reference of the proposed layout. Please note that this proposed method would change the reverse return self balancing configuration of piping. This proposed method also has the possibility of being impacted by various micropile conflicts.

S3H Inc. is also proposing as a fix to field one to install 2 fused - 90 degree elbows at the end of each loop in a U-shape configuration using the current, as installed dimensions between the loops. Please find attached Drawing #2 depicting the 90 degree elbows on the loops This would eliminate the required 83" bend diameter. This is least impact proposal to rectify the already installed field 1, but would be an additional cost.

Please advise as to how to proceed with Field 1 as well as the remaining 14 Fields.

T-0504 **BGP - Radius Foundation Walls - R=637.63'** **Closed** **04/19/2013** **04/29/2013** **05/02/2013** **Potentially** ☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Filip Filipic

REQUEST:

Ref: Submittal Package T0600-030

SCCI's plan is to construct the R=637.63' foundation walls in 16' chords. Layout of the construction joints shall be per approved as noted CJ layout submittal. R=637.63' foundation wall runs along the Southwest portion of the project, from GL 3 thru GL 16, or SCCI's wall pours W160 thru W174A. See attached sketch of the wall detail for clarification.
Is this acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposal to layout the wall in 16' chord segments is not acceptable. The foundation wall assembly is designed with a 2" zone for the waterproofing assembly and a 3' thick foundation wall. Providing chord segments instead of a curved radius will reduce the thickness of the foundation wall.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0504.1	BGP - Radius Foundation Wall Formwork	Closed	11/19/2013	11/29/2013	11/25/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Filip Filipic

REQUEST:

Please reference RFI T-0504.

SCCI plans to construct the south foundation walls from GL2.75 to GL 12.08 in 8' chords. See attached sketch for clarification. 8' chording of the walls will keep the wall faces within the construction tolerances.

Is this acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/22/2013
RESPONSE:
The 8' chording on the curved part of the foundation wall, as proposed in the RFI, is acceptable.

T-0505	BGP - Protection Board on Horizontal Surface of Waterproofing	Closed	04/19/2013	05/03/2013	04/29/2013	Potentially	☐

From: Webcor Construction LP Ian Corcorran **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Ref. Dwg. A1-8710, A1 -8711, S1-3003

Please confirm that there is no protection board installed on top of the waterproofing membrane to receive protection slab. Drawing S1-3003 shows protection board, while A1-8710 & A1-8711 does not.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Protection board is not required on top of the waterproofing membrane which is to receive protection slab, as shown on the architectural drawings A1-8710 & A1-8711.

T-0506	BGP - Continuous Horizontal Concrete Inserts	Closed	04/22/2013	05/02/2013	05/07/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference Drawing: A1-6231

Please reference the attached sheets regarding continuous concrete inserts. On the enlarged detail C of A1-6231 SCCI is proposing the layout of the horizontal concrete inserts. Raising the bottom insert 1- 1/2" and lowering the top insert 1" will provide a greater clearance between the inserts and the construction joint. Achieving a greater clearance from the construction joint will reduce the risk of rock pockets or voids. Please confirm these dimensions as acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposal to raise the bottom insert 1 ½" and lower the top insert by 1" is acceptable.

T-0507	BGP - Continuous Concrete dobie-mat slab	Closed	04/22/2013	05/02/2013	05/06/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please see attached sheets regarding mat slab bulkhead forms. SCCI is proposing the use of a continuous concrete dobie as part of the bulkhead design along the vertical construction joint. The continuous dobie will be installed with the reinforcement mats and will act as a cast-in portion of the formwork. The dobie will become a permanent member and will meet all specifications that the mat slab concrete mix design requires. Please confirm approval of the use of the continuous dobie.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The use of a continuous dobbie acting as both reinforcement support and permanently cast-in construction joint form is not acceptable to Thornton Tomasetti. We are concerned that the continuous nature of the proposed dobbie will increase likelihood of introducing two cracks in the mat (one at each face of the dobbie). Per spec, bottom reinforcing bars in mat slab shall be supported by precast concrete bricks or individual high chairs, supports which are not continuous. TT recommends either to move the dobbie in line with the form work and remove it prior to the next concrete pour, or use another removable option to form below the bottom reinforcement while providing required support for the reinforcement away from the construction joint.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0508	BGP - Drainage Composite Joint Orientation	Closed	04/23/2013	05/03/2013	04/25/2013	Potentially	☐

From: Webcor Construction LP Kody Cooper **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference Specification: 07 12 10-3.2.F

This spec section states "Install drainage composite either vertically or horizontally and lap sheets 1 inch in the direction of water flow." The manufacturer's instructions state "the drainage side laps must be tightly butt joined together so there are no gaps or voids between them." SCCI suggests butt joining the drainage composites per the manufacturer's instructions. Is this acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposal to butt joint the panels is not acceptable for the conditions of this project.

The purpose of interlocking is to aid in supporting the drainage panels by hanging one from the one above.

Co-Author: Webcor Construction LP Kirk Nielsen

REQUEST:

Please reference attached marked up sheet S1-2202.

The location of internal bracing pin pile #8 conflicts with

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per discussions during 04/25/2013 "W/OJV Assist Meeting", this pin pile is being re-visited by Contractor to consider being eliminated as well as to be

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

moment beam BMATV. General Note GR-9 on sheet S-0005 precludes blocking out moment frames. Upon submitting for the internal bracing system the TG03 BSE subcontractor was not aware of the location of beam BMATV to coordinate around. WOJV is requesting a variance from note GR-9 and is requesting to block out beam BMATV around pin pile #8.

Please advise.

coordinated with the in-progress re-bracing solution. Please close this RFI as currently presented.

T-0510.1 **BGP - Internal Bracing Pin Pile #8 in conflict with Moment Beam BMATV** **Closed** **05/02/2013** **05/14/2013** **05/15/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Please reference attached marked up sheet S1-2202.

The location of internal bracing pin pile #8 conflicts with moment beam BMATV. General Note GR-9 on sheet S-0005 precludes blocking out moment frames. Upon submitting for the internal bracing system the TG03 BSE subcontractor was not aware of the location of beam BMATV to coordinate around. On 4/23/13 WOJV submitted RFI #T-0510 requesting a variance from note GR-9 and is requesting to block out beam BMATV around pin pile #8. During the 4/25/13 "WOJV SE Assist Meeting," when the issue was brought up, a PMPC employee suggested prematurely removing strut STA09 because it has diminished load. On 4/30/13 WOJV received RFI response #T-0510 stating pin pile #8 was going to be removed hence WOJV should close the RFI #T-0510. In addition to strut STA09 pin pile #8 supports strut #STB09 which is carrying a load, not that the internal bracing EOR would allow the premature removal of two strut levels. WOJV again requests a variance from note GR-9 and is requesting to block out beam BMATV around pin pile #8.

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

At pin pile #8 location, we will allow contractor to block-out the Lower Concourse beam. Contractor shall limit the width of block-out to 1/3 the width of the beam and refer to GR-9 for other block-out info. Block-out reinforcement shall be included in rebar shop drawings.

Note that the Lower Concourse structure acts as a brace for the foundation wall. Contractor is responsible for the stability of the structure per GR-4 as well as coordinating with other packages.

Note that the RFI mis-quotes the reason why the original RFI #510.0 was commented to be closed

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0511	BGP - Deneef Swellseal at Electrical Grounding System Boots	Closed	04/23/2013	05/07/2013	05/09/2013	Potentially	☐

From: Webcor Construction LP Ian Corcorran **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please reference SCCI RFI #130, Detail 5/A1-8710, and the attached letter. Detail 5/A1-8710 calls for 2" diameter, 18 ga galvanized steel boot to be adhered with trowelable grade adhesive and filled with urethane sealant. Submittal #TG0600-024 approved the use of Deneef Swellseal WA which is the product called out in Specifications 07 12 10.

The attached letter Deneef/Grace technical letter dated 04/05/13 states that filling the entire boot with Deneef Swellseal is excessive and state that filling the entire boot with Swellseal WA is more than necessary and may affect the curing capability.

Deneef/Grace suggests that the material be installed 2-3" deep and topped with a non-shrink grout such as "Rapid Set CT Construction Grout" or "Rapid Set Cement All" to contain it in the boot. The Manufacturer states that the waterproofing ability of the material in this configuration would not be compromised.

Please review and advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The manufacturer's recommendations are acceptable.

The question on RFI T-0511 is very similar to the question on RFI T-0496 and could have been consolidated in to one RFI, or better yet, this installation method should have been researched and proposed on the Waterproofing shop drawing submittal

---

T-0512	BGP - Additional Fasteners for Protection Board Installation	Closed	04/23/2013	05/07/2013	04/26/2013	Potentially	☐

From: Webcor Construction LP Ian Corcorran **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Ref. Spec. 07 12 10-3.2.D

Please reference Spec Section 07 12 10- 3.2.D. Spec Section 07 12 10 - 3.2.D states the following: "Secure 1/4" protection board to flanges of soldier piles with powder driven fasteners and washers spaced 12 inches o.c. Butt vertical joints. Maximum joint width: 1/4" ..."

The manufacturer of membrane waterproofing system (Laurenco) has indicated that due to "out of plane" piles, and relaxation of CDSM substrate requirement, they are requiring intermediate fasteners to hold the 1/4" protection board tight to the CDSM wall. Please review and advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The design team does not object to the proposal.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0513	BSE - Steel plate at CDSM piles 738-739	Closed	04/24/2013	05/04/2013	05/08/2013	Potentially	☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Balfour Beatty Infrastructure, Inc. Shad Gardner

REQUEST:

Ref: Specification Section 31 56 13

During leak grouting at level 5 excavation, a section of the CDSM wall panel between soldier piles 738-739 became dislodged, resulting in a high volume leak. In an effort to stabilize the damaged CDSM panel and stop the leak, BBII installed a steel road plate between soldier piles 738-739 and injected grout behind it.

BBII is concerned that removing the plate will likely cause the panel to become destabilized and could reopen the flow of water. BBII surveyed the face of the plate and found that at pile #738, the face of plate is 3' 0-5/8" back from the inside face of concrete wall and at pile #739 the plate is 3' 1-7/8" back from inside face of concrete wall. BBII proposes leaving the steel plate in place to maintain integrity of the CDSM panel. The edges of the plate may be grouted to provide a smooth transition to the CDSM wall for waterproofing.

Please confirm this is acceptable

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to leave the steel plate in place as proposed in the RFI. This will result in the waterproofing membrane encroaching in on the foundation wall at pile 738. The foundation wall at pile 738 may be reduced to 34 5/8" thickness and the foundation wall vertical reinforcement shall be modified per proposed solution presented in RFI 0448.0 for wall thickness reduction up to 3" and applied between piles 737 and 739.

W/O Note: Acceptable provided BBII take a survey of the face of the plate and provide coordinates.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0513.1	BGP - Steel plate (RFI #T-0513) encroachment between CDSM Piles No. 738 & 739	Closed	05/16/2013	05/26/2013	05/24/2013	Potentially	☐

From: Webcor Construction LP Kirk Nielsen **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

As depicted in attached SK-0153.1, the encroachment of the steel plate is primarily in the mat slab pour. WOJV is proposing to locally adjust the reinforcement in the mat slab pour to achieve the required cover. There will be no change to the reinforcement on the wall width.

As a means of chamfering the offset the result of steel plates edges to the face of CDSM wall:
WOJV is proposing to mechanically fasten expanded metal lath to the CDSM beams using powder activated fasteners. Rapid set mortar is then applied to the required depth ensuring all edges of the plates have a gradual slope back to match the existing face of the CDSM wall.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

ARUP Response:

This is acceptable however this work should be coordinated with other disciplines.

Thornton Tomasetti Response:

It is not clear from the RFI when the Contractor proposes "...no change to the reinforcement..." if this means the unmodified wall contract bars stay in original location or if the bars will move inward. Based on the provided encroachment info, there is still encroachment in the wall. If the bars are proposed to move inward, the thickness of the wall is reduced and therefore the original response of T-0513 shall apply.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

If the Contractor proposes not to modify the wall reinforcement, please submit technical justification.

T-0514 **BGP - Mech Room Slab Finish Elevation and Grate Clarification** **Closed** **04/24/2013** **05/04/2013** **04/30/2013** **Potentially** ☐

The Geothermal Piping can "bulb" eccentrically and concentrically to incorporate the minimum 25D bend radius. -WSPFK Response: 25 Times OUTSIDE DIAMETER of pipe required for bend radius. Eccentric and Concentric "bulbs" are acceptable to achieve the

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

concentrically to incorporate the minimum 25D bend radius.
-The bulbing of the geothermal loops can cause the loops to overlap and this is acceptable at the bulb locations.
-Due to the bulbing, the geothermal loo[may become in conflict with the micropile locations, please confirm that the pipe loopspacing can be adjusted.
-Please confirm that the staking of the geothermal loop pipe is acceptable to achieve the 25D bend radius requirement as long as the stakes are removed for backfill.

radius

-The bulbing of the geothermal loops can cause the loops to overlap and this is acceptable at the bulb locations. WSPFK Response: This is acceptable. At the meeting S3H agreed to provide some backfill between the pipes to prevent kinking of the pipes when they cross over each other.

-Due to the bulbing, the geothermal loo[may become in conflict with the micropile locations, please confirm that the pipe loopspacing can be adjusted. WSPFK Response: Loop Spacing at the bulbs can be less than the 4'-0" from RFI 473 in the areas required to miss micro piles but should return to 4'-0" minimum spacing after the conflict is passed.

-Please confirm that the staking of the geothermal loop pipe is acceptable to achieve the 25D bend radius requirement as long as the stakes are removed for backfill. WSPFK response: Temporary supports to maintain the 25 time OUSIDE DIAMETER bend radius are the means and methods of the contractor.

T-0518 **BGP - Differential Movement in Waterproofing Layers** **Closed** **04/25/2013** **05/05/2013** **05/20/2013** **Potentially** ☐

From: Webcor Construction LP Kody Cooper **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

Per the Engineer's response to Submittal TG0600-023.2, the Contractor is to install the waterproofing system to incorporate "provisions for differential movement". Please reference the contract documents that specify the design criteria for the differential movement of the structure. Please advise to a specification or drawing note that details such.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

RFI retracted as a request by W/O

T-0518.1 **BGP - Differential Movement in Waterproofing Layers** **Closed** **05/01/2013** **05/10/2013** **05/14/2013** **Potentially** ☐

From: Webcor Construction LP Kody Cooper **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Per the response to SCCI RFI #146 - Differential Movement in Waterproofing Layers, is movement expected and if so, how much movement is expected? If movement is expected, please provide Specification Section or Contract Drawing stating so.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

As with all buildings there is expected to be movement due to settlement and at this site hydrostatic uplift on the building after the construction phase dewatering is turned off as well as movement from seismic events.

Please reference the geotechnical report for information regarding these issues.

W/O Note: The Geotechnical report was included in TG06 package as a reference document.

T-0519 **BGP - Waterproofing Detail Clarification at "Pressure Slab" Joints** **Closed** **04/25/2013** **05/05/2013** **04/29/2013** **Potentially** ☐

From: Webcor Construction LP Kody Cooper **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please reference Specification Section 07 12 10 - 3.3.G and Detail 4/A1-8710. Detail 4/A1-8710 shows a typical waterproofing detail for cold joints (construction joints) at walls. Spec Section 07 12 10 - 3.3.G states the following: "Apply two 9" wide strips staggered 6 inches and 3 inches centered over the following joints:
1. Under cold joints in the pressure slab. Temporarily protect the exposed side with protection board until the adjacent slab is cast.
2. On protection boards to receive blindside waterproofing."

1. Please clarify what the "pressure slab" is referring to as there is no reference to "pressure slab" in the Contract Drawings.
2. Please provide a detail for waterproofing for this condition as a detail does not exist in the Contract Documents. Detail 4/A1-8710 does not reflect what is called out in Specifications Section 07 12 10 - 3.3.G for construction joints.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. The term "Pressure Slab" in Specification Section 07 12 10 is the 5' thick "Mat Slab" on the drawings.

2. The contract drawings and specifications cover the general requirements and waterproofing system parameters. Specification 07 12 10 - 3.3.G is clear regarding membrane configuration below cold joints. The contractor should provide a submittal detail following the waterproofing manufacturer's recommendations for this condition.

T-0520 **BGP - Finish Floor Elevation** **Closed** **04/26/2013** **05/10/2013** **05/06/2013** **Potentially** ☐

From: Webcor Construction LP Ian Corcorran **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Andy Khuu

REQUEST:

Ref. Dwg. P1-2022
Ref. Spec. 22 13 01

Contract drawing P1-2022 calls out "Future FFE = -35'-5"" for the Future Finish Floor Elevation. This elevation note does not appear in any of the other mat slab plumbing drawings (P 1-2023 to P 1-2030). Please confirm if the Future Finish Floor Elevation applies to the entire mat slab.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The call out 'Future FFE = -35'-5" applies only to the Future Floor Finish Elevation for the area containing service rooms at B2 Level North West bounded by the the points GL B, 1.5; GL B, 5.5; GL F.7, 1.4 and GL C.5, 5.5.

T-0521 **BGP - 1 in Aggregate in Protection Slab Cast-in-Place Concrete Mix Design** **Closed** **04/29/2013** **05/09/2013** **05/02/2013** **Potentially** ☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Ref: Submittal TG0600-200.1

Please reference submittal TG0600-200.1 (cast-in-place concrete mix design - Protection Slab). Per the referenced submittal and submittal response, sent to SCCI April 12, 2013 and returned as "Make Corrections Noted," SCCI intends to use 1" aggregate in the above mentioned cast-in-place concrete mix. In addition, the above mentioned mix design was also reviewed at the TG06.0 Protection Slab Preparatory DFOW meeting, held April19, 2013.

Please confirm the use of 1" aggregate in the Protection Slab is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed: the use of 1" aggregate at the Protection Slab is acceptable.

T-0522 **BSE - Micropile Relocation- Performance Test Pile Zone 2 (Sequencing)** **Closed** **04/29/2013** **05/09/2013** **05/03/2013** **Potentially** ☐

Co-Author: Balfour Beatty Infrastructure, Inc. Brandon Miller

REQUEST:

Ref: S1-2023

The primary performance test micropile is yet to be installed for Zone 2. Due to sequencing advantages, BBII proposes relocating this pile from the original location

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

At the request of W/O, this RFI will be pulled back from the design team, and superseded by RFI T-0522.1.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

shown in S1-2023 to GL 15 between B&C. The relocated micropile location is within the geothermal area; however, it does not appear to impact geothermal piping. See attached sketch.

Please confirm this is acceptable.

T-0522.1 **BSE - Micropile Relocation- Performance Test Pile Zone 2 & 3 (Sequencing)** **Closed** **05/02/2013** **05/12/2013** **05/03/2013** **Potentially** ☐

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Balfour Beatty Infrastructure, Inc. Brandon Miller

REQUEST:

Ref: Specification Section 31 63 33 1.1B

This RFI supersedes RFI T-0522.
DTDS proposes to reduce the design length of the Micropiles East of Gridline 17 (EG17) from 80 feet to 70 feet. DTDS has shown through testing and reduced post-grouting that a higher soil-grout bond than originally assumed in the design can be achieved in the field. DTDS will install two (2) performance test piles to verify the capacity of a 70 foot micropile EG17. One performance test pile will be installed in Zone 2 at gridline 17 between piles E005 and E008. The second performance test pile will be installed in Zone 3 at gridline 20 between piles E136 and E137. DTDS believes that 70 foot micropiles EG17 will still achieve the maximum required load capacity of 2.4 times Design Load (560 kip). The performance test piles will be installed with one (1) round of post-grout. Based on the results of the testing, additional post-grouting can be provided as necessary.

Upon completion of the testing DTDS will submit revised micropile working drawings and calculation supplement.

All production micropiles will continue to be proof tested per the Specifications. The performance test locations provided would supplant the performance test locations shown in the Contract plans for Zones 2 and 3.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposed relocation for the zone 2 performance test micropile is acceptable.

The proposed relocation for the zone 3 performance test micropile is not acceptable. (The contract documents indicate the zone 3 performance test micropile to be located at GL E and to the east of GL 22. If the contractor desires to relocate the zone 3 performance test micropile, the proposed location will not be approved at locations west of GL 22.)

Thornton Tomasetti does not object to the other aspects of the RFI except to note that the maximum required load capacity for the performance test remains at 2.8 times the Design Load (not 2.4), per the contract documents.

Co-Author: Balfour Beatty Infrastructure, Inc. Danny Walsh

REQUEST:

Ref: Specification section 31 55 00

Please confirm the design team has no exceptions to raising the Zone-4 bracing elevations, all levels of struts/walers and all related strut supports/trestle bracing, 1'-0" so as to facilitate the specified waterproofing lap in relation to the top of wall.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is acceptable with regards to the geotechnical aspects of building the excavation.

The Contractor shall coordinate this change with regards to potential conflicts during the construction of the other building trades.

Stacy Wilson 5/13/2013 URS: WO/BBII is required to provide written documentation from the Internal Bracing and Access Trestle design Engineers of Record (PB&A), stating that they have reviewed and approved this elevation change. If this contractor requested change is approved by PB&A and the design team (AAI, Arup, Thorton-Thomasetti, etc.), the

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Internal Bracing submittal is to be revised accordingly and resubmitted in constructware for review and approval.

T-0527.1 **BSE -Revision to Zone 4 Bracing Elevations Level A-D** **Closed** **05/10/2013** **05/20/2013** **05/14/2013** **Potentially** ☐

From: Webcor Construction LP Ian Corcorran **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Stacy Wilson

Co-Author:

REQUEST:

As installed and or planned the current elevation of the A-level internal bracing walers conflicts with the TG06 wall termination elevations relative to the waterproofing overlap which was unspecified when the internal bracing was submitted. Please find attached RFI SK-527.1-1, WOJV proposes to:

1. Reduce the TG06 top of wall elevation 2'-0" to an elevation of +7.50' between approx. GL(s) 1 to 16-17.
2. Reduce the TG06 top of wall elevation 1'-0" to an elevation of +3.50' between GL(s) approx. GL(s) 16-17 to 25-26.
3. Reduce the TG06 top of wall elevation .75' to an elevation of +1.50' between GL(s) approx.. GL(s) 25-26 to 35.

This scope reallocation would exchange concrete rebar and waterproofing from TG06 to TG07 package, which assuming a prompt response, there is still time to do.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

W/O to coordinate.

W/O Comment: WOJV is herein amending the TG06 documents to reflect the top of wall elevations specified in above items 1-3. The TG06 Trade Subcontractor is to provide a credit for, to include however not limited to, the concrete rebar and waterproofing which has been deleted from the TG06 scope of work.

T-0527.2 **BSE - Revision to Zone 4 Bracing Elevations Level A-D** **Closed** **05/28/2013** **06/07/2013** **06/11/2013** **Potentially** ☐

REQUEST:

Reference Specification: 01 31 26

SCCI is requesting access to the latest, most up to date Structural and Architectural Revit models from the designers. The 3D database would be used for reference only and will not be used for construction. SCCI understands that the 3D Database is subject to change as the project design evolves. As a user of this 30 database, SCCI accepts the risk and acknowledge that the data is subject to change. SCCI also acknowledges the terms and conditions outlined in the Transbay Transit Specification Section 01 31 26.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The updated In-Progress Revit computer model will be issued to TJPA for review and comment on May 31, 2013. TJPA will forward this model to the Contractor for information, review, and comment. The Revit model is clearly clarified as not a Contract Document for use in construction. The documents issued on May 31, 2013 are not being issued for bid or construction. The Contractor shall determine when, for what purpose, and how the model is shared with their Sub-contractors.

T-0535 **BGP - Elevator Opening Encroachment at Concrete Beam B131** **Closed** **05/07/2013** **05/16/2013** **05/09/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference Drawing: A1-2842, S1-2202, S1-3401

Please reference attached Contract Drawings A 1-2842, S 1-2202 and S 1-3401. DrawingS 1-2202 calls out concrete beam B131 running east to west between the elevator and Stair openings. The dimensions of concrete beam B131 are 22 inches wide and 36 inches high. See drawing S1-3401 for beam schedule. A1 -2842 calls out the spacing between openings to be 1'-9". This makes the elevator pit encroach 1 inch into concrete beam B131. Shall the elevator opening be relocated 1 inch to the south to

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The openings in the Lower Concourse slab shall remain as shown on A1-2842. The beam shall be modified to 21" wide by 36" deep. Longitudinal reinforcement for this beam shall be 2-#10 for continuous top bars, 3-#10 continuous for bottom bars, and 3-#10 additional short bottom bars (L=18'-0" centered at midspan). Stirrups shall be #4's, type 2, 12@8"OC from each end, balance at 12" OC. Top & bottom clear cover to the stirrup shall be 3" and 1.5", respectively.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

accommodate the concrete beam? Please advise.

T-0536 **BGP - Sump Conflicting with Trestle Pile** **Closed** **05/07/2013** **05/06/2013** **05/22/2013** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Andy Khuu

REQUEST:

Reference Drawing: A1-2817, S1-2027

Based on the latest BBII trestle model available to SCCI and contract drawing A1-2817, there appears to be a conflict between a sump pit and trestle pile near column line "34" and "E". Please refer to the attached screen shot from SCCIs Revit Model.

8/31/2012 IFC drawings did not show this sump pit as it was added in ASI No. 0099.

Please provide direction on how to proceed

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The sump pit located at 7'-6 ¾" west of GL 34 per A1-2817 shall be relocated to 12'-3" west of GL 34 to avoid this conflict.

W/O note: Please confirm that the relocation of this sump pit does not conflict with any micropiles in the surrounding area.

T-0537 **BGP - Sump Pit/Catch Basin Clarification at Gridlines C/19.1** **Closed** **05/07/2013** **05/16/2013** **05/13/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Andy Khuu

REQUEST:

Reference Specification: 22 13 01
Reference Drawing: A1-2815, S1-2055, P1-2025

The pit near gridlines C/19.1 is identified as a catch basin in drawing A1-2815 but identified as a sump pit in drawing S1-2055. Drawing P1-2025 does not show any piping for this pit. Please confirm if this should be a sump pit or is the piping detail missing?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is a sump pit in an escalator pit. There is no grate or piping associated with this sump pit.

REQUEST:

Ref Dwg. P1-2022, P1-6001

Please reference attached sketch SK-0163 and Contract Drawings P1-2022 and P1-6001. Drawing P1-2022 calls out Top of Concrete = -35'-8" and Finish Floor Elevation= -35'-5". P1-6001 Detail 8 shows top of sump grate frames to be flush with the surface in which it is embedded. It is unclear whether this is top of concrete or top of finish floor. SCCI has not been provided drawings to confirm topping slab extents. There shall be a 3 in vertical edge if sump pit frames are placed flush with top of mat slab concrete and a topping slab is placed in the future. See attached SK-0163 for details. SCCI intends to place top of sump pit frames flush with top of mat slab concrete. Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

All sump pits and catch basins identified on plumbing drawings and located in the future track areas have the grating flush with top of concrete at elevation -35'-8".

T-0539 **BGP - ASTM 123 Galvanizing Variance** **Closed** **05/07/2013** **05/17/2013** **05/07/2013** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference Specification: 05 05 15.3.3.B and the attached letter from AZZ Galvanizing

The steel pipe penetration sleeves are to be coated under the Structural Shapes and Plate Material Category with a grade of 100 and 3.9 mils thickness per Tables 1 & 2 of ASTM A123. The first 2 shipments of steel penetration sleeves (approximately 12 pin pile and 17 trestle pile) were coated under the pipe and tubing material category with a Grade 75 per Table 1 of ASTM A123. This coating grade requires 3.0 miles per Table 2 - Coating Thickness Grade. SCCI is requesting that the Grade 75 be allowed for the first two pin pile in Area 1 that are fit and welded to the intermetallic layers having still penetrated the material and per the attached letter, the process used will insure a long service life. The average thickness for the specified pin pile above is 3.2 mils. Is this acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

No

T-0541 **BGP - Protection Board Installation at SW Corner** **Closed** **05/09/2013** **05/23/2013** **05/13/2013** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Ian Corcorran **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Ref Spec. 07 12 10- 3.2.D

Please reference Specifications Section 07 12 10- 3.2.D. This spec states the following: "Install protection board on vertical surfaces with long dimension vertical and the polyethylene film side facing the soil/cement surfaces. Secure 1 /4" protection board to flanges of soldier piles with powder driven fasteners and washers spaced 12 inches o.c .... "

At the SW comer of the project, the soldier beams are spaced greater than the width of the protection board. We suggest rotating the protection board 90-degrees so that the long dimension is horizontal instead of vertical. This would allow for attachment to the soldier piles and the inside comer of protection board to be heated and formed into the comer. We also suggest using this method where pile spacing exceeds 4' on center.

Please review and advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The contactor's suggestion to rotate the protection board 90-degrees is acceptable where the soldier pile spacing and the waterproofing manufacturer require.

T-0542 **BGP - Drainage Mat Installation Clarification** **Closed** **05/09/2013** **05/23/2013** **05/13/2013** **Potentially** ☐

From: Webcor Construction LP Ian Corcorran **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Ref. Spec. 07 12 10- 3.2.F.

This spec section states the following: "Install drainage composite in largest practical sizes over the entire area of the felts. Install either vertically or horizontally and lap sheets 1" in direction of flow ... "

1. If drainage composite is installed vertically, please confirm that direction of water flow is down vertically towards the mudslab.

2. Please confirm that only horizontal joints in the drainage composite will be lapped 1 inch.

3. Please confirm that vertical drainage core joints will be butt jointed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The Design Team confirms that Items 1, 2 and 3 of this RFI are correct.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0543	BGP - Galvanizing Varying Material Category Variance	Closed	05/09/2013	05/23/2013	05/21/2013	Potentially	☐

From: Webcor Construction LP Ian Corcorran **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Ref. Spec. 05 05 15- 3.3.B.2

Reference is made to Specification Section 05 05 15-3.3.B.2 and the attached 'Ask Dr. Galv' galvanizing article. Section 3.3.B.2 states "When galvanizing assemblies of components of varying material category and material thickness, provide minimum coating thickness grade for all members equal to or exceeding the maximum highest material category coating grade."

For the dewatering and piezometer mat slab penetration sleeves, A513 tube is being used, which has a Grade 75 designation per ASTM A123. Based on the above specification, Grade 100 must be followed because these sleeves have plate components. The reason Grade 75 is specified in ASTM A123 is that it is the minimum consistent attainable galvanizing coating for the thickness and chemistry of the material being coated. As an aluminum killed steel product, it is not a natural catalyst to galvanizing as silicon is per the attached article. To specify Grade 100 goes beyond A123 specifications. Therefore, SCCI requests Grade 75 be used, with a minimum coating thickness of 3.0 mils, for the dewatering wells and piezometer mat slab penetration sleeves. Please be advised if Grade 100 (3.9 mils) is required, the galvanizing process to attain the thicker coating can lead to embrittlement and delamination of the coating. Is Grade 75, with a minimum 3.0 mil coating thickness on the dewatering well and piezometer mat slab sleeve penetrations, acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per specification section 05 05 15 / 1.3 submit shop drawings of the galvanizing schedule, submit samples of the galvanizing, and submit monthly certificate signed by the galvanizer. If in the shop drawing process the Contractor submits a certificate signed by the galvanizer as required by specification section 05 05 15 / 1.3D stating the proposal above meets the recommendations of and is in compliance with the specified ASTM standard's minimum requirements, the Contractor's proposed galvinanizing thickness will meet the design intent of the contract documents.

The last galvanizer certificate received in the Transbay shop drawing process was dated January 4, 2013 and it is not clear if that shop drawing covers the item referenced in this RFI.

AAI - Please see SKA-2763 for new location of FSK

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

20 00

Response to SCCI RFI #I73 (WOJV RFI#T-0546) did not provide SCCI with clear direction on how to proceed with the conflicts between the floor clean out and floor sinks at gridline 4/C (Ref A 1-9215 and
S 1-2022) with top layer of rebar and shear reinforcement. TT response only addresses the top bars of the mat, and not the shear reinforcement that will be in conflict with the floor clean out and floor sinks. WSP Flack and Kurtz suggests possible alternate locations of the floor sink and cleanout vent and trap primer.
Please provide clear direction on what action SCCI is to take.
If the locations are to be moved, please provide exact locations of the floor sink and cleanout.

and FCO within the Fire Pump Room.

TT - The floor sink and cleanout shall be moved such that they do not conflict with the headed shear reinforcement. From the floor sink dimensional info provided in the RFI, it appears that floor sinks will interrupt the top bars of the mat regardless of where they are located. Contractor shall apply detail 1 on S1-3501 for reinforcement requirements at top mat bars that are interrupted by floor sinks.

F&K - For revised piping layout of the Fire Pump Room, see attached sketch PSK-2022

T-0547 **BGP - North Shear Wall** **Closed** **05/09/2013** **05/23/2013** **05/24/2013** **Potentially** ☐

REQUEST:

Ref. Dwg. S1-2030, 2/S1-3204, A1-2110

Reference attached contract drawings S1-2030, S1-3204 (detail2) and A1-2110. Structural drawings do not show the detail for termination of the 3 ft chamfer at the end of the south foundation wall. CD A1-2110 indicates that the 3 ft chamfer terminates at the face of the knockout wall.

Please provide details and where does the 3ft chamfer, at the West end of the South foundation wall, terminate?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The chamfer along the south foundation wall terminates at the face of the west knock-out wall as shown on sheet S1-2060 (Mat Top Reinforcement - Zone 10 Plan), and is not intended to show on S1-2030. Vertical bars of pilaster reinforcement extend to bottom of mat and the hairpins & cross-ties extend 12" below top of mat.

T-0549 **BGP - Testing of WPM-1 Seams** **Closed** **05/13/2013** **05/23/2013** **05/14/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

During the 5/10/13 waterproofing meeting Jon Laurence (Laurenco) and Carl Keim (AAI) clarified that specification section 07 12 10.3.5.B (independent testing all seams) only applies to the Laurenco products i.e. membrane layers, butyl tape, and flashings. Please confirm.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The Design Team confirms that statement in the RFI is correct.

T-0550 **BGP - Request to Revise Lower Concourse Elevation** **Closed** **05/14/2013** **05/24/2013** **05/24/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Exhibits: A - G

The BSE IFC drawing S1-3201 (Exhibit-A) depicted the Lower Concourse slab at an elevation of -8'-8" between grid lines 9-3 and West of grid 3 & North of grid E.6.

Although specification section 01 13 00.1.3.H.3 precludes the TJPA from making scope changes in submittals, on 3/29/11 the TJPA returned submittal package ID TG0300-541/submittal ID TA2010-315500A10 (Exhibit-B) which included a note stating the Lower Concourse level slab varies as follows:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The contractor's suggestion to revise the Lower Concourse slab elevation is NOT acceptable. The contractor is to follow the elevations set out on the latest Below Grade Package documents.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

T/Lower Concourse slab East of gridline 9 = -8'-2"
T/Lower Concourse slab West of gridline 9 = -5'-5"

Although specification section 00 07 00.1.01.37 stipulates a Field Order is not to involve a change in Contract Sum or Time, on 9/7/12 after the zone-1 level-B bracing and trestle was installed (Exhibit-C), the TJPA issued Field Order #T-00008 / ASI #0097 (Exhibit-D) which revised the top of the Lower Concourse slab elevation between grid lines 1-5.5 from -8'-8" to -5'-5" a difference of -3'-3" reference sheets S1-3201 (Exhibit-E) and S1-2202 (Exhibit-F).

The latent elevation change of the Lower Concourse slab has created proximity conflicts with the previously installed internal bracing and trestle steel depicted on the attached marked-up drawings (Exhibit-G).

WOJV has surveyed the internal bracing and trestle steel conflicting with the Lower Concourse slab and believes the most cost and schedule efficient solution would be to again revise the elevation of the Lower Concourse slab to -6'-6".

Please advise if the proposed elevation revision is acceptable.

T-0551 **BGP - CR T-069 Wall Penetration Link Seals** **Closed** **05/14/2013** **05/28/2013** **05/29/2013** **Potentially** ☐

Please provide approximate diameter of walnut sized gobs (maximum/minimum will suffice).

T-0557 **BGP - Waterproofing Asphalt Cement with Laps in Felt Layers** **Closed** **05/16/2013** **05/26/2013** **05/21/2013** **Potentially** ☐

From: Webcor Construction LP Kody Cooper **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

In reference to Specification Section 07 12 10, 3.2, E, the specifications do not mention laps in felt layers needing to be fully sealed in asphalt cement. Please confirm that fully sealed laps are not required.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The end laps are not to be sealed. Lap ends of felt layers in the direction of water flow.

T-0557.1 **BGP - Waterproofing Asphalt Cement with Laps in Felt Layers** **Closed** **05/31/2013** **06/10/2013** **06/03/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please reference RFI #T-0557 response and Specifications Section 071210-3.2. RFI #T-0557 response confirms that end laps are not sealed, but does not address the side laps.

Please confirm that this applies to the side laps as well.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Do not seal any laps of the felt layers. Neither the end laps, the side laps nor any other laps are to be sealed.

T-0558 **BGP - Waterproofing Asphalt Cement at Protection Board Transitions** **Closed** **05/16/2013** **05/26/2013** **05/23/2013** **Potentially** ☐

T-0559	BGP - ASI 102 Change Clarification at Elevator Pit Near GL 2-E 2	Closed	05/14/2013	05/28/2013	05/23/2013	Potentially	☐

From: Webcor Construction LP Ian Corcorran **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Ref. Dwg. A1-2812, 1/A1-9214, 3/S1-3006

Revision 0 of A1-2812 previously contained dimensions for the elevator pit near gridlines 4-E.2; however, as a result of ASI 102 revision 1 of A1-2812 no longer contain the dimensions for the elevator pit and the referenced detail 1 of A1-9214 does not either. Please provide the dimensions of the elevator pit.

Also, detail 3 of S1-3006 indicates that there is a change in the thickened section of the elevator but it does not appear that there were any changes made. Please confirm if there are changes to the thickened section.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The elevator dimensions have been revised and will be included in ASI 104. Please refer to the attached SKA 2709 (based on A1-9214) for revised dimensions.

Thornton Tomasetti response:

Detail 3 of S1-3006 is clouded because the pit depth and plan dimensions were revised in ASI 102. While the changes will require only minimal revision of the rebar lengths/bend locations/etc for rebar fabrication, and the structural intent of the rebar detailing remains unchanged, the mat depression region on 3/S1-3006 was clouded to alert the contractor to the need for these dimensional rebar detailing revisions due to the pit resizing. (We agree that on first glance there do not appear to be any revisions to the thickened section of the detail; the revisions are graphical only, and small enough that they are not noticeable except in an aligned overlay.)

T-0560	BGP - Grade 60 ASTM A-615 Conforming Bar In-Lieu of ASTM A-706	Closed	05/16/2013	05/29/2013	05/29/2013	Potentially	☐

From: Webcor Construction LP Ian Corcorran **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Andy Khuu

REQUEST:

Ref. Dwg. RE-2/S-0007

Gerdau proposes to use Grade 60 ASTM A-615 bar in place of Grade 60 ASTM A-706 material in the locations defined within RE-2 on sheet S-0007 which include foundation walls, columns and moment frame beams. The Grade 60 ASTM A-615 bar shall conform to the strength properties published in the attached ASTM specifications.

This is not a request to replace all Grade 60 ASTM A-706 bars with Grade 60 ASTM-615. Is it acceptable to use ASTM-615 bars, when available, that would otherwise be wasted during the rebar fabrication process?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

We will allow the use of A615 bars in lieu of A706 for inquired scope of elements provided that test data for the A615 bars meet ACI 318 section 21.2.5. Please submit test data that meets code requirements and identify where these bars will be used.

T-0561	BSE - Standard for Determining Buttress Concrete Strength	Closed	05/16/2013	05/26/2013	05/20/2013	Potentially	☐

From: Webcor Construction LP Kirk Nielsen **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Spec. section 31 63 29.3.9.D states,

"Not less than 28 days after concreting is completed, perform HQ coring over the full depth of 10% of the shafts to verify the quality of concrete and test whether the shafts are free of defects. Provide these cores for inspection by the TJPA Representative. The TJPA's Representative will select the locations where coring shall be performed and will select the cores which will be tested for strength."

The aforementioned language in addition to spec. section 31 63 29.1.6.A which states:

"Perform work in accordance with ACI 301, except where otherwise specified. Specifications herein set minimum results required and references to procedures to establish minimum guidelines."

reads as if ACI 301 would be the specified standard for determining the required buttress concrete strength (specifically ACI 301 section 1.6.6.2) hence acceptance.

Please confirm what if not ACI 301 is the standard for determining the buttress concrete strength hence acceptance.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

ACI 301 is the standard.

REQUEST:

Specification Section: 071210 3.2 G

In reference to Specification Section 07 12 10, 3.2, G, "Install insulation with long dimension horizontally. Secure with insulation manufacturer's recommended adhesive."

The EPS insulation manufacturer recommends the use of ADCO Millenium One Step Foamable Adhesive for this vertical application. The waterproofing membrane manufacturer has indicated that they will not provide a warranty for their system unless the adhesive has been

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per Specification Section 07 12 10, 1.4, E, 1: the manufacturer is to supply certificates stating that materials in the system are physically and chemically compatible. This specification statement is clear and question parts 1 & 2 are superfluous; all component manufacturers will need to comply with this section of the specification. The alternative method of installation in part 3 is not acceptable without such certifications and additional fasteners, even temporary are not acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

tested in the same application. Please confirm the following is acceptable:

1. The testing data is required for the manufacturer's recommended adhesive for EPS insulation installation.

2. Laurenco must approve of the use of every component in the system (protection board layer to insulation layer) even though it is called out to follow the insulation manufacturer's recommendation per the specifications.

3. As an alternative to the specification requirements, the Laurenco adhesive (with temporary fasteners and washers) is to be used for the insulation installation, until the insulation manufacturer's recommended adhesive (ADCO) is tested and submitted. Once the manufacturer's recommended adhesive (ADCO) is approved, the ADCO adhesive will be used for the insulation installation in place of the laurenco adhesive.

Please confirm this is acceptable.

REQUEST:

Reference Specification 23 57 34 Sub Section 3.4

During the TG06 IFB process section 3.4 was added to the Ground Loop Heat Exchanger specifications. We believe this requirement is intended for a future bid package during the commissioning of the system. Please confirm.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The water treatment scope of work issued in mechanical specification section 23 57 34-3.4 for the ground loop system is intended to be part of the Below Grade Package bid. However, this specific scope of work could be deferred and bid out with the remainder of the water treatment work for the project in the Main Building Package. Turner/TJPA to provide final direction on scope allocation between different trade packages.

Jeff Thiel:
Geothermal water treatment may be deferred until water treatment of the building condenser water piping system, to which the ground loop heat exchanger

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

piping will be connected to in a future scope of work, takes place. CM/GC to leave geothermal system as described in specification section 23 57 34, 3.2.J until treatment takes place.

T-0565 **BGP - Waterstop Injection Hose Boxes** **Closed** **05/22/2013** **06/01/2013** **05/23/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please reference attached drawing A1-8711. Please confirm all Waterstop Injection Hose Boxes in the Mat Slab are to be mounted as illustrated in the attached drawing (flush@ -35' -8"). With the installation of a future topping slab, mounting these boxes at Mat Slab elevation may render the injection hose system inaccessible at that time.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The Design Team confirms that that Waterstop Injection Hose Boxes in the Mat Slab are to be mounted flush at -35'-8". The rail bed system (by others), which will not be determined until a future time, will need to make provisions for access to these boxes.

T-0566 **BSE - Zone 2 A-Line CDSM Embedded Metal Part at Soldier Pile 96** **Closed** **05/22/2013** **06/01/2013** **05/24/2013** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

Ref: 5/E1-6001, E1-2202, E-0006

Per Plan Sheet E1-6001 , Detail 5. (attached) the embedded conduits for the fire managment system do not extend above or into the lower concourse floor slab. Additionally, on Plan Sheet E1-2202 for the lower concourse level, Sheet Note A (attached) states that the "scope of work on this sheet is limited only to grounding electrode conductors embedded in slab and main grounding bus (MGB) in the main electrical room." From these two notes, it is clear that the fire alarm system scope is limited to the train platfonn level.

However, on Plan Sheet E-0006 (attached) General Note R., "For fire alarm devices, provide embedded boxes, conduit, and pull strings in the lower concourse slab for service to fire alarm devices for both levels".

Please proved direction as to whether or not the fire alarm system conduit is to be installed in the lower concourse level slab.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The referenced detail is limited to the conduits for devices that are mounted on walls or columns at the Train Platform level. Refer to Sheet E-0006, Note R, for the requirements for the fire alarm raceways and boxes to be embedded in the Lower Concourse slab.

T-0568 **BGP - Monitoring Instrument Sleeves Detail** **Closed** **05/23/2013** **06/02/2013** **05/30/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference Drawings: 3/A1-8711, 4/S1-3009

Detail 4 on Sl-3009 does not apply to the monitoring instrument sleeves shown on A1-8711. The sleeves are continuous through the Mat Slab, and thus do not require a blockout.

Please provide a typical mat slab rebar detail that is applicab le to the monitoring instrument sleeves referenced herein.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

As the contractor notes in this RFI, the blockout in the top region of the mat slab per 4/S1-3009 is not required at monitoring instrument sleeves. Contractor shall apply the rebar detailing of detail 7/S1-3009 to both the top and bottom of the mat at these sleeves.

REQUEST:

Specifications Section 071210

We are in receipt of Laurenco Waterproofing Products, Inc.'s Installation Instructions revision dated 5/15/13 and have found several discrepancies with what is called out in Specifications Section 071210. Section 8, f, iv, 4, (d), vi calls for an additional layer of adhesive on walls prior to concrete. It calls for a coat of Laurenco Adhesive over COMPLETED membrane and cold joint reinforcement applied after wall ply adhesive has cured at least (3) days and (1) to (3) days in advance of reinforcement steel application for walls. This is added scope as this additional layer is to be applied over the completed membrane and is not called out in the Specifications.

Please confirm that SCCI is to use the manufacturers installation instructions

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The Contractor is to follow specification section 07-12-10 Modified Bitumen waterproofing (WPM-1) where the Manufacturer involvement is specified.

Questions on the proper installation of the system are to be directed to the waterproofing membrane manufacturer. Questions on the detailed installation procedure (Waterproofing Install Instructions) should be directed to Laurenco, not to the TJPA Reps via RFI.

T-0572 **BGP - New Waterproofing Install Instructions (3 day Cure)** **Closed** **05/29/2013** **06/08/2013** **05/30/2013** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

Reference Specification 26 05 34, 3.2 B.

The exact locations of the electrical equipment are to be provided by the TJPA through the RFI process. With the electrical equipment provided and installed at a later date under a separate contract, please provide the dimensions of the electrical equipment, boxes, and cabinets to allow for accurate electrical riser locations in the concrete slabs. The equipment, boxes, and cabinet dimensions in Zone 1, Area 1 are needed first with the areas to the east to follow.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

WSP Response: To address the specific information that is being requested, please identify which "equipment" is not sufficiently located in the drawings and requires clarification. Sheet E1-0006 notes specific requirements for coordinating the location of equipment and connections. Details on sheets E1-6001 and E1-6006 provide additional location requirements. Wireways have been indicated to position the conduits stubbing out of the slabs in the electrical rooms. Plans locate the embedded light fixture box layouts. Specifications 260502.3.4 require coordination of the work and contractor's coordination shop drawing layouts for review of the electrical room layouts.

T-0574 **BGP - Field Galvanizing of Mat Slab Sleeve Penetrations** **Closed** **05/31/2013** **06/10/2013** **06/09/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc John Berggren

REQUEST:

Reference Specification Section 05 05 15-3.3.B

The shop applied coating thickness for the pin and trestle pile sleeve fabrications is determined to be 3.9 mils per Table 2 in ASTM A 123. Under Section 05 05 15-3.5 the repair/restoration field-applied coating thickness is specified to be 8.0 mils. For field touch-up of damaged areas Section 05 50 10-3.2.D states to apply a thickness of 2.5 to 3.5 mils. For the coating hold back areas for the sleeve field weld joints and for any damage coatings that may arise during installation - is a uniform required mimimum field-applied thickness of 3.9 mils acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The question asks for clarification of the galvanizing coating repair thickness required for a specific location and for specific repair or touchup. The location noted in the question is not clear enough to answer the question. Resubmit the question with a more specific location noted. "Sleeve field weld joints and for any damage coating that may arise during installation" is too vague. Also, clarify if you are asking about field repair or field touchup of damaged zinc coatings.

The 8.0 mil repair thickness specified in section 05 05 15 applies to repair/restoration on most items as specified in 05 05 15 / 1.1.A: "zinc galvanic coatings applied in the shop or factory to surfaces of iron and steel installed at exterior locations and either totally or partially exposed to weather, humidity, moisture or precipitation; and elsewhere as indicated and specified." Specification Section 05 50 10 / 2.6 call for Hot Dip Galvanizing per specification section 05 05 15. Specification 05 50 10 / 3.2D applies to field

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

touchup of damaged zinc coatings at areas covered by specification 05 50 10.

REQUEST:

Webcor is proposing to change the alignment of the Concrete Foundation wall on the west elevation along gridlines 1 & X1-1.

The Concrete wall which runs along gridline 1 would be offset into the structure by 0.2656' (3-1/8") (proposed Face of concrete Foundation wall would now be 15-1/8" of gridline 1). Similarly along gridline X1-1 the wall would also be offset into the structure by 0.1575' (1 7/8") these offsets would enable the contract reinforcement to be installed without the need for further modifications to the reinforcement due to encroachment of the CDSM piles.

See sketch SK-1 showing Cross section of concrete Foundation wall between CDSM piles 818 - 822 GL 1 in proposed revised location.

Please confirm if this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For the pile encroachments at the Zone 1 West and South West CDSM walls, as described and illustrated in this RFI, the Design Team confirms it is acceptable to offset the alignment of the inside face of the Concrete Foundation Walls as the contractor proposes in RFI T-0576 BGP.

REQUEST:

Reference Drawings: S1-3201
Reference Specification: 03 30 20

Based on a recently constructed mock-up of the 1st lift of typical wall reinforcing a potential problem with congestion has been identified. The contract drawings on sheet S1-3201 depict the typical wall reinforcing details include #8 horizontal wall reinforcing at 8" O.C. E.F. typical. Additionally, the #4 cross-tie spacing has been designed at either 6" O.C. or 12" O.C depending on the location (elevation) within the wall. With the non-uniform spacing of the cross-ties and horizontal bars, the cross-ties are secured only to the vertical bars and have the potential during concrete placement to shift or slide down the vertical bars until resting on the next adjacent horizontal bar. The inconsistent spacing of the cross-ties and horizontal bars congests the reinforcing configuration which may lead to potential problems when interfacing the concourse level reinforcing with the walls. In order to eliminate these potential problems Gerdau proposes to perform a grade 80 conversion of the cross-ties such that the size of the cross-tie remains as a #4 bar but the spacing of the cross-ties are installed with uniform spacing to the horizontal reinforcing at 8" O.C. within the designed 6" O.C. ranges or 16" O.C. within the designed 12" O.C. ranges.

Please advise if this grade and spacing change is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Proposed modification to the spacing of the foundation wall cross-ties is not acceptable due to two reasons:

1) Per ACI 318, assumed yield strength for transverse reinforcement cannot exceed 60 ksi.

2) In zones where foundation wall cross-ties are spaced at 6"; the proposed change to 8" spacing violates the spacing requirements for transverse reinforcement of flexural members in ACI 318-11."

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0579.1	BGP - Horizontal Wall Reinforcing Equal Area Conversion	Closed	06/19/2013	06/29/2013	06/20/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: S1-3201, Spec Section 03 30 20

Gerdau (SCCI's subcontractor) has recently constructed a mock-up of the 1st lift of typical wall reinforcing and identified a potential problem with congestion and quality of the final designed product. The contract drawings on sheet S1-3201 depict the typical wall reinforcing details including #8 horizontal wall reinforcing which is designed at 8" O.C. E.F. Typical. Additionally, the #4 cross tie spacing has been designed at either 6" O.C. or 12" O.C depending on the location (elevation) within the wall. With the non-uniform spacing of the cross-ties and horizontal bars the cross-ties are secured only to the vertical bars and have the potential during concrete placement to shift or slide down the vertical bars until resting on the next adjacent horizontal bar. Additionally, the inconsistent spacing of the cross-ties and horizontal bars congests the reinforcing configuration which may lead to potential problems when interfacing the concourse level reinforcing with the walls. Gerdau would like to propose an equal area conversion for the horizontal reinforcing from #8 @ 8" OC to #7 @ 6" OC in order to make the spacing between the horizontal bars and cross-ties uniform. Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

TT does not see slippage of the cross-ties will be a concern if they are properly tied, and we don't see reducing the spacing of the horizontal bar from 8" to 6" will help the congestion issue raised. However, we don't take exception to the proposed change as long as it does not affect the cost and schedule.

T-0580	BGP - Type 2 Coupler at Outside Vertical 4th Lift	Closed	06/04/2013	06/14/2013	06/08/2013	Potentially	☐

REQUEST:

Reference Drawings: 6/A1-8711, 3/A1-8711

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The dewatering wells shall be capped and sealed in

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Per coordination discussions with WOJV (email attached), SCCI is to install BBII Piezometer sleeves per Detail 6 of A 1-8711. In this detail, the sleeve is to be blocked out of the Mat Slab and poured back at a later date contrary to the piezometer/monitoring instrument detail 3 on A1-8711. Is it acceptable to eliminate the blockout portion of detail 3/ A 1-8711 and pour the BBII piezometers into the mat slab?
The ARUP piezometers will remain operational (per Detail 3/ Al-8711) after the mat slab has been poured to monitor the water table levels.

accordance with detail 6/A1-8711. The timing to decommission the dewatering wells is stated in the specifications and the structural drawings.

The piezometers installed by Arup shall be protected as they will be used until further notice. Refer to detail 3/A1-8711 for detail at the mat slab.

If BBI installed piezometers, these will be sleeved and waterproofed in accordance with detail 3/A1-8711 and shall be decommissioned when directed by BBI.

T-0583.1 **BGP - Dewatering / Piezometer Clarification** **Closed** **07/11/2013** **07/11/2013** **07/23/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference RFI T-0583, RFI T-0602
Reference Drawing: A1-8711

In follow up to a phone conversation with George Metzger, detail 3/A1-8711 is to be used for all permanent instruments. Since the piezometers installed by BBII will be removed when the dewatering system is turned off, please confirm which waterproofing detail should be used.

Also, please confirm if any of Arup's instruments will not be permanent. If they are not permanent, please confirm which waterproofing detail should be used.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

As indicated in the previous RFI regarding this subject, it is acceptable to use detail 6/A1-8711 for the BBII piezometers, since they will be decommissioned, capped and infilled when the dewatering system is turned off.

Detail 3/A1-8711 is to be used for the Arup piezometers and extensometers, as these will be used for one year after the dewatering system is decommissioned.

T-0584 **BGP - Dewatering Well and Concrete Wall Conflict** **Closed** **06/05/2013** **06/15/2013** **06/17/2013** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Andy Khuu

REQUEST:

Please reference the attached drawings S 103.0 and S 104.0 from SCCI's Rev it model. Based on BBII's latest

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The shear wall and the concrete partition walls cannot be moved.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

as-built AutoCAD file ("20 13-05-01 BBII Dewatering Well Coordinates.dwg") and SCCI field measurements, it appears that de-watering wells #1, #3, #21 and #22 conflict with the concrete partition walls and shear wall.

Additional information below:

1. BBIIs dewatering well layout submittal was approved MCN 5/10/2011

2. Dewatering wells in conflict rough installation dates:
   Dewatering Well # 1 - 1/18/2012
   Dewatering Well # 3 - 1/19/2012
   Dewatering Well # 21 - 1/24/2012
   Dewatering Well # 22 - 1/23/2012

3. A1-2122 was issued for construction 8-30-2012 placing concrete walls in conflict with previously approved and installed dewatering wells.

Can these walls be blocked out at these locations? Can these walls be moved? Will the dewatering wells need to be relocated (diffiicult as the mud slab has been already poured in these locations)? Please advise as to how to proceed.

Dewatering wells at partition walls in this RFI may be blocked out.

The structural shearwall at dewatering well #3 was reflected in TG0600 BGP documents before dewatering installation which should have been coordinated between packages by the Contractor. Contractor has the option to move dewatering well #3 or provide a block-out (take special notice of note 3 below).

The following comments apply for block-outs:

1. Refer to General Note GR-9 on S-0005 for additional block-out information.

2. Contractor to propose/incorporate block-out reinforcement into shop drawings for review and approval.

3. Note that the shearwall at dewatering well #3 provides lateral stability for the west end wall when the cross-lot bracing is removed. The re-bracing will need to be re-designed to relieve the load off of the blocked-out shearwall and submitted for review.

T-0584.1 **BSE - Abandoning Dewatering Well #3 at Shearwall** **Closed** **07/25/2013** **08/04/2013** **07/26/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference RFI: T-0584
Reference SK-001 and SK-002

BBI is proposing to abandon the dewatering well #3 at the mudslab level. This will mitigate the impact of shear wall dowels and penetration sleeve in the vicinity of the mat slab penetration created by dewatering well #3, in lieu of creating a blockout in the shear wall and designing rebracing to address structural concerns.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to abandon dewatering well #3, however the Design Team is concerned that the contractor's proposed solution, to cut off the plugged well flush with the top of the mud slab, may expose the underside of the waterproof membrane to potential damage due to differential movement. All of the mat slab penetration sleeve details were developed as mitigation in case potential movement occurs e.g. buoyancy movement.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

BBI has discussed this with Viking Drillers and have confirmed they can abandon this well. BBI is proposing to cut the pvc casing flush with the top of mudslab, drill and epoxy #4 bars 2" down from top of casing with 3" embedment. The bars will be installed in the north, south, east, and west face through the casing and are installed to better ensure the dewatering well cement plug does not upheave. They will use Type II Portland Cement with a 5% bentonite content. Waterproofing will then be installed over the dewatering well, lapping as necessary to the adjacent waterproofing.

Please confirm that this is acceptable.

The Design Team proposes that the mud slab is to be broken out sufficiently to allow a 4" excavation below the underside of the mud slab. The dewatering well cut off and filled. Compressible material : 4" of Styrofoam installed into the excavation and over the plugged dewatering well. Then the opening in mud slab is to be repaired with reinforced concrete infill.

Note that BBII is still solely responsible for maintaining the dewatering.

T-0584.2 **BGP - Dewatering Well & Concrete Partition Conflict** **Closed** **07/30/2013** **08/09/2013** **08/08/2013** **Potentially** ☐

From: Webcor Construction LP Ryan Burke **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference: RFI T-0584, Attached sketch

Please refer to RFI 584 and the attached sketch of the proposed block out in concrete partition walls as referenced in RFI 584. The 28" x 28" blockout in the mat slab will be transferred to the blockout of the wall and be 25" from the mat slab elevation to the top of blockout. This will create 3'-0" from top of penetration sleeve to top of wall blockout. We are proposing to use formsavers and the male ends will extend the length of the blockout.

Please confirm this is acceptable or provide acceptable solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposed block-out for the dewatering well & concrete partition conflicts is acceptable provided the following:

1. Confirm the vertical bar size for max height partition at these locations.

2. Extend the vertical bars in the block-out a min 4" into the top of mat.

REQUEST:

Specifications Section: 03 30 20 3.5 & 3.11
Reference attached letter from CTL Group

SCCI is asking for variance to the temperature differential requirements for the mat slab concrete. If granted, this variance would be based on performance based temperature differential limit (PBTDL), which is tailored to both the Project's mass concrete mix design and the placement. Refer to the attached letter from CTL.
The intent of this PBTDL is to prevent thermal cracking, and at the same time reduce duration of the thermal control requirement.

Is this acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It will be acceptable to use the contractor-proposed performance-based temperature differential limit approach for spec section 3.11.B provided the following:

1. This approach shall be approved mix-specific.

3. The maximum temperature of 3.11.B as well as remaining mass concrete specification requirements shall still apply.

4. CTL shall provide the required measurements as well as field quality control.

4. Contractor shall still remain responsible for providing a mat foundation that meets requirements of the contract documents.

T-0586 **BGP - Fire Management System and Concourse Slab Electrical Scope** **Closed** **06/05/2013** **06/05/2013** **06/17/2013** **Potentially** ☐

Contract drawing S 1-9050 provides the reinforcing details for the Partition Walls which depict #7 @ 12" OC reinforcing dowels for a 12" wall. Per S 1-3205 Future 12" Walls receive #6 @8" OC reinforcing dowels. Please confirm the proper bar size for the Future Partition Wall dowels.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

"Future 12 thk conc wall partitions" shall be reinforced per S1-9050 as they are labeled as partition walls. Detail 5/S1-3205 is for future walls within the train platforms.

T-0589 **BGP - Epoxy Coating Thickness Over Formsaver Couplers** **Closed** **06/06/2013** **06/16/2013** **06/17/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: 6/S1-3001, Attached Letter

The response to RFI T 0515 confirmed to coat the form saver couplers for future construction as specified in ASTM A 775. Per ASTM A 775, the standard coating thickness specifies a required thickness range by which different size bars are to be coated 7 to 12 mills for bar sizes 3 to 5 and 7 to 16 mills for bar sizes 6 to 18; however, detail 6 on S1-3001 indicates a 12 mill minimum coating thickness over the couplers. Per the attached letter from Stanley Johnson the Regional Manager for Erico (Lenton) the epoxy coated form-saver couplers specified for use cannot be procured with a guaranteed 12 mill coating but rather an epoxy coating that meets the requirements of the ASTM A 775 standard. Please confirm that supplying an epoxy coated form-saver coupler that meets the ASTM A 775 standard but may contain a mill thickness less than 12 is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

We understand that the epoxy-coated form-saver couplers supplied by Lenton may contain a mill thickness less than 12 while still complying with ASTM A 775 and consider this acceptable.

For the stairs 202 and 203 there are only (2) drain and vent piping connections. (1) 6" sprinkler drain and (1) 3" vent (refer also detail 3/P1-6001). The 6" sprinkler drain to be located with the center line 12" from the face of the column (or wall for stair 203) and then 12"

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

to the 3" vent. Also, all vent connections to horizontal drainage pipe shall have their inverts taken off above the drainage pipe center line downstream of the trap being vented (CPC 505.2). Generally, this is accomplished by rolling-up the wye fitting.

T-0593 **BGP - Concrete Clear Cover of Reinforcing Support Bars** **Closed** **06/06/2013** **06/16/2013** **06/11/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Drawing 5/S1-3001, Spec Section 03 30 20

Gerdau would like to confirm that non-contract reinforcing support (carry) bars are to maintain the required concrete clear cover as specified in detail 5 on S 1-3001 and not encroach upon the designated clear cover limits. See the attached sketch for reference.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the clear covers for carry bars shall achieve at minimum the clear cover requirements of 5/S1-3001.

We note that for concrete cast against waterproofing (which is the condition at the bottom of the mat) the required clear cover per 5/S1-3001 is 2" for #6 or larger bars, and 1.5" for #5 and smaller bars, unless otherwise noted. While the clear cover to bottom typical continuous bars is to be 3" per Mat Bottom Rebar Note 7 on S1-2022, the smaller clear cover of 5/S1-3001 is appropriate to use as a minimum clear cover for carry bars, provided that in doing so the 3" clear to typical continuous bottom bars per Mat Bottom Rebar Note 7 on S1-2022 is still achieved.

T-0594 **SSS - Pendulum Bearing Specification** **Closed** **06/07/2013** **06/17/2013** **06/14/2013** **Potentially** ☐

Reference Specification: 03 20 02 2.6

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Verify these bearings are within the scope of the

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Spec Section 03 20 02 was issued to W/O on 4/26/13 as part of the TG07.1 IFB set dated 2/19/13 to be issued to existing W/O subcontractors for construction. 03 20 02 2.6 includes Pendulum Bearings . Please provide drawings and details depicting the location and quantity of Pendulum Bearings required.

Please also confirm any placement and attachment details for pendulum bearings and structure.

Structural Steel Superstructure Package. They are located at Gridlines 34 and 35, used between two concrete members.

2) Location of Pendulum Bearings is provided in Detail 2/S1-3302. Detail 2/S1-3302 is associated with three column types; C9, C10 and C11 (refer to Column Schedule). Performance requirements are provided in Section 2.6 of Specification 03 20 02. Also see Sections 1.3, 1.4, 3.2 of the same Specification for other requirements on pendulum bearings. Attachment details are per manufacturer's recommendations.

T-0595 **Geothermal Piping Under Construction Personnel Hoist Concrete Pad** **Closed** **06/10/2013** **06/20/2013** **06/11/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference: Attached Drawings

Please see the attached drawing of the proposed manlift pad to be installed flushed with the mudslab in Zone 2. Per WSP/Flack & Kurtz the dimension of soil between mudslab and top of geothermal pipe must be maintained at all times. It was stated that the geothermal piping could be installed 12" deeper as long as the rise of the pipe follow the radius loop bend requirments, in the method that the geothermal is installed in the sump pits. Please confirm that this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

WSP Response: Please provide the structural loading weight of the Personnel Hoist and concrete pad in pounds per square foot.

T-0596 **BGP - Sump Pit Grate and Frame at Gridline 19/C** **Closed** **06/11/2013** **06/21/2013** **06/20/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Jesse Dillon

REQUEST:

See attached drawing CB-2 of returned submittal package TG0600-710, P1-2025, and A1-2125.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The sump pit at grid lines 19/C is located within an escalator pit. Frame and grate are not required.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

The returned (returned to WOJV/SCCI on 06/07/13) shop drawing submittal (TG0600-710) for catch basin and sump pit grating indicates an additional sump pit grate and frame at approx. GL 19/C per drawing CB-2. The contract drawing P1-2025 does not have a call-out for a grate and frame at this location. Furthermore, drawing A1-2125 has the sump pit located within an escalator pit in the mat slab level. Per Field Order T-00011, all escalator pits do not receive grates or frames.

Please confirm the sump pit at GL 19/C does not have a grate and frame. An expedited response is requested in order to release the full order of frames and grates in a timely manner.

T-0597 **BGP - Concourse Deck Capacity for Construction Loads** **Closed** **06/11/2013** **06/21/2013** **06/12/2013** **Potentially** ☐

axle loadings for Sky Trak forklift model no. 8042. The forklift is intended for use on the concourse level deck for the installation of wall reinforcing steel.

Please confirm if it is acceptable to use noted forklift on top of concourse slab.

on top of the Lower Concourse slab. NOTE that this response is for the forklift and its carrying capacity only and does NOT consider additional construction loads that may be present at the time of this forklift use.

Please refer to original RFI T-0597 response for reference to Lower Concourse design loads.

T-0598 **BGP - Fire Management System Class A vs. Class B** **Closed** **06/12/2013** **06/22/2013** **06/15/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Attached Documents, E1-5201

After consulting with Siemens on the fire management system a clarification is needed. The riser diagram on sheet EI-5201 shows Class A conduit routing for the train platform level and the lower concourse level. Using a Class A wiring layout limits the system to 3 or 4 strobe devices per circuit. Under the NFPA 130 6.3.3.2.8 specification, the embedded (note (1) of the specification) fire management conduit protects against the ASTM E119 fire conditions and Class A isn't required per NFP A specification. Is it acceptable to design the fire management conduit system to meet the NFP A 130 specification under Class B requirements and impliment 6 or 7 strobe devices per circuit instead of the 3 or 4 stobe devices per Class A. By implimenting a Class B system, the future fire management system (installed under a future contract) will be less costly all while meeting the the NFP A 130 requirements.
Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

WSP Response: We confirm the Specification requirements for Class A wiring shall apply. The design of the conduit systems shall be configured to achieve Class A wiring for the fire alarm communication circuits that will power the strobelights at the Train Platform Level and Lower Concourse Level. Although we have designed for embedded conduit where possible, we cannot assure in the future design that we can embed or provide approved fire rated cable from the source fire alarm panel to the end device, since the fire rated cable systems that were planned for extension of the circuits have had their listings voided. Embedment and layout for Class A wiring will provide the required protection to meet code and to provide the future flexibility for the life of the building.

T-0599 **BGP - Continuous Concrete Insert Elevations** **Closed** **06/13/2013** **06/23/2013** **06/21/2013** **Potentially** ☐

REQUEST:

Reference: Attached Documents, Drawing A1-6231

Please reference the attached - clouded, Submittal TG0600- 110 BGP -Concrete Formwork Lift #1 sheet, comment regarding the elevation of the cast-in-place continuous concrete insert. The submittal comment requests an adjustment of the concrete insert elevations. In the attached RFI T-0506 the elevations of the concrete inserts were given to accomplish equal spacing as required by the drawings, as well as incorporate the agreed upon adjustments to the top and bottom insert. SCCI would like to verify that the given elevations of the cast-in members in the clouded section of RFI T-0506 are the correct elevations.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Please refer to the attached SKA -2745 which confirms the elevations of the continuous concrete inserts.

T-0599.1 **BGP - Horizontal Cast-In Inserts at EFCO Form Panels** **Closed** **11/19/2013** **11/29/2013** **11/20/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Filip Filipic

REQUEST:

See attached photo and reference RFI 599.

Interrior rib of the EFCO form panels lines up with the cast-in insert at EL -27.08'. SCCI intention is to bolt the inserts to the forms and this makes it difficult to properly secure the cast-in insert prior to concrete placement. SCCI proposes to lower or raise this insert 2" in order to properly secure it to the form.

Is this acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/20/2013
RESPONSE:
It is acceptable to lower the cast-in insert as indicated in the RFI.
Cast-in insert at EL -27.08' can be lowered 2" to have a new elevation of EL -27.25' to coordinate with the formwork installation.

Co-Author:

REQUEST:

Reference Drawings: 3/A1-8711 and 6/A1-8711

BBII's dewatering wells and piezometers are installed per Detail 6 on Sheet A1-8711 which clearly shows how the wells and piezometers will be filled and capped after the dewatering has been decommisioned. Detail 3 on Sheet A1-8711 does not provide any indication that these piezometers will be plugged and/or filled. Does the design team intend on leaving these piezometer holes open after the dewatering is shut off? If not, please provide a revised 3/A1-8711 clarifiying the design teams intent.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The monitoring instruments / piezometers will continue to function for a few years after the entire building has been completed, therefore will remain as shown on detail 3 / A1-8711. No additional detail is required at this time.

The instrumentation cables are inside a 2" dia steel pipe. A seal between the sleeve and the pipe is provided by the two linkseals. When the instruments are decommissioned, the conduit is cut off and the opening sealed. Then a steel cap is fully welded to the ring flange at the top of the sleeve, which is flush to the top of the mat slab.

T-0603 **BSE - Beale PG&E Utilities** **Closed** **06/19/2013** **06/29/2013** **07/01/2013** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Lynn Kowallis **To:** Turner Construction Compan Gary Krutsch **Answered By:** Transbay PMPC Douglas Jacobson

Co-Author: Balfour Beatty Infrastructure, Inc. Rodney Gordon

REQUEST:

Refer RFI T-0286
Specification Section 01 53 13

Please reference W/O RFI T-0286. For First and Fremont street BBII was directed to use a cable weight of 8.2 lb/ft to be used with the 6" conduit. BBII was supplied with a weight of 3 lb/ft for fiber cable used in 4" conduit (not PG&E conduit). BBII does not have a cable weight for 4" PG&E conduit.

1. Please confirm that the 6" PG&E conduit on Beale Street will contain a 8.2 lb/ft cable.
2. Please clarify the weight/ft of the cable used in the 4" PG&E conduit on Beale Street.

This information is necessary to design the utility supports on the Beale street Bridge.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Based on the attached Reference Data table, the total wt. of rigid conduit + conductors: 4" dia = 19.7 plf; 6" diameter = 40.0 plf

---

T-0604 **#2 CPH Platform through Mat Slab in Zone 2** **Closed** **06/20/2013** **06/30/2013** **07/28/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Please see the attached shop drawings and layout of the construction personnel hoist (CPH) to be installed in Zone 2. The CPH elevated steel PLATFORM to be installed and later removed and poured back such as the trestle pile penetrations.

All work dimensions have been coordinated with structure overhead into future bid packages as well as as-built information of internal bracing in the field.

We propose to :

1) Lower the geothermal piping an additional 12" to maintain the same 15" deep trench under all concrete. This will be performed the same way they install the piping in the sump pits with correct bend radius.

2) Install at 19'-6" x 13'-0" x 16" thickened slab incorporated with the current 4" reinforced mudslab. The

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposed Zone 2 personnel hoist installation described in the RFI is acceptable to the Design Team.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

thickened slab will contain #5 bars 12" OC EW T&B and we have confirmed that the total load of thickened slab, CPH, and platform will not exceed 500 PSF.

3) Install CPH elevated steel platform through the mat slab with 3'-0" of clearance between top of mat slab and bottom of platform deck and beams.

4) Waterproof platform legs per detail 5/A1-8711 04/29/13 per ASI 0102 Issued for Construction, Below Grade Package, including galvanized penetration sleeves and waterproofing. Penetration sleeve will be 30" diameter.

5) Reinforcing details will be the same as all other reinforcing at pin/trestle pile blockouts.

Please confirm this is all acceptable.

T-0605 **BGP - Plumbing and Electrical Autocad Files** **Closed** **06/21/2013** **07/01/2013** **06/27/2013** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please reference drawing S1-2061.

A 16-ft portion of the Area 2 wall vertical reinforcement, between GL 6 and 7, has been installed at 6" OC instead of the required WR1 spacing (8" OC).

Please confirm the as-built vertical wall reinforcement spacing identified in the attached excerpt drawing sheet S1-2061 is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/16/2013
RESPONSE:
As built vertical wall reinforcement spacing indicated in the RFI is acceptable. Please incorporate this change into as-built drawings.

T-0609 **BGP - Clear Cover to the Vertical Reinforcement on the Foundation Wall** **Closed** **07/03/2013** **07/13/2013** **07/10/2013** **Potentially** ☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference: Exihibit A, Attached

At some locations the clear cover to the vertical reinforcement on the foundation wall will be far in excess of the 2" shown on detail 1/S1-3201. Base on the RFI T-180.1 (see Exhibit - A) the clear cover could potentially be up 8" at the interface between the foundation wall at lower mat slab elevation and the waterproofing system.

Existing grade elevation = +25' + (protection slab elevation = -42') = 67' X 1/200 (CDSM pile vertical tolerance) = 4"

4" (CDSM pile vertical tolerance) + 4" (set back Per RFI T-180.1) + 2" (design clear cover to rebar) - 2" (waterproofing thickness subject to change) = 8" clear cover to rebar

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Maximum acceptable clear cover between the waterproofing system and foundation wall vertical reinforcement is 6 inches. For clear cover larger than 6 inches, evaluation will be made on a case by case basis. Submit information for review where clear cover exceeds 6". For this calculation, waterproofing thickness can be assumed 2 inches and location of foundation wall reinforcement can be assumed as indicated in contract drawings.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please confirm that this clear cover between the waterproofing system and the vertical reinforcement is acceptable.

T-0610 **BGP - Micropiles at CPH #2 Thickened Slab** **Closed** **06/24/2013** **07/04/2013** **07/01/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Sketch: SK-001

There are 4 micropiles within the perimeter of the thickened slab at CPH #2. Hand excavation will occur around these micropiles to keep from damaging the grout columns. The grout columns will be considered penetrations, in the structural design of the thickened mudslab and trim steel will be installed accordingly at each micropile. We will be installing butyl tape around the exposed grout column and onto the micropile, to top of thickened mudslab as a bond breaker. Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Thornton Tomasetti does not object to proposed micropile detailing at thickened mudslab as presented in RFI.

Adamson Associates Comment: The proposal in this RFI is not to alter the waterproofing system.

T-0611 **SSS - Grout Hole Diameter and Material** **Closed** **06/24/2013** **07/04/2013** **07/01/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference RFI: CN-005

Following up with the response to RFI CN-005 please clarify the following:

1. Please advise if steel pipes intend to be filled with grout or concrete.

2. If the filler is grout, a 1" hole for venting should work. We do not need a 3" hole for venting.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Steel pipe is to be filled with 4000 psi pea gravel concrete.
2. As noted in the response #1 to RFI CN-005, the 1" dia hole in the cast node will be remain to serve as a vent hole.
3. Hole in the cast node is to be used as vent hole, not as a grout port. W/O should review the constructability issue raised as this is a means and method issue.
4. As noted in item 2 of RFI CN-005 response, the 3" dia hole and patching details will be provided in a

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

3. If the filler is grout please advise if locations of the grout holes in cast nodes have been reviewed in the 3D model for accessibility in the field after nodes are attached to structural steel.

4. If steel pipes are filled with concrete and 3" hole must be patched with partial penetration weld please provide proposed detail and procedure for PJP weld.

5. Please provide procedure for patching the node grout hole.

future ASI.
5. 1" dia hole in the node does not require patching.

T-0611.1 **SSS - Grout Hole Options** **Closed** **08/19/2013** **08/29/2013** **08/23/2013** **Potentially** ☐

REQUEST:

Reference Drawings: S1-4002
Reference RFI: T-0611
Reference Sketch: Sketch 1, Sketch 2

Design documents do not specify or provide procedures for filling the steel pipe column with 4,000psi pea gravel. The following two options are proposed, please review and advise.

Option 1 (prefered)
1. Locate 3" grout hole at the back of the pipe to provide access from inside of the building.
2. Locate 3" grout hole about 6" below CJP weld.
3. Fill out pipe with concrete up to the hole.
4. Use 1" vent / grout hole in the cast node to fill out the upper void with grout (not concrete). If it is not required leave the void to reduce added cost.

Option 2
1. Weld a pipe nozzle with threaded end with a valve to 3" grout port.
2. Pump up concrete to completely fill the pipe column including voids in cast nodes.
3. Shut down the valve and wait until concrete sets.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is a contractor's means and method issue. Arup fire/blast engineer indicated that the fill needs to be concrete with carbonate aggregate with strength from 4000 to 6000 psi. From the IFC document, a 3" dia grout hole is to be provided for concrete pumping. If the pea gravel cannot travel thru the 1" dia hole in the bus deck cast node, a second group hole is needed above the bus deck node for pumping concrete above the bus deck. Using grout (with siliceous aggregates) is not permitted.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

4. Cut the pipe nozzle off.
5. Clean up the nozzle weld, remove extra concrete, weld in the plug, grind to AESS requirements, touch up.
6. Note: this option will be very expensive.

Co-Author:

REQUEST:

Reference RFI: T-0611.1
Reference Sketch: Attached

The response to RFI T-0611.1 does not address the question. If grouting of the void in the cast node per Option 1 is not permitted, then Option 2 should be applied to completely fill the pipe column and the void in the cast node with concrete. Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

TT has previous responded to RFI 611.1. TT's original response is excerpted below:

"This is a contractor's means and method issue. Arup fire/blast engineer indicated that the fill needs to be concrete with carbonate aggregate with strength from 4000 to 6000 psi. From the IFC document, a 3" dia grout hole is to be provided for concrete pumping. If the pea gravel cannot travel thru the 1" dia hole in the bus deck cast node, a second group hole is needed above the bus deck node for pumping concrete above the bus deck. Using grout (with siliceous aggregates) is not permitted."

TT is not in the position to give instruction to the contractor on how to fill the pipe with pea gravel concrete, as it is contractor's Means and Methods as stated in the original response. Some other possible options are discussed below for contractor's consideration:

Instead of using a 3" grout hole above the ground floor node as noted in Option 2, the contractor can pour the concrete through a 3" hole above the bus deck node and let the grout flowing through the 1" hole in the bus deck node to the pipe below, and the existing grout hole in the ground floor node can be used as a vent hole.

The Contractor may decide to grout the pipe by pouring concrete from the top of the lower pipe before

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the bus deck cast node is welded.

The Contractor may decide to grout the pipe by pouring concrete from the top of the upper pipe after the bus deck cast node is welded but before the roof node is welded (an external vibrator might be needed to facilitate the flow of the pea gravel concrete thru the 1" hole in the center of the bus deck node.

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Drawing S1-3302, S1-3201

Section 1 on S1-3302 details 2-1 /4" clear cover from the face of concrete to the typical wall vertical reinforcing. Per the response to RFI T-0339, the clear cover to the vertical reinforcing was confirmed to be 2" and the cross-ties would encroach into the 2" clear cover. Please confirm the wall vertical reinforcing cover detail in 1/S 1-3302 is superseded by the response outlining the clear cover requirements in RFI T-0339.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The wall vertical reinforcing cover detail in 1/S1-3302 is not superseded by our response to RFI T-0339. RFI T-0339 was on detail 1/S1-3201. Detail 1/S1-3201 and detail 1/S1-3302 correspond to different sections through the foundation wall. Detail 1/S1-3201 is a typical section and detail 1/S1-3302 is embedded columns within the foundation wall. 2-1/4"cover to the vertical reinforcement is specified in Detail 1/S1-3302 because of the larger cross ties required in the embedded columns.

T-0616 **BGP - Micro Pile and Mat Slab CJ Conflict** **Closed** **06/24/2013** **07/04/2013** **06/26/2013** **Potentially** ☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Documents: Exhibits A - H

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north wall in slab area 3 as well as all levels of the encroachment into the foundation wall between CDSM piles 1 to 32 as well. Location Plan see exhibit - A

Exhibit - B , C & H depict the location and degree in which the SP are encroaching

Option A
Webcor is proposing to change the alignment of the Concrete Foundation wall on the north elevation along gridlines A between gridlines 1 and 5 - 6 (CDSM piles 1 to 50)
The Concrete foundation wall which runs along gridline A between gridlines 1 and 5-6 would be offset into the structure by 0.1979' (2-3/8") the proposed Face of concrete Foundation wall would then be 2-3/8" off gridline A, this offset would enable the contract reinforcement to be installed without the need for further modifications to the reinforcement due to encroachment of the CDSM piles in concrete pour Areas 3 & 4. See Exhibit - H

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Option A

For Option A the proposed revision is acceptable, with the following conditions:

The Train Box design is restricted at the B2 Train Platform Level by the Rail Vehicle Kinematic Envelopes (RVKE). The B1 Lower Concourse Level is strictly controlled by space planning constraints, particularly minimum requirements for Public Utility rooms, service rooms and associated structural and service coordination.

The CDSM wall zone described in this RFI is outside of the RVKE, therefore at the B2 level the foundation wall face can be offset as proposed. However, at B1 Level, the offset will affect Utility Room and Service configurations.

If Option A is adopted, either:

1) Provided the foundation wall configuration and structural design permit, the offset should only occur in this area at the B2 Level and transition back to the

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Option B
WOJV proposal: (See Exhibit - B) Between CDSM piles 1 to 20-21 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear all the encroaching SP. This foundation wall area was originally a WR1 reinforcement area (#11@8"oc EF vertically) and would change to #11@6"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 see Exhibit - D.
Between CDSM piles 20-21 to 22 WOJV is proposing to decrease the specified 36" wall thickness again to 33 5/8" to clear all the encroaching SP, originally this was a WR2 reinforcement area #11@6"oc vertically and would change to #11@5"OC the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit - E)
Between CDSM piles 22 to 31 the reinforcement would remain unchanged as per the Contract Reinforcement.
See Exhibit-G showing a detail of transition between modified reinforcement to contract reinforcement with a non-contact reinforcement lap detail.
Either of these options if approved would be incorporated into the TG06 shop drawings
Please confirm if either of these options would be acceptable

original alignment on Gridline A before reaching the B1 Level.

OR

2) Any offset to the foundation wall face at B1 Level will require adjustment to space planning, coupler layouts, structural / service opening coordination and potentially may need further negotiations with Public Utility Companies i.e. it is not acceptable to simply 'shave off' a couple of inches from a room at this level.

Note that all transitions are to be smooth and not stepped.

Our comments for proposed Option B are as follows:

1) It is not acceptable to transition foundation reinforcement width and/or vertical rebar spacing within sections where specified foundation wall reinforcement is "WR2" or where there is an embedded column per construction documents. Provide uniform reinforcement width and rebar spacing within these regions. The transitions can be acceptable at the ends of (or just outside) these regions.

2) Foundation wall rebar WR2 and embedded columns are designed using vertical rebar spacing of 6" (see construction documents). Proposed changes to this spacing can negatively impact the constructability moment frame beam at the lower concourse level. As an example, see attached sketch which shows the rebar detail at the lower concourse moment frame beam and foundation wall. To assist in addressing these constructability issues it may be acceptable to move wall rebar a maximum of 3/4 inch as needed.

3) Use of tighter foundation wall rebar spacing than those specified in the construction drawings will negatively impact the constructability at the ground floor, where moment frame beams join the foundation wall. To assist in addressing these constructability

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

issues it may be acceptable to move wall rebar a maximum of 3/4 inch as needed.

4) Min center-to-center spacing between two #11 foundation wall vertical rebar with heads cannot be less than 5" (3.5 times bar diameter). The rule does not apply for hooked rebar. This is a general comment provided as a reminder for future revision requests."

The Design Team must be informed of the contractor's preferred approach prior to committing to shop drawings.

T-0621.1 **CDSM Soldier Pile Encroachment Area 3** **Closed** **07/12/2013** **07/22/2013** **07/23/2013** **Potentially** ☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Documents: Exhibits A - C

This RFI is an additional request based on the response to RFI T- 621 option A (see exhibit - A) The original RFI T-621 option A addressed the impact of the encroaching CDSM soldier piles on the north wall in slab in areas 3 and 4 by proposing to offset the face of concrete foundation wall by 0.1979' (2-3/8") into the structure. WOJV note the original response where it was acceptable to offset the foundation wall between B2 and B1 elevations but would have to transition back to design alignment between B1 and ground elevation however this transition back would not be possible as there are CDSM piles encroaching the full high of the foundation wall, with that WOJV is proposing the following possible solution, to continue the revised offset alignment between B1 and ground elevation however limiting it to an area between GL 1 and 2-3 (CDSM piles 1 to 21)full wall height , WOJV acknowledge the fact the PG&E transformer room need to remain at its current size but feel there may be some scope to slightly change the dimensions of the main switchgear room or the service corridor or both see exhibit B and exhibit C.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

As discussed in the meeting with TJPA, WOJV, Turner, AAI and WSP (07/22/13), the proposed solution to maintain the offset of the foundation wall up through Level B1 is acceptable to the Design Team subject to the following adjustments:

PG&E Transformer Vault (B1223/4) shall remain the same size and shift south by 2-3/8". Main Switchgear Room (B1222) will absorb the 2-3/8" wall shift south. Floor opening in NW corner of Main Switchgear Room will shift south 2-3/8" with wall. North Electrical Room (B1289) shall remain same size and shift down 2-3/8" (with electrical slab opening). Landscape Storage (B1288) will accommodate the 2-3/8" wall shift south. Fire Main POE (B1290) wall will move 2-3/8" south. Plumbing Intake Room (B1229) shall absorb the 2-3/8" foundation wall shift south.

Please also note that RFI 621 was on Area 3, not on 3 and 4 as indicated in RFI 621.1

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

This proposal if acceptable to offset the foundation wall would enable the contract reinforcement to be installed without the need for further modifications due to encroachment.
Please confirm if this option would be acceptable

T-0621.2 **BGP - CDSM Soldier Pile Encroachment Area 3** **Closed** **07/24/2013** **08/03/2013** **07/30/2013** **Potentially** ☐

From: Webcor Construction LP Ryan Burke **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Please refer to RFI T-0621 Response Option B Responses #2 & #3.

The RFI response states that it is acceptable to move vertical wall rebar a maximum of ¾" as needed to avoid clashes with horizontal mat reinforcing. As the vertical reinforcing is #11 bar (1 3/8") and the mat reinforcing is #10 (1 ½"), in the worst case a mat reinforcing bar will clash with the vertical bar when the layout ends up with both bars installed on the same centerline. Please confirm that in this case, the reinforcing can be moved the 1 3/8" to avoid the clash.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Moving the foundation wall vertical rebar more than 3/4 inch is not acceptable. Clashes between foundation wall vertical rebar and mat rebar, if any, can be addressed moving the mat rebar up to 1-3/8 inches.

T-0621.3 **BGP - Area 3 North Wall Verts Clearance Near GL 2** **Closed** **01/27/2014** **02/06/2014** **01/31/2014** **Potentially** ☐

clear all the encroaching SP, originally this was a WR2 reinforcement area #11@6"oc EF vertically and would change to #11@5"OC the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit -E) Between CDSM piles 35 to 41-42 and 45-46 to 49 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear all the encroaching SP. This foundation wall area was originally a WR1 reinforcement area (#11@8"oc EF vertically) and would change to #11@6"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit - D). Between CDSM piles 49 to 60 the reinforcement would remain unchanged as per the Contract drawings. See Exhibit-G, H & I showing details of transition between modified reinforcement to contract reinforcement.

Either of these options if approved would be incorporated into the TG06 shop drawings
Please confirm if either of these options would be acceptable

2) Any offset to the foundation wall face at B1 Level will require adjustment to space planning, coupler layouts, structural / service opening coordination and potentially may need further negotiations with Public Utility Companies i.e. it is not acceptable to simply 'shave off' a couple of inches from a room at this level.

Note that all transitions are to be smooth and not stepped.

Option B

For Option B, proposed revision is acceptable however, we note the following:

1) Near gridline 4, move the proposed reinforcement width transition to west by a few feet so that uniform wall thickness can be achieved within the WR2 zone.

2) See Option B Comments 2 and 3 provided in response to RFI #T-0621.

The Design Team must be informed of the contractor's preferred approach prior to committing to shop drawings.

This RFI addresses the previous comments to RFI T-622 see exhibit - D.

The contractor preference approach is to use a modified option B originally outlined in RFI T-622

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1-) We have not received any formal information from the contractor regarding the reduction in the thickness of the waterproofing system mentioned in this RFI. Therefore, we cannot assess the impact of the change in waterproofing system thickness to the encroachment calculations presented in Exhibit C. Also, the calculations provided in this RFI seem to consider 2 inch thickness for the waterproofing

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Exhibit - A shows the revised Plan view with modifications made. Exhibit - C depict the degree in which the SP are encroaching in area 4.

Based on the response to previous RFI's the number of encroaching beams in area 4 has been reduced mainly due to the decreased thickness of the waterproofing system and the contractor willingness to use some of the construction tolerances in an effort to mitigate some of the smaller encroachments. This has resulted in only one area where modified reinforcement will have to be installed; Between CDSM piles 47 to 49 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP number 48. This wall area was originally a WR1 reinforcement area (#11@8"oc EF vertically) and would change to #11@6"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing.

In all other locations in area 4 the reinforcement would remain unchanged.

See Exhibit-B showing details of transition between modified reinforcement to contract reinforcement.

Please confirm if this solution is acceptable.

system, which is unchanged from previous RFIs.

AAI Comment: The below grade waterproofing Substitution Request accepted by the TJPA does not significantly change the overall dimension of the materials in the waterproofing system.

2-) As indicated in our response to RFI T-0626, if the contractor prefers to address small encroachment issues through acceptable construction tolerances, this approach is acceptable

REQUEST:

Reference Documents: Exhibits A - J

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north & south walls in slab area 5 as well as all levels of the encroachment into the foundation wall between CDSM piles 60 to 81 on the north elevation and 702 to 732 on the south elevation. For Location Plan see exhibit - A.

Exhibit - B, & C depict the location and degree in which the SP are encroaching

For this RFI, the combined layers of the water proofing system had been assumed to be 2" thick, which is subject to change, this may increase or decrease the number of encroaching piles depending on the thickness of the system used.

WOJV proposal North elevation on gridline A: (See Exhibit - B) Between CDSM piles 60 to 62 and 69 to 71 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 61 & 70, originally these were WR1 reinforcement area's #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit - D). Between CDSM piles 76 to 78-42, WOJV is proposing to decrease the specified 36" wall

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1-) It is not acceptable to transition foundation reinforcement width and/or vertical rebar spacing within sections where specified foundation wall reinforcement is "WR2" or where there is an embedded column per contract documents. Provide uniform reinforcement width and rebar spacing within these regions. The transitions can be acceptable at the ends of (or just outside) these regions. In Area 5, this comment applies near GL 8, North Wall.

2-) Per Exhibit D, encroachments for some piles seem very small (for example, pile 61). For small encroachments, a 'no remedy' approach can be followed as long as the actual construction is executed within the tolerances specified in the contract documents (see specifications for information on construction tolerances).

3-) Mock up specimen is being developed for a location where an embedded column is used within the foundation wall. Embedded columns include two layers of #11 rebar with 6" spacing. The contractor proposes to use #11@5" in lieu of WR2 foundation wall reinforcement (#11@6") at a number of locations to remedy encroachment issues. If this option is adopted, the tightest foundation wall reinforcement will become #11@5". Revise the foundation wall mock up specimen shop drawings to include #11@5" single

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

thickness to 33 5/8" to clear the encroaching SP 77. This foundation wall area was originally a WR2 reinforcement area (#11@6"oc EF vertically) and would change to #11@5"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit - E).

WOJV proposal on the South elevation: (See Exhibit - B & F) Between CDSM piles 704 to 706, WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 705, originally this was a WR1 reinforcement area #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit - D).

In all other areas without CDSM encroachment issues the reinforcement will remain unchanged as per the Contract drawings.
See Exhibit-G, H, I & J showing details of transition between modified reinforcement to contract reinforcement.
These solutions if approved would be incorporated into the TG06 shop drawings.
Please confirm if these solutions would be acceptable.

layer foundation wall vertical reinforcement.

4-) Foundation wall rebar WR2 and embedded columns are designed using vertical rebar spacing of 6" (see construction documents). We note that proposed changes to this spacing can negatively impact the constructability of the foundation wall joints at mat, lower concourse and ground levels (e.g, installing beam rebar, foundation wall dowels at the mat). An example was provided with our response to RFI T-0621.

T-0626.1 **BGP - CDSM Soldier Pile Encroachment Area 5** **Closed** **08/13/2013** **08/23/2013** **08/23/2013** **Potentially** ☐

T-0629 **BGP - Clear Cover on Concourse Slab** **Closed** **06/28/2013** **07/08/2013** **07/01/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Drawing S1-3500, Spec Section 03 30 20, 03 20 00

Detail 1 on S 1-3500 calls out for 3/4" clear cover on top and bottom of the lower concourse slab. ACI codes 301 and 318 specify 3/4" minimum cover for #11 bars and smaller, in slabs that are not exposed to extreme environment. Even though lower concourse is designed to eventually be enclosed with the rest of the superstructure, it will be exposed to the weather elements during the construction of the project. With that said, inadequate cover over rebar can cause plastic settlement cracking. SCCI is concerned that the 3/4" clear cover in the concourse slab could cause this plastic settlement cracking.
Please confirm that the clear cover on the lower concourse slab is 3/4" minimum?
Please specify what is the maximum clear coverage of the lower concourse reinforcement?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Concrete cover is for protection of reinforcement against weather and other effects. The cover is prescribed for 3 classes of structural members in ACI 318, a) concrete cast against and permanently exposed to earth, and b) concrete exposed to earth or weather, and c) concrete not exposed to weather or in contact with ground. The concrete slab at the lower concourse level, even though will temporarily exposed to weather during construction like any other building structure, is usually categorized as type c condition, which requires a 3/4" minimum cover per ACI 318, Section 7.7.

The statement of "inadequate cover over rebar can cause plastic settlement cracking" is not totally correct, as the ratio of cover to reinforcing bar diameter is only one of many factors that contributes to the plastic settlement cracking. The amount of settlement tends to be proportion to the depth of concrete, i.e., the deeper the section the greater the settlement. Hence, plastic settlement usually occurs in a much thicker slab with much heavier top rebars. With only a 12" thick slab at the lower concourse level, we don't anticipate that plastic settlement cracking becomes a problem, as long as good construction practices are follow. Those practices include, but not limited to the following:

Use mixes with lower bleeding characteristics.

Wet the subgrade or formwork before placing concrete

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

to avoid excessive water loss from the base of the concrete.

Set all formwork accurately and rigidly so that it will not move during concrete placement

Place concrete in the deep sections (beams or columns) first and let it settle prior to placing and compacting the top layers (ensuring two layers blend together)

Fully compact the concrete

Follow the requirements of hot weather concrete placement specified in the Specifications.

Cure the concrete promptly and properly.

The maximum cover should be in accordance with the allowable tolerance per ACI 117 as specified in the Specifications.

We anticipate that SCCI will develop a mix design and employ proper construction technique to ensure that the plastic settlement shrinkage will not occur lower concourse slab and mat.

T-0630 **BGP - Mat Slab Key Way Waterstops Installation** **Closed** **06/28/2013** **07/08/2013** **07/04/2013** **Potentially** ☐

The typical mat slab reinforcing designed to be installed at 8" O.C.E.W. for the bottom and top mats. The micropile layout also consists of a uniformed spacing and at some locations has been adjusted for conflicts or for other purposes, example RFI 490. Should the typical mat slab reinforcing when laid out at 8" O.C.E.W. or some other reinforcing designed within the mat slab conflict with the micropile asbuilt, is it acceptable to displace the reinforcing from the designed spacing layout such that it is repositioned to either side of the micropile? Additionally, please confirm if reinforcing in direct contact with the micropile is acceptable? Should the displacement of the reinforcing to either side of a micropile not be acceptable please provide direction.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Typical and additional mat reinforcing bars (flexural steel) and mat pit reinforcing bars may be shifted in plan up to +/- 4" from the typical spacing of 8" o.c.e.w. where the typical spacing would result in a conflict between the flexural steel and the micropile. Before making such a shift, the contractor shall verify that said shift will not cause unforeseen conflicts that impact the placement of column dowels, mat headed shear reinforcement, or any other mat or wall reinforcement detailing. Where such a shift will impact the placement of other reinforcement, contractor shall not shift the mat bar out of typical spacing, and instead may resolve the conflict by either of the following methods:

a) Treat the micropile obstruction sim to a typical opening per the Typical Slab Opening Detail found on 1/S1-3501 (i.e. add 2 bars of same dia and grade as the bar being interrupted, one to either side of the conflicting micropile).

b) Shift the conflicting bar only locally, up to +/- 4" from the typical as permitted above, splicing back to typical spacing (with non-contact splice either side of micropile) as required to avoid any conflicts with other mat reinforcement that may occur due to the shift.

Mat rebar shall not be in direct contact with the micropile or gage steel boot that functions as part of the waterproofing assembly, but rather achieve min 1.5" clear btwn rebar and micropile steel. Refer to 2/A1-8711 for waterproofing assembly info.

T-0632	BGP - Geothermal Field 7 & 8 Manifold Riser Layout	Closed	07/02/2013	07/12/2013	07/09/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Attached Photos

The initial geothermal riser/manifold layout for Fields 7 & 8

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is not acceptable to locate the risers for fields 7&8 as suggested between soldier piles 172-173-174. Riser for field 7 can be located between piles 174 and

placed the field 7 & field 8 risers between soldier piles 176-177 and 177-178 respectively. To avoid conflicts with the riser install and the temporary 1st bridge, is it acceptable to move the field 7 riser to the CDSM wall panel between piles 172 and 173 and the field 8 riser to the CDSM wall panel between piles 173 and 174? See attached photos. Additionally, SCCI is looking to relocate the temperature probe to the CDSM wall panel between soldier pile beams 171 and 172.
Is this acceptable? Please advise.

175. Riser for field 8 can be located between piles 175 and 176.

It is not acceptable to re-locate temperature probe pipe between 171 and 172. It is acceptable to locate the probe east of risers 7 and 8 between soldier piles 178 and 179.

T-0633 **BGP - ASI#104 Clarifications** **Closed** **07/03/2013** **07/13/2013** **07/26/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: ASI 104s

SCCI is in receipt of ASI #104 on June 25th, 2013 in CR#T-071. Please clarify the following:

1) Per Sheet S-2202 to S-2211, the additional internal walls at the concourse are shown to be in solid line, for Zone 2-7, 10-11. Note 7 on S1-2022 refers us to the architectural drawings for CMU and concrete partition layout dimensions, joint locations, and CMU thickness. However, the corresponding Architectural drawings issued in ASI #104 for wall at concourse (A-2222 and A-2223), only depicts changes in Zones 2 and 3.

a) A-2222 and A-2223 depicts the revised concourse walls to be RCW- please confirm that the internal concourse walls are not in TG-06 scope and additional scope to TG-06 contract will only be the additional couplers for added wall.

b) Please confirm that there are no internal walls to be constructed in TG06's scope at concours level.

c) Please confirm that the internal concourse walls shown as solid lines in drawing S-2022 to S-2211 are supposed to be shown as 'dotted' or 'ghost' lines in ASI #104.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

See below GM/TT comments. WOJV comments included.

1.

a. WOJV to confirm this item.
JT/WOJV - Confirmed.

b. WOJV to confirm this item.
JT/WOJV - Confirmed, same as 1a.

c. We assume the RFI means sheet range starting with S1-2202 and not S-2022. These lower concourse partition walls are supposed to be dashed. WOJV to confirm these are NOT part of the TG06 package.
JT/WOJV - Price all internal walls below the concourse level.

d. WOJV to confirm this item.
JT/WOJV - Provide dowels for all CMU walls shown on the concourse level and below.

e. Sheets A1-2224 through A1-2231 have been issued with 100%CD Phase 1 documentation.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

d) In multiple drawings (e.g: S1-2204), at the middle top of the page, the word "Future" has been deleted. Original drawings show "Future CMU walls, TYP". ASI #104 structural drawings deleted the word "Future" . Please clarify if the CMU walls at the concourse are in TG06's scope.

e) Please issue revised Architectural drawings for Zone 4-Zone 11 (A2224-2231, revised) with the additional RCWs layout for the wall plan at concourse

2) Per S1-2210 revised, a new note states: "Coordinate w/ manufacturer shop drawings for extent of beams". Please clarify which manufacturer SCCI is to coordinate with, or provide dimensions

3) ASI #104 issued new "Slab Edge Plan" A2842, A2843 and A2847 for Zone 2, 3 and 7. The new drawings depict the locations of MEP sleeves that were not shown in previous drawings.

a) SCCI has not received any revisions to concourse plumbing drawings depicting these changes. The original plumbing drawings do not correspond to the location of the sleeves/blackouts shown in the new Architectural drawings A2842, 2843, 2847. Please verify which drawings SCCI needs to utilize to layout the sleeves/openings.

b) Please issue Architectural drawings with sleeves/blackouts locations at the reminders of the zones.

4) ASI #104 issued revised electrical drawings E1-2202 to E1-2204 that changes the layout ofthe electrical rooms. TG06 contract scope includes the installation F15 junction boxes to be terminated in designated electrical rooms.

a) Please provide revised detailed drawings on the electrical room layout (E1-3201, 3202).

2. "manufacturer" refers to cooling tower manufacturer as the support framing is labeled for the cooling tower. JT-WOJV - An MEP subcontractor is projected to awarded in March 2014. Please remit an RFI isolating the details of the cooling tower pier, dimensions, etc.
3.

a. Slab edge plans issued for ASI#104 are coordinated with updated plumbing background drawings.

b. Slab edge plans for the remainder of the Lower Concourse Level have been issued with 100%CD Phase 1 documentation.

4. Please refer to attached sketches SKE-01-3202,SKE-01-3201 and SKE-02-3201 for electrical room layouts.

REQUEST:

Please reference CR T-071 - ASI 104 - Below Grade Modifications and RFI T-0633.

As per coordination meeting on 08/26/2013, to discuss discrepancies in ASI #104, the architectural drawings for Zone 4 thru Zone 11 (A1-224-2231, A1-2844-2846, A1-2848-2851) are not included in ASI 104. The architectural drawings are critical for SCCI's coordination and pricing of interior wall layout on the concourse level in conjunction with the corresponding structural drawings released in CR T-071 - ASI #104. Although, the design team provided their response to these discrepancies in RFI T-0633 by referencing "100% CD Phase 1 Documentation," the drawings have yet to be released for construction.

1. As per request by the design team, please release the following most-up-to date drawing sheets via this RFI : A1-2224 - 2231, A1-2844 - 2846, A1-2848 - 2851.
2. Please confirm the aforementioned drawings are to supersede current drawings in trade group package TG06.0.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/11/2013
RESPONSE:
The attached SKAs update the Architectural Drawings indicated on RFI T-0633.1

SKAs-2825 to 2830 based on A1-2224 to A1-2231 Wall Plans

SKAs- 2831 to 2834 based on A1-2844 to A1 -2847 Slab Edge Plans

SKA-2835 to 2836 based on A1-2850 to A1-2851 Slab Edge Plans Although requested in the RFI, drawing A1-2848 does not exist in the drawing set.

The information contained in the above noted SKAs supersedes the above noted Wall Plans and Slab Edge plans.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Drawing S1-3201, Spec Section 03 30 20

RFI T-0608 shows detail of transition between modified reinforcement to contract reinforcement and shows that the internal wall face location of the concrete wall remains as shown in the contract drawing.

RFI T-0448.5 proposes to decrease the rebar configuration to accomodate the thinnest wall section to be 33-1/8" to clear all the encroaching SPs.

At some locations, the rebar cover on the vertical wall rebar will exceed 2" Typ as shown in detail 1/S 1- 3201.

The worst case scenario in Area 1 & 2 will be at SP 737(lower), where the beam is 3.6" Too Far from the allowable horizontal alignment per TG03's contract Spec 31 56 13-3.3A.
In this case, the rebar cover will be: 2-7/8" (from the difference between 36" and 33-1/8") +2" (allowable rebar cover) +5-3/8" (0.64' offset - 0.1875' allowable waterproofing thickness) = Total cover of 10-1 /4"

Please confirm that the maximum rebar clear cover (unreinforced concrete) of up to 10-1/4" between the CDSM wall and the Vertical Outside Face rebar in Area 1 & 2 is acceptable

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1-) We cannot make a determination based on the clear cover information provided for the worst case location. Information should be provided for each individual pile within an area (or multiple areas). One way to present this information would be in tabular form similar to the wall encroachment information provided in other RFIs.

2-) Provide clear cover information using the foundation wall reinforcement location as indicated in contract drawings, see our response to RFI T-0609.

3-) Provide consistent allowance for waterproofing in clear cover calculations. For example, in RFI T-0609 2" was assumed whereas in RFI T-0635 2 ¼" is assumed.

shown
on the attached sketches.
Is this acceptable?

T-0637 **BGP - CDSM Wall Encroachment Rebar Details at Spandrel and Concourse Neede** **Closed** **07/15/2013** **07/25/2013** **07/26/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to RFI response T-0608 and T-0448.5.

The approved typical CDSM encroachment wall reinforcement detail at the SW corner, West of GL 6 found in RFI T-0608 does not include the concourse level spandrel beam/wall interface.

Please provide a detail depicting an acceptable configuration at the concourse level which includes the spandrel beam/wall interface.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The details provided in RFIs T-608 and T-448.5 were developed by WOJV.

Submit RFIs regarding CDSM encroachment at spandral beam/wall interface for specific locations similar to prior encroachment RFIs. Include detailed backup and proposed solutions.

T-0638 **BGP - Mat Slab U Bars in Modified WR-2 Reinforcement Areas** **Closed** **07/16/2013** **07/26/2013** **07/23/2013** **Potentially** ☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Documents: Exhibits A - E

The contractor has highlighted a potential conflict with the uses of #11@5"OC vertically at the areas where CDSM piles at encroaching in WR-2 reinforcement areas.

Exhibit - A is a vertical cross section through the modified WR-2 area
Exhibit - B is a cross section showing the potential conflict with verts @ 5"OC
Exhibit - C is a cross section showing the original design with verts @ 6"OC
Exhibit - D & E depicts possible solutions

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Either of the options presented in this RFI are acceptable where the #11@5" rebar is used. The "candy cane shaped bar" should include 180-deg standard hook (refer to detail 4/S1-3001 in contract drawings). Note that this RFI seems to focus on the constructability of the U-bars. However, if the top mat rebar was projected on Exhibits D or E, clashes with the 5" spaced foundation wall vertical rebar (inner face) can also be seen."

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

One of the proposed solutions Exhibit - D is to have the "U" bars at the contract width of 7.41"(6"+#11 bar dia) and the vertically rebar @ 5" OC and the U bars moves horizontally to avoid any conflicts with the mat slab reinforcement.

Another possible solution is to change the "U" bars to a bar with a standard hook "candy cane shaped bar" see Exhibit - E

Please confirm if either of these options would be acceptable

---

T-0639 **BGP - Weld Access Hole repair** **Closed** **07/16/2013** **07/26/2013** **07/19/2013** **Potentially** ☐

T-0641	BGP - Level D Internal Bracing Removal	Closed	07/16/2013	07/26/2013	07/19/2013	Potentially	☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Document: Exhibit A

Level D internal bracing removal in areas where walers are not connected together.

Due to the curing requirements of the concrete in the mat slab, the contractor is proposing to have a "hopscotch" sequence to the mat slab pours, as an effort to mitigate delays. The removal of the level D bracing will follow the pour sequence, however as shown in Exhibit A which is a north wall elevation, what is the maximum clear distance horizontal between the construction joint in the mat pours and the next level D internal bracing strut/waler. This becomes an issue when trying to schedule the bracing removal with the mat and wall pours. WOJV understands that this is for areas where the walers are not connected together.

Once the parameters for the bracing removal have been established the contractor will create a plan and sequence for each pour area on the removal of the internal bracing where the walers have being connected together.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This work should be coordinated between the internal bracing designer and the structural engineer.

T-0642	BSE - Steel Plates at CDSM Piles 167-168	Open	07/17/2013	07/27/2013	07/18/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Stacy Wilson

Co-Author:

REQUEST:

Reference: Spec Section 31 56 13

During leak grouting at level 5 excavation, a section of the CDSM wall panel between soldier piles 167-168 became dislodged, resulting in a high volume leak. In an effort to stabilize the damaged CDSM panel and stop the leak, BBII installed a steel road plate between soldier piles 167-168 and injected grout behind it.

BBII is concerned that removing the plate will likely cause the panel to become destabilized and could reopen the flow of water. BBII surveyed the face of the plate and found that at pile #167, the face of plate is 1/2" out from

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

W/O to resubmit once the encroachment requirement is determined.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the theoretical face of pile, and at pile #168 the plate is 1-1/2" out from the theoretical face of pile. BBII proposes leaving the steel plate in place to maintain integrity of the CDSM panel. The edges of the plate may be grouted to provide a smooth transition to the CDSM wall for waterproofing.

Please confirm this is acceptable.

T-0643 **BGP - ASI#104 - A1-2122 Added Line** **Closed** **07/17/2013** **07/27/2013** **07/19/2013** **Potentially** ☐

REQUEST:

Reference Documents: Exhibits A - G

Further to response to RFI T-609 (see exhibit - F) this RFI shows the areas of foundation wall in pour area 2, south wall which will have greater than 6" of clear cover to the vertical reinforcement for location plan see exhibit - A & C

Exhibit - B & C depict the amount and location of the foundation walls which the will have greater than 6" of clear cover to the vertical reinforcement

Exhibit - D & E (RFI T-448.5 and RFI T-608) which shows the thinning of the wall with the revised reinforcement spacing due to CDSM pile encroachment in area 2.

Exhibit - G shows the information on encroaching CDSM pile in this area for your review.

Please confirm that the clear cover between the waterproofing system and the vertical reinforcement outlined at these locations is acceptable

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The clear cover between the waterproofing system and vertical reinforcement as presented in Exhibit B of this RFI is acceptable.

T-0650 **BGP - Fire Management System Layout Conflicts with Class A Design** **Closed** **07/19/2013** **07/29/2013** **07/24/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Drawing E1-2026, Spec Section 28 30 01, Attached Drawing

Review of the fire management system device layout appears to not meet the minimum candela rating of the NFPA code; refer to the attached drawing (dwg. #1, shaded) showing the areas of the platform that are deficient. Please confirm the candela rating set forth in the NFPA code are met with the current layout on drawing E1-2026 or provide a new layout that comply with NFPA candela rating requirements.

SUGGESTION:

The revised device layout shown in drawing #2 will greatly decrease the candela rating to meet the NFPA requirements. This layout would require additional devices.

ANSWER: **Accept Suggestion:** ☐

The fire management system design is a performance based design as per Section 28 30 01-1.1C of the contract documents. The Contractor is responsible for the design of the system as required to meet NFPA 72 and provide additional visual alarm strobes in addition to those shown on the drawings to meet NFPA 72 (Section 28 30 01-2.6P).

T-0651	BGP - Area 3 Partition Wall Clarification	Closed	07/19/2013	07/29/2013	07/25/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Drawing A1-2122,S1-9050, Spec Section 03 20 00, Gerdau's RFI#58

Please clarify if the highlighted portions within the outline of the Partition Walls should be denoted as a different structural element i.e: a column, pilaster ,or a thickened wall that is different than the typical 12" thick partition wall per detail 3/S19050.

If the answer is yes, please reference or provide the correct reinforcing detail that is to be applied at each location.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The intent for the partition wall at gridline C.3 to the right of gridline 1.4 is to apply the 9/S1-9050 pier reinforcement & pier thickness required for the door width and pier height at each end of the partition wall and extend to result in a uniform thickness wall to simplify construction.

The intent for the partition wall at gridline E to the left of gridline 2 is to apply the 9/S1-9050 reinforcement & pier thickness required for the elevator door width and pier height and apply along the full length of this wall.

The intent for the partition wall at gridline E.6 to the left of column at gridline 2 is to apply the 9/S1-9050 pier reinforcement for the 12" thick pier.

Co-Author: Balfour Beatty Infrastructure, Inc. Brandon Miller

REQUEST:

Reference: Attached Autocad Drawing

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Correction: This location is at the First Street Bridge,

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Fremont Street Bridge Pier #6 appears to conflict with the mat depression at GL 18-C in a similar way to the slab penetrations addressed in RFI T-0479.1.

Please confirm that RFI T-0479.1 applies to Fremont Bridge Pier #6 and that it is to be included in the applicable CR T-067 revision.

not Fremont.

CMGC is to follow response to RFI T-0479.2 and waterproofing manufacturers recommendations for this issue.

Upcoming CR T-067R2 will include all locations where excavation modifications are required due to waterproofing configuration requirements at the TJPA's approval.

T-0654 **BGP - Mat Slab Control Joints** **Closed** **07/22/2013** **08/01/2013** **07/25/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Attached Drawing

Please reference attached CJ Layout for Mat Slab in Zone 1. SCCI requests acceptance to move Mat Slab Control Joints to have a 2' clearance of any pit. Control joints will be returned to their original
layout and will tie to Foundation Wall at the submitted CJ locations.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

We assume the 2'-0" proposed clearance of pit means clear of the thickened extent of mat for the pit as graphically implied in the RFI sketch.

It will be acceptable to modify the CJ layout in the mat for the 3 clouded locations identified in the RFI, however, Contractor to coordinate installation of and/or verify that headed shear reinforcement at columns (where applicable) can be installed at CJ's.

T-0655 **BGP - Revised Attached Method of Nelson Studs to the Elevator Pit Embedded An** **Closed** **07/24/2013** **08/03/2013** **08/05/2013** **Potentially** ☐

REQUEST:

Reference: Spec Section 05 50 10

While attaching the 3/4" diameter by 8" Nelson Studs to the 8" X 4" X 1/2" angle it was determined the studs were not fusing to the base metal (angle). To maintain the procurement schedule of this fabrication needed for the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The angled stud in the interior of the angle requires a different type of ferrule (heel) to address the angled condition. The alternate means used to attach Nelson studs for angles in this RFI is acceptable provided that at least 2 studs per angle have been verified by bend test per specification section 03 20 00 2.2.C.2, which

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Zone 1 - Area 03 Mat Slab placement, our fabricator (Gerlinger Steel) used the fillet weld method performed under the attached Welding Procedure Specifications (WPS) to attach studs to the angle(s). The welding was witnessed by the dispatched (IR #001459) ISI Shop CWI. Attached for the readers information and use are the shop fabrication drawing, the employed WPS, and photographs of the finished fabrication.

Is the alternate means of attaching the Nelson Studs to the angle, using the fillet weld method in lieu of the fusing method, acceptable?

references AWS D1.1-2010 (Paragraph 7.8 for testing requirements).

T-0656 **BGP - Shear Wall Dowel and Shoring Pipe Bracing Conflict** **Closed** **07/24/2013** **08/03/2013** **08/07/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Drawing S1-3001, Spec Section 03 30 20

A few potential conflicts exist between the typical shear wall vertical dowels and the 36" OD shoring Pipe Struts in Area 1. See attachement for locations of conflict.

Based on Detail A shown in S1-3260, the typical shear wall verts will be lap spliced.

Per the schedule in Detail 1-S1-3001, the #9 vertical shear wall reinforcement requires a 63" lap splice, which places the top of dowel at elevation -30'-5".

The centerline of Level D diagonal bracing atop Area 1 is shown to be at EL -29'-0" and the bottom of the 36" OD pipe strut at level D is at EL -30'-6".

The pipe strut will potenially encroach on the shear wall dowels since the vertical spacing is #9 at 10" OC.

Please confirm that a 60" lap splice is acceptable at locations where conflicts exist, if not please provide soultions.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The contractor proposed lap splice length is acceptable only at locations where the conflict exists.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0658	BGP - Embedded Conduits in Mat Slab for the Light Column	Closed	07/25/2013	08/03/2013	08/02/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please reference attached drawing E1-2205 and E1-4105.

Per the attached lighting plan drawings, there are no electrical conduits shown to be embedded exclusively for the Light Column on drawing S1-6005.

Please confirm that there are no conduits required for the light column in both the concourse slab and mat slab or provide the location, route and size of the conduit at each level.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

No, there are no embedded conduits required in lower concourse slab or mat slab.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0659	BGP - Mat Slab Conduits	Closed	07/30/2013	08/09/2013	08/13/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: A1-9204, E1-6001

The electrical conduit details on sheet A1-9204/Detail 1 and Detail 5 on E1-6001 regarding the electrical conduits on the columns are in conflict. Detail 1 on A1 -9204 indicates an embedded junction box in the long portions of the columns at Line D.8 above the Train Platform Level. Detail 5 on E1- 6001 indicates all conduits are to be stubbed up 12" at the face of the column. This Detail 5 shows all conduits (shown dashed) above the 12" stub up in the Mat Slab are to be installed in future phases outside of the TG06.0 contract. The columns are part of the TG06.0 scope.

1. Please clarify if these junction boxes and conduit are to be embedded in the columns or stubbed up through the slab at the face of each column at all four (4) locations..

2. If the conduits and boxes are to be embedded in the columns please provide a revised embedded conduit detail indicating conduits as part of TG06 Below Grade Scope.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The embedded junction box details on A1-9204 applies only to the flat surfaces (north and south sides) of the columns along GL D.8 of Platform 2 (refer to note on details 1 & 2 on A1-9204) and shall have embedded boxes and conduits. Locate the conduit and boxes such that the device faceplates will be finished flush to the finished column cladding.

The east and west sides of the columns indicated on the note shall have surface mounted junction boxes and conduits (refer to detail 1 on A1-9204).

For all other columns in the BGP, the junction boxes and conduits are typically surface mounted (refer to detail 5 of E1-6001).

T-0660	BGP - Clear Cover to Mat Reinforcing at CDSM Pile Encroachment	Closed	07/30/2013	08/09/2013	08/07/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Drawing S1-3201, Spec Section 03 30 20

Per Section 1 on S1-3201, the mat slab reinforcing is shown with 6" of clear cover from the outside face of the concrete wall. When the outside face wall and mat foundation step in and out due to CDSM encroachment, the 6" clear dimension shown on 1/S1-3201 will be encroached upon.

Please confirm this is acceptable. This would apply in any area where the wall thickness is being reduced due to encroaching CDSM Pile.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Encroachment into the 6" clear dimension is acceptable as long as mat rebar does not conflict with the foundation wall vertical reinforcement at the outer face. To avoid this conflict, clear dimension between the mat slab reinforcing and outer face of the concrete wall shall not be less than 4". For future reference, note that the condition at the embedded columns within the foundation walls is different. That condition is illustrated in detail 1/S1-3302 of the construction drawings and the question included in this RFI does not cover that condition.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0661	BSE - Access trestle penetration sleeve	Closed	07/30/2013	08/09/2013	08/26/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Drawings: 4/A1-8711, Attached Sketch

2 bump outs have been installed onto the South side of the access trestle in Zone 2 (see attached sketch). Each bump out has 4 trestle piles identical to the trestle piles supporting the rest of the access trestle. Please confirm it is acceptable sleeve and waterproof the 8 piles (2 bump outs - 4 trestle piles ea.) per detail 4/A1-8711. The bump outs will be removed prior to the concourse slab.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to sleeve the 8 piles for the access trestle extensions (bump outs) as shown in detail 4/A1-8711.

Part of this RFI is for a waterproofing system proposed by the Contractors, not the system designed by the Architect. The Contractors should have their engineer who prepared this waterproofing system design respond to this RFI. Until that is done, the Contractor should confirm all waterproofing system questions and details with the waterproofing manufacturer (with copies to the TJPA and its consultants and the Architect).

Contractor shall submit dimensioned locations of bump out piers and size for review of introducing sleeved penetrations into the mat.

Prior to submitting dimensioned locations, Contractor shall review for, including but not limited to, mat conflicts with other work and mat exclusion zones.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0662	BGP - Clarification for the Response to RFI T-0631 Micropile Conflict	Closed	08/01/2013	08/11/2013	08/05/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Spec Section 03 30 20, Attached sketches

Per discussions on 7/31/13 between members of TT, Webcor, Shimmick and Gerdau please confirm the following clarifications and intent of method "B" as it relates to the response issued for RFI 631 reviewed via teleconfrence.

1. The clear cover of 1 1 /2" as described in the response to RFI 631 has been eliminated. The reinforcing bars may come into contact with the micropile and the waterproofing wrapped around the lower portion of the micropile.

2. At the contractor's discretion, he/she may displace the typical contract bar +/- 4" from the called out spacing as required to avoid clashes with the installed micropile. The displacment of the typical reinforcing may be either for the full length of the bar or weaved around the clashes depending on the specific condition. If this solution is incorporated and results in the typical reinforcing being displaced such that the end of the bar is not in the typical alignment a non-contact lap splice with the next adjacent designed/detailed bar is acceptable. Should the displacement of the typical contract bar to resolve the clash with the micropile result in another clash with another element of the reinforcing design this condition will be addressed through the RFI process upon recognition. See attached sketch #1 for reference.

3. At the contractor's discretion, he/she may cut the typical contract bar creating a gap in the bar to allow for the clashing micropile. Should this be the selected method to resolve the clash a lap splice bar of the same grade and bar size will be required at either side of the gap. The splice bar may be a non-contact lap splice. See attached sketch #2 for reference.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Confirmed.

2. Confirmed.

3. Confirmed.

REQUEST:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Reference Drawing: S1-3003
Reference Submittal: TG0300-620.1

Detail 1 on S1-3003 shows a 12"x12"x2" plate under the domed nut on top of the micropile. Note 1 on S1-3003 states that "the contractor is responsible for the design of the pile to meet the design load requirements ... as stated in the project specifications." Submittal No. TG0300-620.1 was returned "No Exceptions Taken" and did not include the plate under the domed nut as it was not a part of BBII's micropile design. Please confirm that it is acceptable to move forward with approved Submittal No. TG0300-620.1 without the 12"x12"x2" plate.

Confirmed that contractor-designed micropile without the plate is acceptable.

T-0664 **BGP - Conflict Between Pit Reinforcing & Trestle/Pin Piles** **Closed** **08/05/2013** **08/15/2013** **08/07/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference: Drawing S1-2022, Attached Photos

During the installation of the pit reinforcing between GL 1.4-2.3 and D.4-F a conflict was discovered between trestle/pile and the tail of the #11 pit reinforcing that extends beyond the limit of the pit out and into the main mat slab. Gerdau proposes to trim the tails of the conflicting rebar (Flame Cut) such that clearance can be maintained to the sleeve around the piles.

Please confirm this is acceptable or provide direction on how to proceed. This conflict is expected to occur at future pits too.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The tails of pit reinforcement that are extending beyond limits of pits and are in conflict with trestle/pin piles may be trimmed for only the 4 of the 5 locations identified in the RFI.

For the 5th location at trestle pile located at D.4-4.4 (which is within the pit depression), see attached SKS-0281.

Note that flame-cutting that has been allowed is limited to applications of this RFI only.

For future pits within the remainder of the Project, when the tails of pit reinforcement that extend beyond the limits of the pits that conflict with trestle/pin piles/bridge piers, Contractor shall coordinate with as-built locations and apply detail similar to 1/S1-3007 (where bars interrupted by trestle/pin/bridge pier shall turn up).

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0665	BGP - Locations of Electrical Outlets, Equipment, and Fixtures	Closed	08/05/2013	08/10/2013	08/07/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Spec Section, 26 05 34

Per Specification Section 26 05 34, 3.2 B., the dimensions of the equipment fixtures and outlets are to be submitted via RFI for clarification pre pour. Attached is the layout for Electrical Room B2221 in the first Mat Slab pour.

Please confirm that these dimensions are acceptable so that the conduit can be laid out correctly.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Layout does not match architectural wall dimensions. Contractor to revise and resubmit layout as coordinated with ASI-102, dated 04/29/2013. Refer to sheet A1-9215 markup attached and coordinate with architectural wall dimensions.

Submitted sketch does not show wall details. Future layouts to be submitted on current CAD backgrounds and all dimensions must be based on interior clearances.

All electrical rooms will be lined with 3/4" plywood backboard. Contractor to coordinate layouts to accommodate.

Due to potential conflict with door, FATC to be relocated to south wall, 9" from west wall, as shown in sheet E1-3101 markup attached. Dimensions added for clarity.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0665.1	BGP - Electrical Locations of Outlets, Equipment, and Fixtures in Electrical Room	Closed	08/23/2013	09/03/2013	08/27/2013	Potentially	☐

T-0666.1	BGP - Mat Slab Clarification to Elevator Pit and Slab Opening Dimensions	Closed	08/21/2013	09/03/2013	08/28/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Webcor/Obayashi (W/O) is in receipt of attached Adamson Associates, Inc. (AAI) response to RFI T-0666 - BSE - Elevator Pit Dimensions Between GL1.4 and GL 2.

This response is unacceptable. The Architect has sole responsibility for confirming that the pit dimensions of all elevators and escalators will accommodate the Architect's proposed elevator and escalator systems.

Until a 100% IFC set is completed by the Architect, W/O has no definite knowledge of the Architect's proposed elevator and escalator systems. This issue has been discussed verbally for over 2 years, during which the Architect has maintained that they have full responsibility for designing all pits and openings to fit their proposed elevator and escalator systems. W/O is unable to even start the RFQ/Bidding process for hiring sub-contractors until the 100% IFC Contract Drawings are finalized by the Architect and approved by the owner; therefore, it is impossible for W/O to hire/coordinate sub-contractors prior to pouring of the elevator pit in the mat slab.

The same applies to all pits and openings throughout the design documents, only the Architect is capable of confirming that these dimensions are acceptable for all of the Architect's proposed elevator/escalator systems.

Please confirm all elvator pits and slab openings are acceptable as currently shown on the contract documents.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The design team believes the elevator pit dimensions noted in the contract documents are coordinated with the requirements of the alternate elevator manufacturers noted in the specification. The CMGC shall confirm the work of adjacent trades have been coordinated between shop drawings and existing field conditions. The CMGC shall coordinate with the TJPA to hire Sub-contractors at the required times to ensure that construction work and shop drawings of adjacent trades are completed in time to coordinate between trades.

T-0667	BGP - Geothermal Loop Excavation in Zone 4	Closed	08/05/2013	08/09/2013	08/07/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Spec Section 31 23 34.

Please refer to attached WOJV and SCCI internal correspondence in RFI #SHIMM000-0038.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

ARUP Response:
The question asked is Contractor's means and methods.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

SCCi is aware of the CDSM wall excavation required for the geothermal field risers, but is not aware of a geothermal specification requiring buttress shaft demolition for the geothermal loop trenches. Specification 31 23 34, Section 3.2 is very clear in the full scope of the ground excavation in soil and wall riser excavation in the CDSM, but it does not cover trenching in buttress shaft concrete.

Please provide a design defining the geothermal fields within the buttress shafts. Please include slot excavation, back-fill and compaction requirements in the the affected buttress'.

T-0668 **BGP - CIDH Temporary Bridge Pier Sleeve Detail** **Closed** **08/05/2013** **08/04/2013** **08/08/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to drawing S1-3003, A1-8711, SCCI RFI #269 with asbuilt information of CIDH Piles at First Street, and ACI 117-90 section 3.4.1.2

The typical 48" diameter bridge pier detail (6/S1-3003) and waterproofing detail (4/A1-8711, 5/A1-8711 and 6//A1-8711) are designed for a steel assembly i.e. bridge pier, piles for shoring, bracing and trestle columns, pin piles and dewatering wells. As a result, the means of achieving the shown steel pipe sleeve is attainable.

As per submittal package TG0300-201.3, the 48" temporary bridge piers are designed as CIDH (cast-in-drilled piles) piles and not steel. Specifications for concrete construction tolerances in ACI 117, section 3.4.1.2 allow for horizontal dimension of unformed members cast against soil for greater than 2 ft. but less than 6 ft. allow for +6" and -1/2".

The penetration sleeves for these piles have been fabricated.

Proposed Solutions:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Utilization of concrete piles for the bridge piers was chosen by the contractor to suit their means and methods. The sleeve shown on the architectural and structural drawings provide details of sleeving penetrations to permit expected movement and provide a waterproofing interface. Sleeves at bridge piers were indicated on the Bridge shop drawings and the requirements for field measurements before fabrication were indicated on the metal sleeve shop drawings.

New details will not be provided. CM/CG to provide means and methods of adapting concrete pier to suit mat slab waterproofing metal sleeve details.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

1. Remove extra concrete from the outside diameter of the CIDH pile to allow the fabricated 48" penetrations to fit through means of bushing or grinding the concrete as necessary and utilize sleeves as originally intended.

2. Please provide a detail drawing with the 48" temporary bridge pier condition as CIDH pile. Please include a sleeve detail allowing for the aforementioned tolerances and waterproofing. Please note, as typical of CIDH piles, the surface profile varies much greater than the 1/2" gap tolerance required for steel assemblies shown in 6/S1-3003.

T-0669 **BGP - Foundation Wall Vertical CJ** **Closed** **08/06/2013** **08/16/2013** **08/09/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Filip Filipic

REQUEST:

Reference: Spec Section 033020, Attached Drawings

See attached sketch of the vertical foundation wall CJ.

During construction of the high congestion mockup SCCI has discovered a constructibility issue with the construction of the foundation walls, more particularly, the vertical construction joints. Vertical construction joints are to be constructed as prescribed on Detail 2 of the S 1-3001 CD.

The designed vertical reinforcement consists of the following:
a. WR-1 with #11 vertical bars 8" OC, haunch #10 bars 8" OC, and #4 cross ties 6" or 12" OC.
b. WR-2 with #11 vertical bars 8" OC, haunch #10 bars 8" OC, and #4 cross ties 6" or 12" OC.
c. WR-2MOD (CDSM Encroachments) with #11 vertical bars 5" OC, haunch #10 bars 8" OC, and #4 cross ties 5".

When rebar configurations noted above are implemented, even with ACI allowed tolerances included, it will conflict

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Option 2 will be acceptable (reduce the depth of the foundation wall vertical construction joint to 1.5").

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

with construction ofthe waterstops, hydrophilic hoses and forming of the vertical CJ.

As a possible solution to this issue SCCI suggests the following:
1. Eliminate a column of cross ties at the construction joints to allow constuction of the vertical CJs per Det. 2 on SI-3001
2. Reduce the depth of the vertical construction joint to 1.5" (similar to horizontal CJ).

Please advise.

T-0670 **BGP - Mat Slab Control Joints 2** **Closed** **08/06/2013** **08/16/2013** **08/20/2013** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Filip Filipic

REQUEST:

Reference: Attached Drawing

Please see attached drawing of Zone 1 control joints. SCCI would like to move the green clouded control joint around the pit with a typical 2' offest.

Please verify this change to be acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Reference RFI T-0670.1 for response. Contractor submitted RFI T-0670.1 while RFI T-0670.0 was still in review and the Rev 1 RFI contains the same request included in Rev 0 along with an additional location.

T-0670.1 **BGP - Mat Slab Construction Joint Conflicts** **Closed** **08/19/2013** **08/29/2013** **08/30/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Spec Section 03 30 20, Attached Sketches

Please see attached sketches of mat slab CJ layout. SCCI has discovered conflicts between the CJ formwork and reinforcing steel, pin pile.
SCCI proposes to modify the mat slab construction joint to clear the conflicting reinforcing steel and pin pile, as shown on the attached sketches.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor-proposed CJ layout as presented in the RFI is acceptable.

Although the contractor has not inquired yet, one N-S line of shear reinforcement for the column at F-4 will conflict with the joint key. Contractor may shift this one conflicting line of shear reinforcement max of 3" to clear the key.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Is this acceptable?

T-0671 **BGP - Control Joint Amplitude** **Closed** **08/08/2013** **08/18/2013** **08/12/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Drawing S1-3001

See attached contract drawing S1-3001 regarding vertical and horizontal control joints of the foundation walls. SCCI is requesting acceptance to eliminate amplitude on the face of the control joint keyway where hydrophilic waterstop and injection hose is to be installed. Amplitude will remain on the diagonal portions of the CJ. This RFI is intended to clarify the use of this procedure for foundation walls only.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For vertical and horizontal control joints at the foundation wall, see response to RFI T-0630.

T-0672 **BGP - Fire Management Device Layout** **Closed** **08/08/2013** **08/18/2013** **08/14/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

As discussed in the fire management coordination meeting on Monday 8/5, the contract plan device layout does not meet code for current draw. The stub ups from the mat slab to the devices shown on the contract plans at every other column will not be sufficient enough to meet code requirements for the future fully occupied space. If stubbed up at every other column, the consequences are having circuit runs that will end up doubling when the devices are added in the future. Siemens recommends that the stub ups are made at every column which will reduce the total current draw when devices are added in the future.

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The fire management system of design is a performance based design as per Section 28 30 01-1.1C of the contract documents. The contractor is responsible for the design of the system, including stub ups and device layout, as required to adhere to all applicable code requirements.

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: S1-3600, Attached RFI 069

See attached Gerdau's RFI#069

At the contractors option, Gerdau is requesting to displace one top cap bar every 5' OC within the moment frame beams for support. Allowing the displacement of one top cap bar would reduce congestion near the top of the beam.

Please confirm that this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

RFI was retracted in Constructware. This RFI will be responded to internally. Per meeting between TT, WOJV and SCCI on 08/08/2013, TT rejected the proposed alternative.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0675	BGP - 400 Series HRC Couplers Assembly Procedure	Closed	08/12/2013	08/22/2013	08/16/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Spec Section 03 30 20

SCCI is in receipt of the approval to SCCI's Request for Substitution TG0600-077 .1 to approve the use of HRC 400 Series Couplers at Vertical Walls. The comment on the approved Request for Substitution noted that assembly of the couplers is to be completed using strict adherence to the manufacturer's installation procedures.

HRC, the manufacturer of the couplers has provided installation instructions, video footage of performance testing, test result and an operator qualification procedure, all supporting the assembly of the of the 400 serious couplers installation is acceptable with "hand tightened" procedure.

Please confirm that the assembly of the 410/420 couplers "hand tight" is acceptable based on this manufacturer's recommendation as it was not directy addressed in the returned submittal comments.

Video of the performance testing can be viewed : http://youtu.be/M5pFkjOgdN8

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

As previously stated in response to the Request for Substitution, the assembly of the couplers shall be per manufacturer's installation procedures.

The manufacturer has stated that hand tightening is allowed with the use of qualified operators, therefore it is confirmed that hand tightened procedure is acceptable. Contractor shall submit operator qualifications for personnel that will be performing the hand tightened procedure.

T-0676	BGP - Mat Slab Construction Joint at 3ft Chamfer	Closed	08/13/2013	08/23/2013	08/22/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Drawing S1-3201, Spec Section 03 30 20

See attached sketch of the mat slab wall CJ interface, reference Contract Drawing S 1-3201 , and RFI T- 0669. During layout of the bulkhead for the mat slab SCCI has discovered a constructibility issue with the construction ofthe mat slab CJ keyway as depicted on Detail 3 on Sl-3001 , at the mat slab interface with the foundation walls.

Reinforcement bars that are in conflict with the 10" deep keyway are:
a.# 4 U-bars as depicted on detail3 on Sl-3201. These bars are spaced 6" OC vertically and 5", 6" or 8" OC horizontally with the respect of the type of wall (i.e. WR-1, WR-2, or WR-2MOD)
b. 3ft chamfer face bars- #10 at 8" OC per detail 1 on Sl-3201

When rebar configurations noted above are implemented, even with ACI allowed tolerances included, it will conflict with construction of the waterstops, hydrophilic hoses and forming of the mat slab CJ.

As a possible solution to this issue SCCI suggests the following:
1. Eliminate a section of#4 U-bars and 3' chamfer face bars to allow constuction of the vertical CJs per Det. 3 on Sl-3001
2. Transition mat slab keyway to match the foundation wall vertical keyway at 1 1/2" depth (reference RFI T-0669).

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor-proposed Option 2 is acceptable (transition mat keyway depth for extent shown on RFI sketch).

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference specification section 22 13 01 2.5, CD Pl-6001 Rev 1 (ASI 104), and SCCI's RFI 255. Drawings do not call out nor provide details for the sand oil interceptor and baffle wall that is called out

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The pit baffles are post-installed and will be part of the TG07.2 Superstructure Concrete Package.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

in SP 22 13 01 2.5.

Please provide details for the sand oil interceptor and baffle wall.

The baffles are to be 6" thick concrete walls with #5@8" OC EA WAY, bars centered in wall. Post-installed epoxy dowel embedment depths per structural General Notes.

T-0678 **BGP - Stair 203 Embed Conflict** **Closed** **08/13/2013** **08/23/2013** **08/27/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please see attached Sl-2022, Sl-7004 and Sl-7602. Please confirm full length L8x4xl/2 embed, as shown on detail 2 of S 1-7004 is required. This embed may conflict with future walls as shown on detail 2 of S 1-7004.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The inquired embeds L8x4x1/2 that is called out in detail 12/S1-7602 are not required at this location as the stair landing framing shall attach directly to the TG07.2 concrete walls.

T-0679 **BGP - CDSM Wall leaks** **Closed** **08/13/2013** **08/23/2013** **08/27/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor Construction LP Jackson Tukuafu

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: Attached Photo, Spec Section 07 12 10

Please reference the attached photo. CDSM wall leaks above Level D bracing have created standing water on top of the Area 3 protection slab in multiple areas. The ponding water is triggering the Ad cor
ES Waterstop (see photo) along the perimeter of the excavation. SCCI has had minimal success shimming the areas of high leakage to help mitigate the water. Please review and provide direction as to
how the leaks will be mitigated. As for the repair of the Adcor Waterstop, SCCI suggests cutting and removing the activated waterstop and installing a new strip with a 4" overlap on both sides. Is this
acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The suggested remedial work by SCCI is recommended as to adhere to Article 3.07, Section D of the general conditions; SCCI to protect installed materials to prevent damage. As per the approved product data, proper confinement time restrictions are required for any premature swelling or remove and replace damaged material.

Please coordinate accordingly with WOJV for specific locations where areas of high leakage occur. As currently coordinated, SCCI is performing mitigation efforts on force account where applicable.

shows the clear cover to the vertical reinforcement on the foundation wall in pour area 4 for location plan see exhibit - A

Exhibit - B depict the amount of clear cover to the vertical reinforcement on the foundation wall in area 4, however there are no areas which will have greater than 6" of clear cover so this RFI is for information only.

RFI T - 622.1 shows the thinning of the wall with the revised reinforcement spacing due to CDSM pile encroachment in Area 4.

Please confirm that the clear cover between the waterproofing system and the vertical reinforcement as outlined at these locations is acceptable.

T-0684 **BGP - Couplers for Future Construction** **Closed** **08/19/2013** **08/29/2013** **08/28/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Filip Filipic

REQUEST:

Reference: Drawing S1-3206, Spec Section 03 30 20

See attached photo of the form savers that are going to be used for the coupler for future construction as depicted on Detail 4 of S1-3206, and Detail 6 of S1-3001.

SCCI believes that Detail 6 on S1-3001 is not applicable due to the following:
1. As shown on the attached photo, epoxy coated form savers have tin cap incorporated into the coupler body. This tin cap will protect the rebar until the future construction.
2. Whatever tar is intended to be used with form savers in not compatible with the Grace waterproofing.
3. Detail 6 on S1-3001 is a detail for the slabs, where future walls are to be constructed.

SCCI proposed to install the coupler for future construction as shown on Detail 4 S1-3206 with form savers set

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Thornton Tomasetti does not object to the contractor's proposal, contained in RFI T-0684 BGP, regarding couplers for future construction.
The proposal contained in this RFI also concerns a waterproofing system proposed by the Contractors, not the system designed by the Architect. The Contractors should have their engineer who prepared this waterproofing system design respond to this RFI. Until that is done, the Contractor should confirm all waterproofing system questions and details with the waterproofing manufacturer (with copies to the TJPA and its consultants and the Architect).

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

against the waterproofing membrane. Care shall be taken to ensure that waterproofing is not damaged.

Is this acceptable?

T-0685 **BGP - North Shear Wall Concrete Mix** **Open** **08/09/2013** **08/23/2013** **08/29/2013** **Potentially** ☐

From: Webcor Construction LP Marina Rosso **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

See attached drawing regarding the North shear wall.

Due to the monolithic pours at the intersection of the shear wall, foundation wall and mat slab chamfer, there will be differentiating concrete mix uses. The attached drawing assigns the portions of this intersection with its corresponding concrete mix.

Please verify the use of these concrete mixes at this location as acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor-proposed concrete mix use at north shearwall is acceptable.

T-0686 **BGP - Drain Line Conflict with Micro Piles** **Closed** **08/22/2013** **09/01/2013** **09/04/2013** **Potentially** ☐

From: Webcor Construction LP Marina Rosso **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

See attached photo and CD PI-2030.

After performed layout of the drainage line system around GL K5 SCCI has discovered that a row of micro piles is in conflict with the 4" cast iron pipe drain line. SCCI suggest shifting the drain line run to clear the micro piles.

Is this acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

In order to avoid the conflict between micropiles and drainage piping, the catch basin indicated in RFI T-0686 BGP has been relocated slightly north. The drainage piping will run straight from the catch based as it did before. Refer to the attached PSK-2030 and SKA-2822.

T-0687 **BGP - Drain Line Conflict with Reinforcement** **Closed** **08/22/2013** **09/01/2013** **09/03/2013** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Marina Rosso **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

See attached photos and CD P 1-2030.

Tails of the bottom rebar mat at the drainage pit are interfering with the construction of drainage lines and catch basin.

SCCI proposes following:
1. Shift the catch basin to where it clears the reinforcement tails.
2. Cut the rebar tails to allow installation of the drainage lines and the catch basin.

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Option 2 will be allowed. Rebar tail ends that conflict with the catch basin for this location may be cut to clear the catch basin. 12" max may be cut off.

T-0688 **BGP - Pin Pile No 6 Conflict with Future Walls** **Closed** **08/23/2013** **09/02/2013** **09/04/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Filip Filipic

REQUEST:

Please refer to attached drawing S1-2052 (ASI 102), S1-3205 (ASI 100) and attached photos.

Drawing S1-2052, shows pin pile No. 6 (43"x43 block-out) at GL D.8/4 encroaching the future reinforced concrete wall (RCW). As a result, the couplers shown in detail drawing 5/S1-3205 cannot be installed in the area where the pin pile 43'x43" block-out is located.

Please confirm it is acceptable to reduce the distance between the mechanical coupler for the future 12" RCW from 8" O.C. to 4" O.C. as shown in detail drawing 5/S1-3205, The revised coupler spacing would only span a distance of three feet on either side of the block-out to compensate for the coupler that cannot be installed due to the block-out/pin pile location.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Note that the wall reinforcement for this RFI is #7@12" OC each face per S1-9050 as it is labeled as a partition wall on plan as well as reflected in rebar submittal TG0600-301.2.

The OC spacing of the vertical dowels shall be 6" OC each face for a distance of 3'-0" on either side of the inquired block-out. For vertical bars within the block-out embed min 4" into concrete.

T-0689 **BSE - Micropiles in Depressions** **Open** **08/23/2013** **09/02/2013** **08/30/2013** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Reference Sketch: attached
Reference Email: attached

The micropile designer has confirmed that it is not necessary to extend the micropile to within 6" of the top of concrete and that the 5' embedment in the sump pit is adequate. Please confirm that this is acceptable to the design team.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is acceptable with the design team.

T-0690 **SSS - Stainless steel welded to cast iron** **Closed** **08/23/2013** **09/02/2013** **09/05/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Drawing: 1/S1-6056

A number of details throughout structural steel drawings indicate stainless steel welded to cast iron or mild steel, see detail 1, 2/S1-6056 as one example. If two metals are fused, cast iron welded to stainless steel results in carbon migration. The chromium in the stainless and carbon in the steel have affinity for each other at elevated temperatures that results in carbon and chromium combining to form chromium carbide. This turns the welded area into hard and brittle material with a potential for rust that overtime has a high possibility to crack and fail.

For Det. 1 and 2 on S1-6056 the added tension from cables may contribute to failure. The proposed solutions include:

1.Use stainless steel instead of mild steel for the bottom connection plate thus welding stainless steel to stainless steel. Where the bottom plate has to connect to structural steel use bolted connection with thin dielectric isolator between two surfaces.

2.Replace welded connection to bolted connection with an isolator.

3.Use galvanized and painted plate instead of stainless

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The inquired connection can be executed in the way shown. Welding stainless steel to carbon steel is an established method, which can be done using an appropriate welding method. As with all welding methods, there are certain points to be considered, such as:

- The fabricator to be approved for welding stainless steel to carbon steel and/or cast steel (qualification submittals)

- The welder to be approved for welding stainless steel to carbon steel and/or cast steel (qualification submittals)

- Surface preparation before welding necessary (welding procedure submittals)

- Selection of weld filler material (welding procedure submittals in combination with structural design verification)

- Surface preparation after welding (welding procedure submittals)

- Coating of weld and stainless steel member 30mm beyond weld (welding procedure submittals)

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

steel plate.

Please advise.

- etc.

However, the contractor in collaboration with his engineer and fabricator are free to propose alternative solutions. Since that specific connection is a design-built detail, the contractor can submit an alternative detail with supporting documentation (structural analysis, etc.) for review by the design team.

T-0691 **BGP - FF&FL Values for Mat Slab and Concourse Slab** **Closed** **08/23/2013** **09/03/2013** **09/03/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Don Muns

REQUEST:

1. Please confirm the contract documetns (TG06.0) do not specify a FF value for the Mat Slab.

2. Also, please reference ACI 302.1R and contract specification 033020.3.6.B. ACI 302.1R does not provide any recommendations on F-numbers for broomed surfaces. Furthermore, table 8.15.3.b of ACI 302.1R (page 46) demonstrates to achieve FF value of 20 for a slab on grade, it must be a smooth, floated surface.

Please clarify if the designer intends to have a rough broom/rake finish, or intends to have the concourse slab finished to a value of 20.

3. Please confirm the concrete finish within the train box.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Confirmed.

2. (Due to the impending first mat pour, only the mat slab is addressed in this RFI response. For this particular RFI, please separate the Mat and Lower Concourse topics.)

3. See responses to 1 & 2 or identify other specific surfaces of inquiry.

T-0692 **BGP - Rebar Configuration at Moment Beam with Incorporation of S-3 vs T-9 Ties** **Closed** **08/23/2013** **09/03/2013** **08/30/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to attached detail 3 on drawing S1-3603 and attached Gerdau Sketch SK-Gerdau RFI 070.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor proposed reinforcement configuration for the lower concourse moment frame beam transverse reinforcement is acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please confirm it is acceptable to install S-3 stirrups and one T-9 tie as shown in the attached sketch for the vertical ties in the moment frame beam in lieu of installing all T-9 ties as depicted in detail 3/S1-3603. The proposed concrete reinforcement configuration is needed to avoid the constructability issues associated with alternating the hooks under the 1.5" of clear cover beneath the bottom beam bars.

T-0693 **BGP - Conduits in Columns** **Closed** **08/23/2013** **09/02/2013** **08/27/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

From discussions with the Design Team, we have been informed that a number of columns will have post installed steel jackets. Columns with Fire Management and steel jackets will require the conduits and j-boxes to be embedded. It is noted that the jackets will not be full height, so the j-boxes will be flush with the concrete face.

Please provide the locations of the affected columns and a height for the boxes.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AAI response: Refer to the attached sketches SKA-2808R1, SKA-2809R1, SKA-2811R1 showing the locations of the West End B2 level concrete columns which will receive post installed steel jackets and embedded conduits. The attached SKA-2817R2 shows the mounting height of the surface mounted electrical boxes for these columns.

WSP response: On the steel jacketed columns, backboxes will be surface mounted with conduit routed within the column. Conduit will exit the column terminating into the back of the surface mounted box. Contractor shall lay out and route the embedded conduits such that the number of bends between boxes does not exceed code (360 degrees between boxes). These embedded conduits shall not be required to follow building column lines, and direct runs between devices shall be acceptable to avoid intermediate junction boxes.

T-0693.1 **BGP - Embedded Conduits in Columns** **Closed** **09/04/2013** **09/14/2013** **09/05/2013** **Potentially** ☐

From: Webcor Construction LP Marina Rosso **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

In the MEP meeting on 9/4/13, the response to RFI T-0693 was clarified. To confirm conversations with the WSP Electrical Design representative, the only conduits to be embedded in columns per the RFI T-0693 response are to be fire management conduits per the locations depicted in the response. All other conduits (power recepticals etc) are to be stubbed up on the face of the columns and are not to be embedded in the column.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

With reference to RFI T-0693, all other conduits (power receptacles etc.) are to be stubbed up adjacent to the face of the columns and are not to be embedded in the columns. The conduits and receptacles will be surface mounted on the post-installed steel jackets.
Note that the conduits are to be stubbed up with 5" between the conduit face and the concrete column face, to allow for the post-installation of the steel jackets. There are also plumbing risers on a number of the steel jacketed columns. The pipe risers should be positioned relative to the columns in accordance with the plumbing documents, but should not be closer than 5" to the concrete column, to permit post installation of the steel jackets.

T-0694 **Additional Rebar Conflict for Plumbing Trim at GL2/D.4** **Closed** **08/26/2013** **09/03/2013** **08/27/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to drawings 1/A1-2122, 1/S1-3501 and attached Gerdau sketch SKS-1

Due to the density or the typical N-S top mat bars (#10) and additional bars (#11) near the elevator pit at Gridlines 2 and D.4, the additional trim rebar per 1/S1-3501 for interrupting the bars over the plumbing opening cannot be installed to the East of the plumbing opening within 3" of the opening. The alternative solution would be to install the additional steel in a new layer below the top mat; however, due to proximity of the piping to the steel the bars cannot be placed below the top mat. Gerdau proposes the folloing options:

A. Omit the additional trim bars to the East of the trimmed opening.
B. Relocate the additional trim bars approximately 3'-0" East of the opening where the rebar spacing would allow for additional steel.

Please advise if proposed options are acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor-proposed option to omit additional trim bars to the east of the trimmed opening is acceptable for the cut plumbing opening at Grid 2/D.4. Added trim bars to the west of the opening will remain as placed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

(see attached SKS-1)

T-0695 **BGP - Additional Rebar Conflict for Floor Sink Trim GL B.7/2.7** **Closed** **08/26/2013** **09/02/2013** **08/27/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

See attached Gerdau's RFI #72, 1/S1-3501, A1-2122, attached Gerdau sketch SKS-1

Due to the density of the typical N-S top mat bars (#10), additional N-S top mat bars (#11) and pin pile trim steel (#11 with lap splices directly over floor sink) near the floor sink at Gridlines 2.7 and B.7, the additional trim rebar per 1/S1-3501 for interrupting the bars over the plumbing opening cannot be installed on either side of the plumbing opening. The alternative solution would be to install the additional steel in a new layer below the top mat; however, due to the proximity of the plumbing piping to the steel the additional bars cannot be placed below the top mat. Also, the additional bar to the East of the opening would conflict with the pin pile. Gerdau proposes to cut top mat bars to allow for the floor sink installation and omit the additional trim bars.

Please advise if the proposed solution is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per SKS-0282 (attached),

Pin pile add bars will be calculated as ½ the number of interrupted bars each side in lieu of ½+1 bars. This eliminates (2) pin-pile add bars being interrupted by the drain.

One wall add bar interrupted by the drain will be cut short at the northern limit of the drain and not be considered interrupted by the drain.

Reinforcing west of the drain centerline, but within the cut zone, will be jockeyed west so that no bars are required to be cut.

Reinforcing east of the drain centerline, but within the cut zone, will be jockeyed east so that no bars are required to be cut.

A single typical mat bar will remain within the cut zone and may be cut.

Congested reinforcing east of the cut zone will be jockeyed east aided by the partial (or complete) removal of a plumbing add bar.

Clear spacing of 1db to be maintained between all bars except where lap spliced.

In displacing bars to achieve the configuration shown in the SKS, resulting non-contact lap splices will be tolerated up to 6".

T-0696	SSS - Type 1 Drag Connection Angles	Closed	08/26/2013	09/05/2013	08/29/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Drawings: S1-2502, S1-2503, S1-2504, S1-2505, S1-2506, S1-2507

The angles shown in the bus deck plan views (drawings S1-2502 through S1-2507) for the Type 1 drag connections to the bus deck cast nodes do not appear to match with the corresponding angles shown on the casting drawings (drawings S1-5121 throughS1-5125).

The attached mark-ups show our fabricator¿s (Oregon Iron Works) attempt to calculate the angles on the bus deck plan views and compare them to the corresponding angles of the castings.

Please clarify.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Beam plan angles (Sheets S1-2502 through S1-2507) and Bus Deck casting angles (S1-5121 through S1-5125) will not match in all cases because some casting types are used at multiple locations as indicated in Sheet S1-5120. The design intent was to minimize the number of unique castings in the structure which is more cost effective than developing unique casting geometry for every joint. For example, as indicated Sheet S1-5120, Casting 21A is used at various different joints at which joining beam angles vary in a certain range. The pad widths on the castings have been designed to be wide enough so that beams with different plan angles can be connected to the casting.

In some other cases, the casting angles were revised during cast node shop drawing review. For example, for Casting 35B one of the plan angles was changed from 42.25 to 26.14 degrees to match the beam angle. Contractor shall coordinate the information in the drawings with those in cast node shop drawings.

T-0698	SSS - Clash Between Slab on Deck and Transfer Girder	Closed	08/26/2013	09/05/2013	08/28/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Reference Drawings: A1-2863, S1-2303, S1-5000
Reference Sketch: attached

There are many conflicts in the plans where the top of concrete and the top of the transfer girder in that given area does not leave the amount of space required under the Metal Deck Schedule on 2/S1-5000.

For Example: Using the Top Of Concrete (TOC) and Top Of Steel (TOS) elevation from sheet S1-2303 a clash occurs between the slab (S3 - TOC: 19.00') and Transfer Girder TR9 (TR9 - TOS: 18.37'). The 10" that the S3 deck requires in the Metal Deck Schedule on 2/S1-5000 cannot be maintained over the Transfer Girder. Please clarify.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to details that have been cut on plan across the transfer girders as applicable in the Superstructure IFC/ASI 105 issue.

Example: See section detail 8/S1-3705 that is cut at gridline 9 & D.4 on S1-2303 (included in the RFI).

REQUEST:

Please reference attached drawing S1-3411 .

The corbel section detail I of sheet S1-3411 calls for a 3/4"x4"x 18" embed plate at the toe of the corbel. However, the embed detail in 1D/S1-3411 shows the embed width at 24".

Please clarify the embed width dimensional discrepancy: 3/4"x4"x18" or 3/4"x4"x24". Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The inquired embed width is 24" as shown in detail 1D.

T-0702 **BGP - Chamfer Bar Top Hook** **Open** **08/29/2013** **09/08/2013** **08/29/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

See attached Gerdau's RFI#74.
See attached SKS-74

In an effor to prevent the chamfer bar from encroaching on the existing shoring waler beams, Gerdau would like to propose over bending the top hook and turning it into a standard 180 degree hook as shown on the attached sketch.

Please advise if this is acceptable

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor-proposed 180 degree hook for the chamfer bars that are in conflict with double shoring walers is acceptable for bars that have not been fabricated. The radius point for the bend shall remain located as originally detailed on 1/S1-3201.

T-0703 **BGP - Drainage Conflicts with Reinforcement** **Closed** **08/29/2013** **09/08/2013** **09/05/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Filip Filipic

REQUEST:

See attached marked up contract drawings PSK-2022 and S1-3005

Some of the drainage lines and fixtures are designed to be constructed in close proximity of the concrete columns, similarly S1-3005 depicts typicall mat shar reinforcement schedule and details. Some of these shear reinforcement bars will be interfering with the drainage lines and fixtures.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

General guidelines for displacement of headed reinforcing at plumbing conflicts are as follows:

Lines refer to heads that are perpendicular to a column face.

1) Any head in line can be displaced 4" in any direction provided that it is not the first head. First

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

SCCI suggest to displace these shear reinforcement bars where conflicts occur. Displacement would occur lateraly, in 8'' increments, governed by the grid of the mat slab main reinforcement bars.

Please advise.

heads can only be displaced away from the column or parallel to the column face.

2) The maximum spacing of heads in a line shall be 12".

3) The minimum spacing of heads in a line shall be 4".

4) Any line can be started 8" along that line from the previously intended starting position provided the displacement is away from the column.

5) Any line or group of lines can be displaced laterally such that all lines are within the projection of the column face and the centroid of the resulting group is within the middle third of the projection of the column face.

6) The minimum spacing between adjacent lines shall be 4"

7) The maximum spacing between adjacent lines shall be 24".

All locations with displaced heads shall be observed by Thornton Tomasetti's field engineer prior to inspection.

T-0704 **SSS - Domestic Manufactured W40x503** **Closed** **08/29/2013** **09/08/2013** **09/03/2013** **Potentially** ☐

Reference Drawings: S1-2505, S1-2506, S1-2507, S1-5050

We have determined that W40x503 is not produced Domestic melted and manufactured. This size girder occurs in 12 locations at the Perimeter Bus Deck Level between grid lines 21 and 33.

This beam is available from import sources, or it can be

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

W40x503 may be replaced by a built-up wide flange with steel plates. The plates shall match the dimensions of the rolled shape.

Please be noted that the W40x503 are not only used at Bus Deck between Grid 31 and 33. They are also used at the ground level drag beam along Grid C & G.

Skanska and W/O please provide information on how

built up from domestic plate.

6/S1-5050 gives an option for W14 built up columns but does not give an option for W40 columns.

please advise

the bid was certified to conform to the Buy America clause.

T-0704.1 **SSS - Built Up Plate Fabrication for W40x503** **Closed** **09/16/2013** **09/26/2013** **09/26/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference RFI: T-0704

The built up beam will consist of 1 9/16" webs and 2 3/4" flanges. Please confirm that these plate sizes are appropriate.

The web to flange weld was not addressed on returned RFI T-0704. We would suggest a 3/8" double fillet weld to join the web and flanges.

Please confirm or provide an alternate detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Flange and web thicknesses are confirmed. The beams shall be 42" deep, the flanges shall be 16-3/8" wide. The plates shall be ASTM A572, GR 50 per General Notes SS-1. Web to flange welding shall be with double 5/8" fillet welds for 4 ft from each end of each flange plate and double 3/8" fillet welds in between.
W40X503 are also used at Roof and Ground Levels.
W/O to coordinate RFI T-0704-SSS and T-0704.1-SSS responses with other sub-contractors, as needed.

T-0705 **BGP - Haunch Reinforcement at Double Waler Condition** **Closed** **08/29/2013** **09/08/2013** **09/02/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc John Berggren

REQUEST:

Please refer to attached drawing 1/S1-3201 attached Photo SCCI-RFI 305.

As per field coordination, the double shoring waler condition, where the waler web is lower than that of a single waler, the tail of the #10@8" (reference attached excerpt drawing BM-3t of submittal package TG0600-301.1) haunch reinforcement interferes with the web of the shoring waler.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The revised haunch reinforcement clear cover as described in the RFI per field coordination is confirmed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

The condition was observed at Grid 2/ A and will likely repeat at other double waler locations. The typical resolution to the condition shall be to adjust the position, where required, so that the interfering tail clears the double waler web. As a result
the 1-1/2" clear cover will deviate up to 4-112" of clear cover. The plan location of the tail shall remain as close as possible per the placement drawings. See the attached Photo for further details.

The 1-1/2" clear spacing shall remain at locations unaffected by the reduced clearance of the double-wlaer. For pieces not yet fabricated and delivered, please refer to RFI T-0603 as the proposed solution to conform to the 1-1/2" clear cover.

Pleases confirm the revised haunch reinforcement clear clover as coordinated in the field is acceptable.

Reference Drawing S1-3003 and Spec Section 03 20 00
See attached Gerdau Sketch SK-77, BM-3b, BM-3t

Due to the location of select trestle and pin piles, the #9@16" (bottom mat) and #11@16" (top mat) added North-South layer reinforcement cannot be installed at the desired spacing. The proposed solution is to cut the added #9 or #11 bars, where interrupted by a pile, and add a hook of equal size or greater (#11 hook max) with a lap splice similar to the hooks used for the trestle and pin pile trim steel.

Please confirm if this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The rebar conditions for bars at pin/trestle piles are addressed in typical details 2 & 3 on S1-3003 as well as details 4 & 7 on S1-3009 - these also apply to the inquired add bars in the RFI. The contractor-proposed use of spliced hook at these locations is acceptable.

T-0710 **BGP - Haunch Reinforcement Alternative Detail at Dewatering Well in Area 3** **Closed** **09/03/2013** **09/16/2013** **09/04/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

REQUEST:

Reference Drawing: S1 -3201
Reference Spec: 03 20 00
Attached Gerdau Sketch: SKS-76.1, SKS-76.2, SKS-76.3

A portion of the #10 @ 8" haunch bars cannot be installed

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

At conflicts with dewatering wells, the tail of the haunch bar may be terminated as shown in Gerdau SKS-76.3 contained in the RFI. The embedment length for #10 headed bar shall be 18¿. Alternatively, the embedment may be a straight development, either

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

as fabricated due to conflicts with overhead obstructions (shoring walers and struts) and the dewatering well sleeves. Per discussions with Sean McNeil where bars cannot be installed due to the obstructions, a modified #1 0 haunch bar with an HRC 555 head can be installed in place ofthe typical haunch bar. The attached sketches (SKS-76.1 and SKS-76.2) depict the magnitude ofthe obstructions at the dewatering wells in Area 3.

Please confirm if this is acceptable.

Additionally, please provide the required embedment length for the headed tail of the modified haunch bar.

inclined or vertical, of 42¿. The 180 degree hook at the top of the bar shall comply with the RFI T-702 BGP response regarding the location of the radius point.

T-0711 **SSS - Radius Change Request for LC301** **Closed** **09/03/2013** **09/13/2013** **09/04/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

A design change on the light column critical type LC301 (CN0058) node has changed the radius between the body and the lifting bracket from the original two inches to one inch. We would like to formally request a change to a minimum of a two inch radius in this location. A one inch radius on the 301 bracket creates the following manufacturing challenges:

A. The sand in the 1 inch radius in the mold will superheat and cause burn in/on sand adherence to the casting causing additional grinding and work in the finishing department to meet visual acceptance criteria.

B. The sharper radius will create a hot spot and solidification challenges - liquid metal contracts % inch per foot and silica sand expands 1.2% during solidification and as cast hot tear potential in the radius may occur causing welding, grinding and blending. This again will be to meet the visual acceptance criteria.

C. With a 2 inch radius the appendage (lifting bracket) will be much closer to thermally neutral reducing solidification stresses and potential shrinkage in the section radius.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Proposed 2" fillet radius between the main body of casting LC301 and its side fin is acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

D. Cosmetically a 2 inch radius will look much more presentable in the as cast state.

E. The 1 inch radius will require either chill sand in the radius, a metal chill made in the mold, or solidification cracking brackets as heat sinks to equalize the solidification temperatures and add strength to prevent hot tearing during solidification. Additional grinding of these areas will be necessary to meet visual acceptance criteria.

F. Items A, B, and E will add costs to the manufacturing process of the casting.

Our purpose is to point out the effects of the 1 inch radius design request and make sure that the designers are aware of the potential impact of having the smaller radius versus the 2 inch radius in the original designs that were reviewed. Bradken Atchison can certainly produce the 1 inch radius and manage the effects the 1 inch radius causes, but producing that design will have cost impacts to the casting process.

T-0712 **BGP - Jitter Bug Finish on Mat Slab Surface** **Open** **09/03/2013** **09/13/2013** **09/04/2013** **Potentially** ☐

Co-Author:

REQUEST:

Reference Documents: Exhibits A - B

Further to response to RFI T-637 please find attached proposed changes to the spandrel beams in pour Area 4 for location plan see exhibit - A.

Exhibit - B shows the plan view of the modification necessary to the spandrel beam due to the revised reinforcement width of the foundation wall as well as typical cross sections.

RFI T - 622.1 shows the extent of the modification to the foundation wall on the north elevation of area 4.

Please confirm that this modification as outlined at this location is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/13/2013
RESPONSE:
Contractor proposed modification to the Lower Concourse spandrel beam within Area 4 is acceptable. Proper lap splices shall be provided where the beam rebar is transitioned from 7-1/16 inch spacing to 6-1/2 inch at each side of the encroached wall region.

T-0714 **BGP - Area 3- Partition Wall Pier Rebar Conflict With Plumbing Near GL3/C.3** **Closed** **09/03/2013** **09/13/2013** **09/04/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

See attached Gerdau's RFI #078.

Near Gridlines 3/C.3, there is a conflict between the partition wall pier dowels and the installed 6" pluming pipe (8" with insulation). The wall pier currently overlaps with the plumbing pipe by approximately 6". Gerdau proposes to move the wall pier to the East, or West to allow the dowels to clear the pipe.

Please provide the acceptable direction (East or West) to shift the wall pier.

Please note that there are conduits stub up on the East side that would need to be moved, should the opening is shifted towards the East.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The 2 corner bar dowels of the pier that are in conflict with the pipe may be minimally bent to clear the pipe.

Non-corner vertical bar dowels within the pier that are in conflict with the pipe may be shifted to clear the pipe.

T-0716	BGP - Haunch Reinforcement Alternative Detail	Closed	09/03/2013	09/13/2013	09/03/2013	Potentially	☐

From: Webcor Construction LP Marina Rosso **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Webcor Construction LP Jackson Tukuafu

REQUEST:

See attached Gerdau's RFI #79.

The RFI Response to RFI T -0702 stated that the 180 degree hook chamfer bars are acceptable where the bars conflict with the double shoring walers. The intent of the RFI was to request the use of the 180- degree hook for the chamfer bars throughout the structure regardless of whether or not the bars were below a double or single walers.

Please confirm that this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per RFI 702 response, contractor-proposed 180 degree hook for the chamfer bars that are in conflict with double shoring walers is acceptable for bars that have not been fabricated. The radius point for the bend shall remain located as originally detailed on 1/S1-3201.

At contractor's option, the same bars may be used at any haunch location and are not restricted to the double walers.

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference drawing: 1/S1-3201
Reference spec: 03 20 00

Per field coordination with the on-site structural engineer the following conditions are to be confirmed as acceptable:

1. In Area 3 along Gridline A, the haunch bars have been trimmed at the approximate intersections with the bottom mat. See sketch FC-3

2. In Area 3 along Gridline 1, (2) haunch bas have been trimmed at the approximate intersection with the top mat with no embedment. See sketch FC-4.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The field conditions as described in the RFI are confirmed as acceptable. Regarding potential future conflicts with dewatering wells, refer to RFI T-0710 BGP response.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

At future locations where dewatering wells interrupt haunch bars, use detail for bar E in sketches FC-3 or FC-4 if the haunch bars do not have 42" of embedment into the mat slab.

T-0723 **BGP - Couplers for Future Walls** **Pending** **09/05/2013** **09/13/2013** **09/05/2013** **Potentially** ☐

From: Webcor Construction LP Marina Rosso **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Filip Filipic

REQUEST:

Reference Det. 6 on S1-3001
See attached photo of the form savers that are going to be used as couplers for future walls.

As discussed in area 3 Mat Slab meeting on 9/4/2013 SCCI is proposing to installing all formsavers for future walls in the Mat slab flush with the top of the Mat slab, to EL -35.67'.
As shown on the attached photo, epoxy coated form savers have tin cap incorporated into coupler's body. This tin cap will protect the rebar until the future construction, and will substitute "tar" shown on Det. 6 on S1-3001.

Is this acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Epoxy-coated form savers shall be installed at the top of the mat slab as discussed on site in the RFI for locations where Detail 1/S1-9051 is applicable and may remain attached to the field observed 2x12 lumber, which shall be chaired to the target elevation. The form-saver/ lumber assembly is not applicable to any wall where there is a keyed joint or waterstop, such as the water tank walls. The arrangement is not acceptable for any "future wall" where the form-saver warranty will not cover corrosion protection for the construction interval without supplementary surface measures to be approved by the design team.

T-0724 **BGP - CDSM Soldier Pile Encroachment Area 8** **Closed** **09/06/2013** **09/16/2013** **09/17/2013** **Potentially** ☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Documents: Exhibits A - I

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north & south wall in mat slab pour Area 8 as well as all levels of the encroachment into the foundation wall between CDSM piles 133 to 164 on the north elevation and 618 to 650 on the south elevation for Location Plan see exhibit - A

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/16/2013
RESPONSE:
The contractor proposed revisions to foundation wall reinforcement due to encroaching CDSM Piles 146, 158, 161 and 632 are acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Exhibit - B, & C depict the location and degree in which the SP are encroaching

WOJV proposal North elevation on gridline A:
(See Exhibit - B & Exhibit - F) Between CDSM piles 145 to 147 and 157 to 159 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 146 & 158, originally these were WR1 reinforcement area's #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit - D).

Between CDSM piles 159 to 162-163, WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 161. This foundation wall area was originally a WR2 reinforcement area (#11@6"oc EF vertically) and would change to #11@5"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit -E).

WOJV proposal on the South elevation:
(See Exhibit - B) Between CDSM piles 631 to 635, WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 632. This foundation wall area was originally a WR2 reinforcement area (#11@6"oc EF vertically) and would change to #11@5"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit - E).

In all other areas without CDSM pile encroachment issues the reinforcement will remain unchanged as per the Contract drawings.

See Exhibit- G, H & I shows details of transition between modified reinforcement to contract reinforcement.

These solutions if approved would be incorporated into the TG06 shop drawings.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please confirm if these solutions would be acceptable.

T-0725 **BGP- CDSM Soldier Pile Cut-Off** **Closed** **09/06/2013** **09/16/2013** **09/18/2013** **Potentially** ☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

In Detail 2/A1-8710 (see attached) it's not clear as to the final cut-off elevation for the CDSM wall shoring piles. Currently CDSM shoring piles extend up past the existing grade and future TG12.1 Civil Site Work Trade Contractor will be responsible for cutting off the CDSM wall shoring steel piles to the final elevation. WOJV propose that the cut-off elevations for the shoring piles be established at 3" above the train box lid i.e. at the top of concrete protection slab. See attached sketch SK -1.

If the shoring piles are to be cut off below the train box lid as currently shown in detail 2/A-8710, the waterproofing membrane could be compromised by the heat generated by the cutting torches which will have to be used to cut these large steel piles, also this detail does not address the instances where the shoring wall is shared with further new projects i.e. 181 Fremont street in Zone 4 and 101 1st street in Zone 3.

It is preferable that the shoring piles be cut-off 3" above the top of the train box lid to ensure that the waterproofing system isn't compromised and omits the need to pothole around 861 CDSM piles which are in close proximity to adjacent property and live traffic.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/17/2013
RESPONSE:
The soldier piles are within the City Public Right of Way. Obstructions either have to be at least 4' below the surface or be protected with 1" thick steel plates (similar to the Train Box Lid). Leaving the soldier piles in this Public Right of Way may compromise agreements that have been established with the City.

Either the piles will need to be cut down below the 4' depth entirely or the vertical flange adjacent to the Train box is left in place and the opposite (outside) flange and the web are cut down to 4' below the finished surface. Leaving the inside flange in place to the top of the Train Box Lid could facilitate support for the vertical waterproofing assembly.

T-0725.1 **BGP- CDSM Soldier Pile Cut-Off** **Closed** **09/30/2013** **10/10/2013** **10/14/2013** **Potentially** ☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Further, in response to RFI T-725, WOJV requires the cut-off elevations for the 861 CDSM piles around the perimeter of the train box taking into account but not limited to, San Francisco city requirements for beam cut off in a public right of way, the elevation of utilities entering the train box structure, bridge structures and ramps as well as pedestrian stair towers 201A and 201 B and passenger elevator 201 foundations on the west side of Zone 1.
Another item which will also need to be taken into account is where the CDSM shoring wall is shared with adjoining Projects i.e. 181 Fremont Street in Zone 4 and 101 1st street in Zone 3.

This information once provided will but used as part of the future trade packages TG07.2 Concrete Superstructure and TG12.1 Civil Sitework scopes of work.

Please provide in tabular format a list of the final cut-off elevations for each individual CDSM pile around the perimeter of the train box.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

RESPONSE: RFI T-0725.1 BGP- CDSM Soldier Pile cut-off

George Metzger
10/11/2013
RESPONSE:
Per Design Review Meeting discussion on 10/09/2013, TJPA (ES) stated to reject the RFI as it is not construction related and will be addressed with W/O within the bidding documents.

Co-Author:

REQUEST:

Further to response to RFI T-725.1 TG07.2 trade package requires the cut off elevations for the 861 CDSM pile around the perimeter or the train box taking into account but not limited to, San Francisco city requirements for beam cut off in a public right of way, the elevation of utility's entering the train box structure, bridge structures and ramps as well as pedestrian stair towers 201A and 201B and passenger elevator 201 foundations on the west side of zone 1, Another item which will also need to be take into account is where the CDSM shoring wall is shared with adjoining Projects i.e. 181 Fremont street in Zone 4 and 101 1st street in Zone 3.

Please provide in Tabular format a list of the final cut-off

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

As discussed with the design team and the TJPA, Tabular format a list of the final cut-off elevations for each individual CDSM pile does not exist. The CDSM Wall cut-off elevations are by contractor means and methods with the elevation determined by the contractor based on the various components of the Transit Center building construction for example; contractor formwork, waterproofing and re-construction of adjacent streets/sidewalks.

Where CDSM wall is shared with adjoining Projects i.e. 181 Fremont street in Zone 4 and (Salesforce Tower) 101 First street again the CDSM Wall cut-off elevations are a contractor means and methods with

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

elevations for each individual CDSM pile.

the elevation determined by the contractor to construct the Transbay Transit Center.

For future bid packages, the Construction Manager can coordinate with the City of San Francisco for the requirement for removal. For example the City DPW states sheet piling and laggin"shall be cut off at least 3 feet below pavement subgrade with the upper part removed."

Jack Adams, Turner Construction Dated 7/16/14

T-0726 **BGP- Trestle pile No 6 in comflict with beam at Lower Concourse Level** **Open** **09/09/2013** **09/19/2013** **09/20/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Webcor Construction LP Michael Spillane

REQUEST:

Following a review and discussion on the trestle pile location, it has been noted that trestle pile number 6 (see sketch attached) is in conflict with a beam (B45) at the lower concourse slab elevation between gridline 5-6, E-F. The contractor is proposing to blockout a section of slab as shown on the sketch, this blockout section would then be infilled once the trestle pile has been removed.

The contractor is to insure that the appropriate reinforcement lap splices are present between these concrete pours.

Please confirm if this option would be acceptable

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/20/2013
RESPONSE:
This approach is acceptable. Please submit detailing in reinforcement submittal for review.

Reference Documents: Exhibits A - E

Further to response to RFI T=0609 (see exhibit - D) this RFI shows the areas of foundation wall in pour area 8, on the north & south wall elevations which will have greater than 6" of clear cover to the vertical reinforcement for location plan see Exhibit - A

Exhibit - B & C depict the amount and location of the foundation walls which the will have greater than 6" of clear cover to the vertical reinforcement.

RFI T-0724 shows the thinning of the wall with the revised reinforcement spacing due to CDSM pile encroachment in Area 8.

Please confirm that the clear cover between the waterproofing system and the vertical reinforcement as outlined at these locations is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/17/2013
RESPONSE:
The clear cover between the waterproofing system and vertical reinforcement as presented in Exhibit C of this RFI is acceptable.

T-0728 **BGP - Column Shear Reinforcement and Bump-Out Pile Interference at GL G/15 in** **Closed** **09/10/2013** **09/20/2013** **09/13/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu
Co-Author: Webcor/Obayashi Joint Venture Bob Garcia
To: Turner Construction Compan Gary Krutsch
Answered By: Adamson Associates, Inc George Metzger

REQUEST:

Please refer to attached drawing S1-2024 (dated 11/27/12), S1-3005 (dated 08/3012) and attached Shimmick sketch SK-SCCI 316.

Per field measurements, the 36" bump-out trestle pile near gridlines F.7/15 interferes with the nearby column shear reinforcement at gridlines G/15. Due to the size of trestle pile, the adjustment of the shear head locations, as provided in RFI T-0703, cannot be achieved.

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per SKS-0283 (Attached):

To avoid the trestle pile interference with the column shear heads at Grid G/15, the heads layout shall be rotated 45 degrees about the column center.

The layout of heads in an arm shall be modified such that each of the arms contains 9 lines of heads extending to 16' from the column center.

Heads in an arm shall be placed approximately at each 8' reinforcing module intersection, such that each adjacent line radiating from the column is staggard.

The minimum number of total heads shall be 508.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0729	BGP - Typical Trim Steel Requirements for Mat Slab per Field Coordination	Closed	09/10/2013	09/20/2013	09/11/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to attached drawing S1-3009 and S1-3501.

As per field coordination between SCCI, Gerdau, WOJV and TT on 09/09/2013, to help alleviate congestion in the mat reinforcing, and in particular, congestion resulting from add bars due to openings and penetrations, please confirm the following items are acceptable:

1. Details 4 and 7 on Sheet S1-3009 in so far as they apply to trestle piles, pin piles, dewatering wells and piezometric pipes can be relaxed in terms of additional bars. For an even number of bars interrupted (typical bars and add bars) the number of bars added on either side of the opening can be (number of interrupted bars)/2. For an odd number of bars interrupted (typical bars and add bars) the number of bars added on either side of the opening can be (number of interrupted bars +1)/2.

2. Detail 1 on Sheet S1-3501, which applies to sinks, can be relaxed in terms of additional bars. For an even number of bars interrupted (typical bars and add bars) the number of bars added on either side of the opening can be (number of interrupted bars)/2. For an odd number of bars interrupted (typical bars and add bars) the number of bars added on either side of the opening can be (number of interrupted bars +1)/2. The minimum requirement of 2 bars on either side of the opening need not apply.

3. The number of bars and maintenance of clear spacing will take precedence over 8" or 4" module spacing as to minimize the number of potential bar interruptions (and minimize resulting add bars). Any bar may be displaced to avoid conflict. The maximum center-to-center spacing of any two adjacent bars may be as large as 16". Clear spacing of 1 bar diameter shall be maintained between bars where bar relocation necessarily reduces spacing in the vicinity of relocation. Where bar relocation affects a lap splice, noncontact lap splices will be allowed up to 6" for #10 and #11 bars. This remedy shall apply in particular when seeking to avoid interruptions at small penetrations such as risers, vents, sinks and conduits.

4. Clear spacing of 1db minimum shall be maintained in all mat reinforcing except for contact lap splices.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/11/2013
RESPONSE:
The measures to reduce congestion described in the RFI are confirmed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

5. Measures to reduce congestion at other locations such as catch basins, sump pits, elevator pits, shoring bracing and bridge piers will be considered on a case-by-case basis during field coordination with Thornton Tomasetti's field representative.

T-0730 **BGP - Extended Time for Concrete Delivery of Protection Slab Mix** **Closed** **09/10/2013** **09/20/2013** **09/20/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to attached excerpt from specification section 033020, Article 3.3 - D.

The referenced specification section requires mixed discharge concrete "...be completed within 1-1/2 hours or before the drum has revolved 300 revolutions, whichever comes first..." However, Cemex the concrete supplier has performed the set time test to evaluate the time at which the onset of hydration occurs for mix #1557217 (Protection Slab Mix) as per the attached Cemex letter dated August 26, 2013.

As per the attached test result by Cemex, please confirm it is acceptable to extend the concrete delivery to two (2) hours in lieu of 1-1/2 hours as specified.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It will be acceptable to extend the concrete delivery time as proposed in the RFI.

The contractor shall be responsible for providing an end concrete product that meets the specifications.

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

Please refer to drawing E1-6001, A1-2102, A1-2103, E1-2023 and E1-2022.

Per Detail 7 on plan sheet E1-6001, the sump pump conduits for the below grade package are to be terminated 12" above the mat slab directly adjacent to the future train platform wall.

1. With the train platform wall beginning at grid line 12 and moving east, please provide the conduit termination location for the sumps installed west of grid line 12 where there is no train platform. Please include a set dimension the conduit should be set away from the sump.

Please note that for the two sumps that have been poured in Area 3, the conduits were placed roughly 9' to the north of each sump opening to avoid the future train tracks. There are 8 total sumps west of grid line 12 with 6 of them left to be placed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per detail 7 on sheet E1-6001, note B reads to mount disconnect and receptacle on nearest column for zones 02 and 03. Please terminate conduit 12" above mat slab at nearest face of rectangular column

On detail 2/S1-5017 for the Type 2 Drag connection verify at the 2" plates the 1/2" PJP weld is the actual prep or is additional prep required to achieve a 1/2" effective weld requirement (IE; 5/8" prep).

The 1/2" is actual bevel dimension, effective weld will be (1/2"-1/8")=3/8".

T-0737 **SSS - Type 2 Drag Connection Pin Clearance** **Closed** **10/07/2013** **10/17/2013** **10/09/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

1) The Drag Connection Details on drawing S1-5017 appears to show double nuts securing each end of the pin, please confirm.

2) Refer to the Drag Connection Details on drawing S1-5017, is it acceptable to add a cotter pin thru the threads of the pins after the double nut to further secure the nuts from backing out?

3) Skanska proposes to size the pins for the Drag Connections per AISC Table 15-8, "Dimensions and Weights of Recessed-Pin Nut", i.e. provide a 4 ½" diameter thread for a 6" diameter pin. Is this acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) It is confirmed that double nuts are required.
2) It is acceptable to add a cotter pin thru the threads of the pins after the double nuts to further secure the nuts from backing out.
3) Sizing the diameter of the thread area per AISC Table 15-8 is acceptable, but please note that the pin for the Type IIM & IIP drag connections is 7" diameter, not 6" as noted in the RFI.

Stacy Wilson (TCCO Response)
If the Contractor elects to use cotter pins as described in the RFI above, it will come at no cost to the TJPA as it is considered means and methods.

T-0738 **SSS - Drag Connection to Bus Deck Castings** **Closed** **09/17/2013** **09/27/2013** **10/01/2013** **Potentially** ☐

REQUEST:

Reference Drawings: S1-5016 and S1-5017

The spacing of the shear plates on the bus deck cast nodes varies in conjunction with the thickness of the web of each connecting beam. See 1c/S1-5016 and 1b/S1-5017 for reference.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

In concept, TT take no exception with standardizing the bolt and pin lengths, but offer the following comments:

1.The bus deck cast nodes are in the process being fabricated, so the proposed change shall not affect the cast node pad width. The pad on the cast node has

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

In order to avoid customizing the cast nodes, connection pins and/or the bolt lengths, our fabricator, Oregon Iron Works, proposes to standardize the spacing on the cast node shear connection plates and customize the thickness of the web reinforcing plates. See the attached mark-ups of S1-5016 & S1-5017 depicting the proposed detail.

Please confirm that this proposal is acceptable.

sufficient width to accommodate the connection plates as shown on the contract documents.

2.For Type I drag connection, the tabulated plate thicknesses do not include the ones for W40 x327 (near Grid 9.9, 10.1, & 19.9) and W40x392 (near Grid 20.1).

T-0738.1 **SSS - Nominal Gap Dimensions for Cast Node Drag Connections** **Closed** **01/14/2014** **01/24/2014** **01/24/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

WOJV RFI T-0738 (SK RFI 004.1) was submitted to the EOR proposing a 1/2" gap for Type 1 and Type 2M drag connections at the Bus Deck Level Cast Nodes. These ½" gaps were not explicitly called out, but were indicated on the suppor ting documents attached for your reference.

Subsequent conversations with Thornton Tomasetti and Webcor/Obayashi have revealed that a 1/8" nominal gap is preferr ed in lieu of the noted ½" gap.

Please advise if a 1/2" or 1/8" nominal gap is required for the Type 1 drag connection on 1/S1-5016 and Type 2M drag connection on 1/S1-5017.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The 1/2" gap was proposed initially in RFI T-0738 to allow for 1/4" gap at each side of the beam web. We propose a 1/8" gap each side to mitigate the potential joint movement in an earthquake. We believe that the 1/8" gap is sufficient for erection tolerance. If Skanska prefer the 1/4" gap, please provide justification for the Design Team to review.

T-0739 **BGP - Column C16 and Knock-Out Corbel at West Throat** **Closed** **09/17/2013** **09/27/2013** **09/18/2013** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to attached drawing detail 1/S1-2022 and 4/S1-3260.

Per previous discussion with TT field engineer, in the West throat shearwalls which contain integrated CI6 columns and vertical corbels to restrain the knock-out

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/17/2013
RESPONSE:
Column C16 is a boundary element in the West Throat Shearwall. Integral to the column (and the wall) is a vertical corbel that restrains the knock-out wall. Ties

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

walls, only the CI6 column ties are required to penetrate the mat at the designated spacing for a distance of at least 12" below the lowest top mat elevation. The ties associated with the corbel are not required to penetrate the mat slab.

This RFI confirms that the column and corbel ties, as placed, are acceptable based on the observation by the TT field engineer.

are indicated for both the column and the corbel. Only the column ties are required to penetrate the mat at the designated spacing for a distance of at least 12¿ below the lowest top mat elevation. The ties associated with the vertical corbel are not.

As the corbel ties are not required below the mat, the corbel ties observed in the field are necessarily confirmed as acceptable.

The column ties, which are required to penetrate the mat, shall be placed per the contract drawings. This RFI response does NOT confirm the placement or spacing of the column ties observed in the field.

T-0740 **BGP - Mat Slab Rebar Alternate to Grade 75 #11 in Area 6 & 7** **Closed** **09/17/2013** **09/27/2013** **09/26/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Due to mill shortages of grade 75 #10 reinforcing please confirm that at no cost to the Owner, the implementation of grade 75 #11 reinforcing where required will be acceptable for use within the typical mat reinforcing installed at 8" O.C.

The use of the grade 75 # 11 rebar is expected to supplement the typical #1 0 bar in the following locations, 3rd and 4th layer of Area 6, and 4th layer of Area 7.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/25/2013
RESPONSE:
GR75 #11 bars as proposed in and limited to the scope of the RFI is acceptable.
Note that the lap splice length for #11 GR75 bars to #11 GR75 bars will increase over than of the previous #10 GR75 to #10 GR75 bars. Other combinations of spliced bars will be governed by the larger of LTE or the larger (or stronger) bar and the tension lap splice length of the smaller (or weaker) bar per Note 4 of Detail 1/S1-3001.
Clear documentation of these bars shall be made available from time of delivery. Submit as-built or marked-up submittal that reflects these bars for record.

T-0741 **BGP - Pile Location Discrepancy at GL E/34.5 in Zone 4** **Closed** **09/17/2013** **09/27/2013** **09/26/2013** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please reference attached drawing S1-2057 and S1-3007.

The bridge pier pile (4'-0" diameter) near grid E/34.5 is shown in Sl-2057 to be offset from the typical row of piles shown along gridline 34.7. In addition, detail 1/Sl-3007 depicts the pile being located within the pit that is located at gridline E/34.5. However, as per BBI's Beale Street Bridge drawings and as-built conditions, the aforementioned bridge pile is installed in line with the other piles on gridline 34.7.

Please confirm the as-built location of the bridge pier is acceptable and the sump pit detail shown in 1/S1-3007 is no longer applicable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/25/2013
RESPONSE:
This topic has already been addressed in past RFI's. Please refer to responses for RFI T-0264.7 BSE as well as RFI-0264.3 BSE.

T-0742 **BGP- CDSM Soldier Pile Encroachment Area 9** **Closed** **09/20/2013** **09/30/2013** **09/26/2013** **Potentially** ☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Documents: Exhibits A - G

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) and steel plate on the north & south wall in mat slab pour Area 9 as well as all levels of the encroachment into the foundation wall between CDSM piles 164 to 188 on the north elevation and 595 to 618 on the south elevation for Location Plan see exhibit - A
Exhibit - B, & C depict the location and degree in which the SP are encroaching
WOJV proposal North elevation on gridline A: (See Exhibit - B) Between CDSM piles 167 to 168 WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching Steel plate attached to SP 167 & 168, originally this was a WR1 reinforcement area #11@8" oc EF vertically and would change to #11@6" OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).
WOJV proposal on the South elevation: (See Exhibit - B) Between CDSM piles 611-612 to 613-614, WOJV is proposing to decrease the specified 36" wall thickness to

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/25/2013
RESPONSE:
The contractor proposed revisions to foundation wall reinforcement due to encroaching CDSM Piles (and added steel plates) in Area 9 are acceptable. Note that reducing the spacing of embedded column vertical reinforcement from 6 inch to 5 inch may negatively impact the installation of embedded column cross-ties which are #5 per construction drawings.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

34" to clear the encroaching SP 612. This foundation wall area was originally a embedment column with reinforcement in this area was a double layer of #11@6" OC EF vertically and would change to #11@5" OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.4 option1 (Exhibit -E).
In all other areas without CDSM pile encroachment issues the reinforcement will remain unchanged as per the Contract drawings.
See Exhibit - F & G showing details of transition between modified reinforcement to contract reinforcement.
These solutions if approved would be incorporated into the TG06 shop drawings.
Please confirm if these solutions would be acceptable.

T-0742.1 **BGP - U-Bar at CDSM Encroachment Near GL 16.9/J in Area 9** **Closed** **10/17/2013** **10/27/2013** **10/23/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to drawing S1-2024, S1-3302 and response to RFI T-0742 - CDSM Soldier Pile Encroachment Area 9.

Per the response to RFI T-0742, the spacing of the verticals in the C21 embedded column at Gridlines 16.9/J was changed from 6" OC to 5" OC due to the CDSM soldier pile encroachment. As a result, there is an odd number (19) of verticals per layer which would leave one row of verticals to not be straddled by a U-bar. Gerdau proposes to widen the final U-bar in the embedded column and straddle 3 rows of vertical bars as depicted in the attached Gerdau sketch SK-97.

Please confirm it is accceptable to proceed as shown in SK-97.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/22/2013
RESPONSE:
All exterior wall bars at their penetration into the mat shall have lateral support perpendicular to the edge of the mat. In Gerdau Sketch SK-97, provide a single leg tie with a 180 hook on the odd exterior vertical wall bar. Alternatively, normal u-shaped ties can be placed either side of an odd bar and a 180 hook added to the odd bar. The embedment length of the single leg tie shall be that of the u-shaped bars.

REQUEST:

Reference Documents: Exhibits A - I

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north & south wall in mat slab pour Area 10 as well as all levels of the encroachment into the foundation wall between CDSM piles 164 to 188 on the north elevation and 571 to 595 on the south elevation for Location Plan see exhibit - A
Exhibit - B & C depict the location and degree in which the SP are encroaching
WOJV proposal North elevation on gridline A: (See Exhibit - B) between CDSM pile 200-201 to 206, WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 206. This foundation wall area was originally a WR2 reinforcement area (#11@6" OC EF vertically) and would change to #11@5" OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.3 option 2 (Exhibit -E).
WOJV proposal on the South elevation: (See Exhibit - B) Between CDSM piles 574 to 576 and 587 to 588 - 589 WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 575 &588, originally these were WR1 reinforcement areas #11@8" OC EF vertically and would change to #11@6" OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).
Between CDSM piles 588-589 to 591, WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 589 & 590. This foundation wall area was originally a embedment column with reinforcement in this area was a double layer of #11@6"oc EF vertically and would change to #11@5" OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.4 option1 (Exhibit -F).
In all other areas without CDSM pile encroachment issues the reinforcement will remain unchanged as per the Contract drawings.
See Exhibit - G, H & I showing details of transition between modified reinforcement to contract reinforcement.
These solutions if approved would be incorporated into the TG06 shop drawings.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/25/2013
RESPONSE:
The contractor proposed revisions to foundation wall reinforcement due to encroaching CDSM Piles in Area 10 are acceptable. Note that reducing the spacing of embedded column vertical reinforcement from 6 inch to 5 inch may negatively impact the installation of embedded column cross-ties which are #5 per construction drawings.

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to attached detail drawing 2/S1-2030, excerpt drawing from submittal package TG0600-301.2 and SCCI Sketch SK-RFI-324

Per field coordination with TT field engineer, please confirm it is acceptable to omit the pilaster ties of detail 2/S1- 3204 within the body of the haunch provided that:

- The pilaster West corner bar (Bar A in attached sketch) is tied with 135 hooks in both directions
- Ties shall be #4 bars spaced at 4" o.c.
- The tie perpendicular to the South wall shall be developed a minimum of 14" into the South wall beyond thehaunch
- The tie parallel to the South wall shall be hooked around the pilaster East corner bar (Bar B in attached sketch)
- In lieu of two individual ties, it is also acceptable to combine the ties into a single shape with a 90 degree bend at Bar A
- The extent of the ties shall be from the top of the mat to the top of the haunch, after which Detail 2/S1-3204 will resume
- The horizontal haunch bars shall terminate with a spliced matching hook
- The horizontal formsaver bars for the future train tunnel shall be #7 @ 6" O.C. on the inside and outside face of the 3'-0" foundation wall.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/17/2013
RESPONSE:
The pilaster detailing as described in the RFI is acceptable within the body of the haunch.

T-0745 **BGP - Construction Joint Layout Modifications at Area 6** **Closed** **09/18/2013** **09/28/2013** **09/30/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Shimmick Construction Company, Inc Filip Filipic

REQUEST:

See attached photos of the construction joint at mat slab area 6 South, near grid line 8.5, and CJ layout drawings.

Due to congestion and access SCCI would like to shift the walls and concourse joints at this location 14.5"' to the East. This adjustment does not affect any other structure's elements and complies with the CJ parameters outlined in the contract specifications.

Please confirm modifiying the construction joint layout is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/27/2013
RESPONSE:
Per conversation between TT & Shimmick, it was clarified that the proposed joint modification is only at the south end where the original N-S running joint in the mat and the Lower Concourse will turn an angle near the toe of the chamfer so that the joint will end perpendicular to the foundation wall. The 14.5" shift proposed in the RFI is shift in the south end point only.

T-0746 **BGP - Plumbing Clarifications to 2" Vent and 3" San Connection in Area 4** **Open** **09/18/2013** **09/28/2013** **09/20/2013** **Potentially** ☐

Co-Author:

REQUEST:

Reference Drawings: S1-5051

Reference S1-5051 which indicates the embedment depths for Type T and TT threadbar anchors are to be 3'-8" and 2'-8", respectively, while the embedment depth for type TTT threadbar anchors is to be 16'-0". Please verify the embedment depth for Type TTT threadbar anchors is to be 16'-0" as indicated on 4/S1-5051.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Please see attached email from Lee Ishida of Thornton Tomasetti confirming the embed length is 16 feet.

T-0749 **SSS - Anchor Bolt Finish Requirement** **Closed** **09/20/2013** **09/30/2013** **09/25/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Drawing: S1-5051, S-0007
Reference Specification: 05 10 00 3.2.P.6

Reference is made to the base plate anchor rod schedule on 7/S1-5051 indicating anchor rods are to conform to either ASTM A615 or A722 standards. While ASTM A615 does not explicitly state finish requirements, A722 calls for all bars to be uncoated. Within the IFC documents, Specification Section 05 10 00 3.2.P.6 and Note SS-10 on S-0007 call for miscellaneous metals and exposed steel to be the hot-dipped galvanized.

Please confirm the finish requirements for materials listed in the base plate anchor rod schedule on 7/S1-5051.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Anchor rods shown on sheet S1-5051 are to be uncoated, as they will be covered by fireproofing.

Co-Author:

REQUEST:

Reference Drawing: S1-4201, S1-4203, S1-4202
Reference Sketch: CD RFI 022 SK1 & SK2

Reference is made to drawing 1/S1-4201 detailing the moment frame column field splice above the Bus Deck Level. Per details 1/S1-4201 and 1/S1-4203, a thickened column web plate is required at the Bus Deck Level in the 48" deep moment columns. Please verify the following is acceptable at this field splice:

1. The web plate can be extended 14" to the field splice location, eliminating a shop web splice in the column. Reference CD RFI 022 SK1 & SK2 for additional information.

2. The thickened column web plate will need to be tapered similar to detail 8/S1-4202 at the field splice location.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The contractor's proposal to extend the thickened web plate to the splice point is acceptable.

The thickened web plate shall be tapered similar to detail 8/S1-4202 as stated in the RFI.

Co-Author:

REQUEST:

Please confirm it is acceptable to locate the couplers for the Type TT Anchor system 12-3/4" above the column and moment frame beam joint to allow for the installation of a temporary 1/4" alignment plate to aid with the installation and alignment of the anchor rods during the initial column pour.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the couplers for Type TT anchor system may be moved to 12-3/4" above the column and moment frame beam joint as proposed for the installation of a temporary alignment plate.

T-0753 **BGP - East Bulkhead and Catch Basin Conflict with Mat Slab Construction Joint in Closed** **09/20/2013** **09/30/2013** **10/02/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Filip Filipic

REQUEST:

Please refer to attached photo of as-built location, drawing SKA-2821 and excerpt from the CJ submittal shop drawing CJ-04 (TG0600-030).

SCCI had to shift the construction joint between mat slab areas 6 and 7 Eastward due to the interference with the micropiles and trestle piles. This shift in the CJ puts the bulkhead against the catch basin near GL G11.

Please confirm it is acceptable to shift the catch basin location approx. 24-inches in either east or west direction of the bulkhead/CJ.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/28/2013
RESPONSE:
It is acceptable to shift the Catch Basin location approximately 24" to the West (Refer to SKA-2850). Drainage piping to be shifted to the west accordingly.

☐

T-0756	BGP - Structural Slurry Primer in Mat Slab	Closed	09/24/2013	10/04/2013	09/25/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to the attached letter, authored by Rober Foley (CEMEX QC), dated September 17, 2013.

With limited site access, many Mat Slab pours will require a larger than normal amount of slick-line. To ensure that no slick-line gets plugged, SCCI is proposing to prime the slick-line with a structural slurry that will reach and exceed the specified design strength for the Mat Slab. A miniscule percentage of this primer will be deposited into the mat slab. This percentage would amount to .01 to .02 percent by volume.

Please confirm the proposed SCCI method of slick-line priming is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/24/2012
RESPONSE:
Any material that is not the approved mix design for the mat slab, including slick-line primer, shall not be placed in the mat slab.

ANSWER: **Accept Suggestion:** ☐

The framing in the area between 7.8 & 9 has been changed. Please refer to ASI 106.

T-0762 **BGP - Haunch Bar Grade and Size Increase** **Closed** **09/25/2013** **10/05/2013** **09/30/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to attached drawing S1-3201 and spec section 032000.

The #10, Grade 60 concrete reinforcement for the "haunch" is shown on the typical foundation wall section drawing S1-3201. The trade group package contractor SCCI proposes the use of a Grade 75 #10 or #11 rebar in-lieu of the Grade 60 #10 "haunch."

Please confirm it is acceptable to use Grade 75, #10 or #11 rebar in lieu of the specified concrete reinforcement at the "haunch."

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
9/30/2013
RESPONSE:
The #10 GR60 haunch reinforcing shown on the typical foundation wall section, 1/S1-3201, can be substituted with #10 GR75 reinforcing with the following conditions:

1. RFI T-702 BGP stands, i.e. the detailing and location of the hooked top remains unchanged.

2. RFI T-710 is modified such that headed bars are not allowed.

3. RFI T-710 is modified such that the straight embedment into the mat, either vertical or inclined, where the bar is interrupted by a dewatering well, shall be 52" minimum.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

#11 bars of either grade shall not be used in lieu of #10 haunch reinforcing.

Co-Author:

REQUEST:

Reference detail 5/S1-4205 showing the link brace detail at the roof along column lines B and H. In the IFC documents, the beam size was increased from W21x55 to W24x55, causing the MC10x41.1 brace (increased from M8x22.6) to foul the beam flange. See CD RFI 020 SK 1 & SK2 attached for reference and advise on resolution for the foul noted.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

A portion of the W24x55 bottom flange and a portion of the web (up to 1" from the bottom of the beam) may be coped to clear the double channel braces.

T-0764	SSS - Built-Up Beams - Plate Yield Strength	Closed	09/26/2013	10/06/2013	09/30/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Please reference contract sheet S-0007, specifically structural steel note SS-1, which indicates that plates used for flanges in built up beams shall meet the criteria of ASTM Designation A572-50 (UNO) and have a maximum yield point of 58ksi.

The plate mills will not guarantee material that meets the A572-50 criteria and further restricts the yield to a maximum of 58ksi. The plate mills will guarantee material that will yield within the range of 50ksi - 65ksi. Attached you will find correspondence with two major US steel mills for reference.

Please confirm, for the plates used for flanges in built-up members produced from A572-50 material, that a yield range of 50ksi - 65ksi is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The maximum yield strength specified on General Note SS-1 is to ensure the strong column/weak beam condition is met. Hence, this requirement may be relaxed to applicable to steel plates for seismic moment frame beams only.

From our past experience, the maximum yield of 58 ksi is a very reasonable target. Also, the lab tensile tests commonly show a lower yield than what is provided on the mill certifications (around 2- 6 ksi lower).

However, we understand that this is still a risk to the steel contractor even though it is only applicable to the seismic moment frame beams. We agree to relax this requirement further accepting the yield strength up to 65 ksi as requested

---

T-0766	SSS - Stiffener Requirements at Column Base Detail	Closed	09/27/2013	10/07/2013	10/02/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Please confirm the following in reference to the column base details shown on S1-5051.

a) With reference to Drawing S1-5051, please confirm that only the Type I base plates have vertical stiffeners at the column flanges and web, while the Type II and Type III base plates have vertical stiffeners only at the column web.

b) With reference to Details 4 and 6 on Drawing S1-5051, please confirm the base plate type and column indicated in these details are for graphical purposes only and do not indicate the type of base plate to be used with the detailed threadbar anchor.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

a) Yes. Type I base plate has stiffeners at flange and web while Type II & Type III base plate only have stiffeners at column web.

b) Yes. the base plate shown is for graphical purpose only. The type of the base plate shall be in accordance with Base Plate Schedule.

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor Construction LP Robert Kjome

Co-Author:

REQUEST:

The following sizes and shapes are not available in the U.S. Please confirm all sizes will be Built up sections from plate.

W40 X 392 Grade A992, W40 X 503 Grade A992, W40 X 593 Grade A992 will be fabricated with A572-50 Plate. W40 X 392 Grade A709, W40 X 503 Grade A709, W40 X 593 Grade A709 at the Bus Deck will be fabricated with A709-50 Plate.

Welding Preparation of Built up sections to follow.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

We confirm that equivalent built-up sections can be provided in lieu of rolled shapes listed in the RFI that are domestically unavailable. Proposed plate types and grades are acceptable. Plate dimensions for the equivalent built-up sections shall be per corresponding rolled shapes in AISC Steel Manual.

T-0767.1 **SSS - Fillet Weld Sizes for Built up Members** **Closed** **10/18/2013** **10/28/2013** **10/30/2013** **Potentially** ☐

ANSWER: **Accept Suggestion:** ☐

Confirm that the bevel for PJP weld is 1/2" as shown.

T-0769 **SSS - Verify Beam Locations at Ground Level East** **Closed** **09/30/2013** **10/10/2013** **10/02/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Drawings: S1-2305, S1-2306, and S1-2307

As indicated on the sketches attached, there are beams which have not been located on the referenced drawings. The dimensions provided and clouded in red are taken from the latest Revit model. Please verify all clouded dimensions required to located the steel in question.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Beam locations are identified on structural drawings by:

1) Dimensions to nearest gridlines,

2) Dimensions to Edge of slab (Coordinate with architectural edge of slab drawings per sheet note on first zone plan of each level to identify beam locations),

3) Dimensions shown on partial plans,

4) Special symbols such as asterisks (*) adjacent to beam size tags in combination with sheet notes. See 3a) and 3b) for examples.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

a) Ground level: Beams supporting W systems are identified with asterisks. Sheet notes are provided on S1-2305, S1-2306 and S1-2307 stating that the locations of such beams need to coordinated with TG08.1 package.

b) Roof park Level: Sheet note 5 on S1-2602 states that for beams with a specific connection symbol, beam locations need to the coordinated with TG08.1 package.

5) General note GR-13 on S-0005 which states "Assume equal spacing between established dimensions, if not indicated on drawings".

6) General notes GR-11 through GR-16 shall apply.

Considering the above guidelines, please resubmit RFI 769 and 770 if further clarification is needed. We will clarify beam locations other than those covered by the above guidelines.

ANSWER: **Accept Suggestion:** ☐

Responses to the queries on dimensions for locating beams on floor plans have been noted on the attached sketches SKS-0316 through SKS-0321.

T-0771 **SSS - Lower Concourse Anchor Bolt Details** **Closed** **09/30/2013** **10/10/2013** **10/04/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Please reference Drawing S1-5051 and confirm the following in regards to the column base details:

1) Confirm it is acceptable to oversize the holes for anchor bolt penetrations through base plate per AISC's 13th Edition Table 14-2 (reference CD RFI 016 SK2 attached).

2) Confirm the hole sizes indicated in Part 1 are acceptable for anchor bolt penetrations through the horizontal column stiffener.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The numbering of the response below matches with the numbering of the RFI.

1.Confirmed the holes may be oversized per AISC's 13th edition, Table 14-2.

2.Confirmed.

3.Washer thickness shall be in accordance with AISC's 13th edition, Table 14-2.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

3) Confirm it is acceptable to supply a ½" x 4" x 4" (A36) plate washer above the column stiffener with a 1/16" oversize hole.

4) Confirm it is acceptable to locate the grout holes typically as shown on CD RFI 016 SK3.

5) To aid in the alignment of the thread bar anchor rods during concrete operations, please confirm it is acceptable to provide one ½" thick anchor plate at the base of the thread bars with size to match the base plate in lieu of four separate ½" x 4" x 4" anchor plates.

6) Confirm the thickness of the stiffener for Type II and Type III column bases is to be 2".

7) Confirm an anchor bolt projection of 2.5 x AB dia. above the plate washer on top of the column stiffener is acceptable. See CD RFI 030 SK3 for reference.

8) Confirm an anchor bolt extension of 2.5 x AB dia. below the bottom plate washer is acceptable. See CD RFI 030 SK3 for reference.

9) Confirm that the 1" cover as shown on CD RFI 030 SK3 is acceptable.

10) Confirm that the anchor bolts shall be installed wrench tight.

4.Grout hole locations and procedure shall be confirmed by the mock-up.

5.1/2" anchor plate matching the base plate at the bottom of the anchor bolt is not acceptable as it will affect the consolidation of the concrete.

6.Confirmed, the stiffener is 2" thick.

7.Contractor to verify with the anchor rod suppliers for the length of the hex nut. Recommend projection = washer thickness+ hex nut length + 1.5x d Minimum to account for construction tolerance

8.See response to question #7.

9.Confirmed the 1" clear is acceptable.

10.Confirmed that wrench tight is adequate.

contractor.
Please confirm if this would be acceptable.

T-0775 **BGP-Concrete strength requirement for bracing Removal** **Closed** **09/30/2013** **10/10/2013** **10/10/2013** **Potentially** ☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

In accordance with Spec section 31-55-00 1.4 J the contractor is to submit concrete strength results to the design team prior to the removal of internal bracing. In order to fulfill this requirement the contractor has asked the following questions.

1. What is the criteria for bracing removal for instant if the average strength of the concrete cylinders tested is calculated to be above the design strength can the internal bracing be removed?

2. Is there any tolerance on the design strength requirement for bracing removal, for example if the concrete has reached 90% of design strength could the bracing be removed? Obviously this could have a positive effect on the construction schedule.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/9/2013
RESPONSE:
The response of this RFI is limited to the scope of the removal of the lowest level D temporary shoring struts:

1. The criteria for removing the shoring struts is defined in general note FO-5 on sheet S-0005 of the TG03 BSE documents: " F0-5 Do not remove temporary shoring struts against foundation walls until the foundation wall and mat concrete has attained 100% of its design strength."

For consideration of bracing removal prior to 56 day concrete cylinder tests, design strength may be considered achieved when all earlier tested cylinders meet ACI 318 acceptance criteria. For this purpose, "test" in ACI will not be required to be the average of multiple test results of a particular batch.

If the results of the concrete cylinders meet ACI criteria and averages (as defined by ACI) exhibit values above design strength, the element may be considered to have attained its design strength.

2. The lowest level brace D may be removed when the concrete strength has reached 90% of design strength. Note that this is a relaxation of the contract document criteria and limited to the removal of the lowest level brace D.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0775.1	BGP-Concrete strength requirement for level D bracing removal	Closed	10/09/2013	10/19/2013	10/16/2013	Potentially	☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

To clarify question 2 in RFI T-0775

WOJV is requesting that the level D bracing be removed once the concrete in the mat slab beneath has reached 75% of its design strength.

Please confirm if this would be acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/15/2013
RESPONSE:
RFI T-0775 already allowed a relaxation of the original contract document requirement. To consider the criteria of 75% design strength, the Contractor shall produce all necessary calculations to justify that the 75% strength and the reduced stiffness at 75% strength is sufficient.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Please refer to attached excerpt drawing CJ-04 from submittal package TG0600-030.3, Item ID #033000-003.3.

As discussed and coordinated in various Progress Meetings, SCCI plans to combine slab pours S102 and S104 into one pour without bulkhead forms in between. The specificaitons do not restict SCCI from using bulkheads in the east and west directions. The returned construction joint layout shop drawing review comments

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/3/2013
RESPONSE:
The construction joints submitted and approved in Submittal TG0600-030.2 (Item 033000-003.2) dated May 29, 2013 were acceptable to the design team and formed the basis for CTL's Submittal TG0600-201.1 (Item 033020-011).

CTL (Shimmick's consultant) indicates that slab

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

do not reflect the coordinated revised construction joint.

Please confirm it is acceptable to combine slab placement areas S102 and S104 into one pour without bulkhead forms in between.

cracking becomes increasingly likely when aspect ratios exceed 1.5:1. TT notes that the revised construction joint layout creates an additional high aspect ratio pour. While TT does not recommend the elimination of the joint, the contractor may at their own risk eliminate the joint between Area S102 and S104 per the revised joint layout contained in Submittal TG0600-030.3 (Item 033000-003.3) dated September 17, 2013. Further, the contractor shall verify that the new geometry does not change the previously issued CTL submittals.

T-0777 **BGP - FF & FL Values for Concourse Slab** **Closed** **10/02/2013** **10/12/2013** **10/17/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to attached RFI T-0691.

This RFI is being submitted in response to RFI response T-0691. As per contract specification section 033020, Section 3.6.B the concrete finish of the lower concourse slab notes an FF value of 20.

Table 8.15.3b of ACI 302.1R (page 46) states that to achieve a surface with an FF value of 20, it must be a smooth floated surface. ACI 302.1R does not provide any recommendations of "F" numbers for broomed surfaces.

Please confirm the design intent for the concourse slab finish: 1. To have a rough broom/rake finish or 2. To have the concourse slab finished to an FF value of 20.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/16/2013
RESPONSE:
The Lower Concourse shall be finished to the FF and FL numbers contained in the Specification 03 30 20, Section 3.6B-1a. Section 3.6B-1a will take precedence over Section 3.6B-1c.

Co-Author:

REQUEST:

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north elevation in mat slab pour Area 12 for location Plan see exhibit - A. This RFI is subject to revision as the current survey data available does not recorded positioning of the CDSM beams at the lowest mat slab elevation.
Exhibit - B, & C depict the location and degree in which the SP are encroaching

WOJV proposal North elevation on gridline A: (See Exhibit - B) between CDSM pile254 to 257, WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 255 & 256. Originally this was a WR1 reinforcement areas #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/23/2013
RESPONSE:
The contractor proposed revisions to foundation wall reinforcement due to encroaching CDSM Piles in Area 12 are acceptable. We note that the survey data for CDSM piles near the mat level is not provided in this RFI. Once that information is available, the encroachment information and therefore the foundation wall reinforcement in Area 12 may require further revision.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

The South elevation has no encroaching piles and therefore the reinforcement would remain unchanged per the contract drawings

In all other areas without CDSM pile encroachment issues the reinforcement will remain unchanged as per the Contract drawings.

See Exhibit - E which shows a detail of transition between modified reinforcement to contract reinforcement.

This solution if approved would be incorporated into the TG06 shop drawings.

Please confirm if these solutions would be acceptable.

This revised RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north & south wall in mat slab pour Area 12 as well as all levels of the encroachment into the foundation wall between CDSM piles 235 to 265 on the north elevation and 517 to 548 to on the south elevation for location Plan see exhibit - A Exhibit - B, & C depict the location and degree in which the SP are encroaching

WOJV proposal North elevation on gridline A: (See Exhibit - B) between CDSM pile 234 to 237-238, 241-242 to 243, 254 to 257 and 262-263 to 270 WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 235,242,255,256,263. Originally these were WR1 reinforcement areas #11@8"oc EF vertically

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The contractor proposed revisions to foundation wall reinforcement due to encroaching CDSM Piles in Area 12 are acceptable. Update Area 12 shop drawings affected by the new shoring encroachment info presented in this RFI and submit them for record.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

Between CDSM piles 237-238 to 241-242, WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 241. This foundation wall area was originally a WR2 reinforcement area (#11@6"oc EF vertically) and would change to #11@5"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on detail A/Sk.3 option 2 (Exhibit - E).

WOJV proposal on the South elevation: (See Exhibit - B)
Between CDSM piles 530 to 531 WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 531, originally this was a WR1 reinforcement areas #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

Between CDSM piles 531 to 535 WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 531, originally this was a WR2 reinforcement areas #11@6"oc EF vertically and would change to #11@5"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.3 option 2 (Exhibit - E).

In all other areas without CDSM pile encroachment issues the reinforcement will remain unchanged as per the Contract drawings.
See Exhibit - E, F & G showing details of transition between modified reinforcement to contract reinforcement.

These solutions if approved would be incorporated into the TG06 shop drawings.

Please confirm if these solutions would be acceptable.

T-0785	BGP - Column Type C31/D22 Vertical Coupler Layout	Closed	10/03/2013	10/03/2013	10/08/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to drawing 1/S1-3300, S1-3301, S1-3306 and attached Sketch SK-90.

Detail 1/S1-3301 requires the couplers for the adjacent column vertical bars be staggered with a vertical distance of 24" or more; however, due to the pattern and spacing of vertical bars for the type C31/D22 detailed on S1-3306, the condition cannot be met. Attached is Gerdau sketch SK-90 - C31/C22 Column Vert Layout with a proposed pattern for the vertical bars in the type C1/D22 columns.

Please confirm the proposed concrete reinforcement detail shown in the attached sketch is acceptable for type C31/D22 columns.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/7/2013
RESPONSE:
Contractor proposed configuration for placement of vertical bars for Column C31 is acceptable.

5160 STEEL, OIL QUENCHED FROM 830C, 650C TEMPER OR DIN 34 CRNIMO 6 + QT CODE EN 10083". The pin manufacturer, Dyson Corp., indicates this material is not available and suggests a substitution to ASTM-A540 grade 823, class 5 (see attachment).

A540 grade B23, class 4.

T-0787 **SSS - Charpy V-Notch Impact Testing Requirements** **Closed** **10/04/2013** **10/14/2013** **10/10/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Please confirm the following regarding the Charpy V-Notch (CVN) testing requirements for the project:

· The members identified on the attached sketches (SFRS - SK) are the only members that are part of the Seismic Force Resisting System (SFRS/SLRS/MF/BF) and are CVN tested in accordance with AISC 341-10 "Heavy Section" definition.
o Except from AISC 341-10: "For structural steel in the SFRS, hot rolled shapes with flanges 1-1/2" thick and thicker shall have a minimum CVN toughness of 20 ft-lb at 70°F, tested in the alternate core location as described in ASTM A6 Supplementary Requirement S30. Plates 2" thick and thicker shall have a minimum CVN toughness of 20 ft-lb at 70°F, measured at any location permitted by ASTM A673, Frequency P, where the plates is used for the following:"
- Members built up form plate
-The steel core of buckling restrained braces

· SFRS/SLRS/MF material will use the "Heavy Section" definition from AISC 341-10: hot rolled shapes with flanges 1-1/2" thick and thicker and plate 2" thick and thicker.

· Non SFRS/SLRS/MF material will use the project specification, Section 05 10 00, Part 1, 1.2, C.6, "Heavy Section" definition: hot rolled shapes with flanges exceeding 1-1/2" thick and plates exceeding 2" thick.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1-) In elevation sheets S1-4101 through S1-4116; moment frame columns, transfer girders and tapered roof girders are part of Seismic Framing (SFRS). In this RFI, only moment frame beams are highlighted by the Contractor as SFRS in these sheets. As indicated in Sheet S1-2302 (see Sheet Notes), Sheets S1-4101 through S1-4116 include "superstructure transverse seismic frame elevations".

2-) RFI correctly highlighted all the members in the "longitudinal seismic framing elevations" as SFRS. This was also indicated in Sheet S1-2302 (Sheet Notes).

3-) Buckling Restrained Braces are part of SFRS. If core plates within the BRBs 2" or thicker (unlikely since the specified BRB steel core area is relatively small), AISC 341-10 Heavy Section CVN requirements will apply.

4-) Ground Level Gridline G beams between Gridlines 12 and 16.9 are SFRS. Note that RFI correctly highlights these beams as SFRS in longitudinal seismic framing elevation views. However, they were not shown as SFRS in the plans.

5-) 2nd Floor Gridline D beam between Gridlines 16 and 16.9 is SFRS as indicated in construction drawings.

6-) For pipe columns (large diameter tubular sections),

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

· Non SFRS/SLRS/MF material will be CVN tested in accordance with note SS-9 on drawing S-0007. These testing requirements apply only to steel using complete joint penetration groove welds that fuse through the thickness of a flange or web. Members or plates that meet this criteria shall be CVN tested as follows:

o ASTMA6/A6M hot rolled shapes with a flange thickness exceeding 2" and built-up heavy shapes with plates exceeding 2" in thickness shall have a minimum CVN toughness of 20 ft-lb at 70°F.

o ASTM A709 hot rolled shapes with a flange thickness exceeding 2" and plates exceeding 2" in thickness shall have a minimum CVN toughness of 30 ft-lb at 70°F.

o ASTM A709 hot rolled shapes with a flange thickness less than or equal to 2" and plates less than or equal to 2" in thickness shall have a minimum CVN toughness of 25 ft-lb at 70°F.

The testing is in accordance with ASTM A673. The frequency is H.

o For "Heavy" rolled shapes, as defined by 05 10 00, test to be in accordance with ASTM A6/A6M, supplementary requirement S30, CVN impact test for structural shapes ¿ alternate core location. The testing is in accordance with ASTM A673. The testing frequency is H.

o For "Heavy" built-up shapes, as defined by 05 10 00, test to be in accordance with ASTM A6/A6M, supplementary requirement S5, CVN test. The testing is in accordance with ASTM A673. The testing frequency is P.

- Confirm that the exception noted in the response to SK RFI 020 (W/O T-0732) for the built-up train box columns still applies which states that for the built-up heavy plates of the train box columns frequency H testing is acceptable.

Please confirm that this RFI, and its response, shall be the governing document for all CVN testing for the structural steel shapes, plates and bars, and that no further testing, beyond what is explicitly stated within the RFI and its response is required.

CVN requirements are as indicated in General Notes SS-1 (API 5L, Product Specification Level 2). CVN requirements for alternative material options for pipe columns are also provided in the same section of General Notes. Note that the CVN requirement for option 1 (API 2B) and option 2 (Spuncast pipe) shall be 30 ft-lb at 0 degree Centigrade (not 0 degree Fahrenheit). This revision is to a higher temperature therefore to a less stringent CVN requirement.

7-) CVN requirements for steel below grade columns are as indicated in our response to RFI T-0732.

8-) For Non SFRS/SLRS members, the testing requirements indicated in General Note SS-9 apply to a) steel using CJP welds that fuse through the thickness of a flange or web, b) members that are spliced using CJP welding (see meeting minutes, 09/26/13 - Weekly Structural Issues Coordination).

We note that scope of this RFI is limited to CVN requirements for steel plates.

T-0788	BGP - Areas 5 and 6 EW Top Mat Reinforcing at South Wall Radius	Closed	10/04/2013	10/14/2013	10/04/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Filip Filipic

REQUEST:

Refer to the attached sketch 131003_S105-S106 South Radius.

In Areas S105 and S106, EW top mat reinforcing makes an increasingly acute angle with the south wall. This eventually prevents the reinforcing from penetrating the haunch and wall reinforcing curtains to reach the edge of the mat.

Per field coordination, please confirm it is acceptable to terminate EW top mat reinforcing in a hook prior to reaching the edge of the mat slab provided the following provisions are as followed:

- All terminating EW top mat reinforcing shall be hooked
- Where the angle becomes such that the mat reinforcing cannot penetrate the inner wall reinforcing. The reinforcing may terminate immediately in front of the wall reinforcing inside the haunch. This is labeled Zone 1 in the sketch.
- In Zone 1, single haunch bars that interfere with penetration of mat reinforcing into the haunch shall be relocated to allow penetration. Relocation will be to the nearest adjacent placement opportunity without regard to the 8" spacing module. Clear spacing, however, between haunch bars shall be maintained.
- The total number of haunch bars will remain unchanged.
- In Zone 1, provide a curved band of reinforcing at the typical size and spacing of the mat within the wall.
- Where the angle becomes such that the mat reinforcing cannot penetrate the haunch without relocating more than one haunch bar, reinforcing may terminate at the toe of the haunch. This is labeled Zone 2 in the sketch.
- In Zone 2, provide a curved band of reinforcing at the typical size and spacing of the mat within the haunch.
- Zone 1 and Zone 2 bands will overlap typical reinforcing by the distance LTS.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/4/2013
RESPONSE:
It is acceptable to terminate EW top mat reinforcing of Areas S105 and S106 prior to reaching the edge of the mat as described in the RFI.

T-0789	ASI 106 - Forced Air Thermal Cooling addition to LCC Nodes	Closed	10/07/2013	10/17/2013	10/21/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Reference: Attached Bradken letter

ASI 106 specification section 05 15 21 2.1.B.2.a.1.f calls for "casting to be normalized with forced air cooling."; however, in order to reach other requirements (chemistry, carbon equivalent, and mechanical properties) Skanska will need to water quench the material to achieve the mechanical properties specificed for the nodes.

The addition of this specification requirement willl greatly affect Bradkens ability to deliver the product, thus Bradken is requesting that this change to the specifications be removed.

The heat treatment proposed by Bradken/Skanska (liquid quenching) is acceptable to replace normalized and force air cool thermal treatment specified in 05 15 21.

T-0790 **SSS - Anchor Bolt Diameter Clarification** **Closed** **10/07/2013** **10/17/2013** **10/09/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Drawings: S1-5051

See attached CD RFI 043 SK1 & SK2 and confirm the anchor bolts for the columns at Grids 21/D.4 & 21//E.6 are 1" diameter per 7/S1-5051.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Anchor bolts are 3/4" diameter. The details for 3/4" diameter anchor is similar to the ones for 1" diameter (Type T anchor bolts). At the contractor's option without additional cost to TJPA, 1" diameter anchor bolt is acceptable to substitute the 3/4" diameter anchor bolt.

T-0791 **SSS - Anchor Plate Dimensions** **Closed** **10/07/2013** **10/17/2013** **10/09/2013** **Potentially** ☐

T-0792	SSS - Anchor Bolt Detail Clarification	Closed	10/07/2013	10/17/2013	10/21/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Drawing: S1-5051

1) The plate washer will clear the fillet weld by 3/16". This is not sufficient to accommodate the maximum anchor bolt as-built tolerance based on the maximum oversize holes per A.I.S.C. Please advise.

2) The plate washer will clear the fillet weld by 1/4". This is not sufficient to accommodate the maximum anchor bolt as-built tolerance based on the maximum oversize holes per A.I.S.C. Confirm it is acceptable to locate the anchor bolts 5 1/2" from the center of the column.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

In the direction parallel to column web, moving the anchor bolts to 5-1/2" from column center line as proposed in RFI will cause washer plates to clash with column flange (or welds). To alleviate this problem, suggest locating the 2 1/2" anchor bolts 4" from column center line (in direction parallel to web). The plate washer for the lower nut may be deleted.

In the direction perpendicular to column web, moving the anchor bolts as proposed in this RFI is acceptable.

REQUEST:

On S1-5017 for the Type 2 Drag connections there are finger type connections where the carrying plates on the beams slide between the framing plates. In order for the beams to side down between these shop attached plates during erection please confirm a 1/8" clearance is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the proposed 1/8" gap is acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0795	SSS - Transfer Girder Stiffener Configuration	Closed	10/07/2013	10/17/2013	10/11/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor Construction LP Robert Kjome

Co-Author:

REQUEST:

Reference Draiwngs: S1-4302 & S1-5052

Stiffeners required on TR9 transfer girder (A/ S1-4302) at line F are fouling. Stiffeners were detailed as per 2/ S1-5052 and 4/ S1-5052. See attached sketch CD RFI 040 SK1 for clarification. We propose to trim the stiffeners by ½" to avoid fouling.

Please advise if this proposal is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Trimming not required. Interference for this case can be avoided moving the below grade column stiffener 1/2" towards the center of the column.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0796	SSS - Transfer Girder Stiffener Thickness	Closed	10/07/2013	10/17/2013	10/09/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Drawings: S1-4300, S1-4308, S1-5052

For columns above transfer girders Detail 1/ S1-5052 calls out thicknesses of "X=1 1/2" for tfc <2 or tfc=2" and "X=2" for tfc >2"). For columns that are below transfer girders 4/ S1-5052 calls out "2 1/2" thk stiffener PL ea side, typ. (see note 3)". Note 3 states "Stiffeners required UON in transfer girder elevations".

Where columns are directly above and below a transfer girder and full height stiffeners are shown per transfer girder elevations, please advise on what thickness these full height stiffeners should be.

*Please note that 1/S1-5052 is also referred to on 2 and 6/S1-5052.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

When a below grade column is present immediately below an above grade column, full depth stiffeners that line up with the flanges of the column above are used within the transfer girder. Therefore, Details 1, 2 or 6/S1-5052, which are for above grade columns, govern the thickness of the full height stiffeners. This condition is indicated by Note 4 of Detail 1/S1-5052 which states, the stiffeners are half-depth UON in transfer girder elevations. For information not shown in Detail 2 and 6/S1-5052 (see Note 2 in these details), Detail 1/S1-5052 is referred to as correctly understood by the contractor.

Note that where the above grade columns are connected to the transfer girders via castings, different details apply and stiffener requirements are different. Refer to corresponding details from Transfer Girder elevations.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0797	BGP - Mat Slab Construction Joint Conflicts in Area 8	Closed	10/08/2013	10/18/2013	10/16/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Filip Filipic

REQUEST:

Please refer to attached photos, excerpt drawing CJ-05 from submittal package TG0600-030.3 and SCCI sketch SK-0341.

The east side of the mat slab construction joint of Area 8 (S108) has several constructability issues with the mat keyway and other project structure elements. The following are identified conflicts and SCCI proposed remediation:

1. The current east construction joint layout in Area 8 falls within the row of micropiles as shown in attached Photo-1 and Photo-2. SCCI intends to jog the joint an addition 12" +/- to the East of GL 16.6 to clear the micropile conflict
2. The east construction joint of area 8 currently jogs thru the thickened slab section at GL 16.6/G.3. SCCI intends to shift the joint Eastward to capture the thickened section

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/15/2013
RESPONSE:
1. We assume the RFI means to state the proposed shift is "... 12"+/- to the East towards GL 16.6..." (and not "...12"+/- to the East of GL 16.6...") as graphically depicted in the RFI sketch SK-341. This is acceptable.

2. The proposed jog around the pit/thickened slab is not acceptable as proposed. However, an acceptable alternative would be to turn the CJ westward along (or parallel) to GL F.7 within S108 and then turn 90 degrees south to align with the CJ on the west side of wall W160.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

within the Area 8 pour.

Please confirm the revised construction joint layout shown the attached SCCI sketch SK-341 is acceptable.

REQUEST:

On S1-2402, S1-2403, S1-2404, S1-2406 & S1-2407 there are some beam & HSS member locations that are not located on the design drawings therefore we have used the Revit model to locate these members. On sketches CD RFI 048 SK1 to SK5 please verify all clouded dimensions that were taken from the latest Revit model received 9/12/13 to locate the steel in question

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The Revit model is not a contract document. See response to RFI-0769. Resubmit the RFI considering the guidelines provided in the response to RFI-0769 to locate beams on floor plans.

T-0803.1 **SSS - 2nd Level Revit Model Dimension Verification** **Closed** **11/22/2013** **12/02/2013** **12/19/2013** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

On the response to Webcor RFI # T-0769 (SK RFI # SK 050) & T-0803 SK RFI # 067) we have reviewed and located most of the beam locations in question using the nearest gridlines, architectural dwg's, partial plans, equal spacing, etc per the noted guidelines in the response. However on drawings S1-2402, S1-2403, S1-2404, S1-2406 & S1-2407 there are still some beam locations that cannot be located and require verification therefore on sketches CD RFI 048.1 SK1 to SK5 please verify all

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Responses to the queries on dimensions for locating beams on floor plans have been noted on the attached sketches SKS-0307 through SKS-0311 and SKA-2970.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

clouded dimensions in RED as noted to close this RFI.

T-0804 **SSS - W21 Beam Substitution** **Closed** **10/08/2013** **10/18/2013** **10/11/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

With reference to the W21x44 and W21x50 beams shown on Dwgs S1-2302 to S1-2307 (Ground Level), S1-2402 to S1-2407 (Second Level), Dwgs S1-2502 to S1-2507 (Bus Level) and Dwgs S1-2602 to S1-2607 (Roof Park Level), these beams have relatively narrow flanges. These beams sizes are problematic with regard to stability during erection for spans over 30 feet in length. The substitution of the W21x48 for the W21x44 and W21x55 for the W21x50 would resolve the stability issue. Please advise if these substitutions are acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

In general, where there is no shaft opening or recess on either one or both sides of the W21, the proposed substitutions for temporary erection stability are acceptable as long as there is no additional cost to TJPA. However, where there is an opening or recess on either one or both sides of the W21, substituting W21x44 or W50 with a beam with wider flange might negatively affect the edge clearance. Skanska may decide to move the beam to gain the same edge distance and submit the revised framing plan (with dimensions) as a RFI.

T-0805 **BGP-Area 7 level D bracing removal** **Closed** **10/08/2013** **10/18/2013** **10/21/2013** **Potentially** ☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Further to response to RFI T-0641 please find attached supporting information from the internal bracing designer (PB&A) see exhibits B this information is a three dimensional structural analysis of the CDSM wall and bracing system. WOJV is proposing the removal of the level D bracing in area 7 and also the bracing which spans across the Construction joints between Areas 6 & 7 and Areas 7 & 8 waler (WD-09 to WD-12, & WD-60 to WD-63 as well as struts 20-25 level D See SK-1 2 &3 in exhibit A) The removal of this bracing will allow all the first lift of wall to be completed in area 7 and mitigate any possible delays to the construction schedule.
As part of this bracing removal process, WOJV will also put a monitoring plan in place to monitor the CDSM beams which will be unsupported by either the concrete of the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/17/2013
RESPONSE:
For the condition where the Level D bracing will be removed above a poured mat slab that has not reached adequate strength, the structural engineer should comment as to the appropriateness of this.

Where mat slabs are not yet poured, Level D bracing removal will allow additional movement and pose a risk of cracking and loss of watertightness of the CDSM material as compared to the sequence illustrated on drawing GT-1112. Therefore we recommend that the early removal of the Level D bracing not be done.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

mat slab or the level D walers and struts see exhibit C

Please confirm if this would be acceptable

T-0806 **SSS - Backing Bar Removal from CJP Welds** **Closed** **10/09/2013** **10/19/2013** **10/11/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

1. In reference to AWS D1.1, Skanska has not found any members or connections identified on the drawings as 'subject to cyclical loading'. Therefore, it is our understanding that the provisions of AWS D1.1 - Clause 2 - Part C do not apply. Please confirm.

2. Please confirm that for welds subject to the provisions of AWS D1.8, Table C-1.1 is the governing reference for the removal of tabs and backing.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed that AWS D1.1-Caluse 2-Part C does not apply.

2) For welds subject to the provisions of AWS D1.8, the removal of weld tabs and backing shall be in accordance with the details included in the contract documents. Confirmed that where removal of weld tabs and backing are not specifically detailed on the contract documents, AWS D1.8, Table C-1.1 is the governing references.

T-0807 **Blockout and reinforcement detail on the future bridge decks** **Closed** **10/10/2013** **10/20/2013** **10/16/2013** **Potentially** ☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Please provide a blockout and reinforcement detail for the 48"diameter bridge piers support the TG03 BSE (Balfour installed) temporary bridges on 1st street, Fremont street and Beale street.
Provide specification for positional couplers to be used, and confirm that rebar has appropriate concrete cover with positional coupler use.

This detail will be part of the TG07.2 scope of works.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/14/2013
RESPONSE:
It is our understanding that this RFI is in regards to block-outs for the temporary bridge piers through the TG07.2 Ground Level concrete roadway slabs. These block-outs are considered temporary openings and therefore the responsibility of the Contractor per General Note GR-9 to propose a detail.

T-0809	SSS - Shear Plate Connections	Closed	10/10/2013	10/20/2013	10/22/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

For the typical shear plate connections per detail 1/S1-5011 see sketches CD RFI 060 SK1 & SK2 for items 1, 2 & 3 noted below.

1. Confirm it is acceptable to locate the bolts 2 3/4" from face of beam web as shown for duplication of shear plate marks.

2. Confirm it is acceptable to cope the beam to match the "k" distance of the supported beam (W24) while maintaining a 1/2" minimum clearance to avoid cutting inside the "k" in lieu of the 1/2" max. shown in detail 1/S1-5011.

3. Confirm the shear plate thickness and weld size at a W16x31 to W24x68 connection as per Note 3 in 1/S1-5011 is 3/8" shear plate and 1/4" weld.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Confirmed. It is typically acceptable to provide a distance of 2 3/4" between face of the beam web and the bolt centerline.

2. It is acceptable to typically cope the supported beam by a distance of k - e while maintaining a ½" minimum clearance as noted wherever detail 1/S1-5011 applies. k is the "k" distance of the supported beam and e is the fillet encroachment allowed per Figure 10-3 of the AISC Steel Manual 14th Edition. For the instance highlighted in the RFI, see response to 3.

3. The shear plate connection shown in SK1 and SK2 occurs at 4 locations between GL 12 and 14. W16 beams at these four locations are going to be upsized in a future ASI.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide kickers with 1 to 1.25 slope at the four locations highlighted in the RFI so that the top gusset plates connect to the short W44 beams that span East-West.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

locations.

T-0811 **SSS - Fitted Stiffeners** **Closed** **10/10/2013** **10/20/2013** **10/17/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference: Attached sketch

Spec 05 10 00 - 16 N states: "Stiffeners: Fitted stiffeners shall be ground to fit closely against flanges."

1.Please clarify which stiffeners are fitted stiffeners as this terminology does not appear to be noted in the structural drawings.

2. Confirm it is acceptable to provide the shear plate height as d-2tf minus 1/16" for fabrication tolerance.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1.) When a stiffener is called out in the drawings as "fitted" stiffener, it shall be ground to fit closely against the flanges as indicated in the specification. In following cases, "fitted" requirement can be disregarded and stiffeners can be constructed using standard AISC fabrication tolerances: a-) When stiffeners are welded to beam/column flanges using CJP welding. b-) In Sheets S1-8001, S1-8002, S1-8003. c-) In Detail 1/S1-5013.

2.) If a stiffener is not called out as "fitted", use of standard AISC fabrication tolerances for construction is acceptable.

T-0812 **SSS - Pipe Column Connections to Cast Nodes** **Closed** **10/10/2013** **10/20/2013** **10/18/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Please review attached sketches with details on S1-4020 and cast node details for pipe connections to cast nodes.

1. Work points for 32" diameter basket column to cast node connections have been offset from the theoretical work line as noted on design sheet S1-4020. Verify ends of 32" pipe will need to be bevel cut to match face of cast node geometry.

2. Where necessary bevel cuts are required at each end of the 32" diameter pipe we propose to add a scribe line along the top surface on centerline of the pipe to facilitate

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. As noted on details on Sheet S1-4020, the center line of the pipe is not in line with the center line of the cast node. Since the cast node ears are casted to be perpendicular to the cast node axis, the pipe end need to be bevel cut to match face of the case node geometry.

2. Scribe line if needed shall be laid out and scored into the casting by Skanska as a part of means and methods. The depth and thickness of the scribe line shall be submitted for review. Scribe line if added, shall not affect the appearance of the cast node nor

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

matching the cut surface to the cast node face. Please verify a corresponding scribe line will be added to the face of Cast Nodes.

pipe after painting.

T-0813 **SSS - Kick Angle Requirements** **Closed** **10/10/2013** **10/20/2013** **10/21/2013** **Potentially** ☐

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Kicker brace at the locations highlighted in the RFI shall be per Detail 7/S1-5015, similar to the one for BU-40x18x0.75x1.5.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

be used for the noted beams as these beams are not MF beams, Transfer Girders or Tapered Girders.

T-0816 **BGP - Revised Placement Tolerance at Top Mat Reinforcement** **Closed** **10/10/2013** **10/20/2013** **10/22/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor Construction LP Jackson Tukuafu

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to drawing S1-2052 and ACI 117.

Please confirm it is acceptable to increase the top mat slab reinforcement placement tolerance from +/-1/2" to +1/2" and -1" as discussed and coordinated with TT field respresentative. This would also change the concrete cover tolerance from -1/2" to +/-1/2".

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/18/2013
RESPONSE:
Minimum acceptable concrete cover over top reinforcing stands at 1" per ACI 117 Section 2.2.2 (+1/2 proposed in RFI). Minimum acceptable concrete cover over headed reinforcing stands at ½" per ACI 117 Section 2.2.2.

Maximum acceptable concrete cover may be increased to as much as 3" provided that the distance from the top of reinforcing to the protection slab is no less than 58" (Relaxation of proposed -1" tolerance in RFI to -1.5" with stipulation).

T-0817 **BGP -Compressible material between concrete structure & CDSM wall** **Closed** **10/11/2013** **10/21/2013** **10/23/2013** **Potentially** ☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

The contractor has raised a concern see letter in exhibit A attached.
Does the design team envisage any possible issues with the CDSM wall if the waterproofing substrate becomes compressed between the permanent structure and the CDSM wall once the level D bracing is removed? The same question applies when the re-bracing is installed against the permanent foundation walls.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/21/2013
RESPONSE:
We do not envisage any problems with the CDSM wall due to the compressible layer. The performance of the CDSM wall with regards to meeting the specified deflection criteria is the responsibility of the internal bracing designer.

WOJV shall coordinate between the Waterproofing

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

and shoring Sub-contractor and provide requested information to BBI.

T-0818 **SSS- Kicker Brace Connection to Underside of Beam Flange** **Closed** **10/10/2013** **10/20/2013** **10/17/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

On S1-2505 at grid lines 20.1/E please refer to sketches CD RFI # 074 SK1 & SK2 and supply a connection detail for the kicker brace to the underside of the beam flange as shown.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Adjust the slope of the kicker brace such that the top gusset plate connects to the bottom flange of the W24x55 beam. For connection detail of kicker brace to underside of beam flange refer to typical gusset plate detail 7/S1-5015. Slope of the kicker brace should not exceed 3:5 (3 horizontal to 5 vertical).

T-0819 **SSS -Gusset Plates at Kicker Angle Connections** **Closed** **10/10/2013** **10/20/2013** **10/14/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

On S1-5015 for the bottom flange connection and the kicker angle connection clarification please refer to sketches CD RFI # 077 SK1 & SK2 for items 1 & 2:

1) Confirm it is acceptable to cut the gusset plate as shown to avoid a pointed corner as the weld will not beeffective in the shaded triangle area.
2) Confirm it is acceptable to cut the gusset plate as shown to avoid a pointed corner as the weld will not be effective in the shaded triangle area.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed. Changes proposed in the RFI (cutting the gusset plate as shown in CD RFI 077 SK1 and SK2) are acceptable

---

T-0820 **SSS - Missing Beam Connection Details** **Closed** **10/10/2013** **10/10/2013** **10/22/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor Construction LP Robert Kjome

Co-Author:

REQUEST:

SUGGESTION:

ANSWER:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

At the ground level north of grid line G at grids 2, 3 & 4 please refer to sketches CD RFI # 078 SK1 to SK4 for items 1 to 4 below and supply connection details as noted.

1) Supply a connection detail.
2) Confirm connection is per 12/S1?]5010.
3) Supply a connection detail.
4) Supply a connection detail.

Accept Suggestion: ☐

1. Connection detail at the W30x99 beam will be similar to 2/S1-5011 except that instead of a single shear plate, the connection will have two shear plates between the three transfer girder flange plates. Width of plates to match the larger of the transfer girder flange plate widths. Provide 2 bolts in the top shear plate and 4 bolts in the bottom shear plate. Bolt sizes, spacing between the bolts, bolt edge distances, shear plate thickness and fillet weld between the shear plate and transfer girder flanges/web for the two plates are to be followed per 2/S1-5011. Provide closure plates for the metal deck at the gap between the WT and the transfer girder top flange. Refer to SKS-0288 (attached) for the connection details.

2. Provide connection detail per 2/S1-5011 except that the shear plate spans between top and middle flange plates of the Transfer girder. Refer to SKS-0288 (attached).

3. Connection detail at the W30x99 beam will be similar to that described in 1. For the connection at W40x183, provide 2 bolts in the top shear plate and 7 bolts in the bottom shear plate. Width of plates to match the larger of the transfer girder flange plate widths. Bolt sizes, spacing between the bolts, bolt edge distances, shear plate thickness and fillet weld between the shear plate and transfer girder flanges/web for the two plates are to be followed per 2/S1-5011. When a transfer girder brace is required per 5/S1-5015 at a beam with a shear plate connection, connect the brace angle to the shear plate. Bottom gusset plate per 5/S1-5015 is typically not required in such instances. Refer to SKS-0289 (attached) for the connection details.

4. Provide a double angle connection per detail 9/S1-5010 at the W40x183 beam. Provide 1 bolt less than that required by the connection detail to avoid conflict with the connection on other side of the transfer girder.

T-0821	**BGP - Plumbing Line in Area 4 Stairway**	**Closed**	**10/10/2013**	**10/20/2013**	**10/31/2013**	**Potentially**	☐

Co-Author:

REQUEST:

Per S1-5012 for the typical bolt beam connections please refer to sketches CD RFI # 079 SK1 to SK3 for items 1 to 7:

1) Confirm the noted dimension may be 1 3/4" in details 1 & 2/S1-5012 to match 3/S1-5012.
2) Confirm the noted dimensions are acceptable for details 1, 2 & 3/S1-5012.
3) Supply plate thickness.
4) Supply welding for shear plate to column.
5) Confirm dimensions are acceptable.
6) Confirm dimensions are acceptable.
7) Supply plate thickness.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed. Vertical bolt edge distance 2db can be changed to 1 3/4" in details 1 and 2/S1-5012 if the bolt diameter is not more than 7/8".

2) Confirmed. The noted dimensions are acceptable for details 1, 2 and 3/S1-5012. Note that the distance between the centerline of the bolts and the face of the column is 3".

3) Plate thickness is 3/4" as noted on Superstructure ASI 106 drawings.

4) Welds between shear plate and column are double sided 5/16" fillet welds as noted on ASI 106 drawings.

5) Confirmed. Noted dimensions are acceptable.

6) Confirmed. Noted dimensions are acceptable.

7) Plate thickness is 1" as noted on Superstructure ASI 106 drawings.

T-0824 **SSS - Bottom Flange Connection Plate** **Closed** **10/11/2013** **10/21/2013** **10/22/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Per detail 6/S1-5015 for the bottom flange connection plate please refer to sketches CD RFI # 069 SK1, SK2 & SK3.

1) Access for field welding the web extension plate per 6/S1-5015 is a problem at the noted location as well as other similar locations.

Confirm the web extension plate may be typically omitted when the dimension shown as 1 3/4" is 3" or less.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Access for field welding of the web extension plate per 6/S1-5015 is a problem at the following locations:

1) Location highlighted in SK1 in the RFI

2) At GLs 6/C.3 and 6/F.7

3) At GLs 9.9/C.3 and 9.9/F.7

4) At GLs 20.1/C.3 and 20.1/F.7

5) At W40x149 beams framing into moment frame beams between GL 32.4 and 33.2 (Total 8 brace locations).

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Provide brace detail per sketch SKS-0290 (attached) at locations listed in 1, 3 and 4 above. Braces at locations listed in 2 and 5 are not required.

T-0825 **SSS - W30 Beam to Girder where bf exceeds 22** **Closed** **10/11/2013** **10/21/2013** **10/17/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

On S1-2505 along grid line 20.1/E.6 where the W30x108 beam frames into the MF girder please refer to sketches CD RFI # 076 SK1 & SK2 for items 1 & 2 noted below.

1) The noted "MF" beam is a BU-44x24x1.25x2.75. Detail 1/S1-5011 does not apply as "bf" exceeds 22". Please supply a typical connection for a round circle on plans when the "bf" exceeds 22 (work with item 2 on SK2)
2) Please note that if a full depth shear plate is used it will foul the beam extension plate per 6/S1-5015. Please clarify.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Provide double angle connection per 1/S1-5010 at the two W30x108 beams that frame into the Moment Frame beam at GL 20.1. For the four shear plate connections at the W30x108 and W40x149 beams on GL 21, provide connections per 1/S1-5011. There are no other locations where a shear plate connection per 1/S1-5011 is specified and where support beam flange width is greater than 22".

2) See response to 1.

T-0826 **SSS - Oversized Hole Size in Web Stiffeners** **Closed** **10/14/2013** **10/24/2013** **10/22/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Please confirm it is acceptable to oversize the bolt holes in the web stiffeners to the bolt diameter + 3/16". Reference Detail 1 on S1-5019 and CD RFI 055 SK1 for additional information.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Use of oversize bolt holes in this drag connection is not acceptable.

T-0826.1 **SSS - Clarification of Oversized Holes in Web Stiffeners** **Closed** **11/11/2013** **11/21/2013** **11/15/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

SUGGESTION:

ANSWER:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Accept Suggestion: ☐

Reference the response to W/O RFI # T-0826 (SK 114 & CD 055D), attached for reference.

W/O RFI T-0826 response states that "Use of oversize bolt holes in this drag connection is not acceptable." Confirm that the response above applies only to conditions when the web stiffener plate is the outside plate in a connection and that the 3/16" oversize holes for the web stiffener plates are acceptable in details 1 & 2/S1-5016 when the web stiffener plate is not the outside plate in the connection.

RESPONSE:
Use of oversize hole is not allowed for drag connections, neither at the shear plates nor at the web stiffener plates, and regardless of whether the web stiffener plate is the inside plate in the connection or not.

T-0827 **BGP - Clarification to Galvanized Steel Plate at Seismic Joint in Area 16** **Closed** **10/14/2013** **10/24/2013** **10/28/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Scott Bunnell

REQUEST:

Please refer to attached drawing detail 7/A1-8881 and 4/S1-3010.

Detail 7/A1-8881 (and other details on A1-8881) call for a 5/8" x 6' galvanized steel plate secured to the mud slab and soldier piles. This plate does not appear on the structural details for the seismic joint in drawing S1-3010.

1. Please explain the functionality and purpose of the galvanized steel plate shown in 7/A1-8881 and 1/A1-8881 in relation to the seismic joint assembly.

2. Please provide revised structural drawings showing all welding and design criteria required to attach and secure the "5/8" THK x 6' wide galv steel plate" to the mud slab and soldier beam, respectively.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/24/2013
RESPONSE:
AAI Response:
1. The 5/8" thk x 6' wide plates were provided at the mat slab (horizontal) and at the shoring wall (vertical) to serve as relatively smooth backing for the seismic joint assembly as the train box moves against the mud slab and shoring wall. It also provides a flat surface for the neoprene gasket seal when pressed against it.
2. The horizontal plates are mechanically anchored to the 4" thk reinforced mud slab with 3/8" expansion anchors (with the shortest minimum embed 2 5/8" or 3" depending on the manufacturer) spaced at 8" min. The vertical plates are either seam/slot welded to the soldier piles or are 2 plates (with total width of 6')-plate panels welded to the solder piles, depending on the field location of installed adjacent soldier piles. Welds ground to a smooth finish.

TT Response:
This plate is not intended to show on the structural drawings.

T-0830	SSS - Type T, TT, and TTT Base Plate Anchor Rod Location Confirmation	Closed	10/15/2013	10/25/2013	10/21/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Detail 7 on S1-5051 provides locations where type TT and type TTT base plate anchor rods will be installed. There are other details throughout the plans that contradict the columns base plate anchor rod locations provided in 7/S1-5051. For example: 7/S1-5051 shows a column at gridline 10.1/G.3 as having a type TTT base plate anchor rod detail; however, 1/S1-3610 shows the column at 10.1 and G.3 as having a type T base plate anchor rod detail.

Please confirm that detail 7/S1-5051 provides the correct base plate anchor rod detail for each of the columns.

Please provide a type T base plate anchor rod detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed that 7/S1-5051 provide correct anchor rods information.

2) Type T anchor rod details are provided in Detail 3 & 5/S1-5051 (see the note stating "TYPE T thread bar anchor shown, for Type TTT threadbar anchor see 4/S1-5051, for TYPE II threadbar anchor see 6/S1-5051).

waterproofing system and the vertical reinforcement as outlined at these locations is acceptable.

T-0833 **BGP - Embed Clarification at Elevator Rail Support** **Closed** **10/16/2013** **10/26/2013** **10/30/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please confirm the length of the elevator rail support embed dimension is 2'-7", as shown in the attached detail drawing 4/S1-7630..

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/26/2013
RESPONSE:
Inquired length is confirmed.

Note that there is more than one size of HSS, therefore the height of vertical plate may vary.

CMGC shall make all future bidders of trades that may be impacted by detail issues such as this, aware of the work of adjacent trades.

T-0834 **BGP - Structural Steel Embeds in Concourse Slab/Columns** **Closed** **10/17/2013** **10/27/2013** **10/24/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Chris Williams

REQUEST:

Attached is a rebar congestion model of the concourse slab and column C2 at C/24.9. As is apparent, the structural steel shear lug portion of the plate embed is in conflict with the reinforcing steel and will not fit with required rebar spacing. The rebar conflicts with he shear lug and blockout that are present, include but are not limited to:

- Typical MFB Beam at C/24.9 (blue colored bars in model)
- B-68 Beam (yellow colored bars in model)
- Main concourse slab (pink colored bars in model)

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The 3-D images provided seems to orient the base plate/shear key in the wrong direction. The long face of the shear keys are to be in parallel to the web of the steel column as shown in details on Sheet S1-5051.

Spacing for the slab rebars and the top rebars for the misc. beams (e.g., B71 at Grid C/2, B68 @ Grid C/24.9) shall be adjusted slightly to clear the shear keys.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

- Column C-2 vertical T-Heads (purple colored bars in model)

Please provide a solution that will provide a constructible blockout and embediment of the structural steel plate.

T-0835 **BGP - Vehicle Ramp Beam and Wall Support Embed Clarifications** **Closed** **10/17/2013** **10/27/2013** **10/29/2013** **Potentially** ☐

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/17/2013
RESPONSE:
Contractor proposal as presented in the RFI is acceptable. Include in forthcoming shop drawings that

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

thick plates together in order to achieve desired obtuse and acute angles.

1. Please confirm that additional embeds per detail 1 S1-3411, not reference in RFI T-0453.1, can be welded to create the specified angles per RFI response T-0853 (this will be an additional2 angles). Please reference attached SKA-2863 for specified angles and locations of embeds in question.

is referenced in RFI T-0881.

(Note that we assume the RFI is intending to reference "T-0835" and not "T-0853".

T-0836 **BGP - Sump Pit Rebar Tail and Trestle Pile @ GL 18.5/E - Area 9** **Closed** **10/17/2013** **10/27/2013** **10/23/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Reference: RFI T-0644

Three of the sump pit lower mat #11 tails near grid line 18.5/E are in conflict wit the nearby trestle pile. The bars have been trimmed to clear the trestle pile and provide an LTE of 34" instead of 60" as required per plans.

Typically, a bent bar would be spliced to the interrupted bar as required in SKS-0281 in the response to RFI T-066; however, the trimmed bars have a 70" length which would not beet the 78" LTS requirement. Gerdau propose to leave the 3 ea trimmed bars as-is and not incoporate an additional spliced bent bar. Please confirm if this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/22/2013
RESPONSE:
Provide spliced bent bar as indicated in RFI T-0664 and that RFI's accompanying Sketch SKS0281. Lap length may be reduced to 69". The total length of bent bar extending beyond the intersection with the bottom mat reinforcing shall be 60". The bent bar may be rotated so that the tail clears the layer of mat top reinforcing.

T-0837 **BGP - Structural Details for Elevator Door Sill Plate Angles on Concourse Level** **Closed** **10/17/2013** **10/26/2013** **11/07/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to attached drawing A1-2824 through A1-2847.

The architectural drawing note at the elevator door sill

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/7/2013
RESPONSE:
Refer to detail 4/A1-7576. The galvanized steel angle

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

plates refer to the structural drawings for details. However, the current structural drawing set do not provide the applicable misc metal angle detail.

Please provide structural detail drawings showing the typical misc metal elevator door sill support angle. Please include mounting detail to concourse slab or topping slab detail, misc. metal details, and all pertinent information to accurately detail the elevator door sill plate angle.

cast on top of the lower concourse structure (which forms the edge of the topping) shall be an L6x4x3/8 (LLH) with ¾¿ x 8¿ long studs at 12¿ OC. Studs shall be 3¿ clear from edge of lower concourse slab. Elevator sill angle to be provided by elevator manufacturer.

T-0837.1 **BGP - Elevator Sill Conflict with Elevator Rail Embed Plate** **Closed** **11/19/2013** **11/29/2013** **12/04/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

The architectural elevator sill angle/emebed (continous) detail shown in 4/A1-7576 is in conflict with the structural elevator rail support embed drawing in 4/S1-7130.

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
12/3/2013
RESPONSE:
The elevator sill plate support angle is interrupted by the HSS elevator guiderail support. The support angle shall terminate and recommence as follows:
Cope horizontal (6") leg of sill plate support L6x4x3/8 contained in RFI response T-0837 up to 2" to clear vertical PL 5/8 of Detail 4/S1-7630. Remaining L4x4 (approx.) shall extend over the PL 1/2 embed plate to within 2" of the HSS elevator guiderail support. Length of cope shall not exceed HSS depth. A stud shall be placed within 3" of the cope.

T-0838 **BGP - Concourse Slab Opening Dimension Clarification at GL C/13** **Closed** **10/17/2013** **10/26/2013** **10/25/2013** **Potentially** ☐

Co-Author: Webcor Construction LP Jackson Tukuafu

REQUEST:

Please refer to the attached drawing A1-2844, S1-2204 and RFI T-0838.

WOJV is in receipt of AAI's response to RFI T-0838, in which the slab opening dimension is referenced in a drawing that has yet to be issued for construction (A1-2844, ASI 107).

Please provide the dimensions for the slab opening east of GL 13 and north of GL C as located on the current contract drawing A1-2844 dated 08/31/2012.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/14/2013
RESPONSE:
See attached SKA-2870 showing dimensions to the slab opening east of GL 13 and north of GL C. Structural beams are aligned at the edges of the opening.

T-0839 **SSS - Bolt Specifications** **Closed** **10/18/2013** **10/28/2013** **10/30/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

As per the Contract Drawings and Specifications all high strength bolts shall be A325, A490 & A354 BD. All TC bolts shall additionally conform to ASTM F1852 & F2280.

1. We propose to use TC bolts for all connections (shop & field) 1-1/8" diameter or less (unless galvanized). All galvanized bolts to be standard A325.

2. All bolts 1-1/4" to 1-1/2" diameter to be standard A490.

3. All bolts larger than 1-1/2" diameter to be standard A354 BD

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

We assume the term "Standard AXXX" used in this RFI refers to high-strength bolts with Hex Heads that will be pre-tensioned using acceptable methods per Specification Section 05 10 00 - 3.2.K (other than TC). If this is not the case, please resubmit the RFI with additional clarification. Responses to individual items in RFI as follows:

1.) As indicated in Specification Section 05 10 00 - 3.2.K.1, it is acceptable to use TC bolts. Bolt specification shall be as indicated in the construction drawings. Standard A325 is acceptable for galvanized

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please confirm this is acceptable.

bolts.

2.) Standard A490 is acceptable in this diameter range.

3.) Standard A354BD is acceptable in this diameter range.

T-0840 **SSS - Means & Methods - Erection Devices** **Closed** **10/21/2013** **10/31/2013** **10/23/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Stacy Wilson

Co-Author:

REQUEST:

As per OSHA Standards Sub Part R Steel Erection 1926.756 (C)(1) When two structural members are sharing common connection holes, at least one bolt shall remain connected to the first member unless a shop or field attached seat or equivalent connection device is supplied with the member to prevent displacement. We propose the Means & Methods depicted in the attached sketch SK-1A to meet these OSHA requirements.
Please advise if this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per 01 10 40 1.6 C 2 - TJPA will not reply and will reject the RFI: "Questions relating to construction means, methods, techniques, sequences, procedures or safety precautions. (These are the Contractor's responsibilities exclusively.)"

T-0841 **SSS - Transfer Girder Splice Conflict with Clip Angle Connection** **Closed** **10/18/2013** **10/28/2013** **10/24/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

As noted on sketches CD RFI 075 SK1 through SK8, there are several instances where the clip angle at the beam to transfer girder connection is in conflict with the transfer girder web splice. This condition occurs at TR7, TR8, TR11, TR19.1, TR19.9, TR21, and TR24.

Please reference the sketches attached and confirm the modified transfer girder web splice locations are acceptable to avoid conflict with the beam clip angle connection.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Transfer girder splice locations may be moved as shown in sketches SK1 through SK7 in this RFI.

There is no splice specified on the structural drawings (D/S1-4305) at TR24 between gridlines E.2 and D.8. Additional splice shown on SK8 is not acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0842	SSS - Full Height Columns	Closed	10/18/2013	10/28/2013	10/24/2013	Potentially	☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Please refer to the attached drawing, S1-4104. The columns shown in the transverse frame elevation that extend from the ground level to the roof level typically have a field splice located 4' above the bus deck slab. Please confirm that this field splice may be eliminated and that it is acceptable to provide full height columns.

The detail is shown at GL 7 & GL 8. Other locations are similar.

Note that a shop splice may be required due to limitations in mill rolling lengths.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

At moment frames where the column sections above and below the splice point are identical, it is acceptable to eliminate the column field splice.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0842.1	SSS - Moment Frame Column Splice	Closed	01/27/2014	02/06/2014	02/04/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

In reference to W/O RFI T-0842, in which permission was given to eliminate field splices in the built-up columns, please see the following:

At certain column locations (see S1-4102 at GL4, for example) the thickness of the flange is constant throughout the height of the column. The fabricator will seek to provide single piece flanges when material availability permits. In instances where the availability of certain plate sizes does not permit the fabricator to provide a single piece / full height flange plate, a shop splice will need to be introduced.

Please identify any locations or areas along the height of the column flange that a shop splice is not permissible so that these limitations may be considered while finalizing our shop details and plate purchases.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to use single plate flanges where column depth is the same throughout the column height (refer to Sheets S1-4101 through S1-4116 Moment Frame Elevations). However, where column depth changes at the splice locations (for example, at GL2/E.6 and GL2/D.4), splices will be needed since flange thicknesses change. It is acceptable to have these splices done in the shop at Contractor's option.

Co-Author:

REQUEST:

Reference is made to sheet S1-4205, Detail 2 "Brace Detail" which specifies a 1 ¾" effective weld from roof node to brace beam. Sheet S1-5131, Detail 1, Side View F specifies a bevel of 2 3/8" x 45 degrees for the weld joint area in question.

Sheet S-0007, General Note SC-4 states that weld sizes shown are considered effective weld sizes. Prequalified weld joint BTC-P4-GF (attached for reference) states that the effective weld size shall equal the bevel size for flat and horizontal weld positions.

These welds are intended to be performed in the horizontal or flat position. Please confirm that a bevel size of 1 ¾" to equal the specified weld size of 1 ¾" is acceptable and conforms to the requirements of note SC-4 and AWS 2010 D1.1 Detail BTC-P4-GF attached.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The weld size shown in Detail 2/S1-4205 is the effective weld size required for this joint. It is acceptable to revise the bevel size shown in 1/S1-5131 according to the effective weld size as required by the welding procedure.

SCCI is requesting to re-route all 2" dewatering well lines as proposed in the attached drawings and depicted in the attached photo. The SCCI proposed re-route is to eliminate any potential conflicts with future work (bracing removal, wall waterproofing, rebar, and form/pour/strip). Upon completion of the use of the dewatering system, the line will be cut below the sleeve, capped and grouted in with the trestle block-out pour back. The line will be poured in place with the future mat and concourse slabs and all 3 wall lifts. The line will also be capped at the top of the final wall lift.

Please confirm the proposed dewatering well re-route as shown in the attached file is acceptable.

Routing the temporary dewatering system within the permanent foundation wall will not be permitted.

T-0849 **BGP - Mat Slab Layer 3 Lap Splice Relocation in Area 11 thru 16** **Closed** **10/21/2013** **10/31/2013** **10/23/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to drawing S1-2052.

Due to limited access between the waterproofing and access trestle, Gerdau proposes to shorten the mat slab typical layer three (North-South) 67'-0" bars at Areas 11 through 16. This requires the lap splice location to be moved from the center of column line, as specified on Note 1 of the Mat Top Bar Notes in S1-2052, to the location shown in the attached Gerdau sketch SK-99.

Please confirm the revised lap splice detail shown in Gerdau sketch SK-99 is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
10/22/2013
RESPONSE:
It is acceptable to move the reinforcing splice from the center of the column line as indicated in the RFI.

T-0850 **BGP - Request for 14 day Concrete Compressive Strength test on future mat slab ı** **Closed** **10/22/2013** **11/01/2013** **10/25/2013** **Potentially** ☐

representatives, WOJV is asking for all future mat slab pours that one of the two concrete test cylinders allotted for the 28 day compressive strength test could be tested at 14 days instead, This information will be used to assess the concrete strength for the level D bracing removal.

Please confirm if this would be acceptable.

10/24/2013
RESPONSE:
At 14 days it is acceptable to test (1) of the (2) concrete test cylinders allotted for 28 day compressive strength testing by the Specifications.

All future mat slab pours will have a sample set for testing consisting of (1) cylinder for 7, 14, and 28 days followed by (3) cylinders for 56 days. (1) additional cylinder per set shall be retained in reserve for later testing if required. The total number of cylinders taken per sample set shall remain at (7).

T-0852 **SSS - Weld Returns at EBF Link Beams** **Closed** **10/24/2013** **11/03/2013** **10/25/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Detail 3 on sheet S1-4205 indicates the weld requirements from the underside of the EBF link beam (28" W) to the roof node (24" W). Detail 3 requires a 3 ½" reinforcing weld to be returned (boxing) 6" at each interior corner of the welded roof node. The distance from the roof node to the edge of the girder flange is only 2" on each side based on the dimensions noted above (reference drawings attached).

Please confirm it is acceptable for the returns running longitudinal to the direction of the EBF Beam to be made as 1 ½" reinforcing fillets, while the weld running transverse to the girder flange remain at 3 ½" as specified. Reference the attached detail showing this condition.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to use 1-1/2 inch reinforcing fillets at the 6 inch returns provided that welding pass is continuous from the 3-1/2 inch thick region into the 6 inch returns.

T-0853 **SSS - Transfer Girder Field Splice** **Closed** **10/24/2013** **11/03/2013** **11/04/2013** **Potentially** ☐

Co-Author:

REQUEST:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

In order to facilitate self-supporting erection of the transfer girders during temporary conditions prior to the completion of the field welded splice joints, please confirm it is acceptable to utilize a temporary connection plate that will bolt the two transfer girders together while the weld takes place, as shown on the attached sketches GS-1.0 and GS-2.0. The temporary connection plate will be removed and open holes will be permanently filled with A325 bolts.

Acceptable for the bolt diameter (1-1/8") and spacing (6") shown in sketches GS-1.0 and GS-2.0.

T-0854 **SSS - Type 4 Drag Connection (Y)** **Closed** **10/25/2013** **11/04/2013** **10/29/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

For Type 4 Drag connection (Y) per detail 1/S1-5019 please refer to sketches CD RFI # 082 SK1 to SK3 for items 1 & 2 noted below. Note sample location is on S1-2402 near grids 2/C.3 shown on SK2.

1) See SK2 & SK3 and confirm this 18" applies at all locations noted as "Y" on plans as this will place the bolts exceedingly outside the supporting beam profile.
2) Please clarify which plan drawings this note applies to.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1a) At Ground Level: Provide b = 18" per schedule in 1/S1-5019 for all Type 4-(Y) drag connections.

2b) At Second Level: There are 14 locations between GL 2 and GL 3 where Type 4-(Y) drag connections per Detail 1/S1-5019 are to be provided. At 8 of these 14 locations the supporting girder is a W30x99. At these 8 locations, provide b such that the beam end is 1" outside of the W30x99 flange as indicated in SK3 of the RFI. Provide b = 2" at the remaining 6 locations.

2) Note applies to Ground Level plans.

T-0855 **SSS - Double Angled Connection** **Closed** **10/25/2013** **11/04/2013** **10/29/2013** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0859	SSS - Elevator Framing	Closed	10/25/2013	11/04/2013	10/30/2013	Potentially	

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor Construction LP Robert Kjome

Co-Author:

REQUEST:

On details 2, 3 & 4/S1-7108 and section A/S1-7136 per ASI 0106 please refer to sketches CD RFI 106 SK1 & SK2 and clarify the discrepancy in framing that is shown on the referenced drawings. Note the elevator vertical was removed on ASI 0106 but a similar vertical is shown on section C/S1-7136.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Section A/S1-7136 does not show the highlighted vertical HSS sections because they are beyond the extent of the section cut. Section C/S1-7136 shows the vertical HSS because the section is directly cut through the HSS member in S1-7108 partial plans. The primary purpose of the section cuts in S1-7136 is to show elevator rail support framing elevations. The vertical HSS members highlighted in the RFI are not part of the elevator rail support framing, they support the W-5 system.

Co-Author:

REQUEST:

Reference: Contract Dwg. A1-2122 to A1-2123, and attached sketch

Rebar dowels were installed for future partition walls at gridlines A-F/1-6 during Area 3 mat slab pour on September 7, 2013. Due to conflicts with equipment access for the removal of Level C and D shoring struts and walers, selected rebar areas as shown on the attached drawing will need to be cut at and removed. Any additional walls that are found to be blocking access once operations have begun will be analyzed on an as needed basis. Please confirm it is acceptable to cut rebar dowels

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/6/2013
RESPONSE:
It is not acceptable to cut the inquired (interior partition & water tank) wall dowels and re-instate them with drill and epoxy method.

Contractor may cut the inquired wall dowels and reinstate the bars with Type 2 couplers. Note that this is limited to the walls inquired in this RFI. Contractor SHALL coordinate with the work of other packages per General Note GR-3 and GR-22 on S-0005.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

in the partition walls as shown on the attached sketch and on an as needed basis, with exception to columns and wall pilasters, then return to drill and bond after bracing procedures are complete. Scanning will be included.

T-0861 **BGP - Interior Wall Thickness Change Clarification in Area 8 & 11** **Closed** **10/28/2013** **11/07/2013** **11/06/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to drawing S1-2054, S1-2055 and attached excerpt drawings from submittal package T0600-0103.

Per the submittal review notes found on drawing sheet S108.2 and S111.1 from submittal package TG0600-0103, the train platform future interior wall thicknesses have been increased from 10" to 1-0" and 1'-2" to 1'-4", respectively. In addition to the revised wall thicknesses, the following noted was included: "For 1'-4" walls use same coupler reinf as 14" walls. Coordinate with RFI T-0587." The note does not include 12" walls which were previously 10".

Please confirm the now 12" wall is to use the same coupler reinforcing as the 10" walls.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/6/2013
RESPONSE:
Bars for 12" thick walls are per contract detail 5/S1-3205.

T-0861.1 **BGP - GL 15.4/E Partition Wall Formsavers in Area 8** **Closed** **11/07/2013** **11/17/2013** **11/13/2013** **Potentially** ☐

Co-Author:

REQUEST:

Please reference detail 1/S1-5013 regarding the full height fitted stiffener detail and confirm the following:

1) Confirm it is acceptable to provide a 2" end distance typically at beams with 7/8" dia. bolts in lieu of the 1 ¾" end distance noted by the "2db" dimension.

2) Confirm the stiffener width is to equal the beam "a" dimension, defined as [bf - tw]/2, thus the noted dimension should read "2db min."

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1.) Acceptable.

2.) Confirmed.

T-0863 **SSS - Double Angled Connections at TPG1 & TPG3** **Closed** **10/28/2013** **11/07/2013** **11/07/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

For the double angle beam connections per detail 1/S1-5010 into the TPG1 & TPG3 roof girders on detail 1/S1-4200 are problematic due to the thick flanges. See sketches CD RFI 091 SK1 & SK2 for items 1 & 2 below for proposed modified connection.

1) Confirm it is acceptable to reduce the end distance on the connection angles to 1 1/4" per A.I.S.C.13th Edition Table J3.4 in order to fit the connection angles inside the beams at the TPG1 & TPG3 girders.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For connections to TPG1:

1)
a) W14x22: Provide one less bolt than that required by 1/S1-5010. All other connection parameters including edge distance on the connection angles shall be per 1/S1-5010.
b) For all other beam sizes noted on SK1, our response is "Acceptable".

2)

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

2) Confirm it is acceptable to cut the beam flanges flush as shown when the connection angles encroach into the beam "k" area beyond A.I.S.C. allowable limits.

a) W14x22: Cutting the beam bottom flange is not required with the reduction in number of bolts per (see 1a).
b) W24x68, W27x84, W30x90, W33x118, W36x135, W40x297: The encroachment of the angle into the "k" region is less than the maximum allowed per AISC 360-05, Figure 10-3. Cutting the bottom flange flush as shown in the RFI is not required and not acceptable.
c) W40x149, W40x183, W40x199: Acceptable.

For connections to TPG3:

1)
a) W14x22: Provide one less bolt than that required by 1/S1-5010. All other connection parameters including edge distance on the connection angles shall be per 1/S1-5010.
b) W24x68: Acceptable.
c) W27x84: There is no W27x84 framing into a TPG3.
d) W40x392: The connection is per detail 8/S1-5032 as noted on Sheet S1-2604 near GL 14/D. In addition, gravity moment connection is shown at the ends of these beams where they connect TPG3. Therefore, flanges of the W40X392s are to be welded to TPG3 per detail 4D/S1-5010.

2)
a) W14x22: Cutting the beam bottom flange is not required with the reduction in number of bolts (see 1a).
b) W24x68: The encroachment of the angle into the "k" region is less than the maximum allowed per AISC 360-05, Figure 10-3. Cutting the bottom flange flush as shown in the RFI is not required and not acceptable.
c) W27x84: See 1c.
d) W40x392: See 1d.

Co-Author:

REQUEST:

Reference sheet S1-2606 for the BU beam to column connection at grids 31/D.4 and 31/E.6. Please confirm it is acceptable to reduce the "Lev" dimension indicated on 3/S1-5011 from 5" to 2 ¾" in order to clear the BU flange to web weld as indicated in CD RFI 092 SK1 & SK2.

If this is not acceptable, please provide an alternate detail for this condition.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide 10 bolt rows ("M" = 10) and vertical bolt edge distance, Lev = 4" for connections at all BU56 beams where 3/S1-5011 is applicable.

T-0865 **SSS - Clarifications for Kicker Brace at Ground Level** **Closed** **10/28/2013** **11/07/2013** **11/07/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Please refer to detail 6/S1-5022 and verify the kicker brace requirements at ground level as noted on CD RFI 093 SK1 to SK3 and in the items below:

1) Confirm the alternate bracing connection proposed in CD RFI 093 SK1 is acceptable.
2) Supply the weld size and length for brace angles to ½¿ plate.
3) Confirm the work point location indicated is acceptable (intended to match S1-5015 details).
4) Confirm the reference to S1-2304 should be added to the referenced detail and the reference to S1-2307 should be deleted.
5) Confirm detail 6/S1-5022 applies only to grid lines 16.9, 19.1, 24.9 & 27.1 on the Ground Level as referenced on plans.
6) Confirm detail 6/S1-5022 is typical for all braces along grid line 16.9, similar to grid line 19.1.
7) Confirm detail 6/S1-5022 is typical for all braces along grid line 27.1, similar to grid line 19.1.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Locate the top gusset plate such that the centerline of kicker angle divides the gusset plate into a 1:3 ratio (3":9") at the top of the plate.

2) Provide a weld size of 5/16" with a minimum length of 4" on each side of the kicker angles.

3) Confirmed.

4) Correct references are S1-2304 and S1-2306 (updated in ASI 106 drawings).

5) Detail 6/S1-5022 is applicable at Gridlines 16.9 and 27.1 at Ground Level. Detail 9/S1-5022 is applicable at Gridlines 19.1 and 24.9.

6) Refer to SKS-0297 (attached) that shows applicable bracing type along GL 16.9 transfer girder. As indicated in the sketch, the bracing along GL16.9 is either transfer girder brace per 5/S1-5015 or kicker brace per 6/S1-5022. Same sketch can be used to identify the bracing type along 19.1 transfer girder by replacing 6/S1-5022 with 9/S1-5022.

7) Refer to SKS-0298 (attached) that shows applicable bracing type along GL 24.9 and GL 27.1 transfer girders. As indicated in the sketch, the bracing along GL 27.1 is either transfer girder brace per 5/S1-5015

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

or kicker brace per 6/S1-5022. Similarly, the bracing along GL 24.9 is either transfer girder brace per 5/S1-5015 or kicker brace per 9/S1-5022.

T-0866 **SSS - Bending Radius at Skewed Beam Connections** **Closed** **10/28/2013** **11/07/2013** **11/07/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Refer to details 7 & 8/S1-5010 regarding bending radius requirements for skewed beam connections. The radius indicated in CD RFI 095 SK2 is per A.I.S.C. (2.5t for A572 GR50 material). Please confirm it is acceptable to proceed per this criteria.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The minimum inside bending radius for a A572 GR 50 plate up to t = 1" is 1.5t per AISC 360-10 Table 10-13, if the bend line is perpendicular to final direction of rolling. These values need to be increased 50% if the bend lines are parallel to the final direction of rolling. 2.5t inside bending radius proposed by the contractor is acceptable for the condition presented in SK2, where t = 1/2". In general, it is acceptable to proceed with the minimum bending radii specified in AISC 360-10 Table 10-13.

T-0867 **SSS - W24 Skewed Beam Connections at Grid 6.C.3** **Closed** **10/28/2013** **11/07/2013** **11/07/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Refer to drawing S1-2303 (CD RFI 096 SK1) indicating the portion of the W24x68 running between GL C.3 and GL 6. CD RFI 096 SK2 shows the tight design requirements for this beam run connecting to TR6. Please advise if this portion of the W24x68 beam can be eliminated due to the tight design requirements. If eliminating this portion of the beam is not acceptable, please provide an alternate connection detail to TR6, as detail 8/S1-5010 will not work at this location.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The portion of the W24x68 beam indicated in the RFI can be eliminated.

T-0868 **SSS - Framing Clarification for W21 Beams at Ground Level** **Closed** **10/28/2013** **11/07/2013** **11/07/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor Construction LP Robert Kjome

Co-Author:

REQUEST:

Refer to the areas indicated on S1-2303 between grids 10.1 & 11 and D & F (CD RFI 097 SK1). Please confirm the noted W21x50 beams are at top of steel elevation 19'-1 5/8" and the BU-WT's are not required.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The noted W21x50 beams support the depressed escalator pit slab (Slab S4). T/Slab for Slab S4 is 17.44' as indicated in Sheet S1-2303 and T/Steel for these two beams is 6 1/4" below the T/Slab for S4 as indicated in Sheet Note 2 on S1-2302. Therefore, these two beams support slabs with different elevations and BU-WTs are required.

T-0868.1 **SSS - Framing Clarification for W21 Beams at Ground Level** **Closed** **11/25/2013** **12/05/2013** **12/20/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Per the response to W/O RFI T-0868 (SK RFI 135), the TOS for the W21 should be at 16'-11" and the BU-WTs are required to support the slab at 19'-9 1/8". Based on this response, please confirm the following:

1) The difference between the TOS elevations per the response to SK RFI 135 requires a BU-WT with a total height of 2'-2 5/8", exceeding the maximum height dimension indicated on 5/S1-5002. Please confirm it is acceptable to proceed with detail 5/S1-5002 and the required BU-WT height of 2'-2 5/8" at this location.

2) Please confirm it is acceptable to stop the BU-WTs 1" clear from the edge of the transfer girder flange to allow for erection clearance or advise if the BU-WTs are required to extend to the face of the transfer girder web for deck support. (Reference CD RFI 097.1 SK1)

3) The W21 connection to the transfer girder at grid line 11 fouls the bottom flange of the girder and cap plate of the train box columns as indicated on CD RFI 097.1 SK1. Please provide an alternate connection detail at this location.

4) As indicated on CD RFI 097.1 SK2, there is no support down for the escalator slab perpendicular to the W21 near the edge of the knock-out slab and the W21 supporting the S4 escalator slab. Please advise if deck support is required at this location and, if so, please provide details

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.
2) It is acceptable to stop the BU-WTs 1" clear from the edge of the transfer girder flange.
3) Cope the top of the W21 beam and provide a double angle connection per 1/S1-7604 with 3 bolts. The connection plates shown in 1/S1-7604 are to be welded to bottom of the trainbox column cap plate. In addition, provide web stiffener plates on each side of the beam web at the coped section per 12/S1-5010. Extend the stiffener plate beyond the coped section a distance equal to the depth of the cope.
4) There is no deck at the highlighted location. The pit slab edge is the same as the knock-out slab edge only it is lower. Refer to detail 4/A1-7550 that shows the slab and escalator enclosure assembly at this location. Note that detail 6/S-7660 is called out on 1/S1-7302 (partial plan of this location). Detail 6/S-7660 applies at the north and east edges of the E305 escalator pit but not at the knock-out slab edge. Similarly detail 6/S-7660 applies at the south and east edges of the E304 escalator pit but not at the knock-out slab edge.

RFI T - 742 shows the extent of the modification to the foundation wall on the north and south elevations of Area 9.

Please confirm that this modification as outlined at these locations is acceptable.

11/11/2013
RESPONSE:
Contractor proposed modifications to the Lower Concourse spandrel beams within Area 9 are acceptable. Proper lap splices shall be provided where the beam rebar is transitioned from the spacing in the construction drawings to the modified spacing at the encroached wall sections. Note that Area 9 foundation wall thinning shown in RFI T-0874 (2-3/8") and RFI T-0742 (2") are not consistent. Contractor to reconcile the discrepancy and prepare/update shop drawings accordingly.

T-0875 **BGP- Trestle piles No 20 & 21 in comflict with beams at Lower Concourse level** **Closed** **11/01/2013** **11/11/2013** **11/07/2013** **Potentially** ☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Following a review and discussion with Thornton Tomasetti on the trestle pile locations, it has been noted that trestle pile numbers 20 and 21 (see sketches attached) are in conflict with beams (B4A) at the escalator pits on the lower concourse slab elevation between gridline 11-12, D-F. The contractor is proposing to blockout a section of slab as shown on the sketch, this blockout section would then be infilled once the trestle pile has been removed.

The contractor is to insure that the appropriate reinforcement lap splices are present between these concrete pours.

Please confirm if this option would be acceptable

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/7/2013
RESPONSE:
Contractor proposed approach is acceptable. Note that the trestle pile also encroaches on the pit slab as well and will have to be addressed.

Include proposed reinforcement in rebar submittal for review.

T-0876 **RFI T-0876 BGP- Trestle piles No 10,12 & 14 are in conflict with a step in the slab a Closed** **11/01/2013** **11/11/2013** **11/27/2013** **Potentially** ☐

REQUEST:

Please refer to similar RFI T-0838 and T-0838.1.

The structural drawings for the lower concourse (Sl-2202 through Sl-2207, framing plans) do not include dimensions for the slab openings. Scaled dimensions from these drawings conflict with many of the dimensions provided on the architectural slab edge plans (Al-2842 through Al-2847).

Please see attached for observed conflicts (highlighted). Please confirm that the dimensions shown on the architectural plans at the slab openings are correct.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/18/2013
RESPONSE:
The attached SKAs are provided to clarify and confirm current slab openings as well as setting out of couplers at the Lower Concourse Level.

1. For setting out of slab openings at the Lower Concourse Level, refer to the Lower Concourse Level Slab Edge Plans (SKA-2916 to SKA-2923).

2. For Setting out of PH1 walls at the Lower Concourse Level, refer to the Lower Concourse Level Zone Plans (SKA-2900 to SKA-2907) and Enlarged Plans (SKA-2924 to SKA-2945).

3. For setting out of couplers for PH2 walls, refer to the Lower Concourse Level Wall Plans (SKA-2908 to SKA-2915).

Note: The "Wall Plans" show wall starter couplers installed in the Below Grade Package, however the "Wall Plans" provide coupler setting out dimension for Phase 2 walls only. For coupler setting out for walls and curbs constructed in Phase 1, refer to the wall types and dimensions shown on the Lower Concourse Level Zone Plans.

REQUEST:

Please refer to attached Detail4 on Sl-7630, attached Al-2202 thru Al-2205 and Al-2207. The following drawings are for reference Sl-2202 thru Sl-2205 and Sl-2207, Sl-7130, Sl-7132, Sl-7134, Sl-7136 and Sl-7139.

Please confirm no conflict exists between embed Detail 4 on S1-7630 and future walls highlighted on attached architectural drawings.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/18/2013
RESPONSE:
The elevator embed is at the edge of the elevator shaft opening. A curb is being provided for the elevator shaft walls. The embed and end of the beam are within the curb zone.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Contractor shall coordinate sequence of construction of work between trades so that the beam and embed will be cast into the curb for the shaft wall.

T-0879.1 **BGP - Conflict of Elevator Opening Embed and Future Walls** **Closed** **11/25/2013** **12/05/2013** **12/09/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

SCCI is in receipt of RFI response T-0879. TT's response does not fully address the conflict brought up in the original RFI. TG06.0 contract drawings do not show a curb at the edge of the elevator openings at the lower concourse level.

Please address and provide details regarding the embed in question in RFI T-0879.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
12/6/2013
RESPONSE:
As indicated in the response to RFI T-0879, the end of the beam and the embed will be cast into the wall curb. The sketches provided with the response to RFI T-0879.1 illustrate the relationship of the beam and the future wall curb. The concrete curb on the elevator shaft walls in Phase 1 will be extended under the future W-5 cladding and its supporting walls in Phase 2. The HSS rail support embed is within the concrete curb zone for both phases.

Refer to the following attached SKAs:

1. SKA-2958 to SKA-2962 - Lower Concourse Zone Plans showing locations of the Service and Passenger Elevators.

2. SKA-2963 to SKA-2967 - Enlarged Plans of Service and Passenger Elevators showing Partition Types with Concrete Curbs.

3. SKA-2968 - Section Detail at Service Elevator Shaft at Pit showing HSS elevator rail support beam.

4. SKA-2969 - Concrete Curb Schedule.

T-0880 **BGP - Receptacle Requirements at Elevator Pits Near GL 19/E and 20/G** **Closed** **11/04/2013** **11/14/2013** **11/13/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to drawing E1-2024 and E1-2025

There are elevator pits in the mat slab at approximate grid lines 19/E and 20/G. The drawings E1-2024 and E1-2025 do not show any receptacles being supplied to these pits. Please confirm this is correct.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/13/2013
RESPONSE:
These receptacles are not required within the BGP package. The only active elevator in Phase 1 is PE203 at the west end. The elevator pits in question will be provided with power in Phase 2. Provisions have been made to run conduit at that time.

T-0881 **BGP - Vehicle Ramp Wall Embedded Supports** **Closed** **11/05/2013** **11/15/2013** **11/18/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please reference attached detail6 S1-3203, attached detail10 S1-3204, RFI Response T-0453.1, RFI Response T-0835 and attached SKA-2863.
RFI Response T-0835 confirmed that the vehicle bike ramp wall intersects the foundation wall at a 97 degree angle. Where this ramp wall intersects the foundation wall, embeds per detail 6 on S 1-3203 and detail 10 S 1-3204 are required. SCCI and its embed supplier has a constructability concern with these embeds. A similar constructability concern was brought up in RFI T -0453.1, stating that if an angle
member of such thickness is bent to achieve an angle other than that member's stock angle, it will structurally stress that member.

1. Please confirm it is acceptable to weld two (2) 8"x24"x1" plates together in order to achieve angle prescribed in RFI Response T-0835. Reference SKA-2863 for the acute and obtuse angles required. Forthcoming shop drawings will show all welds.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/17/2013
RESPONSE:
Contractor proposal to weld 2 plates to create an angle is acceptable as presented in the RFI.

T-0882 **BGP - Column Tie Change from T9 to T12** **Closed** **11/05/2013** **11/15/2013** **11/13/2013** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Please refer to drawing S1-3304 to S1-3306.

Please confirm if it is acceptable to replace the typical T9 column ties (90° or 135° bend on either end) with Tl2 ties (135° bends on both ends). See the attached SCCI sketch SK-101 for further details.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/12/2013
RESPONSE:
It is acceptable to replace T9 column ties with T12 for Column Types C1 and C2. Note that the location of the second cross-tie from each end is not shown correctly in SK-101. In SK-101, these two cross-ties shall be flipped to clear the shear plates for the steel column base plate at Lower Concourse Level. Refer to Sheet S1-3304 of the construction drawings where the column reinforcement details Type A1 (for Column C1) and Type A2 (for Column C2) are shown. Refer to Sheet S1-5051 of the construction drawings for information on steel column base plate details.

Co-Author:

REQUEST:

Please review sketch CD RFI 059 SK1 and details 1/S1-5016 and 1/S1-5018 for type 1 - drag connection details on brace beams at the Bus Deck Level framing plan.

1). Please verify the bottom flange of brace beams noted in detail 1/S1-5016 can be cut flush to the beam web on both sides of web allowing beam to be erected between the shop welded connection plates on the cast node.

2). Verify the diagonal bracing beam web connection plate noted in detail 1/S1-5018 can be shifted to the acute angle side of the connection as indicated in the attached sketch and bottom flange cut flush to the web to allow beam to be dropped into location in the field.

3). Please provide welding details for the relocated web connection plate to the supporting grid beam as connection plates will overlap at these locations.

4). Please verify if additional bolts are required connecting the flange plate where the dimension to the plate edge and

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

RESPONSE:
1) Acceptable. See response to RFI T-0869 for the extents of the bottom flange cope.

2) Moving the web connection plate on the other side of the beam is acceptable however, the shear plate shall still be welded to the north-south girder not the east-west running beams as shown in SK1 of this RFI. With this modification, the diagonal beam centerline will not coincide with the connection work point. This eccentricity shall be minimized as permitted by the connection geometry and shall not exceed 1". The question regarding flange coping is not clear, please provide a sketch that shows the intended coping. Note that there are bolted flange plates top and bottom.

3) Use of PJP welding (full web thickness) is acceptable where the shear plates are welded to the girder web. See also response to 2nd question.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the last row of connection bolts exceeds limitations noted in the 13th Edition (AISC) manual section 16.1-J3, Item 5a.

4) Additional bolts are not required.

T-0883.1 **SSS - Brace Beam Connection Details** **Closed** **12/11/2013** **12/21/2013** **12/16/2013** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to attached drawing S1-2022 and SCCI sketch SK-102.

The dowels for the column near gridlines 5/H were not installed to the required D4-1 configuration and has been casted in concrete. 4EA perimeter vertical bars were omitted from the column but the spacing/grid was maintained per the D4-1 layout. In addition, 16EA dowels were installed at the interior of the column as depicted in SK-102.

Please advise on how to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/12/2013
RESPONSE:
At Column C3 near GL 5/H, design works despite the 4 dowels Contractor did not install (shown as "X" in the RFI). Therefore, it is acceptable to construct the column without these 4 bars. The extra dowels inadvertently installed by Contractor at the column interior (bars not in Construction drawings) are not needed and shall be abandoned.

REQUEST:

SUGGESTION:

ANSWER:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Accept Suggestion: ☐

Please refer Contract Specification Section 03 20 00-3.1.A.6.b and attached excerpt from CRSI Chapter 11

Contract Specification 03 20 00-3.1.A.6.b states, "No field bending of bars partially embedded in concrete is permitted, unless specifically approved by the TJPA Representative and tested by Independent Testing Laboratory for cracks."

1. Please clarify if the statement applies to field realignment as defined in CRSI Chapter 11.
2. Please confirm if it is acceptable to field realign bars per the parameters described in CRSI Chapter 11.

George Metzger
11/17/2013
RESPONSE:
Field bending, including field realignment, of partially embedded reinforcing shall be subject to the approval of the SEOR on a case-by-case basis.

T-0886 **BGP - Round Column Tie-Hook Modification** **Closed** **11/07/2013** **11/17/2013** **11/15/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please refer to drawing S1-3304.

In the round columns (type Al, A2, A3, Bl, B2 and B3), Gerdau proposes to change the 90° hooks to 135° hooks in order to allow for more room to install the vertical bars and their couplers. Please refer to attached SCCI sketch SK-RFI-373 for reference of proposed detail.

Please confirm if this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/14/2013
RESPONSE:
Proposed 135 degree hooks are acceptable for the columns indicated in the RFI. The hooks shall be "Seismic hook" per ACI 318-08 and overlap min 6" as called out in Construction Drawings (See Sheet S1-3304).

T-0887 **SSS - Moment Beam to Column Web Connection Clarifications** **Closed** **11/07/2013** **11/17/2013** **11/19/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer to the moment beam to column web connection details on 5/S1-5012, 10/S1-5013, and 2/S1-5019 in regards to the following:
1) Please confirm the dimensions and weld prep noted are acceptable. [Reference CD RFI 080 SK1]

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

RESPONSE:
1) Confirmed.

2) Typically (unless otherwise noted), moment frame continuity plates are per Detail 5/S1-4202 and

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

2) Confirm the increased thickness and placement of the continuity plate are acceptable to allow for beam over roll. [Reference CD RFI 080 SK1]
3) Please confirm the continuity plate dimensions noted on CD RFI 080 SK2 are acceptable. Note that the "a" dimension shown is defined as ½(bf-tw).
4) Please confirm the dimensions and weld prep indicated for the Type 4 Drag connection are acceptable. [Reference CD RFI 080 SK3]

continuity plate thickness match the thickness of the moment frame beam flanges as shown in relevant details in Sheet S1-4201 and S1-4203. However, at joints GL 32.4/D.4 and GL 32.4/E.6 at Second Level where Detail 5/S1-5012 is called out, continuity plates at the beam bottom flange (bottom continuity plate) shall be 2 1/2" thick. In addition, at GL 32.4/D.4 locate the bottom continuity plate such that top of the continuity plate is aligned to top of the bottom flange of the BU40 Moment Frame Beam. At GL 32.4/E.6 locate the continuity plate such that bottom of the continuity plate is aligned with bottom of the bottom flange of the BU 40 moment frame beam. The reason this is needed is that although the moment frame beam is 40" deep in both cases, the perpendicular beam sizes are different at GL32.4/D.4 (W40x294, d = 40 3/8") and GL32.4/E.6 (W40X199, d = 38 5/8") therefore continuity plates need to be thick enough to pick up both the moment frame beam and the perpendicular beam bottom flanges.

3) Confirmed.

4) Confirmed.

T-0887.1 **SSS - Moment Beam to Column Web Connection Clarifications** **Closed** **12/11/2013** **12/21/2013** **12/16/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

After reviewing the response to item 2 on SK RFI 104 we believe a thickness increase should be allowed for the bottom continuity plate to allow for mill tolerance of rolled sections as per AISC Table 1-22(attached).

1) Due to mill tolerances the actual depth of a beam can over run in depth from -1/8" to +1/8" at the beam centerline.
2) Due to mill tolerances the axis of the flanges in relation to the beam web can have an out of square effect of as much as 5/16" from toe to toe of the beam flange.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that it is acceptable to increase the bottom continuity plates by 1/4"

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Increasing the continuity thickness provides a reasonable land for back up material for the fill penetration weld required in the field (see attached sketch SK1 for clarification)
Please confirm it is acceptable to increase the bottom continuity plates by 1/4".

T-0888 **SSS - Rebar Holes and Headed Stud Details** **Closed** **11/07/2013** **11/17/2013** **11/14/2013** **Potentially** ☐

REQUEST:

Please reference detail 9/S1-3701 and the noted grid lines G.9.9 and G.10.1 on S1-2303 and provide clarification on the following items. Refer to CD RFI 105 SK1 through SK3 for additional information.
1) Confirm the headed studs in the transfer girder per 11/S1-3701 may be located as shown.
2) Confirm the slope of MFB 6 is 1.097° as indicated in CD RFI 105 SK2 or advise otherwise.
3) Provide the vertical dimension indicated on CD RFI 105 SK2 to located PL 1 ½" x 14" x 2'-6" (added in ASI 106).
4) Confirm it is acceptable to locate the first row of holes 6" above the underside of the transfer girder as indicated in CD RFI 105 SK2.
5) Provide the vertical dimension required to locate the row of 3" dia. holes indicated in CD RFI 105 SK2.
6) The hole indicated fouls the stiffener as shown in CD RFI 105 SK3. Confirm the spacing may be reduced to 5" at this location to clear the stiffeners and weld for the stiffeners to the beam web.
7) The two holes indicated on CD RFI 105 SK3 are located directly adjacent to the stiffeners with no clearance. Please advise if this condition is acceptable or if the holes are to be shifted to avoid the stiffeners.
8) Provide the vertical dimension required to locate the 3" dia. holes as indicated in CD RFI 105 SK2. Please verify the other holes in this row are to be located per the angle and spacing in items 2 & 7.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

TT's response:

1). Confirmed

2). 1.06 degree

3). Center line of the plate at EL.15.66 (for bottom bars in 48' deep beam)

4). Confirmed

5). Center line of the holes are at EL. 14.66 (for bottom bars in 60" deep beam).

6). Confirmed

7). Confirmed that the holes are to be shifted to clear the stiffeners.

8). The 2 holes in column can be shifted as noted in item 7). The holes in this row may be located per items 2 & 7 (following the slope of the concrete beam, center line of the hole at 1.75" above the bottom of the MFB6.

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please reference grid C.9.9 and C10.1 for the transfer girder to moment beam connection shown on S1-2303 and provide clarification on the following:
1) Confirm the noted angle (1.2°) is the correct slope for MFB 1 (per Revit Model). If not, please provide the correct angle. [Reference CD RFI 110 SK1 & SK2]
2) Confirm the depth of MFB1 is 48" at this location in accordance with 6/S1-3600. [Reference CD RFI 110 SK2]
3) Confirm the noted elevation. [Reference CD RFI 110 SK2]
4) Provide the width and length of vertical slots to be provided at the 18" stiffeners. [Reference CD RFI 110 SK2]
5) Provide the vertical dimension required to locate the #10 bar shown and subsequently the 2" dia. holes through the beam web (SK3), the vertical slots through the 18" stiffeners, and the 3" diameter holes through the 2'-9" stiffeners.
6) Confirm the bar indicated represents the beam top bar and that the dimension indicated (3 1/16") is correct. Note this dimension is based on 5/S1-3600. [Reference CD RFI 110 SK2]
7) Confirm detail 6/S1-3705 accurately reflects the number of headed studs and spacing required. Otherwise, please provide the requested A, B, C, & D dimensions.
8) Detail 4/S1-3705 indicates that 3-3" diameter holes are to be provided in the web stiffeners on each side while only two #10 bars with terminators are indicated to be provided. Further, the section cut 6/S1-3705 (issued with ASI 106) calls for #9 bars at this location. Please clarify the intent of this detail as it pertains to the rebar configuration and stiffener hole details.
9) Provide the dimension required to located the first 2" dia. hole from the end of TR9.9 and TR10.1 and confirm the spacing of the remaining holes is to be 8" OC as noted on 6/S1-3705.
10) Confirm the dimensions indicated are accurate or provide the required dimensions at this location. The dimensions shown are based on detail 5/S1-3600 and should be confirmed based on the answer provided in Item 8.

1). The slope shall be 1.30 degree at Grid 9.9 and 1.16 degree at Grid 10.1 per top of concrete slab elevations noted on the plan. Revit model (and other electronic files) shall not be used for establish dimensions.

2). Confirmed that the MFB1 is 48" deep per beam schedule on S1-3600.

3) Top of concrete is at 17.59 at Grid 9.9 and 17.55 at Grid 10.1

4). The bottom of the slots are at 2" from the bottom of the concrete beam to allow the beam bottom bars to go through.

5). The center line of the beam bottom bars shall be at 2.375" above the bottom of the concrete beam (1 1/2' cover + diameter of the ties + 1/2 of the longitudinal bar diameter).

6). The dimension shall be 3.8125" per 5/S1-3600 (2 3/4" cover+ tie diameter+ 1/2" longitudinal bar diameter)

7). A=15", B=5, C= 12", D= 16".

8). Only one hole each side is needed in vertical stiffeners to allow the #10 bars to go through. See 6/S1-3705 for locations of the hole.

9). First hole is 6" from the end of beam. The holes are at 8" on center to match with the tie spacing noted on beam schedule.

10). The 2 9/16" dimension noted shall be changed to 3", the 1'-07/17" dimension shall be changed to 1'-0" (for a total beam width of 30" as noted in the beam schedule).

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:**

Co-Author:

REQUEST:

Further to email from the design team (Lee Ishida of Thornton Tomasetti) dated 09/03/13) "the design team wants to pursue with option on SK-2, provided the layout of the pin-pile columns has been coordinated with the moment frame beams so that the block-outs indicated in the sketch do not interfere with the moment frame beams" this option on SK-2 will be used where the strut support beams of the trestle and the internal bracing system are in conflict with the concourse slab, on the other conflicts around the perimeter CDSM wall where the lookout supporting the walers are in conflict with the waterproofing lap length requirements, the lookouts will be relocated above the walers to achieve the necessary lap requirements.

Please confirm if this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

T-0892.1 **BGP Level B bracing - Concourse Slab elevation conflict gridline 1-9** **Closed** **11/13/2013** **11/23/2013** **12/04/2013** **Potentially** ☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

The answer to RFI T-0892 does not answer the intended question, it was not a question on waterproofing requirements, the intended question was to confirm that the design team wish to proceed with the preferred option on sketch SK-2 i.e. to moving the conflicting Level B internal bracing elements to the revised location above the struts or walers whichever is applicable, if this is an acceptable solution, WOJV will proceed and engage the contractor and the Engineer of record for the bracing system to elaborate on this design and install these fixes in the field.
WOJV have already established the waterproofing lap length requirements in coming up with these fixes.

Please confirm that this is the preferred solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/19/2013
RESPONSE:
Having been provided with only schematic representations of the proposed excavation bracing relocation, SK-2 appears to be a preferred solution. Excavation shoring design is a contractor provided item and it is up to contractor to determine the particular temporary configuration that will produce the finished structure as designed. This includes due regard to number and location of block-outs which should not encroach upon the moment frame beams. To this point, we note that pin-piles 19-22 are in close proximity to gridlines (and moment frame beams). This also may be the case for pin-pile 6 and 18. Note that past discussions also included the possibility of removing pin-pile 8 prior to Lower Concourse construction. In any case, any change to the excavation bracing shall be formally submitted for

review.

T-0893 **BGP - F15 Fixtures on Dimmeable or Non-Dimmeable Lighting Circuits** **Closed** **11/11/2013** **11/21/2013** **11/13/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Webcor/Obayashi Joint Venture Bob Garcia

REQUEST:

Please refer to drawing E-0006.

General Note N on DWG E-0006 states in part: "Allocate a maximum of three dimmable lighting branch circuits (multiwire) per conduit home run. Allocate a maximum of six non-dimmed lighting circuits per conduit home run." The type F15 fixtures used throughout the job on the train platform level are fed from, Panels designated "EDMH," which are dimming panels.

Are the circuits feeding these lights considered dimmable lighting branch circuits? Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/12/2013
RESPONSE:
Confirmed, circuits feeding type F15 fixtures are dimmable circuits. Provide separate neutral for each branch circuit per requirements of specifications 26 05 19 par. 3.1.I.

T-0894 **SSS - Double Angle Connection Conflicts Along GL** **Closed** **11/11/2013** **11/21/2013** **11/22/2013** **Potentially** ☐

Co-Author:

REQUEST:

Reference CD RFI SK1 to SK3 indicating the plate on the transfer girder which typically fouls the beam to transfer girder connections along grid lines C.3 and F.7. This is typical at the following locations at Ground Level: 2/C.3; 4/C.3; 5/F.7; 6/C.3; 8/C.3; 9.9/C.3 (see SK2 & SK3); 10.1/C.3 (see SK2 & SK3); 12/C.3; 14/C.3; 16/C.3; 19.9/C.3; 20.1/C.3; 21/C.3; 23/C.3; 23/F.7; 24/C.3 & 24/F.7

Please confirm that the response and details provided in W/O RFI T-0820 can be applied at these locations, thus shear plates may be used in lieu of double angle connections. (W/O RFI T-08020 response is attached for

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed. Shear plate connection details provided in the response to the RFI T-0820 may be used in lieu of double angle connections at the locations noted in the RFI where the intermediate transfer girder plate fouls the double angle connection. For W16 and deeper beams, the total number of bolts at a shear plate connection shall be per schedule on 2/S1-5011. Provide two bolts in the top shear plate and remaining bolts in the bottom shear plate. For W14 and shallower beams provide two bolts with only the top shear plate. Bolt edge distances, shear plate thickness and welds shall be per 2/S1-5011 with the exception of W40 beams where the vertical bolt edge

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

reference.)

distance may be reduced to 1 3/4".

REQUEST:

ASI #107 released updates to drawing set A1-2122 to A1-2127 with the changed note at the top right of page. Previously, CC= concrcrete curb were stated as "CC-Cone curb not in TG06." In ASI 107, this note was revised to "Cone curb ref to A-0022 for cone curb schedule. Ref to struct dwgs for coupler details".

1. Drawing sheet A-0022 is not a part of issuance in ASI 107. Please provide referenced drawing for coordination.

2. Please provide details on how to install CC in Area 3 where the concrete has been placed with no coupler/ dowels.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/218/2013
RESPONSE:

AAI Response:
1. Refer to Attached SKA-2950, which is based on A-0022, showing the Concrete Curb Schedule.

TT Response:
2. Refer to Detail 2 of S1-3002 for curbs where concrete has been placed without couplers or dowels.

T-0896 **SSS - Shear Connection detail at Transfer Girder** **Closed** **11/11/2013** **11/21/2013** **11/22/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor Construction LP Gregory Kemerer

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer to detail 2/S1-5011 and CD RFI 147 SK 1 and clarify the following:

1) Provide the stiffener plate thickness and confirm the back-up stiffener is required at every shear plate location.
2) Confirm weld "F" is to be applied to the stiffener plates.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Stiffener plate thickness to match shear plate thickness provided in the same detail. Back-up stiffener is required with the exception of GL 3/F. At GL 3/F, there is a shear plate connection on one side of the transfer girder and there is a double angle connection on the other side, therefore a back-up stiffener is not required.

2) Confirmed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0896.1	SSS - Shear Connection detail at Transfer Girder	Closed	12/12/2013	12/22/2013	12/26/2013	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The response to RFI T-0896 confirmed that a full depth back-up stiffener will be required at every shear plate location with the exception of a few locations. Along grid 10.1, between grids D.8/E there are full depth connections for a W33 and W24 staggered on either side of the Transfer Girder that are 4" C/C of beams.

1. Please verify if it is acceptable not to provide a back-up stiffener at these locations? See CD RFI 147.1 SK1 & SK2.
2. If back-up stiffeners are not required at these locations, please provide a max offset dimension where stiffeners can be omitted for similar conditions. See CD RFI 147.1 SK1 & SK2.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Backup stiffener can be waived if there is another full depth shear plate on the opposite side of the connection plate within a distance not more than 6".
2) See Response to 1).

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0897	SSS - NE Coordinate Accuracy	Closed	11/12/2013	11/22/2013	11/19/2013	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Reference is made to drawing C-0100, "TTC Grid and Alignment Control." The northing and easting coordinates are provided with only two decimal places, producing a considerable amount of calculated error between the coordinates and the gridline dimensions. Please provide the N/E coordinates with at least four decimal places to reduce the calculated error from the gridline dimensions.

Additionally, the N/E coordinates provided at Grid 2/W appear to intersect with Grid 2/G. Please advise if these grid lines intersect and if the N/E coordinates provided also apply to 2/G.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

RESPONSE:
Two decimal places are adequate. Assume there are an infinite number of zeros after the two decimal digits.

The N/E at the intersection of grids 2/W also apply to the intersection of grids 2/G.

T-0899 **BGP - Electrical Room Dimensions in RFI 778.1,780.1,781.1 & 782.1** **Closed** **11/12/2013** **11/19/2013** **11/15/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

The AAI mark ups included in the responses to RFI 778.1, RFI 780.1, RFI 781.1 and RFI 782.1 do not reflect dimensions in the latest ASI 107 documents or submittal

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/14/2013
RESPONSE:

review comments in the Comprehensive Mat Slab Drawings in submittal drawings package TG0600-0103.

For example, the face of wall of Electrical Room B2460 per Response to RFI 780.1 is shown as 4'-0" from GL 15, however the latest drawing issued in ASI 107 A1-2124 shows the face of wall to this room as 3'-7 5/8" from GL 15. Shimmick has poured this area(Area 8) per ASI 104 which shows this dimension to be 3'-8". The next area to be impacted by these discrepancies will be placed on 11/24/2013.

This discrepancy is present in all of the dimensions issued in the mark-ups included in the RFI responses (attached) and the rooms shown in RFI 781.1 and 782.1 are scheduled to pour on 11/24/13.

Please provide a conformed drawing that shows the current layout for the following Electrical Rooms: B2640, B2461, B2441, B2560.

The attached SKAs clarify and confirm current layouts/dimensions of Electrical Rooms mentioned in RFI T-0899 as well as setting out of all other PH1 walls at the Train Platform Level.

1. For setting out of PH1 walls above the Train Platform Matt Slab Level, refer to the Zone Plans (SKA-2871 to SKA-2878) and Enlarged Plans (SKA-2893 to SKA-2894).

2. For Setting out of knee walls under the Train Platform Level, refer to the Train Platform Level Slab edge plans (SKA-2885 to SKA-2892) and Detail Section (SKA-2895).

3. For setting out of couplers for PH2 walls, refer to the Train Platform Level Wall Plans (SKA-2879 to SKA-2884).

Note that Detail Section 1 on SKA-2895 shows that for the platform MEP rooms, the edge of slab, dimensioned on the Train Platform Level Slab Edge Plans, aligns with the face of wall for the room. However, the face of the knee wall below is set 4" outside of the Platform Level Slab. This step is to provide a key for the future train platforms.

The Wall Plans were included in the TG06 Below Grade Package specifically for the setting out of wall starter couplers. The Wall Plans should not be used for the setting out rooms to position electrical equipment etc. The Zone Plans are more appropriate for this purpose

The cast node material is not a prequalified base material, thus a PQR test for all welds to the cast material is

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Ground, Bus Deck and Roof Castings are welded to 32" diameter pipes therefore per Table 4.1 of AWS,

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

required. The cast node manufacturer, Bradken, has indicated that all test materials will be supplied in flat plate form only. While AWS D1.1 Table 4.1, Note b qualifies that pipe diameters greater than or equal to 24" may be tested on
flat plate, AWS D1.1 Table 4.1 requires that all pipes under 24" must be tested in tubular form. Please confirm it is acceptable to perform all PQR testing for castings less than 24" in diameter, including the 16" diameter castings at the Light Column, on flat cast plate material.

PQR can be performed with flat cast plate material. For the light column upper cast node which connects a 28inch tube with a 16inch tube, we confirm that the PQR can be performed with flat cast plate material.

T-0901 **SSS - Edge of Slab Support Clarifications** **Closed** **11/13/2013** **11/23/2013** **11/26/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

1) Please confirm the weld indicated is intended to be an overhead weld from the outstanding leg of the L5x5x3/8 angle to the underside of the bent plate.
2) Provide required weld size and minimum weld lengths as indicated in CD RFI 112 SK1.
3) Confirm it is acceptable to hold the L5x5x3/8 angle 1" back from the edge of slab.
4) Provide minimum required size of gusset plate and welding information as indicated in CD RFI 112 SK1.
5) Confirm it is acceptable to typically locate the bolts 3" from the edge of the gusset plate as shown on CD RFI 112 SK1.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.
2) Use a 3/16" double sided fillet weld between the gusset plates and beam web/flange. Weld shall be provided for the entire length of the gusset plate in contact with the wide flange beam.
3) Confirmed. Note that the 1:1 slope requirement on the kicker angle supporting the cantilevered portion of the slab is not required.
4) Provide a top gusset plate with a minimum length of 5" and
a) the centerline line of the kicker angle intersects the center of the gusset plate length at the top of the plate. Provide 3/16" double sided fillet weld between the top gusset plate and beam flange. Provide bottom gusset plates with minimum dimensions of 5"x 5". A minimum bolt edge distance of 1.5" shall be provided at the kicker angles with the bolts centered on the angle legs.
b) edge distance to the bolt is 1.5" min on all sides.

Co-Author:

REQUEST:

During level D bracing removal at area 7,a column rebar dowel was bent, as shown in the attached photograph.

Please see below repair options:

1. Abandon the bent rebar leave it in its current position projecting 5' above the mat slab, place and additional equal size bar alongside the damaged bar as a replacement with possibly a 90 degrees hook at the base

2. Leave the dowel as is, couple the upper section of the bar onto it and bring it back in line as the bar continues vertically

3. Drill and epoxy in a new same sized bar beside the damaged one, the slab would have to be scanned for

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Option 3 is acceptable with the following notes:

1. Damaged rebar shall be cut off at slab level.

2. New starter bar to be doweled with approved adhesive.

3. New starter bar shall be placed as close as possible to original bar location and bar location to be approved by SEOR.

4. Remaining column starter bars and mat reinforcing shall be avoided.

5. Mat cover concrete may be removed locally to abandoned bar.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

rebar location and new location pick to avoid damaging the existing reinforcement.

4. Concrete around the rebar to be removed the bar would then be cut and a new bar welded to it.

5. Concrete around the rebar to be removed .The bar would be cut and a barlock would be used to couple the rebar this could be difficult to achieve due to congestion with the top mat reinforcement and the depth required for the bar lock to be fitted

Please advise on which option is acceptable.

6. Minimum embedment shall be 45".

7. Starter bar to be shop bent no greater than 1:6 (sim 4/S1-3001) so that column reinforcing geometry is resumed per S1-3304.

T-0903 **SSS - Location of Roof Beams for W-1 Glazing** **Closed** **11/14/2013** **11/24/2013** **11/19/2013** **Potentially** ☐

T-0905	BGP - Light Column Anchor Bolts Conflict with Rebar	Closed	11/15/2013	11/25/2013	11/27/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please refer to attached drawing S1-3009, S1-6008.

SCCI encountered potential conflict between anchor bolts of light column (layout depicted in 2/S1-6008) with light column rebar as shown in 1/S 1-3009. Please find attached model depicting conflict between bundles of 2 ea rebar #11@16" OC with the layout of the anchor bolt.

Please advise and provide parameters with which the rebar may be moved to clear the anchor bolts.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/25/2013
RESPONSE:
In order to avoid conflict with the light column anchor bars detailed on S1-6008, the bundled #11 bars depicted in Section 1/S1-3009 may have their number take precedence over spacing. Any bundle may be moved from the typical 1¿-4¿ module by up to 11-7/8¿. The minimum clear spacing between any two adjacent bundles shall be 1-3/8¿. The maximum spacing between any two adjacent bundles shall be 23-3/4¿.
The particular arrangement of bundled bars is at the contractor¿s option per the rules described above. One potential allowable arrangement is presented in the Sketch SKS-0299 (attached).

T-0906	BGP - Omitting the Grout Port at all Applicable Column Base Plates	Closed	11/15/2013	11/25/2013	12/12/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference column base plate details on Sheet S1-5051.

SCCI proposes to permanently remove the grout ports used to grout the column base plate as shown in A/S1-5051 . SCCI believes the 2" grout holes and 3" perimeter clearance is sufficient to grout voids underneath and around the base plate and shear keys. The blockouts will be grouted from the holes and/or perimeter and the hose removed as the voids are filled up.

Please confirm it is acceptable to remove the grout port depicted in A/S1-5051, typical at applicable column base plates.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/19/2013
RESPONSE:
Contractor proposed grout procedure is acceptable, pending on the successful grout procedure mock up.

T-0907	BGP - Haunch Reinforcement Embedment Detail in Area 9	Closed	11/15/2013	11/25/2013	11/20/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Scott Bunnell

REQUEST:

Please refer to drawing S1-3201 and attached SCCI sketch SK-RFI-383.

The haunch bars in Area 9 were fabricated to a shorter length than required. Per discussions with TT Engineer in the field, Gerdau proposes to raise the lowest point of the haunch bar 6" from the designed location. As a result, the haunch would have a 64" embedment into the mat slab and 29" minimum embedment into the foundation wall. Refer to attached sketch for further details.

Please confirm the revised haunch reinforcement detail in Area 9 as depicted in the attached sketch is acceptable .

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/18/2013
RESPONSE:
The reduction in length is acceptable for use in Area 9 with the following conditions:
1. The top of bar embedment into the wall shall comply with RFI T-0702 and T-0716.
2. The bottom of the bar shall be chaired as required above the lower mat.
3. Embedment into the mat shall conform to RFI T-0710 and T-0762.

REQUEST:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please refe to attached detail A on sheet S1-5051.

Please confirm it is acceptable to reduce the overall 14" shear key block-out dimension to 10"; therfore, allowing for 2-inches of clearance all around the shear key as discused and coordinated during the 11/12/2013 mock-up review. See attached detail A/S1-5051 for mark-ups.

Please note the revised column base plate block-out is typical for Type I and II.

George Metzger
11/18/2013
RESPONSE:
Acceptable

T-0908.1 **BGP - Concrete Beam Top Bar Spacing and Layering** **Closed** **11/22/2013** **12/02/2013** **12/04/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please refer to drawing S1-3400 and RFI T-0908.

In order to clear the 10" shear key block-out as approved in RFI T-908, please confirm it is acceptable to place the additional short bars in a typical concrete beam in a second layer. Also, please confirm it is acceptable to increase the space between the top and short bars near the center of the beam to 10".

Please reference the attached photo for more details.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
12/3/2013
RESPONSE:
- This response addresses Lower Concourse Level concrete beams framed to concrete columns with steel columns above only. Reinforcement information for these beams is provided in Sheet S1-3400.

- Where the beam has more than 6 top bars over the column, place the top bars in 2 layers. A minimum of 6 bars (long bars placed first) shall be placed in the top layer and the remaining bars shall be placed in the 2nd layer. When the concrete beam and the steel column centerlines coincide or slightly offset from each other, It is acceptable to increase the space between concrete beam top bars to 10" to clear the shear key block out.

- For beams B30, B66, B71 and B76 provide 6-#11 Right End Top LONG Bars and 6-#11 Right End Top SHORT Bars. Place short bars in second layer, with a clear distance of 1" or db, whichever is greater.

- All other conditions shall be reviewed separately.

T-0909	BGP - Cast-In Place Plumbing Fixtures on Concourse Level	Closed	11/15/2013	11/25/2013	11/25/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Webcor Construction LP Spencer Sayles

REQUEST:

As discussed in the 10/28/2013 ASI 104 Concourse Plumbing design meeting, this RFI is requesting confirmation that it is acceptable for the Early Below Grade Package (TG06) contractor to block out the concourse slab where plumbing fixtures are shown to be embedded in concrete.

General notes in TG06 drawing P-0005 call for sleeves only in elevated slabs in the EBGP. However, for the future main package plumber to be able to install the cast in place floor sink and floor drain fixtures, larger openings and structural details are needed. The contractor is proposing to install square blockouts sized larger than these fixtures so that they can be installed and grouted in a later date by the main package plumber. The desired benefit of this proposed logic is that concourse plumbing will be installed by one trade contractor who will provide a single source warranty for the work. Also, the later installation allows for more precise coordination of fixture rim elevations.

If this proposed sequence is not acceptable, CIP plumbing fixtures will need to be supplied and installed by the BPG (TG06) contractor. If this proposal is acceptable, please provide blockout size, rebar trim details and rebar doweling details for floor sinks and also floor drains. Sample product data for the fixtures are attached for reference and for sizing of openings.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/22/2013
RESPONSE:
We confirm that installing block-outs for the floor drains and floor sinks (to be installed later) is the acceptable solution. The size of the block-outs has to be determined by the contractor, it is part of the means and methods as a temporary condition.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0909.1	BGP - Cast-In Place Plumbing Fixtures on Concourse Level	Closed	12/11/2013	12/21/2013	12/19/2013	Potentially	☐

REQUEST:

Reference response to RFI 909.

For floor sinks (FSK) shown cast into Lower Concourse structural slab CM/GC proposes to block out 18"x18" square centeredon center of fixture. Propose using detail 1/S-3501 for trimming rebars through this blockout (TG06 contractor). Fixture to be placed and grouted back in as

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
12/18/2013
RESPONSE
It structurally acceptable to blockout the Lower Concourse sinks and drains as indicated in the RFI, following Detail 1/S1-3501. Suggest blocking out concrete only and leaving reinforcing to be interrupted

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

part of main package (TG-10.2) plumbing scope installation. Doweling and pourback details to be designed by TG-10.2 plumbing trade contractor.

For floor drains (FD) shown cast into Lower Concourse structural slab CM/GC proposes to block out 12"x12" square centered on center of fixture. Propose using detail 1/S-3501 for trimming rebars should they encroach into the blockout. Fixture to be placed and grouted back in as part of main package (TG-10.2) plumbing scope installation. Doweling and pourback details to be designed by TG-10.2 plumbing trade contractor.

Please confirm the above proposed scope is structurally acceptable.

un-cut until the time of fixture installation when the bars can then be cut to a close fit. This method will eliminate potential required dowels to support the grout and mitigate the number of bars required to be cut should there be small changes in the location of the fixture. Contractor shall coordinate the sizes and locations of all blockouts with the actual fixtures selected and the approved drawings for that scope of work.

T-0910 **BGP - Mechanical Couplers at Top of Partition Walls** **Closed** **11/18/2013** **11/28/2013** **12/02/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor Construction LP Jackson Tukuafu

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please refer to attached drawing excerpts from sheet S1-2052 and 4/S1-3205.

The typical wall section shown on S1/-2025 for the tank walls directs the reader to section 4 on S1-3205. When reviewing this section the design calls for mechanical couplers at the tops of the walls per detail 6/S1-3001. The formsaver coupler depicted within this detail is a threaded product that will not support a hooked or bent bar because the specific orientation of the hook is not possible.

Please provide direction on how to proceed.

SUGGESTION:

1. To maintain the formsaver coupler but modify the male bars with hooked ends, potentially use HRC 555 heads
2. Eliminate the coupler and use a drill and dowel method of installation for the follow on bar into the soffit
3. Modify the vertical bar from contract TG06 to extend out of the concrete with the desired hooks oriented correctly for the follow on contract work.
4. Modify the coupler type by using a formsaver style coupler that attaches the male dowel with epoxy adhesive. This would provide no extension of the bar above the TG06 contact line and provide a pre-determined layout for the follow on bars with the ability to orientate the hooks as required.

ANSWER: **Accept Suggestion:** ☐

RESPONSE: RFI T-0910 BGP - Mechanical Couplers at Top of Partition Walls

George Metzger
11/27/2013
RESPONSE:
At the tops of the water tank walls, maintain the formsaver couplers in anticipation of headed reinforcing in lieu of hooks.

T-0911 **BGP - Seismic Joint Specification Clarifications** **Closed** **11/18/2013** **11/24/2013** **11/25/2013** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference Specification Section 07 09 16 - 2.6.A.1.

The aforemention section states, "Provide joint assemblies in single lengths between changes in direction with vulcanized, mitered comers where joint changes directions or abuts other materials."

1. Please confirm that this is in reference to the Omega Seal gasket, and not the clamping system and embedded steel.
2. Please confirm that it is acceptable to use clamping components with 4'-0" maximum lengths with butt joints not to exceed 1/8".
3. Please confirm that it is acceptable to use 14' max lengths on steel embed with butt joints not to exceed 1/8".

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/25/2013
RESPONSE:

AAI Response:
1. Confirmed. The Specifications Section 07 09 16-2.6.A.1 refers to the Seal gaskets and not the clamping system and embedded steel.
2. For Clamping component lengths, contractor to coordinate with manufacturer of Double Seismic Joint Seal complete with clamping assembly.

TT Response:
3. Acceptable.

T-0912 **SSS - GFRC Drawings** **Closed** **11/18/2013** **11/28/2013** **12/04/2013** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

On the Type 2 (M) Drag connection per detail 1/S1-5017 refer to sketch CD RFI 117 SK1 for the GFRC question below. Note 4 references GFRC drawings. The connections in the clouded areas cannot be completed until the GFRC information is issued. Please supply the necessary information.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

"For Reference Only" see the attached "In-Progress & Draft" 3D Digital files containing geometry control information and related 2D drawings. These documents may be updated prior to issue and will be issued for construction in the future, however the CMGC can use the data to coordinate the work of adjacent trades.

T-0913 **BGP - Seismic Joint Detail Clarifications** **Closed** **11/18/2013** **11/24/2013** **11/25/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference details 7/A1-8881 (ASI #107) and 4/S1-3010 (ASI #100).

1. Detail 7/A1-8881 calls for a "neoprene gasket compressed by bar and bolt typ." Please provide sizes for

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AAI Response:
1. For size of tabs and bolts for the neoprene gasket, refer to Specification Section 07 09 16 - Seismic Joint Assemblies - Below Grade Package. Fastening device types and sizes required are to be engineered to suit

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

tabs and bolts. Also, provide welding instructions (if necessary).
2. The same detail shows pipe penetrations through the seismic joint at both levels. Plumbing drawings show a 4" "SAN/ AD" running parallel to the seismic joint. Please confirm this pipe penetrates the joint. If so, provide locations off of grid and pipe sleeve dimensions. Also, provide details on how to seal this penetration (watertight).
3. Detail 4/S1-3010 shows a 3/4" dia Headed Stud at 12" oc, with 6" embed. Is this to be one row as the drawing shows?
4. Detail 4/S1-3010 also calls for 4" diameter hole at 2'-0" oc. What is the purpose of these holes? If the clamping system is continuous, then what will support the rod at the hole locations? Please clarify.

and ensure compliance with the specification. Contractor to coordinate components specified under this section, including Double SJ Seal c/w Clamping Assembly, SJ Cast-in Galv Steel Frame and Stud Assembly, and Waterproofing Assembly, which are closely integrated with materials and assemblies specified in other Specification sections and require close trade coordination to complete the overall Seismic Joint Assembly.

2. For Seismic Joint Drain locations, refer to SKA-2949. Pipe sleeves are not required around the pipe penetration. Drains to be provided with clamp frames / flanges for clamping the waterproofing system, creating a seal around the pipe penetration at the Seismic Joint.

TT Response:
3. Confirmed.

4. The holes are to ensure that concrete fills all the way up to into the curb and allows for the use of a concrete vibrator. Refer to Double Seismic Joint Seal with Clamping Assembly Manufacturer for bolt spacing. Coordinate concrete fill holes to avoid interference with bolts of the clamping system.

T-0914 **SSS - Detail Clarifications for Edge of Slab Supports** **Closed** **11/18/2013** **11/18/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor Construction LP Gregory Kemerer

REQUEST:

Please reference details 2, 3, 7, and 9 on S1-5001 and CD RFI 120 SK1-SK2 for the following items:
1) Details 2 & 7/S1-5001 appear to indicate the same condition, however the required deck angle supports are different. Detail 2 shows the configuration of 3/8" bent plates while Detail 7 shows a different configuration. of L6x4x5/16 angles. Please confirm it is acceptable to proceed with the deck supports per detail 7.
2) If detail 7/S1-5001 is acceptable, confirm the deck

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Detail 2 shows deck support at exterior column while Detail 7 is to show the slab reinforcement. However, for deck support, either the deck support shown on detail 7 can be used to replace the 3/8¿ angle shown on Detail 2 at contractor¿s discretion.
2) Confirmed
3) Horizontal leg to have a dimension so that the edge angle will have 1 ½¿ bearing similar to detail 8/S1-5000.Vertical leg shall be not less than 4¿.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

support angles can be held back 1" from the edge of slab.
3) If detail 2/S1-5001 is preferred, please provide additional information on the indicated members with horizontal and vertical leg dimensions.
4) Details 3 & 9/S1-5001 appear to indicate the same condition, however the required deck angle supports are different. Detail 3 shows the configuration of 3/8" bent plates while Detail 9 shows a different configuration. of L6x4x5/16 angles. Please confirm it is acceptable to proceed with the deck supports per detail 9.
5) If detail 9/S1-5001 is acceptable, confirm the deck support angles can be held back 1" from the edge of slab.
6) If detail 3/S1-5001 is preferred, please provide additional information on the indicated members with horizontal and vertical leg dimensions.

4) Confirmed
5) Confirmed
6) See response to item 3.

T-0915 **SSS - Connection Clarifications For Beam Cope** **Closed** **11/18/2013** **11/28/2013** **12/04/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

At sample locations on S1-2303 along line 9 between grids D & F and refer to sketches CD RFI 118 SK1 to SK3 for items 1, 2 & 3 for beam cope clearance.
1) The 1/2" max clearance per 1/S1-5010 is not sufficient to clear the k of the W40x183. Confirm it is acceptable to increase the clearance to 1 11/16" to avoid coping the beam inside the k.
2) The 1/2" max clearance per 12/S1-5010 is not sufficient to clear the k of the W24x68. Confirm it is acceptable to increase the clearance to 15/16" to avoid coping the beam inside the k.
3) Confirm it is typically acceptable to increase the 1/2" max clearance at other similar connections on this project to avoid cutting the beams inside the k.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Acceptable.
2) Acceptable.
3) Acceptable at other similar connections where 12/S1-5010 applies.

T-0916 **SSS - Clarifications for Typical Deck Support at Wet Column** **Closed** **11/18/2013** **11/28/2013** **12/04/2013** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Refer to detail 4/S1-5001 and CD RFI 133 SK1 for the following items:
1) Per the response to bid question TG07.1-0140, a "wet" column is any column which has a vertical plumbing line running along it. Please confirm that, according to this response, any column with one or more round slab openings close to it on the Edge of Slab plans is to be detailed as a "wet" column.
2) The deck support angles are shown continuous over the beam flanges with the vertical leg of the angles pointing down, causing the vertical leg of the angle to foul the beam. Please clarify the orientation of the deck support angles for the "wet" columns per detail 4/S1-5001.
3) Please confirm the deck support angle on the column flange required only the one-sided fillet indicated or clarify additional welding requirements.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Yes. However, we are not clear on the meaning of ¿detailed as a wet column¿ and why wet column will need to be detailed differently.
2. Where the vertical leg of the angle foul the beam, the vertical leg can be clip off to clear the beam flange (horizontal leg bear on the beam flange).
3. Confirmed.

T-0917 **BGP - Concrete Column T-Head Clearance from Lower Concourse Slab (Mock-Up I** **Closed** **11/18/2013** **11/18/2013** **11/25/2013** **Potentially** ☐

On S1-2503 along line 9 between grids E & F refer to sketches CD RFI 124 SK1 & SK2.

With the beam spacing per S1-2503 (SK1), there will be a 3" offset between the noted beams. The double angle

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The W21x50 beam between GL E.2 and E.6 may be moved to align with the W24x68 on other side of GL 9 as shown on SK2. However note that the location of the W24x68 beam east of GL 9 and between E.6 and F is incorrectly shown on SK2. The W24x68 beam is

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

connection per S1-5010 will not work as the bolts will foul the beam web on the opposite side. We propose to relocate the beam per the proposed dimensions shown or connect these beams with shear plates per S1-5011. Please
review and advise how to proceed.

7' 6" from GL F and is aligned with the W21x50 on the west side of GL 9. Similarly, the W24x68 and W24x55 beams on the two sides of GL 9 between GL D.4 and D are aligned.

T-0919 **SSS - Beam Bottom Flange Bracing Connection** **Closed** **11/18/2013** **11/28/2013** **12/04/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to the beam bottom flange bracing connection detailed on 8/S1-5015 and CD RFI 127 SK1 & SK2 for the following items:
1) In order to support erection requirements, please confirm it is acceptable to:
a. Typically locate the bolts shown 3" from the underside of the top flange and 3" from the face of the beam web as indicated in CD RFI 127 SK2.
b. Typically locate the bolt 3" from the top of the flange indicated.
c. Typically locate the bolt outside the beam profile as shown to make the brace erectable.
2) Confirm the stitch plates should be ½" thick to match the ½" thick gusset plates at each end.
3) Please confirm that it is acceptable to provide slotted holes in the brace at the end connections.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) It is acceptable to typically locate bolts as shown in SK2. However, the slope of the kicker angle shall be such that the centerline of the angle should pass through the centerlines of the beam web and flange similar to that shown in 7/S1-5015 at both top and bottom ends.
2) Confirmed.
3) Slotted holes are not acceptable.
Bottom flange bracing detail 8/S1-5015 applies only at beams with the "dashed arrow" symbol (See Note 1 on 8/S1-5015). Bottom flange bracing of 2nd floor and bus deck level spandrel beams is to be provided per S1-8020 as noted on typical sheet notes on S1-2402 and S1-2502 (See Note 3).

T-0919.1 **SSS - Detail Clarification at Angle Brace** **Closed** **12/31/2013** **01/10/2014** **01/13/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

This is a follow-up to Webcor RFI # T-0919.1 (SK RFI # 173.1 & CD RFI # 127.1)

Per the conference call discussion on 1/16/14 with Webcor, Skanska & Thornton Tomasetti, Candraft was to layout the bracing work points to the underside of the top beam flange superseding the response to locate the work at the top of the beam. Please review the attached two sketches CD RFI 127.2 SK1 & SK2 showing the revised work point locations and confirm this is the intent of the design parameters. Note that the bracing work points are not indicated on 8/S1-5015 and we feel that the original sketch CD RFI 127 SK2 (Relabeled CD RFI 127.2 SK3) conforms to the design with the bolt closer to the inside profile of the beam members and would like to use as modeled.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the work points shown on CD RFI 127.2 SK1 and SK2 are the design intent. The work points shown on CD RFI 127.2 SK3 previous submitted are also acceptable. There shall be no cost and time increase for this one.

T-0920 **SSS - Kicker Connection Clarification** **Closed** **11/18/2013** **11/28/2013** **11/22/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to sketches CD RFI 126 SK1 to SK3 for items 1 to 4:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Acceptable.
2) Acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

1) Confirm it is acceptable to locate the brace at the bevel shown to fit the steel framing in lieu of the 2:1 bevel per 5/S1-5015.
2) Confirm it is acceptable to locate the brace at the bevel shown to fit the steel framing in lieu of the 2:1 bevel per 5/S1-5015.
3) Confirm it is acceptable to increase the thickness of the full depth shear plate to 1" per 5/S1-5015 and connect the kicker brace to the full depth shear plate as shown.
4) Confirm that it is acceptable to typically apply item 3 at other similar conditions.

3) Acceptable.
4) Acceptable.
One general comment that is applicable to all sketches include in this RFI is that where shallower beams are supported by deeper girders. Coping the bottom flange of the shallow beam is not allowed per details 1/S1-5010 and 1/S1-5011.

T-0920.1 **SSS - Kicker Connection Clarifications** **Closed** **12/11/2013** **12/21/2013** **12/26/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Per the response to Webcor RFI T-0920 (SK RFI # 172) it was confirmed acceptable to increase the full depth shear plate from 3/8" to 1". Upon further review of this location there would be an issue where a 1" thick shear plate would foul the bolts connecting the top flange of the Transfer Girder to the Cruciform column base plate.

1). Please confirm it is acceptable to center the 3/8" shear between the bolts and move the beam 5/8" south from its original location.

2). Please confirm the 1" gusset plate welded to the bottom flange of the beam can be moved off the center line of the beam to line up with the 3/8" full depth shear plate. The gusset would move 7/16" from the centerline at this location.

3). If it is acceptable to line up the gusset with the full depth shear plate, there will be a 5/8" discrepancy between the two plates. Please confirm if stitch plates with varying thicknesses can be used to make up the difference.

4). Confirm that it is acceptable to typically apply the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.
2) Confirmed.
3) Confirmed.
4) Confirmed.
5) See responses to 1) through 4). Further comments may be provided on a case by case basis during shop drawings review

above items at other similar conditions.

5). If any of the above suggestions will not work, please provide an alternate detail for these conditions.

T-0920.2 **SSS - Kicker Connection Clarifications** **Closed** **12/16/2013** **12/26/2013** **01/02/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Per the response to Webcor RFI T-0920 (SK RFI # 172) clarification is required regarding the last statement where "Coping the bottom flange of the shallow beam is not allowed" and also per the response to Webcor RFI T-0934 (SK RFI # 187) clarification is required regarding the last statement where coping the bottom flange of the shallow beam shall not exceed 1" from the end of the beam.

1). Per detail 1/S1-5010 where there is a double sided beam connection, the bottom flange is required to be coped in the shallow beam in order to allow for installation of the bolts from the shallow beam side. Note the bolts cannot be torqued if erected from the other side and would also foul the shallow bottom beam flange in question. On the attached sketches CD RFI # 126.1 SK1 to SK4 show some typical sample conditions illustrating the clearance required. The beam flange cope lengths required will range from 4" long in most cases to 4 1/2" at larger web thicknesses. Please verify the shallow bottom beam flanges can be coped for bolt clearance and erection of the beams as noted on SK2 to SK4.

2). Per detail 9/S1-5010 where the WT on the top of the beam flange is required to extend to the end of the beam please verify the beam flange can be coped back to the "k1" of the beam in order to get full bearing and weld for the WT and to clear bolts as noted on SK2.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Coping the bottom flange 4- 4 1/2" long will affect the block shear of the connection design in some cases. Contractor shall prepared the shop drawings satisfying the require tightening clearance and cloud the coped area requesting approval by the Engineer on a case by case basis.

2) Confirmed.

T-0921 **SSS - Detail Clarifications For Edge of Slab Supports** **Closed** **11/18/2013** **11/28/2013** **11/25/2013** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Per details 8 & 10/S1-5001, refer to sketches CD RFI 121 SK1 for items 1 & 2:

1) Confirm the noted area indicates that the concrete slab is not required and the edge plates may be terminated as shown.
2) Confirm the noted area indicates that the concrete slab is not required and the edge plates may be terminated as shown.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The noted area does require concrete slab. Note that this detail is for the slab reinforcement at an edge column condition and the detail note references to ¿see typical slab edge details for additional information¿. Refer to detail 2/S1-5001 for additional info regarding edge of deck at exterior columns.

The noted corner area does require concrete slab. Note that this detail is for slab reinforcement at a corner column condition and the detail note references to ¿see typical slab edge details for additional information¿. Refer to detail 3/S1-5001 for additional info regarding edge of deck at exterior corner columns.

T-0922 **SSS - W-1 Support Connection Clarifications at Bus Deck** **Closed** **11/18/2013** **11/28/2013** **12/12/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to CK RFI 125 SK1, SK2A, SK2B, SK3, and SK4 requesting clarification at the Bus Deck level on the following:
1) Confirm the noted connection should be a moment connection.
2) At the noted location, two supports for CP5 connections are required adjacent to Grid 9. Based on the CP5 detail requirements, a 1 ¼" horizontal stiffener should span from shear plate to shear plate per 1B/S1-8003; however, because these two connection points span the same beam, the horizontal stiffener would foul the incoming beam to shear plate connection, as there is a horizontal stiffener welded on both sides of the shear plate. Please provide a solution for this condition.
3) Confirm the vertical spacing of the 1 ¼" horizontal stiffeners is acceptable to accommodate the connection bolts on the incoming beams.
4) In the beam connection shown in detail 1/S1-8003, the required shear plate will foul the 2" web reinforcement plate required per 1/S1-5017. Please confirm the shear plate is to be welded to the 2" web reinforcement plate with a ½"double fillet weld per 1/S1-8003 or provide an

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Yes, the connections shall be a moment connection as shown on Detail 1/S1-8003 and as denoted on the plans.
2. The horizontal plates shown on 1B/S1-8003 are eliminated (see ASI 109).
3. See response to item 2)
4. Is this question related to the vertical shear plate? If so, Confirmed that the shear plate may be welded to the 2" web reinforcement plate with 1/2" double fillet weld as shown.
5. 3/4" partial pen weld at the bottom flange called out may be replaced by a partial penetration weld with an 3/4" fillet weld overlay built-up.
6. Confirmed.
7. Confirmed.
8. Confirmed.
9. See ASI 109 for bolt hole dimensions.
10. Use 2 1/16" holes for 1 ½" bolts to allow for ½" field tolerance.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

alternate connection detail.
5) A CJP weld is required at the flange connections shown on CD RFI 125 SK2A and SK2B; however, the indicated flanges are out of alignment per the dimensions shown. Please advise on the welding or connection requirements at this condition.
6) Confirm the noted 1" stiffener plate per 1/S1-8003 may be welded to the 2" web reinforcement plate as shown in SK2A and SK3.
7) Due to the placement of the 1/14" horizontal stiffener plates and required ½" fillet weld, the bolts for the beam connections will not be erectable. Please confirm it is acceptable to clip the horizontal stiffener plates as shown to accommodate the erection bolts or supply an alternate solution.
8) Confirm it is acceptable to cut the 1 ¼" horizontal stiffener plates as shown to avoid fouling the 2" web reinforcement plate or supply an alternate solution.
9) Confirm the hole locations for the W-1 glazing system per 1/S1-8003 are acceptable as shown or supply alternate locations.
10) Confirm 1 9/16" dia. holes are acceptable or provide alternate hole size.

REQUEST:

This is a follow-up RFI to RFI T-0922 (SK 171 CD 125)
See attached CD RFI # 125.1 SK1 to SK4 for items 1 to 3:

1.) The 2" stiffener per 1/S1-8003 (ASI 109) and the beam connection shear plate foul each other as shown. Confirm it is acceptable to offset the 2" stiffener as required and use it as the shear plate for the beam connection. If not, supply an alte rnate solution.

2.) Please supply missing dimensions.

3.) The noted dimensions per 1/S1-8003 in ASI 109 (SK4) will result in the bottom holes fouling the beam flange.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). The 2" vertical stiffeners are to be located 1'0" from the center of the W1 connection as shown in Detail 1/S1-8003 in order to make to the W1 connection. Where the beam connection shear plate fault the 2" plate, the 2" plate may be used as the shear plate.
2). See 12/S1-6091 for bolt spacing.
3). Change the 4" dimension to 3 1/4", and change the 8" dimension to 6 1/2".
4). The 3/4" PJP weld at the top flange may be replaced with CJP weld to allow for fit up tolerance. The weld at the bottom flange may be changed to a double fillet weld as shown on the attached sketch

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please issue revised hole locations to suit the beam sizes.

SKS-324.

See attached CD RFI # 125.2 SK1 to SK3 for item #4:

4.) The RFI T-0922 item 5 instruction to supply a PJP weld with a 3/4" fillet weld on top as shown is not possible as there
is only 9/16" of material remaining on top as shown. A PJP weld requires a 0" gap which is not possible as there is no erection clearance. Please supply an alternate weld.

T-0922.2 **SSS - W-1 Connection Clarifications** **Closed** **01/17/2014** **01/27/2014** **01/21/2014** **Potentially** ☐

REQUEST:

This is a follow-up RFI to RFI T-0922 item 5 (SK 171 CD 125)

See attached CD RFI # 125.2 SK1 to SK3:

The RFI T-0922 item 5 instruction to supply a PJP weld with a 3/4" fillet weld on top as shown is not possible as there is only 9/16" of material remaining on top as shown.

Also, a PJP weld requires a 0" gap and this is not possible as there is no erection clearance.
Please supply an alternate weld.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Combined with RFI T-0922.1

T-0923 **SSS - W-1 Glazing System CP6 Connections** **Closed** **11/19/2013** **11/29/2013** **12/11/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to CD RFI 128 SK1 through SK4 in response to the following regarding the W-1 glazing system connection "CP6" at the bus deck level:
1) The indicated CP6 connections foul the beam

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. The double stiffeners (1" thick) shown on 4/S1-8003 will be revised to single 1 ½" thick stiffener (centered to the W1 support). If the connection for the beam supporting crash rail posts fouls the stiffener and

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

connections as indicated in SK3A and SK3B. Please provide a solution to this condition.
2) Confirm the holes for the "CP6" connections may be typically located as shown in SK4 along Grids B & H.
3) Confirm the connection holes for "CP6" are 1 9/16" diameter or provide the required hole diameter.

kicker for W1 support, adjust the beam supporting the crash rail post slightly (less than 3") so it is in line with the W1 support. In this case, the kicker is no longer needed.

2. The center line of the bolt shall be 2'- 0 1/8" from the top of the beam (2'-0 ¼" shown on SK4). The vertical spacing of the bolt shall be 10 ½"(10" shown on SK4) and the horizontal spacing of the bolt shall be 5 ½"(4 1/2" shown on SK4).

3. Confirmed that 1 9/16"dia. hole is fine for 1" bolt to allow for field tolerance.

T-0923.1 **SSS - Dimension Clarification for W-1 Glazing** **Closed** **01/06/2014** **01/16/2014** **01/14/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 128.1 SK1 & SK2:

RFI T-0923 SK4 was submitted with the center of "CP6" down 2'-0 1/4 from the top of steel. The 2'-0 1/4 dimension was taken from the Rhino model. The response to RFI T-0923 item 2 has changed the 2'-0 1/4 dimension to 2'-0 1/8.
1) Confirm the 2'-0 1/4 dimension from the Rhino model is correct.
2) Confirm the locations for all connections for the W-1 glazing system on the Bus Level may be taken from the Rhino model.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Per RFI T-0923 the center line of the bolt shall be 2¿- 0 1/4¿ from the top of the beam.

2. The Rhino model is the geometry control for the W-1 elements as defined in the Contract Documents.

T-0923.2 **SSS - W-1 Glazing System CP6 Connections** **Closed** **05/13/2014** **05/23/2014** **05/27/2014** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please refer to drawing S1-3300 and attached SCCI sketch SK-RFI390

SCCI has located a potential conflicts with the column rebar and the column anchor bolts as depicted in the attached sketch. Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/27/2013
RESPONSE:
The conflicts between the column ties and anchor bolts indicated in the RFI can be resolved with modifications to column ties as outlined in Sketch SKS-0300.

T-0927 **BGP - Injection Hose Testing Criteria** **Closed** **11/21/2013** **12/01/2013** **12/04/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Webcor Construction LP Jackson Tukuafu **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Scott Bunnell

REQUEST:

Please reference attached Grace/DeNeefTechuical Letter, Submittal TG0600-0025, and Spec Section 03 15 00, 3.4, A.

Spec Section 03 15 00, 3.4, A states, "After concrete has cured for a minimum of 30 days, test the integrity of the entire hose system by compressed air. Ensure that a positive pressure can be maintained for at least 5 minutes."

Page 14 of the "Applicator Manual" included in Submittal TG0600-0025 states that "each section of INJECTO should be pressure tested with water to a minimum pressure of I 00 psi, to insure migration of water through

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
1/29/2013
RESPONSE:
Air is specified, rather than water because the injection hose is flanked with hydrophilic water stops. If the hose leaks, it will activate the water stops and the leaks in the hose will go undetected.

Contractor shall use air to test the hoses as specified.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the entire joint. If excessive water leakage out of joint is observed, this may indicate the presence of honeycombs or voids and should be noted on job report..."

In addition, the attached Grace/DeNeef Technical Letter also notes that the INJECTO should be tested with water (not air).
.
Please confirm that it is acceptable to test the integrity of the INJECTO hoses with water as required by the manufacturer.

T-0927.1 **BGP - Injection Hose Testing Criteria** **Closed** **01/06/2014** **01/16/2014** **01/21/2014** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference attached Grace/DeneefTechnical Letter and RFI #T-0927 response.

RFI T-0927 response states that "contractor shall use air to test hoses as specified," but the specifications call out several different types of injection hoses. Although, air testing may be suitable for other products specified, Grace/Deneef requires water testing for the INJECTO Tube system. The attached technical letter from Grace/Deneef states that "INJECTO is an open system, and any air pumped in will begin to flow immediately through the 35 micron filter and polypropylene mesh out into the concrete."

Please review and confirm that water testing is acceptable for the Deneef INJECTO Tube system on the TTC project.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
1/17/2014
RESPONSE:
H&B does not disagree with deNeef that air will flow into the concrete. We also assume that water will also flow as readily into the concrete as air. What is the water test intended to demonstrate? The requirement in the specifications was in response to a Webcor comment during the design phase on the system and specification.

The reason air was specified, rather than water is that the injection hose is flanked with hydrophilic water stops. If the hose leaks, it will activate the water stops and the leaks in the hose will go undetected.

T-0927.2 **BGP - Injection Hose Testing Criteria** **Closed** **02/18/2014** **02/28/2014** **02/19/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer to the isolation bearing details on SK1 & SK2 attached for the following items:
1) Please provide the bolt pattern & size connecting the isolation bearings to the W12x65 & W8x31.
2) Please provide the bolt pattern & size connecting the isolation bearings to the 3" steel plate & C15x40.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Total 4 bolts shall be provided at the top and bottom of each rubber bearing with a 3" offset between the bolts and the centerline of the bearing (square pattern) as noted in response to RFI 931. All bolts are to be 3/4" diameter A325N bolts as noted in the detail.

2) See response to 1).

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Note that the 1/2" plates attached to the rubber pads at top and bottom shall have female holes to "lock" the threaded bolts.

T-0932 **SSS - Detail Clarification at Hanger Support** **Closed** **11/22/2013** **12/02/2013** **11/26/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to S1-2503 near grid 9.9/C and CD RFI 139 SK1 & SK2 which indicate that the W12x65 hanger support beam fouls the skewed W40x327. This same condition occurs at Grid 9.9/G.

Please confirm it is acceptable to trim the bottom flange of the W12x65 beam to maintain a ½" gap between the beam flanges.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the contractor's proposal of trimming the bottom flange of W12x65 is acceptable

---

T-0933 **SSS - Slab Opening Discrepancy at F.5** **Closed** **11/22/2013** **12/02/2013** **12/09/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The slab opening near grid F.5 indicated on drawings S1-2302 and 2/S1-7101 (SK1 & SK2) does not match the location indicated on drawing A1-2862 (SK3). Please clarify the correct slab opening location and provide dimensions to locate the slab opening and perimeter steel.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Slab opening on S1-2302 and 2/S1-7101 will be updated to match the slab opening per A1-2862 in the Concrete IFB Addendum #1 drawings that will be issued soon.

T-0934 **SSS - Beam Connection Clarifications** **Closed** **11/22/2013** **12/02/2013** **12/06/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer sketches CD RFI 141 SK1 to SK7 for beam to beam connection clarifications required per items 1 to 4

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Acceptable.
2) Acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

below:

1) On S1-2505 between grids 1.4 & 2, the required (9) bolts per 1/S1-5010 will not fit in the W33 due to the size of the supporting BU beam. Confirm (8) bolts as shown are acceptable or supply an alternate solution. See SK1 & SK2.
2) On S1-2505 near grids 24.9/E, the required (9) bolts per 1/S1-5010 will not fit in the W33 due to the size of the supporting BU beam. Confirm (8) bolts as shown are acceptable or supply an alternate solution. See SK3 & SK4.
3) On S1-2507 near grids 33.2/E, the required (10) bolts per 1/S1-5010 will not fit in the W36 due to the size of the supporting BU beam. Confirm (8) bolts as shown are acceptable or supply an alternate solution. See SK5 & SK6.
4) On S1-2403 at grids 8/D.8, the required (8) bolts per 1/S1-5010 will not fit in the W30 due to the size of the supporting BU beam. Confirm (7) bolts as shown are acceptable or supply an alternate solution. See SK7.

3) Acceptable.
4) Acceptable.
One general comment that applies to all sketches included in this RFI is that where shallower beams are supported by deeper girders, coping the bottom flange of the shallow beam shall not exceed 1" from the end of the beam.

T-0935 **BGP - Lower Concourse Typical Moment Frame Beam Dimensions** **Closed** **11/22/2013** **12/02/2013** **11/25/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please refer to drawing S1-2204 and S1-2205.

Plan sheets S1-2204 and S1-2205 show 8 Moment Frame Beams (MFB) from GL 14 to GL 20.1 designated as typical. There are no section views of these beams which show the dimensions, as the other MFB have.

Please provide both the Width and Depth of the typical MFB in the lower concourse level.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
11/22/2013
RESPONSE:
Typical lower concourse moment frame beam details are in Sheet 1/S1-3600. Corresponding cross-section detail is in Detail 2 of the same sheet. Beam width and depth info are provided in the cross-section detail.

T-0936 **SSS - HSS Hanger Connection Clarification** **Closed** **11/22/2013** **12/02/2013** **12/04/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to S1-2403 (CD SK1) which indicates the edge detail between grids 8 & 9.9 is to be constructed with an L5x5x3/8 angle per 9/S1-5000. Please confirm it is acceptable to extend the W24x68 beam to the edge of slab, eliminate the L5x5x3/8, and connect the HSS 5" hanger to the W24x68 similar to the detail shown on 1/S1-5020 or provide an alternate detail for this connection.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Not acceptable. Provide the edge of slab support detail per 9/S1-5000 except:
1) Weld the gusset plates to the HSS column
2) Stop the 3/8" bent plate short at the HSS column face. The 3/16" field weld at the bent plate edge is not required
3) Coordinate with RFI T-0901 for information missing on 9/S1-5000
Note that the back span kicker angle is not required at posts or columns as noted on 9/S1-5000.

T-0937 **SSS - SMRF Flared End Connection** **Closed** **11/22/2013** **12/02/2013** **12/02/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to the SMRF flared end connections detailed in CD RFI 144 SK1 to SK5 and clarify the following:

Detail 9/S1-4202 indicates that the flared beam flange is to be the same width as the column flange while detail 5/S14202 does not match this detail and indicates a narrower flared beam flange. Please confirm that the beam flange width is as noted on the elevation drawings and the flange width shall increase at the flared ends to match the column width per detail 9/S1-4202.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the beam flange width is as shown in elevation drawings. Flared beam flange is 6" wider (3" flare on each side) than the beam flange width shown on elevation drawings. Therefore, depending on the location, flared beam flange width is either equal to the column flange width or smaller.

T-0938 **BGP - One-Way Slab Shrinkage and Temperature (S&T) Bars at Columns** **Closed** **11/22/2013** **12/02/2013** **11/25/2013** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please refer to drawing S1-3500

In order to alleviate congestion in a condition where columns cross lower concourse support beams, please confirm that it is acceptable to eliminate the top and bottom shrinkage and temperature bars for the one-way

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

RESPONSE: RFI T-0938 BGP - One Way Slab Shrinkage and Temperature Bars

George Metzger
11/25/2013
RESPONSE:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

slabs up to 12" from the face of support column.

Contractor's proposal to eliminate the one-way slab temperature & shrinkage bars adjacent to the moment frame beams (up to 12" from the face of the beam) is acceptable.

T-0939 **SSS - Connection Clarifications at Moment Beams** **Closed** **11/25/2013** **12/05/2013** **12/06/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to CD RFI 132 SK1 to SK4 requiring clarification on the moment beam to beam connections per the following.

1) At the location indicated on CD RFI 132 SK1, the continuity plate will foul the bolts if (8) are provided per 1/S15010. Please confirm it is acceptable to provide (6) bolts in the W30x99 as shown on CD RFI 132 SK2.
2) Confirm the continuity plate detailed on CD RFI 132 SK2 is correct as shown with tf and bf per W24x68.
3) Please confirm it is acceptable to provide one continuity plate with a slot 1/8" larger than the beam web and the 3 ½" beam cope as indicated on CD RFI 132 SK2 to allow for a continuous CJP weld of the continuity plate.
4) At the location indicated on CD RFI 132 SK1, the continuity plate will foul the bolts if (11) are provided per 1/S1-5010. Please confirm it is acceptable to provide (8) bolts in the W40x277 as shown on CD RFI 132 SK3.
5) Confirm the continuity plate detailed on CD RFI 132 SK3 is correct as shown with tf and bf per W30x99.
6) Please confirm it is acceptable to provide one continuity plate with a slot 1/8" larger than the beam web and the 3 ½" beam cope as indicated on CD RFI 132 SK3 to allow for a continuous CJP weld of the continuity plate.
7) At the location indicated on CD RFI 132 SK1, the continuity plate will foul the bolts if (9) are provided per 1/S15010. Please confirm it is acceptable to provide (8) bolts in the W33x118 as shown on CD RFI 132 SK4.
8) Please confirm it is acceptable to provide one continuity plate with a slot 1/8" larger than the beam web and the 3 ½" beam cope as indicated on CD RFI 132 SK4 to allow for a continuous CJP weld of the continuity plate.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Acceptable.
2) Confirmed.
3) Confirmed.
4) Acceptable.
5) Confirmed.
6) Confirmed.
7) Acceptable.
8) It is acceptable to use a single plate with a slot, however, coping of the beam bottom flange is not allowed at this (or similar) location(s) since there is bottom flange bracing (see 6/S1-5015). It is acceptable to locally cope the beam web for the slotted continuity plate.
9) Confirmed.
10) It is acceptable to apply solutions provided in 1 through 9 at similar locations at Bus Deck Level along GLs 9.9, 10.1, 19.9 and 20.1 only. For all other locations submit a separate RFI for each case.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

9) Confirm the continuity plate detailed on CD RFI 132 SK4 is correct as shown with tf and bf per W30x99.
10) Confirm the response to items 1 to 9 may be typically applied at other similar conditions/locations or provide a typical solution for the condition where the required continuity plate extends into the double angle connection of a deeper beam.

T-0939.1 **SSS - Connection Clarifications at Moment Beams** **Closed** **12/19/2013** **12/29/2013** **12/30/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

At beam to beam moment connections as noted in RFI # T-0939 and other similar locations please confirm if the continuity plate is required when the nominal depth of the beam shown as dimension "X" is 3" or less as per CD RFI 132.1 SK1.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the continuity plate is required as shown on Detail 4G/S1-5010.

T-0940 **SSS - Shear Plate Dimension** **Closed** **11/25/2013** **12/05/2013** **11/26/2013** **Potentially** ☐

REQUEST:

On S1-
2403 at the Shaw Alley Bridge refer to sketches CD RFI 1 04 SK1 to SK4 for items 1 to 6:
1) Confirm the horizontal long slots in detail 5/S1-5013 apply only at this connection.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.
2) Confirmed.
3) Confirmed.
4) Confirmed the weld is a PJP weld. Root opening and bevel angle at PJP are to be based on the weld

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

2) Confirm the closure plate may be welded as shown in li eu of the requested butt weld.
3) Confirm the closure plate may be welded as shown in li eu of the requested butt weld.
4) Confirm the weld is a PJP weld.
5) Confirm this CJP weld may be welded as shown.
6) Confirm the detail on SK2B is acceptable for 5/S1-2403 Plan A.

procedure used, which is yet to be submitted.
5) The root opening and bevel angle at the CJP weld does not appear to be AISC prequalified. Specify prequalified CJP welds per Table 8-2, AISC 360-05.Contractor to submit information on welding procedures before information highlighted in 4) and 5) can be confirmed.
6) Confirmed

T-0943 **SSS - Light Column Base Details** **Closed** **11/25/2013** **12/05/2013** **12/11/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

1. Please supply the material manufacture(s) for the "SEAL RING" a catalog cut or other information. Additionally, please supply the specifications for the material, size necessary to fit specified tube and other information necessary to install the seal rings.

2. Please provide weld size and weld process indicated on the attached sketch.

3. Please provide omitted dimensions for "CAVITY TUBE" requested on the attached sketch

4. Please confirm that welding the WELDED STEEL TUBE to the SOLID ROUND ANCHOR PLATE is acceptable and the alteration of the A722 plate by the welding process is acceptable.

5. Please confirm missing dimension for anchor bolt projection. Note on 4/S1-6008 states "END OF ANCHOR BAR LEFT AFTER TRIMMING MUST BE LONG ENOUGH TO ALLOW RE-TENSIONING LATER". Skanska will provide projection of ½ coupler length to attached stressing rod at future date. Please confirm compatibility with TJPA's stressing system used later may be different than Contractor's stressing system.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Seal ring is to stop grout from entering steel tube as well as to limit spread of corrosion protection. This requires a rubber O-ring or possibly just denso tape to seal the gap. Additionally, please add a second seal ring between the PE-Tube and the shrinkable tube, to also inhibit the spread of corrosion protection.

2. These are non-structural welds. Min. fillet size is all that is required.
2e. Please note that there should be no weld here. The plastic PE-Tube cannot be welded to the steel cavity tube.

3. Dimension has been added, see marked-up sketch.

4. Only the threadbar is Grade 150 ASTM A722 Type II. Anchor plate and steel tube are ASTM A572 Gr. 50. Steel tube should be welded to anchor plate prior to installation, so no welding is done near threadbar.

5. Min. length above nut to be determined by contractor based on his means and methods of pre-tensioning. Final length of threaded rod above nut must be long enough to allow re-tensioning at a later date, which must equal thread length of jack used + elongation of threadbar.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Additional comments:
- Please delete bitumen tape at end of shrinkable tube from shop drawings. Bitumen tape must be applied at end of PE-Tube.

T-0944 **SSS - Beam Connection Clarification at Edge of Slab** **Closed** **11/25/2013** **12/05/2013** **12/04/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to CD RFI 169 SK1 and SK2 showing beam connections into slab openings near grid 11/C on S1-2403.

1) The double angle connection required per S1-5010 will extend past the edge of slab as shown on CD RFI 169 SK2. Please confirm it is acceptable to replace these connections with shear plate connections per S1-5011 or provide an alternate solution.

2) Confirm it is typically acceptable to replace the double angle connections with shear plate connections when the double angles extend past the edge of slab.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.
2) Solution in item 1 will be reviewed on a case by case basis. For other similar conditions submit a separate RFI for each case.
Note that for beams that are perpendicular to the slab edge (for example W21x44 beams that support the W12x14 beams on SK1), the distance between the beam end and slab edge should not exceed 1 1/2" typically.

T-0945 **SSS - Connection Clarification at Slab Edge** **Closed** **11/25/2013** **12/05/2013** **12/06/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to S1-2403 near grid 9/E for slab edge support connections as indicated on CD RFI 170 SK1 and SK2. The backup kicker brace detailed on 9/S1-5000 will fit in condition # 1 as indicated, but it will not fit in conditions #2 and #3 due to the limited difference in beam depth.

Please confirm it is acceptable to omit the kicker braces at conditions #2 and #3 or provide an alternate detail for these conditions.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) For condition #2, provide back-up brace per 6/S1-5015 except:
a) Use 1/2" plate, instead of 1¿ plate shown on 6/S1-5015.
b) Weld size for double sided fillet weld is 5/16¿ instead of ¾¿ shown in 6/S1-5015.

2) For condition #3 provide a back-up brace per SKS-0290 submitted with response to RFI T-0824 except:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

a) Provide a 1'-0¿ long WT 4x10.5 CJP welded to the bottom as shown on SKS-0290.
b) Double sided 3/16" fillet weld between the WT stem and bottom flange of the W21 beam .

T-0946 **Dimension Clarification at Edge of Slab** **Closed** **11/25/2013** **12/05/2013** **12/04/2013** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to CD RFI 172 SK1 & SK2 regarding the following question along grid lines C & G on Level 2 at the edge of slab. The dimension indicated in CD RFI 172 SK1 is shown as 7" or 8" on S1-2402, S1-2403, and S1-2404 while detail 1/S15032 shows this as a 6" dimension.

Please confirm the 7" and 8" dimensions currently modeled based on the plan drawings are to be used and the 6" dimension in detail 1/S1-5032 does not apply at specified locations.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed

T-0947 **SSS - Continuity Plate Foul at Column Web** **Closed** **11/25/2013** **12/05/2013** **12/04/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to grids 11/D and 11/F on B/S1-4106 at Level 2 as indicated on CD RFI 173 SK 1 & SK2. The continuity plate required per 4/S1-5012 will foul the WT in the column web at the location indicated on CD RFI 173 SK2.

Please confirm it is acceptable to supply (2) continuity plates, one on each side of the stem of the WT, or provide an alternate detail for this condition.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

At the two locations indicated in the RFI (GL 11/D and 11/F), it is acceptable to provide a single continuity plate placed between the WT and beam bottom flange. Plate to be provided near side and far side (both sides of the column web) and detailed per 5/S1-4202.

T-0948 **SSS - Connection Clarifications at Beams to Transfer Girder** **Closed** **11/25/2013** **12/05/2013** **12/06/2013** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

On S1-2303 at grids 11/C @ beams to transfer girder refer to sketch CD RFI 178 SK1:
The bolts thru the column cap plate & Transfer Girder per 4/S1-5052 are fouling the 3" connection plate as shown. Please supply a solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The conflict between the base plate bolts and the perpendicular drag beam plate at GL11/C can be resolved per modifications outlined in Sketch SKS-0306.

T-0948.1 **SSS - Connection Clarifications at Beams to Transfer** **Closed** **02/03/2014** **02/13/2014** **02/10/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Per the response to Webcor RFI # T-0948 (SK RFI # 227) the cap plate length was revised to suit a shear plate fouling issue at the cap plate bolts. Please verify the sketch from Thornton Tomasetti SKS-306 can be applied at grids 8/G on S1-2303 and we can adjust the plate length for this similar condition. Refer to sketches CD RFI 178.1 SK1 & SK2 showing a 6 1/4" adjustment at one side of the cap plate.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

At GL 8/G transfer girder, it is acceptable to increase bottom base plate length by 6-1/4" on the north side and 4" on the south side (plate flush with the end of the transfer girder). It is also acceptable to conceptually apply the solution provided in SKS 306 for RFI T-0948. As indicated in this sketch, one of the stiffeners on the north side can be omitted. All other 18" long stiffeners, machined geometry and the bolts to be moved 6-1/4" outwards from the plate center (both on the south and north sides).

T-0949 **SSS - Stair ST304 Framing and Connection Clarifications** **Closed** **11/25/2013** **12/05/2013** **12/19/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

For Stair ST304 refer to sketches CD RFI 179 SK to SK6 for items 1 to 6:
1) The noted beam flange extends into the slab opening for ST304 by 1/2" as shown. Confirm this is acceptable or supply revised dimensions on 1/S1-7008 or A1-2863.

2) This stair post is currently located 1 1/2" from the edge of slab. This does not agree with typical connection detail 1/S1-7600 which shows the stair post extending past the edge of slab 1/2" max. Please confirm this is the intent and supply a new connection detail for the post to the slab or supply revised dimensions for the stair post locations in

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Beam locations and slab opening have been changed in ASI 109 and Concrete IFB Addendum #1 drawings. Beam flange does not extend beyond slab edge.
2) Edge of opening and stair post locations have changed. See updated ASI 109 drawings and SKS-0312 submitted with response to RFI T-0955.
3) See response to 2).
4) See response to 1).
5) See response to 2).
6) See response to 2). Detail 1/S1-7600 shall apply.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

detail 1/S1-7008 or the slab opening location on drawing A1-2863 to conform to detail 1/S1-7600.

3) Similar to item 2 on SK3. Please clarify.

4) The noted beam extends into the slab opening for ST304 by 2 1/2" as shown. Confirm this is acceptable or supply revised dimensions.

5) Please supply a connection detail for the noted stair post as 1/S1-7600 does not apply and 10/S1-7600 will not work as the BU WT will only partially fit on the TR11 flange.

6) Confirm detail 10/S1-7600 may be applied at the noted location to connect the stair post to the supporting beam.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

For typical stair & elevator connections refer to sketches CD RFI 180 SK1 to SK3 for items 1 to 5:

1) Confirm this connection may be applied as shown on SK2B (item 2).

2) Confirm connection as shown is acceptable. All not shown is per 2/S1-7600).

3) Confirm it is acceptable to substitute the L3x3 angle with L5x3 angle. The connection with the L3x3x3/8 angle is not possible as the brace angles will foul the horizontal legs as shown.

4) Confirm the same dimensions may be used when detail 2D/S1-7600 occurs.

5) Confirm this is the correct interpretation of the weld for the angles to the HSS beam.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Acceptable. See 2) for additional notes.
2) It is acceptable to typically locate bolts as shown in SK2B. However, the centerline of the kicker angle should pass through the centerlines of the beam web and flange.
3) Acceptable.The work point of the brace shall intersect the center of the L5 x 3x3/8.
4) Confirmed.
5) Confirmed.

T-0951	SSS - Knock-Out Slab Clarification	Closed	11/25/2013	12/05/2013	12/26/2013	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

On S1-2303 there is a detail 7/S1-5004 shown near grids F/11 to supply bent plate to support the permanent slab. This is a general bent plate detail for the knock-out areas and does not provide enough detail at the stepped Transfer Girder. Please see the following questions below:

1) Please verify if bent plate is required parallel to the Transfer Girder along grid 11 to support the permanent slab at the knockout areas? If yes, will new beams be needed to support the bent plate and slab? Please provide size and location if new beams are needed at these areas. See RFI 185 SK1 & SK2.

2) Please verify step in slab from grid D to F along grid line 11 will incase the Transfer Girder? Will headed studs be required at the transfer Girder web? If so, please provide size and spacing. See RFI 185 SK1 & SK2.

3) Please verify it is the designs intent to have the edge of the knock-out slab extend past the edge of the Transfer Girder flange at grid line 10.1? If yes, please provide details to support the edge of the permanent slab at these locations. See RFI 185 SK1.

4) Please confirm only steel highlighted in yellow will require bent plate to support the permanent slab? See RFI 185 SK1.

5). Please clarify if any slab support is required for the knock-out slab at the edge of the escalator pit as shown on detail 6/S17660, referenced from the escalator plan on 1/S1-7302? Should the knock-out slab be separated in some way from the curb/wall of the escalator pit? See RFI 185 SK1.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The low permanent slab and new supporting beams are not required.

2) Step in slab does not need to encase the transfer girder. The top slab stops at the step and is supported by edge of slab detail similar to 9/S1-5000 (See attached sketch SKS-0315). There will be architectural wall between the high and low slabs as shown in the sketch.

3) The edge of knock-out slab is 1' - 9" away from GL 10. With a 36" wide flange of the transfer girder, the edge of knock-out slab is 21- 36/2 = 3" outside of the flange edge. The small overhang of the slab is to be supported per detail 8/S1-5000.

4) Bent plate and edge of slab detail per 8 or 9/S1-5000 shall apply not only at the members highlighted in yellow but also at portion of the W21x50 beams below the escalator pits. Coordinate with response to RFI T-0868.1.

5) See response to 4). Coordinate with response to RFI T-0868.1.

Co-Author:

REQUEST:

Further to discussion with Thornton Tomasetti field personnel.

WOJV is asking for the remainder of the Mat slab pour, that the requirements per specification Section 31 55 00 1.4J may be deemed satisfied after 14 days to start removing the level D bracing based on historical data of the 284 concrete strength test results completed to date.

Please confirm if this would be acceptable

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
12/4/2013
RESPONSE:
The RFI does not stand as written.
The historical mat slab break data is sufficient only to waive the specification requirement that the TJPA Representative review and approve strength test results prior to removal of bracing (Section 31 55 00 1.4J). It is permissible that Webcor-Obayashi review the 14 day results to determine early brace removal provided they establish and submit acceptance criteria. SEOR is awaiting documentation of the procedure and acceptance criteria, which may take the form of an RFI. Language for this RFI has already been discussed with WO and TCCO.

dimensions shown on A1-2864 are correct and the SE401 elevator posts align with the edge of slab.

T-0966 **SSS - Cruciform Column Splice** **Closed** **12/04/2013** **12/14/2013** **12/11/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

At multiple cruciform column locations (S1-4301 thru S1-4308 at Grids C & G), detail 2/S1-4350 has a 24" wide column flange flaring out to 36" flange at the connection to the cast node & transfer girder. It is the preference of the fabricator to utilize a CJP spliced flange plate where the flare (radius) starts. Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to use CJP spliced flange plates in the exterior MF Columns (Gridlines C, G, C.3, F.7) at Ground Level, however, the splice plane shall be a minimum of 2dc (dc = MF column depth) away from the top of the cast node. Note that MF column flange width is not always 24", refer to elevations S1-4101 through S1-4116 for MF column sizes. Splices shall conform with the requirements of 1/S1-5050.

T-0967 **Procedure for the removal of the level D bracing** **Closed** **12/05/2013** **12/15/2013** **12/09/2013** **Potentially** ☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Procedure for the removal of the level D bracing:

Webcor-Obayashi will review the 14 day compressive strength reports issued by the independent test lab (ISI) for the applicable pour area. In the review WOJV is to ensure that the "lower-bound" concrete strength exceeds 3000psi at 14 days. "Lower-bound" will be understood as the mean minus one standard deviation. If the calculated lower-bound strength <3000 psi, the bracing removal would not continue until results are received satisfying the lower bound criteria. Further, If any single compressive strength test is < 2500 psi, the bracing removal would not continue until results are received satisfying the minimum strength criteria.

Please confirm if this would be acceptable

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

T-0969	SSS - Filler Metal Usage on Group IV Grade HPS70W Material	Closed	12/06/2013	12/16/2013	12/20/2013	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Observation: Job specifications and Code AWS D1.1, Table 3.1, matching strength filler metal combinations for Group IV material, specifies for use an E91XTX for FCAW and F9XX for SAW process(s).

Concern: ASTM A709GR 70W material hardening during welding (alloying up) as each weld layer is deposited (in 2" to 4" material thickness). An increased hardness value is expected and the actual concern is that, in this instance, the E91XX specified will create an overmatching filler metal condition during the welding process.

Review: The AWS D1.1 2008 edition in table 3.1 for ASTM A709 Grade HPS70W specified a minimum of 70 ksi Yield Point and 90-110 ksi Tensile Range. In comparison, the AWS D1.1 2010 edition, a revision was made on this same material and the Tensile Range was dropped to 85 ksi minimum and maximum to remain at 110 (85-110).

Research: Currently for seismic application, the filler metal companies have seismic testing certificates for E81XX and F8XX electrodes. The Tensile test range for AWS D1.8 requirements is 80ksi minimum, but the manufacturers' test results consistently come in at 88 to 95 ksi, which would meet the 85-110 ksi range for the material. The two manufacturers contacted, ESAB and Lincoln, are willing to do seismic testing (test data) for the purpose of supplying AWS D1.8 seismic certificates to meet the E91XX requirements. However, when reviewing the current test data from the manufacturer, the test tensile range is 90-110 ksi, but the results are 97-110 ksi.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposed under match the base material and filler metal is not acceptable. The AWS electrode specification A5.29 for FCAW doesn't change, so the electrode classification as noted by the D1-code committee (E9xxx) shall stay. The contractors supplier is welcome to certify-by-test their electrode E8 as a E9 and provide the documentation as-such and submit it for approval.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Conclusion: TMF and their welding consultants believe that starting with a near Minimum Tension ksi (under match in classification/specification) that allows the use of E81TXX or F8XX electrodes with current seismic certificates would be best for the welding of the A709 HPS70W material due to the 2-4" thickness in this application.

Please confirm this proposal is acceptable.

T-0970 **SSS - Pretensioned Rods at Moment Columns** **Closed** **12/09/2013** **12/19/2013** **12/19/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer to drawing S1-5052 and S1-5050.

Refer to attached sketches CD RFI 099 SK1 & SK2 for items noted below.

3) To allow sufficient clearance to position a hydraulic tensioning device we require a dimension of 30"h instead of the 24"h indicated on 3/S1-5050, please confirm this is acceptable.

5) Confirm Section C shows the 3" thick plate only.

6) Confirm the 2 1/2" thick bearing plate is shaped as shown.

7) Confirm the 2 1/2" thick plate is welded on 3 sides as shown. Supply the welding requirement for the 2 1/2" thick plate to the WT below if required.

10) To allow sufficient clearance to position a hydraulic tensioning device we require a dimension of 30"h instead of the 24"h indicated on 3/S1-5050, please confirm this is acceptable.

12) Provide the weld requirements for the 4" plate to the column web.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

3.) Please consider the option of pre-tensioning from the bottom. This item may be discussed further in next structural issues conference call.
5.) Confirmed.
6.) Confirmed.
7.) Confirmed. No welding required to WT, direct bearing. WT surface shall be milled as called out in the detail.
10.) See our comment to RFI Question #3.
12.) No welding required.
13.) Confirmed. Note that the coupler should clear the base plate by a minimum of 1-1/2 inches.
14.) It is acceptable to use larger washers at Contractor's option.
15.) Use of 2-1/2" dia rods is acceptable at the Contractor's option, pretension shall be kept the same. Note that there are some steel rod vendors that can provide larger jacking force for 1-3/4 diameter rods. One example is Dywidag, which shows a jacking force of up to 330 kips in their catalogue for 1-3/4¿ diameter rods.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

13) Confirm it is acceptable to increase the 12"h dimension shown on 3/S1-5050 to 18"h to allow for the installation of the coupler below the built up TT only

14) Confirm it is acceptable to provide 8x8x2"h plate washers to allow sufficient base for the hydraulic tension device.

15) 1-3/4"h dia rods are required to be tensioned to 200kip at two locations. We are unable to find a tensioning system to achieve 200kip. The max capacity for a device used on 1-3/4"h rod is 172kip. We request to use 2-1/2"h dia rods at these two locations.

Please confirm this is acceptable.

T-0970.1 **SSS - Pretensioned Rods at Moment Columns** **Closed** **01/16/2014** **01/26/2014** **01/28/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Following the response to RFI T-0970 and after further review of #3 & 10, we agree the rods can be pretensioned from the bottom. Candraft have run a sanity check at several locations to confirm there is adequate clearance for the tensioning device and will continue to do so as other locations are detailed. Any interference will be addressed in future RFIs.

Please confirm it is acceptable to use a standard flat washer in lieu of the plate washer as the holes are not oversized and this will also allow
for easier workability during the pretensioning operation fr om the bottom (see Dyson catalog cut attached).
If this is acceptable the 24" dimension indicated from bottom continuity plate to top of built up T & TT (on 3/S1-5050) and the 6x6x2" plate washer under the top nut will not require to be changed (as per #3, 10 &14 RFI T-0970).

Please confirm this proposal is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Acceptable to use standard flat washer at the bottom of the pretension rod.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0971	SSS - Column Side Plates Dimension Increase	Closed	12/09/2013	12/09/2013	12/11/2013	Potentially	☐

Co-Author: Arup Rich Coffin

REQUEST:

Please refer to drawing S1-2203 and S1-5050.

On S1-2203 at grids 9/C refer to sketches CD RFI 161 SK1 & SK2 regarding anchor bolts at column side plates. For the column side plates per detail 4/S1-5050 and anchor bolts it is not possible to insert the nuts & plate washers for the
anchor bolts with the 3'-0" side plate dimension.

Confirm it is acceptable to increase the noted dimension to 3'-5" or supply an alternate solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The detail referred in the RFI (4/S1-5050) is for column W14X730-SP, which is constructed using a rolled W14X730 as a base and welding side plates on it. However, the decision was that the below grade steel columns will be constructed using plates (built-up shapes), they won't be rolled shapes. Equivalent built up shapes for all rolled shape column types shown on Lower Concourse Plans are provided in Detail 6/S1-5050. These equivalent built up shapes do not require the side plates shown in Detail 4/S1-5050.

For the angle brace connection per detail 5/S1-5015 see sketches CD RFI 061 SK1 & SK2 for items noted below.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Yes, bracing is required at all locations specified on plan. Provide bracing per 6/S1-5015 at all transfer

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

1) For the Transfer Girder bottom flange bracing connection, confirm if bracing is required when the dimension from the bottom flange of the framing member to the top of the transfer girder bottom flange is less than 1'-3". See SK2 grid line 3/D.4 as an example.

If bracing is required please provide typical details.

girder brace locations where the distance between the bottom flange of the beam and the top of the transfer girder flange is less than 1' - 3".

T-0974 **SSS - Pin Details in Drawing 1/S1-5017** **Closed** **12/09/2013** **12/19/2013** **12/11/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Arup Rich Coffin

REQUEST:

For Drag connections per detail 1/S1-5017 refer to sketches CD RFI 123 SK1 & SK2 for the following items noted:

1) Confirm the size of the hole required thru the beam web, web stiffeners and shear plates is the diameter of pin +1/32". Confirm if any additional tolerance is allowed for hot dipped galvanized pins.
3) Confirm flanges can be cut flush to the beam web. Note that the flanges need to be cut flush only to the web stiffeners for erection access purposes.
4) Confirm if a radius is required when cutting the flange flush to the beam. If required confirm a radius of 1-1/2" is acceptable.
5) On RFI T-0737 Skanska requested to provide a cotter pin to further secure the nuts from backing off. Please confirm it is acceptable to provide one nut with the cotter pin as detailed on SK2.
6) Confirm the material grade for the pins and nuts is A668 Class M.
7) Confirm all pins and nuts are to be hot dipped galvanized.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

TT's response (the original RFI does not use #2, the responses are in the same order as the original RFI):

Tolerance shall be 1/32" per Specification 05 10 00, paragraph 3.2.B.2.

It is contractor's option to either cut the flange flush with beam web or flush with the web reinforcement plate for erection purpose.

Confirmed.

2 nuts shall be provided as detailed in the contract documents.

Confirmed.

Confirmed.

T-0974.1 **SSS - Nut Material Grade** **Closed** **03/05/2014** **03/15/2014** **03/06/2014** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The contract documents do not contain a specific material grade for the nuts for large diameter pin connections (6, 7 and 8" diameter pins). In SK RFI 169A (T-0974), our detailer asked for clarification on the material grade for these nuts. It was confirmed that A668 Cl. M would be acceptable. Given the function of these nuts are to hold the pin in place and not apply a clamping force to the assembly, we do not consider that these nuts need to be a high strength forged material. Please refer to AISC Table 15-8 which shows a thin cap plates for pins overs 10" in diameter which reinforces this position.

Please confirm it is acceptable to use A572 Gr.50 plate to fabricate these nuts.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-0975 **SSS - Vertical Clearances at Tapered Girder Kicker Connections in S1-5015** **Closed** **12/09/2013** **12/19/2013** **12/26/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Arup Rich Coffin

REQUEST:

Please refer to drawing 4/S1-5015, S1-2602

Please refer to sketch CD RFI # 071 SK1 - SK3 for items 1 & 2:
1) As shown, 11-3/8" is the minimum vertical clearance required to provide the kicker brace connection per 4/S1-5015. Please confirm criteria as shown is acceptable.

2) Per item 1 on CD RFI 071 SK1, detail 4/S1-5015 cannot be applied in the noted case on SK3 and other similar cases when the vertical clearance is less than 11-3/8".

Please confirm if bracing is required at these locations, if so supply a typical alternate detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Providing a 3' clear distance between the gusset plate shown on SK-1 may be reduced to 1", hence the minimum clearance (11 3/8") required to provide the kicker brace per 4/S1-5015 may be reduced further.

2) Brace is required. The vertical clearance shown on SK3 corresponding to the location shown on SK2 is not correctly determined. The tapered girder is much deeper (about 54" deep) at the brace location shown on SK2. Note that the tapered girder depth increases from 40" at the ends to 60" at the mid span per S1-4200.

T-0976 **SSS - Transfer Girder Kicker Connection Conflicts** **Closed** **12/09/2013** **12/19/2013** **12/26/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Arup Rich Coffin

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Please refer to drawing 5/S1-5015.

For the Transfer Girder angle connections see sketches CD RFI 063 SK1 to SK4 for items 1, 2, 3 & 4 noted below.

1) The kicker angle fouls the vertical stiffener, this is typical at similar locations. We propose notching the leg of the fouling angle and using a two bolt connection in lieu of welding or provide a typical solution.
2) Due to welding access issues we propose to use a two bolt connection, typical at similar locations. Confirm this is acceptable.
3) The kicker fouls the stiffener and the kicker gusset is too close to the stiffener for welding access. Similar conditions occur at other locations on the Ground Level. Please provide a typical solution.
4) The kicker gusset fouls the stiffener plate. Similar conditions occur at other locations on the Ground Level. Confirm it is acceptable to use the stiffener as the kicker gusset and increase the gusset thickness at the other end to
match or provide an alternative detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) It is acceptable to typically notch the leg of the fouling angle and provide (2)- 1 1/2" A490X bolts to connect the kicker angle to the bottom gusset plate at the location highlighted in the RFI on SK3 and at other similar locations. Provide a spacing of 3" between the bolts and a bolt edge distance of 2.5". The bolts shall be centered on the kicker angle legs.
2) Submittal shall address all access issues for field welding. It is acceptable to typically provide (2)- 1 1/2" A490X bolts to connect the kicker angle to the bottom gusset plate at the location highlighted in the RFI on SK3 and at similar locations where weld access is not possible. Bolt apacing and edge distance shall meet the requirements in AISC. The bolts shall be in line with the centroid of the kicker angles.
3) Shift the beam to the south so that the same solution in 4) could be applied.
4) Confirmed.

T-0977 **SSS - Handling Holes at Basket Column Pins** **Closed** **12/09/2013** **12/19/2013** **12/19/2013** **Potentially** ☐

REQUEST:

It is requested that work points be added to the Cast Connex machine drawings and Bradken Cast Nodes as outlined on the marked up Cast Node drawings attached. These external "physical" work points will be used to reestablish the "non-physical" internal work points set during the pre-machining of Cast Nodes at Bradken. These external work points will be used to aid the following construction activities:
1) Shop fabrication of shear plates and pipe columns
2) Shop trial assembly and QC dimensional inspections
3) Field assembly and final QC dimensional inspections

Please confirm each work point will be precision punch marked and highlighted with paint marker for easy identification.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Webcor needs to liaise with Bradken to determine if they are willing and able to punch these marks on the castings, and what (if any) the cost and schedule impact would be. If Bradken can complete the work, then Cast Connex is willing and able to update the machining drawings (at Skanska¿s cost). The cost for Bradken¿s additional work will have to be taken care of between Skanska and Bradken and not the TJPA.

T-0982 **SSS - Elevator Rail Support Connection Clarifications** **Closed** **12/09/2013** **12/19/2013** **01/10/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer to Elevator Rail Support drawings S1-7130 through S1-7139 and provide clarification on the following:
1) At locations where the HSS members span two equally sized support beams, please confirm connection detail 1/S1-7630 typically applies and the HSS member is to be located direction under the beams. Refer to SK1, SK2, SK5, SK6, and SK7 for reference.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

See attached comments on RFI sketches, RFI_T_0982 sketches w comment.pdf

1. See TT comments on RFI sketches.
2. When HSS is to connected to bottom of W beam use detail 1/S1-7630. At the end where HSS is framed into the web of a beam, provide a double angle

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

2) At locations where the lower HSS member spans two unequally sized beams, it is assumed that the HSS member will connect to the shallower beam per detail 1/S1-7630. Please confirm and provide a typical connection detail for the HSS member to the deeper beam. Reference SK1, SK2, SK5, SK6 for reference.
3) Confirm the HSS beams indicated on SK1, SK2, and SK7 are located flush with the top of slab per 1/S1-7630.
4) Confirm the plates indicated on SK3 & SK4 may be cut as shown on details 1&4/S1-7630 to achieve an effective weld along the full length.
5) Provide a connection detail for the HSS 12x6 to the W21, W24, and W36 beams at the locations indicated on SK7.
6) Provide the elevation of the lower HSS 12x6 indicated on SK RFI 239 SK2 and the connection details required at each end.
7) Confirm the elevation of the W21s indicated on SK5.
8) Provide a connection detail for upper and lower HSS12x6 to HSS12x6 at locations with no floor slab on SK5.
9) Provide a connection detail for upper and lower HSS12x6 to W16 at locations with no floor slab on SK5.
10) Provide a connection detail for HSS12x6 at the W21 indicated on SK5 where there is no edge plate as shown on detail 1//S1-7130.

connection with 3- 1" dia A325 bolts (with pipe spacer inside the HSS). Alternatively, a welded connection similar to 1/S1-7630 may be used.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

On S1-2303 there are two W33x118 beams between grids D.8/E.2 that connect to the stepped Transfer Girder along grid line 11. These connections should be typical double angle shear connections, but due to the location of the stiffeners for the Moment frame column cap/base plate there is a fouling issue. Please see the following questions

below:
1) Please verify a partial full depth shear plate connection similar to detail 2/S1-5011 can be provided at these locations in lieu of the double angle shear connections. The shear plate cannot be full depth as it will foul the bolts connecting the Transfer Girder bottom flange to the column cap/base plate. See CD RFI 204 SK1 to SK3.
2) If a shear plate connection is acceptable at these locations, please verify plate thickness & welding per 2/S15011. See CD RFI 204 SK1 to SK3.
3) The numbers of bolts in a single row per the schedule on 2/S1-5011 cannot be provided if bolt spacing and edge distance are to be maintained due to the difference in

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Acceptable.
2) Acceptable.
3) Acceptable. Provide 3" horizontal spacing between the two vertical bolt columns.
4) Provide plates welded to the transfer girder bottom flange and the W33x118 beam web as shown in attached sketch SKS-0314 in lieu of the angle braces at the two W33x118 beams highlighted in the RFI.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

elevation between the Transfer girder and W33 beam. Please verify if it is acceptable to provide a double row with a total of 12 - 1" A325N bolts. See CD RFI 204 SK1 to SK3.
4) On S1-2303 there is bracing shown at the end of the W33 beams to the Transfer Girder. These brace members cannot be provided as the bottom of the W33 beam and the bottom of the Transfer Girder flange nearly line up, there will be nothing to connect the braces to. Please verify that the braces shown per plan are not required at these locations. See CD RFI 204 SK1 & SK2.

REQUEST:

At a sample location on S1-2503 near grid 10.1/C, refer to CD RFI 197 SK1 & SK2 requesting clarification on the following:

1) The double angle connection per S1-5010 for the W12x40's fouls the connection from the W30x99 to the column. Confirm it is acceptable to connect the W12x40's to the W30x99 with shear plate connections per S1- 5011.

2) This condition occurs at grids C/9.9, G9.9, G/10.1,

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.
2) Confirmed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

C/19.9, C/20.1, G/19.9, and G/20.1. Please confirm the solution for item 1 may be applied at these locations.

T-0987 **SSS - Elevator PE202 Dimension and Connection Clarifications** **Closed** **12/09/2013** **12/19/2013** **01/09/2014** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to CD RFI 199 SK1 requesting clarifications for dimensions and connections at Elevator PE202 as follows:

1) Detail 8/S1-5004 shows the edge of slab is to be 1'-0" from the toe of the WF beam, but based on the dimensions shown on S1-2502, the 1'-0" requirement is met only on the west side of the elevator opening. The north, south, and east sides do not meet the 1'-0" requirement. Confirm the dimensions to locate the elevator opening WF perimeter beams are correct as indicated on S1-2502.

2) Please supply the missing dimensions to locate the HSS 12x6x1/2 on four (4) sides of the elevator opening.

3) Please clarify how the HSS12x6x1/2 perimeter members are supported and connected to each other at the corners.

4) Confirm edge plate per 8/S1-5000 is required on 4 sides of the elevator opening as none are indicated on detail 8/S1-5004.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Please refer to the attached A1-2892 2014JAN06 for the dimension of the raised elevator cap and EOS
2). See the green markups on the sketch submitted with RFI T-0987
3). The HSS 12 x 6 shall be supported by W16 at the south and W27 at the north. The TOS for the HSS 12 x 6 shall be at 1-1/4" below the TOP of the W27. Use double angle bolted connection (L 4x4x3/8" with 3-1" dia A325 bolts, which pipe sleeve inside the HSS to allow for pretension). Similar double angle connections may be used to connect the HSS at the corner, except one side of the double angle shall be welded to the face of the HSS with 5/16" fillet weld with 5/8" return.
4). Confirmed

T-0987.1 **SSS - Elevator PE202 Dimension and Connection Clarifications** **Closed** **07/18/2014** **07/28/2014** **07/31/2014** **Potentially** ☐

REQUEST:

See attached CD RFI # 199.1 SK1 & SK2 for items 1 to 4:
1) The noted dimension per S1-2502 places the beam inside the slab opening.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The noted dimension shall be 6'.
2) See attached sketch SKS-0375 for correct dimensions.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please provide the location of the beam to suit the slab opening per A1-2892 (SK1).
2) Confirm dimensions per T-0987 are still correct with revised opening location/size on A1-2892 or supply new dimensions.
3) Confirm dimensions per T-0987are still correct with revised opening location/size on A1-2892 or supply new dimensions.
4) Confirm the connection details as shown are correct at the noted locations.

3) See attached sketch SKS-0375 for correct dimensions.
4) Confirmed.

T-0988 **SSS - W21 Full Depth Connection at Transfer Girder** **Closed** **12/09/2013** **12/19/2013** **12/16/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

On S1-2303 there is a W21x50 beam just south of grid D that connects to the Transfer Girder along grid line 10.1. There is a similar W21x50 along 10.1 north of grid F that is shown with a full depth shear connection to the Transfer Girder.

Please advise if the W21x50 near grid D should also be a full depth shear plate connection. See CD RFI 207 SK1.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The connection of the W21x50 beam at the transfer girder near GL 10.1/D shall be a double angle connection per 12/S1-5010. A shear plate connection specified for the W21x50 beam near GL 10.1/F is to avoid conflict with the stiffener plates at the transfer girder that are required for the WF column below.

T-0988.1 **SSS - W21 to Transfer Girder Connection** **Closed** **12/30/2013** **01/09/2014** **01/13/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Reference sketches CD RFI 193 SK1 & SK2 indicating one specific location where the bolt spacing provided in detail 8/S1-5010 will not work as the bolts will foul each other. In the specific case shown on SK2, the "H1" dimension will need to be increased to 7 1/2" to avoid the fouling issue. Please confirm it is typically acceptable to increase the "H" or "H1" dimensions as required to allow sufficient clearance between the bolts for installation and tightening. If not, supply an alternate solution.

NOTE: RFI #T-0976 item 4 requested permission to typically move the shear plate to the opposite side of the skewed beam from what is shown in 8/S1-5010 to allow erection access for the skewed beams.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that in concept, it is typically acceptable to increase the "H" or "H1" dimensions as required to allow sufficient clearance. Final approval of this change will be provided during submittal review.

Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

On S1-2403 at grids 11/C refer to sketches CD RFI 156 SK1 & SK2.
After applying the double angle connection per S1-5010 for the W12x14 to the W30x99, there is insufficient room to connect the W30x99 to the column flange per 8/S1-5012.
Confirm it is acceptable to connect the W12x14 to the W30x99 using a shear plate per S1-5011 or supply an alternate solution at this location.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The W12x14 beam has been moved as shown in ASI 109 drawings so that the double angle connection of the W12x14 does not conflict with the shear plate connection of the W30x99.

T-0997 **SSS - Steel Framing Clarification** **Closed** **12/10/2013** **12/20/2013** **12/26/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

On S1-2604 near grids 16/D refer to sketches CD RFI 158 SK1 & SK2 and confirm the (3) W16x26 beams are not required and may be deleted as the edge of slab is located only 1'-3" east of grid 16 per A1-2904 as shown on SK2.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The three highlighted W16 beams have been removed in ASI 109 drawings.

T-0998 **SSS - Thread Diamter at Pretensioned Rod Detail** **Closed** **12/10/2013** **12/20/2013** **12/30/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Arup Rich Coffin

REQUEST:

Please refer to drawing S1-5052.

On 3/S1-5052 @ the Pretensioned Rod detail refer to sketches CD RFI 229 SK1 & SK2.

The actual major thread diameters of the pre-tensioned rods in detail 3/S1-5052 do not equal the nominal diameters shown. See the actual diameters on SK2 and confirm the holes in all elements that the anchor rods pass thru as shown in details 2 & 6/S1-5052 will be 1/16" over the major thread diameter.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For the elements that the rods pass through, the proposed hole diameter of rod diameter + 1/16" is acceptable in concept. Contractor to verify the actual hole size for allowing the rod to stretch during pre-tensioning.

We cannot comment on the Dyson bars included in this RFI as it has not formally submitted for approval. Note that we cannot locate RFI SK 086 (CD RFI #053) which is referred from this RFI. In future, include all referred information within the RFI.

T-1000	SSS - Machine Lower Nozzles Perpendicular to Pipe	Closed	12/10/2013	12/10/2013	01/13/2014	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Stacy Wilson

Co-Author: Arup Rich Coffin

REQUEST:

Please refer to drawing S1-5111 thru S1-5133.

In recent meetings, Webcor/Obayashi has made it clear that the same Bus Deck Cast Node geometry will be used at multiple locations even though the angle of the lower Basket Columns changes at each Node. This adds a level of complexity and cost to the joint between the Cast Node and Basket Column Pipe due to the kink imposed on that joint as a result of the following:

- The Lower Pipe Columns will be required to be "miter cut" instead of a traditional square cut end. (Please note Spec Section OS 10 00, paragraph 3.2.M.1 states "Bearing ends of columns shall be milled or sawn square perpendicular to axis of the column.")
- Miter cut Pipe will have an ellipse cross section and will not match the circular Casting Node.
- Backing bars used to full pen weld the Pipe Column to the Cast Node would need to be custom machined to match the ellipse Pipe and circular Node to eliminate weld gaps. This significantly increases the complexity and risk for successfully welding the joint, and reduces the adjustability for fit up of these joints in the shop and the field.

This kink can be accommodated either by machining the nozzle of the Cast Node to be perpendicular to the pipe, or by machining the pipe end at a mitered angle to match the Cast Node.

Since this joint on the Cast Node is already being machined, Skanska/OIW believes that the more desirable

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The contract drawings at bid time clearly showed that the centerline of the pipe is not in line with the centerline of the cast node nozzle, that the same cast node is to be used at multiple locations, and that the cast nodes were not miter cut to be perpendicular to the incoming pipe. The reference to Spec section 05 10 00 noted in this RFI regarding bearing ends does not apply for this condition as the pipe to cast node connections are not ¿bearing¿ connections, they are a fully welded connections as shown on the contract documents.

This ¿kink¿ between the topside of the ground floor basket column and the bottom-side of the bus deck cast node ¿ resulting from the building¿s geometry and the use of the same cast node type in multiple locations ¿ can be accommodated by either miter cutting the pipe or the cast node. However, the contract documents, including those available during bid, clearly show that the bus deck cast nodes were not going to be miter cut, and so miter cutting of the basket column pipe members by the Steel Contractor is necessary to accommodate the building¿s geometry.

The specified miter angle does not exceed 1.5-degrees in any location. Miter cutting a 32-inch diameter steel pipe by 1.5 degrees results in an elliptical cross-section having a major diameter of 32 / cos (1.5°) = 32.011-inches and a minor diameter of 32-inches. This results in a minimal mismatch in cross-sectional dimension / shape between the

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

and less expensive option is to machine the nozzle ofthe Cast Node perpendicular to the axis of the Basket Column Pipe . As the nozzles will each be custom machined regardless, machining them to match the pipe axis should be a relatively low cost change .

Skanska/OIW requests that the lower nozzle of each Bus Deck Cast Nodes to be machined perpendicular to the axis of the adjoining lower Basket Column Pipe. A negative response will result in a cost increase and a time increase.

outside and inside faces of a mitred pipe member and the cast node. Based on this geometry, a two-inch wide backer bar sized properly would only show a gap of about 2/100ths of an inch, nominally. A split-ring backer bar could also be employed, which would provide some additional adjustability for this joint in the field.

There is no objection structurally or architecturally for the miter machining of either the nozzle of the bus deck cast node to be perpendicular to the pipe, or miter machining the pipe end at an angle to match the Cast Node. However, if Skanska seeks this additional miter machining of the bus deck lower nozzles on the Cast Nodes, all related costs and schedule will be the responsibility of Skanska. Skanska would need to provide the requested miter angle for each Cast Node for incorporation into the casting machining drawings. Additional costs including drawing time would need to be paid for by Skanksa.

Skanska will be responsible for all costs associated with the miter machining of either the nozzle of the Cast Node or the pipe to be perpendicular or coplanar. If Skanska opts to have the lower nozzle ends of the bus deck nodes mitered, Skanksa will need to coordinate with the CM/GC to make an agreement with Bradken for this change to Bradken¿s scope of machining work for the bus deck cast nodes. Skanska will also be responsible to absorb any schedule impact without delaying the overall project schedule. NOTE: If miter cutting the bus deck cast node nozzle is selected, machining would need to be performed by a third party as Bradken does not have this capability. Be aware that those costs for machining, trucking, and for handling the cast nodes would be Skanska¿s. Custom miter cutting each nozzle end would also require additional geometric inspection of the cast nodes, the cost for which would be borne by Skanska.

REQUEST:

On S1-2603 at grids 11/D for the W40 beam connections into the column web call for details 3/S1-5011 with 3 & 4/S15013 to be used. On sketches CD RFI 218 SK1 & SK2 please verify the large 2 3/8" single sided PJP weld for the 2 1/2" thick shear plate required at this location.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per Detail 3/S1-5013, the two shear plates highlighted on SK2 in the RFI shall be welded with a 3 sided PJP weld with 1 1/8" effective weld.

T-1002 **SSS - Web to Flange Welds at EBF Girders** **Closed** **12/10/2013** **12/20/2013** **12/16/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Arup Rich Coffin

REQUEST:

Please refer to drawing S1-4205.

Please see Plan Sheet S1-4205 Detail 1 for typical details at EBF Link Beams. The typical arrangement specifies a transition from CJP weld to fillet welds and incorporates a weld access hole to separate the 2 welds. In an effort to reduce the number of weld access holes and the inherent issues that can arise with them, Oregon Iron Works is proposing to extend the CJP welds to the end of the girders thus removing the weld access holes at the weld transition point.

Please see attached OIW sketch 2770-SK-TH02 representing a typical EBF Blank Beam Fabrication. It is Skanska/OIW's intent to extend the UT testing 1'-0" beyond the specified CJP weld zone. The balance of the weld will be MT/VT tested as required by Contract Documents.

Please confirm that the proposed welding and NDE is acceptable for all EBF link Beams at the roof perimeter. There is no cost or time impact with this change.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the proposed welding and NDE is acceptable for all EBF link beams at the roof perimeter. Also, please note the special CVN requirements for the weld materials for this EBF link beam CJP weld noted in Specification 05 12 10, paragraph 2.1.C.2.

T-1003 **SSS - Connection Clarification at Sloping Moment Beams** **Closed** **12/10/2013** **12/20/2013** **12/20/2013** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

At a sample location on S1-2503 at grids 9/F refer to sketches CD RFI 150 SK1 & SK2 as noted below.

As the sloping BU beam rises 1/2" above the opposite BU beam, the thickness of the top continuity plate will be increased to 3-1/4". Confirm this is the design intent and should be applied typically at similar conditions.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For the conditions described in the RFI, continuity plate thickness shall be per construction drawings (no need to increase thickness). At the condition described in the RFI (1/2" difference between the top of flange elevations), line the continuity plate up with the non-sloping MF beam. At Bus Deck Level joints at GL 2/D.4, 2/E.6, 3/D.4 and 3/D.6, the difference in elevation of MF beams on each side of the column is 2". At these joints, slope the continuity plate between the top flanges of the two beams (no need to increase thickness).

T-1004 **SSS - Pins at Roof Clevises and Perimeter Bus Deck** **Closed** **12/10/2013** **12/20/2013** **12/12/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer to the the following: S1-5017, S1-5131, S1-5132, S1-5133, 05 10 00 - 2.3.J & 3.2.B.2.

Paragraph 3.2.B.2 specifies the holes for the pins shall be no more than 1/32" over the diameter of the pin.
Paragraph 2.3.J specifies the pins to be Hot Dip Galvanized (HDG). This combination will lead to interference at assembly due to the following factors:
1) Tolerance in bored hole diameter of 0.010 (+0/-.010)
2) Tolerance of Pin diameter of 0.010 (+/-.005)
3) Tolerance of galvanize thickness at pin of 0.012 (+/-.006/side x 2)
4) Tolerance in thickness of primer at pin holes of 0.002 (+/-.001/side x 2)
The stack-up of tolerances is 0.034" which is greater than the specified 1/32" maximum clearance.

Skanska/Oregon Iron Works is requesting approval to supply the pins and bored holes to the following nominal values and within the tolerance identified above. These values are measured after machining and prior to coating.
1. 7" diameter pins:
a. Pin diameter = 6.906" (bored holes -1/8")
b. Bored holes = 7.032"
2. 8" diameter pins:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per Specification 05 10 00, the pin is to be measured by a ring gage after galvanizing. The 1/32" tolerance is for pin after galvanizing.
We don't feel a chrome coating is equal to the specified galvanized coanting. Chrome coatings do not have the construction industry track record that galvanizing has. Skanska has not provided a substitution request with technical data showing a chrome coating has the same performance as galvanizing.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

a. Pin diameter = 7.906 (bored holes -1/8")
b. Bored holes = 8.032"
Note that zinc coating is not a hardened material, and the coating on the pins will be prone to galling while attempting to install in a horizontal position. Skanska/OIW suggests investigating alternate pin coatings; for example, a hardened chrome coating has tightly controlled thickness tolerance and will not gall.

T-1004.1 **SSS - Pin Diameter** **Closed** **01/29/2014** **02/08/2014** **02/10/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

We have identified a fit-up issue with the basket column pin connections at roof node and Type 2M drag connections.
Spec section 05 10 00-13 3.2B states that the diameter of the pin hole shall not be more than 0.03125" greater than the diameter of the pin. The response to SK RFI 293 (T-1004) clarifies that the 0.03125" erection tolerance is for the
pin after galvanizing.

Therefore, to make this pin connection work, the pin must be machined below the 8" nominal dimension stated in the

contract drawings (Ref S1-5133).

We have determined the maximum allowable pin diameter as follows;

Data:
Min Bored Hole Diameter: 8.0313 - 0.01 = 8.0213"..... Source: Ref 1
Max Roof Node Bored Holes Concentric Offset: 0.0156"..... Source: Ref 2
Max Galvanizing Thickness: 0.010" (each side)..... Source: Ref 3
Erection Tolerance: 0.03125"..... .....Source: Ref 4

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to machine the pin to 7.953" (+0, -0.01"), i.e., 0.047" less than the nominal diameter of the pin diameter specified, however, the specified 1/32" tolerance for the pin hole shall not be exceeded.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Maximum Allowable Pin Diameter: X (pin must be machined and so we have applied a reasonable industry standard
machining tolerance of +0,-0.010")

Calc (inches):
(8.0213-0.0156) - (X+2(0.01)) = 0.03125
X = 7.953" (+0,-0.010")
Data used above is for 8" diameter pin. Similar for 7" pin (i.e 6.953").
Please confirm it is acceptable to machine the pins to the diameters specified above.

References;
1 - CN-0126 and CN-0127
2 - CN-0126 and CN-0127
3 - The maximum galvanizing thickness was provided by the galvanizing shop that will be coating these pins. Based on
their experience they estimate a minimum of 0.008" and a maximum of 0.02" on the diameter of the pin.
4 - Section 05 10 00-13

Please also note that A153 1.2 states that this specification is intended to be applicable to hardware items that are
centrifuged or otherwise handled to remove excess galvanizing bath metal. This is not practical with an 8" diameter
pin and should be taken into consideration.

T-1005 **SSS - Relocate Beam to Suit Double Angle Connection** **Closed** **12/10/2013** **12/20/2013** **12/26/2013** **Potentially** ☐

REQUEST:

This is a follow-up RFI to RFI T-1007:
Per the response to item #1 a dimension of 40' 4-3/4" was provided that differed to the dimension indicated on the
Revit model. Candraft & Skanska have reviewed the Structural and Architectural drawings provided and cannot come
up with this dimension. This is typical at every location where we are required to calculate the slope of the slab to locate the kicker angles connected to the underside of the slab.
Please provide the dimensions indicated on SK1 thru SK4 or clearly direct Skanska as to where to find this information.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The T/slab elevation is called out at the slab step just north of GL G and west of GL 1. A slope of 1.7% and the direction of the slope is called out on A1-2862. From this information, the T/Concrete elevation can be calculated at the highlighted location.

2) The T/slab elevation is called out at the slab step at GL 2 and south of GL G . A slope of 1.7% and the direction of the slope is called out on A1-2862. From this information, the T/Concrete elevation can be calculated at the highlighted location.

3) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location. Note that the slope changes from 1.7% to 2% across the step along GL X.

4) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location.

5) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location.

6) Confirmed.

7) Confirmed.

8) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location.

9) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location.

10) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location.

11) The method described in 2) can be applied to get the T/Concrete elevation along the B88 beam.

12) There is no perimeter concrete beam. The MFB beams frame into the foundation wall. See 1/S1-3201 for reference. Yes, the foundation wall slopes between GLs. The T/slab elevations at the foundation wall edge between gridlines can be obtained by the method described in 2) or can be interpolated between the

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

values shown at gridlines.

13) Three work points are noted on plans along foundation wall edge and offset from gridlines are shown on A1-2110, A1-2103 and A1-2104. The foundation wall curves between the first two work points with a radius of curvature of 637' - 7 1/2" and is a straight line between the second and third work points. From this information the coordinates of the foundation wall edge can be established along the portion of the wall that is not aligned to gridline J and the requested dimension can be calculated. The T/slab elevations are shown on plans at two ends of the MFB beams i.e. at edge of the foundation wall and at the slab step south of GL G. The slab step is dimensioned from GL G on architectural drawing A1-2863. The slope of the MFB beams can be calculated based on the T/slab elevations at these two points and the distance between them.

14) See response to 13).

15) See response to 13).

16) See response to 13).

17) See response to 13).

18) See response to 13).

Co-Author: Arup Rich Coffin

REQUEST:

Refer to sketches CD RFI # 059B.1 SK1 to SK5 for items 1 to 3:

1) This diagonal beam will typically have to be erected from the top due to the slope of the pipe at the perimeter node connection. This will require the top gusset plate to be shipped loose per CD RFI 059B response and the bottom flange of the beam cut flush to the web to slide past the shear plate on the gusset plate end. Please review attached sketches and confirm.

2) This diagonal beam will typically have to be erected from the bottom due to the slope of the pipe at the perimeter node connection. This will require the bottom gusset plate to be shipped loose contrary to CD RFI 059B response and the top flange of the beam cut flush to the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This RFI is a follow up to RFI T-0883 and 0883.1.
1) Confirmed that the end connecting to the cast node may have the bottom flange cut flush to the web as noted in RFI T-0883. Shipping the gusset plate loose is a means and methods issue.
2) Confirmed that the end connecting to the cast node may have the top flange cut flush to the web as noted in RFI T-0883, shipping the gusset plate loose is a means and methods issue.
3) Confirmed that the top flange of this beam at both ends may be coped to clear the connection plates.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

web to slide past the shear plate on the gusset plate end. Please review attached sketches and confirm.

3) This beam will have to be typically erected from the bottom due to the slope of the pipe at the node connection. This will require the top flange of the beam to be coped at both end the clear the connection plates. Please review and confirm.

T-1014 **BGP - Moment Frame Beam Tie Configuration** **Closed** **12/11/2013** **12/21/2013** **12/12/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please refer to detail 2/S1-3600.

Due to the possibility of limited access during the installation of the individual moment frame hairpins as detailed in 2/S1-3600, SCCI/Gerdau proposes to modify the typical moment frame beam tie configuration to what is shown in the attached SCCI sketch SK-RFI-399.

Please confirm if this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
12/12/2013
RESPONSE:
The proposed configuration containing hairpins with 555 t-heads is acceptable for the 48¿ deep moment frame beams only in regions further than 96¿ from the face of supporting vertical elements. For locations within 96¿, the stirrup configuration may remain as proposed; however, the 555 t-heads shall be replaced with hairpins conforming to those of Detail 2/S1-3600. Note that all ties (including cap ties) which contain both 90 and 135 hooks shall have their hooks alternated for all locations.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

blockout.

Reference the attached photo for more details. Is this acceptable?

T-1016 **BGP - Concourse Slab Elevation at NW Corner of Area 3/Zone 1** **Closed** **12/11/2013** **12/21/2013** **12/12/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please refer to attached drawing S1-2202.

Please clarify the concourse slab thickness in gridline area 1-2 and A-C. It is unclear if the area is marked as RCS8 or RCS1.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
12/12/2013
RESPONSE:
The lower concourse area identified is confirmed to be RCS1 as indicated by slab symbol (reference legend on S-0010) with double arrows which symbolize "extent to edge of deck." The RCS8 slab mark uses single arrows which point to the actual "edge of deck".

T-1017 **SSS - Location Clarification for Lateral Bracing** **Closed** **12/11/2013** **12/21/2013** **12/16/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

On S1-2303 (S1-2302 sim.) at the lateral bracing south of line G, the concrete locations cannot be determined using the structural and architectural drawings. Please refer to CD RFI 216 SK1 & SK2 requesting clarification on the following:

1) Provide the requested dimensions X1, X2, X3, X4, and X5 to determine the length and bevel of braces.

2) Provide the requested elevations to the underside of the slab edge to determine the length and bevel of braces X1, X2, X3, X4, and X5.

3) Supply the elevation to the underside of slab at the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Braces are equally spaced between Grids 9 & 9.9.

2) The bottom of the slab is equal to the top of slab elevation minus the slab thickness (10"). Top of the slab elevations may be determined assuming that the slab has a constant slope between the elevation points noted on the plan.

3) See response to item 2)

4) See response to item 2)

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

edge of concrete beam for each brace to determine the length and bevel of the braces between grids 1.4-9 sough of grid G.

4) Supply the information to determine the slope of the slab at each steel to concrete beam brace.

T-1018 **SSS - Perimeter Protection Detail** **Closed** **12/11/2013** **12/21/2013** **12/19/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

In order to comply with OSHA regulation 1926.501 - 'Duty to Have Fall Protection', Skanska has directed our modeling contractor, Candraft, to incorporate holes in new framing members to facilitate installation of the guard rail systems and life lines. Please see the attached sketches, SK 6 A-F, SK 7-8 and SK R-4, which are consistent with the National Institute of Steel Detailing standards for safety holes on beams and columns, and confirm that the EOR takes no exceptions to our proposal.

Particular attention is drawn to the note on our proposal that states 'No Holes or Welded Tabs will be located in the protected zones of the new members.' All open holes will be filled with high strength bolts upon removal of the safety systems.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The holes for erection safety railing are acceptable in concept. The holes shall be detailed on the shop drawings submitted for review as a part of review process. The holes shall not be in any steel exposed to view in the completed design and there may be other areas that are not acceptable once the holes are shown on the shop drawings. Any holes in galvanized steel shall have the galvanized finish repaired.

T-1019 **SSS - Transfer Girder CJP Web-Flange Welds** **Closed** **12/11/2013** **12/21/2013** **12/16/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

In orThe web to flange T-joint CJP welds for the transfer girders shown on drawings S1-4300 to S1-4308 do not indicate that a reinforcing fillet weld is required. Note 1 on 4/S1-4202 calls for reinforcing fillets to T-joint groove welds of SLRS members. Please confirm that a reinforcing fillet weld in not required for the transfer girder

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The T-joint CJP welds for the transfer girders shown on drawings S1-4300 to S1-4308 are double side CJP weld, not requiring reinforcing fillet weld. Detail 4/S1-4202 is for single side CJP weld at beam flange to column moment connection, therefore, Note 1 in Detail 4/S1-4202 does not apply.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

web to flange T-joint CJP welds.

T-1020 **SSS - Type 2 Drag Connection Clarifications** **Closed** **12/11/2013** **12/21/2013** **12/16/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

For Type 2 Drag Connection Clarifications refer to sketches CD RFI 148 SK1 to SK2 for items 1 to 5:

1) Supply erection gap between web reinforcement plate and shear plate on column.
2) Supply erection gap between 2" plate and shear plate on column.
3) Supply erection gap between 1 1/2" web doubler plate and 2" thick plate.
4) Supply erection gap between beam web and shear plate on column.
5) Supply erection gap between 2.5" plate and shear plate on column.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Erecting gaps between plates should be typically 1/16" If wider gap is required at certain locations, submit the gap width for approval.

T-1021 **SSS - Rebar Holes and Headed Stud Details at Ground Level** **Closed** **12/12/2013** **12/22/2013** **12/19/2013** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Refer to sketch CD RFI 105.1 SK1.
The 2 1/2 x 14 x 2'-6" plate has been set per the elevation given in RFI # T-0888 item 3 and the 3" dia. rebar holes have been set at 1 3/4" above the underside of MFB 6 per RFI # T0888 item 8. This results in the plate fouling the rebar holes as shown.

Please advise.

Note: the same occurs at grid 10.1.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

First rebar hole fouling the 2 ½¿ plate may be deleted. This response applies at Grid 10.1 as well.

☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

1. At 1/S1-4205 EBF LINK BEAM DETAIL, there is a section 4/S1-4205 that cuts an EBF LINK BEAM CROSS SECTION. The same section 4/S1-4205 is cut on 2/S1-4205 BRACE DETAIL. Please confirm that EBF link beams are where the 4/S1-4205 section is shown, and that they will be ASTM A709 grade 50 and other built-up beams at the roof park perimeter will be ASTM A572 grade 50 per SS-1/S-0007.

2. Please verify if bus deck built-up plates that are ASTM A709 grade 50 plates less than 2" thick part of the SLRS should be CVN tested 25 ft.-lb @ 70 degrees F.

3. Please supply CVN testing requirements, if any, for secondary material steel (i.e. stiffeners, connection plate, continuity plates, etc.).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. The requirements for ASTM A709 Grade 50 material for the link beam is for the region between the diagonal work point as shown in Detail 1/ S1-4205. At the contractor¿s option, steel plate beyond the splice point outside of the A709 grade 50 plate may be ASTM A572, grade 50.

2. CVN should be per requirements in the respective ASTM specification and Specification 05 10 00. For a member that is a part of SLRS (or SFRS), see 05 12 10 for additional requirement for CVN testing. Also, the testing temperature for weld metal is not 70 deg F, it should be in accordance with AWS D1.1 and 1.8 (for SLRS), assuming LAST=25 deg F per specification 05 12 10, paragraph 2.1.C.3.

3. CVN requirement for stiffeners, connection plate, continuity plates shall be in accordance with their respective ASTM specification.

1) Confirmed that the weld configuration at 3/S1-4350

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

condition at 2/S1-4354 and 3/S1-4356. See sketches CD RFI 225 SK1 & SK2.

2. Please verify if weld configuration 3/S1-4353 should be the same as weld shown at 3/S1-4350, 2/S1-4354 and 3/S14356. See sketch CD RFI 225 SK3.

is similar to 2/S1-4354 and 3/S1-4356. The joint bevel configuration is not correctly shown on RFI 225 SK2. The 45 deg bevel shall be on the opposite side (the side that the 3" plate connecting to the curve surface of the cast node), and 5/16" back gouge and re-weld (no need to prepare the groove) shall be on the flat side where the 3" plate is in line with the back of the cast node.
2) Confirmed. Also see response to Item 1).

T-1036 **SSS - Flange Plate between Tapered Girder and Built Up Edge Girder** **Closed** **12/12/2013** **12/22/2013** **12/26/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The 1 1/4" top flange plate per 6/S1-5010 & 7/S1-5032 will require bending due to the sloping TPG girders on the roof and a 5/16" shim will be required to fill the gap as shown in CD RFI 154 SK1&2. Confirm it is acceptable to bend the top flange plate at the edge of the BU beams on grid lines B & H and supply a 5/16" shim plate to fit the profile of the top flange plate to be welded all around to the TPG girders with 1/4" fillet weld. If not, supply an alternate solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to bend the 1 1/4" plate and add shims to match the profile of the sloping tapered girders. Note that T/steel of tapered girder is not correctly shown on SK2. T/steel of the tapered girder should match the T/steel of the BU girder at the flange edge of the BU girder.
- End of Response -

Turner disputes the claim that there is a probable cost increase as noted in this RFI. The top of steel of the beams connected are shown in the contract document. The necessity of bending the connection plate due to beam slope should be anticipated by the contractor.

T-1037 **SSS - Typical Kicker Brace Detail** **Closed** **12/12/2013** **12/22/2013** **12/26/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Reference the bracing connection details provided on S1-5015. At conditions where a full depth shear plate and bracing are required, there is consistently a conflict

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Acceptable.
2) Acceptable.
3) Acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

between the bottom gusset plate and shear plate. Based on the weld requirements for the kicker brace connection, the following is proposed to avoid this conflict:
1) Connect the kicker directly to the shear plate
2) Eliminate the bottom gusset
3) Offset the top gusset (below the beam) by the width of the beam web to align with the shear plate
4) Match the thickness of the gusset and stitch plates to the shear plate thickness
5) Shape the bottom of the shear plate, where necessary, to achieve the required angle brace weld

Please confirm this is an acceptable typical solution for the conditions shown in the sketches attached and at other typical locations where bracing and a full depth shear plate are required.

4) Reducing the top gusset plate thickness to match the full depth shear plate thickness is not acceptable. See response to RFI T-0920.1 where stitch plates with varying thickness were allowed to be used when the full depth shear plate and gusset plate thickness did not match. The same solution can be applied at all similar locations. Alternatively, the full depth shear plate thickness can be increased to match the gusset plate thickness.
5) Acceptable.
It is typically acceptable to apply solutions 1) through 5) at locations where there is a conflict between the bottom gusset plate and full depth shear plate at the transfer girders.

T-1038 **Spandrel Beam Reinforcement clarification Area 1-9** **Closed** **12/13/2013** **12/23/2013** **12/19/2013** **Potentially** ☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Further to discussion with Thornton Tomasetti design Engineer Kerem Gulec on the responses to the RFI received to date on the spandrel Beams modifications for area's 1-9 which include: RFI's T-0707, 708, 713, 717, 718, 719, 873 & 874 the response to these RFI"s specified that a "lap splices shall be provided where the beam rebar is transitioned from the spacing in the construction drawings to the modified spacing" However following discussion this now will change to "Horizontal Rebar Bar spacing between modified spacing and construction drawings spacing will transitions over a distance of 6' on either side of the modified cross-section and thus removing the need to provide the additional lap splices. See a typical example attached.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger

T-1039	SSS - Stitch Bolts on Kicker Braces	Closed	12/16/2013	12/26/2013	12/30/2013	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Details 4, 5 & 7/S1-5015 do not show a stitch bolt requirement for the kicker braces. At a sample location and detail shown on sketches CD RFI 066 SK1 & SK2 please confirm none are required or supply the necessary information.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to Section 3/S1-3703 that is just above the SK2 section cut, where the Section RFI 066-SK2 was cut. In addition to Section 3/S1-3703 refer to Section 6/S1-5022, which provides information on the stitch plate.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1039.1	SSS - Stitch Bolts on Kicker Braces	Closed	02/03/2014	02/13/2014	02/10/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The response to T-1039 references details 3/S1-3703 & 6/S1-
5022 for stitch plate information although these sections are only cut at Ground Level at Fremont & First Street. Ple ase confirm the response is intended to indicate stitch plat es are required at all kicker brace locations including detail s 4, 5 & 7/S1-5015 as per details 3/S1-3703 & 6/S1-5022. If so pleases confirm detail 8/S1-
5015 can also be used for the stitch plate detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed. Stitch plates are required for kickers where Details 4, 5 and 7/S1-5015 are applicable, except where the kicker is shorter than 1.5'. Stitch plate details provided in 8/S1-5015 can be used at locations where kickers are required except that the stitch plate thicknesses shall match those of the gusset plates in the details. Stitch plates can be either welded (as shown in 8/S1-5015) or bolted (as shown in 6/S1-5022) to the kicker angles. For kickers shorter than 3' but longer than 1.5', provide a single stitch plate centered on the kicker angles.

T-1040	BGP - Width and Depth of Intermediate Beam in Lower Concourse at GL E.6/7	Closed	12/17/2013	12/27/2013	12/19/2013	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference contract drawing S1-2203.

Plan sheet S1-2203 shows an intermediate beam at gridline E.6 from gridline 6 to gridline 8 (see highlighted area attached). The Section 2/S1-3400 does not give the specific dimensions for a beam with change in slab elevation. Please provide both width and depth of the beam at this location in the lower concourse.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
12/19/2013
RESPONSE:
There is no beam at Grid E.6 between Grids 6 and 8 of the Lower Concourse. The hidden line shown on S1-2203 is a step in the soffit that corresponds to a change in top of slab elevation. Refer to Detail 2/S1-3501 for dimensions and reinforcing. Detail 2/S1-3400 does not apply at this location. See RFI T-876 response for additional information.

T-1041	SSS - CJP Weld Prep between Ground Level Cast Node and Transfer Girder	Closed	12/17/2013	12/27/2013	12/26/2013	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Stacy Wilson

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Our fabricator Thompson Metal Fab has requested a 2" 45° bevel be incorporated into the ground level cast node machining drawings. This weld is detailed on 6/S1-4350. See attached sketch for bevel detail.
Please confirm approval for weld prep detailed in attached sketches.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The 2" 45 degree bevel to the ground cast nodes is acceptable to incorporate into the machined drawings per CCX. The additional Cast Connex detailing, Bradken additional machining, and any other follow on expenses or schedule delays due to this change will be borne by Skanska and not the TJPA.

George Metzger
12/18/2013
RESPONSE:
Cast Connex,
It makes sense to have Bradken to put in this bevel as detailed on the structural drawings. Please coordinate with Bradken for this work.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1042	BGP - Geothermal Manifold Locations for Fields 3, 4, 5, 6, 7, 8, 9, and 10	Closed	12/17/2013	12/27/2013	01/07/2014	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Per the drawings, the manifold is to be located at an elevation no greater than 14' below finish grade (street) elevation. Per conversations in the preparatory DFOW meeting and other coordination meetings, the Engineer planned to have the manifold in a specific location. Attached are elevation drawings for Field 3, 4, 5, 6, 7, 8, 9 and 10 Manifolds. Please confirm that the attached elevation details work with the desgner's intent for the manifold locations for said Fields.

Note that Riser 10 has been relocated approximately 4' East between piles 231 and 232 to allow for the required 10' minimum spacing for future column installation.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
1/7/2014
RESPONSE:
Riser penetrations into the building must occur within the beam space of the ceiling of the lower concourse level. The elevations shown on the sketches fall below the beam pockets and conflict with future emergency ventilation ducts within the building. Elevations shall be modified and resubmitted to verify that the pipes enter the building within the beam space. Risers 7 & 8 may be greater than 14'-0" below finished grade and should be reviewed by ARUP for confirmation.

Co-Author:

REQUEST:

BBII is proposing to move 49 micropiles located within Zone 3 & 4 due to their close proximity to the Trestle/bridge Deck. Micropiles E375/E390/ E401/E411/E654/E670/E704/E738/E769/E800/E815/E826 would all be relocated 5' to the North, micropiles E492/E512/E537/E564/E587/E610/E630 would also relocated 3' north. The micropiles E371/E386/E400/E410/E488/E526/E534/E559/E578/E605 /E622/E650/E666/E700/E734 /E765/E796/E811/E825 would also be relocated 5' to the South. Micropiles E416/E417/E418/E419/E420/E426/E427/E428/E429/E430 /E431 would also be relocated 3' to the West. See attached sketch of micro piles in question.

Please confirm this is acceptable

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Based on a reanalysis of the mat slab with the proposed micropile relocations contained in the RFI, the proposed relocations are determined to be acceptable. No modifications to the mat slab are required to accommodate the proposed micropile layout.

T-1046 **SSS - Transfer Girder Weld Access Holes** **Closed** **12/17/2013** **12/27/2013** **12/26/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please confirm the weld access holes detailed on SK1 are acceptable for all Transfer Girder field splice connections.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The attached sketch SK-1 did not provide sufficient information on the dimension for the weld access hole, hence, this RFI cannot be confirmed by the Design

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Team. However, there is no need to resubmit this RFI. Weld access hole for the Transfer girder shall be detailed per AWD D.11, Section 5.17.1, which gives very specific requirements for the weld access hole dimension for built-up members.

T-1047 **SSS - Field Splice Locations** **Closed** **12/17/2013** **12/27/2013** **12/30/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Skanska has evaluated adding, relocating or removing sev eral field splices on a number of the transfer girders in ord er to reduce segment weights for critical picks, avoid interf erences with longitudinal framing members, increase stabil ity of the girder segments during erection and to optimize our erection sequencing.

Please confirm the field splice locations indicated on the at tached sketches (SK1 thru SK34) are acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the proposed field splice locations are acceptable. However, changing the field splice locations shall not result into reducing the steel plate thickness. If the proposal in this RFI results in additional shoring or costs, SKANSKA shall bear the additional costs.

T-1048 **SSS - Elevator Rail Support Embedded Plate** **Closed** **12/17/2013** **12/27/2013** **12/17/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Webcor Construction LP Jeff Galoyan **Answered By:** Webcor Construction LP Gregory Kemerer

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Elevator rail support detail 4/S1‐7630 indicates a shop assembled support with embedded plates. As the package delineation line shows the ½" thick embedded plate is not in Skanska¿s scope of work. The embedded plates will besupplied and installed by Shimmick and Skanska will field weld the HSS with end plates to the embedded plate as indicated on SK3.
Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed. The embedded plates shown in the attached sketch are to be provided and installed by others. Skanska will field weld the HSS per contract documents.

T-1048.1 **SSS - Elevator Rail Supports Erection Aids** **Closed** **01/08/2014** **01/18/2014** **01/14/2014** **Potentially** ☐

2.) Confirm the elevator rail support connection with erection aids is acceptable as shown.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

RFI number changed to RFI T-1105

T-1049 **BGP - Column Base Plate Clearance Lower Concourse Slab** **Closed** **01/14/2014** **01/27/2014** **Potentially** ☐

From: Webcor Construction LP Adib Sassine **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Ref: 1 and 3/S1-5051, S1-3600, S1-2205

To erect and plumb Lower Concourse Column with base plates Types I as shown on schedule 1/S1-5051 and II at 7/F.8 shown on detail 5A/S1-5051, erection aids will be required at the base plate. However, due to the depression, rebar running thru the depression and based on our experience with the grouting at column base plate mock-up, allowable clearances to set these base plates may not be adequate. As an example, column at GL C/24.9, the bottom of type I C base plate is within 1" from the top of rebar and does not have adequate area for shim packs.

Question # 1:

To provide adequate erection aids, please review the following options and advise as to which one is acceptable:

Option 1: Lower rebar around the base plate area by 1" to allow for 2" clear between rebar and bottom of base plate. Install 4 shim packs for erection purposes under each corner of the base plate on top of level concrete surface.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Question 1, Option 1: Lowering the MF Beam reinforcing is not acceptable. Erection aids are contractor's means and methods.
Question 1, Option 2: The reinforcing adjustments allowed are contained in RFIs 908.1, 917, 924, 925 and 1015. Erection aids are contractor's means and methods.
Question 1, Option 3: Raising the column base plates is not acceptable. Erection aids are contractor's means and methods.
Question 2: Increasing the plan dimension of the column base plate block-out to 6" all around is acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Option 2: Stop or adjust reinforcing steel under the base plate and use shim packs for erection on top of level concrete surface.

Option 3: Do not modify rebar, raise base plate elevation by 1" to provide minimum of 2" clearance under the base plate. Locate two shim packs next to key plates and install two additional erection aid threaded bolts with leveling nut drilled in concrete by Skanska as shown on the attached sketch SK-2.

Question # 2:
There is a 3" dimension between edge of steel plate and edge of depressed slab. Pls confirm if 6" dimension is acceptable in lieu of 3" around the base plates Type I C , I B and Type II at 7/F.8.

T-1050 **SSS - Field Splice Framing Interference** **Closed** **12/19/2013** **12/29/2013** **12/30/2013** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

REQUEST:

The details on S1-4206 & S1-4207 do not provide the information required to finalize the shape of the BRB gusset plates. Please see questions below and noted on

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The dimensions requested are pending on the geometry of the end connections of the BRB brace. Skanska to submit BRB Technical Submittals per

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

sketches CD RFI 236 SK1 & SK2.
1) Please provide a typ. minimum dimension to maintain from the edge of the Clevis plate to the corners of the gusset. See SK1 & SK2.
2) Please verify the typ. length for the gussets on 1 & 5/S1-4206, 1/S1-4207, see SK1.
3) Please verify the typ. length for the gusset on 2/S1-4206, see SK2.
4) Please verify if a typ. minimum width for the gusset on 2/S1-4206 is to be maintained or the shape of the gusset can be based from the offset of the edge of the Clevis plate to the corners of the gusset? See SK2.
5) Please verify if the 1/2" stiffener should maintain a minimum width or should the stiffener extend to the edge of the beam flange? also please verify if the corners of the stiffeners should be shaped? if so, please provide details. See SK2.

specification 05 12 50.

2) See response #1

3) See response #1

4) See response #1

5) Stiffeners shall match the width of the beam. Corners of the stiffener plates do not need to be shaped.

T-1052 **SSS - W10 Detail Clarifications** **Closed** **12/19/2013** **12/29/2013** **01/02/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor Construction LP Gregory Kemerer

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

1. Confirm the dimensions as shown are correct and match the W-10 system.
2. The noted elevation shown on 87'-4" in details 1,4,9/S1-8008 conflicts with A1-2903. Please verify correct elevation.
3. Supply the offset from top of curb to determine the location of the 3/8" x 6" x 6" stiffener plates.
4. The 5/16" fillet weld all around is only possible on one side of the post due to the 10 1/8" flange width on the W27x114 and the limited remaining distance on the end of the beam as shown. Confirm it is acceptable to supply a 5/16" PJP weld on 3 sides.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). The clouded dimensions shall be determined from the W-10 3d model, TTC_SBP_STR_WRF_MST_NFC_W10-WIREFRAME_131010, which WOJV has as part of the current bid documents.

2). The top of concrete curb elevation is 87'-4 1/2" (Also see Detail 5/S1-6011).

3). The clouded dimension (center line of the rebar to face of sloping concrete wall) is 1 1/2".

4). The 5/16" fillet weld is on 2 sides only (not all around as stated in this RFI). The width of the stiffeners can be reduce to match the W27 beam flange width. Don't see a problem in performing the double fillet weld, however, a CJP weld to replace the double fillet weld is acceptable.

T-1052.1	SSS - W10 Detail Clarifications	Closed	01/16/2014	01/26/2014	01/28/2014	Potentially	☐

From: Skanska USA Civil West California Dis Ryan Clayton **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

The response to RFI T-1052 (SK RFI 309.1), states that "The 5/16" fillet weld is on 2 sides only (not all around as stated in this RFI). The width of the stiffeners can be reduced to match the W27 beam flange width. Don't see a problem in performing the double fillet weld, however, a CJP weld to replace the double fillet weld is acceptable." The original question asked permission to use a PJP weld in lieu of the double fillet weld, not a CJP weld. Please clarify the following:

1) Skanska disagrees with the note that the referenced weld is shown as being required on 2 sides only. Please review the attached SK2 and confirm the welding locations as shown are acceptable.

2.) As there is insufficient landing to perform the 5/16" fillet as originally detailed, please confirm the welding as per CD RFI 240.1 SK2 is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Questions 1 and 2 appear to be asking the same thing.

Welding per SK2 is will be acceptable.

T-1053	SSS - Roof Park Level W40 to BU Girder Connections	Closed	12/19/2013	12/29/2013	12/31/2013	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

On S1-2602 to S1-2607 along lines B & H the bottom flanges of the sloping W40x264 moment beams are deeper than the BU 40 girders by 5/16" of an inch as noted on sketch CD RFI # 217 SK1.
1). To accommodate for the depth discrepancy verify a 1/2" plate can be added to the bottom of the BU 40 girders and the welds as noted on sketch SK1.
2). Also for the top & bottom flange welds for the W40x264 sloping beams verify the CJP weld noted on the sketch SK1.
3). Option # 2 is to move the work points of the W40x264 beams up 5/16" thus flanges would then be flush for both W40 & BU 40 members.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The top of steel for the slope W40 may be set to match the BU40 girder at the tip of the flange, thus, avoid the need for the 1/2" connection plate.

2) 1 3/4" bevel for 1 1/2" effective PJP weld is acceptable.

3) See response to Item 1).

REQUEST:

At 2nd level & Bus deck level Spandrel beams refer to sketches CD RFI 235 SK1 & SK2 for items 1 to 8:
1) Detail 1/S1-8020 is not referenced on the structural Bus Deck Level plans. Please clarify where this detail applies.
2) Detail 4/S1-8020 is not referenced on the structural Second Level plans. Please clarify where this detail applies.
3) Supply the information showing the W-2 mullion locations to help locate the angle braces in details 1 & 4/S1-8020.
4) Confirm the work point for the brace is on beam center at top of bottom flange in details 1 & 4/S1-8020.
5) Supply the work point location for the brace from top of beam in details 1 & 4/S1-8020.
6) Confirm the noted plate size in details 1 & 4/S1-8020 is a minimum size and may be increased to facilitate the connection.
7) Supply stitch plate requirements in details 1 & 4/S1-8020.
8) Confirm the brace in detail 1/S1-8020 may be connected beyond the beam flange as shown in 4/S1-8020 (SK2) to facilitate the erection of the brace.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Detail 1/S1-8020 was referenced in the Plan Note #3, Sheet S1-2402. See architectural drawings A1-2302 thru A1-2304 for the locations of W-2 system.
2). Detail 4/S1-8020 was referenced in the Plan Note #3, Sheet S1-2402. See architectural drawings A1-2302 thru A1-2304 for the locations of W-2 system.
3). The W-2 design documents are in-progress and have not been issued for bid. The dimensions requested should be obtained from the W-2 Shop Drawings as the exact final mullion placement will be determined by the W-2 trade subcontractor.
4). Confirmed.
5). Work point to be located at the intersection of the beam centerline and bottom face of the flange.
6). Confirmed.
7). Stitch plates shall not be spaced more than 4'-0" on center with 1 -3/4" dia A-325 bolt.
8). Confirmed.

REQUEST:

As a follow up to SK RFI 301, 301.1, and ASI 111, please review the following requesting further clarification for the W2 kicker brace locations:
1) (SK1 & SK2) Detail 1/A1-8151 indicates mullions on the W-2 curtain wall from grade level to the bus deck level. However, the section cut 2/A1-8151 only shows bracing and stiffeners at the Bus Deck level framing, not the Second Level framing. Please confirm no kicker braces or stiffeners are required at W-2 mullions at the second level.

2) (SK1) Please advise if Bus Deck Level mullion spacing shown on A1-8155 is to be pulled from grid line 10 or 10.1. It appears that the spacing is typically for a 42-6" bay.
3) (SK3) Per A1-8151, kicker braces per 4/S1-8020 are

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

WOJV has requested the secondary steel in support of the W-2 System to be removed from the TG07.1R contract. Forthcoming PCO seeking a credit from Skanska.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

required as shown. Please confirm.
4) (SK5) Per A1-8152, kicker braces per 4/S1-8020 are required as shown. Please confirm.
5) The mullion locations on A1-8157 cannot be located with the information provided. Please supply the dimensions off grid lines to locate the bracing and mullions.
6) It appears that W-2 mullions occur along the entire wall on grid line 1.4, however A1-8157 only shows mullions between grid lines C and D.4. If mullions occur south of GL D.4, please provide the dimensions required to locate the mullions, braces, and stiffeners.
7) A1-8158 is shown on grid line 2.5. Please advise if A1-8158 is to be mirrored on GL 3.5 or provide the required mullion spacing.
8) A1-8158 does not provide the locations of the mullions. Please supply the required dimensions off grid lines.
9) A1-8159 is shown on grid 8.5. Please advise if this elevation also applies on grid 9.5 or provide the required mullion spacing.
10) The locations of the mullions cannot be located with the information provided on A1-8159. Please provide a reference dimension off a grid line to locate the mullions.
11) A1-8152 is reference on A1-8150 between grid lines 2 and 3, with grid lines 2 and 3 shown on the elevation. Please confirm this detail also applies at the corners on grid lines 4, 8, 10, 12, and 14.
12) Please confirm details 1 and 4 on S1-8020 do not apply to drawings A1-8156, A1-8165, A1-8166.
13) A1-5167 is reference on the south portion of grid 16.9. Please advise if this detail also applies on the north portion of grid 16.9.
14) It appears that partial dimensions are provided (between grid lines E.6-F.7) for the mullion locations on A1-8161 along grid line 27 on the Second Level. Please provide the remaining dimensions required to locate the mullions along the remainder of grid line 27.
15) No detail reference is provided on the north half of grid line 27 and grid line 32.5. Please provide the mullion spacing requirements at these locations.
16) A1-8156 is referenced on grid line F.7 between grid lines 27 and 32.5 on the Second Level, but this detail does not appear to be correct. Please confirm the reference should be A1-8160 or provide the corrected reference.

T-1060.1	SSS - Shop Primer Coat Exclusion Areas	Closed	01/06/2014	01/16/2014	01/16/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

While specification section 05 10 00-3.2 .P.3b excludes shop paint from areas to receive cementitious fireproofing, the response to SK RFI 319 (WOJV T-1060) indicates that all steel is to be prepped per the manufacturer's recommendations. The response to WOJV T-1060 provided three potential manufacturers for the SFRM-1 per the preliminary specification section 07 81 00-2.3.A.

1.) Based on the product data sheets published for the Grace Monokote Z-146 and Cafco Fendolite M-II products, Skanska understands that these products are recommended to be applied to bare steel that is free of oil, grease, excess rolling compounds, lubricants, loose mill scale, excess rust,..., or any other substance that will impair proper adhesion. Please confirm this interpretation is acceptable and the potential use of these products is intended for application on bare steel.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1.) Confirmed.
2.) The two manufacturers described in item 1 above meet the technical performance requirements specified. The third product on item 2 should match the technical performance requirements specified in section 07 81 00 without requiring additional treatments to meet the specified requirements. If the manufacturer of this product deems it necessary to add corrosion protection for meeting the requirements, they should add this to their bid.

As an additional measure prior to issuing specification section 07 81 00 for bid, we will add "or equal" to the Materials listing of Specification Section 07 81 00.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

2.) The Carboline Pyrocrete 40 product does not require the use of a primer, however the published data sheets state that "Pyrocrete 40 neither promotes nor prevents corrosion". It is understood that the manufacturer finds application of Pyrocrete 40 to bare steel to be acceptable on the building interior, but recommends the Owner's consideration of a primer on steel exposed to corrosion. Please advise which areas, if any, are required to be primed prior to application of the Carboline Pyrocrete 40 product.

Please note that application of a primer for areas receiving any of the three SFRM-1 products will incur additional costs and schedule impacts, as these areas were originally specified to be bare steel per 05 10 00-3.2.P.3b.

T-1060.2 **SSS - Shop Primer Coat Exclusion Areas** **Closed** **01/27/2014** **02/06/2014** **02/12/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Webcor Construction LP Gregory Kemerer

Co-Author:

REQUEST:

Details 5, 6, and 7/A1-8662 indicate "12 inches of fireproofing required on stiffener fins, typical."

1) Please provide a UL assembly # and details for conditions where cruciform columns are enclosed with exterior wall cladding or interior furred-out walls.

2) Structural drawings reference cruciform columns while A1-8662 references "stiffener fins." Please advise if the A1-8662 drawings are intended to show the cruciform columns, and provide revised drawings as necessary. Please provide the applicable UL assembly for cruciform columns with any revised details.

3) Please advise if the cruciform columns are to be fireproofed SFRM-1 per spec section 07 81 00

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Refer to 'Fire Protection Matrix & Schedule' per attached A1-8662 for UL Assembly listings. Refer to drawings A1-9317, A1-9351 and A1-9354 for related details.

2) The 'stiffener fins' as noted on sheet A1-8662 are added to the Ground Level columns to increase weak axis bending stiffness of what are known as the cruciform columns on the Structural drawings. These stiffeners are provided for vibration control and being non-load carrying elements they do not require fire protection from a code perspective. As typically recommended by the fire protection manufacturer, non-load carrying attachments be fire proofed to the same level as the protected structural elements to mitigate 'thermal bridging'.

3) Confirmed

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Reference A1-8662 which indicates that beams and columns from the Lower Concourse level to the Roof Park Level, as well as beams at the Roof Level, are to receive SFRM. As noted in the response to WOJV RFI T-1060.2, it is typically recommended by the fire protection manufacturer that attachments to primary structural members are fire proofed to the same level as the protected structural elements to mitigate thermal bridging.

Please confirm that all ancillary components for beams and columns scheduled to receive SFRM are also to be prepped to receive SFRM. This includes, but is not limited to, kicker braces, hangers, stiffeners, connection plates, gusset plates, outriggers, and connection angles.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

SFRM to be applied to structural steel members as scheduled and all attachments, please refer to spec 07 81 00, item 1.1 A.

REQUEST:

On details 4/S1-5052 & 1/S1-5052 (sim.) refer to sketch CD RFI 134B.1 SK1 and verify the weld access hole size

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Geometry of the weld access hole for SMRS shall be in accordance with AWS D1.8, Section 6.10.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

and radius in the column webs is acceptable.

T-1061.1 **SSS - Weld Access Holes at Columns Cap Plates** **Closed** **02/24/2014** **03/06/2014** **03/04/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Per the response to Webcor's RFI # T-1061 (SK RFI # 180B.1) we have complied with the geometry for the weld access hole size per AWS D1.8, section 6.10. Using this formula we have shown the connection on CD RFI # 134.2 SK1 for a BU column with a 3 1/2" thick web. Please confirm the remaining 5 1/2" web material as shown on SK1 is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that it is acceptable to use AWS D1.8 for WAH geometry and confirmed that the 5 1/2" remaining web material for the column with 3 1/2" web thickness is acceptable.

T-1062 **BSE - Timber Pile Removal from CDSM Wall** **Closed** **01/03/2014** **01/02/2014** **01/13/2014** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Balfour Beatty Infrastructure, Inc. Danny Walsh

REQUEST:

BBII has located portions of timber piles in several CDSM wall panels along gridline A in zone 3 at excavation levels 4 and 5, between soldier piles 255-257 and 259-261. BBII believes any attempt to remove the piles has the potential to damage the CDSM wall. Given that there is no issue with water intrusion at the pile locations and the CDSM material is in good condition, BBII believes the best course of action is to leave them in place. To ensure a smooth surface for waterproofing, the piles have been ground down so that they are recessed from the face of wall. BBII will then patch over the panel to bring it flush with the CDSM piles. (Patching has already occurred on a portion of the affected areas - see attached photos of panels before and after the above procedure.)

Please confirm this is acceptable

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

ARUP Response:
We take no exception.

Adamson Associates, Inc. Response:
The CM/GC shall confirm the waterproofing subcontractor/manufacturer and the contractor's waterpoofing system designer accept the site conditions

---

T-1064	BGP - Fire Alarm Conduits at Column D.8/12	Closed	12/30/2013	01/09/2014	01/13/2014	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please refer to drawing A1-9204.

Detail A on A1-9204 calls for embedded junction boxes on GL D.8 from GL 13 to GL 33.2. A set of (3) 1" fire alarm conduits were erroneously installed embedded at the column on D.8/12 rather than stubbing up outside the column. An embedded junction box was installed flush with the face of the column at a height of 13'-9" to center per Detail A. If future devices are to be installed on that column at a different height, then an extension box can be installed, and conduit can be run from the extension box on the surface of the column.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
1/9/2014
RESPONSE:
1) For the condition described in the RFI, the Contractor should include an extension box with blank faceplate, box depth of 2-3/4" (which will be flush with the finished face of the future column cladding).
2) Extension box shall have knockout provisions for the conduit extension to the strobe to be concealed within the finished column wrap.
3) The as-built condition and detail shall be documented on the as-built drawings.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1065	BGP - Elevation Discrepancy at Escalator Pit near GL 21/E.2	Closed	12/30/2013	01/09/2014	01/02/2014	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please refer to attached drawing S1-2205, S1-7660 and SKA-2919.

The depth from the concourse TOC to the TOC in the pit conflicts in Details 10 and 11 of drawing sheet S1-7660. Detail 11 shows a distance of 4-feet from the concourse finished floor to the TOC in the pit. As drawn, this

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The details are not in conflict. Detail 11: FF=-7'-9" minus 4'-0" = -11'-9". Detail 10: TOC=-8'-2" minus 3'-7" = -11'-9". Pit depth relative to FF = 4'-0". Pit depth relative to TOC = 3'-7". Refer to Sheet A1-2205.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

indicates a concourse TOC to pit TOC depth of 3'-9". Detail 10 shows the dimensions between the concourse TOC and the bottom of the slab in the pit as 4-feet, and this indicates a concourse TOC to pit TOC depth of 3'-7". Elevations provided in SK2919 also indicate the concourse TOC to pit
TOC distance is 3'-7".

Please clarify the correct depth dimensions for the pits represented in Details 10 and 11 of S1-7660.

T-1066 **BGP - Moment Frame Beam and Column Conflict GL 21** **Closed** **12/30/2013** **01/09/2014** **01/09/2014** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please refer to attached drawing S1-2025, S1-3304 ans S1-3621.

Please confirm that the moment frame beam at GL 21 is 66-inches. Columns at GL C21 and G21 are 68-inches which make them 2-inches wider than the moment frame beam.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Increase GL21 moment frame beam width from 66" to 72" per sketch SKS-0323. Required revisions to the rebar detailing is also provided in the same sketch.

T-1067 **SSS - Stair and Elevator Connections** **Closed** **12/30/2013** **12/30/2013** **01/13/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Adamson Associates, Inc. George Metzger **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Arup Rich Coffin

REQUEST:

For typical stair & elevator connections refer to sketches CD RFI 181 SK1 to SK3 for items 1 to 11:
1. Please consider attached detail (CD RFI 181 SK4) as an alternative for elevator post bases shown in 1/S1-7600 and 10/S1-7600.
2. Confirm a 1/16" gap between post and angle on each side is acceptable (CD RFI 181 SK1).
3. Plate washers are not shown for the slotted holes for 1" dia. A307 bolts. Are they required? (CD RFI 181 SK1)
4. Supply dimensions for kicker brace connections to

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. The Design Team cannot accept the proposed detail as shown in CD RFI 181 SK4 because required fire protection and separation of the structural beam and slab is not able to be maintained. Note that the HSS is to align with the EOS and not be set off the EOS by the noted 1/2" dimension in CD RFI 181 SK4.

2. Confirmed.

3. No.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

composite deck requested on (CD RFI 181 SK2)
5. Confirm gusset and hole dimensions at top of kicker brace (Detail E) are same as shown for bottom of brace connection shown in CD RFI 181 SK2B.

4. For detail 2D/S1-7600, the width of the plate is the length required to capture 2 flutes as shown in detail. Fasteners shall be centered on deck bottom flute. For detail 2B/S1-7600, fasteners shall be 3" from the ends of the plate/angle and 6" min between fasteners.

5. Confirmed with the following exception: The centerline of bolt to end of kicker angle at bottom flange of beam and top of brace at the L5x5 shall be 2".

T-1067.1 **SSS - Stair and Elevator Connections** **Closed** **03/18/2014** **03/28/2014** **03/31/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached SK1 & 2 for items 1 & 2:
1) Details B, C & D are not practical as it is not known where the deck bottom flutes will be located at the time of modeling this project. As designed it is not possible to position the brace so the anchor bolts will be located on the centers of bottom flutes. Please confirm it is acceptable to model an oversized plate with additional staggered holes to account for the unknown position of the bottom flutes or supply an alternate detail.

2) Confirm a vertical short slot can be provided in the angle of the top bolted connection to allow for fabrication tolerances of the WF beam.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Detail B, C, D cover possible conditions where the brace hits the metal deck. This types of detail is usually field adjusted, and does not require pre-fabrication. Skanska please confirm.

2) A vertical short slot in the HSS10x4 is acceptable. No need to increase the size of the angle.

T-1067.2 **SSS - Stair and Elevator Connections** **Closed** **04/17/2014** **04/27/2014** **04/28/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

As per the response to T-1067.1 Skanska confirms these details will require field adjustment and proposes the following as per SK1:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1a, 1b) We don't take any exception to the erection approach outlined by the Contractor. Regarding SK1 of the RFI, it is acceptable to field align braces with

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

1)Confirm it is acceptable to (a) field weld the bottom connection after aligning the top connection to center of low flutes when deck flutes are parallel to kicker and (b) field drill the top connection after aligning the L6 to center of low flutes when deck flutes are perpendicular to the kicker.
2) Confirm the diameter of expansion bolt required.
3) Confirm the field drilled top connection is acceptable at deck flutes perpendicular to the kicker as this will vary from the direction in T-1067 #5.

the closest deck flutes.

2) Confirmed.

3) It is unclear how the 2" bolt edge distance requirement to the edge of the angle brace per response to item 5 of RFI T-1067 affects the distances noted as "6 inch" and "varies" on SK1. Please add this item to the agenda of an upcoming structural coordination meeting.

T-1068 **SSS - Perimeter Connections at GL C&G** **Closed** **12/30/2013** **01/09/2014** **01/13/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Details 7 & 8/S1-3703 are shown on sheet S1-2305 as typical sections for beams connecting perpendicular to the perimeter BU & WF beams at grid lines C & G. These sections reflect the varying elevation differences between the two members. In most conditions, the remaining depth of the beam framing into the perimeter BU or WF will only allow for a two bolt connection as shown in details 7 & 8/S1-3703.

1) Please confirm it is acceptable to use a two bolt shear plate connection for any beam size where the remaining depth of the connecting beam will only allow for two bolts. The shear plate thickness and welding will be per the schedule on 1/S1-5011.
2) Please confirm at some locations it is acceptable to cut the flange flush on one side of the beam to maintain edge distance.
3) Please confirm edge distance can be reduced where needed to complete connection.
4) Please confirm a double angle connection should be used when the varying elevations will allow for more than a two bolt connection. The angle size & thickness will be per the schedule on 1/S1-5010.
5) Please confirm the maximum amount of bolts that will be used would be based on the remaining depth of the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Details 7 & 8 /S1-3703 showing 2 bolt shear connection are applicable to the condition where the sections are cut and similar condition.

2). Confirmed. Specific application of this detail will be reviewed on a case by case basis during shop drawing review.

3). AISC minimum edge distance shall be maintained.

4). Confirmed.

5). Confirmed. Specific application of the approach stated will be reviewed on a case by case basis during shop drawing review.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

connecting beam.

T-1069 **SSS - Connection at Crash Rail Supports** **Closed** **12/30/2013** **01/09/2014** **01/09/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

At the Bus deck level at the Crash Rail supports beams, verify when larger beams are framing into smaller beams that details 1/S1-5031 will be used with detail 1/S1-5011 for the number of bolts required. At sample locations on S1-2502 & S1-25 03, refer to sketches CD RFI 248 SK1 to SK3 and verify the 3 Types indicated.

Note: The other ends of the beams in question are connected per the typical detail 1/S1-8000 at the grid lines unless indicated with a moment connection.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed
2) Confirmed
3) Confirmed

T-1070 **SSS - Connection Clarification at Escalator Areas** **Closed** **12/30/2013** **01/09/2014** **01/16/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

1). On 1/S1-7303 at Escalator E309 & E310 at detail 5/S1-7661 verify 4 - 7/8" A325N (non TC) bolts can be used in lieu of the 5/16" field weld that would be required, see sketches CD RFI 243 SK1 & SK2 for reference.
2). Per detail 5/S1-7661 verify the stiffener plates are 2/3/4" wide to match the beam flange with as noted on sketch CD RFI 243 SK2.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Contractor proposed is acceptable, however, please refer to updated S1-7303 issued with TG07.2 Addendum #1 dated 12/13/2013 for updates to this low beam area condition.

2. Stiffener plate width is per referenced detail. See also response 1 to refer to updated sheet.

T-1071 **SSS - Edge of Slab Support at Protected Zones** **Closed** **12/30/2013** **01/09/2014** **01/13/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

SUGGESTION:

ANSWER:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

At the Bus deck level (S1-2503) @ grids D/9.9 & 10.1 and F/9.9 & 10.1 the 3/8" edge of slab bent plate protrudes 3'-4 & 2'-3 from grid lines 9.9 & 10.1 respectively as shown on sketch CD RFI 244 SK1. Due to the 5'-0 protected zone at these lo cations the angle supports per detail 9/S1-5000 cannot be attached due to no welding is allowed in this area. Please advise on this non supported area and other similar type areas where no welding is allowed in the protected zones.

Accept Suggestion: ☐

At grids D/9.9 & 10.1 and F/9.9 & 10.1, run an L5x5X3/8 parallel to the moment frame beam between the two outriggers, namely, the cantilever W30x90 (gravity moment connected to the MF beam) and the support angle at the moment frame column. Attach the angle legs to each support using fillet welds (1/4" thk, 2" long), cope the angle as needed. Note that seam welding to be provided where the bent plate width changes.

T-1071.1 **SSS - Edge of slab support @ protected zones** **Closed** **02/11/2014** **02/21/2014** **02/24/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

1). Per the response to Webcor RFI # T-1071 (SK RFI # 313) please verify the bolted end connections for the new L5x5x3/8 angle now required as shown on sketch CD RFI # 244.1 SK1.
2). To eliminate any overhead field welding confirm the bent plate required will be shop attached to the angle.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The intent for the RFI T-1071.0 is further clarified on the attached sketch. Either bolted or welded connection is acceptable.

2). Skanska should verify whether the bent plate is to be shop welded. Shop welded bent plate might affect the weld access of the moment connection at the beam bottom flange if a "wild cat" position is to be used.

T-1072 **SSS - Clarify Beam Connections at Protected Zones** **Closed** **12/30/2013** **01/09/2014** **01/07/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

At the Bus deck level near grids 10.1/F & 10.1/D please verify the double angle connections for the W16 beams can partially connect into the protected zones for the BU moment girders as shown on sketch CD RFI 247 SK1. If not please supply an alternate connection.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The encroachments into the protected zones by the double angle connections at the two locations indicated the RFI are acceptable. Note that the W16X26s indicated in the RFI have been revised to W21X50s in 12/13/13 package (TG 7.2 IFB, Addendum #1 package).

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1073	SSS - North Exit Mezzanine Support	Closed	12/30/2013	01/09/2014	01/24/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer to detail 1/S1-2252 in regards to the following clarifications for the North Exit Mezzanine:

1.) Please provide connection details for MC4x13.8 channels framing into the W12x40 beam, CMU wall, and adjacent MC4x13.8 members.
2.) Please confirm how MC4x13.8 channel, east of GL 24, is supported at east end.
3.) Please provide the required dimension to locate the east end of the W12x40 member.
4.) Bracing for the W12x40 appears to be located slightly west of CL 23. Please provide the indicated dimension to locate bracing. Verify that this is the only location to receive bracing along the length of the W12x40.
5.) a. Please confirm the splice locations indicated on SK1 for the W12x40 beam are acceptable. Note that the splice just west of CL 23 may need to be shifted slightly depending on the response to item #3.
b. Please provide a splice detail for the W12x40. Note that bolted splice connections are preferred.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. For MC4 to W12, weld channel with 5/16 fillet weld to 3/8" thick plate welded to underside of W12 beam (use 1/4" fillet weld, NS/FS). See 4/S1-5032 for graphic reference. For MC4 to CMU wall refer to updated version of sheet dated 12/13/2013 Issued for Bid Addendum #1. For MC4 to perpendicular MC4, use 1/4" fillet weld all around.

2. Refer to 12/S1-9001.

3. End of W12 is at EOS. Refer to architectural drawings for EOS.

4. Dimension to locate bracing in SK1 is 2'-9" west of gridline 23. Locate second set of bracing at 6'-9" west of gridline 24.

5a. Acceptable, however adjust as necessary for brace locations identified in response 4. Locate splice in middle third of spans between hanger locations and avoid locations 3 ft within brace locations.

5b. Refer to T-0979 SSS RFI response for splice information.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1074	SSS - Crash Rail at Bus Deck	Closed	12/30/2013	01/09/2014	01/13/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

On the Bus deck level, at the Crash Rail detail 1/S1-8000, refer to sketches CD RFI 242 SK1 to SK3 for items 1 to 3:

1.) Confirm the noted weld is acceptable.
2.) Confirm the noted weld is acceptable.
3.) Please confirm it is acceptable to provide a 7/8" plate in lieu of a 13/16" plate, as a 13/16" plate to match the flange thickness is not available. Note this creates a 1/16" gap between the top of the stiffener and underside of the beam flange as indicated in SK3. Please confirm this is acceptable or provide an alternate solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Confirmed

2). Confirmed

3). Confirm using 7/8" plate is acceptable. Provide shim plate at the bolt connection. Confirmed the 1/16" gap at the stiffener plate is acceptable. Adjust the fillet weld size per AWS code to account for the 1/16".

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1075	SSS - Girder Weld Details	Closed	12/31/2013	01/10/2014	01/08/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

For girder weld details, refer to detail 7/S1-4202 & CD RFI 241 SK1 for the following:

1). Please verify that holes are not required in the built up members as shown on CD RFI SK1.

2). Please verify the noted welds as shown on CD RFI SK1.

3). Please verify the weld transition as shown on CD RFI SK1.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1.) If the contractor chooses to splice the beam flanges at these weld transitions, then these holes would serve as weld access holes. Otherwise these holes are not required.

2.) To be reviewed as part of shop drawings, following submittal and review of welding procedures.

3.) If no hole used, weld transition should comply with AWS D1.1 Section 2.8.2. Fillet weld shall start at the transition line shown in the construction drawings (i.e., fillet weld to overlap with tapering CJP).

Bracing removal/re-bracing sequence on the west end of Zone 1

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The propopsed method is not acceptable. Both sets of diagonal bracing, on the north side and the south side,

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

WOJV is proposing the following sequence for the re-bracing/ Bracing removal for the west side of Zone 1 See sketches SK-1, 2 & 3 attached.

For level C strut removal see sequence on attached sketch SK1. WOJV is proposing to remove level C bracing in three defined areas.
1. Remove level C Cross lot struts and walers from east to west direction once the walls and RB re-bracing is installed and stressed.
2. Remove level C struts and walers from south west corner once the walls and RB re-bracing rakers beneath are installed.
3. Remove level C struts and walers from north west corner once the walls and RB rakers beneath have been installed.

For level B strut removal see sequence and defined areas on attached sketch SK2
1. Remove level B struts and walers from east to west direction once the lower concourse slab beneath has been place, cured and reached the required design strength.
2. Remove level B struts and walers from south west and north west corner once the lower concourse slab beneath has been place, cured and reached the required design strength.

For level A strut removal see sequence on attached sketch SK3
1. Remove level A cross lot struts and walers from east to west direction once the RA re-bracing is installed and stressed.
2. Remove level A struts and walers from south west corner once all the RA re-bracing rakers and +7.00' diaphragm slab beneath have been installed.
3. Remove level A struts and walers from north west corner once the RA re-bracing rakers beneath have been installed.

Please confirm if this sequence would be acceptable and the first few cross lot braces work in conjunction as a group. Any one part cannot be removed until the rebracing is complete for the entire group.

T-1078	SSS - Machine Type 1 Drag Connection Pads	Closed	01/02/2014	01/12/2014	01/15/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The Type 1 Drag Connection shear plates are shown on drawing S1-5016 to be oriented perpendicular to the connection face of the cast node and further they are shown to be centered with respect to the width of the connect ion face. OIW has discovered that this is in error; the shear plates are neither centered on the face nor do they project perpendicular from the face. These conditions significantly increase the complexity of this welded joint.

OIW would like to use a CNC milling machine to prepare the surface of the Type 1 Drag Connection pads on the cast nodes in order to provide a perpendicular surface for the shear plates to attach to. Please see attached sketch showing proposed machining.

1. Please indicate if it is acceptable to machine these surfaces.
2. Please indicate if there is adequate stock to allow machining of these surfaces or if additional stock must be added.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The contract drawings at bid time clearly showed orientation of the connection pads of the cast node. Since the cast node contract drawings and the cast node shop drawings (which are also a part of bid documents), were provided, it is clear that the Drag Connection shear plates steel connections (angle and centering) to the castings would need to be cut by the contractor prior to fit-up for welding. The design intent was clearly depicted on the contract documents. The angle of the connection pads (F5 and F6) are provided in the cast node schedules; refer to 1/S1-5121, for example. Each cast node type is used in multiple framing locations as noted on the cast node designation sheets (S1-5110, S1-5120, and S1-5130). The cast node shop drawings, which are also a part of the bid documents, show that the face of the drag pads are cast perpendicular to the axis of the pad and were provided in the as cast condition (not a machined condition). From the framing plans (Sheets S1-2502 thru S1-2507), Skanska should be able to see that the diagonal beams are framed into the same cast node type at various angles, resulting in a condition that requires some connection plates to be appropriately fabricated. There are many details in the structural set which graphically show the connections not to be concentric and normal to the drag pads on the bus deck nodes. Detail 1 on S1-5030 is one example where the design intent is visually evident without having to correlate information on more than one drawing.

T-1078.1	SSS - Machine Type 1 Drag Connection Pads	Closed	02/25/2014	03/07/2014	03/04/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The response to Skanska RFI 294 (W/O T-1078) states that machining the internal drag pads is Contractors means and methods. In order to simplify modelling, detailing, fabrication and welding of the drag pads, Skanska's fabricator OIW intends to machine the internal drag pads.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the "minimum 1-inch extrusion" dimension called out for the bus deck cast nodes in contract drawings can be less than 1 inch as needed by machining of these pads by the Contractor.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

In so doing, there is potential that the "minimum 1-inch extrusion" called out for the drag pads on the bus deck nodes on the structural drawings may be violated in some cases (refer to 1/S1-5121 attached).

Assuming that this minimum dimension was provided to accommodate fabrication, and given that the responsibility for fabrication and erection is with Skanska, please confirm that it would be acceptable for Skanska to violate the 1inch minimum extrusion with machining of the pad.

With the design team's approval, Skanska hereby proposes to move forward with machining of the pads without the submission of RFIs for every bus deck node. RFIs will only be submitted for those cases where the planned machining of the pad may slightly undercut an adjacent pad or where the planned machining may slightly bite into the main body of the node.

T-1079 **Bracing removal-rebracing sequence on the East end of Zone 4** **Closed** **01/02/2014** **01/12/2014** **01/13/2014** **Potentially** ☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Compan Gary Krutsch **Answered By:** Adamson Associates, Inc George Metzger

REQUEST:

Bracing removal/re-bracing sequence on the East end of Zone 4
WOJV is proposing the following sequence for the re-bracing/ Bracing removal for the East side of Zone 4 See sketches SK1, 2, 3 & 4 attached.

For level D strut removal see sequence on attached sketch SK1. WOJV is proposing to remove level D bracing in two defined areas.
1. Remove level D Cross lot struts and walers from west to east direction once the mat slab beneath has been place, cured and reached adequate strength.
2. Remove level D struts and walers from south east and north east corner's once the mat slab beneath has been place, cured and reached adequate strength.

For level C strut removal see sequence and defined areas

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The propopsed method is not acceptable. Both sets of diagonal bracing, on the north side and the south side, and the first few cross lot braces work in conjunction as a group. Any one part cannot be removed until the rebracing is complete for the entire group.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

on attached sketch SK2
1. Remove level C Cross lot struts and walers from west to east direction once the walls and RB re-bracing is installed and stressed.
2. Remove level C struts and walers from South East and North West corner's once the walls and RB re-bracing rakers beneath are installed.

For level B strut removal see sequence and defined areas on attached sketch SK3
1. Remove level B struts and walers from west to east direction once the lower concourse slab beneath has been place, cured and reached the required design strength.
2. Remove level B struts and walers from South East and North West corner's once the lower concourse slab beneath has been place, cured and reached the required design strength.

For level A strut removal see sequence on attached sketch SK4
1. Remove level A cross lot struts and walers from west to east direction once the RA re-bracing is installed and stressed.
2. Remove level A struts and walers from South East and North West corner's once all the RA re-bracing rakers beneath have been installed.

Please confirm if this sequence would be acceptable

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

In the first lift (up to EL -20.56) of the 190C to 190E shear walls, the #6 ties were installed at 5-inches O.C. instead 4-inches O.C. Please confirm if it is acceptable to leave the corbels as-installed. If not acceptable, Gerdau proposes to install additional T9 (hairpin) ties between every 4ea - #6 ties on the Western face of the corbel. See attached SCCI sketch SK-RFI 410 for details.

Please confirm if this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to leave the corbels as installed (5" tie spacing) without adding additional hairpins.

T-1089 **BGP - Concourse Beam Added Bar Congestion at GL 10.1 to 12** **Closed** **01/07/2014** **01/17/2014** **01/20/2014** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor Construction LP Robert Kjome

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please refer to drawing S1-2203, S1-3400.

In the lower concourse, where four beam pairs consisting of C68 and C69 between GL 10.1 and 12, the added short bars at the top and bottom intrude into the laps of typical bars. This would mean per plans, SCCI would have 14 bars at the top location and 18 bars at the bottom location. Gerdau proposes to move the additional short bars into their own layer to alleviate congestion. Please confirm if this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor proposal to place additional short bars at B68 and B69 beams between GL10.1 and 12 in a second layer is acceptable. Place bars in second layer with 1.5" clear distance between the 1st layer.

T-1092	SSS - Ground Level Cast Nodes	Closed	01/09/2014	01/19/2014	01/24/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

In recent meetings, Webcor/Obayashi has made it clear that the same Ground Level Cast Node geometry will be used at multiple locations even though the angle of the lower Basket Columns changes at each Node. This adds a level of complexity and cost to the joint between the Cast Node and Basket Column Pipe due to the kink imposed on that joint as a result of the following:

- The Lower Pipe Columns will be required to be limiter cut" instead of a traditional square cut end. (Please note Spec Section OS 10 00, paragraph 3.2.M.1 states 11Bearing ends of columns shall be milled or sawn square perpendicular to axis of the column.")
-Miter cut Pipe will have an ellipse cross section and will not match the circular Casting Node.
- Backing bars used to full pen weld the Pipe Column to the Cast Node would need to be custom machined to match the ellipse Pipe and circular Node to eliminate weld gaps. This significantly increases the complexity and risk for successfully welding the joint, and reduces the adjustability for fit up of these joints in the shop and the field.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per Contract, RFIs shall not be used as a vehicle for requesting cost and schedule increases which appears to be the purpose of this Skanska/OIW statements; "A negative response will result in a cost increase and a time increase" are examples.

The contract drawings at bid time clearly showed that the centerline of the pipe is not in line with the centerline of the cast node nozzle, and that the cast nodes were not miter cut to be perpendicular to the incoming pipe. The reference to Spec section 05 10 00 noted in this RFI regarding bearing ends does not apply for this condition as the pipe to cast node connections are not "bearing" connections, they are a fully welded connections as shown on the contract documents.

This "kink" between the bottom-side of the ground floor basket column and the top-side of the ground floor cast node - resulting from the building's geometry and the use of the same cast node type in multiple locations - can be accommodated by miter cutting either the pipe or the cast node. However, the

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

This kink can be accommodated either by machining the nozzle of the Cast Node to be perpendicular to the pipe, or by machining the pipe end at a mitered angle to match the Cast Node.

Since this joint on the Cast Node is already being machined, OIW believes that the more desirable and less expensive option is to machine the nozzle of the Cast Node perpendicular to the axis of the Basket Column Pipe. As the nozzles will each be custom machined regardless, machining them to match the pipe axis should be a relatively low cost change.

OIW requests that the nozzles of each Ground Level Cast Nodes to be machined perpendicular to the axis of the adjoining lower Basket Column Pipe.

A negative response will result in a cost increase and a time increase.

contract documents, including those cast node shop drawings available during bid, clearly show that the ground floor cast nodes were not going to be miter cut, so miter cutting of the basket column pipe members by the Steel Contractor is necessary to accommodate the building's geometry.

Miter cut of the cast node is not acceptable architecturally. The specified miter angle of the pipe does not exceed 1.5-degrees in any location.. Even though Miter cut Pipe will have an ellipse cross section, the lips created by the ellipse cross section is very small (1/160"), which can be ground smooth as a part of weld grinding for meeting AESS requirements. Weld assist devices like backing bars, a contractor means and methods for joints fit up in the shop and the field, are the responsibility of Skanska.

T-1093 **BGP - Foundation Wall Mix Placed in Shear Wall** **Closed** **01/09/2014** **01/19/2014** **01/14/2014** **Potentially** ☐

REQUEST:

See attached CD RFI # 264 SK1 to SK4 for items 1 to 8:

1.) Supply the slope angle for MFB1.
2.) Confirm the noted information is the correct information to determine the top end of MFB1.
3.)
Supply the noted dimension (to be used to locate PL 2 1/2 x 9 x 2'-6).
4.) The braces per 5/S1-5015 as shown on plan (SK1) will cross each other between Grids 19.9 & 20.1 as shown on SK3 & SK4. There is insufficient room on Girders TR19.9 & TR20.1 to accommodate these brace connections without the braces fouling each other.
Please work with SK3 & SK4 and provide a solution.
5.) Supply
the underside of slab dimension at the location of the brac e per item 4.
6.) Supply
the underside of slab dimension at the location of the brac e per item 4.
7.) Supply
the underside of slab dimension at the location of the brac e per item 4.
8.) Supply
the underside of slab dimension at the location of the brac e per item 4.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). The slope of the beam can be calculated from the Top of Slab Elevation at each end of the beam.
2). Confirmed.
3). Centerline of the welded coupler is at the elevation that is equal to the bottom of the beam minus the clear cover (see 5/S1-3600) minus diameter of the stirrups minus 1/2 of the rebar diameter.
4). The cross brace between 19.9 and 20.1 may be replaced by a single horizontal brace.
5). Underside of the slab is 10" below the top of slab, which can be calculated based on the spot elevations given (also see response #1)
6) See response #5
7) See response #5
8) See response #5

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 264.1 SK1 to SK3 for items 1 to 4:

At GL 22/G detail 9/S1-
3702 is noted as typical at Grids 19.9 & 20.1 on S1-
2305. However, TR19.9 & TR20.1 do not match the inform
ation as shown in detail 9/S1-
3702 due to the MFB1 concrete beam & BU girder depth.
See SK3 for the outline of the MFB1 and please provide di
rection for the following items at Grids 19.9 & 20.1.
1) The number of headed studs requested in detail 9/S1-
3702 will not fit TR19.9 & TR20.1. Supply the number of h
eaded studs required with location dimensions.
2) The PL 2 1/2 x 9 x 2'-
6 cannot be welded as shown in detail 9/S1-
3702. Please advise.
3) The 2" diameter holes at the bottom of MFB1 thru the w
ebs of TR19.9 & TR20.1 cannot be supplied as requested.
Please advise.
4) The L8x4x1/2x2'-
0 cannot be supplied as shown. Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The top of the beam is at 16.07', and the bottom of the concrete beam is at 12.07'. The top of Transfer Girder is at 17.60', which allows 5.3' high region for 5 rows of studs at 6" spacing (out to out distance of 2'-0"). Lower the stud group so that that top row is 6" below the top of concrete beam.

2). The 2 1/2" plate is incorrectly shown graphically. The end of the plate is to flush with the end of the transfer girder web.

3). 2" dia holes are to be provided. The center of the hole is to be 2" above the bottom of the concrete beam.

4). The angle may be deleted.

REQUEST:

See attached CD RFI # 264.2 SK1 to SK3 for items 1 to 3:

1. The group of headed studs has been lowered to 6"
below the concrete beam per response in RFI T-1097.1
(SK 340.1, CD 264.1). Please confirm the headed studs
may be moved as necessary to clear the stiffeners.
2. Please clarify the vertical location for the PL 2 1/2 x 9 x
2'-6.
3. The 2" dia. holes cannot be located 2" above the bottom
of the concrete beam as requested in RFI T-1097.1 (SK
340.1, CD 264.1) as the concrete beam is below TR19.9
as shown. Please clarify where the 2" dia. holes are to be
placed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Confirmed.

2). PL 2 1/2" x 9" x 2'-6" may be deleted and the couplers may be welded to the bottom flange of the transfer girder directly.

3). The holes are to be located above the bottom flange (as close as possible to the flange).

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Skanska is reviewing the rigging schemes required to erect the Transfer Girders, Built-up Columns and Tapered Roof Girders. Please confirm drilling holes for the bolted connection in the following members is acceptable so Candraft can incorporate them into the model as per:
1) Transfer Girders sketches R-1A & R-1B.
2) Built-up Columns sketches R-2A, R-2B & R-2C.
3) Tapered Roof Girders sketches R-5A & R-5B.

Rigging is a means and methods issue, the Design Team does not have specific comment on the proposed rigging scheme, however, the rigging scheme for the transfer girder shall consider the weight of the cast node as it is to be shop welded to the transfer girders.

T-1102 **SSS - Type III Column Base Embedded Plate** **Closed** **01/09/2014** **01/20/2014** **01/10/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Webcor Construction LP Jeff Galoyan **Answered By:** Webcor Construction LP Gregory Kemerer

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Type III column base detail 8/S1-5051 indicates an embedded plate, as the package delineation line shows the ½" thick embedded plate is not in Skanska's scope of work. TG06 trade subcontractor will be required to coordinate locating the shear studs to clear the congested rebar at these locations. The embedded plates will be supplied and installed by others and Skanska will field weld the L4x3 to the embedded plate as indicated on SK1. Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-1103 **BGP - Increased Slump Specification Limit for Mixes with High-Range Water Redu** **Closed** **01/13/2014** **01/23/2014** **01/15/2014** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference attached letter Authored by Robert Foley, CEMEX QC Manager, dated 1/2/2014 and TG06.0 technical spec section 033020.2.3.F.1.b.

SCCI and CEMEX are proposing the following guidelines regarding slump of cast-in-place mix designs that contain 30% or higher fly-ash (CM) and HRWR:

1. Maximum 8-inch slump will continue to be the target slump for delivery of concrete mixes with HRWR.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
1/15/2014
RESPONSE:
The revised guidelines are not acceptable. Acceptability is governed by the limits in the approved mix design submittals and the project Specification within ACI 117 tolerances.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

2. 9-inch and higher slump will be considered an action limit. Whenever slump of consecutive loads exceeds 9 inches, actions wiJI be taken to reduce subsequent slump measurements.
3. Batches with slump as high as 10.5 inches will be accepted provided the batch weights are evaluated to verify the batch did not include water content that exceeds mix design w/c ratio; and the concrete is not visibly segregating.

Are these revised guidelines acceptable?

T-1104 **BGP - Increase Concourse Slab Maximum construction Joint Spacing** **Closed** **01/13/2014** **01/23/2014** **01/28/2014** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference TG06.0 contract specs section 033020.3.2.A.4, submittal TG0600-030.2 and attached drawing showing proposed CJ layout per variance below. SCCI is proposing to increase the allowable maximum construction joint spacing in the lower concourse slab:

With the use of currently approved Concourse Slab cast-in-place mix design, SCCI is proposing to eliminate every other construction joint. See attached pages for reference example. Maximum construction joint spacing would be 96-feet. Joint location will always land on wall joint location below per 033020.3 .2.A.4.

Construction joint layout submittal TG0600-030 will be revised and resubmitted to reflect any change made to currently approved layout.

Is this acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
1/27/2014
RESPONSE:
The contractor-proposed Lower concourse slab CJs presented in the RFI will be acceptable.

T-1105 **SSS - Elevator Rail Supports Erection Aids** **Closed** **01/14/2014** **01/24/2014** **01/27/2014** **Potentially** ☐

REQUEST:

The response to RFI T-1105 directs the contractor to issued for bid drawings. Please advise if the new details 7/S17630 & 8/S1-7630 are intended to be for construction, if so please indicate which ASI package these revised drawings will be formally issued with.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Yes, details 7/S1-7630 and 8/S1-7630 are intended for construction. The documents have now been issued to TJPA as and ASI.

T-1106 **SSS - Pretensioned Rod Bearing Plate Hole Dia** **Closed** **01/14/2014** **01/24/2014** **01/24/2014** **Potentially** ☐

From: Skanska USA Civil West California Dis Ryan Clayton **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

With reference to detail 6/S1-5052 (attached) please review the following:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor proposed use of anchor bolt hole sizes per Table 14-2 of AISC Manual for the pre-tensioned rods in SLRS columns is not acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Due to the limited access at the top of the built-up TT please confirm it is acceptable to increase the diameter of the hole in the 4" bearing plate to the maximum allowable size of 3-3/4" as per ASIC table 14-2 (attached) to allow for additional tolerance and workability when installing the 2-1/2" diameter 18' rod. The oversized side hole will only be required at the 17 built-up TT locations and the 6x6x2" plate washer hole will remain the major diameter of the rod + 1/16".

Please confirm this proposal is acceptable.

T-1107 **SSS - Connection Clarification at Roof Level GL 11** **Closed** **01/14/2014** **01/24/2014** **01/27/2014** **Potentially** ☐

From: Skanska USA Civil West California Dis Ryan Clayton **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

See attached CD RFI # 256 SK1 & SK2.

Due to the thick flanges of the W40x593, it is not possible to provide the required 10 bolts in the W36x160 per S1-5010.

Please confirm it is acceptable to provide 9 bolts as shown or supply a new detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-1108 **SSS - Edge of Slab Location Clarification** **Closed** **01/14/2014** **01/24/2014** **01/29/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 261 SK1 to SK4:

S1-2503 (SK1) shows the beam as 9" from the edge of slab. 1/S1-7303 (SK2) shows the edge of slab as 31'-11 1/2 from Grid 11 but A1-2893 (SK3) shows the edge of slab as 31'-11 from Grid 11.

SK4 shows what is currently in the model.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The dimensions shown on SK-4 are correct. See additional comments noted on the attached sketches RFI T-1108 SSS-Edge of Slab Location Clarification-AAI.pdf.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please advise of any correction that needs to be made in the model due to the discrepancy for the edge of slab location.

T-1109 **SSS - Pretension Rod Finish Requirement** **Closed** **01/14/2014** **01/24/2014** **01/17/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

With reference to pretensioned rods required as per schedule 3/S1-5052 please review the following:

As the pretensioned rods on the cruciform columns are to receive a fireproof coating please confirm the rods are to be supplied
plain (no finish required) as per General Note SS-10 - All steel members and embedded steel angles and plates not painted, coated with fireproofing, nor protected by concrete cover, shall be hot-dipped galvanized.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the pre-tensioned rods are to receive fire proofing; they shall not be galvanized.

T-1109.1 **SSS - Pretension Rod Finish Requirement** **Closed** **01/27/2014** **02/06/2014** **02/12/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The response to RFI T-1109 (attached) indicates that the pretensioned rods are to receive fireproofing.

1) Please provide the UL assembly for the rod fireproofing.
2) Please confirm that the rods will be Sprayed Fire Resistive Materials SFRM-1 to match the column fireproofing system.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The pre-tensioned rods are to increase the bending stiffness of the column in a seismic condition and are considered non-gravity load carrying elements which do not require fire protection from a code perspective. As typically recommended by the fire protection manufacturer, non-gravity load carrying attachments be fire proofed to the same level as the protected structural elements.

Confirmed.

T-1110	SSS - Welded Reinforcement at Light Column Tendons	Closed	01/14/2014	01/24/2014	02/03/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Reference details 1 and 5 on S1-6008 which indicate that welded reinforcement bars are "to be determined by post-tensioning system supplier." Per detail 4/S1-6008, the PT anchor bolt supplier is Dywidag.

Per the email attached, Dywidag's representative states that additional reinforcing bars are not required provided the concrete strength is sufficient and that the anchorages are not located particularly close to an exterior concrete face.

Based on the maximum permissible jacking load and associated maximum bearing stress of 3.8ksi, please confirm the concrete strength is sufficient and that the reinforcing bars can be eliminated at the Light Column tendons.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

TT has confirmed that the mat slab has a concrete strength of 5 ksi. As per the anchor plate size specified by Bryan Lampe of DSI USA, only 4 ksi concrete strength is required for the anchor plate without additional reinforcing bars. Therefore, we agree that the helical reinforcement can be eliminated at the Light Column anchor rods.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1111	SSS - Framing & Connection Clarifications	Closed	01/14/2014	01/24/2014	01/28/2014	Potentially	☐

REQUEST:

See attached CD RFI # 254 SK1 to SK4 for items 1 to 7:
1.) It appears the noted section references do not apply on the noted level of steel but the detail should be applied on S1-2403. Work with SK1 & SK4 and confirm or clarify how the detail is to be applied at this level.
2.)If detail 1/S1-7661 is to be applied on the noted level, please respond to the following:
a.) Confirm 1/S1-7661 applies within the 10'-11 area.
b.) Supply information for how to apply 1/S1-7661 at the 2 1/4" slab transition per A1-2883 as doc umented in RFI T-0963 (SK 247 & CD 196)
3.)Confirm noted dimensions are correct.
4.) Confirm the L8x8x3/4 does not need to be welded to the plate and/or to the L8x4x1/2. If yes, supply the welding requirement.
5.)The noted information is not clear. Please supply information for the plate and welding.
6.)Confirm the horizontal leg of the L8x4x1/2 does not need to be welded to the beam flange. If yes, supply the welding requirement.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Confirmed that Section 1/S1-7661 is to be applied to S1-2403.

2). a. Confirmed.

b. See response to Item 3). The distance from EOS to centerline of the beam varies.

3). See the attached sketch RFI T-1111 SSS-Framing Connection Clarification -AAI.pdf for the dimensions requested.

4). Confirmed

5). Use 3/8" plate with weld to beam flange per Detail 8/S1-5000.

6). Provide CJP weld the horizontal leg of L8x4 to beam flange.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

7.)Confirm a slab closure plate per 8/S1-5000 is required on center of beam or clarify the edge of slab along this beam.

7). Confirmed.

REQUEST:

See att ached CD RFI # 259 SK1 & SK2 for items 1 to 3:
1.) The 1" MAX is not achievable with the hole locations shown. The actual gap will be 1 13/16 as shown on SK2. Confirm this is acceptable.
2.)The stitch plate will foul the web of the WT20x105.5 above if it is located at mid-span. Confirm it is acceptable to locate the stitch plate 7/16" clear of the WT as shown on SK2.
3.)It is not clear what is meant by the noted size of the shim plates. Confirm it is acceptable to locate the corner of the MC10 2 7/16" below the top of the WT20x105.5 to clear the "k" and to have the shim plates match the profile of the MC10 as shown on SK2. The shim plate size is 10" x 2'-0 1/2.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Confirmed.

2). Confirmed.

3). Confirmed.

T-1113 **SSS - Light Column Template Air Gap** **Closed** **01/14/2014** **01/14/2014** **01/17/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Installation of the template at the base of the light column DYWIDAG anchor rod will result in a 1/16" air gap (see SK1). Please confirm it will be acceptable to fill this air gap with either Teflon tape or caulking.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposed template detail is ok. SBP has no objections to anything below the loaded anchor.

T-1114 **BGP - Concrete Samples for Columns** **Closed** **01/15/2014** **01/25/2014** **01/21/2014** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Reference Spec: 03 30 20-3.a.

"The TJPA Representative shall conduct tests of concrete as follows:

a. Testing frequency: Sample sets for all tests listed below of each concrete design mix
placed each day shall be taken not less than once a day, nor less than once for each
100 cubic yards of concrete, nor less than once for each 5000 square feet of surface
area for the mat, cast-in-place formed concrete slabs or walls. Additional tests shall
be performed if deemed necessary by the TJPA Representative. Sample each
column, regardless of other frequencies listed above."

We request that the last sentence "Sample each column, regardless of other frequencies listed above", be deleted. The current testing of columns would fall under the statement to test "..not less than once a day, nor less than once for each 100 cubic yards". As the current schedule shows two columns to be poured per day, this will produce one set per day for testing.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
1/17/2014
RESPONSE:
The requirement that samples be taken for every column may be relaxed to a single sample set for every two columns placed contemporaneously with the same pump.

T-1115 **BSE -Alternate Micropile Method in Buttress Area** **Closed** **01/16/2014** **01/26/2014** **01/31/2014** **Potentially** ☐

From: Balfour Beatty Infrastructure, Inc. Kelly Phariss

To: Turner Construction Compan PHIL MILITELLO

Answered By: Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

DTDS is concerned about delays and extra costs resulting from drilling Micropiles adjacent to buttress piles from Gridlines 26.5 to 30. As stated in our Contract Change Order request (CCO #04) regarding "Final Micropile Layout - Additional Micropiles" (attached for reference), drilling for the micropiles may encounter overbreak pile concrete and grout placed during buttress pile remediation. The current drilling system cannot be used to drill through the pile overbreak and/or remediation grout.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is not an acceptable alternate at this time. If serious delays begin to be encountered, the design team, Turner, Webcor and their subcontractors should meet to discuss this issue immediately.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

The reduced pile spacing from 10 feet on center to 5 feet and less may also cause problems such as communication between piles.

Significant additional costs and schedule delays will result should DTDS have to change our procedure and/or equipment to drill through buttress pile concrete and/or remediation grout. Delays will also be realized should DTDS have to change our drilling sequence to mitigate problems that may arise from the reduced pile spacing.

Should detrimental issues arise, DTDS proposes to drill, install, and grout micropile dowels in the center of the existing buttress piles as an alternative to drilling adjacent to buttress piles. A micropile dowel could take the place of a micropile as necessary. A dowel would consist of the same #20 Gr. 80 reinforcing bar used for the micropiles. A six- inch diameter, 20 foot long hole would be drilled in the center of the buttress pile. An additional drill rig will be required to perform the drilling. A 25' bar would be set with centralizers and tremie grouted with the same grout used for the micropiles. Based on an assumed minimum Buttress pile concrete and grout strength of 3,000 psi, the developmental length (ld) of a #20 bar is 182.5 inches (15.2 feet). 20 feet embedded would develop the yield strength of the #20 bar (393 kip) and exceed the design micropile load of 308 kips.

ld = (80,000 psi/ (20 * sqrt(3000 psi))*2.5 in = 182.5 in.

Accepting this alternative would mitigate delays and extra costs that will result should buttress pile concrete and/or grout be encountered while drilling adjacent to these piles.

Please confirm that this alternative micropile procedure is acceptable.

T-1116 **BSE - Micropile Removal and Relocation in Buttress Area** **Closed** **01/16/2014** **01/26/2014** **01/31/2014** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Balfour Beatty Infrastructure, Inc. Kelly Phariss

REQUEST: **SUGGESTION:** **ANSWER:** **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

WOJV recieved FO T-00008 9/07/2012 which added micropiles within the footprint of the buttress shafts. RFI T-0323.1 returned 10/24/12 directed BBII to install buttress shaft E4, which is in direct conflict with Micropile E520.

BBII proposes to:

Option 1. Remove Micropile E520
Option 2. Drill Micropile E520 into the center of the buttress shaft as proposed in RFI T-1115
Option 3. Relocate Micropile E520 to a location provided by the design team.

Also, BBII is requesting that they be permitted to relocate Micropile E519, 1' to the South, to allow further clearance form Buttress Shaft E4.

Option 1 and 2 are not acceptable (also see response to RFI T-1115) Option 3: Move E520 toward east or west (approximately 6'+/-), in the space between 2 buttress piles.

Relocate E519 as proposed is acceptable.

T-1117 **BGP - Geothermal Trench Backfill and Compaction Requirements in Zones 3 & 4** **Closed** **01/16/2014** **01/26/2014** **01/24/2014** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Webcor Construction LP Jackson Tukuafu

REQUEST:

There are areas in Zone 3 (and perhaps in Zone 4) that Geothermal trenches will be trenched through that Arup identified as unsuitable soils (high in bay mud) , which is of such nature as to be incapable of being compacted to specific density using ordinary methods of optimum moisture content. Additionally, there are areas in Zone 3 (and perhaps in Zone 4) that Geothermal trenches will be trenched through that Arup identified as in-situ suitable, which are incapable of being compacted.

- Spec. 23-57-34 Ground Loop Heat Exchanger states "placing and compacting soils the loop installation, the trenches shall be back filled per IGSHPA with loose soil minimizing air gaps or voids and then marked with warning tape. After bedding around the loop and header piping, the backfill shall be watered to settle the loose soil to ensure there are no air gaps along the length of the pipe."

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
1/23/2014
RESPONSE:
Backfill with Native Soil to replace the unsuitable material is acceptable to WSP. Reference RFI 356.1 for relaxation of wetting requirement.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

- Spec. 31-23-34 Trenching and Backfill states "All backfill will be placed in horizontal layers not more than (8) inches thick before compaction, and each layer shall be satisfactorily compacted by mechanical means. Flooding or jetting will not be allowed. Compact soil to not less than 95 percent maximum dry density according to ASTM D1557.

Is the following procedure acceptable for placing and compacting soils in the Geothermal Piping trenches in the areas with unsuitable soils (high amounts of bay mud), and suitable in-situ non-compactable as identified by Arup?

1. After the Geothermal piping is installed and tested, these trenches will be filled with available approved suitable materials from onsite excavations or 300 psi CLSM as approved by the TJPA Rep.
2. Geothermal piping trenches soils will be placed per Geothermal Spec. 23-57-34 Ground Loop Heat Exchanger which states "the trenches shall be back filled per IGSHPA with loose soil minimizing air gaps or voids and then marked with warning tape."
3. Soil bedding and backfill around the loop and header piping, shall be placed to ensure there are no air gaps along the length of the pipe (water will not drain well, so will be used sparingly and only if necessary).
4. All backfill will be placed in horizontal layers not more than (8) inches thick before compaction, and each layer shall be satisfactorily compacted by mechanical means (e.g. pogo stick/power puff tools) .
5. Flooding or jetting will not be allowed.
6. Soils will be compacted using steps above and best construction practices.
7. Trench fill and adjacent areas will not be tested to verify the "not less than 95 percent maximum dry density" according to ASTM D1557. The TJPA Reps will not perform density and moisture content tests specified in the Trenching and Backfill Spec. 31-23-34. In lieu of testing, the TJPA Geotechnical Inspection and Testing Agency will perform full time inspection of the fill and compaction process to verify procedure steps are followed, the suitability of the fill and that soils compaction is achieved.

T-1118	BGP - Knockout Wall Neoprene Pad Width Clarification	Closed	01/17/2014	01/27/2014	01/21/2014	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please refer to attached drawing S1-3204.

Details 1, 2, and 4 on S1-3204 call out a 1/4-inch x 8-inch continuous neoprene pad to be placed between the shear wall pilaster and the knockout wall. The bearing surface of the pilaster is 12-inches, so the 8-inch pad will no adequately cover the bearing surface.

Please confirm that this is the designer's intent. If not, SCCI proposes using a 1/4-inch x 12-inch continuous neoprene pad to provide more adequate coverage of the bearing surface.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The following options are acceptable:

1. As per design documents, an 8" continuous neoprene pad may be used. Center the pad on the supporting corbel. The Knockout wall concrete shall not be permitted to directly contact the supporting corbel concrete. As part of contractor's means and methods, 2" foam (or equivalent) strips may be used on either side of the neoprene pad to prevent concrete to concrete contact.

2. A 12" continuous neoprene pad may be used.

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Reference detail 4 on S1-5022 which indicates that where "S" is less than or equal to 3", a double bent plate is to be used. Based on the information provided in SK RFI 266.1 SK2, this cannot be achieved, as the minimum overall height for a Z angle is 4" and the minimum thickness for a

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Yes, it is acceptable, however, the weld shall be a continuous 1/4" double fillet weld, not a 3" long weld at 12" on center. Note that the lower horizontal plate needs to be welded according to the weld shown on detail 4B/S1-5022.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Z angle is ½".

1.) Please advise if it is acceptable to use the detail approved in RFI T-1032 (for sloping conditions), shown on SK RFI 266.1 SK1, at all locations where "S" is less than 4".
2.) Please advise if it is acceptable to use a Z angle at all locations where the "S" dimension is greater than or equal to 4" and the required thickness is ½", in lieu of the bolted connection.
3.) Please advise if it is acceptable to use the detail approved in RFI T-1032 (for sloping conditions), shown on SK RFI 266.1 SK1, at locations where "S" is greater than or equal to 4" and the required thickness is 3/8", in lieu of the bolted connection.
4.) Note that based on the bending radius and edge distances shown in 4/S1-5022, the minimum height for bolted connections is 4 ¾" as indicated on CD RFI 215.1 SK1 attached. If the bolted connection is required, please verify the maximum height "S" for the bent plate detail in 4A/S1-5022 may be increased to 4 ¾".

2). Z section is acceptable, but it limits any field adjustment that the bolted connection can provide. It is Skanska's decision which way is preferable.

3). See Response to #2.

4). Angles can be used in lieu of bent plates to address the clearance issue raised. Also see response to #2 & #3.

T-1122.1 **SSS - Edge Plate Detail at Steel Drag Beam** **Closed** **02/05/2014** **02/15/2014** **02/14/2014** **Potentially** ☐

2) Confirm the noted are acceptable location dimensions f or the 2" dia. holes per 7/S1-3702 SIM.
3) Supply the location of the 2" dia. holes from top of girde r as shown.
4) Confirm the headed studs and 2" dia. holes may be mo ved as necessary to avoid fouling the stiffeners.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Confirmed

2). Confirmed.

3). Center of the 2" holes is 3'-3 1/2" below top of steel at the beam end, and 3'-0" below top of steel near the end of concrete beam.

4). Confirmed.

T-1124.1 **SSS - Plate Grade Substitution** **Closed** **02/21/2014** **03/03/2014** **03/03/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

In response to RFI T-1124 & the Structural Coordination Meeting on February 6, 2014:

The moment frame columns and light column base plates are identified on the structural drawings for TG07.1R as material grade ASTM A572 Grade 50. Please confirm that it is acceptable to use ASTM A572 Grade 42 modified to achieve a minimum specified yield strength of 50 ksi for all plate exceeding 4¿ in thickness at these locations.

Please note that the mill certification will read ASTM A572-Gr 42 but the reports will indicate a yield strength of 50 ksi.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Acceptable to use ASTM A572 GR42 with 50 ksi min yield strength for moment frame columns. The light column base plate was already called out as ASTM 572 GR42, therefore 42 ksi yield is acceptable as indicated in contract drawings.

REQUEST:

See attached CD RFI # 274 SK1 to SK4 for items 1 to 4:
1) Supply the location for the holes in the stiffeners (information not shown on S1-3600):

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Hole locations can be determine following the rules below:
The holes are for MFB11 bottom bars (6-#9).

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

a) Dimensions from center of TR3
b) Dimension from top of bottom flange of TR3
2) 4/S1-3707 shows 5 1/2" and 6/S1-3702 shows 6" spacing for the headed studs. Confirm 5 1/2" in acceptable.
3) It is not clear where the 2" dia. holes are to be located. 4/S1-3707 shows the concrete extending to the bottom of TR3 and 6/S13702 shows the concrete stopping above the top of the boittom flange of TR3. Please confirm the location of the 2" dia. holes as shown on SK3 are acceptable or supply the location dimensions.
4a) Confirm it is acceptable to move the headed studs or rebar holes as necessary to avoid fouling the stiffeners.
4b) Provide the minimum clearance between the stiffener and the headed studs.

The center of the 6-#9 bars are to be 2 9/16" above the bottom of the beam (1 ½" cover + stirrup diameter + ½ bar diameter).
The 6-9" shall be equally spaced witin the concrete beam width (36"), the outside bars shall be 2 9/16" (+/-) from the side of the concrete beam (1 ½" cover + stirrup diameter + ½ bar diameter).

2). Confirmed.

3). The 2" holes are to be located base 1 ¾" above the bottom of the beam per Detail 6/S1-3702.

4a). Confirmed

4b). The headed studs shall be located with sufficient distance away from the stiffeners to facilitate welding of the studs.

There is insufficient room to connect the W16x26 to the W27x84 using the double angle connection per 1/S1-5010.

Confirm it is acceptable to connect the W16x26 to the W27x84 using a shear plate per 1/S1-5011 as shown or supply
an alternate solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed

T-1139 **SSS - WT Deck Support Requirements** **Closed** **01/24/2014** **02/03/2014** **02/07/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 282 SK1 to SK4 for items 1 to 5:
1) The noted WT is shown as stopping short of the concrete curb on S1-2304 (SK1).
a) Confirm the WT is to extend as shown.
b) It appears the WT will interfere with the rebars below the curb per 6/S1-5002 (SK2). Confirm the WT is located as shown and the rebars will be modified.
2) It is not clear from S1-2304 (SK1) what the deck support requirements are above the noted beam are. Please supply a detail.
3) It is not clear from S1-2304 (SK1) what the deck support requirements are above the noted beam are. Please supply a detail.
4) It appears the WT will interfere with the rebars below the curb per 6/S1-5002 (SK2). Confirm the WT is located as shown and the rebars will be modified.
5) The items below have been identified at specific locations on S1-2304 but similar conditions appear repeatedly on the Ground Level. Confirm the responses to items 1 to 4 may be applied typically on the Ground Floor at similar conditions.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

a) The WT does not need to extend beyond the curb that runs north-south (N-S). It should stop short of the N-S curb as shown in detail 6/S1-5002. Note that this also applies to the BU-WT over the W24x76 beam on the east of GL 13 shown in SK1.

1b) The WT will not interfere with the rebar as it stops short of the curb.

2) See attached sketch SKS-0329 that shows deck support above the W12x14 beam. Provide closure plates at the end of the deck as shown in the sketch.

3) See response to 2).

4) See responses to 1a) and 1b).

5) Confirmed.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

See attached CD RFI # 285 SK1:

The flange of the sloping W40x277 is 1/8" below the flange of the flange of the W40x297 at the top and 1/16" below at the bottom, making the requested CJP weld not achievable.

Confirm the welds with the flange alignments as shown are acceptable.

Note: moving the sloping W40x277 up to align with the top edge of the W40x297 is not an option as this will move the

sloping W40x277 out of the normal sloping plane.

Please note that this condition repeats at all the same conditions along Grids B & H.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-1141 **SSS - AESS at Grand Hall and Shaw Alley Bridge** **Closed** **01/27/2014** **02/06/2014** **02/12/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

1. Reference drawing A1-8661, issued for construction, which appears to have information missing for the Grand Hall AESS requirements. Please reference details E, F, and G on A1-8661 attached and clarify the AESS requirements at the noted locations.
2. Detail C on drawing A1-8661 indicates that the HSS 16x16x5/8" member supporting the Shaw Alley Bridge is AESS. However, details C and D on A1-8662 indicate that the HSS 16x16x5/8" member, BU girder, and HSS 5x1/2" posts at the Shaw Alley Bridge are to receive IFRM-1. Please clarify the coating requirements at the Shaw Alley Bridge.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Refer to attached drawing A1-8661. Details E, F, and G are not used, there are no additional AESS requirements.

2. Correct, Detail C on drawing A1-8661 identifies AESS requirements for the Shaw Alley Bridge. To clarify, IFRM-1 coating as indicated on details C and D of sheet A1-8662 for the HSS member, BU girder and HSS posts are the required coatings on these structural members.

T-1142 **BGP - Grounding Rod at Buttress Pile in Zone 4** **Closed** **01/27/2014** **02/06/2014** **02/03/2014** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Please refer to drawing E1-2026.

In Zone 4, an overlapping series of concrete buttress piles were poured along the North Wall of the excavation, extending towards the south wall.

In this area, the final grade of the excavation will be the concrete buttress piles. The attached photo shows the buttress pile layout with the grounding ring/ground rods overlayed on it. The ground rods need to be driven 10' deep. Please confirm that the rods which conflict with the buttress piles could be moved away from the north CDSM wall and to the void area of the buttress piles as shown in the attached SCCI sketch SK-SCCI_RFI421.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

RESPONSE
George Metzger
1/31/2014
WSP does not object to moving ground rods inward; however, contractor shall maintain separation between ground loop and geothermal piping. The photo submitted does indicate this separation.

T-1143 **BSE - Reduced Micropile Testing Requirement in Unsuitable Material Areas** **Closed** **01/27/2014** **02/06/2014** **01/28/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Turner Construction Comp Jack Adams

Co-Author: Webcor Construction LP John Reynolds

REQUEST:

Balfour Beatty Infrastructure Inc. (BBII) has experienced complications with micropile testing in geothermal field 11 due to unsuitable material. In an effort to minimize additional cost and maintain schedule, Webcor/Obayashi Joint Venture (WOJV) requests the testing requirement be reduced in unsuitable areas to test one (1) in five (5) micropiles. To date, all micropiles have passed the testing requirement. WOJV proposes to test seven (7) of the remaining 31 micropiles in geothermal field 11. The micropiles selected to be tested will be approved by a TJPA representative.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

No. Per discussions with TJPA, AAI and T-T the following response is provided.

The contract Specification Section 31-63-33 Drilled Micropiles is clear; All Micropiles shall be proof tested. Paragraph 3.2H Proof and performance Testing in accordance with ASTM D3689 "Standard Test Method for Individual Piles Under Static Axial Tensile Load" SubParagraph 8 states "Proof tensile load testing shall be performed against reaction piles or cribbing in accordance with ASTM-D3689. Existing footings, piles, or other structures shall not be used as reaction points for load testing. An adjacent production micropile in a group may be used as reaction pile. If cribbing is used, the contractor's attention is drawn to the presence of poor bearing soils and underground utilities, which may require special measures to protect against settlement and damage."

Also; Requests such as these should be accompanied by the [Drilltech] Pile Test Engineer's written recommendation.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

1. Pile Test Engineer: A Contractor's engineer who is a registered civil engineer in the State of California.

2. The Pile Test Engineer supervises Performance and Proof Testing.

3. The working drawings and supplement shall be stamped and signed by the engineer who is licensed as a Civil Engineer in the State of California.

4. Micropile Proof Test Plans working drawings and supplement shall be stamped and signed by the engineer who is licensed as a Civil Engineer in the State of California.

NOTE: The RFI statement 'In an effort to minimize additional cost and maintain schedule" is not an acceptable justification for changing the testing requirements. Per Contract, RFI's shall not be used as a vehicle for requesting cost and schedule increases which appears to be the purpose of this statement.

T-1144 **BGP - Lower Concourse Electric Rooms & Lighting Feeds** **Closed** **01/27/2014** **01/27/2014** **02/07/2014** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

ASI 104 changed the feeds for the embedded (Type F15 fixture) lighting boxes in the lower concourse slab. Previously they were to be fed from Electric Rooms in the Train Platform level; as per ASI 104, they are now to be fed from Electric Rooms in the Lower Concourse Level. Some discrepancies have been noted as to electrical panel location, and room locations.

DWG E1-4102, Sheet Note J, and E1-4110, Sheet Note I, specify that the type F15 fixtures in Zones 2 and 10 are to be fed from Panel EDMH-BI-A-EMG located in Electric

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

RESPONSE
George Metzger
2/5/2014

1. Sheets E1-4102 and E1-4110 have been revised. Refer to attached sheets dated 01/23/2014 for revisions. Per Sheet Note J on E1-4102 and Sheet Note I on E1-4110, the type F15 fixtures in Zones 2 and 10 on the Train Platform Level are to be fed from Panel EDMH-B2-A-EMG-1 located in Electric Room B2280 on Train Platform Level.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Room B1253. DWG El-2202 identifies Room B 1253 as Emergency Equipment Storage.

DWG El-4103 indicates the F15 fixtures in Zone 3 up to Gridline 9 are to be fed from Panel EDMH-B1-A-EMG in Electric Room B1496. This is the same panel as indicated in Zones 1 and 10, but a different room is specified. Room B 1496 is not shown on the drawings.

DWG El-4103 and DWG E1-4104 indicate the F15 fixtures in Zone 3 past Grid Line 9, and the F15 fixtures in Zone 4 are to be fed from Panel EDMH-B1-B-EMG in Electric Room B1322. SKE-02-3201 issued with ASI 104 does not have a Panel EDMH-B1-B-EMG in Rm B1322.

DWG E1-4105 and DWG E1-4106 indicate the F15 fixtures in Zone 5 and Zone 6 are to be fed from Panel EDMH-B1-C-EMG in Electric Room B1541. Plan sheet E1-3204 Detail 6 referenced does not seem to be included in the contract drawings.

DWG E1-4107 indicates the F15 fixtures in zone 7 are to be fed from EDMH-B2-D-EMG in Electric Room in Electric Room B1644 in Lower Concourse. Per the "Equipment Naming" char on DWG E1-0010, the B2 in the panel name indicates that it is on the Train Platform Level. However, the room number indicates that it is indeed on the Lower Concourse level.

1. Please provide an enlarged room plan showing the location of each of the following panels: EDMH-B!-A-EMG, EDMH-B1-B-EMG and EDMH-B1-C-EMG

2. Please confirm that panel EDMH-B1-D-EMG is in ROom B1644 per detail E1-3203 (dated 8/30/12) on that the panel was incorrectly labeled EDMH-B2-D-EMG on E1-4107

2. Sheet E1-4103 has been revised. Refer to attached sheet dated 01/23/2014 for revisions. Per circuiting note on E1-4103, the type F15 fixtures up to gridline 9 on the Train Platform Level are to be fed from Panel EDMH-B2-A-EMG-1 located in Electric Room B2280 on Train Platform Level.

3. Sheets E1-4103 and E1-4104 have been revised. Refer to attached drawings E1-4103 and E1-4104 dated 01/23/2014 for revisions. Type F15 fixtures in Zone 3 and Zone 4 are to be fed from Panel EDMH-B1-B-EMG located in Electric Room B1325 on Lower Concourse Level.

4. Sheets E1-4105 and E1-4106 have been revised. Refer to attached sheets E1-4105, E1-4106, and E1-3204, Detail 6 dated 01/23/2014 for revisions. F15 fixtures in Zones 5 and 6 are to be fed from EDMH-B1-C-EMG in Electric Room B1563 on Lower Concourse Level.

5. Sheet E1-4107 has been revised. Refer to attached sheet dated 01/23/2014 for revisions. Type F15 fixtures are to be fed from Panel EDMH-B1-D-EMG located in Electric Room B1644 on Lower Concourse Level.

6. Refer to attached drawings dated 01/23/2014 for enlarged plans requested (Panels clouded in blue). EDMH-B1-A-EMG is now EDMH-B2-A-EMG-1.

7. Refer to revised sheets E1-3203 and E1-4107. Revised sheets dated 01/23/2014 are attached

T-1144.1 **BGP - Electrical Rooms B1222, B1223, B1560 & B1561 Enlarged Plan Sheet Discre| Closed** **02/11/2014** **02/21/2014** **03/21/2014** **Potentially** ☐

REQUEST:

Ref: E1-2202, E1-3201

Electric Rooms B1222 and B1223 on plan sheet El-2202 (Issued in ASI 104) and rooms B1560 and B1561 on plan sheet El-2205 (Issued in ASI 104) do not match the enlarged room plans shown on El-3201 (IFC) and El-3202 (IFC) respectively.

Please issue revised electrical drawings including, but not limited to El-3201 and El-3202.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The requested updated drawings will be issued in a forthcoming ASI 0112 scheduled for issue on 02/24/14.

T-1145 **BGP - Plumbing and Floor Drawing Detail Discrepancies** **Closed** **01/27/2014** **02/06/2014** **02/10/2014** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please refer to attached drawing A1-2224, A1-2844, A1-2225, A1-2845, A1-2846, A1-2226 and excerpt from spec section 22 05 30, 3.2.

Details for plumbing and floor drains in the drawings for the Lower Concourse have the following discrepancies:

1. Drawing A1-2224 left of gridline (GL) 13 between GL B - GL C shows two plumbing details and in drawing A1-2844 these plumbing details are not shown
2. Drawings A1-2845 and A1-2225 between GL 22 - GL 23 and GL G - GL H where A1-2845 shows a plumbing (PLBG) detail and A1-2225 shows a floor drain (FD) detail
3. Drawings A1-2846 and A1-2226 between GL 29 - GL 30 and GL G - GL H where A1-2846 shows a plumbing (PLBG) detail and A1-2226 shows a floor drain (FD) detail
4. A plumbing detail shown in drawing A-2225 on GL G between GL 24 - GL 24.9 is not shown in drawing A1-2845.

5. Furthermore, the PLBG callouts in all the Architectural and Structural drawings do not include the size for each pipe or sleeve. Plumbing sleeve details in spec section 22 05 30 - 3, do not state the required clearance spacing needed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. 2 PLBG penetrations on A1-2224 (refer to SKA-3021) have been removed and are coordinated with A1-2844 (refer to SKA-3029).

2. PLBG annotation on A1-2225 (refer to SKA-3022) revised to FD and is coordinated with A1-2845 (refer to SKA-2845).

3. PLBG annotation on A1-2226 (refer to SKA-3023) revised to FD and is coordinated with A1-2845 (refer to SKA-2845).

4. PLBG annotation on A1-2225 (refer to SKA-3022) is coordinated with A1-2845 (refer to SKA-2845).

5. For Pipe Sleeve Schedule - Refer to PSK-0051.

For updated Lower Concourse plans, refer to attached SKAs:

SKA-3011 to 3018 - B1 Zone Plans,

SKA-3019 to 3026 - B1 Wall Plans,

SKA-3027 to 3034 - B1 Slab Edge Plans.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please verify the conflicting plumbing and floor drain details, the diameter size of each pipe or sleeve detail, and clarify the clearance space for sleeves required for plumbing.

Red mark ups are for changes in slab penetration annotations, relocation, and/or deletion.

Blue mark ups are for slab penetrations that were added due to Plumbing coordination.

T-1145.1 **BGP - Plumbing and Floor Drain Drawing Details** **Closed** **02/12/2014** **02/22/2014** **03/05/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference RFI T-1145 Response BGP - Plumbing and Floor Drawing Detail Discrepancies

The diameter size of PLBG callouts were not provided in the response (only sleeve schedule was provided). TG06.0 Plumbing drawings are for reference only and not for construction and have not been revised through the current ASI's and SK.A's.

Please provide diameter size of plumbing penetrations or revised plumbing drawings coordinated with updated Architectural and Structural drawings.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to ASI 0112 and ASI 0113 for additional information.

T-1145.2 **BGP - Plumbing and Floor Drain Drawing Details** **Closed** **03/11/2014** **03/21/2014** **03/24/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

T-1145.3	BGP - Plumbing and Floor Drain Drawing Details	Closed	03/24/2014	04/03/2014	03/27/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

As discussed in the 3.24.2014 submittal TG0600-121 comment review meeting, please issue current design drawings P1-2202 through P1-2211 so that the size of plumbing pipes that pass through the concourse slab can be ascertained for the purposes of sizing the plumbing penetration sleeves per PSK-0051 (issued in RFI 1145rev0). The -8.30.2012 Issued for Construction - Below Grade Package- P1-2202 through P1-2211 pipe plans do not match up to the current sleeve layout as shown in sheets A1-2842, A1-2843, A1-2844, A1-2845, A1-2846, A1-2850 & A1-2851.

The size of the Concourse level slab sleeves required in the above mentioned A1-2800 series drawings cannot be determined without the current coordinated plumbing design.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to ASI 112, ASI 113 and Addendum #2 for the most current plumbing drawings as of this date.

RESPONSE: 3-28-14
Judy Long: Refer to the attached ASI 112, ASI 113 and Addendum #2 plumbing drawings for the most current plumbing drawings as of this date. These drawings will be issued on April 1, 2013 as "Issued for Construction" documents.

T-1146	SSS - W16 connection fouls W33 connnection at grid 14F	Closed	01/27/2014	02/06/2014	02/14/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

On S1-2304 there are W16's centered under CMU wall connecting into a W40 along grid F near grid 14. The drag connection for the W33 connecting into the Transfer Girder and the W16 connections will foul each other. Please
verify the following:
1. Per the schedule on 1/S1-5010 the W16 connections should be three bolts. Please verify it is acceptable to reduce
the bolts form three to two bolts?
2. Please verify it is acceptable to move the drag connection down to clear the two bolt W16 connection?
3. Please verify coping the bottom flange of the W16's to clear the W40 drag connection is acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Acceptable.
2) Acceptable.
3) Acceptable.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 277 SK1 to SK3 for items 1 to 3:
In order to maintain interior TOS (Top of Steel) elevations shown on the contract documents, the connection detail as
shown on 1/S1-5010 needs to be modified along the ground level perimeter beams at certain locations. Please

confirm the following:
1) Confirm the proposed connection is acceptable as shown or supply an alternate detail.
2) Confirm the proposed connection is acceptable as shown or supply an alternate detail.
3) Confirm the connections in items 1 & 2 may be applied typically at other similar conditions.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Provide connection details per 6/S1-5011 (similar) at the W12x14 beams highlighted in the RFI.

2) Provide a double angle connection per 1/S1-5010 with 2 bolts at the W16 beams highlighted in the RFI.

3) Solutions in 1) and 2) can be applied typically at other W12 and W16 beams with similar conditions, except at beams with * notations. For beams with * notations provide connection detail per 1/S1-5028 as noted on sheet note 2 on S1-2305.

T-1147.1 **SSS - Ground Level Perimeter Framing Clarification at GL14** **Closed** **03/17/2014** **03/27/2014** **03/31/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 331 SK1:

The connection per RFI T-1147 (SK 356, CD 277) item 2 on SK3 will not work here as the connection angles will foul the Girder connection to the column as shown.

Confirm it is acceptable to connect the W16 to the W40 per 1/S1-5028 with S < 12" or supply an alternate connection detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide a shear plate connection at the W16 beam per attached sketch SKS-366. The beam and shear plate may be adjusted slightly to avoid the bolts at the W40 drag connection.

REQUEST:

Basket column pipes of wall thickness less than or equal to 1" will be produced from rolled and seam welded plate per API-5L (X65 for ground level to bus deck level pipes and X52 for bus deck level to roof level). For wall

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

We note that the chemical composition for cast steel provided in the RFI has elements for which max limits exceed those recommended by ASTM 732 or those of API 5L (for example, Mn). The chemistry of the

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

thicknesses greater than 1", the pipes will be produced using the centrifugal cast process as defined in the project specifications section 05 15 22. Please see attached letter of compliance from the pipe manufacturer confirming chemical composition to meet mechanical requirements. Please confirm this is acceptable.

material may be as proposed and submitted by the Contractor provided that all mechanical properties (yield strength, tensile strength, elongation, CVN toughness) of the supplied material meet those outlined in specification 05 15 22 (Centrifugally Cast Steel Pipes). However, the Contractor assumes all responsibility for ensuring that the material is adequate from a weldability perspective. Since this is not a prequalified base material, welded joints will need to be qualified per AWS. We recommend that joint qualification is performed in advance (before pipes are manufactured) in order to minimize risks related to weldability and joint adequacy.

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

There are some discrepancies between the Train Platform Level Lighting Plans(E Drawings) and the Lower Concourse Level Slab Edge Plans(A Drawings). Please provide direction and revised drawings for the following instances.

1) The Lighting Plans show two exit signs in close proximity, yet on the Slab Edge Plan only one EJB layout is shown:
Al-2844/El-4104 at approximate Grid Lines:
-14.5/F
-16.6/A.6
-16.7/F
Al-2850/El-4110 at approximate Grid Lines:
-2.8/V.8

2) The Slab Edge Plan shows EJB layout, yet there are no fixtures on the Lighting Plan:
Al-2842/El-4102 at approximate Grid Lines:
-1.6/C.5
-2.7-3.5/C.3 (Three EJBs in a row)
-4.5/C.3 (Two EJBs)
Al-2846/El-4106 at approximate Grid Lines:
-25.7/F.I
-26.6/C.5
-26.7/A.6

3) The Lighting Plan shows fixtures, yet there is no layout on the Slab Edge Plan:
Al-2845/El-4105 at approximate Grid Lines:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Please refer the following SKAs, ESKs and TE1 pdfs:

SKA-3059 to SKA-3066 for Lower Concourse Slab Edge Plans
ESK-026 to ESK-033 for Train Platform Level Electrical Lighting Plans
TE1-2202 - Lower Concourse Zone 2 Floor Plan
TE1-8014 - Telcom Closet Details

1. EJBs on the Lower Concourse slab edge plan A1-2844 were updated and coordinated with Train Platform Level Electrical Lighting Plan E1-4101: see SKA-3061 and ESK-028

2. EJBs on the Lower Concourse slab edge plan A1-2842 were removed and coordinated with Train Platform Level Electrical Lighting Plan E1-4102: see SKA-3059 and ESK-026 Same with A1-2846, EJBs were coordinated with E1-4106: see SKA-3063 and ESK-030

3. EJBs on the Lower Concourse slab edge plan A1-2845 were updated and coordinated with Train Platform Level Electrical Lighting Plan E1-4105: see SKA-3062 and ESK-029

4. For Train Platform Level Zone 11 Lighting Plan: see ESK-033 and SKA-3066

5.There are no Telcom conduit penetrations for

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

-19.2/A.6
-21.2/C.6
-21.2/F

4) There was no Train Platform Level Zone 11 Lighting Plan (El-4111) included with the contract documents, but there is an EJB layout on Lower Concourse Level Zone 11 Slab Edge Plan(Al-2851).

5) Telecommunications Drawing Lower Concourse Level Zone 2 Floor Plan(TEl-2202) has six(6) 4" conduit sleeves on Grid Line I between GL E and F. the Slab Edge Plan(Al-2842) does not have a layout for these sleeves.

TELCOM closets along GL 1 between E & F. Please refer to attached TE1-2202 and Detail 1 of TE1-8014

T-1156.1 **BGP - Telecom Drawing Discrepancies** **Closed** **02/25/2014** **03/07/2014** **03/13/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

The response to RFI T-1156 provided a number of drawings which were not previously provided. Only TE1 drawings TE1-0000, TE1-2202, TE12203 and TE12207 were issued with the TG06 scope of work.

The telecom sleeve locations on SKA-3060, SKA-3063 and SKA-3064 do not match the TE1 contract drawings.

The discrepancies between the telecom drawings and the slab edge drawings are:

I) GL 5/A - Telecom sleeves indicated on TEl-2202, no layout dimensions on SKA-3059
2) GL 10/J -Telecomsleeves on TEl-2203 are not shown in the same location as on SKA-3060
3) GL 29.5/A - No TEI drawing provided, however SKA-3063 has layout for three(3) sleeves
4) GL 33/A - Telecom sleeves indicated on TEl-2207, but no layouUdimensions on SKA-3064

Please provide an up to date set of ALL TE I drawings

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AAI Response:

For updated Slab Edge Plans coordinated with updated TE1 Plans showing telecom enclosure penetrations at the Lower Concourse Slab. Refer to the following sketches:

SKA-3095 to SKA-3102 Lower Concourse Level Slab Edge Plans

See also for reference:

SKA-3079 to SKA-3086 Lower Concourse Level Zone Plans

SKA-3087 to SKA-3094 Lower Concourse Level Wall Plans

SMW Response:

The attached sketches are based on coordination with

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

which show telecom sleeves and are consistent with the Lower Concourse Level Slab Edge Drawings.

updated Lower Concourse Level Slab Edge Drawing provided by AAI. We have adjusted Telecom sleeve locations to match Lower Concourse Level Slab Edge Drawings as well as adjusted Telecom enclosure quantities and locations as needed to match.

See attached SMW Response which includes TSK-008, TSK-009, TSK-010, TSK-012, TSK-013.

T-1157 **SSS - Fireproofing Clarification At Light Column** **Closed** **02/07/2014** **02/17/2014** **02/20/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 293 SK1 for items 1 to 3:
1) Supply the elevation to determine the termination of IFRM-2.
2) Confirm the IFRM-2 finish applies to the sides and top of the base plates but not the bottom surface.
3) Supply the finish requirements for the plate washers and the protection caps for the anchor bolts above the base plates.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Elevation to determine termination of IFRM-2 is not required at Ground Level as IFRM-2 does not terminate at this location. Extent of IFRM-2 at uppermost boundary is indicated on detail E/A1-8662.

2.Confirmed, bottom surface of any steel column base plate to be grouted shall not be fireproofed.

3.The plate washers and protection caps are to be finished as specified in section 05 10 00, Part 2 - Products.

T-1158 **BGP - Geothermal Field 12 Layout** **Closed** **02/07/2014** **02/17/2014** **02/14/2014** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

1Please confirm it is acceptable to decrease the minimum 4-inch center to center dimension required by the specifications to 2-feet center to center in order to install the required 10 loops in Geo Field 12 in the new East to West orientation. The 83-inch diameter will be maintained

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. As discussed in 2/4/2014 meeting with WSP, AAI Webcor, Schimick and Airco, 2' Center to Center distance is acceptable for Field 12.

2. It is acceptable to reduce clearance to 4 inches

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

at the end of the loops. Please note that the 2-foot center to center dimension will require significant hand digging to maintain trench separation and stability.

2. Please confirm it is acceptable to reduce the geothermal 6" clearance around micropiles to 4".

within this field only.

T-1159 **SSS- Bracing Requirements at W-1 Connections** **Closed** **02/07/2014** **02/17/2014** **02/20/2014** **Potentially** ☐

Further to response to RFI T-637 please find attached proposed changes to the spandrel beams in pour Area 10 for location plan see exhibit - A

Exhibit - B shows the plan view of the modification necessary to the spandrel beam on the north and south elevations due to the revised reinforcement width of the foundation wall due to encroachment of the CDSM beams as well as typical cross sections of the revised spandrel beams.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Modifications for the spandrel beam at locations outlined are acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

RFI T - 0743 shows the extent of the modification to the foundation wall on the north and south elevations of Area 10.

Please confirm that these modifications as outlined at these locations are acceptable.

T-1161 **BSE- Replacement and Removal of Waler Lookouts GL 9.5 West** **Closed** **02/11/2014** **02/21/2014** **02/18/2014** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Turner Construction Comp Stacy Wilson

Co-Author: Balfour Beatty Infrastructure, Inc. Danny Walsh

REQUEST:

Due to a revision in the concourse slab elevation, waler lookouts from gridline 9.5 west must be removed to allow for construction of the slab. BBII's EOR for the internal bracing has approved the use of additional 6x6x3/8" angle braces to replace the lookouts in conflict. Reference the attached RFI response, supplemental calculations, and details from PB&A.

Please confirm it is acceptable to proceed with removal of the lookouts per PB&A's RFI response.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The following is URS' comments on the PB&A's response to the RFI.

It is not acceptable to proceed with removal of the lookouts per PB&A's RFI response until the following items are resolved. Please revise and resubmit the RFI response with the following items addressed.

1. The drawings do not show the sequence of installing new items and removing existing items. The construction sequence is required to ensure proper load transfer from removing elements to new load-carrying elements. Information provided for construction must clearly identify details and sequencing. There should be nothing left to interpretation by field personnel. This includes all detailing as well as full identification of what is to be installed and where, and what is to be removed, with clear identification of what is required prior to removal, and when (relative to installation of new bracing elements). The specific degree of finalization for installation of the new installed bracing elements prior to removal of lookouts is required. This includes identification of the specific inspections required to be complete prior to allowing any removal of existing lookouts to occur.

2. For welding of an angle brace to a waler, please

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

show clarification of welding to provide full compliance AWS prequalified procedures (weld geometry). For the bottom welding, please verify the weld is accessible with waler beam flange being close to welds. Welding is to include detailing that provides access for performance of welding. All welding must have clearly defined geometry allowing calculation of weld capacities. If this is not achieved, the welding provided cannot be relied upon for transmission of loads. If an angle brace needs to move away from waler beam flange for accessibility, the distance shall be indicated.

3. Either an identical WF beam or an angle brace as proposed for a replacement element of the existing lookouts is to be attached to WF soldier pile beams above a waler according to the RFI. However, a number of soldier piles already connect angle braces, and those soldier piles with an existing brace may have a difficulty to accommodate an additional WF beam or angle. Lookouts were placed at least 4 per waler and one on each side of a strut per the drawings and calculations, and the same number and locations of replacement elements are required. Please verify the existing angle braces are to be used as a part of the lookout replacements or the same number of new angle braces as the existing lookout beams are to be added in addition to the existing angle braces. Please verify the proposed replacement elements can be installed without a conflict of existing angle braces.

T-1161.1 **BSE - Replacement and Removal of Waler Lookouts GL 9.5 West** **Closed** **02/20/2014** **03/02/2014** **03/04/2014** **Potentially** ☐

The specific degree of finalization for installation of the new installed bracing elements prior to removal of lookouts is required. This includes identification of the specific inspections required to be complete prior to allowing any removal of existing lookouts to occur.

PB & A response :The replacement WF beam or angle shall be installed and special inspections shall be performed on the welding connections prior to the removal of the existing WF lookouts underneath the waler. As per sketch attached

2. For welding of an angle brace to a waler, please show clarification of welding to provide full compliance AWS prequalified procedures (weld geometry). For the bottom welding, please verify the weld is accessible with waler beam flange being close to welds. Welding is to include detailing that provides access for performance of welding. All welding must have clearly defined geometry allowing calculation of weld capacities. If this is not achieved, the welding provided cannot be relied upon for transmission of loads. If an angle brace needs to move away from waler beam flange for accessibility, the distance shall be indicated.

PB & A response :The replacement WF beams or angles shall be installed on each side of the pipe strut. If an existing angle brace has been installed on the soldier

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

beam on the side of the pipe strut, the replacement WF beam or the angle shall be installed on the adjacent soldier beam away from the
pipe strut. The angle brace is move from the waler beam flange for accessibility per sketch SK-1 attached.

3. Either an identical WF beam or an angle brace as proposed for a replacement element of the existing lookouts is to be attached to WF soldier pile beams above a waler according to the RFI. However, a number of soldier piles already connect angle braces, and those soldier piles with an existing brace may have a difficulty to accommodate an additional WF beam or angle. Lookouts were placed at least 4 per waler and one on each side of a strut per the drawings and calculations, and the same number and locations of replacement elements are required.
Please verify the existing angle braces are to be used as a part of the lookout replacements or the same number of new angle braces as the existing lookout beams are to be added in addition to the existing angle braces. Please verify the proposed replacement elements can be installed without a conflict of existing angle braces.

PB & A response: At least the same number of replacement WF beams as that of the existing lookouts shall be installed. For the replacement angle option, minimum 4 additional angle braces excluding the existing ones are required.

Please confirm it is acceptable to proceed with removal of the lookouts per PB&A's RFI response. Note that the RFI response provided by PB&A has been amended to address comments from urs in response to RFU T-1161.

T-1170	SSS - Light Column Base Plate and Corrosion Protection	Closed	02/13/2014	02/23/2014	02/25/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

As a follow up to review comments provided in Submittal Package TG0701-023.1 SSS - Light Column Anchor Bolts (#1.5E), please review and respond to the following items:

1) Base plate hole oversize and subsequent sizing of the top plate washer

As a follow up to the conference call held 1/29/14 for the Light Column anchor bolts, Dywidag provided the following information via the email attached: "If we spec a 50ksi plate and use the full width of the spherical washer, the plate works as-is. Leaving the plate

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

We have reviewed Dywidag's statement for the top plate washer as well as the corrosion protection of the bar within the galvanized tube and based on this guarantee by Dywidag we find these solutions acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

design alone (with the assumed actual contact width of the washer) the plate still works at a 6" hole diameter. This is designing for 95% of the ultimate capacity of the bar."

The maximum outside diameter of the HSS tube inside the base plate is 3.5". Within a 6" hole, this allows for 1.25" of clearance all around the tube, which is more than adequate clearance based on the AISC allowable tolerances for installations of anchor-rod groups. Reference AISC Steel Construction Manual, Section 16.7.5.1 attached, which does not allow for any more than ¼" variation between anchor rod groups nor between anchor rod group and column lines. Please confirm it is acceptable to proceed with a 6" base plate hole size to avoid modifications to the top anchor plate grade and geometry.

2) Adequate corrosion protection of bar with clearance provided between 2.79" bar and 3" galvanized tube

See the email attached from Dywidag stating that the provided clearance allows for adequate corrosion protection of the anchor bar. Please confirm the galvanized duct is acceptable as detailed based on this information.

T-1171 **SSS - Galvanizing Steel Composite Deck** **Closed** **02/13/2014** **02/23/2014** **02/24/2014** **Potentially** ☐

REQUEST:

With reference to the galvanizing required for the composite metal deck please clarify the following:

a) General Notes drawing S-007 note DK-1 requires deck to conform to ASTM A653 hot dipped galvanized conforming to ASTM A924 G90.

b) Detail 2/S1-5000 note 6 requires UNO all floor and roof deck to be galvanized in accordance with ASTM A653 coating class G60. Type 2 deck shall be galvanized in

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Note 6 of Detail 2/S1-5000 stating that UNO, all floor and roof deck to be galvanized in accordance with ASTM A653, coating class G60. Since both the General Note DK-1 on sheet S-007 and Specification 05 30 00, paragraph 2.3 A call for G90 coating for all metal deck, G90 shall be used.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

accordance with A653, G90.

c) Specifications section 05 30 00 part 2.3A requires before forming, the steel sheet shall be coated with a zinc coating conforming to ASTM A653 Zinc coated per ASTM A653 G90.

Please clarify this conflicting information

T-1172 **BSE - Geothermal Field 10 & 11** **Closed** **02/14/2014** **02/24/2014** **02/20/2014** **Potentially** ☐

From: Webcor Construction LP Robert Kjome **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Per field discussions with ARUP, Airco is to hand tamp (not use the jumping jack) the geothermal trench only to ensure "tight" compaction. ISI will be onsite to visually verify the compaction efforts.

Per field walk on 02-13-14 ARUP has classified the top portion of Geothermal Field #10 and #11 as oversaturated/unsuitable/partially contaminated due to the inclement weather (rain from 02.06.14 through 02.09.14). It is recommended to scrape off the top layer immediately prior to the rat slab rebar install.

Please confirm it is acceptable to pour the rat slab in this area thicker to compensate for the scraped off unsuitable material.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

ARUP Response:

Contractor should first perform the required treatment of wet soils resulting from unfavorable weather conditions specified in Spec. 31-23-34.

It is acceptable to pour the mud slab in this area thicker to compensate for the scraped off unsuitable material. However; Geothermal Piping must have suitable soils cover of minimum of 6" above top of geothermal piping within header trenches/trenches.

Adamson Associates Response:

CMGC shall verify the waterproofing sub-contractor, waterpoofing manufacturer, & sub-contractor's waterpoofing designer approve the proposal in this RFI to confirm the mud slab will provide a suitable installation surface for the waterpoofing system.

T-1173 **SSS - Grease at Light Column Anchor Bolts** **Closed** **02/18/2014** **02/28/2014** **02/27/2014** **Potentially** ☐

Detail B/A1-8662 indicates that BRBs at Ground Level between GL D.4/28 and D.4/31 are to receive IFRM-2 fire protection. All other BRBs are to receive SFRM fire protection. Please refer to SK RFI 397 SK1 attached and clarify the following finish requirements for the BRBs:

1) Details 1, 3, and 5 on S1-4206 indicate that bottom gusset plates are to be galvanized. Please confirm that only the bottom gusset plates are to be galvanized.
2) For BRBs to receive SFRM fire protection:
a. Please confirm the extent of the SFRM at the braces as indicated by the red outline in details 2, 3, and 6. Note that all materials indicated to receive SFRM will be bare steel. Steel will be prepped in accordance with 07 81 00-3.2.B.
b. Please confirm the pin, bolts, plates, and top gussets shown in details 2 and 6 are to be bare steel in anticipation of receiving SFRM by others.
3) For BRBs to receive IFRM fire protection:
a. Please confirm the extent of the IFRM at the braces as indicated by the blue outline in details 2, 3, and 6. Materials indicated to receive IFRM will be prepped and primed in accordance with 07 81 23.
b. Detail B/A1-8662 graphically indicates that only the braces and not the gussets are to receive IFRM. Please confirm the final finish of the bottom gusset plates is to be galvanized and provide the finish requirements for the top gussets.
c. Please provide the finish requirements for the pins and 1" thick plates indicated on 6/S1-4206.
d. Provide the finish requirements for the bolts indicated in detail 6/S1-4206.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Item 1. Confirmed and as indicated on the documents referenced.

Item 2.

a. Extent of SFRM and shop prep as indicated in the documents referenced.

b. Extent of SFRM and shop prep as indicated in the documents referenced.

Item 3.

a. Extent of IFRM and shop prep as indicated in the documents referenced.

b. Confirmed and as indicated on the documents referenced.

c. Finish requirements are indicated in referenced drawings and specifications.

d. Finish requirements are indicated in referenced drawings and specifications.

T-1176.1	SSS - Finish Requirements at BRBs	Closed	03/18/2014	03/28/2014	03/18/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Skanska is proceeding as follows for BRBs based on the response to WOJV T-1176:
1) Bottom gusset plates shall be galvanized.

2) For BRBs scheduled to receive SFRM fire protection:
a. Materials in red indicated to receive SFRM will be bare steel. Steel will be prepped in accordance with 07 81 00-3.2.B.
b. The pins, bolts, plates, and top gussets shown in details 2 and 6 shall be bare steel to receive SFRM.

3) For BRBs to receive IFRM fire protection:
a. Prime coat for IFRM will be provided to the extent indicated by the blue outline in details 2, 3, and 6.
Materials indicated to receive IFRM will be prepped and primed in accordance with 07 81 23.
b. The response to WOJV T-1176 indicates finishes for top gusset plates shall be per the documents.
Note that the contract documents and specifications do not indicate whether top gusset plates are to be galvanized, bare steel to receive SFRM, or IFRM. Based on the interface between gussets, bracing, and pinned components, it appears that the top gusset plate shall be prepped and primed to receive IFRM. Please confirm.
c. The response to WOJV T-1176 indicates finishes for the pins, bolts, and 1" thick plates shall be per the documents. Note that the contract documents and specifications do not indicate whether these components are to be galvanized, bare steel to receive SFRM, or IFRM. Based on the interface between gussets, bracing, and pinned components, it appears that the pins, bolts, and 1" thick plates shall be prepped and primed to receive IFRM. Please confirm.

Please advise if exception is taken to any of the noted finishes.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. No exception taken.

2.

a. No exception taken.

b. No exception taken.

3.

a.Confirmed

b. Confirmed

c. Confirmed

REQUEST:

Skanska proposes the erection aids detailed in attached sketches to position 8 No. W10 system support posts. Please confirm no exceptions are taken to hole locations and quantity drilled to accommodate these erection aids.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

TT takes no exception to the proposed erection aids as shown in the sketches attached to this RFI.

T-1178 **BGP - Concourse Typical Blockout Detail at Deck Penetrations** **Closed** **02/19/2014** **03/01/2014** **02/21/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Please see attached concourse deck typical blockout detail at pile penetrations.

SCCI proposes to construct the temporary pile penetrations as shown in the attachment.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The accompanying calculations only include the required development lengths for the additional bars placed with couplers. The additional bars are placed at a lower level due to the form saver that reduce slab flexural capacity, therefore, additional bars are needed to make up for the reduced flexural capacity. A calculation justifying the number of additional bars required shall be submitted as a shop drawing for review.

For the case when the blockout is unfilled, the calculation was incorrectly done assuming #6 bar for calculating the moment capacity instead of #5s actually specified for RCS1. Update this calculation and resubmit for review, or clarify that shoring will be required while the blockout is unfilled.

Note that the application of the blockout detail at the specific field condition shall be incorporate into all applicable reinforcing submittals. Additionally a complete set of calculations addressing all temporary blockout conditions is required for submittal.

T-1179 **BGP Geothermal Manifold Location for Riser 11** **Closed** **02/19/2014** **03/01/2014** **03/04/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Per discussions with Geothermal EOR (WSP), SCCI was directed to route the geothermal risers below the bottom of the Air Duct and above the top of the conduit rack against the foundation wall. Due to the location of the Fremont St abutement, the penetration plate has been moved down between the bottom of the abutement and the top of the waler.

Please confirm the attached sleeve detail for Geothermal Riser 11 is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

WSP Response: Since piping is not installed per Detail A/M1-5002 With piping tight to slab, install as shown in the attached sketch (WSP Review-RFI_T-1179_BGP_-_Geothermal_Manifold_Location_for_Riser_11) with the piping and valves mounted as close as possible to the foundation wall.

Arup Response: Height of manifold below the top of shoring wall, as shown, is acceptable in this one instance.

T-1180 **SSS - Roof Level Support Framing to Drum Cafe** **Closed** **02/19/2014** **03/01/2014** **02/28/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Framing plan S1-2605 in ASI 105 shows support framing at roof level for the W20 Drum Café. A note (see attached sketch) indicates that steel beams are to be "aligned with each drum café column See S1-6100." Please provide the referenced drawing.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

See attached sketch for the location of the W-20 columns.

T-1181 **BGP - Proposed Revised Location of the Reinforcement Lap Splices at the Lower (Closed** **02/21/2014** **03/03/2014** **03/04/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Further to discussion with Thornton Tomasetti design Engineer Kerem Gulec, WOJV is requesting that the horizontal reinforcement lap splices of the spandrel beams and the top horizontal reinforcement of the lower concourse slabs can both be located anywhere within the middle 1/3th span between the moment frame beams.

Please confirm it would be acceptable

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1182	BGP - Mat Slab - Top Rebar Splice Location at Light Tower Anchor Bolt	Closed	02/21/2014	03/03/2014	03/28/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

See attached sketches.

To accomodate the installation of Light Column Anchor Bolt assemblies, SCCI proposes to locally move the splice location of the top mat slab rebar towards the West.

Please confirm that this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to locally move the top reinforcing lap splice west as described in the RFI. Along the bars affected it is also acceptable to maintain a lap splice in the original plan location to avoid excessive lengths of bar to the east.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1183	SSS - Interference at GL15	Closed	02/21/2014	03/03/2014	03/04/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

On the attached sketches CD RFI # 298 SK1 & SK2 the double angle connections per S1-5010 are not possible at the noted location as the W16 & W24 are off-set 2 7/16" from each other.

Confirm it is acceptable to supply full depth shear plates as shown with plate thickness, welding and bolts per S1-5011

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Not acceptable. Provide double angle connection per 9/S1-5010 at the W24 beam. Provide shear plate connection at the W16 beam per 2/S1-5011 with 6 bolts (2 vertical rows of 3 bolts each).

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

At grid line D/15, the W40 to column connection will conflict with the W16 connection to the W40 (SK2). Please confirm it is acceptable to connect the W40 (SK1 & SK2) to the indicated column as shown, using 3 rows of 4 bolts in lieu of the 2 rows of 6 bolts per 5/S1-4206.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Not acceptable. Provide a shear plate connection per 1/S1-5011 at the W16 beams that are next to the W40 drag connection on both sides of GL D. Drag connection at the W40 beam shall be per 5/S1-4206 as noted on construction drawings. Note that the W40 beam is framed into the transfer girder and not a column as stated in the RFI.

REQUEST:

On the attached sketches CD RFI # 300 SK1 & SK2 the 11 bolts per 2/S1-5011 will not fit in a single row in the beams.

Confirm it is acceptable to locate the bolts as shown at 13 locations along Grid line 19.1.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed

T-1186 **SSS - W14 Connection Detail Between 19.9 & 20.1** **Closed** **02/21/2014** **03/03/2014** **03/04/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached sketches CD RFI # 301 SK1 & SK2 for items 1 & 2:

1) Supply a connection detail for the noted W14x61 to the Transfer Girder (both ends).

2) Confirm the W14x61 is located at elevation T/SLAB 18.22" minus S1 slab (7 1/2") per S1-2305.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The T/steel of the W14 beam shall be 16' - 6 1/2". Provide connection to the transfer girder per 9/S1-5010 except that there is no WT at this beam.
2) See response to 1). Note that the beam is supporting W-3 anchorage cables and not the composite deck. The t/steel of the beam does not need to be flush with the bottom of the slab.

T-1186.1 **SSS - W14 Connection Detail Between 19.9 & 20.1** **Closed** **06/11/2014** **06/21/2014** **06/25/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

As per the response to RFI T-1186 item #2, the W14 beam is supporting W-3 anchorage cables and not the composite deck. Please confirm the (6) shear studs as indicated on the framing plan drawings are not required as the beam T/Steel elevation is 4" below the composite deck.

If required, please provide details for the composite deck at this location.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the shear studs are not required at the W14 beams indicated in the RFI.

☐

T-1188	SSS - Finish Requirements at Basket Columns	Closed	02/21/2014	03/03/2014	03/03/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

A1-8660 conceptually indicates the boundaries of Category 2 and Category 3 AESS requirements for the basket columns. Based on this information and the documents provided for the TG07.1R trade package, SK1 has been provided to depict Skanska's understanding of the basket column finish requirements. Please review the following and confirm the various finish boundaries associated with the basket columns:

1) Confirm the Category 2 AESS boundary is from the Ground Level cast node to the end of the pipe column from the Ground Level to the Bus Deck Level as indicated in SK1.
2) Confirm the Category 3 AESS begins at the Bus Deck level cast node and extends through the pipe column to the Roof Level cast node as indicated in SK1.
3) Confirm the AESS boundary ends at the Roof Level cast nodes and that the Roof Level connection plates are to be delivered on site in the bare steel condition to receive SFRM.
4) Confirm the AESS boundary at the Bus Deck cast nodes extends to the cast node pad, with all shear plates, reinforcement plates, and perimeter beams to receive SFRM as indicated in SK1.
5) Confirm these boundaries can be typically applied to all perimeter basket columns at North, South, East, and West

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Boundaries indicated on SK RFI 418 SK1 generally appear to be OK. However, this information should be confirmed by the CM/GC, as this RFI states "by others", which is information for the CM/GC. All this information should be clearly submitted for review in shop drawing submittal per drawings and specification 05 12 14 Paragraph 1.4.

Additionally, see added notes on your SK RFI 418 SK1 attached. The elements currently highlighted in cyan color in the enclosed sketch should be AESS category 3 per A1-8660 and finished per specification section 09 97 16.

2. See response to item 1) above.

3. This statement is incorrect. Cast node connecting plates are AESS members that should be prepped and finished per specification section 09 97 16. SFRM fireproofing should be applied to perimeter beam per A1-8662 and details in sheets A1-8611 and A1-8612.

4. Please submit shop drawings submittals per specification 05 12 14 Paragraph 1.4 and as noted on item 1) above.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

exterior elevations.

5. See response to item 1) above.

T-1189 **SSS - Missing Dimensions and Connection Details** **Closed** **02/24/2014** **03/06/2014** **03/06/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

1) Work with SK2 and provide the missing dimension.
2) Detail 10/S1-7600 will not work as the noted posts are off-set from the beam. Provide a connection detail.
3) Supply the missing dimensions.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Missing dimensions have been provided on the attached sketch SKS-0332.

2) Beams shall be centered on the highlighted posts and detail 10/S1-7600 shall apply as noted on the drawings. See SKS-0332 for reference.

3) See response to 1).

T-1190 **16" Slab Negative Moments at North-South Walls** **Closed** **02/24/2014** **03/06/2014** **02/26/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Please reference attached Memo from seers consulting Engineer.

There is a certain concern that once the LL= 150 PSF is imposed on the LCL deck there will be excess negative moments generated at the interface between weak axis of the supported slab and wall-spandrel beam. This may require additional top reinforcement in the weak axis of the one-way slab.

Please confirm that there are no additional bars neded at the LCL spandrel/wall interface, and that loading Table from S-1002 applies.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

No additional bars are required at the LCL spandrel/wall interface. Loading on S-1002 applies.

T-1192	BSE - Steel Plate at CDSM Piles 450-451	Closed	02/24/2014	03/06/2014	03/04/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Balfour Beatty Infrastructure, Inc. Kelly Phariss

REQUEST:

During level 4 and 5 excavation, a high volume leak occurred in zone 4 between CDSM pile 450 and 451. In an effort to stabilize the CDSM panel and repair the leak, BBII installed a steel road plate between soldier piles 167-168 and injected grout behind it.

BBII is concerned that removing the plate will likely cause the panel to become destabilized and could reopn the flow of water. BBII survey of the plate indicates that the plate is behind the theoretical face of CDSM wall and does not encroach into the permanent structure - reference the attached drawing.

Please confirm is is acceptable to leave this plate in place. The edges of the plate may be grinded to provide a smooth transition to the CDSM wall for waterproofing.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed, it is acceptable to leave the steel plate in place, provided, as stated in the RFI, it does not encroach into the permanent structure and the edges of the plate are ground smooth. This location should be reviewed by the waterproofing manufacturer and details developed for the waterproofing and cushioning layers between the CDSM wall and foundation wall, to ensure a smooth transition for the CDSM wall waterproofing at this condition.

T-1194.1	BGP - Unmarked Member on S1-2203	Closed	02/27/2014	03/09/2014	03/07/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

The response to RFI T-1194 conflicts with Submittal TG0600-364 response.

RFI T-1194 response noted that the curved member shown is future CMU wall. However,
response to TG0600-354 submittal noted that the member is Curved Concrete Beams- CB24,
CB55 and CB15.

Please clarify and provide latest drawings to reflect noted change shown in Submittal TG0600-
354 if the curved member is a beam.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Response to RFI T-1194 does not conflict with notes on Submittal TG0600-364.

Curved Concrete Beams CB24, CB55 and CB15 noted on submittal TG0600-364 are members to support future walls.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1194.2	BGP - Unmarked Member on S1-2203	Closed	03/10/2014	03/20/2014	03/14/2014	Potentially	☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

On attached sketches CD RFI # 309 SK1 & SK2 confirm the connection for the W21x50 to the top of the W30x90 is acceptable as shown or supply a new detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed

T-1204 **SSS - Support Steel at Large Slab Openings** **Closed** **02/26/2014** **03/08/2014** **03/03/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The perimeter support steel at large slab openings as deta iled on 12/S1-5003
will not work at GL 16.9/D as indicated on SK1 due to the 12" top of slab elevation changes around these openings. Please provide details for the support steel required at this location including all connection details.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The W33 beam is 1'-0" higher than the W24 as shown on the plan. The metal deck for the slab where those 2 openings occur is set by the low slab (similar to Typical Detail 10/S1-5002). The Typical Detail 12/S1-5003 applies. C8 channel shall have a shear connection per typical detail 1/S1-5011 (2 bolts).

T-1205 **BGP - Lower Concourse Blockouts to Pour Train Level Partition Walls** **Closed** **02/26/2014** **03/08/2014** **03/04/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

SCCI is planning on pouring as much of the Train Level Partition Walls in Area 3 and 4 prior to the Lower Concourse Deck being poured (see attached Structural Drawings for reference). However, some of the partition walls conflict with the Rakers used for bracing. Additionally, there are some partition walls in Areas 6-16 that are added in ASI #110 that is now included in TG06 scope.

Since the Rakers will not be removed until after the Lower Concourse Deck is poured, SCCI proposes installing blockouts in the Lower Concourse above the walls in order to complete the concrete pours for the partition walls in Areas 3 and 4. The same blockouts will be installed for the partition walls on the mat slab level in Areas 6-16, added as part of ASI 110. The blockouts will be 6"x 12" for RCS 1 reinforcement and 9"x l2" for RCS8 reinforcement, both at 4' O.C. The blockouts would be positioned in the space

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Conceptually, it is acceptable to provide blockouts in the Lower Concourse slab for the purpose of pouring the concrete partition walls below. It is noted that the RFI does not address the following conditions:

· Cases where a partition wall is below or partially below a parallel Lower Concourse beam
· Cases where a blockout coincides with features above, such as a CMU wall
· Means of preparing and pouring back the blockout

Contractor shall give due consideration to the above and revise the plan as required. Consideration shall be given to the differing heights of wall pours due to changes in the Lower Concourse soffit such as for perpendicular beams, particularly with regard to consolidation. Minimum separation gaps between top

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

between bars as to not affect the reinforcement layout.

Please confirm this is acceptable.

of partition wall and Lower Concourse elements shall be maintained as detailed.

T-1206 **BGP - Geothermal Header Pipe Size at Field 12** **Closed** **02/27/2014** **03/09/2014** **03/07/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

See attached drawing

The orientation and layout of Geothermal Field 12 has changed significantly.
Please provide the pipe sizes for the header piping in this Field.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

See attached Sketch WSP Response-RFI_T-1206_BGP_-_Geothermal_Header_Pipe_Size_at_Field_12 for pipe sizes.

T-1207 **SSS - Missing Elevator Information** **Closed** **02/28/2014** **02/28/2014** **03/17/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

See attached CD RFI #314 SK1 to SK3 for items 1 to 8:
1) There appears to be a beam missing as there is no support for the slab edge plate per 8/S1-5000. Pleae advise.
2) The double angle connection per 1/S1-5010 will extend beyond the edge of slab located 5" from the center of beams. Confirm it is acceptable to connect the beams using the shear plates connection per 1/S1-5011 at the 7 locations noted.
3) Details 4-7/S1-5015 do not apply at the noted 4 locations. Please clarify which bracing detail is to be applied.
4) Details 4-7/S1-5015 do not apply at the noted 2 locations. Please clarify which bracing deatil is to be applied.
5) Confrim the noted stiffener is a 3/8" plate per 1/A1-7600.
6)Confirm the 3/8 side plates are to extend the full length

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Weld the edge angle per 8/S1-5000 to the drag beam along GL D at the highlighted location.

2) Move the short W12x14 beams at the highlighted locations (total 7) so that they are 6 1/2" away from the edge of slab in order to fit the double angle connection within the slab edges.

3) Provide bottom flange bracing per 4/S1-5015 at the highlighted locations.

4) See response to 3).

5) Confirmed.

6) Confirmed. Note that the side plates are not

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

of the elevator slab opening.
7) Confirm the noted weld is acceptable.
8) The double angle connection per 1/S1-5010 will fould the shear plate to the column web.
Confirm it is acceptable to connect the noted beam with a shear plate per 1/S1-5011

continuous and are interrupted by the perpendicular stiffener plates at the HSS post locations.

7) Acceptable. We assume that the weld shown on SK2 is between the side plate and the perpendicular 3/8" stiffener plate highlighted in 5). Note that the side plates are to be welded to top and bottom beam flanges with 5/16" welds as shown in the detail.

8) Acceptable.

T-1208 **SSS - Verify no Bent Plate Welds at Protected Zones** **Closed** **02/28/2014** **03/10/2014** **03/11/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Per the approval comment on A2647 and RFI T-1071 occurs North of line D and South of line F along line 10.1 for loose bent plate conditions and does not apply at this location. This beam is between greids D and F.
Please verify for the continuous shop attached bent plate condition no weld will occur within the noted protected zones.
Note this is the same for A2659 and other similar conditions.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Where the bent plate cross-section is continuous between the two outriggers on each side of the protected zone, it is confirmed that the bent plate shall not be welded to the beam along the protected zone and no additional revision is necessary to brace the bent plate. Response to RFI T-1071 applies where the bent plate cross-section changes within the protected zone for example at Bus Deck Level, south of GL 10.1/F and north of GL 10.1/D.

T-1209 **BGP - Plumbing Sleeve Manufacturer** **Closed** **02/28/2014** **03/10/2014** **03/10/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

The response to SCCI Submittal, TG0600-044-BGP-Concourse Plumbing and Piping Sleeves-Product Data and Shop Drawings, states that sleeves and flanges shall be 18 gauge minimum per specs. From the three manufactures, per Spec Section 22 05 30 - 2.1 .B, RK Industries is the only manufacturer that provides plumbing sleeves but with flanges that are 26 gauge only.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This RFI (and the submittal) refers to plumbing sleeves to be cast in lower concourse concrete slab. The 18 gauge sleeves with 26 gauge flanges are acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

In order to proceed, please provide a manufacturer that fabricates sleeves according to TG06.0 specs or allow flanges that are 26 gauge to be used.

T-1211 **BGP - Lower Concourse Blockout - Shifted Bars Near Piles** **Closed** **03/04/2014** **03/14/2014** **03/06/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Where trestle piles protrude through the lower concourse deck, block-outs in the concrete slab will be installed and interupted deck reinforcing will be spliced with formsavers. For bars near the extents of the trestle pile, please confirm if it is acceptable to shift the typical deck bars (#8 and #9) beyond the allowed placing tolerances to avoid interuption of the bar. If acceptable, please provide tolerances for shifting of the bar and minimum clear spacing between rebar similar to conditions listed in the response to RFI T-0631. See attached sketch for details.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to shift Lower Concourse reinforcing for the purpose of minimizing the number of reinforcing intersections with openings, block-outs, and other obstructions thereby minimizing the attendant cutting of reinforcing and the addition of trim steel. The following shifts are acceptable:

1. Any single bar may be shifted to within a bar diameter of an adjacent bar so long as the resulting gap between any two adjacent bars does not exceed 12".

2. Any group of bars may be uniformly shifted to within a bar diameter of an adjacent bar so long as the resulting gap between any two adjacent bars does not exceed 12".

3. Any single bar may be removed from a module so long as it is replaced midway between adjacent modules and the resulting gap between any two adjacent bars does not exceed 12". An equivalent shift of two bars resulting in the same configuration is also allowed.

4. Lap splices may be offset up to 6" provided that the resulting gap between any two adjacent bars does not exceed 12".

T-1212 **BGP - Goethermal Manifold Sleeve Supports** **Closed** **03/04/2014** **03/14/2014** **03/07/2014** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Per discussions with EOR(WSP), please confirm geothermal contractor is to install temporary supports (see attached sketch) to facilitate the installation of the geothermal pipe sleeves(36" long) at the face of finish concrete(which is not in the current concrete package-TG06).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Temporary Supports are the means and methods of the contractor.

T-1213 **SSS - Transfer Girder End Bracing at 9.9 & 10.1** **Closed** **03/05/2014** **03/15/2014** **03/17/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 324 SK1 & SK2 for items 1 & 2:
1) Supply dimensions to locate the braces considering that the braces cannot be connected to the stiffener plates due to rebars.
2) Transfer Girders at other locations also have rebars passing thru the stiffener plates as shown here. Please provide a typical connection detail when this occurs.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Provide braces per Detail 12/S1-3703. Braces are to be connected to the stiffener plates closest to Grid C. Some rebars might interfere with the braces, but they can be adjusted in field slightly.

2). See response to #1.

T-1214 **SSS - Transfer Girder End Bracing at 9.9 & 10.1** **Closed** **03/05/2014** **03/15/2014** **03/17/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

For the Transfer Girder end bracing at GL 9.9 & 10.1 as indicated on SK1 please confirm the following:
1)
The outer braces are to be modeled as per detail 12/S1-3703.
2)
The inner braces between 9.9 & 10.1 are to be modeled as per detail 81/S1-5015.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). The outer braces are to be modeled as per detail 12/S1-3703.

2). The inner braces between Grid 9.9 & 10.1 are also to be modeled as per detail 12/S1-3703.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The contractor proposed revisions to foundation wall reinforcement due to encroaching CDSM Piles in Area 15 are acceptable. Update Area 15 shop drawings affected by the shoring encroachment info presented in this RFI and submit them for record.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

323 to 326 & 330 to 335, 338 & 339 Originally this was a WR2 reinforcement areas #11@6"oc EF vertically and would change to #11@5"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.3 option 2 (Exhibit -E)

WOJV proposal on the South elevation: (See Exhibit ¿ B) Between CDSM piles 438 to 442 & 445-446 to 448 WOJV is proposing to decrease the specified 36" wall thickness to 33" to clear the encroaching SP 441,442,445,446 & 447, originally this was a WR1 reinforcement areas #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

Between CDSM piles 441-442 to 445-446, WOJV is proposing to decrease the specified 36" wall thickness to 33" to clear the encroaching SP 442 & 445 Originally this was a WR2 reinforcement areas #11@6"oc EF vertically and would change to #11@5"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.3 option 2 (Exhibit - E)

In all other areas without CDSM pile encroachment issues the reinforcement will remain unchanged as per the Contract drawings.

See Exhibit - F & G showing details of transition between modified reinforcement to contract reinforcement.

These solutions if approved would be incorporated into the TG06 shop drawings.

Please confirm if these solutions would be acceptable.

T-1219 **BGP - Spandrel Beam Modifications in Area 11** **Closed** **04/03/2014** **04/13/2014** **04/11/2014** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Further to response to RFI T-637 please find attached proposed changes to the spandrel beams in pour Area 11 for location plan see exhibit - A
Exhibit - B shows the plan view of the modification necessary to the spandrel beam on the north and south elevations due to the revised reinforcement width of the foundation wall due to encroachment of the CDSM beams as well as typical cross sections of the revised spandrel beams.
RFI T - 0783 shows the extent of the modification to the foundation wall on the north and south elevations of Area 11.

Please confirm that these modifications as outlined at these locations are acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Modifications for the spandrel beam at locations outlined are acceptable.

T-1220.1 **BGP - SFPUC Grounding Details** **Closed** **03/24/2014** **04/03/2014** **03/24/2014** **Potentially** ☐

T-1221 **BGP - 36" Pile Sleeve Joint** **Closed** **03/06/2014** **03/16/2014** **03/14/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Scott Bunnell

REQUEST:

Please reference attached sketch, photo, and Contract Drawings Sl-3003 and Sl-2025. SCCI welded the 36" pile sleeve (see S 1-2025) vertical CJP as

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposed method and testing described in this RFI is acceptable at this location only.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

depicted in the attached sketch due to a shop fabrication error (see attached photo). Per AWS DI .1, the pre-qualified joint designation B-U2a-GF for FCAW allows a 65 degree groove angle with detail and fit up tolerances. The welded joint is approximately 15 degrees out of tolerance and is on one side of the sleeve only (2 joints per sleeve).
Due to the member considered as non-structural, SCCI requests this joint to be acceptable as welded at this location only. SCCI will adhere to Spec Section 05 50 10 - 2.5.C.2 - "Weld mat foundation sleeve components continuously and test their water tightness by filling with water. Monitor water level for 48 hours minimum. Dry and correct faulty welds and re-test until proven watertight." Is this acceptable?

T-1222 **SSS - Filler plate weld access at CP2 connection** **Closed** **03/07/2014** **03/17/2014** **03/17/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please reference Details 4 and 7 on sheet S1-8001.

Detail 7 specifies a 1" thick filler plate between the beam web and the 2 1/2" thick backing plate. Detail 4 Section E notes 1" typical from the edge of the fill plate to the adjoining stiffener or beam web. 1" opening does not allow for adequate access to perform the welding.

Oregon Iron Works(OIW) is requesting that all filler plates for CP2 connections have a minimum clearance of 1 1/2" from any adjoining edges. Additionally, OIW is requesting that this minimum clearance be applied to any similar areas that exhibit this limited access for welding.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Welding of the vertical stiffener should be done prior to installing the filler plate, hence there should be no weld access issue.
The proposal to increase the 1" gap to 1 1/2" gap is acceptable.

REQUEST:

At SE401 see attached CD RFI # 317 SK1 to SK5 for items 1 to 7:
1) It is not clear what is meant by the noted slope designation.
Confirm the roof slab slopes and the top of pad slab is EL 56'-11 per A1-2894 (SK3).
2) Confirm the noted dimension is 1'-2 3/4 per 8/S1-5004 (SK4).
3) This note is pointing to the edge of slab and giving a top of steel elevation. Work with SK5 and clarify.
4) Confirm the noted dimensions should read 1'-9 & 9'-2 per 1/S1-7113 & RFI T-0965 (SK251, CD 200). If not, clarify.
5) The noted HSS members are not shown on S1-2504 (SK1) or 3/S1-7113 (SK2) but this detail is referenced on both plans noted above.
a) Please confirm the HSS members are required.
b) If yes, supply the size.
c) Supply the horizontal locations on plan
d) Supply the elevation
e) Supply connection details
f) NOTE: the elevator post connections per 1/S1-7600 may foul the HSS members (work with SK5)
6) Confirm the slab edge plate terminates below the 10" raised slab as shown.
7) Confirm detail 1/S1-7600 with the full depth stiffener and kicker brace applies in the noted cases with no elevator post on top of the beam.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The roof slab does not slope. T/Slab of the elevator shaft roof slab is 56' - 11" as noted on A1-2894.
2) Confirmed.
3) The note is pointing to the horizontal steel beams shown on 8/S1-5004 and notes the T/steel of these members.
4) No. The 10'- 3" and 1'-3" dimensions noted on A1-2894 are correct. The edge of slab for SE 401 at the top of the elevator shaft size increases at the top of the elevator shaft. Also see revised dimensions in the attached sketch SKS-0333.
5a) Yes, beams are required at these locations. These members shall be W18x50 beams. Refer to attached sketch SKS-0333. Note that there are four beams ,one on each side of the shaft.
5b) See response to 5a).
5c) Centerlines of the W18 beams shall be 3 ¾¿ from the edge of the elevator shaft opening (see note on sketch SKS-0333) .
5d) Elevation is 54' - 5" as noted on 3/S1-7113 (see note on sketch SKS-0333). Also see response to 3).
5e) Connection at the elevator machine support beams is shown in the attached sketch SKS-0333.
5f) See response to 7.
6) Confirmed.
7) The elevator rail posts shall be connected to the depressed W18x50 beams per 1/S1-7600. See detail in attached sketch SKS-0333.

using a shear plate per 1/S1-5011.

T-1224 **BGP - Concourse Top Bars at Column Embedded Plates** **Closed** **03/10/2014** **03/20/2014** **03/18/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Reference: SKS-0324 and SKS-0325
Per SKS-0324 and SKS-0325, where the top bars for the concourse slab intersect type 1 B and 1 C embedded base plates, the bars are to be trimmed and supplemented with a matching slab dowel in MF beam layer 1. The typical deck top reinforcing consists of a continuous run of #9 bars @ 12" and alternates with a #9 x 28'-0" long bars@ 12". See attached sketch for details. To avoid trimming a 28'-0" bar and splicing it with a 17'-0" bar, please confirm if it is acceptable to relocate the #9 x 28'-0" top bars@ 12" to the MF beam layer 1. The continuous #9 bars@ 12" will remain at 3/4" from the top of concrete and trimmed according to SKS-0324 and SKS-0325.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to relocate the discontinuous T2 bars to the lower layer with the typical continuous T1 bars remaining in the top layer. We note that the RFI mentions the matching dowel length as being 17'-0". For RCS1, this would be a #9 bar with a splice length of 122" for Top Bar, Category II. Given a 42" base plate and either a 3" or 6" oversized block-out, the minimum length of the dowel would be 292" (24'-4") or 298" (24'-10"). The appropriate splice category and block-out size shall be considered when determining the length of the matching dowel.

Alternatively, the Contractor may place the T2 bars that conflict with the base plate in the lower layer.

T-1225 **BGP - Level C Bracing Removal Sequence West Side of Zone 1** **Closed** **03/10/2014** **03/20/2014** **Potentially** ☐

Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference attached sketch that show as-built location of sump pit near GL 14/G.

Please confirm this as-built location is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The RFI and as-built sketch refers to a sump pit at west of Gridline 14-G. However, on comparing with the slab edge and reviewed matt slab submittal drawings, the location reference for the subject sump pit should be west of Gridline 16-G.

The sump pit is to serve an escalator which will be installed in Phase 2. The as-built location is not acceptable as the sump pit will not be accessible under the landing for clean-out once the escalator is installed.

Please provide a solution to revise the sump location to its correct position.

T-1230 **SSS - Machined Cap Plate Surface Finish** **Closed** **03/12/2014** **03/22/2014** **03/14/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please confirm it is acceptable to provide the machined surface of the train box column cap plates with a prime coat finish in lieu of the rust inhibiting coating. The surface prep will be SSPC-SP6 commercial blast cleaning with International Interzinc 315B primer (attached).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The specified product (Interzinc 315) calls out for a zinc load in the dried film of 83%, where as the proposed product (Interzinc 315B) has only 80%.

The Design Team does not object to this substitution as long as the application meets the performance requirements; it meets the SSPC Paint 20 standard for organic zinc rich primers; it is acceptable to the manufacturer and the entire work receives the specified warranty.

T-1230.1 **SSS - Machined Cap Plate Surface Finish** **Closed** **03/24/2014** **04/03/2014** **04/04/2014** **Potentially** ☐

REQUEST:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

To clarify, the specifications section 05 10 00 - 3.2.P.2 requires finished bearing surfaces to be protected with a rust-inhibiting coating (which is typically a petroleum/grease or wax based product) which is to be removed immediately prior to erection. The Train Box Column Cap Plate is a finished bearing surface.

The Interzinc 315 product referenced in the response to RFI T-1230 is specific to the IFRM Coating System. Skanska/TMF proposed an organic zinc rich primer (Interzinc 315B) as the rust inhibiting coating, which would not need to be removed prior to placement of the TG atop the cap plate. The proposed product meets or exceeds the primer specified in the 05 10 00 - 2.2.A spec section as noted in the attached manufacturer's letter.
Please confirm this is acceptable.

It is acceptable to use the Interzinc 315B coating at the cap plate bearing surface in lieu of a temporary rust-inhibiting coating.

T-1231 **BGP - Zone 2 Lower Concourse Openings** **Closed** **03/13/2014** **03/23/2014** **03/21/2014** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

SCCI performed a survey of the CDSM Soldier Piles approximately March 2013 for the North of Area 3 and West of Area 3 and Area 1. SCCI re-surveyed the soldier piles again this year (March 2014) and have found that the Soldier Piles in the area have displaced into the structure by
approximately 1.5" at both the North Wall and the West wall. Please find attached survey information and the changes noticed in the past year.

I. Please confirm that the additional encroachment and future potential movement of wall into the structure will not cause conflict with current and future rebar installation.

2. Please confirm and demonstrate that the future potential movement will not cause additional stress to the Wall Lift 1, which will be poured in the next week.

3. Please confirm that future potential CDSM movement in this area will not impact any of SCCI's future permanent work.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is requested this RFI be withdrawn as discussed with Turner.

WOJV - 4/23/14
In addition to this WOJV request more information and request that each CDSM wall pile is resurveyed after the level C bracing is removed prior to waterproofing . Two points per pile one at top elevation (similar elevation of the previous surveys) and the other at an elevation of approximately -16'. This survey information should then be then sent to both WOJV and the design team highlighting any additional encroachment which has not been already taken in to account with the current RFI for the relevant area.

1) Confirm it is acceptable to connect the W30x90 to the column with the bolts located as shown and the web extended as shown.
2) Confirm it is acceptable to connect the W12x40 to the W30x90 using a shear plate per 1/S1-5011.
3) At 19.9, gridlines C & G, the top flange of a BU-56x30x1.5x4 and sloping W40x327 weld to the continuity plate at the bus deck level. In order to provide a CJP between the aforementioned members and continuity plate, as well as keeping the moment frame members in line with the continuity plate, the continuity plate will need to be increased by 5/8". Please confirm this plate thickness increase to 4 5/8" is required or provide an alternate detail.
4) Please confirm that the solution provided for 3) can be

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) Confirmed.

3) Not acceptable. Taper the top flange of W40 beam to match the top of the continuity plate and provide a CJP weld as shown in attached sketch SKS-0334. The taper angle shall be 1:2-1/2 as shown in the sketch.

4) This condition occurs at total 8 locations: 4 at GL 9.9/10.1 and 4 at GL 19.9/20.1. Solution provided in 3) noted above may be provided at these 8 locations.

Note that top of the top 4" thick continuity plate shown on SK3 shall be aligned with top of the top flange of

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

used at other locations where the continuity plate thickness needs to be increased.

the MF beam.

T-1235 **SSS - Thermally Cut Holes in Transfer Girders** **Closed** **03/14/2014** **03/24/2014** **03/19/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please confirm it is acceptable to thermally cut the rebar holes and the column post-tensioned rod holes in the Transfer Girders using an automated (oxy-fuel) process. All other holes in the primary member will be drilled or punched.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Holes in transfer girder flanges for column post-tension rods shall not be thermally cut.

2). Holes in transfer girder web for rebars may be thermally cut only if the hole is undercut and reamed to the specified size.

T-1236 **SSS - Slab Support Details at GL19E Opening** **Closed** **03/17/2014** **03/27/2014** **03/19/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 327 SK1:

The deck support detail per 4/S1-7660 & 10/S1-5002 will not work at the noted location.

Please supply a detail for this deck support.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For deck support at the W16 beam highlighted on SK1, provide a continuous 8x4x7/16 angle (LLV) welded to the beam bottom flange at the beam web centerline. Weld between the angle and beam flange shall be a double sided fillet weld with size and spacing as indicated on 10/S1-5002. The deformed bars anchors shall be welded to the vertical leg of the angle.

T-1237 **SSS - Base Plate Interference at 19.9G** **Closed** **03/17/2014** **03/27/2014** **03/21/2014** **Potentially** ☐

The column base plate fouls girder TR19.9 at grid line G a

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

At GL 19.9/G, move the transfer girder step (where TG depth transitions from 64.75" to 56") 9" towards north

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

s shown. Please provide a solution.

to clear the column base plate. Extend the slotted flange plate below in the same direction with the same amount (9"). Flag this revision in the shop drawings for final review and approval by design team.

T-1238 **SSS - Shear Plate Interference w Pretensioned Rod** **Closed** **03/17/2014** **03/27/2014** **03/21/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 335 SK1:

The pretensioned rod per detail 2/S1-5052 fouls the beam connection as shown. This occurs on S1-2305 at Grids 19.9/C,G; 20.1/C,G; 22/C,G & 24/C,G.

Please provide a solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Detail 5/S1-5026 has two connection details for drag beams at Gridlines C & G / C.3 & F.7. First detail is for typical conditions and the second detail applies at Gridlines 19.9, 20.1, 22 and 24 as indicated in the construction drawings. For the conditions shown in this RFI, the second detail applies.

T-1239 **SSS -Deck Support Details at Protected Zones** **Closed** **03/17/2014** **03/27/2014** **03/31/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 339 SK1 for items 1 & 2:
1) Provide a typical detail showing how the decking for the lower slab is to be supported at the "Protected Zone".
2) Supply a typical detail for deck support across the colu mn flange if required.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Provide L3 x 3 x 12 gage similar to Typical Metal Deck Detail 1/S1-5000. L 3 x 3 is to be supported on W27 on the north end and W24 at the south end (as close as possible to the web of MF beam).

2) Provide 3/8" bent plate at the column flange similar to Detail 3/S1-5000 for deck support.

This is a follow-up to the response to RFI T-1239 (SK-454, CD 339):
Confirm the Engineer is referring to drawing S1-5001 in his response to question 1 & 2 or provide clarification.
1) Detail 1/S1-5000 is Typical Headed Stud Spacing Detail not Typical Metal Deck Detail
2) Per the latest S1-5000 Rev5 (issued as ASI 114) there is no detail 3/S1-5000.

1. Reference to 1/S1-5000 is a typo, it should be referenced to 1/S1-5001

2. Reference to 3/S1-5000 is a typo, it should be referenced to 3/S1-5001.

T-1239.2 **SSS - Deck Support Details at Protected Zones** **Closed** **04/21/2014** **05/01/2014** **05/01/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please reference RFI T1239 response.
The L3x3x12ga proposed to support the deck will have an approximate span of 8'. This is a concern for 12 gauge material to carry 7-1/2" of nominal weight concrete over an 8' span.
1)
We propose to span the gauge angle from the L4x4 where it terminates on the girder web at the protected zone, which will shorted the span of the angle by approximately 3'. See SK1 for clarification. Please confirm this is acceptable.
2)
A closure piece will need to be added and tack welded to the girder web. This was previously closed by the removed L4x4. Please confirm this is acceptable.
3) Confirm 1 & 2 are acceptable at similar conditions.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) Tack weld the closure piece to the metal deck.

3) Confirmed.

T-1240 **SSS - Bus Deck Level Fouled Beam Connections at GL18** **Closed** **03/17/2014** **03/27/2014** **03/18/2014** **Potentially** ☐

Confirmed.

T-1250 **BGP - Lower Concourse Beam Discrepancies** **Closed** **03/18/2014** **03/28/2014** **03/28/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Filip Filipic

REQUEST:

Reference atached contract drawings.

Latest CDs S1-2203. S1-2210, and S1-2211 have added curved CB16 and CB&B7 downturned beams which appear to be concerntric to South spandrel beam B65. However, no dimensions have been provided, i.e. redius, offset etc.
Furthermore, CD s1-2211 shows tat CB16 and CB&B7 do not follow the same radius. There appears to be an offset between the CB16 and CB/B7 at the MFB at GL 6, and the offset dimensions are not shown.
If architectural drawings are used to find the missing radius (reference SKA-3017 and SKA-3026), one can find that the future partition walls at the South corridor have R=647' - 7 1/2" on both East and West side of MFB at GL6. This implies that the partition walls in this area would off center (non-concentric), and the South corridor would taper (or narrow) Down towards East. SCCI. believes that this was not designer's intent.

Please provide accurate and consistent dimensions and offsets for the LCC beams and future partition walls.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed, there is an offset between CB16 Curved beam and CB7 Curved beam. Please see the attached SKA-3105~SKA-3111 for clouded dimensions.

CB16 Curved beam between gridline 5 and 6 to follow radius of curved beam CB16/partition to the west.

T-1258 **SSS - Stair and Elevator SFRM Clarification** **Closed** **03/18/2014** **03/28/2014** **03/27/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Reference is made to the Fire Proofing Schedule on A1-8662 where Note 2 indicates that all elevator and stair structures are to use SFRM. It appears that architectural drawings, issued for reference, indicate various HSS posts are to receive alternate coating systems or finishes. For example:

- Detail 3 on A1-7576 indicates two HSS "Divider Beams" to be painted to match shaft walls
- Detail 1 on A1-7870 indicates HSS outriggers are to be galvanized

Please confirm that all stair and elevator members are to receive SFRM. This is inclusive of framing which extends above the Roof Level and west of Grid 1.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Not all stair and elevator steel members are to receive SFRM, it is only when a steel member interrupts a rated wall assembly that a fire resistance rating is required for the steel. The various HSS members referenced are not part of the building structural frame nor do they interrupt a rated wall assembly, therefore no fire resistance rating is required at these locations.

T-1259 **SSS - Deviation Due to Tooling - Cast Node Type LC 201 WC0054 - Dimensional Re Void** **03/18/2014** **03/28/2014** **Potentially** ☐

The approval comment on A4714 (CS2) is contrary to the information issued in RFI T-1111, item #7 (SK 327, CD 254)
Confirm the response to RFI T-1111, item #7 is valid and the approval mark-up may be ignored.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-1266 **SSS - ST304 Framing Details** **Closed** **03/20/2014** **03/30/2014** **03/31/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer
To: Turner Construction Compan PHIL MILITELLO
Answered By: Adamson Associates, Inc George Metzger
Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 364 SK1 to SK3 for items 1 to 4:

1) Confirm the (4) W10x22 beams are located on the center of the supporting posts. If not, supply the location dimensions.
2) Supply the clouded dimensions (4 total).
3a) Confirm the stair stringers do not connect to the W12x14.
3b) If yes, supply a connection detail as 1 or 3/S1-7601 will not work with the 5" offset dimension.
3c) If yes, please supply east/west location dimensions for the stair stringers.
4) Confirm it is acceptable to prep the flanges of the WT5x15 for the 1/4" PJP weld in lieu of the beam flange as shown.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The stair framing is a design/build item and comes under the stair contractor's scope (W/O to verify). The W10 x 22 is to be provided by stair supplier.

2) See response to 1).

3a) Stringer is to be designed by the stair supplier, however, we anticipate that it is to be connected to W12x14.

3b) See response to 1).

3c) See response to 1).

4) Confirmed.

REQUEST:

Reference RFI T-1266 (attached) and the associated SK1 & SK2 for the following:

1) The (4) W10x22 beams are in Skanska's scope. Only the stringers are design built and provided by the stair supplier. Please confirm these beams are located on the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) The east-west dimensions to locate the posts have been noted on 1/S1-7008. The outer north-south W10x22 beams at the landings shall be 8" 7/8" from the centerline of the posts typically. The intermediate

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

center of the supporting posts or supply the location dimensions.
2) The (6) W10x22 beams in question are also in Skanska's scope. Please supply the requested dimensions (4 total).
3a) W/O agrees that the stringer is to be designed by the stair supplier, however, we anticipate that it is to be connected to the W12x14. Typically the stringer is connected to the bent plate that is part of the W12x14. This member would also include web stiffeners. If a typical detail is not available, please provide stiffener details and leave the stringer connection to be designed by the stair supplier.
3b) See above, the offset dimension for bent plate should work with 3a.
3c) Please provide location of stringers as requested.

moment connected W10x22 beam shall be aligned with the stringer coming from above at the landing per 10/S1-7601.

3a) Stiffener plates are not required at the W12x14 beam.

3b) The W12x14 beam centerline to the edge of slab distance shall be 4". We anticipate that the stringer will be connected to the bent plate.

3c) Refer to Architectural drawings A1-7007, A1-7501, A1-7502, & A1-7503 for stair 304 stringer locations.

REQUEST:

See attached CD RFI # 344 SK1 to SK3 for items 1 to 5:
1) RFI T-1111 (SK 327, CD 254) confirmed the edge plate to match the thickness of the slab but the approval comment of CS2 drawing 4714 requests a bent plate as shown in SK3. Which is correct?
2) The detail on SK3 is per approval mark-ups on CS2 drawings 4766 & 4767 (noted with an arrow) with references to detail 2/S1-7661 but the approval comments do not occur on the other beams at the yellow walls. Confirm the detail on SK3 applies at all (8) beams next to the concrete walls noted in yellow.
3) Confirm the wall terminates at the lower slab.
4) This detail is per approval mark-ups on CS2 drawings 4766 & 4767 with references to detail 2/S1-7661. Detail 2/S-7661 is not referenced on S1-2403 or 2/S1-7302. Confirm the detail as shown is acceptable.
5) Confirm edge plate per 8/S1-5000 is not required.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Provide edge closure plate per typical detail 8/S1-5000 as noted in response to RFI T-1111. The tall bent plate and 3/8" stiffener plate per comment and markups on CS2 shop drawings are not required.

2) Response in 1) also applies at the 8 beams highlighted in yellow on SK1.

3) Confirmed.

4) See responses to 1) and 2).

5) Confirmed.

The edge closure plate is required per typical detail 8/S1-5000, hence, there should be no cost and schedule increase.

T-1269 **SSS - GL 15 Dimension Clarifications** **Closed** **03/21/2014** **03/31/2014** **03/31/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 346 SK1 to SK3 for items 1, 2 & 3:

1) The noted dimension should be 4'-7 1/2 per A1-2904 (SK2) but 4'-6 is shown in the Revit model which appears to be supported by 1/S1-7010 (SK1) which shows this beam off center from the wall. Confirm 4'-6 is acceptable.
2) The noted beam should be 9" from Grid D per A1-2904 (SK2) but it will foul the W44x290 on Grid D. Confirm the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The noted dimension shall be 4' - 7 1/2" so that the beam is centered on the wall.

2) Confirmed.

3) Confirmed. Note that per contract document the W44x290 should have a double angle connection. However, to avoid conflict at the tapered girder drag

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

location of the W27x84 is acceptable as shown.
3) The noted W44x290 is to be located 3'-10 1/2 north of Grid D per A1-2904 as shown. However, the shear plate connection fouls the web stiffener plates per 2/S1-5016 on TPG2. Confirm it is acceptable to locate the W44x290 4'-0 1/2 from Grid D to avoid the fouling.

NOTE: Items 1, 2 & 3 are symmetrical about Grid E and also occur at Grid F.

connection plate, it is acceptable to provide a shear plate connection. Provide 3 equally spaced bottom flange braces per 8/S1-5015 at the W44x290 beam from the north side (south side for W44 beam near GL F).

T-1269.1 **SSS - GL 15 Dimension Clarifications** **Closed** **04/09/2014** **04/19/2014** **04/21/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

This is a follow-up RFI to RFI T-1269 (SK 461, CD 346)
See attached CD RFI # 346.1 SK1 & SK2:
It is not possible to supply 3 equally spaced bottom flange braces per 8/S1-5015 as requested in the above noted RFI item 3 due to the existing framing. Confirm it is acceptable to supply a brace per 4/S1-5015 at each W27x84 and 1 brace per 8/S1-5015 as shown.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide 3 equally spaced bottom flange braces per response to RFI T-1269. When there is a conflict with the parallel W16 as shown in SK2, provide brace from the other side of the W44 beam.

T-1270 **SSS - ST401 Geometry Clarification** **Closed** **03/21/2014** **03/31/2014** **04/01/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 347 SK1 to SK3 for items 1 & 2:
1) Shown are two versions of the slope geometry for ST401 with the variations noted. Please clarify which geometry is to be used.
2) Confirm a bent deck support plate per 9/S1-5012 will not be required on top of the W12x14 with the beams aligned as shown.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Provide the geometry shown on the top half of SK1. Note that the starting point of slope at the top of the slab which is noted to be 2-7/16" on SK1 has been revised to 5-1/8" in the TG 7.02 IFB Addendum #1 (See A1-2904). Consequently, the slope angle changed to 32.552 degrees with the end of the slope at the bottom terminating at GL D.4. With the new geometry, the S4 slab does not foul the beam flange at GL D.

2) We confirm that bent plate is not required per 9/S1-

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

5012 at the top of W12x14 on GL D.4.

T-1271 **SSS - ST401 Dimension and Connection Clarifications** **Closed** **03/21/2014** **03/31/2014** **04/08/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 348 SK1 to SK3 for items 1 to 8:
1) Supply location of sloping W16 beams from face of concrete wall.
2) Confirm location of W44x335's is acceptable as shown or supply the location.
3) Confirm HSS8x8x5/8 post locations are acceptable or supply the locations.
4) Clarify/supply edge plate requirements for the 'S4' slab at EL. 74'-10 as well as the sloping 'S4' slab.
5) Confirm dimension is acceptable or supply dimension.
6) Confirm dimensions per A1-2904.
7) The connection for the W40 to the HSS8x8 per 6/S1-7661 will not work at the corner. Supply an alternate connection.
8) It appears this detail will not work with the elevations noted. Please supply an alternate detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Locate the sloping W16x26 beams as close to the center of the concrete walls as possible without conflicting with the W27x84 beams above at the roof level.

2) The noted dimension shall be 1' - 1". Note that the 8x8x5/8 posts are to be connected to the top of the W44x335 per 10C/S1-7630, except that the 8x8x5/8 posts will be partially welded to the flange due to offset between the posts and the W44 beam centerline. Provide bottom flange bracing for the W44x335 girder per 4/S1-5015 at the W14x61 beams (total 4 locations).

3) Confirmed.

4) Provide edge plate per typical edge of slab details on S1-5000. Also refer to response to RFI T-1279.

5) Confirmed.

6) Confirmed.

7) Connection at the W40 framing into the HSS post shall be similar to 8/S1-5012.

8) Provide a full depth shear plate connection per 1/S1-5013 at the two W10 beams except, 1) cope only one side of beam flange at top and bottom and 2) Provide 4 bolts at the connection (2 vertical rows of 2 bolts each) with a 3" horizontal spacing between the bolts. Bottom flange brace per 2/S1-7604 is not required at these connections.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:
See attached CD RFI # 366 SK1 to SK5 for items 1 to 6:

1) Supply the missing clouded dimensions at (5) locations shown.

2) The connection for the W10x22 to the HSS post per 3/S1-5012 will interfere with the W10x22 to W10x22 beam

connection as well as the WT5x15 per 6/S1-7601 at (6) locations noted. This is a typical condition on all landings in ST403.
Please provide a solution.

3) Depending on the noted missing dimension, the beam to HSS6x6 post connection per 3/S1-5012 may not work. Please supply an alternate connection as necessary.

4) Supply the missing clouded dimensions at (5) locations shown.

5) Supply the missing clouded dimensions at (5) locations shown.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐
TT's response:
1. See requested dimensions on SKS-0338.

2. Shear plate connection at the W10x22 beam is acceptable at the 6 locations as shown on SK2. It is acceptable to shift the location of the WT10x15 by 1" max to accommodate detail 6/S1-7601.

3. See sketch SKS-0338.

4. See sketch SKS-0338.

5. See sketch SKS-0338.

6. See sketch SKS-0338.

Adamson's response:
For stringer location refer to detail 4/A1-7502 to be 1" min from face of wall.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

6) Supply the missing clouded dimensions at (5) locations shown.

T-1280.1 **SSS - ST403 Missing Dimensions and Connections** **Closed** **06/30/2014** **07/10/2014** **07/11/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

1) The WT5x15 interferes with the connection for the W10x22 to the HSS12x6x5/8 post. Please supply a solution.

2) Confirm the connection for the W10x22 to the HSS6x6 post is acceptable as shown or supply a new detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) We assume that the "interference" noted in item 1 refers to the accessibility issue for bolt tightening. If the WT5x15 restricts the accessibility for bolt installation, the nuts may be tack welded to the beam web and bolts may inserted from the other side and tightened once the beam is in place. Or, bolts may be tack welded to the beam web on the WT side and nuts may tightened from the other side once the beam is in place.

2) Acceptable, except, provide a 1/4" fillet weld on three sides

---

REQUEST:

This is a follow-up RFI to RFI T-1281 (SK 467, CD 350)

See attached CD RFI # 350.1 SK1 & SK2 for items 1 & 2:

1) It is not clear where the posts per 1/S1-8006 are to be located. Work with SK2 and clarify where the posts are located on Grid 16.9 relative to the east-west beams west of Grid 16.9.

2) Confirm it is the intent to have the noted dimensions as shown or should they be the same?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Provide HSS posts per 1/S1-8006 centered at WP41, WP46 and at midpoints between WP42 & WP43 and WP44 & WP45. Concrete fins are also to be provided at these locations as shown in detail 1/S1-8006. Adjust the W21x50 beam locations west of GL 16.9 to align with the post and fin wall locations.

2) The dimensions shown in SK1 and SK2 per S1-6043 are incorrect. Revised dimensions were provided on Sheets S1-6040 (detail 6) and S1-6043 (detail 1), issued in package TG08.10 DB IFB Addenda #11 on 5/16/2014. Revise the dimensions to match the current drawings.

T-1281.2 **SSS - W8, W12 Connection Clarifications** **Closed** **07/08/2014** **07/18/2014** **07/11/2014** **Potentially** ☐

construction or supply them as sketches in response to this RFI.

T-1282 **BGP - Lower Concourse - Latest Drawing Request** **Closed** **03/25/2014** **04/04/2014** **03/28/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Per the meeting between TCCO, WOJV, SCCI, and AAI on Monday 3/24/14, it was made clear that AAI believes that all documents have been issued to WOJV in order for construction of the lower concourse deck. WOJV stated that there are currently drawings out to bidders (for TG 07.2 /TG10 MEPS Series) and in Pre-Construction, but that WOJV has not been provided direction by TJPA/TCCO to proceed with construction in the field, nor to utilize the most current drawing sets. Prior to this meeting, WOJV requested that all IFB drawings be issued as an ASI's in order to coordinate with current and continuing construction. ASI's 112 and 113 drawings were issued, however they are not complete per our initial request. AAI has responded to RFI's and submittals referring to sheets that have yet to be issued for construction. This has caused confusion and frustration for all parties. Therefore, in lieu of continuing to request ASI's to address this specific issue at the lower concourse, WOJV/Turner have agreed to utilize the RFI process to construct the lower concourse deck.

For the list of series of drawings below, please note and/or provide the latest drawings or ASI(s) that should be used to construct the lower concourse deck. We understand that there are drawings issued for pre-construction, that will not be issued for construction for multiple bid packages. For those cases, TJPA/TCCO needs to inform and provide WOJV with the set of the most current and coordinated drawings to be used for construction of the lower concourse, including (but not limited to) blockouts, deck penetrations (such as MEPS), beams, dowel/formsaver locations, and electrical conduit locations.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

See the "Issued for Construction" drawings dated April 1, 2014 for the most current drawings.

RESPONSE:
Judy Long 3/28/14
The drawings, some issued with ASI 115, forthcoming CR-104, are attached for your use and coordination with construction.

T-1283 **SSS - Drag Beam Double Connection** **Closed** **03/25/2014** **04/04/2014** **04/04/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 354 SK1 to SK3 for items 1 & 2:

1) Confirm the double angle connection per 5v/S1-5026 (SK2) occurs at all locations noted with an arrow on SK1 (16 total).

2) The double angle connection per 5v/S1-5026 & 6/S1-5026 does not allow access to install the threaded rod nuts (4-3/4" long x 4-1/2" wide) and washers in the field. Please confirm it is acceptable to provide two elongated hand holes (6" wide x 10" long) in each full height shear plate either side of the beam. Due to the restricted access, the post
tensioning operation will need to be done from the top of the rod, contrary to the response to RFI T-0970.1. This will require the 6x6" oversized washer to be installed at the bottom and the standard flat washer to be installed at the top. Please confirm this is acceptable

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) Providing a hole in the stiffener plates for access to threaded rod nuts is acceptable in concept. Hole shall not be located near the top of the stiffener plate. Final review of the hole location to be done with review of shop drawings. Cloud the hole locations on shop drawings to call the attention of the reviewer. Post tensioning from the top of the rod is acceptable at these locations.

T-1284 **SSS - Erection of Drag Beam at Double Connection** **Closed** **03/25/2014** **04/04/2014** **04/04/2014** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

See attached CD RFI # 355 SK1 & SK2:
The connection per 5v/S1-
5026 creates erectability issues for the beams on Grids C & G.
Please confirm it is acceptable to cope the bottom flange o f the drag beam to clear the double angles.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to cope the bottom flange of the drag beam up to 8" from the bolt centerline at locations highlighted on SK1.

T-1285 **BGP - Anchor Bolt Placement Tolerance** **Closed** **03/26/2014** **04/05/2014** **03/26/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche

To: Shimmick Construction Comp Sylvia Hartanto

Answered By: Webcor/Obayashi Joint Ve Spencer Sayles

Co-Author:

REQUEST:

Under the Below Grade Concrete TG-06 Contract, SCCI is bound by concrete standard for Anchor Bolt placement. Concrete industry standard, ASI 117-90, Section 2.3 allows a tolerance of vertical, lateral and level alignment of+- l ".

Per Anchor Bolt DFOW meeting on 112912014, SCCI proposed to use ASCC (American Society of Concrete Contractors) "Anchor Bolt Tolerances" Position Statement #14 (attached) with the following tolerance for each bolt location:
-3/4 and 7/8 diameter bolts : +-1/4in
- 1-, 1-1/4, and 1-1/2in diameter bolts: +-3/8in ; and
- 1-3/4, 2-, and 2-1/2-in diameter bolts: +-1/2in

Please confirm that the proposed anchor bolt placement tolerance as prescribed by ASCC "Anchor Bolt Tolerances" Position Statement #14 is acceptable. Please note that this tolerance is more stringent than ACI Concrete Standard ACil 17-90, Section 2.3.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Under TG06 contract SCCI is required to place all light column and steel column anchor bolts supplied by TG07.1 in accordance with the contract documents.

- 03 20 00 Concrete Reinforcement and Embedded Assemblies - Section 3.2 A. 1 States: "Set and secure embedments, including embedded plates, bearing plates, and anchor bolts per approved setting drawings and in such a manner to prevent movement during placement of concrete and to allow removal of formwork without damage."
- 03 10 00 Concrete Formwork - Section 3.1 B. 1. a. States: "Use setting drawings, diagrams, instructions and directions by suppliers of items to be attached."
- Structural Drawing Sheet S-0005, GR-2 lists both ACI and AISC reference standards for this project. At the bottom of GR-2 it states: "THE MORE STRINGENT REQUIREMENT IN THE CODES LISTED ABOVE GOVERNS".
- 01 10 90 References - ASCC reference standard discussed in SCCI RFI 452 is not listed in project standards.
- ACI 117-10
  - 1.1.2 States: "Tolerances in this specification are for typical concrete construction and construction procedures and are applicable to exposed concrete and to architectural concrete. Materials that interface with or connect to concrete elements may have tolerance requirements that are not compatible with those contained in this document." - AISC

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

requirements for anchor bolts are more stringent and govern.

- 1.1.3 States: "A series of preconstruction tolerance coordination meetings shall be scheduled and held prior to the commencement of the work. The Contractor, subcontractors, material suppliers, and other key parties shall attend. All parties shall be given the opportunity to identify any tolerance questions and conflicts that are applicable to the work with materials, prefabricated elements, and Work assembled/installed in the field by the contractor."

At the 3.5.2014 meeting Skanska stated that the ASCC Position Paper would not be acceptable for the installation of their structural elements over the anchor bolts. AISC needs to be followed. See attached letter 027 for additional info from Skanska.

T-1286 **SSS - Bus Level Beam Splice at GL 18** **Closed** **03/26/2014** **04/05/2014** **04/16/2014** **Potentially** ☐

REQUEST:

See attached CDs. It appears that all of the future platforms walls along GL E are encroaching into the columns along GL D.8 by 1 1/2".

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed. It is intended that the identified walls cope at the "bull nose" columns. In all cases, these are walls which will be constructed in Phase 2 and are all escalator pits below the future train platform. The

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please confirm that the designers' intent was for the walls to cope around the "bull nose" column along GL D.8. If so, please provide further details for this column/wall interface.

Otherwise, please provide new offset dimensions, so that the walls clear columns.

escalators will be above the platform and are designed to clear within the paired columns.

No further details are required.

T-1288 **BGP - Lower Concourse Testing and Curing Conflict** **Closed** **03/26/2014** **04/05/2014** **04/02/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference Specification Section 03 30 20 - Cast-In-Place Concrete.

Spec Section 03 30 20 - 3.6.A.3 states "For shored floor construction: Floor flatness/floor levelness tolerance compliance testing is to be performed prior to the removal of shores and forms but not later than 72 hours of concrete placement by the TJP A Representative." SCCI intends on providing a moist cure on the concourse slab per Spec Section 03 30 20 - 3.7.A.5.b.3 - cover concrete surface with
specified absorptive cover, thoroughly saturate cover with water, and keep continuously wet. The absorptive cover is to remain for 10 days for type II cement (Mix #1558218) per Spec Section 03 30 20 - 3. 7 .A.2 and is to be installed as soon as free water has disappeared from concrete surface and finishing has been completed. The FF/FL 72 hour testing requirement is in conflict with the immediate installation of the moist cure cover requirement.

SCCI requests either of the following:

1. Waiving the FF /FL requirement on the lower concourse slab due to the later installation of the 5" topping slab it will receive. SCCI will maintain its adherence to dimensional tolerances per ACI 117 and flatness variance per ACI 318 and provide a stiff broom finish per Spec Section 03 30 20 -3.6.B.1.c. (similar to mat slab).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Neither request is acceptable. FF/FL testing within the 72 hour time limit and curing are not mutually exclusive.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

2. Extending the FF/FL 72 hour requirement out past the 10 day cure time requirement. SCCI does not want to compromise the immediate moist cure cover installation due to the sensitivity for potential shrinkage cracking in the slab.

Are either of these requests acceptable?

T-1289 **SSS - ST401 Missing Dimensions and Connections** **Closed** **03/26/2014** **04/05/2014** **04/16/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 367 SK1 to SK6 for items 1 to 13:
1) Review all the east/west post location dimensions on SK1 to SK6 and confirm they are correct as RFI T-1189 (SK419, CD 313) does not show the dimensions at all Levels.
2) The 18'-6 dimension to the edge of slab minus the 6" set-back dimension per S1-2304 locates the beam 18'-0 from Grid 15. This does not match the 18'-8 supplied in RFI T-1189 (SK 419, CD 313). Please clarify the discrepancy in beam and edge of slab location.
3) Confirm the noted section reference is correct.
4) The actual condition does not reflect what is requested in detail 3/S1-7601. Please clarify what is required.
5) Supply the missing clouded dimensions at (4) locations shown.
6) The detail shows the minimum offset dimension from the center of posts to the W10x22's in order to make the requested connections. Please review this with the actual dimensions and supply revised connection details as necessary.
7) Supply the missing clouded dimensions at (8) locations shown.
8) Supply the missing clouded dimensions at (8) locations shown.
9) Supply the missing clouded dimensions at (8) locations shown.
10) Connection section references are missing. Confirm they are correct as shown.
11) Supply the missing clouded dimensions at (8)

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) All East/West post location dimensions are correct as noted on SK1 through SK4. On SK5 and SK6, the dimensions noted as 2' - 1" and 8' - 7 1/8" shall be 1' - 10" and 8' - 10 1/8", respectively.
2) The 18' - 8" dimension was specified in response to RFI T-1189 for the HSS 12x6x5/8 posts and the W12x14 and W14x22 beams only. The W12x26 beam shall be 18' - 2 3/4" from GL 15 so that the flange edge aligns with the edge of slab at the opening.
3) The detail reference shall be 11/S1-7601.
4) See response to 2). Detail 3/S1-7601 will reflect the actual condition at the location.
5) See attached sketch SKS-0341 for dimensions. Refer to Architectural drawings A1-7011, A1-7012, & A1-7013 for locations of all stair stringers.
6) Shear plate connections may be provided at the W10 beams and at similar locations at this stair if the double angle connection cannot fit within the available distance.
7) See attached sketch SKS-0341 for dimensions.
8) See attached sketch SKS-0342 for dimensions.
9) See attached sketch SKS-0342 for dimensions.
10) Confirmed.
11) Dimensions are the same as those at the level below. See attached sketch SKS-0342 for dimensions.
12) Confirmed.
13) Dimensions are the same as those at the level below. See attached sketch SKS-0342 for dimensions

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

locations shown.
12) Connection section references are missing. Confirm they are correct as shown.
13) Supply the missing clouded dimensions at (8) locations shown.

T-1289.1 **SSS - Stair ST401 dimension clarification** **Closed** **05/23/2014** **06/02/2014** **05/27/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc Erick del Angel

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

This is a follow-up RFI to RFI T-1289 (SK 487, CD 367)

See attached CD RFI # 367.1 SK1 to SK3:
The indicated dimensions between the stair stringers supplied in above noted RFI SSK-0341 & SSK-0342 (see SK1 & SK2) will not work. The width of the flange on the C12x20.7 = 3" and therefore the stringers will foul with the 2 3/4" dimensions supplied. See SK3 and clarify the dimensions between the stringers.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1/CD RFI 367.1 SK1: The dimensions noted on this detail are not correct, see the original SSK-0341 issued in response to T-1289.0 where the dimensions from gridline to stringer face of web is noted as 4 ¼". Architectural detail 8/A1-7503 notes the stringer clear spacing as 2 ½". The Stringer having a 3" width, the total dimension from face of web to face of web equals 8 ½". See response 4 below for clarification on the 7" dimension.
2/CD RFI 367.1 SK1: The 2 ¾" dimensions are noting the location (center line) of the W10x22, not the stringer web face. To locate stringers refer to response 1.
3/CD RFI 367.1 SK2: The 2 ¾" dimensions are noting the location (center line) of the W10x22, not the stringer web face. To locate stringers refer to response 1.
4/CD RFI 367.1 SK2: The 2 ¾" dimensions are noting the location (center line) of the W10x22, not the stringer web face. To locate stringers refer to response 1.
CD RFI 367.1 SK3: (the added sketch information is not correct. (Refer also to 8/A1-7503) The 7" highlighted dimension locates the outside face of the guardrail, not the web face of the stringer. Total dimension from stringer face of web to stringer face of web is 8 ½".

T-1290 **SSS - Mean Temperature in Service** **Closed** **03/26/2014** **04/05/2014** **04/01/2014** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The contract specifications state that steel fabrication and erection are to:
"Compensate for the difference between the temperature at the time of fabrication and the mean temperature in service." - Spec 05 10 00 - 3.2.B.1
"Compensate for the difference between the temperature at the time of erection and the mean temperature in service." - Spec. 05 10 00 - 3.3.A

Mean service temperature is referenced, but not defined. So that we are coordinated in our efforts, please identify the "Mean Service Temperature."

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For the work in the referenced specification section 05 10 00, assume Mean Service Temperature equal to 60 deg F.

T-1291 **SSS - Engineer's Comments on 643AC & 645AC** **Closed** **03/26/2014** **04/05/2014** **04/04/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 372 SK1 & SK2 for items 1 & 2: Drawings 643AC and 645AC from TG0701-075 SSS - Structural Steel Shop DWG (CS3) GL 12-13 are attached for your reference

1) The noted approval comment does not help as the plate will foul the rebar holes when located 11" down. See SK2 and confirm the 8 7/8" dimension is acceptable or supply a workable solution.

2) The weld is not missing. It is shown in Detail 1 on drawing 643AC as WD1Q, which is correct per 6/S1-4350 as the
weld is non-DCW.
NOTE: The same applies to drawing 645AC.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Agree the 8 7/8" dimension as detail is okay to clear the holes.

2). Noted. WD1Q is okay, but we still think that it is more appropriate to show the weld on sheet 643AC, not in Detail 1.

T-1292 **BGP - Lower Concourse Electrical Room Layout** **Closed** **03/26/2014** **04/05/2014** **03/31/2014** **Potentially** ☐

2) Supply specific information for the extent of IFRM-1, including the beam end connection per 8/S1-5025.
3) Supply specific information for the extent of IFRM-1, including the beam end connection per 9/S1-5025.
4) Supply specific information for the extent of IFRM-1, including the beam end connection per 7/S1-5012.
5) Per S1-2606 & A/S1-4114, this beam is cantilevered over columns on each end. Supply specific information for the extent of IFRM-1 on each end of the cantilevered portion of the beam (Ref: A/S1-4114).
6) Confirm that only steel visible inside the slab opening between the slab edges is IFRM-1 and the unexposed portion of these members is SFRM. If not, supply specific information for the extent of IFRM-1 including the beam end connection per 4/S1-5012.
7) Detail 4/A1-8663 indicates that four MF Beams at the W-12 glass floor are to receive IFRM-1 coating. The MF beam along GL 19.1 is not indicated to receive IFRM coating, but spans a similar opening adjacent to the W-12

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) Refer to 4/A1-8178 & 4/A1-8180.

3) Refer to 4/A1-8178 & 4/A1-8180.

4) Extent of IFRM-1 occurs only at exposed steel in visible areas between edges of slab.

5) Extent of IFRM-1 occurs only at exposed steel in visible areas between edges of slab, including cantilevered portions of the beam up to the slab edge. Columns are SFRM, full height to the bottom of the beam.

6) Confirmed - Reference Architectural details 2, 3 & 4/A1-8615 (IFC submission - 03/31/2014). See A1-8614 for detail Elevations.

7) Beams at 19.1, 19.9, 20.1, 21, & 22 have IFRM-1. See A/A1-6005; 1 & 2/A1-8614; and 2, 3 & 4/A1-8615.

Note: Second Level beams with exposed surfaces

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

system. Please confirm that the beam indicated on SK4 along GL 19.1 is to receive SFRM and not IFRM-1.

shall receive IFRM-1 - Reference S1-2402 W40x297 at gridline 3 (two locations): refer to 2 & A/A1-7310, 1/A1-8152, and 2/A1-8176. Reference S1-2406 MF at gridline 28: refer to 1/A1-7306, A/A1-7307 and 4/A1-7836.

T-1296 **BGP - Concrete Plant Recertification Test Batch** **Closed** **03/31/2014** **04/10/2014** **04/02/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

The 4th review comment to SUBM TG0600-095 (document enclosed as reference) states after plant recertification a "test batch" will be prepared and tested for accuracy. Attached is SCCI's concrete supplier (CEMEX) responses to the submittal review comments.

Regarding the test batch, is it acceptable to either:

1) Have an Owner's representative perform a plant visit during production operations to observe batching tolerance during normal business hours?

or

2) Neither perform the test barch nor plant visit?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

After further discussion with Bob Foley of CEMEX, we are satisfied with the corrective actions CEMEX has already taken. The proposed plant visit and batch constituent verification are not required.

T-1297 **SSS - EoS Bent Plate at Knock-out Slab GL11-12** **Closed** **03/31/2014** **04/10/2014** **04/11/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 378 SK1 & SK2:
The knock-
out slab extends 1 1/4" onto the flange as shown. Confirm that is acceptable or provide alternate direction.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Move the East-West direction W21x50 beams to GLs D.8 and E.2 so that the slab will overhang the beam flange.

☐

T-1298	SSS - Lift Eyes on Ground Cast Nodes	Closed	03/31/2014	04/10/2014	04/09/2014	Potentially	

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The contract drawings indicate that lift eyes will be provided for shop handling:

"Provide picking eye(s) as required for the handling of the cast node in the foundry AND the shop of the steel fabricator. Picking eye(s) to be located withing the interior of the casting's nozzle(s)"

The lift eyes that were cast into the back side of the ground level cast nodes have now been machined off by Bradken, leaving only the lift eyes inside the nozzles. In order to safely handle these castings, new lift features need to be added to the back side to replace those that were machined off.

OIW notes that if the castings are picked using only the lift eyes inside the nozzle, the center of gravity causes the castings to rotate into an unworkable position. Some other manner of rigging must be employed in order to manipulate the castings into positions required for shop fabrication work. CastConnex noted exactly the same issue in their Release 1 Pre Shipping Inspection Summary, even noting that the improvised and awkard handling was causing damage to the castings:

"The lifting lugs are located inside the nozzle-end on these parts making the machined nodes difficult to manipulate. Often the parts have to be lifted using straps thru the pin hole causing some broken edges on the radius of the pin hole."

To facilitate handling the cast nodes in the shop in a way that is safe and that avoids damaging the castings, OIW proposes that drilled and tapped holes be added. The attached sketches (2773-SK-401 and 2773-SK-402) show a proposed arrangment of these holes. Note that the proposed locations are in areas that will not be visable in the final product, and also are in areas of minimal stress. OIW requests that the engineer of record

review the attached drawings and determine if the proposed modifications to the cast node are acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
4/9/2014

Taping holes at the back side of the cast node for erection is a means and methods issue.

Stacy Wilson
4/9/2014

To note, the referenced Cast Connex report was in regards to the roof nodes, not the ground floor nodes. In addition, the contract drawings never called for eyes on the backside of the ground floor nodes, therefore at the contractor's option, the addition of drilled and tapped holes shall come at no cost to the TJPA.

T-1300	SSS - Carboline AESS Primer	Closed	04/02/2014	04/12/2014	04/04/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Turner Construction Comp Stacy Wilson

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Specification section 05 10 00-2.2.B.2.b indicates that Carboline Carbozinc 621 is to be used for non-galvanized steel
to receive high performance coating. Reference is made to the letter provided by Carboline attached, which publishes that this (nearly obsolete) product has a recoat window of only 2-3 hours, which cannot be achieved on the Transbay

project since subsequent overcoats will be installed in the field by others.

Carboline has provided information and validation for use of the Carbozinc 859 Organic Zinc Rich Epoxy as a replacement for Carbozinc 621, which provides protection and performance equal to or greater than Carbozinc 621. The Carbozinc 859 product provides an unlimited recoat window, allowing for intermediate and top coats to be applied by others in the field, in accordance with the project's schedule and contractual requirements.

Please confirm the Carbozinc 859 product is acceptable for use as the AESS primer.

Note: Specification section 09 97 16-2.2.A states that the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

RFI is rejected per Specification Section 01 10 40 1.6 C 2 a. "RFIs shall not be used for the following; the TJPA will not reply and will reject the RFI: Product or material Substitution".

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

listed manufacturers are acceptable subject to conformance
to requirements of Drawings, Schedules and Specifications. For this reason, Carbozinc 859 is proposed as the
recommended product by the basis of design manufacturer, Carboline, rather than a product substitution.

T-1301 **SSS - Erection Aid at Roof Spandrel Beams** **Closed** **04/02/2014** **04/12/2014** **04/07/2014** **Potentially** ☐

Co-Author:

REQUEST:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

During backfill activities in Geothermal Field 11 inclement weather occurred and as a result isolated areas of bay mud/clay are deemed unsuitable. Per field walk on 04-07-2014 with Arup these soft areas are found unacceptable to place mud lab. What are the procedures required to satisfy and meet an acceptable substrate for the mud slab.?

ARUP Response:

Remove disturbed material from the top of undisturbed soil in geofield 11. The geothermal trenches are okay as is. Arup will review the condition on Monday, 04-14-14 to confirm that the mudslab is ready to pour.

T-1309 **SSS - Missing Stair ST202 information (GL 1.4-2)** **Closed** **04/08/2014** **04/18/2014** **04/25/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 387 SK1 to SK6 for items 1 to 15:
1) Supply all clouded dimensions on SK1 thru SK6.
2) [Issue has been resolved, no further action necessary]
3) Supply the top of concrete elevation for the (4) posts.
4) This detail shows horizontal HSS beam but the beam is not shown here or on S1-2202.
Please clarify.
5) This detail does not allow for any horizontal adjustment for concrete +/- location variances.
Please review and advise.
6) [This item is to be resolved by Skanska]
7) Confirm these posts are continuous from 1/S1-7400 (SK1) to here.
8) Clarify the noted landing steel and supply the member sizes, elevations & dimensions.
9) The minimum distance between the center of post and the W10x22 must be 1'-1 3/4 in order to connect per 3/S15012
and 1/S1-5010. Supply alternate connection details if the dimension is less.
This is a typical occurrence on all stairs.
10) Confirm all stair landing beams are centered on the posts or supply offset dimensions.
11) Supply a connection detail.
12) The noted 2 braces per 1/S1-7600 will span across the slab opening. Confirm that is acceptable or give direction.
13) Do the posts starting above the Lower Concourse Level in detail 2/S1-7400 (SK2) extend to the underside of the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Refer to attached sketch SKS-0347 for missing dimensions.

3) Refer to 1/A1-7004 for top of concrete elevations.

4) Detail 4/S1-7600 does not apply and is incorrectly called out at the highlighted location.

5) The statement "this detail does not allow any adjustment for concrete +/- location variances" is not entirely clear. Up to a 1" gap is allowed between the end of steel beam and concrete wall therefore there should be enough tolerance for placing steel as long as concrete walls are constructed within tolerances. If the intent of the question was different, please clarify, or alternatively add this item to the next structural coordination meeting agenda for further discussion.

7) Confirmed. The guide rail posts are continuous in between floor levels.

8) Detail 3/S1-7004 was updated in IFC Main Package dated 3/31/2014. See attached sketch SKS-0347 that shows the updated framing.

9) Provide shear plate connection per 1/S1-5011 at the W10 stair beams typically for such instances.

10) Confirmed. Refer to latest architectural issued A1-

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

HSS beams? Please clarify.
14) Clarify what supports the noted steel.
15) Supply a corner connection detail.

7XXX series sheets for correct post locations.

11) Provide connection detail per 3/S1-7600 except, The W10 beam connects to the HSS post per 3/S1-5012.

12) Provide full depth stiffeners on both sides of the beam web in lieu of the braces per detail 1/S1-7600.

13) Yes. See attached sketch SKS-0347 that shows the HSS posts.

14) Detail 6/S1-7004 was updated in IFC Main Package dated 3/31/2014. See attached sketch SKS-0347 that shows the updated framing.

15) See attached sketch SKS-0347 that shows connection detail callouts.

T-1310 **SSS - CS3 Review Clarifications for Spandrel Beams** **Closed** **04/09/2014** **04/19/2014** **04/22/2014** **Potentially** ☐

REQUEST:

See attached CD RFI # 388 SK1 to SK6 for items 1 to 6:
1) Supply all clouded dimensions on SK1 thru SK6.
2) Confirm all landings have 1/4" checker plate.
3) Please clarify which stringers go up and which stringers go down and add stair to landing connection references as was done on S1-7004.
4) How are the (3) W10x22's supported/connected?
5) How are the noted (2) W10x22's supported/connected?
6) The noted 6" dimension does not work with detail 3/S1-7601 which shows the stringer attaching at the toe of the beam flange. Please clarify.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Refer to attached sketches SKS-346 and SKS-349 for missing dimensions. SKS-349 shows how the stair landing beams that are perpendicular to the stringers can be located based on architectural drawings.

2) Refer to Specification "Steel Stairs and Railings 05 51 00" under 2.2 Materials -B Checker Plate Treads and Landings.

3) See attached sketch SKS-0346 for clarification of stringer direction. Also refer to architectural drawings A1-7005 and A1-7104.

4) The W10 beams frame into CMU walls and are shown on S1-7005 that was updated in IFC Main Package dated 3/31/2013. See attached sketch SKS-0346.

5) See response to 4).

6) Move the W16 beam closer to the edge of slab for detail 3/S1-7601 to work at the location.

REQUEST:

See attached CD RFI # 383 SK1 to SK3 for items 1 to 3:
Drawings A1-2502 (SK1), A1-2892 (SK2), A1-2951 (SK4), and 1/A1-2951 (SK5) show a valley. A valley is not shown on S1-2502 and S1-2602 and it is not clear what the intent is for the structural framing:
1) In order to keep the diagonal brace framing along Grid H in one plane (shown in blue), it is necessary to introduce a valley as indicated by the red line. If not, twisting will be introduced into the framing and connection details 3/S15025 at Grid 1.4 and 1/S1-5018 at Grid 2. Per Note 6 on S1-2602 the beams are canted to match the slope of TPG1 on Grid 2 but the BU-40 on Grid 1 is horizontal. This will result in the beams having to twist. To avoid this a valley as shown on the architectural drawings is required. Please confirm a valley as indicated by the red line is required or clarify/supply the top of steel elevations between grids 1-2.
2) If a valley is introduced, all beams crossing the red valley line will need to be broken-back/bent beams. Please supply a detail showing the splice at the bend lines.
3) If the valley is to occur, please clarify the location of the valley as drawings A1-2502 (SK1) and A1-2892 (SK2) show conflicting information. The same condition shown here also occurs between Grids 1-2/B-D, 32.4-33.5/B-D & 32.433.5/F-H. The same condition except opposite shown here occurs between Grids 1-2/F-H on the roof park level.
4) It is not clear on S1-2606/S1-2607 where the east-west slopes start east of Grid 31.7. Please clarify the framing.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1.) A valley is not required. See specific comments for Bus Deck and Roof Park Levels below:

At Bus Deck Level, an additional top of steel elevation is provided within the deck zone bounded by Gridlines 1&2 and E.6&H. Top of Steel at Gridline 2/G can be calculated as 55' 10 3/8" by linear interpolation using the top of steel information provided at Gridlines 2/E.6 (at column face) and 2/H. At GL 1.4/G top of steel can be assumed the same as 2/G therefore the diaphragm truss is in single plane. Metal deck will need to be slightly warped at other parts of this zone, where two way slopes are present. Ultimately, thickness of the structural topping slab can be adjusted locally to achieve the slab slopes per architectural drawings.

At the Roof Level, following info is provided for the deck zone bounded by Gridlines 1&2 and E.6&H. East-west running beams are to be set perpendicular to TPG1. These beams will land on the Gridline 1 slightly rotated however rotation is small resulting in an approximately +/- 1/8" vertical deviation at the tips of the east west running beams' flanges with respect to the GL 1 beam. Metal deck will be slightly warped at this zone. Per our estimations, metal deck steel beam gap/clash is in +/- 1/16" range which can be addressed by small amount of warping in the metal deck.

2.) See response to (1).

3.) A valley is not required. Information provided in item 1 is applicable to the locations noted in this question at the Bus Deck and Roof Levels.

4.) In Sheet S1-2607, East-West slope starts at GL 32.4 as indicated Sheet S1-2607 (between gridlines 32.4/D4 & 32.4/E.6). As indicated in item 1, metal deck will be slightly warped in this area where two way slopes are present.

T-1322.1	**SSS - West Zone Bus Level and Roof Level Grade Clarifications**	**Closed**	**05/16/2014**	**05/26/2014**	**06/02/2014**	**Potentially**	☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 383.1 SK1 to SK6 for items 1 to 10:
The noted (2) skewed W40x277 form part of the bracing system and must remain in the same as the other braces.

This means that the noted W40x149 & W36x231 will not align with the top of the W40x297 on Grid 1.
1) Please advise how to make the moment weld for the for the W40x149 to the W40x297 with the flanges not aligned.

2) Please supply a detail showing how the deck will be supported at the (2) lowered beams.
3) Due to the beams not being aligned, confirm it is acceptable to connect these beams with shear plates per 1/S1-5011
4) Confirm it is typically acceptable to lower the beams to align the corner of the flange with the top of the supporting beams as some connections are moment connections.
5) Review all items on SK2 and confirm they meet the design intent.
6) The noted (2) skewed W40x277 form part of the bracing system and must remain in the same as the other braces. This means that the (4) noted beams will not align with the top of the W40x297 on Grid 33.5. Please supply a detail showing how the deck will be supported at the (4) lowered beams.
7) Confirm the T/Steel elevation at this location is EL. 55'-8 9/16 based on the north/south slope to keep the diagonal bracing in the same plane.
8) Confirm the noted (2) beams will be canted to match the other beams based on the slope on TPG1 on Grid 2.
9) Review all items on SK5 and confirm they meet the design intent.
10) This is to confirm the response in RFI SK515 item 4: All beams within the blue boundaries on SK6 will slope as needed the have the top of beams flush with the top of the supporting beams per the noted T/Steel elevations. The east/west beams between Grids 32.4-33.2 will be canted to match the canted beams west of Grid 32.4.The east/west beams between Grids 33.2-33.5 will be canted to match the slope of the beams on Grid 33.2. Please confirm.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). The W40x149 (0.83" thick flange) may be lowered so that the complete penetration weld can be made for the top flange because W40 x 297 has a 1.65" thick flange. For the bottom flange weld, a plate might need to be added in order to achieve the complete penetration weld.

2). The T/STL for W40 x 149 is not necessarily controlled by the diagonal brace, as the type G drag connection detail (1C/S1-5018) has called for shim plates as required.

W 36 does not need to support the metal deck.

3). Yes, the E/W beams between Grids 1 & 2 may be changed to a single shear plate connection as shown on 1/S1-5011 with the following 2 conditions:

a) Type X bolts should be used for W21 and W24 beams.

b). One row of bottom flange bracing should be provided for the W21 and W24 beams between Grid 1.4 & 2 per detail 8/S1-5015.

4). Confirmed

5). Confirmed.

6). See responses #1 & 2

7). Confirmed

8). Confirmed

9). Confirmed, Also see response to items 1 & 2.

10). Confirmed.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Bus Deck Level drawings S1-2502 thru S1-2507 indicate an S8 type slab, as per metal deck schedule 2/S1-5000, S8 is a 10" structural slab with 4" second pour topping slab. Sheet note #6 on S1-2502 indicates "shear studs are to extend a minimum of 2" into the second pour UON. See detail 9/S1-9004 for perimeter EoS conditions" (S1-9004 has not been provided).

Drawings A1-2892 thru 2987 show a 1" topping slab typically between 10' north of GL D and 10' south of GL F. The slab outside of that region is typically shown as structural slab only.

Confirm that decking drawings will be modeled as per the information provided on the structural contract drawings unless otherwise directed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed. Note that the 4" second pour topping slab is part of the structural slab and studs are to be extended 2" into this 4" topping slab as shown on 4/S1-5003. Studs do not extend into the architectural topping slab. Also, the correct detail reference for perimeter EOS condition is 9/S1-5004.

T-1324	SSS - BRB Clevis Plate Detail	Closed	04/14/2014	04/24/2014	04/24/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Skanska is the process of incorporating the AAN BRB Shop Drawings from Star Seismic into the Tekla model.

During the integration process we have identified a deviation from certain dimensions shown in the contract documents. Specifically, the 2" dimension shown from edge of clevis to top of concrete at the ground level connection and the 5" dimension shown from edge of clevis to the bottom flange of W section above.

Below, is a table showing the "As Detailed" dimensions at each BRB.

Please confirm that the 2" & 5" dimensions shown on S1-4206 are not controlling dimensions and the lengths of the BRB's from WP-WP as designed, detailed and approved, control.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provided dimensional deviations from contract documents are acceptable at all locations except for BRBs at GL 4-5/F; 28-29/D.4, 29-30/D4 and 30-31/D.4.

At GL 4-5/F, provide bottom clearance between 2" and 3" (2" ideal) and a top clearance between 5" and 6" (5" ideal).

At East Building BRBs (28-29/D.4, 29-30/D4 and 30-31/D.4), it is not clear from the RFI that the contractor understood the design intent at the bottom clevis plates. At the bottom, 2" clearance to the clevis plate applies from the top of the finished floor (not the top of structural concrete slab) since these braces are exposed. See BRB elevations (S1-4150) and the corresponding detail (1/S1-4206) for this info. Note that the finished floor at this location slopes down to East and this information shall be coordinated per

civil/landscape drawings as applicable. For these BRBs, top clearances indicated in the RFI are acceptable in current form.

T-1324.1 **SSS - BRB Clevis Plate Detail** **Closed** **05/08/2014** **05/18/2014** **05/21/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Skanska has incorporated the response to RFI T-1324 into the drawings and made the necessary adjustments, while maintaining the required stiffness factor, at gridlines 28-29/D.4, 29-30/D4 and 30-31/D.4. These adjustments have been submitted under submittal package TG0701-415.4.

However, after discussions with Star Seismic, at GL 4-5/F the stiffness factor plays a limiting role into modifying the length of the brace. Please see the attached stiffness and over strength analysis, provided by Star Seismic, and confirm that the brace lengths may stay the same as previously approved in TG0701-415.2.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

GL 4-5/F dimensions shall be as indicated in RFI T-1324. It is acceptable to have a stiffness ratio of 11% as shown in the calculation submitted by the Contractor. We also note that there may also be other ways to achieve the required pin-to-pin dimension and the required stiffness multiplier called out on the contract drawings. Also, it is not clear why the yield zone length is reduced by 16" whereas the pin-to-pin dimension is reduced by 6" in the calculation. With a longer yield zone length a lower stiffness multiplier can be achieved.

REQUEST:

Please reference Sl-2251 rev 6, Sl-3401 rev 7and S1-3411 rev 3.

1. Clouded area of attached Sl-2251 shows beam types: B125, B132, B141 and B142. B125 is a 24" wide beam, B132 is a 22" wide beam, B141 is a 48" wide beam and B142 is a 30" wide beam. Sl-3411 DI & DI0 depict the beam support embed. These two (2) details are for a 24" wide beam and a 48" wide beam only. Please provide details for 22" and 30" wide beams.

2. See attached Sl-3411 DI & DI0. Embed details call out 1-1/4" threaded rod Fl554 GR55 w/ 2-1/2" x 2-1/2" x 1/2"

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. End support for beam B132 (22" wide beam) to follow detail 1/S1-3411 as shown on plan 1/S1-2251; corbel width to be 2'-0". For end support of beam B142, see SKS-0344 attached.

2. Rods to be provided with matching nuts as required Specification 03 20 00, Section 2.3.F. Welding of plate washer to L8x8 is not required.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

PL washer. Please clarify how the plate washer will be attached to the threaded rod and/or embed? Will the designer require any type of nut or weld that is not depicted?

T-1329 **BGP - Lower Concourse Beam Locations, Added Beam** **Closed** **04/17/2014** **04/27/2014** **04/21/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Please confirm the below structural beam update should be incorporated into the TG06 Scope of work.

1. CB15 is required between Grids 14 and 15 near Grid C.3. Beam centerline to be located 7'-1 ¼" south of Grid C.3.

Beam locations will be submitted for review with the comprehensive layouts.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed

T-1330 **BGP - Glass Guardrail Embeds at B1 Beams** **Closed** **04/17/2014** **04/27/2014** **04/24/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference RFI #T-0440 and #T-0440.1 responses and the attached Contract Drawings S1-3410, Sl -2203, and Sl-2204.

The detail for the glass guardrail embed depicted in 7/Sl-3410 calls for a 3/8"x7" embed with an 8" minimum coverage for the top embed and a 6 1/2" minimum coverage for the bottom embed. The guardrail embeds located at B1 beams on the east side of openings between GL 11/12 and D.8/E.2 (Sl-2203) and GL 18/19 and B/C (Sl-2204) will not have minimum sufficient coverage due to the 18" beam depth of Bl beams (see attached photo).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Bottom embed plate at B1 members not required. Additional supporting member to be included as part of Phase 2 scope. Top embed plate at B1 to be placed with 8" min coverage and align with top embed at supporting concrete girders.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please provide a detail for glass gaurdrail embeds at the B1 beams. Please note, these specific embeds have been fabricated and are onsite

---

T-1331 **SSS - Missing Stair ST301 Information** **Closed** **04/17/2014** **04/27/2014** **05/05/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 389 SK1 to SK7 for items 1 to 12:
1) The noted W16x26 beams are centered below the concrete wall on S1-2303. Confirm the lower beam may be moved below the stair post or supply an alternate solution.
2) The noted W16x26 beam is centered below the concrete wall on S1-2303. Confirm it may be moved below the stair post or supply an alternate solution.
3) Supply all clouded dimensions on SK2 thru SK7.
4) Confirm equal spacing.
5) It appears the noted stair stringer connects to the HSS post. Please supply the missing connection detail.
6) The plan shows a moment connection but detail 3/S1-5012 does not. Please clarify the intent for the beam to post connections at (8) locations.
7) 9/S1-7601 is not the correct detail because it shows an HSS beam and we have a W21x50 at this location. Please clarify and note that detail 3/S1-7601 will not work as the edge of slab is 7" from beam center.
8) This dimension is 7" per S1-2403. Confirm 7" is correct.
9) Confirm the "CB" notation should be removed.
10) The minimum distance between the center of post and the W10x22 must be 1'-1 3/4 in order to connect per 3/S1-5012 and 1/S1-5010. Supply alternate connection details if the dimension is less.
This is a typical occurrence on all stairs.
11) The red dimensions match the dimensions shown in detail 3/S1-7006 (SK3). Please clarify the discrepancy in dimensions.
12) 9/S1-7601 is not the correct detail because it shows an HSS beam and we have a W21x50 at this location. Please clarify and note that detail 3/S1-7601 will not work

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Not acceptable. Provide a W16x26 beam centered on the two HSS posts as shown in the attached sketch SKS-0350. Provide shear plate connections per 1/S1-5011 at the ends of this beam. The W16x26 beam will be added on the structural drawings in the next ASI.

2) See response to 1).

3) Refer to architectural drawings A1-7006, A1-7501, A1-7502 and 3/A1-7506 for the stringer and landing beam locations.

4) Align the intermediate W10 beams to the stringers.

5) Correct detail reference at the 8 locations should be 6/S1-5012.

7) Detail at the highlighted location is similar to 3/S1-7601 except the stringer shall be welded to the bent plate at the edge of slab and not the WT.

8) Confirmed.

9) Confirmed.

10) Provide shear plate connection per 1/S1-5011 at the W10 stair beams typically at such locations where double angle connection is not possible.

11) Refer to architectural drawing A1-7006 for correct post locations.

12) See response to 7).

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

as the edge of slab is 6" from beam center.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 319.1 SK1 to SK3 for items 1 to 4:

1) Confirm this general layout locating the shop splices is acceptable.
2) Confirm dimensions.
3) Confirm dimension.
4) Confirm location points for 1/2x3 stiffeners.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) Confirmed.

3) Not acceptable. The weld between the thru shear plate and the HSS column shown on 9/S1-7632 varies from 1/2" to 3/4" per schedule 8/S1-7632. The dimension should vary accordingly.

4) It is unclear what is referred to as "location points" and what needs confirmation. PJP welding shown on the sketch to connect the 1/2 inch thick stiffener plates to the column and the beam comply with what is called out on detail 4/S1-7632 and are acceptable.

T-1336 **SSS - API 5L X65 Pipe to A216 WCC Casting (Field Weld) PQR** **Closed** **04/17/2014** **04/27/2014** **04/29/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Skanska is currently procuring weld test plates for qualifying field welds to API-5L Grade X65 pipe. For this, we
propose to use API 2W plate. Whereas API 5L is strictly a pipe specification, API 2W is a plate specification but is commonly rolled and welded to create API 5L pipe. Below is a direct comparison between API 5L Gr. X65 allowable chemical and mechanical properties with our proposed API-2W plate material. Values for the plate are taken directly
from the MTR for the plate we propose to use (attached and highlighted). All values for the API 2W plate we propose
to use meet the requirements of the API 5L Grade X65 specification. Please confirm it is acceptable to use the API 2W
plate for our PQRs.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor's request is not acceptable in current form. Please provide additional information. Is this request for welding qualifications only? Which grade of API 2W is to be used? Provide API 2W corresponding specification with the RFI or mill report that shows that the material qualifies for API 5L X65 use. Verify if the material that is being proposed to be used for welding qualifications is subject to Buy America clause or not. If it is, please verify it complies with it.

T-1339	SSS - Deck Support Steel at Step in Slab GL 12-14	Closed	04/17/2014	04/27/2014	04/30/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to SK-1 thru SK-3 for 3 locations at step in slab between GL 12 - 14:
1) At section A-A on SK-2 an extended WT will expose the flange through the conc rete. Confirm a bent plate as per SK-3 is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed. Provide a 3/8"x3" full depth stiffener at the W24 beam (same side as the bent plate). Provide 1/4" double sided fillet welds for the stiffener (3 sides - web, flanges). The stiffener shall be located at the middle of the bent plate span.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

2) At section B-B on SK-2 support is required at the extended upper deck over the W12x14 (A4987). Confirm a WT can be added per section B-B.

2) WT is not required. Provide an 18 gauge Z-shaped closure plate to close between the upper and lower decks.

T-1339.1 **SSS - Deck Support Steel at Step in Slab** **Closed** **05/23/2014** **06/02/2014** **06/13/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

RFI SK534 (T-1339) addressed steps in the ground floor slab which occurred between grid lines 12-14. This condition also occurs between the following grids: 2-3, 3-4, 8-9 & 9-9.9 (16 locations).

Item #1 added a 3/8" bent plate to support the upper level deck and can be applied at two locations between grid 2-3 as indicated on SK1. At the other 14 locations the step is similar to item #2 of T-1339 which added an 18 gauge Z closure. At grid 12-14 the perpendicular support beam is located within 1'-9" of the step, at the 14 locations listed above the support beam varies from 2'-0" to 6'-0" and at two locations at grid 2-3 no support beam is provided. Refer to SK3 for clarification.

Please confirm the 18 gauge Z is sufficient to carry the load of the deck at the 14 locations or provide an alternative detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide a WT per 4 or 5/S1-5002 at locations where the distance between supporting beams is greater than 3'. At other locations where the distance between beam is less than 3', a Z closure plate is sufficient, however, the Z closure plate is not correctly shown on SK3. See attached sketch SKS-0357 for correct extents of the Z closure plate.

T-1339.2 **SSS - Deck Support Steel at Step in Slab** **Closed** **06/18/2014** **06/28/2014** **07/09/2014** **Potentially** ☐

REQUEST:

The response to RFI T-1399.1 indicated the zee closure was incorrectly shown on SK-3 and shall be supported on

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Option 1 is not acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the lower beam, not on top of the deck. We agree the closure would be best supported on the lower beam, however the closure was placed on top of the deck so that the lower deck could bear 3" on the beam as is required for a type 3 deck as per 2/S1-5000.

SSK-0355 revises the closure so that the bottom leg is underneath the lower deck and the top leg is above the upper deck. This creates several problems for installation. The most significant being that the closure now needs to be installed before the deck. Typically closures are installed after the deck so that the deck can be used as a working platform. SSK-0355 would require the installation of the closure on open iron, which while possible is not a safe working practice.

Option 1: As a proposed solution to the issues indicated above, we propose to increase the beam size at the step from a W12x14 to W12x26 which has a 6-1/2" wide flange. We would also revise the zee shaped closure to a cee shaped closure with the top leg placed underneath the upper deck (see detail A SK-1). Also at locations where a WT will be added, a W12x14 will only be left with about 1-3/4" of exposed beam flange for bearing, instead of the required 3", increasing this to W14x26 will provide the required bearing (see detail B SK-1).

Option 2: As an alternative, at locations where the top deck spans less than 3' the top deck load will be primarily supported by the upper WF beam. As detailed in SK-2 the zee plate will only act as a closure with minimal deck support and can be installed after the deck if allowed to bear on top of the lower deck. Note: this alternative does not provide a solution of the 1-3/4" bearing issue on detail B SK-1.

Please confirm if option 1 or 2 is acceptable.

Option 2 is acceptable. The 3" minimum bearing requirement may be waived and a bearing of 1-3/4" is acceptable at locations where detail B on SK-1 is applicable.

T-1340 **BGP - Mechanical Room B2228 Pier/Wall Location** **Closed** **04/18/2014** **04/28/2014** **04/30/2014** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Please see attached drawing showing the location of the west wall in the IDF Room B2228 located in the Area 3 mechanical rooms. Typical pier width dimensions for the mechanical rooms are 24" and are not typically dimensioned out in the plans. Based on scaling, the pier in the northwest comer of Room B2228 is 16"x28". However, this pier was labeled as a 16"x24" pier in the rebar shop drawings (see Submittal TG0600-301.2) and as a result the dowels for the west wall were placed 4" to the west to align with the pier edge.

Please confirm that this new location is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The west wall of IDF Room B2228 at the B2 level cannot be moved 4" to the west to align with the 16x24 pier due to Building Code Accessibility and Egress requirements for the adjoining room at Phase 2 build-out.

T-1341 **BGP - Plumbing Opening in Mechanical Room B2203** **Closed** **04/18/2014** **04/28/2014** **04/28/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please see attached drawing for clarification regarding dimension of the plumbing opening above the door in Room B2203. In Al-9215, the door opening and distance between piers is scaled to be 3' -5" and was submitted as a 3 '-5" opening per approved submittal TG0600-102. However in A1-9217 a plumbing opening with a dimensioned width of 3' -11" is shown to span the distance between the piers. If the 3 '-11 " opening dimension is correct as shown, the blockout would cut into the piers. Please confirm the dimension of the plumbing opening and whether or not it is intended to cut into the piers. Please note that the pier dowels have already been installed with the 3'-5" span per approved submittal TG0600-102.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The 3'-5" width dimension for the door opening in between piers, described in this RFI, is correct. For updated plumbing opening above the door at Stair 203 (Room B2203), refer to the attached SKA-3142 and SKA-3143.

Confirm it is acceptable to increase the 2" dimension to 3" in order to locate the bolts at the locations provided in RFI SK 193C.*

*RFI SK 193C was answered internally by Skanska. The relevant sketch is attached below.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-1346 **BGP - Column Jackets at Lower Concourse, Vehicle and Bike Ramp** **Closed** **04/23/2014** **05/03/2014** **05/06/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference AI-2842 rev 5, AI-2847 rev 4, AI-2850 rev 5, AI-2853 rev 6, AI-9213 rev 0 and SI-3503 rev 2.

1. See AI-2842, AI-2847 and AI-2850. Please confirm these are the locations of columns to receive column jackets on the concourse level.

2. See AI-9213 details 5 through 8 and AI-2853. These details show 1/2" thick ring with 8" long welded studs (to be used for the installation of column jackets) at the base of columns on the concourse, bike ramp and vehicle ramp

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

WOJV received revised response 5/8/2014

1. Confirmed. These columns receive column jackets. We do not show detail references for column jackets at Slab Edge Plans - Refer to the following Lower Concourse Level Zone Plans and Enlarged Plans issued with the MEP Add #3/ASI-116 showing detail references for column jacket details: A1-2202, A1-2207, A1-2210, A1-3005, A1-3006, A1-3007.

2. For columns that receive jackets at the ramp area,

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

levels. AI-2853 does not depict any column jackets at the bike or vehicle ramp levels. Please provide a detail that depicts which columns are to recieve jackets at the bike and vehicle ramp levels.

refer to SKA-3236 (Updated A1-2250 - Enlarged Ramp Plan). Refer also to A1-9208 (Column Detail Plans, Section References, and Notes) and SKA-3237 for updated A1-9213 (Column Section Details).

T-1347 **BGP - Column Jacket 1/2" thick x 4" wide Base Plate at Concourse** **Closed** **04/23/2014** **05/03/2014** **05/05/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference S 1-3503 rev 2, detail 6, AI-9208 rev 0 and AI-2842 rev 5.

1. Please see clouded areas of AI-2842. Please confirm 1/2" thick x 4" wide ring base plate is to be continuous around the entire column per details on AI-9208. Please confirm the designer does not want 1/2" ring to be coped where it intersects walls.

2. If coping is required, please provide details or direction on coping the 1/2" thick column jacket base plate.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The 1/2" thk x 4" wide ring plate around columns are coped at walls. For updated A1-2842, refer to attached SKA-3140.

For the pilasters (i.e. columns within the ramp walls) we need continuity between the pilaster element and the wall. The ring plate and steel jacket will need to be coped at the walls.

T-1348 **BGP - SFPUC Electric Room Copper Mesh** **Closed** **04/23/2014** **05/03/2014** **04/29/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

The response to RFI 1220.1 included E1-3212 which details the embedded grounding required for the SFPUC Electric Rooms. Note 5 indicates that a #6 copper mesh is to be installed.

Please provide the following information:
1) Type of mesh (Pure Copper or Copper Coated Steel)
2) Required spacing for grid of mesh

In addition, please provide a drawing with the dimensions to the location of the #2/0 copper pigtails which stub up

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

REVISED RESPONSE

1) Mesh shall be copper. Copper coated steel is not acceptable. Erico or equal.

2) Required spacing shall be 8" x 8"

The copper pigtails may be stubbed up anywhere within the switchgear footprint/elevated pad area.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

into the future switchgear enclosures.

T-1348.1 **BGP - SFPUC Electric Room Copper Mesh** **Closed** **05/29/2014** **06/08/2014** **06/04/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference plan sheet El-3212.

1) Note 4 on plan sheet El-3212 states, "Cadweld main #4/0 grid to #6 mesh with #1 stranded Cu conductor (typical). Refer to Detail 1/El-3212." Detail 1/El-3212 does not show a #1 copper conductor connecting the grid to the mesh. Please confirm the 4/0 grounding grid is to be connected directly to the grounding mesh.

2) Please see the attached Detail 5/El-3212. Please identify which part of the grounding grid system the highlighted portion belongs to and provide the proper wire size.

3) Detail 5/El/3212 designates the embedded conductors going to the battery rack as #2. Please confirm this means #2 AWG copper conductors. In addition, no designation is provided on Detail 4/El-3212 at the pigtail which appears to be for the battery rack in B1289. Please confirm this is pigtail is to be #2 A WG conductor as well.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The #6 mesh is to be interconnected to the grounding grid in several locations. Where the #4/0 grid crosses or contacts the mesh, it could be directly connected. Additional connections to the #4/0 grid are required from remote parts of the mesh. These interconnections shall be made with #1 bare CU connections.

2) The Detail 5/ E1-3212 did not convey a numbered note for this connection. Similar to the response to question 1, this connection refers to additional bond points (using #1 bare CU conductors) between the #4/0 ground grid and the grounding mesh.

3) Yes, the callout refers to using #2 AWG bare CU to the battery racks. The pigtail in Detail 4/E1-3212 is also required to be #2 AWG bare CU to the battery rack.

T-1348.2 **BGP - SFPUC Electric Room Copper Mesh** **Closed** **06/09/2014** **06/09/2014** **06/17/2014** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

The response to RFI T-1348.1 stated the #6 mesh shown

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger: 6/13/14

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

on El-3212/Detail 1 is to be interconnected to the grounding grid at "several locations" and that the #4/0 grid could be "directly connected" where it crosses or contacts the mesh. This response also stated that all other connections are to be #1bare CU connections.

I) Please provide the exact quantity of connections which are required from the #4/0 grid to the #6 mesh.

2) Please provide the interval distance between required direct connections from the #4/0 grid to the #6 mesh.

3) Plan sheet shows six (6) total #1 "remote connections" in each room. Please confirm this is the proper quantity required.

Per TJPA(Guy HOllins) direction, this RFI shall be redirected to the TJPA to forward to SFPUC for response.

Matt Ho 6/17/14:
1) RESPONSE: Referring to Details 4 and 5 on Sheet E1-3212 for the West and East Switchgear Rooms, we count 16 locations in the West room and 17 locations in the East room that offer an opportunity to connect the #6 mesh to the #4/0 grid. These locations include all interconnections of the #4/0 grid to ground riser conductors, grid cross connections, grid to pigtails (for equipment grounds), and grid to ground test bar connections.

2) RESPONSE: As noted above, the recommended connections to the mesh do not need to be evenly spaced. The connections can be made by including the mesh in the various connections to the #4/0 grid.

3) RESPONSE: The quantity noted should be adequate.

Response by: Matt Ho, SFPUC dated 6/17/14

T-1349 **BGP - Beam B52 Trestle Pile Conflict** **Closed** **04/23/2014** **05/03/2014** **04/23/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

See attached CD S 1-2202 and sketches.

Trestle pile No. 88 at GL F5 encroaches into the B52 beam by approximateley 6". In liue of creating the blockout in this beam SCCI proposes to shift the beam 8" to the North. Whith the approval of the beam moving concept, following items will be taken into consideration:

1. Adjacent beam B51 , to the West, has long bars and short bars. these will be placed in to layers.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

Ethan Heinrich 4/24/14
Response to RFI comes at no cost to TJPA.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

2. Southmost B51 bars (one long and one short) will miss B52, but continue into the slab. These will not be contained in B52 tie set.

3. Add (1) # 10 long bar on the left of B52 with a hook to the far side of the MFB. Place in the corner of the B52 tie set.

Please confirm if this is acceptable.

T-1350 **BGP - Proposed Revised Location of the Reinforcement Lap Splices at the Lower (Open** **04/24/2014** **04/24/2014** **04/28/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Similar to RFI T-1181:

Please confirm that it will be acceptable to move the horizontal reinforcement lap splices of the concourse deck beams to be located anywhere within the middle 1/3rd span between the moment frame beams. The specific locations of the splices will be per submitted reinforcing drawings.

Please confirm that this would be acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to locate Lower Concourse Beam's (long) top and side Bar lap splice location within the middle 1/3 span provided adjusted location does not overlap with (short) top bars and create unplanned congestion.

T-1351 **BGP - Room B2230 Plumbing Opening Conflict** **Closed** **04/24/2014** **05/04/2014** **05/02/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

See attached drawings that show a B48 beam in direct conflict wih the plumbing opening on the South wall of room B2230.
Please confirm the location of the plumbing opening.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For the updated plumbing opening at concrete wall elevations D/A1-9217 and E/A1-9217, refer to SKA-3143.

T-1352 **BGP - Manlift 2 Conflict with EJB and Cast in Strut** **Closed** **04/24/2014** **05/04/2014** **05/01/2014** **Potentially** ☐

Co-Author:

REQUEST:

See attached submittal sheet D2.28 and sheet E1-2204. Response comment to Submittal Package TG0600-121.1 on sheet D2.28 between gridlines 12-13 B-C, calls out "conduits are now embedded in the lower concourse slab". Per the TG0600-121.1 submittal review comment meeting held on 4/30/14, please confirm that embedded conduits FE045,FE051,FE052,FE058 incorporated on sheet E1-2204 dated 03/31/14 will continue to be surface mounted and blockout will be left in place for penetrating the slab.

Please confirm attached sketch SKA-3148 showing the coupler setting out dimensions for the future corridor wall at B1 level, GL 10, B-C as reviewed with AAI in our slab edge workshop held April 30, 2014

Please confirm rebar for Lower Concourse Floor drains marked "Future" are to be trimmed as detailed on 1/S1-3501 but not blocked out.

For door openings not dimensioned on architectural slab, floor or wall plans, please confirm it is acceptable to size door rough openings in the lower concourse partition walls to be 4.5" larger than doors scheduled on sheets A1-9700, A1-9701, A1-9702. If not please provide a door jamb detail for these openings.

Please confirm that Lower Concourse telecom penetrations shown on slab edge plans A1-2841 through A1-2851 to be 4" x 90 GRS elbows with a factory 30"

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Embedded conduits:

WSP Response: WSP does not object to the proposal of surface mounting conduits and retaining the slab blockout in these specific referenced zones. For other areas where embedded conduits are indicated, WSP recommends the embedment in this phase.

2. SKA-3148 showing coupler setting out dimensions for future corridor walls at B1 Level, GL10/B-C:

AAI Response: Confirmed.

3. Future Floor Drains:

WSP/MDS Response: It is confirmed that the lower concourse floor drains marked "Future" will be trimmed as detailed on 1/S1-3501 but not blocked out.

TT Response: The reinforcement for the Lower Concourse slab at Floor Drains marked as "Future" are to follow detail 1/S1-3501. It is acceptable to trim bars.

4. Door Rough Opening:

AAI Response: As stated in workshop meeting April 30th, 2014, AAI cannot provide rough opening dimensions, as the rough openings may vary between

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

radius as shown on 6/TE1-8014.

manufacturers. It was agreed that WO will check on specified door manufacturers for the appropriate door rough opening requirements and provide this information to sub-contractor.

5. B1 Level Telcom Conduit Penetrations on slab edge plans:

SMW response: 4"x 90 GRS Elbow with factory 36" min - 42" desired radius cast into concrete beam as shown on 6/TE1-8014.

RESPONSE
WOJV 5/13/14

4. Door Rough Opening

For door openings not dimensioned on architectural slab, floor, or wall plans, size door rough openings in the lower concourse partition walls to be 4.5" larger than doors scheduled on sheets A1-9700, A1-9701, A1-9702.

T-1362.1 **BGP - Telecom Cast-In Elbow Radius - Lower Concourse** **Closed** **05/14/2014** **05/24/2014** **05/15/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

See attached RFI T-1362 Response.

The response to RFI T-1362 states that 4"x90 elbows with factory 36" min - 42" radius are to be cast into concrete beam as shown on 6/TE1-8014. This contradicts with the 30" radius called out on sheet 6/TE1-8014 and 30" radius confirmed in the comprehensive layout drawings, TG0600-121.1. Please confirm if the 30" radius elbows currently installed per TG0600-121.1 will need to be swapped out for 4"x90 GRS ELBOW with Factory 36" min - 42", as stated in the response to RFI T-1362.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

WOJV received 5/19/14

SM&W Response: NO, 30" bend radius is not confirmed or approved, the minimum bend radius shall be 10 times conduit trade size (internal diameter), this means SM&W will accept commercially available factory bends of minimum 36", with 42" preferred.

See attached updated detail TSK-0040, which supersedes TE1-8014

T-1363	BGP - Vehicle Ramp Beam Support Embeds - Threaded Rod, PL Washer and Nut	Closed	05/05/2014	05/15/2014	05/08/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Filip Filipic

REQUEST:

Please reference detail 1 and detail 10 on S1-3411. Please also reference RFI T-1326 and attached sketch BES-001.

RFI T-1326 provides angles at which vehicle support beams intersect the foundation walls. As shown on attached sketch BES-001 the built up 8x8 angle will be adjusted to match the angle at which the applicable beam intersects the wall. S1-3411 detail 1 and 10 call out for a 1-1/4" diameter threaded rod with plate washers and nuts running through slotted holes in the 8x8 angle. These rods, washers, and nuts will not be perpendicular to the 8x8 angle due to the angles at which the beams intersect the walls.

Please confirm no wedge, spacer, or shim will be required between the 8x8 built up angle and the plate washers to evenly distribute the load.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide tapered washers or add tapered steel plates that develop full bearing between the nut and the built up angle.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

With reference to the Train Box Column cap plate, our machine shop has drilled (1) non-standard hole in (1) p395 cap plate due to a broken tool. See attached inspection report and photos.
The hole is dimensionally in the correct position but has an internal spiral cut. The minimum diameter is 1-9/16" (1.563) and the max diameter is 1-49/64" (1.770).

Please confirm if one of the following is acceptable:
Option 1 - Proceed with the as-built condition, no further action required.
Option 2 - Reem out the hole to 1-13/16 and use a 1-1/2" bolt. AISC Table J3.3 page 16.1-121 allows oversize hole in slip critical connections, a hardened washer will be installed over the oversized hole. (see attached)
Option 3 - Drill the hole to 1-13/16 and use a 1-3/4" diameter bolt.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Both option 2 and option 3 are acceptable. This approval does not set a precedent, evaluation will be made case by case for similar issues in future.

T-1366 **SSS - Slab Opening Clarifications** **Closed** **05/06/2014** **05/16/2014** **05/27/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Adamson Associates, Inc. Paul MacPhail **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 410 SK1 for items 1 & 2:
1) The Architectural Slab Edge Drawings indicate round sl ab openings greater than 8".
Confirm structural perimeter steel is not required at all rou nd openings or supply a detail.
2) It is not clear what is meant by large openings. Does d etail 12/S1-5003 apply to all rectangular/square slab openings shown on the Architectural Slab Edge Drawings?

Please clarify.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) For openings greater than 8" and up to 2' provide rebar as shown in the attached sketch SKS-0354.

2) The large opening detail applies for openings that are greater than 2' but limited to the dimensions specified on 12/S1-5003.

T-1366.1 **SSS - Slab Opening Clarifications** **Closed** **06/02/2014** **06/12/2014** **06/10/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Refer to attached CD RFI 410.1 SK1:

1) The response in RFI T-1366 (SK 551, CD 410) does not address rectangular slab openings where one side is less than 2'-0 and the other side is over 2'-0. See the example slab openings and clarify the perimeter steel requirement for all rectangular slab openings where one side is over 2'-0 and the other side is less than 2'-0.
2) The noted slab openings along with other slab openings shown on the Architectural Slab Edge Plans are NOT shown on S1-2302 and other structural plans. Confirm the slab openings on the Architectural Slab Edge Plans supersede the structural plans with updated structural drawings to follow.

1) The 2' dimension limit stated in the response to RFI T-1366 is the larger of the dimensions of the rectangular openings. So for a rectangular opening where one side is over 2' and the other side is less than 2', detail 12/S1-5003 shall apply.

2) Confirmed.

T-1366.2 **SSS - Slab Opening Clarifications** **Closed** **07/01/2014** **07/11/2014** **07/14/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer
To: Turner Construction Compan PHIL MILITELLO
Answered By: Adamson Associates, Inc George Metzger
Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Following up on RFIs T-1366 and T-1366.1, please find attached table and exhibits of small slab openings with at least one side that is 2'-0" long.

For each of the minor slab openings included in the following table, please confirm that the direction provided in the aforementioned RFI response is to install framing channels per 12/S1-5003. In some cases, the slab openings are only between 8"-12" wide. Otherwise, please indicate that it is acceptable to provide rebar as shown in SKS-0354 per RFI T1366 instead.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide perimeter steel per response to RFI 1366.1 around openings where the side of the opening that is perpendicular to the deck span is greater than 2'.

For openings highlighted in green, the perimeter steel per detail 12/S1-5003 is not shown on floor plans because 12/S1-5003 is a typical detail. We disagree with the claim that the perimeter steel for these openings constitutes a change order.

Some of the openings highlighted in red are shown on both architectural and structural drawings. These openings are noted in the schedule shown on attached sketch SKS-0369. Other openings that are missing from the structural drawings will be added in a future ASI.

T-1367 **SSS - IFRM Prime Coat Requirement** **Closed** **05/06/2014** **05/16/2014** **05/12/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Specification section 07 81 23 (Intumescent Fire Resistive Materials), issued with Field Order 00027, lists three acceptable basis of design manufacturers for IFRM systems. Additionally, specification section 07 81 23, 1.7.C.2 states that the intumescent fire protection system is to be from a single source, indicating that the prime coat Skanska shop applies must be from the same manufacturer as the subsequent coats that are field applied.

Per the monthly schedule delivered to TJPA, the IFRM contractor is not to be selected until 10/16/14.

Skanska requires direction as to which of the three approved basis of design manufacturers will be used on subsequent coats in order to obtain a recommendation from that intumescent coating manufacturer as to the appropriate primer to be utilized.

Alternatively, priming of IFRM steel can be removed from Skanska's scope and added to the scope of the IFRM contractor. This will result in a cost increase.

Please provide direction.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

TJPA has rejected this RFI per 01 10 40 1.6 C 2 c.

T-1368 **BGP - Moment Frame Beam Perimeter Stirrup at Column Supports** **Closed** **05/06/2014** **05/16/2014** **05/07/2014** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Skanska USA Civil West California DisRyan Clayton

REQUEST:

During a Quality Control review, performed by Thompson Metal Fab for compliance with the "Buy America" clause of the Contract, a question was noted regarding the proposed use of ESAB Spoolarc F9A4-ENi4 Submerged Arc Welding (SAW) Electrode for the welding of the HPS70W steel in the Train Box Columns. The attached letter from ESAB, dated April 22, 2014, describes the process that ESAB employs in the manufacture of the referenced product. It notes the fact that the tensile and yield properties of the specific filler metal alloy required to meet the Contract specifications
of 90XX are not offered or produced by any mills within the United States. The alloy is provided as a "Greenrod" and is acquired outside of the States. The cold drawing, proprietary processing and packaging of the product is done, by ESAB, wholly within the United States and uses, other than the alloy itself, domestically produced and acquired materials. The Certificate of Conformance from ESAB states that the product is manufactured in the United States (attached).

An inquiry was made, by Skanska, to Lincoln Electric regarding a similar product classification that met the Contract requirement (F9A4-ENi5). Lincoln Electric advised Skanska that they also receive "Greenrod" and strip from sources outside of the United States for this product.

A subsequent Quality Control review by The Herrick Corporation revealed a similar condition for the use of the Lincoln Electric product Outershield XLH-70, AWS classification E70T-1C-H8, FCAW process weld electrode. Once again, Lincoln has indicated that "Greenrod" for weld electrode products may not be domestically available and may be sourced from throughout the world. However, the manufacturing process, like ESAB, is done wholly within the United States. The Certificate of Conformance from Lincoln also states that the product is manufactured in the United States (see attached certificate and letter dated 04/28/2014).

The CFR Part 661.5 of the Clause gives the following definitions:
c) The steel and iron requirements apply to all construction materials made primarily of steel or iron and used in

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The Contract Documents are clear, and ¿Buy America¿ requirements can reasonably be derived from a review of the Contract Documents. RFI are not an appropriate request to the TJPA for interpretation if products meet ¿Buy America Certification¿

The Contractor shall submit the ¿Buy America Certification¿ and the Prime Contractor is responsible for ensuring that lower tier subcontractors are in compliance.

REF: SECTION 00 08 13 ¿ SPECIFIC PROJECT REQUIREMENTS

SECTION 00 08 13 - USDOT REQUIREMENTS FOR AGREEMENTS WITH THE TJPA

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

infrastructure projects such as transit or maintenance facilities, rail lines and bridges. These items include, but are not limited to, structural steel or iron beams and columns, running rail and contact rail. These requirements do not apply to steel or iron used as components or subcomponents of other manufactured products or rolling stock, or to bimetallic power rail incorporating steel or iron components.
d) For a manufactured product to be considered produced in the United States:
(1) All of the manufacturing process for the product must take place in the United States; and
(2) All of the components of the product must be of U.S. origin. A component is considered of U.S. origin if it is manufactured in the United States, regardless of the origin of its subcomponents.

Skanska has interpreted this clause to indicate that both ESAB and Lincoln supply welding electrodes for this Project that are wholly manufactured within the United States and that they satisfy the requirement of the "Buy America" clause.

Please confirm that the use of manufactured weld electrodes on the Project for which the manufacturer is providing a Certificate of Conformance indicating that the entire manufacturing process is performed in the United States, but may contain alloy material produced elsewhere, meet the intent of the Contract "Buy America" clause.

T-1370 **SSS - Roof Level Stiffener Plate GL 16** **Closed** **05/07/2014** **05/17/2014** **05/13/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Following our discussion on the CP01 support stiffener welds at Thursday 05/01/14 structural issues coordination meeting, Skanska proposes to remove the "all-around" designation on the 3/4" PJP weld shown in section C 1/S1-8001 and replace with 'four sides' written in the weld tail. The welds will terminate at the start of the clips at the internal corners. Please confirm this is acceptable. (See sketch below)

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

However we disagree with the "time increase" impact of this RFI. This modification was proposed by the Contractor in a Structural Coordination meeting and we did not take an exception to it. If there is an "impact" to be claimed for this modification, please provide all around welding per contract documents.

T-1372	**BGP - CDSM Soldier Pile Encroachment Area 16**	**Closed**	**05/08/2014**	**05/18/2014**	**05/17/2014**	**Potentially**	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference Documents: Exhibits A - G

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north & south wall in mat slab pour Area 16 as well as all levels of the encroachment into the foundation wall between CDSM piles 343 to 440 on the north east and south elevations Plan see exhibit - A.

Exhibit - B & C depict the location and degree in which the SP are encroaching.

WOJV proposal North elevation on gridline A (343 -369): (See Exhibit - B) Between CDSM pile 351 to 353. WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 352. Originally these were WR1 reinforcement areas #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

WOJV proposal East elevation on gridline 35 (369 -414): (See Exhibit - B) Between CDSM pile 373 to 375,379 to 381, 387 to 399 & 404 to 406. WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 374,380,388,390,391,395,398 & 403. Originally these were WR1 reinforcement areas #11@8"oc

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The contractor proposed revisions to foundation wall reinforcement due to encroaching CDSM Piles in Area 16 are acceptable. Update Area 16 shop drawings affected by the shoring encroachment info presented in this RFI and submit them for record.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

WOJV proposal on the South elevation on gridline A (415 - 440): (See Exhibit - B) Between CDSM piles 415 to 417 WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 419, This foundation wall area was originally a embedment column (C -023) with reinforcement in this area was a double layer of #11@6"oc EF vertically and would change to double layer of #11@5"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail B/Sk.4 option 2 (Exhibit -F).

Between CDSM piles 417 to 420 WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 416 Originally these were WR1 reinforcement areas #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

Between CDSM piles 423 to 425-426, 428 to 434 & 438 to 441-442 WOJV is proposing to decrease the specified 36" wall thickness to 33" to clear the encroaching SP 424,428 to 432 & 441 Originally these were WR1 reinforcement areas #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

Between CDSM piles 425-426 to 428 WOJV is proposing to decrease the specified 36" wall thickness to 33" to clear the encroaching SP 426 & 427 This foundation wall area was originally a embedment column with reinforcement in this area was a double layer of #11@6"oc EF vertically and would change to double layer of #11@5"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.4 option 1 (Exhibit -F).

Between CDSM piles 434 to 438 WOJV is proposing to

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

decrease the specified 36" wall thickness to 33" to clear the encroaching SP 436 & 437 Originally this was a WR2 reinforcement areas #11@6"oc EF vertically and would change to #11@5"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.3 option 2 (Exhibit -E)

In all other areas without CDSM pile encroachment issues the reinforcement will remain unchanged as per the Contract drawings.

See Exhibit - G shows a typical detail of transition between modified reinforcement to contract reinforcement.

These solutions if approved would be incorporated into the TG06 shop drawings. Please confirm if these solutions would be acceptable.

T-1373 **BGP - Modifying Slump Limits for Mix 1557205** **Closed** **05/07/2014** **05/17/2014** **05/13/2014** **Potentially** ☐

T-1378 **BGP - SFPUC Electrical Room Grounding** **Closed** **05/09/2014** **05/19/2014** **05/09/2014** **Potentially** ☐

From: Shimmick Construction Company, Inc Sylvia Hartanto **To:** Webcor/Obayashi Joint Ventu Spencer Sayles **Answered By:** Webcor/Obayashi Joint Ve Spencer Sayles

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author:

REQUEST:

Please reference RFI T-1227.1 - SFPUC Plate Grounding.

Please confirm the SFPUC Transformer mounting plate is to be installed by a future contractor and SCCI is only to stub the grounding conductor into each corner of the Electrical Room(see Note 1 on Plate Sheet EI-2203).

If SCCI is to install this SFPUC Transformer mounting plate, provide the specifications, including but not limited to material type, size and thickness.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is confirmed that SFPUC Transformer mounting plate in transformer vault room elevated slabs will be supplied and installed by future contractors. However, SCCI BGP base bid scope needs to be increased from the corner of the three electrical rooms originally bid in BGP. This increase shall be priced and coordinated as described in RFI 1227.1 sketch in order for grounding conductors to be embedded in the structural Concourse slab. Grounding conductors must be extended from the corner of each Electrical Room to each future pad location and stubbed up so that transformer mounting plates can be connected by future electrical contractor. Please provide a sketch and product detail of how BGP electrical intends to implement this grounding extension so that SFPUC review can proceed as described on new sheets E1-3208, E1-3209 and E1-3210

IFC drawings (dated 3.31.2014) issued in Field Order 27 contain updated electrical drawings. BGP contractor should review these drawings for any modifications to Electrical scope bid during TG06. This is to include Grounding and embedded conduit for F-15 EJB conduit. New electrical scope other than that described above is not currently requested at this time.

T-1378.1 **BGP - SFPUC Electrical Room Grounding** **Closed** **05/30/2014** **06/09/2014** **06/09/2014** **Potentially** ☐

REQUEST:

SCCI is in receipt of RFI T-1379. SCCI disagrees with the response provided in the aforementioned RFI.

S1-2026 illustrates a 30" wide pile in a 30" wide pit at gridline 27/E. However, Submittal #TG0300- 284.4, which was reviewed and approved by the design team, shows the previously mentioned trestle pile as a 36" wide pile. It has also been confirmed in the field this pile is 36" wide pile.

Please provide applicable details (similar to D4 on Sl-3009 & D2 on Sl-3007) for permanent elements in the mat slab construction, including but not limited to galvanized sleeves and structural steel reinforcing, for the pit at GL 27/E which contains a 36" wide pile, not 30" as shown on the design drawing S 1-2026.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

T-1379.2 **BGP - Pit and Pile Discrepancy at GL 27/E** **Closed** **06/10/2014** **06/20/2014** **06/12/2014** **Potentially** ☐

Mat Slab Rebar Shop Drawing, and Sketch 113-001.

For constructability reasons, SCCI proposes to enlarge the pit at GL 27/E in order to facilitate the installation of the trestle pile sleeve and cap. Please see sketch 113-001 for details and dimensions. Rebar would be altered to accommodate enlarged pit dimensions. See sketch 113-001 for rebar details for pour-back portion of pit once pile is removed.

Please confirm this is acceptable.

from as-built pile survey.

T-1380 **SSS - Field Weld Access at Deck Support Angles** **Closed** **05/12/2014** **05/22/2014** **05/27/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to 1/S1-
3701 for deck support angle welded to Transfer Girder we
b detail.
Due to restricted access the decker cannot make the requi
red field welds when the top of deck to underside of
Transfer Girder flange is less than 12". See attached SK1
for clarification.
1)
Confirm a 3/8" bent plate can be welded to the toe of the t
op flange.
2) Confirm the weld indicated on SK1 is acceptable.
3)
Confirm the deformed anchor rods can be welded to the b
ent plate.

Where deck to underside of girder exceeds 12" the deck s
upport angle will be detailed as per 1/S1-3701.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Welding of the deck to the support angle may be performed from the underside, using 1/8" fillet weld, 3" long at 12" on center

2) See response #1

3) See response #1.

T-1380.1 **SSS - Field Weld Access at Deck Support Angles** **Closed** **06/10/2014** **06/20/2014** **06/24/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

After reviewing the response to T-
1380 there are several items of concern:
A.
Access from the underside will not always be possible. At certain locations the perimeter wall bracing and rebracing that will remain in place during the deck installati on operation at Ground Level is in close proximity to the transfer girder and will restrict the mobility of a sciss or lift required for a welder to reach the work point from the lower concourse slab, approximately 30' bel ow.
B.
To provide an effective weld from the underside, the deck l ower flute is required to overhang the toe of the angle. In order to achieve this, shifting the deck may result in the loss of bearing at other locations. If the deck can't be shifted a 12ga minimum flashing plate will be requ ired, see details 3 & 4 on SK1.
C.
Effective concrete placement will be an issue if adequate c learance from the top of deck flute to bottom of girder flange is not established.

To move forward we propose the following:
1.
Where d<7" we will use stock angle sizes up to 8x4x1/2" (LLV) welded to the toe of the flange, see detail 1.
2.
Where d>7" but <15" we will use an overhead 1/8" fillet fro m the underside as per the response to T-1380 (where accessible), see detail 2. This will allow a minimum of 4" clearance from top of deck flute to underside of flange for placement of concrete.
Where the bottom flute does not overhang the toe of the a ngle and shifting the deck creates a loss of bearing at another location, a 12ga min flashing will be welded to t he angle and deck bottom flute, see detail 3 & 4.

Please confirm items 1 & 2 are acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Confirmed.

2. Confirmed.

T-1381 **SSS - CVN Testing For Secondary Material** **Closed** **05/12/2014** **05/22/2014** **05/23/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Skanska USA Civil West California DisRyan Clayton

REQUEST:

The response to RFI T-1034 indicates that secondary steel components (stiffeners, connection plates, continuity plates, etc.) are to be CVN tested in accordance with their respective ASTM specification. In the CS05 (TG0701-077) and CS07 (TG0701-079) submittal packages, Skanska¡¦s detailer inadvertently tagged the spandrel shear plates and web reinforcement plates at the Bus Deck level to receive CVN, Frequency P testing. These same components were not tagged for CVN testing in the CS1, CS2, CS3, CS4, and CS6 packages and the drawings were approved with no comment on the CVN requirements.

For the subject material, the governing ASTM 572 specification indicates that supplementary CVN, Frequency P testing is not required unless specifically indicated in the contract documents. In accordance with the response to RFI T-1034, Skanska has proceeded without CVN-P testing for the following secondary components: (Note that the material listed has been ordered without Frequency P testing.)
Bus Deck Spandrel Plates
Bus Deck Web Reinforcement Plates
Bus Deck Drag Connection Plates
Roof Level Fabricated Nodes (as per submittal package TG0701-097.1)
Other secondary materials (stiffeners, connection plates, continuity plates, etc.)

In preparation for the resubmittal of CS05 and CS07 drawing packages, Skanska will remove the CVN remarks for these components to conform to the RFI T-1034 response, the ASTM specifications, and the previously approved packages.

Please confirm concurrence.

SUGGESTION:

T-1387 **SSS - Erection Plan Temporary Lugs** **Closed** **05/12/2014** **05/22/2014** **05/23/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

During a recent structural issues coordination meeting, Skanska raised a concern regarding a submittal response received with package TG0701-29. Specifically, Skanska flagged a comment that indicated our temporary erection aids at the exterior moment frame columns needed to be located 36" below the moment frame beam to column connection at the bus deck level and also 36" away from the weld joint between the column and cast node/transfer girder at ground level. See attached drawings for ease of reference.

As discussed during the meeting, please confirm that this is not mandatory; and, if Skanska opts to leave the lugs as shown on the attached documents, it is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-1389	SSS - Stud Comment Clarification on Decking Drawings	Closed	05/13/2014	05/23/2014	05/27/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

With reference to the Linden Steel decking drawings the reviewer's comment references general note DK-5 - Distribute steel studs uniformly over beam span unless otherwise noted on drawings. Maximum spacing of ¾ inch headed studs shall not exceed 24" on center (one stud every 2 feet) unless otherwise noted.

As per note 1 on 1/S1-5000 - "See general notes for headed stud size and maximum spacing. Number of studs is indicated on the framing plan." Linden has modeled their drawings as per note 1, referring to the general notes for size and spacing requirements and the framing plans for stud quantities indicated on each member as per the Steel Beam Legend on S1-2302.

If a stud quantity is not indicated on a beam member, no studs are provided. Please confirm this interpretation is correct. If additional studs are required on members that are not currently identified please provide revised drawings identifying beams and quantities required.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

While the maximum stud spacing requirement of 24" noted in General Note DK-5 is the design intent, we understand that the Note 1 on 1/S1-5000 is somewhat conflicting. We agree to handle the 24' spacing requirement on a case by case basis, by marking on the shop drawings where this requirement is to be enforced to minimize the impact. We will re-submit the metal deck shop drawings for clarification.

REQUEST:

See attached CD RFI # 415 SK1 to SK3 for item 2.

2) The noted bolts for the W27x84 beams are not accessible from the back side as shown in SK3. Please supply an alternate detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) If the bolts are not accessible from the back side, it is acceptable for this location to use a shear plate connections per 1/S1-5011 that does not require access of the bolt in the 4' gap.

2) It is Skanska's responsibility to figure out the erection means and methods. For this condition, the flange of the beam in question might be coped to allow the beam to drop down between the double angles that are shop bolted to the column web plate. The bolts to the beam web will then be accessible because the coped flange.

T-1403 **BGP - Partition Wall Construction Joints** **Closed** **05/15/2014** **05/25/2014** **05/23/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please confirm the following items are acceptable regarding partition wall construction joints.

1. To provide the 3/8" gap for the vertical CJ's, SCCI intends to place felt board in the joint with a 3/4" chamfer (see attached drawing). Once the walls on either side of the CJ have been poured, the felt board will be trimmed down to the end of the chamfer and the edges of the joint will be caulked. Please confirm this is acceptable.

2. With the exception of the tank walls, SCCI intends to

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AAI Response:

1. 3/4" chamfer for min 3/8" partition wall vertical CJ is confirmed. For joint filler and caulking of fire rated walls: refer to Spec Sec 07 84 13.

TT Response:

2. Confirmed. Additionally contractor to confirm construction joint is clean of foreign materials.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

pour the Train Level Partition Walls that go all the way to the Lower Concourse (~28'-11" tall) in two lifts with one horizontal CJ. SCCI proposes prepping the joint by roughening it with 1/4" amplitude. Please confirm this is acceptable.

T-1404 **SCS - Transfer Girder Clarification** **Closed** **05/15/2014** **05/25/2014** **05/29/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please clarify the designer's intent:

Sheet Sl-2303 indicates that the south end of Transfer Girder TR9 extends beyond the B87 and B88 beams southern edge and partially into the intersecting MFBl beam which is angular to the B87 beam. Section 8/S1-3701 indicates that there are welded rebar couplers at the top flange of the TR9 girder to match the B78 beam reinforcing, but the B78 beam ends at the B87/B88 intersection prior to the southern end of the TR9 girder.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The note" BARS TO MATCH BM78 BARS WITH LENTON COUPLER" has a typo. It should read as " BARS TO MATCH MB1 BARS WITH LENTON COUPLER". The bottom bars for BM78 shall go through the holes in the web of TR9 as shown in Detail 8/S1-3701.

WOJV Received: 6/2/14

T-1405 **SCS - TR7 Transfer Girder** **Closed** **05/16/2014** **05/16/2014** **05/29/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please clarify the designer's intent.

Sheet S1-2303 indicated that the south end of Transfer Girder TR7 extends into the B106 beam (60"w X 72"h). Section 8/S1-3702 and 11/S1-3703 indicate a substantially shallower beam section.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The beam depth shown on 8/S1-3702 and 11/S1-3703 was not shown to scale. Since there is no dimension given on these 2 details, the beam depth (72") specified in the beam schedule govern. There is no changes needed for these 2 details. The 2 1/2" x 14" x 2'-6" steel plates are to be center to the B106 bottom bars.

Please clarify the designer's intent:

Sheet S1-2305 indicates the upper Slab elevation as 17.71' and the top of the Lower Slab as 16.07' in elevation at Girders TR19.9 and TR20.1. The connecting MFB1 30"(W) X 48" (W) X 48"(H) beam top is indicated at the 16.07' elevation per details on Sheet S1-3600. The

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The Elevation 19.07 is the elevation below the concrete pad. The concrete pad is at El.17.71. See the attached response to RFI SSS-T-1097.1 for additional information.

WOJV Received: 6/2/14

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

referenced Section 9/S1-3702 at the south ends of TR19.9 and TR20.1 doesn't correlate with the slab elevation in relation to the top of structural steel.

Please clarify the detail for the welded couplers at the south end of TR19.9 and TR20.1.

T-1409 **TR1.4 Transfer Girder 72" X 40" CBM Welded Couplers/Bars** **Closed** **05/19/2014** **05/29/2014** **05/19/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Please clarify the designer's intent:

Sheet S1-2302 indicates that the 2 northerm 72"x40" CBM beams east of Grid 1.4 are sloping and references Section 1/S1-3700 which indicates that the CBM beams are level. The 2 southern 72 "x40" CBM beams east of Grid 1.4 are not indicated as sloping and reference Section 1 /S1- 5023 that indicates that the beams are sloping. Please clarify the details for the welded couplers and #11 bars for the 72"x40" CBM beams at east side of TR1 .4. Section 2/S1-7605 indicates 17-#11 bars top and bottom, one added set of 17-#11 bars 3" below the top bars, and 4-#11 side bars.The details shown in Sections 1/SI-5023 and 9/SI-3700 indicate that the top and bottom 17-# 11 bars are connected to the transfer girder by welded couplers or bars. Please verify that only the top and bottom #11 bars connect to the transfer girder by welded couplers or bars.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

As noted on the plan, the slab west of Grid 1.4 has a step at Grid E.
As noted on the plan, along Grid 1.4 , top of slab is at 20.23 north of Grid E and at 21.21 south of Grid E.
As noted on the plan, along Grid 1 (top of concrete wall), top of slab is at 20.03 north of Grid E and 21.00 south of Grid E.
The 72x40 concrete beams are to have a slope per elevation noted on plan.

T-1412 **SSS - Pipe Wall Thickness Tolerance** **Closed** **05/23/2014** **06/02/2014** **05/28/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Per conversation during "Transbay structural issues review" meeting on 5-20-2014, the wall thickness tolerance of spec 05 15 22 was discussed. Per design team, this tolerance is intended to apply to the ends where the pipe would be welded, and a less restrictive tolerance would be acceptable throughout the length of the pipe, provided that the wall thickness is greater than nominal, not less.

The manufacturer of the spun-cast pipe has produced all product to date with dimensions that meet the 05 15 22 spec for 12" at each end. Throughout the remainder of the pipe, the wall thickness is greater than nominal (typically by about 0.090"), and in all cases falling within the tolerance of API-5L.

See attached depiction ofthe pipe tolerances.

Please confirm that wall thickness tolerance noted in spec 05 15 22 is intended to apply to the ends only, and that the wall thickness throughout the remainder of the pipe may be greater by as much as is allowed by API5L, but shall be no less than the nominal wall thickness.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-1413 **SSS - Second Level Popout Verifications** **Closed** **05/23/2014** **06/02/2014** **05/30/2014** **Potentially** ☐

14). See the response noted on the attached sketch RFI 296.1 SK5

15). The detail works as shown. It is a means and methods issue, it just means that the connection cannot be shop fabricated as the work require contractor¿s coordinate during construction. If the deck span parallel to the brace angle, field weld the brace angle to the L4x4. (TT)

16). Stiffener plates are to be 3/8¿ thick with ¼¿ double fillet weld to column. (TT)

17). See the response noted on the attached sketch RFI 296.1 SK6

18). See the response noted on the attached RFI 296.1 SK7 (TT)

T-1417.1 **SSS - Missing OCS Switch Information** **Closed** **06/27/2014** **07/07/2014** **07/11/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The responses to the following items were not sufficient for Candraft to proceed.
7) The response notes one of the requested dimensions as "VARIES". Please provide criteria for this varying dimension.
12) Detail 3/A1-8551 does not provide the bottom of the HSS post elevations. Please supply the elevation at each post.
13) Per the structural details only the 1/2" plate is to be galvanized. Confirm this is correct and supply weld required for PL3/8" to HSS4x4.
14) Supply the requested missing dimension as shown at each post.
17) Please supply the elevations for the stiffeners in the columns.
18b) Please provide the size, radius, hole location and dimension on the 1/2" x 8" plate. Note: See response sketches SK1 through SK7

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Please see OCS configuration in 1/A1-8550. Notice the OCS path relative to the beam (16'-4 1/2" from GL C.3 in CD RFI 296.1 SK4) is not a constant offset in plan and changes locations traveling east to west. From this, the HSS structure supporting the OCS assembly from above will also have an offset dimension from the beam that is not constant and will vary.

12) The bottom of HSS post elevation will vary because the bottom elevation is dependent upon the elevation of the OCS Universal Spacer Bar which is dependent upon the ultimate constructed sloping grade below (concrete). The OCS Universal Spacer Bar shall be 18'-0" above the built finish grade and the dimension between the bottom elevation of the supporting post and the Universal Spacer Bar is given on detail 3/A1-8151.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

13) All should be hot dip galvanized as noted in the CDs. The weld shall be 1/4" double sided fillet weld. Please note that the connection plate shall be centered to the work point of the diagonal angles.

14) Same response as in item #12.

17) CL of plate is determined by SFMTA OVS. See response to item #14 on attached CD RFI 296.1 SK5.

18b) Plate size, thickness and hole location are provided in 6/S1-9101. SFMTA must provide size of plate hole, as the cable tensioner components are provided by SFMTA. TJPA shall assist with the SFMTA contact if required.

The Design Team suggests that the OCS connectors be field installed to accommodate the final coordination with the SFMTA

REQUEST:

See attached CD RFI # 296.4 SK1 to SK3 for items 1 to 4: Skanska plans the following erection aids for the OCS. Please review and confirm there are no adverse structural implications.
1) Confirm the concept of the erection aid detail as shown is acceptable to accommodate the field welding required.
2) Confirm welding for cap plate as shown is acceptable.
3) Confirm the concept of the erection aid detail as shown is acceptable to accommodate the field welding required.
4) Confirm it is acceptable to supply (4) 15/16 diameter hol es per plate for erection lifting holes as shown.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) Confirmed, but use all around weld.

3) Confirmed, but finger tighten A325 through bolt.

4) Holes are acceptable. However, contractor is to plug holes completely with full grommet of the shield plastic fiber insulating material specified in Section 05 50 00 .

REQUEST:

This is a follow-up to RFI T-1417.1 (SK 399.3A, CD 296.3)

Skanska: The responses to items 7, 12, 14 & 17 require further clarification. Please review the items below.
Item 7 ~ the response and reference to A1-8550 does not provide the requested dimensions. Please provide the dimensions to locate the posts.
Item 12 ~ the response tells us that the Universal Spacer Bar is to be 18'-0 above the ultimate constructed sloping grade with the bottom of the post being +/- 4" above that per 3/A1-8151. Several unknowns remain:
a) What does "ultimate constructed sloping grade" mean?
b) The top of slab information on drawings S1-2306, A1-2306 & A1-2866 is not clear
c) What does the +/- 4" in detail 3/A1-8151 mean?
Item 14 ~ same as item 12
Item 17 ~ same as item 12

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Item 7 - information has been provided. Skanska should review with WOJV and TJPA.

Item 12 -

a) It means field dimension must be determined from the constructed grading by the CM/GC and coordinated between trade subcontractors and the SFMTA (the transportation agency). The design team cannot provide the as-built field dimensions that are required for this item.

b) The reviewer should be using civil (grading) information - not structural information. Refer to sheets L1-3306, L1-3307, C1-4007 and C1-4009.

c) This dimension is incorrect - It is 1'-0" +/-4". This will be corrected in VE Round #4 submission.

Item 14 - This question is the same as in Item 12, so the response is the same.

Item 17 - This question is the same as in Item 12, so the response is the same.

AAI recommends that WOJV schedule a coordination meeting with SKANSKA, TJPA, SFMTA the Design Team to review This RFI and the previous sub-

Provide welds at the MC10x8.4 to HSS column connection as shown in the attached sketch SKS-0355.

T-1419 **SSS - Bus Deck Cast Node Dimension Confirmation** **Closed** **05/23/2014** **06/02/2014** **06/04/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Turner Construction Comp Jack Adams

Co-Author: Webcor Construction LP Jeff Galoyan

REQUEST:

The structural issues meeting on 5/15/2014 reviewed potential changes to the cast node machine shop drawings. Due to the sand inclusions in the 35A and 35B cast nodes, further machining of the pad surfaces is required. This will result in a dimension of 16" from the W0 work point in lieu of the initial dimension of 17" (see attached sketch). Cast Connex has proceeded to make the 16" revision to the cast node machine shop drawings.

Please confirm this is acceptable, and update the structural drawings to match.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Acceptable to TT.

Machining of these cast node pads was not indicated on the design drawings (nor Skanska or Bradken shop drawings). Design Team has no issues with the resulting dimension of 16" from the W0 work point in lieu of the initial dimension of 17" .

The machining of these pads < 1¿ deep to remove sand inclusions found in as cast surface is a Contractor means and methods.

Webcor to communicate/coordinate with Shimmick as the TG18.1 Bus Ramp Contractor to coordinate if shop machining versus field grinding is preferred for weld

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

prep. This weld prep work is at no cost to the TJPA.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:
See attached CD RFI # 432 SK1:
Confirm the 1 7/16" edge distance for the 1 1/2" dia. bolts per 1/S1-8000 is acceptable or supply a solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐
It appears from the sketch SK1 provided in the RFI that the detailer spaced the middle two bolts at (tw + 3 3/4") per detail 1/S1-8000. At this location with tight edge clearance, revise the spacing between the middle two bolts to 4". The resulting bolt edge distance is acceptable.

T-1423 **SSS - Girder Flashing Max Gap Dimension** **Closed** **05/27/2014** **06/06/2014** **06/04/2014** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

With reference to details 6, 7 & 9/S1-5000, a 9" max dimension is shown from the edge of the girder flashing to the edge of the deck with a 1-1/2" minimum bearing onto the girder, indicating the flashing gauge is to match the gauge of the deck. Based on the preceding, most locations would require 18 gauge flashing with the max gap between beam and deck being 7-1/2".

Please confirm it is acceptable to increase the max gap to 9" as the deck flutes are at 12" centers and at some locations this gap will exceed 7-1/2". To accommodate the increased gap, the decker is proposing to use 16 gauge flashing at all locations, connecting the flashing to the beam with ¾" diameter puddle welds at 12" OC and connecting the side lap with button punches at 12" OC or top seam welds at 24" OC.

See attached SK1 for clarifications.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the gap may be increased from 7 1/2" to 9" where 16 gauge closure sheet is used.

T-1425 **SSS - Edge of Slab Angle at Seismic Joint GL10 & 20** **Closed** **05/29/2014** **06/08/2014** **06/10/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Section 3/S1-3282 details the typical concrete wall at expansion joint on the Roof Deck Level. Please confirm an edge of slab bent plate and deck support as per 9/S1-5000 is not required. See SK1 & SK2 for reference.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The Typical Detail 9/S1-5000 is applicable at the expansion joint, as the slab edge overhung is within the range (2' - 4') noted for this detail.

T-1425.1 **SSS - Edge of Slab Angle at Seismic Joint GL10 & 20** **Closed** **06/30/2014** **07/10/2014** **07/09/2014** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please confirm per field conversation between structural EOR and Gerdau that it is acceptable to install the concourse slab bottom East-West reinforcing at GL 9 per the attached sketch.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Proposal is acceptable provided:

1. Tail of slab bottom bar is fully developed within the confined joint

2. Tail of slab bottom bar runs over the top of the lowest MFB longitudinal bar and is no longer located below it

3. Field bends conform to ACI minimum radii limitations

4. Within the joint, bottom MFB bars are brought to their lowest possible position above (and in contact with) the MFB exterior hoop bottom legs

5. All hooks of MFB vertical ties shall be made to fully engage the MFB longitudinal reinforcing outside the joint and at the sides of the joint

6. Proposal is implemented at all Grid 9 columns where the overpour results in slab bottom reinforcing being out of tolerance (3/4 clear plus 1/2" tolerance)

It is also acceptable to cut the bottom slab bars at the face of the MFB-column joint and splice in an equivalent z-bar.

location per 11/S1-7630 as requested in the CS6 approval submittal because the beam will not be erectable with the stiffener below the beam.
Confirm that is acceptable.
5) It is not possible to supply a 12" high stiffener plate at this location per 11/S1-7630 because it will foul the bolts for the beam connection on the far side as shown.
Confirm it is acceptable to terminate the stiffener as shown.

T-1436 **SSS - Metal Decking at Popout Framing** **Closed** **06/02/2014** **06/12/2014** **06/03/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The reviewer's comment on Linden Shop drawing D3 detail 49, requests the contractor to coordinate the change of steel deck height with RFI T-0803.1 and with W2 roof assembly components (see SK1).

After further review of the available information, detail 1/A1-8171 provides conflicting information to what is indicated on 1/S1-5032, the W-2 retail façade roofing assembly build-up indicates a 1-1/2" metal deck (see SK1).

Please confirm the steel framing and 1-1/2" metal deck as currently detailed is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This item was already confirmed by RFI T-1413.

T-1437 **BGP - Shear Wall Column Vertical Splice at 3rd Lift** **Open** **06/03/2014** **06/13/2014** **06/06/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Reference: RFI T-0620
For constructability purposes, the shearwalls require horizontal construction joints at the same elevations as the foundation wall construction joints. All vertical reinforcing has been detailed with HRC mechanical couplers with the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Acceptable provided that the coupler is a Type II coupler, such as Dayton Superior Barlock L-Series. The coupler proposed in the RFI does not qualify. The contractor shall plan for the installation of the coupler by taking into account the length of the coupler, the

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

exception of the 3rd lift of the shear wall column located adjacent to the knockout wall. Please confirm that it is acceptable to splice the verticals in the shear wall column with a Dayton Superior Barlock D250SCA coupler

length of the reinforcing stub to be spliced, and the available clearance. The coupler may need to be preinstalled with the stub or a blockout created depending on the proximity of the obstruction to the planned construction joint. The detailer shall account for the increase in effective bar diameter at the mechanical coupler with respect to ties and clear cover.

T-1438 **SSS - Kicker Brace at Slab Opening** **Closed** **06/04/2014** **06/14/2014** **06/11/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 449 SK1 & SK2:
Please confirm the location of the slab opening on SK1 as it is currently located over a kicker brace and not indicated on the structural drawings.
Please provide revised structural drawings indicating all sl ab openings required.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Slab opening locations per A1-2862 govern. Move the kicker brace so that it is in between the two openings. Structural drawings will be updated in a future ASI to show the two openings.

Note: Small openings in slabs are to be coordinated between sub-contractors by GC and included in the contract as defined in Contract Documents.

T-1439 **SSS - Oversized Holes in Cruciform Column Base Plate** **Closed** **06/04/2014** **06/14/2014** **06/12/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Due to the thickness of the cruciform column base plate and the transfer girder top flange connection (7-1/2" to 9-1/2" thick). Please confirm it is acceptable to provide oversized holes in the base plate only at the slip critical connection as per AISC (see SK1). This will allow additional tolerance for threading the 2-1/2" diameter post tensioned rods varying from 14' to 38' long through the 7-1/2" to 9-1/2" thick steel.
Note: The transfer girder top flange will remain a standard

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Using oversized holes in the SFRS bolted connection indicated in the RFI is not acceptable. It is acceptable to achieve additional tolerance for the post-tensioned rods by using oversized holes for these rods within the base plate.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

size hole (d+1/16").

T-1440 **SSS - Moment Frame Column Protected Zone** **Closed** **06/04/2014** **06/14/2014** **06/10/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

After reviewing the contract documents for the moment frame protected zones, please reference attached SK1/SK2
and note the following:
For the built-up moment frame beams, details 1, 3/S1-4201 have a note that directs Skanska to detail 10/S1-4202, which depicts the yellow striping and warning signage to be installed. However, the protected zone detail for the moment frame columns, 2/S1-4201, does not have any such requirement noted. Please confirm that detail 10/S14202 does not apply to the moment frame column protected zone shown on detail 2/S1-4201.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Detail 10/S1-4202 is a typical detail that applies for all moment frame protected zones (beams & columns).

T-1441 **SSS - Discrepancy for Slab Opening Location at ST301** **Closed** **06/04/2014** **06/14/2014** **06/12/2014** **Potentially** ☐

2) The location dimensions for the elevator opening shown in 4/S1-7101 and A1-2882 do not match as indicated by dimensions hi-lited in red. Please clarify which dimensions are correct.

Dimensions noted on Architectural edge of slab drawing A1-2862 govern. Structural drawings will be updated in a future ASI.
Dimensions noted on Architectural edge of slab drawing A1-2882 govern. Structural drawings will be updated in a future ASI.

T-1443 **Re-Install Dewatering Well Pump #34 per Field Coordination** **Closed** **06/06/2014** **06/16/2014** **06/12/2014** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

On Thursday, May 22, 2014, there was slurry intrusion through dewatering well #34, from the Transbay Tower Project. After the Transbay Tower Project placed a lean mix to plug the slurry intrusion, only water has come out of the well at a pressurized rate, not yet experienced on this project prior to the event.

The water in this well has been confirmed acceptable by the SFPUC to discharge into the City's combined sewer system, on 6/5/14. A plug has been placed in this well in order to keep the jobsite from flooding due to the volume of water pushing through the well. We want to replace the dewatering pump in this well, but are concerned that we may end up dewatering the Transbay Tower Project and possibly draw the water table on their project outside of the requirements of our specification.

1) Please confirm that it is acceptable to re-install the dewatering pump in well #34.
2) Please let us know if there are certain steps or durations that you want us to pump in an effort for ARUP to monitor the water table on Transbay Tower's Project and/or other adjacent properties.
3) Please confirm that in performing this activity, we are not held to the requirement of Spec Section 31 56 13-

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. It is acceptable to reinstall the dewatering pump in well #34.
2. Access has been provided to the global analyzer. Please watch carefully the affects from dewatering in wells P-03DS and P-6MS. These have currently not shown any change in the piezometric elevation since May 22.
3. The specification will not be relaxed at this time.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

13.F.1. in regards to "The performance of the shoring wall shall be such that the groundwater levels around the excavation are maintained within 3 feet from the pre-excavation levels" since there is the potential of us drawing their groundwater through our well.

T-1444 **SSS - Location of Grout & Vent Holes** **Closed** **06/09/2014** **06/19/2014** **06/17/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

As a follow-up to the review comment on drawing 1202 within Submittal Package TG0701-73.1, the elevation of the grout/vent holes on the pipe basket columns is called out to be 6'-0" above finished floor per S1-4003 (SK1). Skanska's modeler has taken the finished floor to be the top of steel dimension provided in the structural drawings (EL 56'-4") plus the slab thickness provided on S1-5000 (SK2). Based on this, the model currently reflects the grout/vent holes at EL 63'-6", 6'-0" above the structural slab high point. (TOS EL 56'-4" + 1'-2" [S8 slab] + 6'-0" = EL 63'-6") (SK3).

Please confirm a grout/vent hole elevation of 63'-6" at the Bust Deck Level is acceptable. Note that shop drawings packages CS1 through CS7 have been released for fabrication based on the current model.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

We confirm the grout/vent hole elevation of 63'-6" at the Bus Deck Level is acceptable for shop drawing packages CS1 through CS7.

The elevation of the finish floor at Bus Deck Level is 57'-11 1/4", thus for all the remaining CS- shop drawing packages, the grout/vent hole elevation shall be 57'-11 1/4" + 6'-0" = 63'-11 1/4".

T-1445 **BGP - Foundation Wall Mix Placed in Partition Walls** **Closed** **06/10/2014** **06/20/2014** **06/12/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference RFI T-1093 and cast-in-place mix designs TG0600-203.1 (#1557216 Foundation Walls) and TG0600-204.2 (#1558218 Slabs, Beams, and Shear Walls).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

The Foundation Wall cast-in-place mix design satisfies all requirements prescribed in Table 2-1 "Concrete Properties" (03 30 20.2.1) for the "Slabs, Beams, and Shear Walls" cast-in-place mix design. Please confirm both concrete mix designs (#1557216 and #1558218) can be used for Partition Walls.

T-1446 **SSS - PE 202 Dimension Discrepancies** **Closed** **06/10/2014** **06/20/2014** **06/18/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 454 SK1 for items 1 & 2:

1) The dimensions locating the edge of slab shown in 4/S1-7101 & A1-2892 do not match as noted by the hi-lited dimensions. The model currently matches the dimensions in detail 4/S1-7101. Please confirm that 4/S1-7101 shows the correct dimensions.

2) The noted dimensions do not match the dimensions in detail 2/S1-7101. It appears the dimensions should match with elevator posts extending from the Ground Level to the Bus Deck Level.
Please work with CD RFI 448 and clarify.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Dimensions per A1-2892 shall govern. Dimensions to locate the edge of slab will be removed from 4/S1-7101 in a future ASI.

2) The elevator shaft size at the bus deck is larger than that at the ground level. Dimensions per A1-2892 shall govern. The RFI refers to CD RFI 448.

Note: In future RFIs, provide reference to general contractor RFI number and not subcontractor RFI number. Turner shall return RFIs using subcontractor RFI numbers and have WOJV revise the RFI prior to submitting the RFI to the PCPA team.

T-1447 **SSS - Column Connection by Bi-Fold Door Support** **Closed** **06/10/2014** **06/20/2014** **06/26/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer to the response to T-1402 (SK RFI 558B) and see attached SK 1:

The W27x84 beams have a depth of 26.7 inches. In order to access the bolts as suggested in the response, both the top and bottom flanges will need to be coped. The bottom flange supports the Bi-Fold Door Supports at these locations. Please provide the minimum distance between

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide a minimum distance of 1" between the cap plate and cope of the bottom flange of the W27x84 beams.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the ¾" cap plate and the cope for the bottom flange of the W27x84 beams.

T-1448 **SSS - Shear Stud Layout at Column Base Plate** **Closed** **06/10/2014** **06/20/2014** **06/24/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Reference drawing S1-2304 at grid line 16G, section detail 9/S1-3702 indicates 7 rows of 6 studs on the top flange of the transfer girder. At this location and at 5 other typical locations along grid line G the transfer girder top flange is covered by the column base plate. See SK1 for clarification.

Please provide a layout detail for the 42 shear studs if they are to be welded to the column base plate.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The 42 (3/4" headed) studs shown on the top of beam flange may be deleted.

T-1449 **SSS - North Exit Mezzanine Hanger Detail** **Closed** **06/10/2014** **06/20/2014** **06/25/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached sketches CD RFI # 456 SK1 to SK3 which re ference the hanger and brace location that clashes with th e lower concourse column at grid C/21.
The hanger and brace per 1/S1-
2252 are directly in line with the cap plate bolts at grid C/2 1.
Please provide an alternative connection detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The hanger shall be connected to the cap plate similar to the detail at the bottom of the hanger as shown in detail 9/S1-5028. The 2" distance between the ends of the gusset plate and angle may be increased to clear the bolts at the cap plate. The V-shaped angle braces at the location highlighted in the RFI may be deleted.

T-1460	BGP - Telecom Sweep Conflict	Closed	06/16/2014	06/26/2014	06/19/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

At Gridline 8.9/A one of the 4" 90 degree telecom sweeps conflicts with an existing internal bracing strut (See attached photo). This sweep was changed from an original 30" radius sweep to a 36" radius sweep.

Please confirm which option SCCI is to proceed with:
I)The first telecom sweep could be installed 7'-1" West of GL 9 (instead of 5'-7" shown in comprehensive layout drawing) and the remaining 2 installed with the specified I' -6" offset.

2)The 36" radius telecom sweep could be replaced with the original 30" radius telecom sweep at this location only.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Please proceed with option 1: The first telecom sweep could be installed 7'-1" West of GL-9 (instead of 5'-7" shown in comprehensive drawing) and the remaining two installed with the specified 1'-6" offset.

T-1461	BGP - CMU Pier Sizing	Closed	06/17/2014	06/27/2014	06/25/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Detail 9 on plan sheet S1-9000 shows the CMU pier sizing based on wall height and door opening width. The height of the CMU wall significantly affects the CMU pier sizing. The AI-9240 drawings which were provided in the response to RFI T-1410 are the only drawings which show possible CMU wall heights, however those heights are only based on scale dimensions. Please provide the heights of the CMU walls or confirm SCCI is to assume the maximum CMU wall height of 26'-8" for all CMU walls.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

CMU wall limiting height varies according to the Masonry Partition Schedule shown on A-0022 issued with the Main Package IFC dated March 31, 2014. CMU wall heights can be established using information provided on Structural and Architectural drawings (slab thickness, beam depths, TOC floor elevations).

Please reference S1-2302, grid 5/C. At this location and similar conditions, section 2/S1-3707 is shown. Through this detail section 6/S1-3702 is cut. This detail calls for 6 rows of 6 studs @ 6" placed on the top flange of the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

transfer girder. At conditions where the end of the transfer girder is 4'-8" from the grid line there is not enough room to install the studs as indicated. See attached SK-1.

Note: This condition also occurred at GL9/C and detail 5/S1-3707 was provided with field order 027 to show 4 rows of 4 studs. Confirm this detail is also acceptable at 2/S1-3707.

T-1463 **SSS - Shear Studs and Rebar Holes at TR4 GL4G** **Closed** **06/17/2014** **06/27/2014** **06/24/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 460 SK1 & SK2 for items 1 & 2:
1) It is not clear how many studs are required. See SK2 a nd confirm the location and number of studs.
2) It is not clear how many 2" diameter holes are required. See SK2 and confirm the location and number of holes.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Confirmed the studs shown on SK2 are acceptable.

2). Confirmed the holes shown on SK2 are acceptable

T-1464 **BRP - Copper Drain Pipe Details** **Closed** **06/18/2014** **06/28/2014** **07/08/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference the attached drawings, A1-2817 and A1-8881. Please provide further details regarding the added 2" diameter copper overflow drain pipe clouded in the attached drawings. ·

1. Please specify the type of valve needed for the copper drain pipe.
2. Is the copper pipe insulated? If so, please provide specific details on insulation.
3. What type of install method should be used such as, is the connection brazed, soldered, butt welded, mechanical, etc?
4. Please provide further details on how the pipe terminates at the SJ joint.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Valve needed for the Copper Drain Pipe: Soldered Ball Valve

2. Insulation for Copper Pipe: No Insulation, however pipe wrap required, refer to Spec 22 11 11 for underground pipe wrap.

3. Type of installation method: Soldered Joints

4. Details on how the copper drain pipes terminate at the SJ joint. For lower and upper copper drain pipes, provide with PVC flange secured to cast in galvanized steel frame and stud assembly, refer to attached SKA-3737.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

5. Please clarify how the 2" diameter hose adapters connect to the 2" diameter copper drain pipes and how they are sealed to flex flashing and SJ assembly.

5. 2" dia hose adapters connect to 2" dia copper drain pipe - Copper fitting (2") soldered end to threaded end cap.

6. For sealing of copper pipe to flexible flashing: For lower copper drain pipe, provide prefabricated boot flashing c/w SS draw band, refer to attached SKA-3737.

T-1465 **SSS - Seal Weld at Edge of Backing Bar** **Closed** **06/18/2014** **06/28/2014** **06/25/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Reference attached RFI OIW 033. The same configuration of weld joint and backing bar used on the fabricated roof nodes is also used on the bus-deck nodes for each pair of shear plates. It is our intent to provide a continuous seal weld at the end of the backing plate and the shear plates.

Please confirm that the noted seal weld is acceptable for all shear plate connections to bus-deck nodes.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The RFI question and information are not complete.

- It refers to RFI OIW 033. We can't find RFIs through sub-contractor numbers. W/O should refer to W/O RFI numbers.

- On page 7, the question in RFI OIW 033 was included. However, it is referring to a shop drawing which is not included in the RFI. It is also referring to a photograph that was not attached.

- There are drawings attached with no markups (pages 4 and 5), so it is not entirely clear what they are for.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

1) Please reference sheet S1-2302, grid E.2. 5-6. At this location detail 10/S1-5002 is cut. The W33x118 beam is located 1' 1-7/8" from line E.2 as per S1-2303. Per A1-2862 the face of the slab is 1' 6-3/4" from line E.2. The face of the step to the center of the beam is 4-7/8" and the width of the flange is 11-1/2" resulting in the beam flange projecting 7/8" beyond the face of the step. Please advise if the structural steel or decking is to be modified to avoid this occurrence.

2) Please reference sheet S1-2303, grid E.2, 6-7. If item #1 requires changes, confirm if changes are requires at this location also.

Note: the face of the step does not meet the minimum 2" from the beam flange required as per detail 10/S1-5002. See attached sketch 20 for clarification.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) See response to RFI T-1415.

2) No changes are required at the location noted in item 2. The 2" min requirement per 10/S1-5002 can be waived at the location posed in the question 2 of this RFI

T-1467 **SCS - Foundation Wall Lift #4 Construction Joint** **Closed** **06/23/2014** **07/03/2014** **06/26/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Based on the construction joints shown on Sheet Sl-3201, the fourth lift and the ground level slab is to be poured monolithically. Pouring the fourth lift monolithically with the ground slab causes problems with access, staging space and formwork. SCCI proposes to add a construction joint

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is construction means and methods issue. We do not take an exception to the new construction joint proposed by the contractor at the location indicated in the RFI.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

on the fourth lift as shown in the attached marked up reference drawings to remediate these issues.

Please confirm this is acceptable.

T-1468 **SCS - WPS Qualification - Lenton Weldable Couplers** **Closed** **06/23/2014** **07/03/2014** **07/03/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

The Lenton welding information provides guidance for qualification of processes; however there are inconsistencies when trying to fulfill AWS D1.1 (2010) requirements. The materials used for manufacturing weldable couplers size #9-11 are Grade 1030/1035. These grades of material are not listed in AWS D1.1 (2010) Table 3. 1, although Grade 1030 is listed in AWS B 2.1 Table D.1 as a Group 2 material (table attached). In order to move forward with welding the Lenton weldable couplers to the Transfer Girders, TMF proposes that FCA W Grade 70 filler material to be used manufacturer ESAB 7100 Ultra, Classification E71 T-9, AWS Specification AWS 5.20"D". One mockup of the actual coupler welded to a Group 2 plate and macro etched would be provided as a supplement.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Acceptable.

T-1470	BGP - Steel Jacket at Column GL1.4/D.4	Closed	06/24/2014	07/04/2014	06/25/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Reference attached drawings.
The column at Gridlines 1.4/D.4 requires steel jacketing as called out in AAI comment in Submittal Package TG0600-141 sheet G101.0. During the TG0600-141 coordination meeting held on 6/18/14 it was confirmed that the typical sleeve detail as shown on 3/A1-9208 will apply. Sheet A1-2102 implies a one-sided sleeve on the south face of column, sheet A1-9214 implies a two piece sleeve, and sheet 3/A1-9208 shows the typical detail with no modifications. Please confirm a detail specific to this location showing how the jacket is to be wrapped and interfaced with adjacent partition walls.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The column at gridlines 1.4/D.4 requires 6'-0" high steel jacket all around the column with ring plate base, post-installed studs at the Mat Slab. The concrete wall located at 2 sides of column terminates 3/8" before the steel jacket face, 3/8" before and above the ring plate base, and 3/8" before the concrete column face (above steel jacket). Please refer to dwg sheets 3/A1-9208 for detail plan and 2/A1-9213 for section.

T-1471	BGP - Seismic Joint Bottom Embed Plate at Pits	Closed	06/24/2014	07/04/2014	07/07/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference attached Contract Drawings and photos.

The east face of the north pit along GL 35 is scaled at 6'-8" from face of CDSM wall (S1-2027 attached). The as-built dimension ranges from 5'-0" to 5'-11" (S1-2027). Also, the center pit is scaled at 5'-8" to face of CDSM wall while the as-built is 5'-3" (S1-2027).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The embed plate for the center pit at GL 35/E: It is acceptable to reduce the plate to 5'-7" minimum length to accommodate the edge of pit and clamping detail. Provide grout for vertical transition of WPM.

The embed plate for the north pit at GL 35/B-C.3: The vertical surface of the mud slab should be adjusted to reflect what is depicted on engineering drawings

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Detail 4 on S1-3010 includes a scaled dimension of 5'-0" from face of CDSM wall to the inside face of the west half of the seismic embed (See S1-3010 attached). Therefore, the bottom embed plate will need to extend 2'-6" beyond the 5' dimension per Detail 7 of Al -8881 (attached).

Since the as-built dimensions of the edge of pits range from 5'-0" to 5'-11" from face of CDSM wall, the bottom embed plate will overhang the pit depression 2'-6" to 1'-7". The plate could be reduced up to 1-11" (2'-6" minus the 8" for clamping detail) to accommodate the edge of pits and allow for waterproofing clamping detail. Is this acceptable?

Please provide further details at locations where encroaching pits do not allow for sufficient room for bottom embed plate and clamping assembly.

(7/S1-3010) and read in combination with architectural drawings (A1-8881). The contractor may reinforce and anchor additional concrete to the side of the pit. Alternatively, they may opt to remove the existing mud slab concrete locally leaving exposed reinforcing to lap splice or mechanically splice to and pour concrete on area removed. The plate at this location shall be reduced to 5'-7" minimum horizontal length to accommodate the clamping detail.

T-1471.1 **BGP - Seismic Joint Bottom Embed Plate at Pits** **Closed** **07/28/2014** **08/07/2014** **08/06/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Further to the response to 1471 please find attached embed plate layout with cross-sections at the pit locations. It will be necessary at the pit locations to also infill and adjust the mud slab vertical/sloped face in order to accommodate the embed plate and clamping detail of the SJ embed.

Please confirm if this is acceptable.

Note: all infill material used is to be approved by the WPM manufacturer

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AAI Response:
The dimensions provided in SK-1, SK-2, and SK-3 for the SJ bottom embed plate are confirmed. The high strength grout or concrete infill should be compatible with the WPM and should be approved by the WPM manufacturer.

TT Response:
The proposed dowels are sufficient to keep in place the 2" minimum high strength grout or concrete infill during construction.

WOJV 8/1/14: Confirmed, proceed with work.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1472	BGP - Pier and Opening Sizes on Deck D207-D209	Closed	06/24/2014	07/04/2014	07/30/2014	Potentially	☐

T-1473	BGP - Lower Concourse Service Corridor Dimensions on West Wall	Closed	06/25/2014	07/05/2014	07/02/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference RFI T-0576 regarding the offset of the West Foundation Walls to account for the CDSM Encroachment. The west wall (GL 1) was offset 3 1/8" to the east while the southwest wall (GL Xl-1) was offset 1 7/8" to the northeast. Currently there are no dimensions explicitly shown in the contract drawings for the width of the service corridor that runs along the very western edge of the Lower Concourse in Area 1 and 3. However there is a dimension shown on A1-3006 & A1-7004 that shows the eastern face of the service corridor at 5' to the west of GL 1.4 which translates into a service corridor width of 9' -8 7 /8". Is it the designers intent to offset the service corridor walls similar to the foundation walls to maintain the 10' corridor width, or is it the designers intent to shrink the width of the service corridor and keep the interior walls in place? Please provide dimensions for the service corridor width.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The location of interior walls of rooms along the west and southwest service corridors shall be maintained. The service corridor widths shall be reduced by 3 1/8" on the west and 1 7/8" on the southwest.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1473.1	BGP - Lower Concourse Service Corridor Dimensions on West Wall	Closed	07/07/2014	07/17/2014	07/15/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

With the response from RFI T-1473 and the contract drawings, SCCI has enough dimensions to model the service corridor running north-south in Area 3. However

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For the alignment of the service corridor that runs along the west side of the Lower Concourse, as requested in this RFI, please refer to the work points

there is not enough information to model the alignment of the service corridor running northwest-southeast. Please provide a work point with dimensions somewhere along the east face of the service corridor (preferably at the southernmost point of the service corridor at Shear Wall 390A) or provide an angle at which the service corridor changes direction above Gridline K.

and dimensions in the attached SKA-3865.

T-1474 **BGP - Seismic Joint Fire and Smoke Barrier** **Closed** **06/26/2014** **07/06/2014** **06/26/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Webcor/Obayashi Joint Ve Spencer Sayles

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference the attached drawing, AI-8881. Per ASI-107, a fire and smoke barrier is added at the top of Gridline 35 on 3/AI-8881. Please confirm: -

1. The fire and smoke barrier is not to be incorporated in TG06 Contract.

2. There will be no embeds associated with the fire and smoke barrier that will need to be installed in TG06 Contract.

3. Please verify who will be supplying the flexible drain to be installed in the top wall poured in TG06 Contract.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Fire smoke barrier and seismic cover to be supplied and installed by others.

2. No specification exists for the referenced seismic joint. Currently there are no known embeds. TG06 scope delineation on this sheet remains. SCCI to incorporate any ASI modifications to its originally contracted work.

3. The drain pipe design through the wall appears to be not fully developed at this point in time. WOJV is requesting structural sleeving details via RFI.

T-1475 **BGP - Plumbing Penetration Sizes in Concourse Area 8** **Void** **06/27/2014** **07/07/2014** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

forthcoming Confirming RFI."

RFI T-1410 revised the plumbing penetrations in this area. Please provide concourse blackout sizes for these penetrations (including "future plbg").

Sketch is based on A1-2844

T-1476 **SCS - Concrete Form Support Using CDSM Piles** **Closed** **06/30/2014** **07/10/2014** **07/09/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Shimmick is planning to use a similar form system for the fourth lift of the foundation wall to that used on the second wall lift. However, the second wall lift form system is a cantilever system and is supported by 1 row of anchors, excerpting significant force on the wall lift below. Shimmick proposes to add a tie to the top of the forms and connect to the CDSM soldier piles in addition to using the third lift anchor to provide better support. The soldier piles extend above the ground level and this added tie would not affect the waterproofing (installed by others). See the attached marked up drawings for reference

Please confirm it is acceptable for the fourth lift form system to tie to the CDSM soldier piles.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is acceptable. We recommend that the shoring designer be notified and given a chance to comment on this approach.

T-1477 **SSS - Comment on TR19.1 Package CS09** **Closed** **06/30/2014** **07/10/2014** **07/03/2014** **Potentially** ☐

T-1478 **SSS - Paint Boundaries at Roof Level Beams** **Closed** **06/30/2014** **07/10/2014** **07/11/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

1. At the Roof Level EBF Link beams, the AESS fabricated roof nodes weld to the underside of the built-up beam protected zone as indicated in the sketch attached. Based the thickness of the SFRM coating and the profile of the node-to-flange weld, the coating boundary line between the protected zone paint and AESS primer is proposed at an elevation 3" below the bottom flange. This will allow for a clear delineation between the two coatings by avoiding the weld area, as well as allow for compatibility between the SFRM coating and prime coat. Please confirm this is acceptable.

2. The same elevation for the AESS to SFRM boundary is proposed at the Roof Level Brace beams; however, rather than the protected zone paint, the area above the AESS primer will be bare steel to receive SFRM by others. Please confirm it is acceptable to terminate the AESS paint 3" below the bottom flange of the Roof Level Brace beams.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. This question is a means and methods coordination between trades which the CM/GC shall coordinate. We take no exception to the suggested method. However the ultimate approach selected shall meet the approval by the AHJ.

2. Same response as above.

T-1479 **SSS - Cylindrical Plate Requirements** **Closed** **06/30/2014** **07/10/2014** **07/18/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

1) It appears the structural drawings and the architectural drawings do not supply consistent information for the location of the AESS enclosures.
Please clarify where the AESS enclosures are required.
2) The AESS enclosure plate on A1-8692 is weldable only

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Statement is too general and not quite correct, information required for AESS elements is consistent between Architectural & Structural drawings.

2) It is correct that only one side of AESS cylindrical

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

on one vertical side where it contacts the node. Confirm that is the intent.
3) The AESS enclosure plate on A1-8693 is weldable only on one vertical sides and the bottom side where it contacts the node. Confirm that is the intent.
4) Confirm all AESS enclosure plates are A572 GR50 material.

plate is welded to cast node and it is to extend below the concrete topping slab. All exposed edges of the plate shall be finished per AESS requirements, as documented on drawings and Spec Section 05 12 13 2.3; welding shall meet QA in Spec Section 05 10 00, 1.8 D.5.d. Contractor is to submit detailed shop drawings of this AESS work describing the AESS closure fabrication, prep and welding procedures, so that basket column nodes may be reviewed as complete elements to confirm all conditions documented in Sheet A1-8690.

3) It is correct that AESS cylindrical plate is welded to one side and the bottom side onto the cast node. Additionally, plate is to extend below the concrete topping slab. All exposed edges of the plate shall be finished per AESS requirements, as documented on drawings and Spec Section 05 12 13 2.3; welding shall meet QA in Spec Section 05 10 00, 1.8 D.5.d. Contractor is to submit detailed shop drawings of this AESS work describing the AESS closure fabrication, prep and welding procedures, so that basket column nodes may be reviewed as complete elements to confirm all conditions documented in Sheet A1-8690.

4) Confirmed.

T-1480 **SSS - ST301 Shear Plate to HSS Connection** **Closed** **06/30/2014** **07/10/2014** **07/11/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 472 SK1:
Please supply the size and location for the noted slab opening.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The opening noted in this RFI is no longer there. Refer to the A-2902 issued as part of Roof Park Restaurant IFC.

T-1483 **BGP - Dimension to Door on North Vehicle Ramp Wall** **Closed** **07/01/2014** **07/11/2014** **07/07/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

The door in question is at the east end of the north Vehicle Ramp Wall. There is a dimension on AI-2853, dimensioned at 7'-5 7/4" from GL 6 to the end of the wall and it is shown without a door attached. On all other drawings a door is shown at the east end of the wall, but there are no other dimensions indicating the east-west location of the door. Please confirm if it is the designer's intent to have the door placed on the end of the wall shown in AI-2853 so the east face of the door is 6'-5 1/4" off of GL 6 or if the door is to be placed per scale at 6'-3" off of GL 6.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For door location with updated dimension at the east end of the north and south Vehicle Ramp walls, refer to SKA-3747 & SKA 3748.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please confirm that grout hole "5" as shown on the attached sketch, SK1, is required on the west side only on grid 1 and on the east side only on grid 33.5. If not please clarify locations.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Hole "5" (3 in dia port in steel pipe) is used not only at East and West ends of the buildings as indicated in Sheet S1-4018 and at other locations as indicated in Sheet S1-4003.

At East and West ends of the Buildings:

In detail B/S1-4018 at GL H, a 3" hole (indicated as hole 5 in the RFI) is to be provided above the Bus Deck Level. On detail B/S1-4018 at GLs F.7 and E.6, a 3" grout hole above the Bus Deck Level is not needed since Bus Deck castings (casting 37 per S1-5120) include 3" holes to allow concrete flow through. Per symmetry and as called out, all pipe columns at D4., C.3 and B require the same hole configuration as those of H, F.7 and E.6.

Hole requirements for pipe columns between the ground level and the roof level in detail A/S1-4018 are identical to those of Detail B/S1-4018.

T-1487	SSS - Shear Plate Weld Connection Clarification	Closed	07/02/2014	07/12/2014	07/14/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

For roof level shear plate connection details at GL11D & GL11F, S1-2603 refers to 3/S1-5013. This detail calls for a 3sided PJP weld at the shear plates, with a t-1/8 bevel (t=shear plate thickness). The shear plate located at the center of the web has a thickness of 2 ½", which results in a 2 3/8" bevel. The column web at this location has a thickness of 1 ¼"; the stiffener plates top and bottom have a thickness of ½". A 2 3/8" PJP weld will greatly distort the ½" stiffener plates. The weld size should not exceed the thickness of the thinnest member. Also, Detail 3/S1-5013 refers to Connection Detail 4/S1-5013 which in turn

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Double sided 1/2" fillet welds are acceptable at the top and bottom stiffener plates as indicated in the RFI. Also, reduce the weld size at the column web from 2-3/8" PJP welding to double sided 1/2" fillet welds.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

refers to Shear Connection Detail 3/S1-5013. Since both sides of the shear plate are accessible (note 1), is a ½" fillet both sides as shown in 3/S1-5011 acceptable for this location?

T-1488 **SSS - NDT of Centrifugally Cast Pipes** **Closed** **07/02/2014** **07/12/2014** **07/11/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Specification 05 15 22, section 2.1.A.3 indicates magnetic particle testing (MT) shall be performed according to the criteria of ASTM A903, which in turn indicates that liquid dye penetrant testing (PT) may be performed, not in lieue of but in addition to MT, to give further information in cases where the MT results may be unclear.

Please confirm if PT is an acceptable NDT method per ASTM A903, in addition to the MT already prescribed. For clarification, no reduction in the amount of MT is requested.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Acceptable at Contractor's option. When available, include dye penetrant test (PT) data as part of NDT submittals.

T-1489 **SSS - Pin Coating Clarification** **Closed** **07/02/2014** **07/12/2014** **07/14/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Structural Steel Specification - 05 10 00, states that the pins for the basket columns, a Type 2(M) drag connection, are to be galvanized to class A or Class B-1 per ASTM A153. After reading this note, and looking through all of the applicable details, Skanska interpreted all of the remaining drag connection pins to be provided as bare steel. In the response to the submittal package TG0701-60.1 SSS - PIN Drawings (Central Zone), drawing A9312, a Type 2 (N2) drag connection at GL 11, was marked to receive a galvanized coating. Similar pin connections occur at GL 21 & GL 22 (Type 2-P) and GL 28 (Type 2-N2). Does the design team want these pins galvanized

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor's interpretation of the corrosion protection/finish of remaining pins (other than the Basket column pins) is not correct. AESS elements documented to receive IFRM should receive IFRM in all instances (pins are included), both as fire protection method and as a corrosion prevention measure.

The Design Team as the TJPA Representative will offer this as Contractor's Option; to hot dip galvanize ALL the remaining pins (other than the Basket column pins), or apply the intumescent coating system over non-galvanized steel, in either option, the tolerances

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

too? If so, please provide the standard required.

required for installation of pins is a means and methods solution the responsibility of the contractor

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

See attached 'CD_RFI_466_SK1_SK2' submitted with the original question for requested dimension.

T-1502 **SSS - Decking Around Bus Deck Level Crash Rails** **Open** **07/09/2014** **07/19/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:**

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

With reference to the Bus Deck Level crash rail post detail 1/S1-8000, the post base plate is 18"x30" and spans or overhangs the width of the supporting beam allowing no bearing for the deck. As a result along grid lines B & H where the deck runs parallel to the support beam, our decker is required to provide a gauge support angle and flashing where required around the base plate, see details 1 & 2 on SK1. At grid lines 1.1 & 33.5 where the deck runs perpendicular to the support beam, a beam flange extension is required to achieve the 3" end bearing requirements for the S8 slab, see detail 3 on SK1.

Please confirm these details are acceptable or provide an alternative detail for the deck support around the crash rail

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

base plate.

T-1503 **BGP - Lower Concourse Grounding Grid Alternate Detail - Room B1441 GL15/G.5** **Closed** **07/09/2014** **07/19/2014** **07/10/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Per the breakout meeting held after the TTC progress meeting on 7/9 @10:30, and email correspondence between Adib Sassine and Walter Melville (Attached). Please confirm the following items regarding the grounding mesh in electrical room B1441 at Grid Lines 15/G.5.

- Due to constructability issues please confirm that the attached PUC approved alternate detail is acceptable and will be incorporated into lower concourse electrical room B1441 at GL15/G.5

- The attached alternate detail incorporates a 4/0 field fabricated grid in lieu of the original #6 mesh and 4/0 ground ring. Please confirm that the alternate detail 4/0 grid will suffice to also act as the ground ring, and all pigtails can be attached to the grid.

- Please confirm the grounding grid spacing is 4' on center with connections to mat rebar at 8' on center.

- Please confirm that cadweld or use listed irreversible compression connections to cross-grid and ground mat at 8' on center minimum is acceptable.

- Please confirm ground potential rise study at each switch gear room is not required.

- Please confirm which specification governs, IEEE142 per Transbay Transit Center contract documents or per PUC referenced specification IEEE80, which will require "Ground Grid Test". (See attached email).

- Please confirm the layout of grid does not extend past the walls in South Electrical room B1441.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) WSP has no exceptions to this proposal, subject to SFPUC acceptance.

2) WSP has no exceptions to this proposal, subject to SFPUC acceptance.

3) WSP has no exceptions to this proposal, subject to SFPUC acceptance.

4) WSP has no exceptions to this proposal, subject to SFPUC acceptance.

5) WSP has no exceptions to this proposal, subject to SFPUC acceptance.

6) Refer to SFPUC response.

7) WSP has no exceptions to this proposal, subject to SFPUC acceptance.

8) WSP has no exceptions to this proposal, subject to SFPUC acceptance.

9) WSP has no exceptions to this proposal, subject to SFPUC acceptance. SFPUC to confirm if inspection by other parties is required.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

- Please confirm that exothermic or irreversible compression connections listed for concrete encasement are required for all pigtails main grid connections, (outside edge to cross members, corners, and main cross connectors), and connections to building ground wires (shown with "G" on plan).

- Please confirm that SFPUC and DBI will be the only entities inspecting the grounding grid.

T-1504 **BGP - Lower Concourse Future Wall FS Conflicts** **Closed** **07/09/2014** **07/19/2014** **07/09/2014** **Potentially** ☐

From: Shimmick Construction Company, Inc Sylvia Hartanto **To:** Webcor/Obayashi Joint Ventu Spencer Sayles **Answered By:** Webcor Construction LP Claude Titche

Co-Author:

REQUEST:

Per attached correspondence, WOJV has directed SCCI to install future wall formsavers according to the details attached that clarify the Contract Drawings. However, due to congestion created by the increased amount of reinforcing within the beam components, ample space to install the future wall formsaver bars at the design spacing does not always exist. See attached pictures.

Because the CMU contract has not been solicited or awarded, please confirm that it is acceptable to offset the bars out of alignment+/- 4" in attempts to maintain proper spacing, and/or increase or decrease the specified spacing +/- 6" such that the future wall formsaver bars can be installed and the correct number of dowels is maintained. The same flexibility is also requested for the "ends, intersection and corner" detail per the attached document.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-1505 **SSS - Stiffener Plate Location at TR13** **Closed** **07/09/2014** **07/09/2014** **07/18/2014** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

See attached CD RFI # 473 SK1:
The 2 1/2" plate has been located 1 1/8" above the 2" diameter rebar holes to allow room for the 1" fillet welds. If the plate is located per the response to RFI T-0889 (SK 145, CD 107) item 1, it will cover the 2" diameter rebar holes. Confirm the plate location as shown is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-1506 **BGP - Room B1441 Grounding Grid Approval and Inspection Jurisdiction** **Closed** **07/11/2014** **07/21/2014** **07/29/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Turner Construction Comp Judith Long

Co-Author:

REQUEST:

Per breakout meeting held after the TTC progress meeting on 7/9 @10:30am, please confirm that PG&E will have no jurisdiction over approval and inspection of the grounding grid in electrical room B1441 GL 15/G.5.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

As SFPUC is the utility, SFPUC shall have jurisdiction over the approval and inspection of the grounding grid in electrical room B1441 GL 15/G.5. PG&E, as the WDT provider, may have jurisdiction only over the metering section of the WDT switchgear. For reference, please find attached an email from SFPUC on 7/25/2014 and PG&E on 7/14/2014 confirming PG&E does not have jurisdiction over the grounding grid in the electrical room. Please note, SFPUC, through Walter Melville, had inspected and approved the ground grid for the North electrical room on 7/16/2014

Answered By: Sam Larano, Manager SFPUC
Answered On: 7/29/2014

T-1507 **BGP - Seismic Joint Removable Corbel Connection Variance** **Closed** **07/11/2014** **07/21/2014** **07/23/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Per contract drawing S1-3205, the removable W14x61 steel corbel and WT8X28.5 angles it connects with are to be fabricated with a 2" vertical slotted hole.

In order to eliminate the lead time of field measured

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1.) Not acceptable.

2.) The beam portion of the corbel may be coated for corrosion protection rather than galvanized. Refer to specification section 09 97 13, part 3.6, item E for

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

fabrication of the corbels after concrete formwork removal from the SJ assembly, the contractor is proposing either or preferably both of the following modifications:

1. Change the slotted hole from vertical to horizontal (east to west) direction on the angles and or the steel corbels
2. Change the finish of the removable W14X61 steel corbel only from galvanized to primed steel (all other embedded metals would remain galvanized per the contract drawing).

Please confirm if either of these proposals would be acceptable?

acceptable coating types.

T-1508 **SSS - Additional Stud Requirements on ASI 112** **Closed** **07/14/2014** **07/24/2014** **07/24/2014** **Potentially** ☐

REQUEST:

See attached CD RFI # 501.1 SK1 for items 1 to 3:
1) The response RFI T-1524 (SK 691, CD 501) did not supply a response to item 1. 2/S1-7003 clearly shows the steel framing as shown on SK1 but does not supply this dimension to locate the beam. Please supply this missing dimension.
2) Edge plate per 8/S1-5000. Confirm.
3) Supply a detail for the edge of slab plate if required.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The W16 beam shall be aligned to the HSS8x8 column as shown in the attached sketch SKS-0397.

2) Confirmed.

3) Distance between GL E.6 and the slab edge noted as 11 1/2" on SK1 in the RFI is incorrect. Refer to SKA-3906 submitted with RFI T-1524 and detail F/A1-2952 for the edge of slab condition at the north edge of the elevator landing. Provide slab edge plate per typical detail 8/S1-5000 at this slab edge.

T-1525 **SSS - Plate Extending Past End of Girder at Roof Level** **Closed** **07/18/2014** **07/28/2014** **07/29/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Per detail 1/S1-5052 when the column base plate and the transfer girder flange is the same width, there is no deck support for the length of the column base plate when the deck sits at the same level as the girder.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Using gage angle for connection to the metal deck around the base plate is acceptable, however, the gage angle is to be welded to the transfer girder flange, not the base plate. Extend the vertical leg of

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please confirm it is acceptable to provide a gage angle to support the deck around the column base plate. The gauge angle will be welded after the column to girder connection is made to avoid the angle and weld interfering with the connection. See attached SK1 & 2 for clarification.

the gage angle down as needed.

T-1532.1 **SSS - Deck Support Angle at Column Base Plate** **Closed** **07/31/2014** **08/10/2014** **08/18/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Webcor Construction LP Gregory Kemerer

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

This is a follow-up to the response of RFI T-1532.

As per the response, restricting welding to only the girder flange creates several issues:
1. See detail 17 on SK1 - an additional 4" would be required on the vertical leg of the angle to allow welding to the girder flange. This creates a 12" vertical leg, welded at the bottom toe to the girder and supporting a 13" concrete slab. Our decker does not believe this is adequate support. This occurs at 9 locations.

2. See detail 5 & 17 on SK1 - overhead welding will be required from the underside to weld to the girder flange. Detail 5 occurs at 67 locations and 17 occurs at 9 locations. Our decker will incur additional labor and equipment costs for this work.

If welding to the base plate is prohibited, an alternative solution which will have lower additional cost impact is to use Hilti pins to attach the gauge angle to base plate or girder flange. See attached product data and application details. See attached SK2 for clarification.

Please confirm if welding to the column base plate is prohibited, Skanska can use Hilti pins as per SK2.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Welding the deck support angle to the base plate is acceptable if the welding is made only in the zones marked on attached sketch SKS-0396. The gage angle welded to the base plate will provide adequate deck support. Using Hilti pins to attach the angle to the base plate is not acceptable. We disagree with the claim that overhead welding at the deck support angle constitutes a "cost increase". Detail 8/S1-3705 which shows deck support angle detail at the transfer girder flanges was part of bid documents. The only exception to this detail at the column base plates is that the angle is being welded to the base plate and not the transfer girder flange. Also, refer to details on A1-9317 for slab edge detail at the column base plates.

T-1532.2	SSS - Deck Support Angle at Column Base Plate	Closed	08/25/2014	09/04/2014	09/15/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

This is a follow-up to the response of RFI T-1532.1

As per the response to the above RFI, direction to drawing A1-
9317 (which was provided as part of FO 27) indicates a deck closure/support angle separated 1" from the column base plate, with no structural information provided. As a d etail for deck support around the column base plate is not provided in the structural drawings and Skanska's proposa ls have been rejected in previous RFI responses, this rem ains an open issue. We require a detail in order to proceed with the detailing of shop drawings. Please note this condi tion occurs at CS1 and throughout the central zone and is currently holding up the resubmittal of the metal deck shop drawings for the central zone.

Additionally, the RFI response identified a "no weld zone" t hat was not shown on the design documents. As this was not called out on the contract drawings, this zone is not bei ng identified with paint strips as per the protected zone req uirements. This may lead to trade workers accidently weldi ng in the field. Please provide direction for the identificatio n requirements for the base plate "no weld zone".

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1.) We believe that deck support during construction is a means and methods issue, however in our opinion, the simplest solution is running angles parallel to the transfer girder, from one perpendicular beam to another, around the column base plates. This will also help to provide the 1" separation needed from the column base plate in detail A1-9317.

2.) As indicated in the design drawings there are no elements around the base plate that require welding to the base plate. Any accidental welding in the field to the base plate will likely require proper corrective actions to be submitted to the SER for review.

T-1533	BGP - Additional Reinforcing at MS 113	Closed	07/21/2014	07/31/2014	07/23/2014	Potentially	☐

beam.

6) The slab edge detail is incorrectly called out. Detail 9/S1-5000 does not apply at the highlighted location.

T-1536 **SCS - Concrete Cover & Tolerance on Foundation Wall Terminator Rebar** **Closed** **07/24/2014** **08/03/2014** **08/04/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Ben Gordon

REQUEST:

Drawing Sl-3201 and other similar foundation wall sections call out a 2" concrete cover on the terminators of the foundation wall vertical rebar. These vertical bars have no adjustability because one end is a terminator and the other end is a male coupler end. The elevation of the top of terminator will be dependent on the coupler elevation above the Lift 3 Foundation Wall. The ground floor slab is 10" thick and sloped along the top of foundation wall.

To allow for maximum deviation to accommodate for the slope of the slab, tolerances in rebar fabrication and location from the previous wall lifts and the final wall lift:
1. Shimmick proposes to change the concrete cover from 2" to 5" and increase the tolerance to 2.5". Please confirm this is acceptable.
2. If the proposal is not acceptable, please provide a concrete cover and tolerance that is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Standard ACI tolerance shall apply on concrete cover, increasing the cover and deviation of the tolerance is not acceptable. These proposed modifications to the cover and tolerances would be acceptable only if contractor provides additional U bars over the moment frame beam top rebar with size and spacing matching the size and spacing of stirrups in Zone 1 of Detail 6/S1-3600 at no cost to the owner. The U bars would span between the top corner bars of the moment frame beam have vertical legs that are equal to embedment length per 1/S1-3001. No additional U bars is required between the beams.

T-1537 **SSS - ST202 Connection Clarification at HSS Posts** **Closed** **07/24/2014** **08/03/2014** **08/07/2014** **Potentially** ☐

See attached CD RFI # 500 SK1 for items 1 to 4:
1) Confirm the missing beam size should read W12x26.
2) Supply missing dimension.
3) Supply the slab type.
4) The noted (2) davits are shown located on Grid 'D' but A1-7003 shows the davits located north of Grid 'D' with providing the location. Please provide the north/south location of the davits.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) Missing dimension is 3' - 11 1/2".

3) Slab type is S7.

4) Dimensions to locate the two noted davits in the north/south direction are noted on A1-7003.

T-1547	BGP - Seismic Joint Deformed Bar Anchor Variance	Closed	07/25/2014	08/04/2014	07/25/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference Detail 2, Sheet S 1-3205.

Please clarify the following deformed bar questions:

1. 1" diameter deformed bar is a non-standard diameter for deformed bar. This will require the bar to be specially manufactured which could take up to 4 weeks to procure. 3/4" diameter deformed bar is the largest standard size readily available. Is it acceptable to use 3/4" diameter in lieu of 1" diameter deformed bar?

2. The detail depicts a head on the end of the deformed

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). See response to #3

2). The detail was drawn graphically incorrect, see response to #3

3). Using 1" (#8) welded rebars is acceptable as long as ASTM A706 bars are used. Submit weld detail with the seismic joint shop drawings for review.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

bar. Headed deformed bar is also non-standard (see attached Nelson Stud Deformed Bar Product Data) and currently found to be unattainable. Is it the intent of the engineer to include a headed deformed bar anchor? Is it acceptable to use a standard A 108 bar per ASTM A496 as detailed in the attached product data?

3. If the 3/4" diameter deformed bar is unacceptable, is it acceptable to use 1" (#8) welded rebar in lieu of the 1" deformed bar? Furthermore, will the rebar require headed reinforcement?

T-1548 **BGP - Protection Slab at Seismic Joint** **Closed** **07/25/2014** **08/04/2014** **07/29/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference Detail 3 of A1-8881, S1-2027, and the attached Drawings.

Please confirm the protection slab is to stop 5" east of GL 35 as scaled on attached Detail 3 of Sheet Al - 8881.

Please confirm it is acceptable to eliminate the 12" section of protection slab against the east CDSM wall.

Please reference attached drawing S1-2027. If the protection slab is required to end 5" east of GL 35, the slab will be poured halfway up the slope on the center and north pits as depicted in S1-2027. Is it the engineer's intent to end the slab halfway up the pit? If not, please provide details of protection slab location at the seismic joint at the center and north pits.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Confirmed, the protection slab may stop 5" east of GL 35. Protection of the membrane is a means and methods issue and is the contractor's responsibility and does not require our comment.

2. It is acceptable to eliminate the 11" protection slab against the east CDSM wall. Protection of the membrane is a means and methods issue and is the contractor's responsibility and does not require our comment.

3. For the North and Center pits along GL 35, where the embed plates are shortened in accordance with RFI-1471, the protection slab will terminate at the vertical face of mud slab.

T-1549 **BGP - 3rd Wall Lift Vertical Unistrut Spacing Tolerance** **Closed** **07/25/2014** **08/04/2014** **07/29/2014** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Vertical Unistrut embedded in the 3rd wall lift is spaced at 10' O.C. per plan drawing Al -6231. Due to locations of wall bulkheads, form work panel ribs, and other embedded items, the contractor requests a tolerance of plus/minus 4" off the 10' O.C. spacing. Please confirm if this is acceptable and if not, please provide an acceptable lateral tolerance.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed. It is acceptable to have +/- 4" off the 10'-0" spacing of the vertical Unistrut at the Lower Concourse foundation walls.

T-1550 **SSS - PE203 Connection Clarifications** **Closed** **07/25/2014** **08/04/2014** **08/11/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 516 SK1 to SK3:
The L8x4x1/2 is insufficient for the HSS10x10 posts in SE201 & SE202. Please supply an alternate detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The detail is applicable as is. The base plate to match the size of the post as indicated in the detail, and the L8 embed angle is large enough to weld the pipe section onto (pipe to embed angle weld).

T-1552 **BGP - Pit Rebar in South Pit at GL 35** **Closed** **07/25/2014** **08/04/2014** **07/29/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference Contract Drawings Sl-2027, Sl-3010, Sl-3004, and the attached drawings.

Sheet S1-2027 depicts the east edge of the south pit 2'-5" west of GL 35. As-built location of east edge of south pit is 1 '-0" west of GL 35. The south pit at GL 35 has typical pit rebar per Detail 4, S1-3004. Typically, the pit rebar extends 4' beyond the edge of pit and 4' in height (see attached drawing Sl- 3010). At the as-built location of the pit, pit rebar will extend into the seismic joint gap by approximately 14" as depicted in the attached drawing. Please provide alternate pit rebar detail for the south pit at GL 35.

Please note, pit rebar for all pits in Area 16 have been fabricated.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The condition is analogous to the pits shown to the north, detailed in Sections 7/S1-3010 and 1/S1-3007. Contract documents instruct the contractor to verify field dimensions, coordinate the drawings, and apply similar detailing. It is acceptable to apply the aforementioned details or for the contractor to provide an alternative equivalent detail for acceptance through the RFI process.

It is possible that pit has been placed too far east. Contractor to verify plan location of pit and the ability to comply with contract documents for the 5'-0" minimum clearance requirement between the bottom edge of sump and nearest face of waterproofing.

T-1553 **SSS - SE201 & SE202 Roof Level Framing Clarifications** **Closed** **07/25/2014** **08/04/2014** **08/07/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 524 SK1 for items 1 to 4:
1) These (2) beams have been located on center of the HSS10x10 posts above per 1/S1-7102. This results in the beams being 1'-0 from the edge of wall as shown but 8/S1-7631 indicates 10". Confirm 1'-0 is acceptable.
2) Detail 11/S1-7631 does not indicate that slab edge plate per 8/S1-5000 is required. Confirm that is the intent.
3) 6/S1-7631 is shown at the west side of the slab openings but it is not clear if slab edge plate per 8/S1-5000 is required. Clarify the slab edge requirement on the east and west sides of the openings.
4) Depending on the response to item 3, supply a connection detail for the HSS beam.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Framing plan shown on SK1 in the RFI is not current. See sketch SKS-0383 submitted with response to RFI T-1544 for current framing layout. The two noted beams are centered on the WF columns. Dimensions to locate WF columns are shown on attached sketch SKA-3923.

2) Confirmed. Edge plate per 8/S1-5000 is not required at the highlighted locations as there is no slab on either side of the concrete walls as shown in 11/S1-7631.

3) See attached sketch SKS-0388 showing updated details 6/S1-7631 and 10/S1-7631. Details 6/S1-7631 and 10/S1-7631 apply at the west and east edges of the opening, respectively. As shown in the details slab edge plate per 8/S1-5000 is required.

4) The HSS beam connects to a WF column. See

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

attached sketch SKS-0389 HSS beam to WF column connection detail.

Note that all the sketches attached with this RFI were already issued by the design team as part of the Roof Restaurant IFC package (5/31/2014). W/O to coordinate issuance of drawings to the sub-contractors

REQUEST:

Detail 6 on S1-5013 calls for HSS 5 X .500 posts at the Second Level Shaw Alley Bridge. This size is not available domestically. Please advise.

SUGGESTION:

HSS 5.563 x .500 is available domestically.

ANSWER: **Accept Suggestion:** ☐

HSS 5.563 x .500 is acceptable - also Contractor shall coordinate this work with Steel Shop Drawings already reviewed.

T-1558 **BGP - Bracing removal sequence on the East end of Zone 4** **Open** **07/25/2014** **08/04/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:**

Co-Author:

REQUEST:

Bracing removal sequence on the East end of Zone 4

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

WOJV is proposing the following sequence for the bracing removal for the east side of Zone 4.
See sketch SK1, attached.

Sequence
1. Remove level D struts and walers from within the green clouded area up to GL- 32.2 once the mat slab beneath has reached adequate strength.
2. Remove level D struts within the Blue clouded area STD-65 to 74, 82 & 83 and all corresponding walers once the mat slab beneath has reached adequate strength, the sequence for de-stressing will be the diagonals struts should be all de-stressing prior to the 4 remaining cross lot struts (STD-65,66,67 & 68).

For the remaining levels A, B and C WOJV is proposing to follow a similar removal sequence as Level D

Please confirm if this sequence would be acceptable.

T-1559 **SSS - TPG1 Stiffener Connection Clarification at GL 3** **Closed** **07/25/2014** **08/04/2014** **08/05/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Webcor Construction LP Gregory Kemerer

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 529 SK1 & SK2 for items 1a & 1b:

1a) The typical connection for the TPG1 to the perimeter BU Beam is per 6/S1-5010 as shown on SK2 but at this location a pull-out shear plate is shown. Supply thickness, bolt and weld information for the shear plate connection if that is the connection to be used at the noted location.
1b) The stiffener will foul the bolts for the top plate per 7/S1-5032 if the connection per 6/S1-5010 is used.
Please provide a solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1.) Detail 6/S1-5010 is to be applied at this location.

2.) For the 8 bolts on the same side as the stiffener: Move 4 bolts 1.5 inches to east and move the other 4 bolts 1.5 inches to west. This modification will increase the spacing between the central bolts from 4.5 inches to 7.5 inches and reduce edge distance from 4.5 inches to 3 inches (each side).

Co-Author:

REQUEST:

SUGGESTION:

ANSWER:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Detail 10/S1-4202 shows the protected zone signage attached directly to both sides of the beam. The response to submittal package TG0701-37A includes a note directing the contractor to remove the signage before SFRM application, and then reattaching it after the SFRM is applied (See SK1). Please confirm this note is to be ignored.

Accept Suggestion: ☐

Contract documents indicate paint and signage for protected zone. It has been previously established that the paint may be applied directly to the beam before the application of SFRM. This should serve to designate the protected zone during erection and over the life of the building. The signage is intended to be an exterior alert, over the life of the building, and must be visible from the exterior. Therefore, the signage must be outside of the SFRM. The contract documents do not specifically indicate that the signage be present before the application of SFRM as the contract documents generally show the final condition. It would, however, behoove the contractor to have the signage present at all stages of construction, before and after application of SFRM, in order to mitigate the risk of accidental damage to the part, which would be very expensive to replace.

T-1563 **SSS - Erection Access Confirmation at TPG1** **Closed** **07/29/2014** **08/08/2014** **08/18/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

There is a 3 7/16" gap between the flanges of the TPG1 and W40x264. The north end of the W40x264 is connected to
the W40x297 per 1/S1-5010 and the south end is connected to the BU-40x28 per 1/S1-8001 including a field moment
weld at the top and bottom flange of the W40x264. Please review and supply any changes that are required for erection access.

Alternatively, please confirm that it is acceptable to move CP1D (shown on S1-4002) 6-inches away from TPG01.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is not acceptable to move W-1 awning connection CP1D from its current location. However, it is acceptable to move the W40x264 beam 6" away from TPG1 to allow access for field erection.

T-1564 **SSS - Bus Ramp Support Connection Clarifications** **Closed** **07/29/2014** **08/08/2014** **08/11/2014** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

See attached CD RFI # 489 SK1 for items 1 & 2:

1) Please provide the hole diameter and hole size as noted.

2) Please provide the weld size for the 2" web plate to the 2" end plate.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1.) The drop-in span at the Bus Ramps is being revised by the Contractor as part of a post-bid value engineering proposal. This may impact the bearing details currently shown on the bus ramp drawings. WOJV to coordinate.

2.) Provide 1 inch thick fillet welds on each side of the web.

T-1565 **SSS - ST403 Embedded Angle Elevation & Orientation and Curb Dimensions** **Closed** **07/29/2014** **08/08/2014** **08/13/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 481 SK1 & SK2:
1). At Stair # 403 at the train platform level verify the embedded angles for the elevator posts per detail 11/S1-7600
are at elevation 29'-0 and confirm the angles orientation onto the concrete curb.
2). Confirm the 5'-4 dimension is to inside face of curb shown on SK1.
3). Confirm the 5'-10 & 6'-1 dimensions are to inside face of curb shown on SK2.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. It is confirmed that the embedded angles are at elevation 29'-0"and the embedded angles align with inside face of the curb.
2. Dimension is confirmed.
3. The dimension from GL E to the inside of the curb located at south is 5'-9" instead of 5'-10" . The dimension from GL E to the inside of the curb located at north is 6'-2" instead of 6'-1".

T-1568 **BGP - Pile Location Discrepancy at GL E/34.5 - Zone 4** **Closed** **07/29/2014** **08/08/2014** **08/12/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

SCCI is in receipt of RFI response T-0741. RFI response T-0741 references RFI response T-0264.3, which states: " ... Note that a pile in this location will require the pile to be cut off at a lower elevation than the typical detail, which will involve a larger block-out..."

1. Please provide an elevation, referenced in the above mentioned RPI response, which the pile will be cut.

RFI response T-0264.3 also states: " ... the mat shall be re-braced at the block-out by TG03 ... "

2. Please provide a detailed description of this required re-brace and how it will effect TG06 formwork, rebar, etc.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Per the RFI attachments, the bridge pier appears to be completely contained between the shallow eastern sump and the deeper sump immediately west. As such, the cutoff elevation for the bridge pier may be the same as for blockouts at the typical top of mat slab elevation. Detail 4/S1-3009 will apply to the blockout in the north-south direction except that diagonal trim bars are not required. For the east-west direction, Detail 4 would not apply but may be modified such that the #5 at 8" infill cap bars lap with the pit wall reinforcing on the west side and lap with embedded dowels of same size and spacing on the east side. The resultant depth of blockout will be approximately 30". The (6) additional #11 bars shown on 1/S1-2065 may be relocated adjacent to the pier below the shallow east sump. Additional reinforcing beyond the (6) #11's mentioned is not required above the bottom of the mat. Additional reinforcing per Detail 7/S1-3009 is required at the bottom of the pit.

Temporary blockouts are the responsibility of the contractor and the suggestion above is but one acceptable way to accommodate the change in pier location. The contractor is requested to provide a sketch of the final proposed configuration and reinforcing for confirmation through the RFI process.

2) The comment regarding re-bracing may be ignored.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1568.1	BGP - Pile Location Discrepancy at GL E/34.5 in Zone 4	Closed	08/28/2014	09/07/2014	09/02/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference RPI response T-1568, attached photo of bridge pier/sleeve at Grid Lines 34.5/E and attached sketch.

SCCI is in receipt of RFI response T-1568. The bridge pier in question is not fully contained within the sumps pits referenced in RPI response T-1568 (see photo attached). The galvanized pile sleeve encroaches into the Eastern most sump pit approximately 5/8".

In order to facilitate the installation of this sump pit the provided contract details will need to be modified. The pile will need to be cut off at a lower elevation than the typical detail, which will require a larger block-out. The typical contract rebar details will need to be altered, as well as the typical waterproofing details.

1. Please confirm the attached sketch showing revised rebar and formwork details is acceptable.
2. In order to install a deeper blockout, the galvanized sleeve will be cut down to 4" above bottom Of blockout. This cut will remove the sleeve flange. Please confirm this is acceptable.

All waterproofing detail revisions will be performed per Grace's recommendation and referenced mat slab "Ready-to-Pour" sign-off document for Mat Slab 16

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Item 1 is confirmed.

Item 2 is not acceptable. Submit a proposal for providing a flange on the sleeve, field repair of galvanizing, and any waterproofing details that are proposed to be modified.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1568.2	BGP - Pile Location Discrepancy at GL E/34.5 in Zone 4	Open	09/15/2014	09/25/2014		Potentially	☐

At Gridline 21 & 22 between D & F, S1-2505 shows two pipes 16 X 1.031, that are to be supplied as API 5L GR X52. Herrick has been unable to locate this grade of material that stays within the Buy America requirement. Please advise.

Herrick has found two pipes that are certified to API 5L GR X42 but meet the mechanical properties for API 5L X52 (Please see attached Mill Certification). Please confirm this material is acceptable.

Suggestion acceptable for the two pipes indicated in the RFI.

T-1579 **BGP - Seismic Joint Stepped Embed Clarifications** **Closed** **08/01/2014** **08/11/2014** **08/19/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche

To: Turner Construction Compan PHIL MILITELLO

Answered By: Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please reference Contract Drawing S1-3010 and Submittal TG0600-051 .1.

Please clarify the following:

1. Sheet 8.01 of Submittal TG0600-05 l.1 calls for a M30x4-1/2" stud welded to the embed. Due to the unavailability ofM30x4-1/2" studs, please confirm it is acceptable to fillet welding M30x4-1/2" long cut pieces of fully threaded rod.

2. Submittal TG0600-051.1 requested design to determine bar lengths for the hooked #6 welded rebar. Please provide missing lengths for the hooked welded #6 rebar.

3. Please clarify the (. 11 7) at the double flare bevel weld on the hooked #6 rebar and the deformed #6 bar. It is SCCI's understanding the 3/8" is the weld size and the 5 is the weld length. What is the (.117) referring to?

4. See attached SI-3010. The east embed top vertical leg appears to be welded to the horizontal leg with a square bevel and convex weld with a fillet on the other side. Typically, a square bevel has a given dimension that depicts the gap between plates. As no dimension is given and the other side is a fillet weld, it appears to be a flat fillet laid down on the joint, with no gap. Please confirm this is the design intent.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). The headed studs, their weld attachment forming a part of clamping assembly are a part of assembly designed by seismic joint supplier. Changing of the clamping assembly shall be approved by the supplier.

2). The hook #6 shall be 36" long (length without hook) same length as the 3/4" deformed bar anchors.

3). The double flare weld is 3/8" with 0.117" effective throat.

4). Gap of the square groove weld shall be per AWS prequalified weld joint detail. The gap size depending on the weld process used.

REQUEST:

See attached CD RFI # 474 SK1 to SK6 for item 1 to 10:
1-
8) Several of the shop and field welds required at the grou nd level corner cast nodes are inaccessible once the cast node is set in position. Please see items 1 through 8 on S K1 through SK8 for clarification and provide direction.
9) Supply the welding for the north flange plates of the BU column to the node.
10) The welds required at this external corner create an un weldable condition, See SK5 & SK6 for clarification. Pleas e
provide direction.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). The CP weld noted may be achieved by weld a backup bar/angle prior to setting the column.

2). The CP weld noted may be achieved by weld a backup bar/angle prior to setting the column. The back-gouge and 5/16" reinforcing fillet may be deleted.

3). The double bevel weld may be changed to single bevel weld from the east side.

4). The CP weld noted may be achieved by weld a backup bar prior to setting the column. The back-gouge and 5/16" reinforcing fillet may be deleted.

5). See response #4

6). See response #4

7). Backup bar may be installed prior to fitting the transfer girder to the cast node. The back-gouge and 5/16" reinforcing fillet may be deleted.

8). Cannot see when the weld cannot be made. The vertical stiffener may be installed after the 2" PP weld is completed.

9). The weld info is called out as CP weld with back gouge and 5/16 reinforcement weld, which is questioned in item 4 above.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

10). Weld access hole per AWS D1.1.

T-1581.1 **SSS - Inaccessible Welds at Corner GL Cast Nodes** **Open** **09/08/2014** **09/18/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:**

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

This is a follow up to RFI T-1581:

1-7) Confirm the backing bar may be left in place.
8)The "vertical stiffener" referenced in the response is the transfer girder web as per section 5B. This weld is inaccessible once the node is set in place. Confirm this section of 2" PJP can be omitted.
9) The weld detail requested was the vertical edge of the built-up column flange to node, not the column field weld indicated in item #4 as referenced in the response. Please provide weld detail or confirm weld is not required.
10a & b) Confirm access holes as per SK4 are acceptable.

SUGGESTION:

Co-Author: Shimmick Construction Company, Inc Henry Chiang

REQUEST:

A unique support system is necessary for the foundation wall under the temporary bridges (First, Fremont, Beale). Shimmick proposes that in these areas, the form work will kick to support brackets mounted to the underside of the bridges to provide better support. Without this, the form system will be a cantilever system supported by 1 row of anchors which will exert a significant force on the wall lift below.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The bridge is designed by a WOJV subcontractor. WOJV shall respond to this RFI.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please confirm it is acceptable for the fourth lift form system to be supported by the bridge underside.

T-1591 **SCS - Pendulum Bearing Test Results** **Closed** **08/05/2014** **08/15/2014** **08/15/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Henry Chiang

REQUEST:

Per Specification Section 03 20 02-1.4-A-7, "test results for [pendulum] bearings with similar size" are to be submitted for approval. Per Mageba, they have test data on pendulum bearings (isolators) with similar sizes which they believe have been tested under more severe conditions than the ones required for this project. See attached email correspondence with Mageba for further explanation and more
specific details in regards to their test and how the results apply to satisfy the requirements in the specifications. The referenced Annex documents in the email are also attached. Only a sample of the data has been included for preliminary approval; full test data will be submitted once this data is confirmed acceptable.

Please confirm that the mentioned test reports could serve as evidence of the proper functioning of mageba pendulum bearings, as well as the fulfillment for the requirements in the specifications.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Reports from past test data can serve as a basis to waive the testing requirement. However, the information provided with this RFI is not sufficient to waive the testing requirement. The test data provided in the RFI seems to belong to a bearing of similar size but it does not seem to meet vertical load carrying requirements outlined in the specifications. It is also not clear whether it meets the horizontal force requirements (friction coefficient) outlined in the specifications or not.

To waive the testing requirement:

- Provide specifications for the product that is intended to be used in this project that meets the design requirements outlined in the contract documents.

- Provide test data for a bearing that is comparable in size and performance to those intended to be used in this project tested with conditions that are comparable to the design requirements.

T-1591.1 **SCS - Pendulum Bearing Test Results** **Open** **09/10/2014** **09/20/2014** **Potentially** ☐

T-1603 **SSS - Transfer Girder Flange Shop Splices** **Closed** **08/12/2014** **08/22/2014** **08/27/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

It has been understood that, due to the availability of mill r un plate size and length, it would be necessary to splice s ome of the top and bottom flange components of several o f the Transfer Girders in order to achieve the overall length required. The Contract provisions and AWS D1.1 Structu ral Code require that all splices made by welding are to be shown on the shop drawings. However, the location of the shop splice(s) was not shown on the shop drawings that were issued for fabrication to Thompson Metal Fab. TMF has fabricated flanges that have been spliced by full penet ration welds. The welds have been inspected and have be en accepted in accordance with the provisions of the AWS D1.1 Structural Code for static load criteria. The locations of the splices in the transfer girder components and the af fected flanges are shown in the attached documentation.

Girder A626 - top and bottom flange
Girder A627 - bottom flange only
Girder A630 - top and bottom flange
Girder A631 - bottom flange only
Girder A643 - top and bottom flange
Girder A645 - top and bottom flange

Please confirm it is acceptable to proceed as fabricated. A ll shop drawings will be revised to indicate all shop weld lo cations.
In addition TMF propose to shop weld flanges not currently indicated on shop drawings, please review appendix C an d confirm the splice locations are acceptable.
See Appendix A for shop drawing girder segments referen

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the as-built shop splices shown in Appendix B and proposed splice locations in Appendix C are acceptable.

ced on Contract Drawings.
See Appendix B for as-
built splice locations including UT & MT reports.
See Appendix C for proposed splice locations.

T-1604 **SSS - Light Tower Cast Node Detail LC-702 Clarifications** **Closed** **08/12/2014** **08/22/2014** **08/26/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 559 SK1 for items 1 to 3:

1) Provide welding detail for the contact plate to lug plates.

2) Verify dimensions.
3) Confirm the dimensions in item 2 can be used at similar conditions e.g. 3&5/S1-6005, 4&6/S1-6006.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) 1/8 inch fillet weld all around the contact plate.
2) Dimensions confirmed.
3) Confirmed.

T-1605 **SSS - Light Tower Cast Node LC-302W Detail Clarifications** **Closed** **08/12/2014** **08/22/2014** **08/22/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 560 SK1 for items 1 & 2:

1) The CJP weld cannot be applied at the sharp edges of the 2 3/4" thick (2) plates and the 3" thick connection plate. Verify it is acceptable to shape the edges of plates as shown.

2) Confirm the solution in item 1 can be applied to similar conditions e.g. 4/S1-6006 and 3&5/S1-6005.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. It is acceptable to shape the edges of the plates at shown.

2. Confirmed.

T-1606 **SSS - Type Drag Connection Geometry at Bus Level Cast Node 29A-01 and 29B-01** **Closed** **08/12/2014** **08/22/2014** **08/19/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Please refer to attached SK RFI 744 SK01.
The shear plates at drag connection type 1-A at cast node 29B-01 and 29A-01 land on the edge of the welding pad. This condition does not make allowance for as-cast tolerances on the welding pad edge and may impact our ability to
achieve effective weld size. Please advise.

Skanska acknowledges the response to SK RFI 004.1 (T-0738) and 004.2 (T-0738.1). Following these RFIs, Skanska
increased shear plate spacing to give a 1/8" gap on the inside of each shear plate for erection clearance. Even had this
gap not been added, Skanska would still flag this issue for designers review as 1/8" still does not allow for as-cast tolerances at these locations.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The information provided in the RFI is not sufficient to provide a single solution at this time. Consider following solutions, which depend on the actual size of the pad:

1-) If the as cast dimensions of the pad allow the shear plate to land on the pad, no action needed. Since the contractor has opted to machine the pads, the rounded edges of the pads will likely be removed to create a wider weldable pad surface.

2-) Once the as cast dimensions of the pad are determined and if the plates do not fit in the pad, the ends of the plates can be tapered 0.25" with 1:2.5 ratio (e.g., 0.25"x 0.625" taper) at the outside faces of the plates.

Lastly, the contractor plans to use 1/8" gap on each side of the shear plate per the RFI. Considering that these are slip critical connections, a smaller gap might be considered by the contractor which can decrease the out to out connection width. To achieve slip critical, shim plates are needed if there is a 1/8" gap between the connection plate and beam web.

T-1607 **SCS - Fill Material at ST201** **Closed** **08/13/2014** **08/23/2014** **08/22/2014** **Potentially** ☐

T-1610	SSS - W14 Connection at Perimeter Framing GL20.1	Closed	08/14/2014	08/24/2014	09/04/2014	Potentially	

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 567 SK1 & SK2 for items 1, 2 & 3:

1) Work with RFI T-1573 and supply the clouded dimensions.
2) The connection per 1/S1-5028 does not work for the W14x68. The seat angles do not work due to the 8" MIN. criteria and there is insufficient room to fit the angles with (2) bolts. Please advise.
3) Confirm a W14x68 beam is required at the step in slab or provide a deck support detail.

Note: the same condition occurs on the north side at Grid 'C'

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The W14x68 and W24x62 beams are centered on the W-3 system HSS posts shown on Sheet 1/A1-8215D issued with ASI 120 on 7/11/2014. The W14 beam is centered on the smaller HSS (8' -3 3/4" from GL 20.1) and the W24 beam is centered on the bigger HSS (8' -10 3/4" from GL 20.1). Note that with these dimensions, flanges of the two beams are going to foul each other. The W14 and W24 beam flanges may be coped 1" each to avoid this conflict.

2) Provide shear plate connections per 1/S1-5011 at the W14x68 beam with 2 bolts and a vertical bolt edge distance of 1 1/4".

3) No new beam is needed. The lower deck shall be extended and supported by an angle welded to the web of W14 x68 similar to the typical metal deck detail 10/S1-5002.

TT disagrees that there is a cost increase for this RFI (no new beam is needed per #3).

T-1611	SSS - Mis-Drilled Holes in Transfer Girder A628	Closed	08/14/2014	08/24/2014	08/28/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Skanska's transfer girder fabricator, TMF, has drilled girde r A628's top flange hole pattern 5/16" north of the designe d location. Please confirm it is acceptable to offset the hol e pattern and machined grooves on the column base plate to account for the offset on the girder. This will allow the c olumn to be positioned at the required location while acco mmodating the offset holes. The girder short stiffeners will also need to be shifted 5/16" to allow bolt clearance. See a ttached 628AC & 628AB for as-built hole locations, also see attached p4284 for proposed offset on column base plate.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

REQUEST:

See attached CD RFI # 568 SK1 & SK2 for items 1 & 2:
1) Please clarify what is meant by "SIM".
2) Please supply the missing stud information.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). The text "SIM" shall be deleted.

2). Use 2- 3/4"dia x 6" studs at 6" on center (total 6 rows @ 6" on center).

T-1613 **SSS - Deck Support at TR3 Grid C & G** **Closed** **08/15/2014** **08/25/2014** **08/27/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

At grid C3 the BU perimeter beam butts into the transfer gi rder TR3. The deck support angle in the web of the BU beam stops back 4' 9-
5/16" from the center of the girder. This results in a region of about 4'-4" without deck support
at an end bearing.

Design drawings do not provide a specific detail for this co ndition. Deck support at column detail 1/S1-5001 should not be used as this detail typically only supports one or tw o flutes of deck. The condition described above has 4 ½ unsupported flutes in an end bearing condition with 10" of nominal weight concrete. This is too much for a 12 gauge angle. Please advise.

SUGGESTION:

A 4x4x3/8" steel angle can be field welded from the perimeter beam deck angle to the transfer girder deck angle to span the unsupported deck or provide an alternative detail. See SK1 for clarification. This condition also applies at line G.

ANSWER: **Accept Suggestion:** ☐

Deck support is a "means and methods issue" and we disagree with the cost increase claim. Deck support angles proposed in the RFI and as shown on SK1 in the RFI are acceptable at the two locations on GL 3.

T-1614 **BGP - Gridline L/X Moment Frame Beam Bottom Reinforcing** **Closed** **08/15/2014** **08/25/2014** **08/22/2014** **Potentially** ☐

T-1622 **BGP - Top of Vertical Wall Interface with Ground Level MFB** **Closed** **08/18/2014** **08/28/2014** **08/22/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

The current design indicates the top of the # 11 vertical wall reinforcing terminating with a terminator maintaining 2" concrete clear cover above the bar as seen in Section 1 on S-3201 .

A # 11 555 t-head is 11/ 16" thick and a #11 Lenton Terminator is 11/16" thick. The Ground Moment Frame Beams appear in Section 5 of S1-3600. The concrete clear cover indicated over the stirrup is 2 3/4".

Due to the designed concrete clear cover called for, the thicknesses of the different terminator products and the allowable tolerance in fabrication and placement per ACI a conflict with the two interfacing componets is expected to occur at the top bars of the MFB.

Please confirm if the tenninator on the vertical bar can terminate below the ground level MFB top bars to avoid the expected conflict similiar to that allowed between the column and concourse MFB as indicated within RFI T-0917.

Should this proposed solution not be acceptable please provide direction how to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed, provided that the resulting clear cover to the Foundation Wall Vertical Reinforcing Terminator is within the parameters of the RFI T-1622 response including the supplemental U-bars. We disagree that a potential clash is anything other than insufficient means and methods.

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Please provide dimensions for CMU walls near Gridline 20-H. See attached marked-up contract drawings for the dimensions needed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For dimensions to CMU wall/pier adjacent to Door B1560B, refer to SKA-4032.

For dimension to the CMU wall at the south of the Main Switchgear Room B1560, it is confirmed that south face of CMU wall is aligned with Gridline H.

T-1625 **SCS - Embedded Column Inner Vertical Bars at Foundation Walls** **Closed** **08/19/2014** **08/29/2014** **08/22/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Henry Chiang

REQUEST:

See attached marked up contract drawings.

The TG0600 rebar subcontractor is using HRC 420 friction welded standard couplers at the top end of the 3rd lift foundation walls and embedded columns C21, C33, C34 vertical bars. The inner set of embedded column vertical bars are indicated in sections as having a 90 degree SH tail at the top of bar. It isn't possible to install the bar with the 90 tail into the 3rd lift HRC 420 standard coupler as the tail of the bar needs to spin circular to engage the threads into the coupler with the final tail orientation dictated by torquing of the bar into the coupler. A possible solution to this issue is to utilize the HRC 555 Forged head in lieu of the 90 degree tail. The top of the inner vertical bar 555 head could be held 4" below the top of the outer vertical bar 555 head for concrete encapsulation.

Please confirm that the proposed solution is acceptable

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Proposed solution is acceptable for Embedded Columns C21, C33, C34 and C23. Coordinate head elevation with requirements of framing coming into the joint. Indicate target head elevations on submittals for review.

REVISED RESPONSE:

Proposed solution is not acceptable, hooks shall be provided as shown in construction drawings. This is a means and methods issue. The work between the two sub-contractors shall be coordinated by the general contractor.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

for the typical embedded column in foundation walls.

T-1626 **BGP - Column 101E and 101F Concrete Elevation** **Closed** **08/20/2014** **08/30/2014** **08/27/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Webcor Construction LP Adib Sassine

Co-Author: Shimmick Construction Company, Inc Sylvia Hartanto

REQUEST:

Column 101E and 101F was poured 1 ft below shoring elevation.

Is it acceptable to use concourse slab concrete mix 1558218 to pour back the remaining top foot concurrently with concourse deck D201?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Proposed using concourse slab mix to pour back both columns is unacceptable.
Pour the remaining 1 ft of concrete at both columns 101E and 101F the same mix as the concrete columns with the following options as discussed with Sean McNeil:

Option 1: Pour both columns separately under separate IR.
Option 2: Or pour both columns at the same time as the concrete deck D201 provided you allow 2 hours for the concrete to set and then you pour the deck with the scheduled concrete mix. This will require a separate IR to track this condition at both columns. Include special instruction in the IR to ensure consolidation of both columns are inspected separately as well as paying close attention not to disturb the concrete of poured column sections when consolidating. Prep the top of concrete column surface to achieve the required amplitude as required per previous column pour cold joint condition.

T-1627 **SCS - Bridge Blockout CIDH Piles** **Closed** **08/21/2014** **08/31/2014** **09/05/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

REQUEST:

Please provide details for blockout(s) at the concrete roadway section as shown in the attached sketch.
A Blockout will be necessary to allow the CIDH pier(s) to be removed from the ground level, pulled up through the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Reference RFI T-0470 and RFI T-0807. Temporary blockouts are the contractor's responsibility. Refer to General Notes GR-4, GR-5, and GR-9.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

deck, after the concrete bridge(s) section has reached design strength.
Once the CIDH piers have been removed the circular section will need to have rebar installed, concrete poured back, and waterproofing repaired prior to receiving infill pursuant to contract documents; 10 sets of CIDH piers, per temporary structure, will require Blockouts at First, Fremont, and Beal street.

2. Refer to attached conceptual detail representing an acceptable method of restoring a temporary opening to contract final condition at the roadway slabs. It does not relieve the contractor from the obligation of verifying the suitability of the detail to actual field conditions and construction loading.

3. Should the contractor elect not to shore the temporary condition, the contractor shall submit a statement or supporting calculations justifying the unshored condition under construction loads signed by a licensed professional engineer. Should the contractor elect to use conceptually different detailing, the detailing and any required supporting calculations shall be submitted for review.

4. The final choice of detailing shall be explicitly indicated on the deck reinforcing submittals for each unique blockout case for coordination with surrounding reinforcing.

T-1629	SSS - Shop Prime Coat Thickness for Carbozinc 859	Closed	08/25/2014	09/04/2014	09/08/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Specification 05 10 00 3.2.P.1.b.1 requires a primer of DFT 2.5 to 3.4 mils. The product data sheet for the approved Carbozinc 859 specifies a DFT of 3-5 mils. OIW coating instruction CI-2770-14-04 notes the 3-5 mils as recommended by the coating manufacturer.

Please confirm that a prime coat of 3-5 mils of Carbozinc 859 is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed. Prime coat of 3-5 mils of Carbozinc 859 is acceptable. Specification Section 05 10 00 3.2.P.1.b.1 is changed to: Apply primer to a DFT between 3 and 5 mils.

T-1631	SCS - Elevation at Transformer Vaults Room	Closed	08/25/2014	09/04/2014	08/27/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Henry Chiang

REQUEST:

On Sheet Al-2203, on the slab around the transformer vaults room, grid lines 12-C, the elevation is indicated as TOFF -7'-9". On Plan 1/A1-3002, there is an elevation point corresponding to the same slab at grid lines 12.1-B.5 that indicates an elevation of TOC -7'-9". On the detail A/Al-9236 same point has an TOC elevation of -8'-2". Please confirm that elevation -7-9" on Detail 1/A1-3002 corresponds to TOFF instead of TOC.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The elevation -7'-9" on Detail 1/A1-3002 corresponds to TOFF instead of TOC. Refer to SKA-4049 which reflects updated elevation tag.

REQUEST:

See attached CD RFI # 554 SK1 to SK3 for items 1 to 14:
1) Supply missing dimensions.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. For updated slab edge drawing confirming and showing missing dimensions, refer to SKA-4081.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

2) Confirm dimensions.
3) Supply location for the MC4.
4) Confirm the vertical hanger is interrupted at the upper beam. Please clarify.
5) Clarify where the MC4x13.8 is located and supply a connection to the W12 & CMU wall.
6) Supply missing dimension.
7) Connection per 9/S1-5028 will not work at the noted location. Supply an alternate detail.
8) Confirm off-center connection per 9/S1-5028 is acceptable or supply an alternate detail.
9) Supply the elevation for the W12x40 at the landing and depending on the elevation, supply a connection detail at each end.
10) Supply missing dimension.
11) Supply length of weld.
12) Supply a connection detail for brace to hanger/beam.
13) Confirm dimension for plate orientation.
14) Confirm detail 9/S1-5028 also applies to the top of the hangers.
15) Confirm a 2-sided fillet is acceptable as the welding access of the end of the brace is not sufficient.

2. See updates on SKS-0403. Braces to be placed at equal spacing.

3. The MC4x13.8 channel may be waived at the highlighted location. In lieu of the MC4x13.8, provide a W12x40 beam as shown in sketch SKS-403 and SKS-0405.

4. See SKS-0403 and SKS-0405 for hanger locations.

5. See response to question 3. Connection of W12 to CMU wall per 12/S1-9001. Connection of W12 to W12 per 1/S1-5011.

6. For wall dimension to GL F.7, refer to A1-7009 issued with ASI-123.

7. See SKS- 0403.

8. Align W12x40 with centerline of W40x230 above, as specified on 2/S1-2252. See SKS-0403.

9. See SKS-0405.

10. S1 slab to attach to top of W12x40 bottom flange, as shown on 4/S1-5032. Requested dimension approx. 3-7/8¿.

11. Provide 6¿ min weld length at double angle brace to gusset plate.

12. Connection of brace and hanger to beam above per 6/S1-5028 sim.

13. Confirmed.

14. Confirmed.

15. Confirmed.

REQUEST:

See attached CD RFI # 561 SK1 to SK4 for items 1 to 20:
1) Confirm all dimensions shown in a green rectangle box.
2) The noted W12x40 appears to be shown as one continuous beam from west of Grid 22 to east of grid 24. Supply splice locations and a splice detail.
3) Confirm the CMU wall aligns with the west edge of the slab opening or supply more information.
4) Confirm it is acceptable to locate the MC4's 1" from

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. For confirmation of dimensions highlighted in green on CD RFI 561 SK1, A1-2854 should be read in conjunction with A1-3020, A1-7010 and structural details.

a. 12'-0" is confirmed

b. 2'-8 5/8" - should be 2'-0 5/8", refer to A1-2854

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

edge of slab openings.
5) It is not clear where the MC4 is located. Is it backed against the CMU wall? Please provide more information and connection details.
6) The location of the hangers are not correct at the locations noted as a red rectangle box based on the concrete beam locations per RFI T-1010 (SK 287, CD 230). Confirm the updated dimensions are correct.
7) Confirm connection is per 9/S1-5028.
8) Supply a connection detail.
9) Supply a connection detail for MC4 to MC4.
10) Confirm all W12x40's and all MC4x13.8's are located vertically per 4/S1-5032 (SK3). If not, supply more information.
11) The location of the hangers are not correct at the locations noted as a red rectangle box based on the concrete beam locations per RFI T-1010 (SK 287, CD 230). Confirm the updated dimensions are correct.
12) Confirm the CMU wall aligns with the east edge of the slab opening or supply more information.
13) Confirm dimension to edge of slab.
14) Confirm MC4 is located 1" west from the edge of slab or supply more information.
15) Confirm the underside of the slab is typically at the top of the bottom flange of the W12x40's or supply more information.
16) Supply a connection detail for the MC4 to the W12x40.

17) Supply a connection detail for the MC4 to the CMU wall.
18) Please supply dimensions for hooked deformed bars.
19) Confirm stud spacing to avoid the bending radius.
20) Confirm 1 1/4" I/S cold bending radius.

issued with ASI-118.

c. 11'-6" - should be 11'-2", refer to A1-2854 issued with ASI 118.

d. 11 5/8" is confirmed.

e. 19'5 ¾" - is acceptable

2. Refer to response to RFI T-1073 for clarification on W12 beam splice locations and detail.

3. Wall below is 3" offset from EOS. Refer to Detail 5/A-0024.

4. MC4s shall be 2" (clear) away from the slab openings.

5. The MC4 channel may be waived at the highlighted locations.

6. Confirmed.

7. Confirmed.

8. Move the W12x40 and 2L6x6 hanger northwards so that the W12x40 beam is 1" offset from the W40 beam at the ground level.

9. Refer to response to RFI T-1073 for MC4 to MC4 connection detail clarification.

10. Confirmed.

11. See attached sketch SKS-0414 for correct hanger locations.

12. Wall below is 3" offset from EOS. Refer to Detail 5/A-0024.

13. Dimension of EOS to GL 24.9 is 6'-2 1/8" as shown on A1-2854 issued with ASI-118.

14. The edge of the MC4 shall be aligned to the edge of slab. The MC4 shall span between the W12x40

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

beam on the south to the first perpendicular CMU wall and not the entire width of the slab.

15. Confirmed.

16. Refer to response to RFI T-1073 for MC4 to W12x40 connection detail clarification.

17. Refer to detail 12/S1-9001 for MC4 to W12x40 connection detail. Detail 12/S1-9001 is called out on 4/S1-5032.

18. Develop the deformed bar anchors 24¿ into the MFB beam. Refer to detail 4/S1-3001 for hook lengths.

19. Confirmed.

See attached CD RFI # 589 SK1 for items 1 & 2:
1) 5" long studs are correct per detail 1/S1-7600. Confirm no further action is required. (The same applies to drawing 9519 & 9526).
2) 3 3/4" is correct to place the pipe collar on the centerline of the HSS8x8 post per 1/S1-7600 above as shown. Confirm no further action is required.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Detail 1/S1-7600 applies to HSS posts landing on composite decks. For HSS posts landing on concrete slabs details 11/S1-7600 and 12/S1-7602 are applicable. Details 11/S1-7600 and 12/S1-7602 call out 8" long studs.

2) Embed Angle A9516 is noted in two locations, 3 on Train Platform (drawing EM46) & 2 on Bus Deck Levels (drawing EM47). The Corrected dimension applies to embeds at the Train Platform level (see drawing EM46). Skanska to confirm if Embed A9516 is designed for both levels.

T-1650 **SCS - Requesting Approval for Precast Panels in Lieu of Cast-In-Place** **Closed** **08/27/2014** **09/06/2014** **09/15/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Shimmick Construction Company, Inc Henry Chiang

REQUEST:

See attached Exhibits A through D as a possible means of precast installation method. Using a precast yard facility in lieu of concrete cast in place will reduce the construction duration for the scallop, perimeter, and sky light eliptical wall operations since production can start prior to the construction start date. Precasting concrete elements also results in a better final product. Quality advantages of using a precast yard facility over cast in place methods are improved formwork design, curing procedures, temperature control, and form striping methods since work space, formwork weight, formwork relocation and reassembly, and hoisting equipment restrictions are greatly reduced if not eliminated.

shimmick requests approval from the engineer to allow precast manufactured panels in lieu of the cast in place walls shown on S1-2752 & S1-3282 scallop walls, S1-2602 stair well, S1-2603 eliptical skylight, S1-2604 light column opening, S1-2606 stair shaft, and S1-2607 elevator shaft.

Please confirm that the concept drawing is acceptable as well.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

In concept, the proposed P/C scheme will work structurally. However, we would point out that the support of the panel on the steel beam shall be detailed to allow for in/out and up/down adjustments. The detail shall also accommodate the nature camber in the steel beam. Structural calculations and shop drawings shall be submitted for review. The calculations and shop drawings shall be stamped and sealed by a California Structural Engineer.

In concept, the proposed P/C scheme will work visually for the architectural team. However, without an existing precast concrete specification and drawings that outline visual and quality control issues there may be some details that require a joint agreement on what is to be provided between the Contractor, TJPA, and the TJPA Representatives. Submit a draft design package including specification, confirmation on waterproofing details, and more developed design drawings to the TJPA Representative for review prior to final agreement on this substitution.

T-1651 **SCS - Concrete Anchor Inserts at Temp Bridges** **Open** **08/27/2014** **09/06/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Balfour Beatty Infrastructure, I Danny Walsh **Answered By:**

Co-Author: Shimmick Construction Company, Inc Henry Chiang

REQUEST:

See attached photo and concept sketch.

A unique support system is necessary for the foundation wall under the temporary bridges (First, Fremont, and Beale). A top tie is required to avoid the significant forces caused by a cantilever system supported by 1 row of anchors. In the attached photo, a concrete ledge can be seen along the CDSM wall under the temporary bridges. SCCI proposes to utilize these concrete ledges to install anchors for tie points.

Please confirm it is acceptable to install anchors into the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

T-1653	SCS - Partition Wall Elevation	Closed	08/28/2014	09/07/2014	09/04/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Shimmick Construction Company, Inc Henry Chiang

REQUEST:

On sheet A1-2203 and A1-3002, at the Transformer Vaults Room located about GL 11, Section detail A/A1-9236, regarding the elevation of the top of the partition walls.

1. Is the gap between the top of the wall and the Ground Level slab constant along the wall? This would mean that the top of wall would slope with the ground level. Please confirm.
2. Please clarify how to obtain the elevation of the top of the partition walls. Note: The elevations obtained through those two methods below conflict.
a.Should be obtained using the ground slab elevation points on plan S1-2303 and a constant slope between two consecutive elevation points? -OR-.
b.Scale the elevation from the section detail in Al Al-9236?
3. Please confirm if the above answers are applicable to all similar partition walls.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Confirmed. The Top of the wall slopes with the ground level structural slab and the joint gap is constant.

2. The elevations of the top of the partition walls (which extend to U/S ground floor slab) is determined from the elevations on the slab edge drawings together with structural slab design, framing design and details on the structural drawings. Scaling the elevations from section details is not acceptable.

3. The above answers are applicable to similar partition walls.

T-1654	SSS - Cast Node Work Points	Closed	08/28/2014	09/07/2014	09/10/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Candraft have identified several dimensional discrepancies between the Structural Engineer's certified Tekla model and the cast node shop drawings. Please verify correct dimensions queried in attached sketches

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

TT confirms that the dimensions per Tekla model are accurate. Cast Connex looked into the discrepancy between the dimensions from the Tekla model and in cast node shop drawings and it was not entirely clear where the discrepancy is coming from.

The discrepancy only effects the angular position of the pad; the worst case discrepancy was determined to be 0.0107 degrees which is far less than the allowable angular tolerance on this as-cast feature, therefore the discrepancy is not significant from constructability perspective and can be ignored in detailing the light column.

T-1655	SCS - Additional Information Needed to Cut CDSM Soldier Pile Beam.	Closed	08/28/2014	09/07/2014	08/28/2014	Potentially	☐

From: Shimmick Construction Company, Inc Henry Chiang **To:** Webcor/Obayashi Joint Ventu Spencer Sayles **Answered By:** Webcor Construction LP Claude Titche

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author:

REQUEST:

Direction provided is limited to: EXHIBIT A - TRADE SUBCONTRACTOR BID PACKAGE MANUAL AND FORMS, IV. SCOPE OF PACKAGE, D - 13. pg-13 - "Cut Interior Flange and Web of the CDSM Shoring Wall Steel Soldier Pile. Assume that the cutting of the pile will occur between 2' and 8' below the finish grade surface. The precise elevations for the cutting of the pile beams will be determined by a future design requirement."

In order to perform this work the elevation of the cut is needed.
Shimmick was informally provided a copy of the attached drawing from Webcor Obayashi Joint Venture which only identifies a vertical distance in elevation from finished grade elevations. Shimmick was then informed by WOJV that Thornton Tomassetti is currently making corrections to the site grading civil drawings C1-1000's to C1-8000's Rev 0 Dated 03/31/14 which show top of curb elevations. The civil drawings do not provide complete curb elevations to determine the elevation of the cut at all piles.

1. Confirm that the attached drawing which identifies a vertical distance in elevation from finished grade elevation is to be used.
2. Are the top of curb elevations in the civil drawings to be used as finish grade elevations for the depth of cut on the CDSM piles?
a. Provide finished grade elevations for cutting the interior flange and web of the CDSM piles or provide a height from top of concrete elevations shown on the ground level deck on plans sheet A1- 2862 to A1-2781. Also, please provide a drawing identifying the type of cut required ie., horizontal, angling up, or angling down.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. See attached sketch for notching depths.
2. ASI 123 roadway at curb (low point) elevations will be used to calculate notching elevation.

Note. Refer to submittal package "TG0702-145 SCS - CQC Plan for CDSM Notching" for "Means and Methods" procedures.

REQUEST:

ASI 121 issued new wall CJ locations. Reference sheet Al-2203, Detail l/Al-3008 and B/Al-9240.

A. On the south wall of the room at GL 13-B.2 there is a construction joint (see plan attached indicated as location "A") running through one of the MEP blocks outs. That creates a cantilever section below the beams cutout and above the MEP block out. Is that acceptable? If not, where should the CJ be relocated?

B. On the same wall there is a construction joint (see plan attached indicated as location "B"), the distance between the MEP block and the construction joint is 5' 5/8", which is not enough to place diagonal trim bars on the comers of the MEP block out that are closer to the construction joint. Please provide detail for this location.

C. In the same wall, the construction joints are not shown in the area cover by the spall plate, do the CJ's start at the top of the wall plates? Please confirm intent and provide further direction.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

A. Omit wall CJ running through Mech opening.

B. Wall CJ to be moved 1'-0" west of Electrical opening.

C. Wall CJs are continuous behind steel plates and are shown as hidden lines.

For updated A1-9240, refer to SKA-4049.

T-1666	SCS - Wall Opening Detail Conflicts	Open	09/08/2014	09/18/2014		Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:**

Co-Author: Shimmick Construction Company, Inc Henry Chiang

REQUEST:

Please reference drawing S1-3001.

See attached marked up drawing 4/S1-3207 details typical wall opening reinforcement, noting to use additional bars for 10" to 30" wall openings with lengths LTS + W. The typical vertical bars used for the foundation walls are #11 rebar and the added bar length is 19'-6" (LTS + W + W + LTS + W = 102" + 1 0" + 10 + 102" + 10"). Depending on the location of the penetration, the added bar would have to extend LTS + W beyond the opening, which in the 10" opening case is 9'-4" (102" + 10").This is not possible considering the foundation walls under TG07.2 scope of work are between 8' to 12'.

Additionally these additional vertical bars will potentially conflict with moment frame beam rebar at ground level by adding to the rebar congestion. See attached marked up drawings for example conflict.

1. Please provide an alternative to the current wall opening

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

detail for the foundation wall.
2. Please provide an alternative detail for cases where additional vertical bars conflicting with moment frame beam rebar.

T-1667 **SCS - Foundation Wall Conduit Penetration Locations** **Closed** **09/08/2014** **09/18/2014** **09/08/2014** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc Henry Chiang

REQUEST:

Reference drawings: A1-2862 to A1-2871, E1-2862 to E1-2871 and E1-3208 to E1-3210.

Please see attached marked up drawings noting atypical set of conduit penetrations. A1-2862 provides a lateral distance relative to a grid line to set of conduits; however 3/E1-3208 details the set of conduits as not aligned. On top of this, the referenced drawings do not provide an elevation for the conduit penetrations. SCCO requires the locations of these penetrations to proceed with foundation wall rebar detailing.

Please provide information on the location of the electrical conduit foundation wall penetrations.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

See attached drawings for electrical conduit penetration locations.

T-1668 **SSS - Weld Access Hole at Transfer Girder** **Closed** **09/08/2014** **09/18/2014** **09/15/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please confirm it is acceptable to provide weld access hol es as indicated on 628BC per AWS D1.1 to adequately ter minate the CJP weld to cast node. For plates not fabricate d, confirm it is acceptable to omit the hole closest to the pr oposed access hole to maintain AISC min edge distance. This typically occurs at all cast node to girder connections.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Confirmed that weld access holes shown on P77 attached is acceptable. The hole above the transfer girder flange should have rounded corner similar to the one below the flange. The bolt nearest to the hole shall still be installed.

2). Confirmed that for the plates that still yet to be

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

fabricated, the hole nearest to the access hole may be omitted to maintain minimum edge distance.

T-1669 **SSS - Insufficient Cope for Erection Clearance** **Closed** **09/09/2014** **09/19/2014** **09/15/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Adamson Associates, Inc George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer to beams highlighted in S1-2503 (attached) and work with this RFI.

The 7" cope shown in 2/S1-5017 is not sufficient for erection clearance. The connections on the other end of these beams dictate that the beams cannot be dropped vertically into position during erection (Please refer to attached SK RFI 813 SK1 and SK RFI 813 SK2). Beams have either a gravity moment connection (per 1/S1-8003) at odd gridlines or a shear plate connection (per 1/S1-8000) at even gridlines. These beams connect into the bus deck perimeter beams which must be installed first in our erection sequence due to the constraints of knife/pin connections at either end at the bus deck level cast nodes.

Please advise.

SUGGESTION:

We propose increasing the 7" bottom flange cope to 9.5" for both scenarios. We have modelled both cases and can erect the beams with a cope of this size.

ANSWER: **Accept Suggestion:** ☐

Suggestion acceptable.

T-1670 **SSS - Reviewer Comments - Decking Dwgs GL 1-4** **Open** **09/09/2014** **09/19/2014** **Potentially** ☐

T-1695 **SCS - Foundation Wall Conduit Penetration Location** **Open** **09/12/2014** **09/22/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Compan PHIL MILITELLO **Answered By:**

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Shimmick Construction Company, Inc Henry Chiang

REQUEST:

See attached exhibits.

See Exhibit A mark-ups. A minimum depth criteria is provided but the actual elevations or a finite depth for the 2" PVC conduits are not given. The dimensions for the typical support bracket are not given either.

1. Please provide either an elevation or a finite depth for the conduits.
2. Please provide the spacing between the 2" RG conduits and 6" RG conduits.

The section detail A/ES-2107 provides elevations and dimensions between the 6" PVC to 2" PVC but the numbers do not add up nor does the dimension convert correctly.

3. Please clarify which value to use in detail A/ES-2107 and correct the remaining values.

See Exhibit B. There is a spacing discrepancy between A1-2862, E1-3208 and ES-2108 for the 2" PVC sleeves. The architectural slab edge plan A1-2862 shows a typical dimension 1'-9" centers between pairs of electrical sleeves. Detail 3/E1-3208 shows a 3' clear spacing between conduits. ED-2108 showing the vertical centerline matching the below 6" sleeve.

4. Please clarify whether to use the detail from the architectural slab plan or E1 or ES drawings for 2' RG conduit lateral spacing.
5. Please clarify whether to use the detail form the architectural slab plan or E1 or ES drawings for 6" RG Conduit lateral spacing.
6. The variation in width between conduits in E1 and ES suggest a transition from one spacing to the other. Please confirm that the PVC pipes transition from the spacing shown in ES to E1 drawings before reaching the foundation wall.

Co-Author: Shimmick Construction Company, Inc Henry Chiang

REQUEST:

Please reference detail 4/S1-3207 and RFI T-1666 about foundation wall opening conflicts. Since

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

submitting RFI T-1666, more concerns regarding 4/SI-3207 have been brought to our attention.

One of the concerns mentioned in RFI T-1666 was the case of additional vertical bars potentially conflicting with moment frame beam rebar. This issue can also occur with the diagonal cross bars and additional horizontal rebar.

1. Please provide an alternative detail for cases where either additional horizontal bars and diagonal cross bars conflict with moment frame beam rebar.

Due to the length of additional horizontal bars, wall openings near foundation wall CJs will cause the constructability issue of requiring rebar to be built out further to proceed with concrete pours.

2. Please confirm that the alternate wall opening detail (requested in RFI T-1666) for additional vertical bar lengths can also be applied to additional horizontal bars.

2) Confirm the 3/8" bent plate (50 ksi) terminates on top of the "S1" slab on the Second Level and it does not extend to the top of the side plates in detail 5/S1-5004.

T-1701 **SSS - Insufficient Cope for Erection Clearance** **Open** **09/15/2014** **09/25/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:**

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer to beams highlighted in S1-2503 (SK1) and work with this RFI.

The 1' 11 ½" cope is not sufficient for erection clearance as shown on A4644, A4645 (SK2, SK3). The Type 4 (V) drag connection on the other end of the beam limits the position in which the beam can be erected (See SK4, SK5). The beam needs to be erected from below and positioned through the shear plate on the moment frame column. As you slowly lift the back side that is currently coped, a ¼" clash transpires between the top flange of W40x327 and the shear plates on the bus deck casting.

Please advise.

SUGGESTION:

We propose increasing the 1' 11 ½" top flange cope to 2' 0 ½", please confirm this is acceptable.

ANSWER: **Accept Suggestion:** ☐

T-1702 **SSS - Weld Terminations on Moment Frame Column Shafts** **Open** **09/15/2014** **09/25/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Compan PHIL MILITELLO **Answered By:**

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please see Section 5.17.1- Figure 5.2 from the AWS D1.1 Structural Welding Code (See SK1). In the sketch, proper terminations are shown for both a CJP weld and fillet weld as they approach an access hole.

The moment frame column shafts have been designed with a varying thickness of web. These web splice locations require an access hole to account for the different weld details between the web and flange, with

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

generally a CJP weld being performed on one side and a fillet on the other (See SK2).

The shaft drawings that have been detailed show an access hole that conforms to 5.17.1 - Figure 5.2. Note, however the shaft drawings do not show the weld termination detail. It is industry standard for the modeler to exclude these details as it is up to the fabricator/inspector to understand that welds should always be terminated as per the section of the AWS code they fall under, unless the design engineer specifies otherwise.

Currently, the TJPA shop inspection staff has directed our fabricator to terminate both the CJP & fillet welds similarly - as shown for a fillet weld (See SK3). Please confirm that this is acceptable as currently shown.

Please also confirm that the weld terminations should be completed as per AWS D1.1 - Section 5.17.1- Figure 5.2 for all columns fabricated in the future. Terminating CJP welds, as currently directed by the inspection staff to be flush with the end of the access hole will result in additional costs to our fabricator.

T-1703 **SSS - Fouling Issues for CP8** **Open** **09/15/2014** **09/25/2014** **Potentially** ☐

REQUEST:

Please reference detail 4/S1-3207 and RFI T-1666 about foundation wall opening conflicts. Since submitting RFI T-1666, more concerns regarding 4/SI-3207 have been brought to our attention.

One of the concerns mentioned in RFI T-1666 was the case of additional vertical bars potentially conflicting with moment frame beam rebar. This issue can also occur with the diagonal cross bars and additional horizontal rebar.

1. Please provide an alternative detail for cases where either additional horizontal bars and diagonal cross bars conflict with moment frame beam rebar.

Due to the length of additional horizontal bars, wall openings near foundation wall CJs will cause the constructability issue of requiring rebar to be built out further to proceed with concrete pours.

2. Please confirm that the alternate wall opening detail (requested in RFI T-1666) for additional vertical bar lengths can also be applied to additional horizontal bars.

REQUEST:

Reference Specification: 07 12 10 - 3.2.D

This section states "Install Protection board on vertical surfaces with long dimension vertical and the polyethylene film side facing the soil/cement surfaces." Per the manufacturer's installation instructions, "the protection board will be installed length wise for easier handling during the fastening procedure." SCCI suggests installing

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Install the protection board as specified. It is not intended for protection, but to serve as a substrate for the waterproofing assembly.

Protection board is 4' x 8'. When installed vertically, the edges of the boards will be butted and fastened at each pile. This will provide a line of fasteners on the edge of each board and help accommodate the board

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the protection board length wise per the manufacturer's instructions. Is this acceptable?

to pile misalignment. When installed horizontally, the board will be fastened on the intermediate pile which will complicate the installation if the piles are twisted or misaligned.

The board should not be fastened to the CDSM. It should only be fastened to the steel soldier piles.

Reference specification sections
- 03 30 20 (Dated August 30, 2012)
- 09 67 24 (Dated March 31, 2014)

Reference Drawings
- A1-2202 thru A1-2211 (Dated March 31, 2014)
- A1-9523, A1-9524, A1-9525 (Dated March 31, 2014)
- A1-9602 (Dated March 31, 2014)

Per specification 03 30 20-3.6, B.1 Concrete Finishes: Scratch finish is specified with FF/FL and is clarified in RFI T-777. (see attached)

New Lower Concourse drawings A1-9523, A1-9524 & A1-9525 issued in IFC set dated 3.31.14 delineate certain areas of structural concrete slab to remain as exposed and will not receive topping slab. These sheets do not show any reference for concrete surface finish other than what is specified under specification 03 30 20 and RFI T-777. The contractor has stated that this finish will be provided using a Fine Broom.

Please confirm this understanding is in alignment with the designer's intent for the areas of structural slab that will remain exposed.

Also, please confirm for all Concourse floor areas (topping slab, interim topping slab or no topping slab) that are to receive floor coating FC-3 the specified scratch finish is the designer's intent for concrete finish. FC-3 Spec section 09 67 24 located per floor finish plans A1-22__ Series drawings and Floor finish schedule A1-9602.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to attached (SKA-3576, SKA-3577, SKA-3578, SKA-3579, SKA-3580 and SKA-3581) which show updated topping slab information at B1 and B2 .

Fine broom finish is to be used at water storage tank rooms as specified in 07 13 55.

Elevator/ escalator pits and transformer vault's sump pump areas to receive float finish.

All Lower Concourse floor areas that are to receive floor coating FC-3 are to comply with surface preparation requirements as specified in 09 67 24, so that in all cases CSP shall not exceed 6 or less than 3.

REQUEST:

What is the Agency's Definition of a Joint Venture and what agreements need to be in place if firms want to

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The CM/GC defines a joint venture as provided in California Business and Professions Code section

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

submit their proposal as a Joint Venture?

7029, et seq. Any respondent joint venture must be properly licensed as a single entity and must submit with its Qualification Statement a copy of the joint venture agreement. The agreement shall identify the responsibilities of each partner in the joint venture for the scope of work established by the RFP, demonstrate the relationship between partners, and provide for contractual relationships and authorities to bind each entity to the obligations of the joint venture. The joint venture respondent should submit experience and qualifications as an entity and should submit experience and qualifications for each joint venture partner.

TG05.04-0003 **Temporary Pavement Clarification** **Closed** **02/10/2011** **02/20/2011** **02/14/2011** **Potentially** ☐

From: Webcor Construction LP David Hungerford **To:** Turner Construction Compan Kevin Chiu **Answered By:** Transbay PMPC Alfred Lau

Co-Author:

REQUEST:

In the Traffic Control Specification 01570-2F # 10 "TEMPORARY PAVEMENT" is Temporary Pavement in regards to traffic controls limited to the following:
A. Pothole Patching;
B. "Cutback or Coldpatch" at bridging and plating, handicap ramps, and sidewalk repairs;
C. Misc Roadway Maintenance;
D. Does not include Roadway Grinding or Hot Asphalt Application.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Section 01 15 70, paragraph 1.2.F.10 defines ¿temporary pavement¿ as part of the scope for Traffic Routing Work. The requirement for ¿temporary pavement¿ is to accommodate construction traffic control and maintenance of public and construction safety throughout the complete construction duration. It is envisaged that the scope may include pothole patching; "cutback or coldpatch" at bridging and plating, handicap ramps, and sidewalk repairs; and misc. roadway maintenance. Usually, roadway grinding and hot asphalt application, which are typically utilized for larger paving areas, and possibly permanent installations, will not be necessitated by ¿temporary pavement¿ work. However, without the opportunity to review the traffic control plan as stipulated in 1.2.A of the same section, we cannot preclude the need at this time.

REQUEST:

We need direction for the electrical installation inside the new concrete stem wall. We are planning on installing the formwork for the south-side of the wall starting Wednesday morning. As such, we need to install the electrical conduits
and boxes tomorrow, Tuesday, at the latest to meet our schedule.
Please provide detailed information on the entire conduit run and the elevation of the boxes.
It is our understanding that we are completing abandoning the originally anticipated electrical lighting work as anticipated
in our contract documents.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The question stated "It is our understanding that we are completing abandoning the originally anticipated electrical lighting work as anticipated in our contract documents." However there are no electrical drawings in the contract documents. This RFI was recieved at 4:28pm, the day before the wall was to be closed up, and requests an answer by tomorrow, which is not enough time to review. Due to the timing of this RFI, it was not submitted to the design team, but instead a meeting was held with URS in the field for direction. For record, see the attached inspection report and email for what is to be done.

TRANSWORLD 026.1 **301 Mission Wall - Framing Modifications and Base Plate Conflict** **Closed** **05/06/2011** **05/16/2011** **06/01/2011** **Potentially** ☐

installation methods. (See attached pictures and sketches. This RFI addresses three framing issues. All issues have been discussed in the weekly 301 Mission Wall subcontractor meeting with URS, Turner, Transworld, TJPA and Webcor-Obayashi.

1.) In two of the four stucco slot locations, field conditions show that a portion of the base plate conflicts with the stucco slot. This base plate encroaches into the stucco panel per dimensions shown on the attached sketch. Please advise.

2.) The structural steel had been relocated to CL of the wall (per RFI T-0098) and therefore studs around the steel per B/A-6000 could not be set per plan. Transworld has installed hat channel metal framing to the face of the structural steel tube using fasteners into the structural steel as per RFI T-0106 as well as modified the boxed framing per attached sketches around the perimeter of the wall. Sizes of metal framing were used to align with adjacent framing per plan. This work is currently installed, please confirm framing modifications per attached marked up details are acceptable.

3.) Blocking a the top of the wall at the north side (between the framing and 8"x 8" tube steel) was not installed, as there was no room between the framing and steel. Framing was attached directly to the tube steel. See attached.

Please confirm that the framing modifications in item 2 and 3 are acceptable and provide direction at the base plate conflict per item 1.

TRANSWORLD 038 **Concrete mix design for concrete repair work** **Closed** **06/08/2011** **06/18/2011** **06/08/2011** **Potentially** ☐

From: Webcor Construction LP David Hungerford **To:** Webcor Construction LP David Hungerford **Answered By:** Webcor Construction LP David Hungerford

Co-Author:

REQUEST:

This is to respond to submittal title TA1010.S-5000.A01 Rapid Set for Concrete Repair (TCI #31)
Please identify a product or a custom mix design that would meet these specifications. In our past practice we have
successfully used the suggested grout product as a concrete patch. In our investigations with suppliers and other
contractors, it seems that the general conclusion is that using a grout product (such as the one proposed) would be
the appropriate product for this application and condition. The proposed grout seems to offer greater strength and structural performance than the original concrete that has since been removed.
Is there another product that you could identify that would achieve these specifications? Since we are not the project designers, we can only suggest those products that would generally be used and accepted in our standard of practice It was based on this standard of practice that we submitted the RapidSet grout product.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The submittal response referenced in this RFI is incorrect. The suggested product was never submitted past Webcor-Obayashi's possession. Due to compliance with the direction given per response to RFI T-0130, a submittal was not required.

An email chain was generated from conversations between W/O and Turner, then a message sent between Turner and URS, which relayed the product type and an email chain starting from URS was recieved noting that the material is not acceptable. Upon further review of codes, the material is acceptable, which had been discussed in the weekly subcontractor meeting held on Monday June 6, 2011.

This RFI is no longer valid. Transworld is to submit products that will be used to repair this condition, per sub meeting.

Transworld is aware of this and is submitting product for review.

TRANSWORLD 039 **301 Mission Wall - New concrete curb detail** **Closed** **06/13/2011** **06/30/2011** **06/13/2011** **Potentially** ☐

Co-Author:

REQUEST:

Reference Sheet U-3107 and attached photos

At the intersection of 2nd St and Minna St, there is an existing 2in gas line running directly on top and next to the existing 8in main to be tied into. SFWD cannot make the Tee connection due to the bells of the fittings with the 2in gas line so close.

The end of the new line installed by Trinet will need to be exposed about 2ft for SFWD to move the end of the line by 1ft east so that SFWD can make the connection without moving the gas line. This will require extra work for Trinet to expose the new line for SFWD. Eric Zangol from AECOM and Dan Helminiak from SFWD were present during the discussion of this issue.

Please provide direction as soon as possible as this will impact the chlorination and tie-in schedule.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide labor and equipment to excavate and shore trench for pipes, fittings, and valves as necessary for connections to the existing water mains by SFWD in accordance with U-3100 Note 4 and specification section 33 11 00 par. 3.5.

U-0076 **Water Main Connection at 2nd St and Minna St - demo/excavate per SFWD** **Closed** **01/11/2011** **01/21/2011** **01/14/2011** **Potentially** ☐

From: Webcor Construction LP Mario Saldana **To:** Turner Construction Compan Michelle Smith **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

Reference Sheet U-3107 and attached photos

At the intersection of 2nd St and Minna St, the new 8in water main is to be connected to an existing 6in water line. The new 8in line installed by Trinet is above and below existing utilities, and SFWD requires more demo/excavation to make the connection.

This will require extra work for Trinet to demo/excavate per SFWD. Inspector Dan Helminiak is scheduling the SFWD to come back and measure this afternoon (01/11/2011). Eric Zangol from AECOM was also present during the discussion of this issue.

Please provide direction as soon as possible as this will impact the chlorination and tie-in schedule.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide labor and equipment to excavate and shore trench for pipes, fittings, and valves as necessary for connections to the existing water mains by SFWD in accordance with U-3100 Note 4 and specification section 33 11 00 par. 3.5.

U-0077	**Fire Hydrant Installation at Minna St Stn. 0+90**	**Closed**	**01/12/2011**	**01/22/2011**	**01/14/2011**	**Potentially**	☐

From: Webcor Construction LP David Hungerford **To:** Turner Construction Compan Michelle Smith **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

Reference Sheet U-3107

With reference to the fire hydrant at Minna St. Stn. 0+90, (northeast corner of Second St. and Minna St.) General Note #5 on sheet U-3107 directs Trinet to "replace in place existing fire hydrant."

Per on site field discussions with Eric Zagol from AECOM, Robert Friend from Trinet and Mario Saldana from W/O, it was determined that the existing hydrant would remain in place until after the new water main connections are performed by CDD crews. After which the existing hydrant will be removed and new hydrant and lateral piping will be installed and tested.

Please confirm if this is acceptable. An expedited response is requested.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

As discussed on site with Daniel Helminiak (SFPUC Inspector) and those mentioned above, the proposed construction sequencing of the fire hydrant at Minna St. STA 0+90 is acceptable.

Coordinate with Daniel Helminiak (or assigned SFPUC Inspector) and the SFWD to ensure the fire hydrant is properly decommissioned by SFWD and SFFD following main connections by SFWD and prior to abandonment of the existing main in Minna Street by SFWD prior to fire hydrant installation by Trinet. Coordinate with SFPUC inspector to ensure SFWD and SFFD installs a black hydrant "donut" on the existing fire hydrant and new fire hydrant prior to the new fire hydrant being placed in service. Coordinate the removal of the "donut" once new fire hydrant is in service.

U-0078	**6in and 4in Service Laterals to 2 Shaw Alley**	**Closed**	**01/12/2011**	**01/22/2011**	**01/14/2011**	**Potentially**	☐

From: Webcor Construction LP David Hungerford **To:** Turner Construction Compan Michelle Smith **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

Reference Sheet U-2008

The existing 4" water service found at Stn. 5+37 has been confirmed abandoned by SFWD personnel through on site investigations. Since the service is determined to be inactive, Trinet intends to not provide service from the new main for this 4" service as discussed in the field, with Eric Zagol from AECOM, Mario Saldana from W/O, Dan Helminick from SFWD and Robert Friend from Trinet. In addition, Dan Helmnick from SFWD requested to have the service tee installed in the new 8" main which was to provide service for this 4" lateral removed and straight pipe installed. Please confirm if this is acceptable.

The 6" water service lateral found at Stn. 5+30 has been confirmed as an active fire service to 2 Shaw Alley by SFWD personnel through on site investigations. Trinet

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Existing 4" water service at STA 5+37. Subsurface utility investigations should have been performed and submitted prior to installation of water main to determine status of existing lateral in accordance with U-3108 General Note No. 3. It is acceptable to remove the 8"x8"x4" tee installed and replace with straight pipe per the request of SFPUC SFWD inspector.

Provide 6" water service later at STA 5+30 per contract documents.

AECOM suggests that there is no change in contract price to perform this work.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

intends to provide service from the new water main for this 6" service as discussed in the field with Eric Zangol from AECOM, Mario Saldana from W/O, Dan Helminiak from SFWD and Robert Friend from Trinet.

An expedited response is requested.

U-0079 **Fremont St Temp Water Line Installed over AT&T Duct** **Closed** **01/17/2011** **01/27/2011** **01/19/2011** **Potentially** ☐

From: Webcor Construction LP Nhi Tran **To:** Turner Construction Compan Michelle Smith **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

Reference Sheet U-3123 and attached detail

During Trinet's installation of the temporary water line in Fremont St., Trinet encountered an existing AT&T duct that was in direct conflict with the temporary water line. Trinet was directed by Eugene Chu of SFWD/SFPUC to run the temporary water line over the existing AT&T duct using 45 degree bends. This resulted in less cover for the piping than what is required by the Water Department. Due to the lack of cover, Trinet was directed to install a 1/2in steel plate beneath the concrete base along the trench as depicted in the attached detail. The plate was approximately 2ft wide by 6ft long and extended to the limits of the installed 45 degree bends.
Please provide confirmation that this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is AECOM's understanding that Trinet encounter an existing PG&E electrical duct (4-4") crossing the water alignment feeding 301 Mission property and not an AT&T duct as referenced above. It is also AECOM's understanding that Trinet encountered an existing PG&E electrical duct (8-3") parallel to the water alignment which is ultimately to be abandoned by PG&E and demolished by Trinet. Both PG&E ducts are shown in the plans. Per sequencing shown on U-1123, the water line should be constructed after PG&E completes their work on Fremont Street.

Given the fact that the PG&E duct parallel (8-3") has not been abandoned by PG&E, and given the fact the option to go under the existing 4-4" PG&E duct per plans is not feasible because the existing 8-3" PG&E duct is not demolished, and given the fact that the new water main is a temporary condition, the above mentioned installation proposal is acceptable.

AECOM suggests no additional cost to contract price to perform this work.

U-0080 **Proposed Design Change for MH #501** **Closed** **01/17/2011** **01/27/2011** **01/28/2011** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Reference Sheet U-2021 and attached drawings

Trinet proposes to change the design of sewer manhole #501 from a Modified Box Manhole (per SF Standard Plan #87,184) to a Precast Concrete Manhole (per SF Standard Plan #87,181 - see attached drawing). The proposal includes the installation of a temporary 24" PVC pipe stub, extending south from the manhole and connected to the brick sewer per SF Standard Plan #87,197.

The proposed manhole design will facilitate construction around the many utilities identified in the excavation - see RFI # U-0021 (Trinet RFI 04). It is also the preferred manhole design for 24in pipe per the SF Standard Drawings, especially since the brick sewer on the south side will later be abandoned and plugged (in the manhole) by the owner. This plan will also facilitate the later abandonment of the outlet to the south, as the owner will just have to plug the 24in outlet pipe and not a 3x5 brick sewer.

Please consider. An expedited response is requested.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

CCSF DPW Standard Plan #87,181 referenced specifies a 4 ft diameter precast concrete manhole. Three (3) 24-inch pipes connecting to a 4 ft diameter manhole at invert elevation as proposed by contractor may yield an unstable structure and is not approved. A larger diameter precast concrete manhole may be acceptable however the alternative would need to be submitted as a substitution for CCSF SFDPW approval.

As per the response to RFI U-0021, please provide a mark up of U-3021 indicating the size, and horizontal and vertical location of the utilities identified in the excavation for review.

U-0080.1 **Proposed Design Change for MH #501** **Closed** **02/09/2011** **02/18/2011** **02/22/2011** **Potentially** ☐

Co-Author:

REQUEST:

Reference Sheet U-2021, RFI #U-0080, and attached drawings

In response to the Engineer's concerns with the number and size of pipes in Trinet's original revised detail for MH 501 (RFI#U-0080), Trinet has changed their proposed installation drawing to include a 5' I.D. cast-in-place MH base. The lower precast section of the MH will be 5' I.D., with a precast reducer section transitioning from 60" to 48" I.D. placed above. Attached is the revised drawing for MH 501 and shop drawings for the precast MH sections. The design was discussed with Cliff Wong from the SF Bureau of Engineering, Hydraulics Department, and he did not have a problem with a 5' I.D. manhole.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

02/22/2011 - Kevin Chiu

A Change Request (CR) may be issued for the accepted substitution of the 5-foot diameter precast concrete manhole in lieu of the cast in place Modified Box Manhole.

02/18/2011 - Eric Zagol

The proposed design change for sewer manhole #501 from a Modified Box Manhole per SFDPW Standard

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Trinet requests an expedited response.

Plan #87,184 included in the contract documents to a 5-foot diameter precast concrete manhole with a temporary 24¿ PVC pipe connection to the existing 3¿x5¿ brick sewer per SFDPW Standard Plan #87,197 is acceptable.

Provide flexible pipe connections to the 5-foot diameter precast concrete manhole as shown in SFDPW Standard Plan #87,181.

As per the response to RFI U-0080 and U-0021, please provide a markup of U-3021 indicating the size, and horizontal and vertical location of the utilities identified in conflict for review. This request is now 7 weeks outstanding.

AECOM suggests a cost credit for the substitution of the 5-foot diameter precast concrete manhole for the larger cast in place Modified Box Manhole per contract documents.

Co-Author:

REQUEST:

Reference Sheet U-3119 and attached drawing

Please confirm that it is acceptable for M Squared to install the new 12in water line in a straight line as sketched on the attachment. Contract Drawings show the pipe offsetting between Sta 18+72 and Sta 19+98.
Due to existing utilities discovered in potholes the 12in line will be installed 18ft from centerline.

Also, please confirm the elevations of the water line can be raised dependant on the depths of the existing utilities

Also, the referenced drawing has a discrepancy shown between the 12in water line bend station called out and the location shown in plan view. Please confirm that the first 45degree bend is located at 18+72, and not 18+27.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Contract Drawings indicate an offset to avoid a bus island, as shown on the plans, that was to be constructed as part of the Transbay Temporary Terminal Project. AECOM received confirmation from Philip Sandri TJPA/PMPC that the bus island was deleted from the Transbay Terminal Project. It is acceptable to eliminate the offset and construct water main between STA 18+72 and STA 19+98 at 18ft from centerline.

2. Elevations of the water line can be raised dependant on the depth of the existing utilities. Minimum depth of cover shall be 18-inches below the bottom of the concrete base pavement section per DPW Order No. 176,707 or 28" which ever is greater.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

3. 45 degree at STA 18+72. 45 degree bend no longer required due to response provided in item 1 above.

Reference Specifications Section 33 31 10, 1.4.E

Please clarify if TJPA or DPW is going to complete the inspection of the pipe as described in the referenced specification section.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For general materials, please follow the specification requirements regarding delivered materials in 01 16 00 1.6D.

For materials falling under specification section 33 31 31, section 1.4C determines that all piping is SUBJECT to inspection by TJPA and/or DPW. This means that all piping is to be made available upon delivery if TJPA/DPW deems it is necessary to inspect the material. Contractor to inform TJPA of all deliveries and assure the storage facility is accessible. TJPA will inform contractor if material will be inspected prior to installation. When TJPA determines that additional labor is needed to move materials around for inspection, please reference 1.4E, which states that contractor is to furnish labor as needed to assist TJPA with this effort.

There is no ¿HOLD POINT¿ for TJPA or SFWD to inspect materials at manufacturer or upon delivery. TJPA/DPW intends to inspect the materials deliveries of each subcontractor until such time as a confidence level is built that subcontractor and W/O are ensuring the proper amount of quality control through their own material inspections.

Per specification Section 01 14 00 1.4, W/O shall verify all dimensions in the field and shall check all field conditions continuously during construction, including materials. Any inspection of materials by TJPA, DPW, or any other agency does not alleviate the subcontractor or W/O of the responsibility of

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

performing your own quality assurance measures, or constitute an acceptance of materials. Ultimately, it is the responsibility of the subcontractor and W/O to ensure the materials used for the project meet the contractual requirements set forth in the drawings and specifications.

Co-Author:

REQUEST:

Reference Sheet U-3124

M Squared potholed at Sta 1+10 on Beale Street. We discovered that the 10in High pressure water line is 9ft-5in from the FOC. The existing 12in water line is 14ft-8in from the FOC. The 10in High Pressure line is closer to the FOC that shown on contract drawings. This now means that there is a larger window between the 10in high pressure water and the existing 12in water main.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contract drawings show existing 10-inch HPW (AWSS) at 9ft-7in from FOC. Contract drawings show existing 12-inch water line at 13 ft-11in from FOC.

Please clarify if dimensions provided by Contractor are to centerline of pipe.

Please provide depth to centerline of the existing 10-inch HPW (AWSS) potholed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

M Squared would like to install the new 12in water line at 12ft-3in from center line of the pipe to the FOC.
This would mean the new 12in water line would be outside the parking strip and the parking strip would stay in tact.
SFWD would also prefer it outside the parking strip for maintenance purposes.

Please confirm that it is acceptable to install the new 12in water line at 12ft-3in from FOC, going from Sta 0+60 to Sta 1+90.

Contractor's proposed location at 12ft-3in from FOC is in conflict with proposed Beale St. sewer main.

Following receipt of information requested, AECOM will evaluate if water line can be moved west of parking strip.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jetting in accordance with CCSF DPW Standard Specification Section 703.08 of the backfill layers

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Trinet requests authorization from the Engineer to compact the sewer trench backfill sand by jetting in accordance with the San Francisco Standard Specification Section 703.08.

The native material along Minna, which Trinet is re-using for trench backfill, is a clean well grade dune sand. Trinet believes jetting is an ideal method of compaction for this type of material. It is also an effective means of compacting the sand around the top and sides of the pipe without disturbing the pipe, and backfilling any voids left from removal of the shoring or that might have formed behind the shoring. This method of compaction is commonly utilized in San Francisco for sewer projects in similar ground conditions.

An expedited response is requested.

above the sand backfill (pipe zone) as specified in CCSF DPW Standard Specification Section 703.06 for sewer installations is acceptable.

Contractor shall determine that jetting will not result in damage to sewers, adjacent structures, or cause adjacent materials to be softened. Any resulting damage shall be repaired at the Contractors expense.

Meet compaction requirements for each horizontal lift. If compaction requirements are not met, discontinue the use of jetting.

Notify TJPA's geotechnical engineer through the TJPA representative in advance of jetting to coordinate on-site observation of jetting and compaction testing.

U-0088 **Minna St 18in Sewer Conflict with PG&E MH#1355 at STA 1+77** **Closed** **01/28/2011** **02/07/2011** **03/24/2011** **Potentially** ☐

REQUEST:

Reference Sheet U-3108, attached sketches, and material information sheets

At 11:30am on 2/2/2011, Michelle Smith (Turner), Eric Zagol (AECOM), Guy Hollins (TJPA), Rick Bowling (46 Minna Property Manager), Dan Helminiak (SFWD Inspector), SFWD water department crew, Robert Friend (Trinet), Jason Dunne (Webcor Obayashi), and Mario Saldana (Webcor Obayashi) met to discuss the 6in Fire Service Lateral and 1in Water Service Lateral for the 46 Minna building.

SFWD has proposed the new tie-in pipe configuration.
1. New 6in Fire Service Lateral Tie-in at 46 Minna St (See Attachment A)
- Old existing fire service lateral is to be cut out of the existing water main up to the gate valve as shown in the sketch, and replaced with straight pipe. A new 10in hole is to be core drilled into the existing basement wall 22in east of the existing service lateral to incorporate the new 6in fire service lateral. SFWD will run the new 6in fire service

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AECOM has coordinated with SFPUC Engineering (Chi Yu, Division Manager) and SFPUC inspector (Eugene Shu) and the direction agreed to is as follows:

6-inch Fire Service Renewal -

1. Coordinate with SFWD for the shutdown of the existing 6-inch fire water service. Shutdown by SFWD. SFWD to coordinate shutdown with SFFD.
2. Neatly remove existing fill material between the existing pipe and wall penetration to dislodge and free the existing pipe such that it can be removed by SFWD.
3. SFWD to cut and remove existing pipe.
4. Remove excess fill material to create flat even surface for link seal type pipe sleeve.
5. SFWD to install and connect new service.
6. Restore wall per SK-U-0005 attached.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

lateral through the hole and Trinet is to provide Link Seals (see attached material information sheets) to seal the space between the new pipe and wall hole.

2. New 1in Copper Service Lateral Tie-in at STA 5+17 (See Attachment B)
- Old existing 1in plastic poly pipe is to be cut and plugged with non shrink grout. A new 2in hole is to be core drilled 4in east of the existing 1in service, to incorporate the new 1in copper service lateral. The space between the new pipe and wall hole will be sealed with non-shrink grout.

Please advise if this is acceptable. An expedited response is requested.

1-inch Water Service Renewal -

1. Coordinate with SFWD for the shutdown of the existing domestic water service. Shutdown by SFWD.

2. Neatly remove existing fill material between the existing pipe and wall penetration to dislodge and free the existing pipe such that it can be removed by SFWD.
3. SFWD to cut and remove existing pipe.
4. SFWD to install and connect new service.
5. Fill void between pipe and exposed wall penetration with non-shrink grout.

U-0093.1 **46 Minna 6in FS Water & 1in Copper Water Service Lateral at STA 5+17 Tie-In** **Closed** **02/16/2011** **02/25/2011** **02/17/2011** **Potentially** ☐

Co-Author:

REQUEST:

Reference Response to RFI #U-0093, Sheet U-3108, and attached sketch

The SFWD completed the 1in domestic and 6in fire water service change-overs on 02/15/2011.
Part of the detailed provided in the response to RFI #U-0093 for the 46 Minna 6in Fire Service water lateral could not be installed due to the angle of the pipe installed by the SFWD.

Per discussion with E. Zagol of AECOM, please confirm the direction is to fill the void on the property side with 2-5 inches of non-shrink grout, finishing grout flush with the inside wall.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed. Fill the void on the property side with 2-5 inches of non-shrink grout, finishing grout flush with the inside wall.

U-0094 **Joint Trench Alignment Conflict With (E) Steam MH at Minna St. STA 0+85** **Closed** **02/03/2011** **02/13/2011** **02/04/2011** **Potentially** ☐

Reference Sheet U-3012 and attached drawing

On 02/07/2011, M Squared encountered what appeared to be a live PG&E duct bank during their sewer installation excavation on Natoma Street STA 9+50. Due to this conflict, M Squared was unable to continue excavating for

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

02/14/2011 Kevin Chiu

See CR U-006 issued on 2/14/11

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the sewer (See attachment). On 02/09/2011, M Squared's Superintendant met with a PG&E Representative and PG&E Representative confirmed that the duct bank is live and is not due to be decommissioned for at least 3 months.

In order for M Squared to continue with the sewer installation, M Squared is proposing to:
- install MH #305 and begin installing pipe west of MH #305
- perform a temporary connection from MH#305 to the existing 3' x 5' brick sewer

M Squared can then perform the remainder of the work once PG&E has decommissioned the duct bank.

M Squared estimates that the additional cost to perform the temporary tie-in would be approximately $4,500.

Please confirm how you would like M Squared to proceed. M Squared requests an expedited response as they are currently stopped work and awaiting a response.

02/10/2011 Eric Zagol

Demolition and Construction Sequence shown on U-1112 and U-1120 lists per sequence order that the sewer work is to commence after PG&E has completed their Phase I work in Natoma and First St., all services cut over and existing duct bank is abandoned by PG&E. Given the fact that PG&E has experienced construction delays associated with their structures on First Street, the proposed sequence for sewer construction is acceptable.

Submit a temporary connection detail for review.

Coordinate with PG&E to abandon the existing 2-inch HP Gas along Natoma per U-1112 and U-1120 prior to demolition.

Coordinate with Verizon to abandon existing conduit (labeled "U" on base plans) prior to demolition per U-1112 and U-1120.

REQUEST:

Reference Sheet U-3012

Following on from M Squared's RFI #U-0096, M Squared has confirmed in the field that there is a grade conflict between the proposed sewer and the existing electrical duct bank on Natoma between STA 9+30 to 9+50. The conflict is between the bottom of the electrical duct bank and the top of the new 24'' sewer pipe.

The elevation of bottom of electrical duct bank is 11.5'
The top of the 24'' VCP sewer is 11.82'

M Squared has also confirmed with PG&E that 3 of the 4 concrete encased conduits are occupied, 2 being occupied by 12KV lines. The duct bank is to be abandoned in the future but PG&E was unable to provide a schedule for this work.

Please advise M Squared on how to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Demolition and Construction Sequence shown on U-1112 and U-1120 lists per sequence order that the sewer work is to commence after PG&E has completed their Phase I work in Natoma and First St., all services cut over and existing duct bank is abandoned by PG&E.

Proceed per response to RFI U-0096.

U-0102	First St. CB#206 in Conflict with (E) Subsurface Conc. Structure / Duct Bank	Closed	02/23/2011	03/05/2011	03/04/2011	Potentially	☐

From: Webcor Construction LP Nhi Tran **To:** Turner Construction Compan Michelle Smith **Answered By:** Turner Construction Comp Daphne Faulkner

Co-Author:

REQUEST:

Reference Sheet U-3009 and attached sketch and photo

During Trinet's excavation for replacement of CB#206 on the northwest corner of First St. and Minna St. (at STA 9+31), they encountered a concrete subsurface structure or concrete encased duct bank not indicated on the contract drawings. The existing catch basin is approximately 30in deep and is constructed on top of the existing concrete structure/duct bank (see attached drawing).

Trinet requests direction on the demolition of the existing catch basin and the installation of the new catch basin CB#206.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Pending approval by the TJPA, a deductive CR will be issued.

03/04/2011 - Eric Zagol

As determined during a site visit on 3/3/11 with Trinet, AECOM and W/O; existing unforeseen conditions including an abandoned sub-sidewalk basement wall along Minna Street, an active sub-sidewalk basement wall for the 100 First St. property, and an abandoned telecommunications concrete duct along First Street create a situation where the installation of a new catch basin would require an extensive amount of unforeseen demotion.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

In lieu of installing a new catch basin barrel to replace existing modify the existing catch basin as follows:

Clean interior walls and bottom.
Apply 1/2-inch think uniform layer of mortar on interior walls and bottom.
Install cast iron trap.
Install pipe culvert and connect to MH#207 as shown in Plans. New culvert size and invert shall match existing culvert at catch basin. Use ductile iron pipe if depth of cover is less than 3 feet.

U-0102.1 **Catch Basin #206 redesign** **Closed** **04/01/2011** **04/11/2011** **04/13/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Michelle Smith **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

Please clarify the following items relating to the re-design of CB#206:

1) The only specification section addressing mortar coating is in 33 31 10 Paragraph 2.1.I, which specifies a "Wet Spray Mortar" application. This process would be cost prohibitive for coating only one catch basin. Trinet proposes the use of "SikaTop 123 Plus" mortar - product data sheets are attached. Please advise if this product is acceptable or specify an alternate material.

2) The RFI response directs Trinet to use ductile iron pipe for culvert runs with less that 3' of cover. If 22.5% DI bends are required to construct the culverts Trinet would prefer to use Mechanical Joint Fittings. Please advise if these are acceptable.

SUGGESTION:

Eric Zagol 4/12/2011: 1) SikaTop 123 Plus mortar is acceptable. 2) MJ DIP for 22.5 degree fittings is acceptable for culvert runs with less than 3 feet of cover.

ANSWER: **Accept Suggestion:** ☐

REQUEST:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Reference Sheet U-1113 and U-3113

A 4-inch water line runs from east to west on the south side of Natoma from Sta 9+40 to Sta 10+95. At Sta 10+95, the 4-in water line 90degrees into the building at 400 Howard St. This building however, appears to be fed from the existing 8-inch line on 1st St between Howard and Natoma.

Is this 4-inch water lateral at Sta 10+95 on Natoma already abandoned? If not, can M Squared abandon it? It is currently in conflict with the proposed location of MH#306, and is also in conflict with the excavation and shoring for the new 30-inch sewer along Natoma (TG04.1).

It is AECOM's understanding that the existing 4-inch lateral is "killed" (not supplying water) however the "killed" lateral may still be pressurized up to the lateral terminal point at the gate valves located on the south side of Natoma Street at Natoma Street STA 10+95.

Demolish 4-inch water as indicated on U-1112, U-1113 and U-1120.

Prior to demolition:

1. Coordinate with SFPUC inspector to confirm 4-inch lateral is "killed".
2. Coordinate with SFPUC inspector to confirm that the lateral is not pressurized and that the 4-inch gate valve at Natoma Street STA 9+40 (intersection with existing First Street 8-inch water main) is closed.
3. Coordinate with SFPUC inspector and install cap in First Street as shown on U-1120 at Natoma STA 9+55 +/-.

U-0104 **Natoma St. Temporary Sewer Connections at Sta 9+25 and Sta 7+20** **Closed** **02/24/2011** **03/06/2011** **03/01/2011** **Yes** ☐

Co-Author:

REQUEST:

Reference Sheets U-1112, U-1120, U-3012, and RFI#U-0096

In order for M Squared to install the new water main on Natoma Street between Sta 6+40 to Sta 10+00, the existing 3'x5' sewer must first be demolished. The 3'x5' sewer cannot be demolished until the new 24-inch VCP has been installed and connected to the existing sewer on First Street at Sta 9+59. Per sheets U-1112 and U-1120, the new 24-inch sewer is to be constructed after the demolition of the PG&E ducts. However, demolition of the PG&E ducts cannot be completed because PG&E has not completed their relocation work

Per RFI#U-0096 (M Squared RFI #009), as confirmed by

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Due to existing PG&E duct in conflict caused by PG&E's delay with First St. Phase I relocations, the two 12-inch temporary HDPE connections as proposed are acceptable as an interim condition until PG&E Phase I work is complete and the existing duct in conflict can be demolished per plans.

Daphne Faulkner - Pending approval by the TJPA, a CR will be issued.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

PG&E in the field on 02/09/2011, there is a live PG&E duct bank in conflict with MH#305 and the new 24-inch VCP between MH#305 and MH#306, and not due to be decommissioned for at least three months.

M Squared proposes to install a 12-inch HDPE pipe from Sta 9+25 to Sta 9+59, and perform a temporary connection to the existing 3'x5' sewer on First Street. Surveys carried out on the electric duct bank at Sta 9+30 on 02/08/11 shows that the bottom of the Duct Bank is approx. 10.8, meaning a 12-inch pipe will fit. In addition, M Squared proposes to perform a temporary connection (also 12-inch HDPE) at Sta 7+20 from the new MH#303 to the existing 3'x5' sewer. This would allow M Squared to demolish the 3'x5' sewer from Sta 7+02 to Sta 9+59, and allow M Squared to install the water from Sta 6+40 to Sta 10+00.

M Squared estimates the cost for both of these connections is $20,000.

An expedited response is required to avoid impact to the installation of the water line

---

Co-Author:

REQUEST:

Reference Sheet U-1113, U-1122, U-3013 and attached drawing

A pothole on Natoma Street at Sta 12+92 confirmed that the duct bank shown on Sheet U-3013 is in conflict with the proposed 30-inch VCP sewer (see attached drawing).

Per sheets U-1122 and U-1113, the new 30-inch sewer is to be constructed after the demolition of the PG&E ducts. However, demolition of the PG&E ducts cannot be completed because PG&E has not completed their relocation work. Per PG&E's new schedule this work is not scheduled to be completed until 06/31/2011. This would

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Due to existing PG&E duct in conflict caused by PG&E's delay with Fremont St. Phase I relocations, the12-inch temporary HDPE connection as proposed is acceptable as an interim condition until PG&E Phase I work is complete and the existing duct in conflict can be demolished per plans.

Daphne Faulkner - Pending approval by the TJPA, a CR will be issued.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

mean M Squared's work cannot start until after this.

In order for M Squared to continue with their work, M Squared proposes the use of 12-inch HDPE pipe from Sta 12+80 to existing sewer at Sta 13+15 (proposed location of MH#602). Once PG&E has completed their cutovers and the duct bank is abandoned, M Squared will demo the duct bank per specifications and complete the installation of the 30-inch VCP sewer from Sta 12+80 to MH#602.

M Squared estimates the cost for this work is $15,000.

An expedited response is required to avoid impact to the installation of the sewer and water line

This RFI confirms modification discussed in the field by Trinet and discussed with the Design Engineer, SFDPW, and W/O personnel. Trinet's field survey shows the existing 3'x5' brick sewer on First Street to be approximately 11-inches lower than the grade depicted on the drawings. Trinet also checked the elevation of the existing SSMH (10-feet north of MH#501) and confirmed

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Construct MH#502 at First St. STA 4+98 as shown on U-3021 to match the invert elevation of the existing 3'x5' brick sewer, elevation 6.77 as determined in the field by contractor.

Construct MH#501 at First St. STA 4+45 as shown on U-3021 with an invert elevation of 7.58 as determined by contractor.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

that it is approximately 11-inches lower than what is shown on the drawings. Trinet installed MH#502 with invert elevation at 6.77 to match the existing brick sewer at the connection point. The new 24-inch VCP is being installed 11-inches lower than what is shown on the drawings maintaining the design slope of 0.0062. MH#501 will be installed with the invert elevation of 7.58, as shown in the attached sketch.

Please confirm that this design is acceptable. Also, please provide a revised grade for the 24-inch VCP run from MH#207 (Minna St.) to MH#501.

Construct MH#207 per RFI-U100.

Construct the 24-inch VCP sewer from MH#207 (invert elevation 8.67 per RFI U-0100) at a continuous downward slope such that the invert elevation of the 24-inch VCP at MH#501 matches the invert elevation of MH#501 at elevation 7.58.

Based on discussions with Trinet in the field, Trinet reported 11-inches of sediment/sludge/dirt in the existing 3'x5' brick sewer. Please confirm that existing sewer in First Street was cleaned with high velocity hydro cleaning equipment per specification section 33 31 10 3.2 A prior to excavation.

REQUEST:

Reference Specification Section 01 15 40, 1.5

Singer has been coordinating W/O access to the adjacent properties for W/O's subcontractors to complete their Joint Pre-Construction survey (Spec. 01 15 40, 1.5). Singer has informed W/O that they were instructed by TJPA Representatives to stop scheduling the joint surveys because TJPA will be conducting one overall survey, instead of having each individual contractor do them.

The surveys are a specification requirement for current and future subcontractors. Please clarify this specification, moving foward.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

TJPA will be conducting perconstruction surveys of adjacent property interiors. Singer will not be scheduling these surveys for W/O subcontractors.

U-0111 **Minna St. Joint Trench Conflict with (E) 8" elbow and thrust block** **Closed** **03/04/2011** **03/14/2011** **03/09/2011** **Potentially** ☐

REQUEST:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Reference drawing sheet U-3409 and attached sketch.

During our excavation for the joint trench on the east end of Minna St. (STA 9+29) Trinet encountered the (E) 8" water main in Trinet's trench line, approximately 1 foot from our termination point. The existing alignment is different from what is shown in the contract drawings. The drawings do not show the water line crossing the joint tranch. The alignment and grade of the water main changed in Trinet's excavation to avoid the adjacent catch basin. A 22.5 degree elbow is located in the center of the joint trench excavation. The elbow is rolled up to accommodate the grade change and there is a thrust block under the footing. Trinet does not believe that it would be safe to excavate under the water main for Trinet's duct bank without having the line shutoff. Extending the PG&E ducts to FOC will also place the connection point for PG&E's extension of the duct bank directly under the water main fittings and elbows. There is adequate clearance to install the 4" gas line above the water main and extend it out to FOC per contract. The top of the water main is 49" below FG at the south side of the joint trench, at the location of the ags line.

Trinet propses to terminate the concrete encased duct bank approximately 5 ft. back from FOC. This would allow adequate room for Trinet to mandrel the ducts after the joint trench is installed without undermining the water main. PG&E could then extend their duct bank under the water main to connect to Trinet's water main. Please advise.

Per request to Jason Dunne (W/O) via email on 3/4/11 please provide the following information for review:

Horizontal (from a known point i.e. FOC along First St.) and vertical location of "top of water main".
Horizontal (from a known point i.e. FOC along First St.) and vertical location of water line at "22.5 degree elbow".
Determine if the water main is mechanically restrained with tie rods at each bend in questions.
Approximate size of existing concrete thurst block a the "22.5 degree elbow".

Eric Zagol 4/26/2011 Proceed pre RFI U-0111.1 response.

U-0112 **Minna St. Joint Trench, AT&T Vault and Conduit Configuration** **Closed** **03/08/2011** **03/18/2011** **03/15/2011** **Potentially** ☐

From: Webcor Construction LP Nhi Tran **To:** Turner Construction Compan Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Reference Sheet U-3408

At the 02/03/2011 Joint Trench Pre-Construction meeting and field walk through, the AT&T inspector expressed concern with the configuration of the AT&T ducts connecting to the AT&T vault at Sta 3+71. The AT&T inspector was specifically concerned with the east side of the vault where all eight 4-inch ducts are shown entering the vault on the one side (north side) of the center line.

Trinet would like AT&T to review the duct configuration connection to the vault as depicted in the contract drawings and provide a revised drawing if they wish to make a change.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AT&T has reviewed the information and has proposed revisions to the Joint Trench to accommodate the following:

1. Revised information from AT&T regarding 555 Mission St. service point of connection, and
2. AT&T preferred Minna St. AT&T vault conduit penetration locations

Attached SK-U-0009 is a markup of the AT&T Vault at STA 3+71 butterfly drawing indicating conduit penetrations and schematic diagram of conduit alignments. Revised Minna St. Joint Trench Plans are being prepared as part of ASI#3 to address these revisions as well as changes associated with RFI U-0088.

U-0114	PG&E Abandonment Schedule for Natoma St. at Second St.	Closed	03/09/2011	03/19/2011	05/07/2011	Potentially	☐

From: Webcor Construction LP Nhi Tran **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

Reference Sheet U-1110 and U-2010

On 03/04/2011, M Squared met with a PG&E representative on site at Natoma and 2nd Street. The PG&E representative confirmed that none of their utilities had been abandoned in the area, and that the PG&E representative would be unable to provide a schedule for this abandonment.

Per note 2 on sheet U-1110, the services for 77 Natoma and 83 Natoma were to be terminated by Feb 2011. To date, this work does not appear to be completed.
In PG&E's letter to the TJPA regarding their schedule, there is no reference to work on Natoma Street at 2nd St.

M Squared is unable to proceed with their sewer and water utility installation on Natoma St. west of shoring wall until PG&E has completed abandonment of their existing utilities.

Please provide M Squared with an updated schedule for all PG&E's termination/abandonment work at 2nd and Natoma St.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 3/18/2011 ***5/5/11 UPDATE***

77 Natoma and 83 Natoma services have been terminated, refer to USR Nos. 11 and 13 as executed by W/O, Turner and PG&E on 4/21/11.

As of 5/4/11, PG&E estimates that Natoma Street will be de-energized by 5/21/11. Coordinate USRs for the remaining electric ducts with Turner and PG&E.

3/18/11 RESPONSE

Per demolition and construction sequencing shown on sheet U-1110, water and sewer work shall commence after PG&E has completed their Phase I relocations in First St., Natoma St. and existing electric ducts are abandoned by PG&E.

PG&E services to 77 Natoma and 83 Natoma have been terminated as part of the Existing Terminal & Ramps Demolition Project. USRs for these services are currently being prepared by the TJPA's Representative (Turner). The USRs shall indicate the service conduits and cables that are abandoned subject to demolition as indicated in sheet U-1110.

To facilitate schedule, AECOM has requested PG&E to de-energize Natoma St. to the extent possible in an effort to re-sequence construction of the sewer. PG&E's response and schedule of abandonment is forthcoming.

As shown on U-3110 the water line could be constructed prior to PG&E abandoning their facilities. Pothole to confirm the water line can be constructed as shown on U-3110.

REQUEST:

Refer to Sheets MA-5, MA-8

There are two caps that are required to be installed in order to shutdown the AWSS service on First St between Mission to Howard St. Per the construction schedule, both caps were supposed to be worked on simultaneously. Please confirm per a conversation in the field on 03/07/2011 with inspectors Michael Smith (SFDPW) and Dan Helminak (DPW), only one AWSS cap can be installed at a time.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The below response was copied into Constructware on behalf of Michael B. Smith SFDPW/BOE/Mechanical (see attached, "RFI U-0115 1490J Phase I First Street BOE Response 03 11 11")

"Installing/capping of the AWSS lines at two locations in sequence instead of simultaneously was a decision made by the SFWD/CCD together with SFFD. Please contact Dan Helminiak of SFWD/CDD at (415) 420-4821 for further information" - Michael B. Smith SFDPW/BOE/Mechanical dated 03/11/2011

03/14/2011 - Eric Zagol

Michael Smith from SFDPW BOE will respond to this RFI.

U-0116 **Abandoned 6" Fire Water Service Thru 100 First St Basement Wall** **Closed** **03/18/2011** **03/28/2011** **03/21/2011** **Potentially** ☐

From: Webcor Construction LP Nhi Tran **To:** Turner Construction Compan Michelle Smith **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

Refer to sheets U-1109 and U-3109

An abandoned existing 6" fire water service lateral was discovered while demolishing the old 8" water main running down Minna St. The 6" fire water service lateral was not shown on the plans and there were no existing water valve covers to indicate the existence of this line. The abandoned lateral penetrates the foundation wall entering the basement to 100 First St at Station 7+36.

Please provide direction for plugging the void that will be left after 100 First St management removes the 6" water lateral pipe. A roughly 1ft x ft x 1ft deep square opening will remain after the fire water lateral pipe is removed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor had knowledge of existing abandoned 6-inch fire water service at STA ~7+35.

Existing abandoned 6-inch fire water service at STA ~7+36 was exposed and potholed by Trinet on 11/19/2010 and included in Submittal TG0405-024 Item No: UA0000-020630A01.0 as Pot Hole No. 29.

Cut and plug abandoned 6-inch fire water service in accordance with specification section 02 41 00 3.6 at face of curb along the North side of Minna St.

Please clarify why private property improvements are being requested.

REQUEST:

The AWSS valve at Mission and Beale was potholed on 4/29/2011 per response to RFI#U-0121. It was confirmed that the existing valve does not have lugs.

Please provide details for capping the AWSS line on Beale.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/4/2011 From Michael Smith (SFDPW BOE);

Refer to attached DWG M-6 Rev 1 with changes made on 05/04/11. Cap is to be tied back to (E) pipe with cast lugs.

Eric Zagol 4/5/2011 ***4/19/11 UPDATE***

In response to the numbered items above:

1. Refer to the attached markups of TG04.2R documents from SFDPW BOE that define the AWSS abandonment/capping scope for Beale Street; MA-6 for the work in Beale St. at Mission St., and MA-10 and MA-19 for the work in Beale St. at Howard St.

2. SFWD Inspector Daniel Helminiak has confirmed that the following materials are available at the SFFD Yard:

Beale at Mission Street

- 1 10-inch DI MJ spigot x GH spigot adapter

- 1 10-inch DI MJ flat cap

- 1 18-inch x 18-inch x 1-inch steel plate

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Beale at Howard Street

- 4 10-inch DI stop collar

- 2 10-inch DI bell collar

- 1 10-inch DI flat cap

Coordinate with SFWD Inspector for materials provided by SFWD.

3. Proceed with this work per direction from TJPA Representative. Coordinate the shutdown of existing AWSS main in Beale St. with SFWD prior to commencing the work.

4. Submit pothole data for review per RFI response provided on 4/5/11 as stated below.

****

4/5/11 Response

Pothole the existing AWSS gate valve at the Beale at Mission street proposed cap location as shown on M-6 (Rev No. 1, 1/31/11) to determine if the existing gate valve has lugs. SFWD to inspect condition of gate valve once excavated, coordinate with SFWD inspector accordingly.

Details for the capping work at Beale and Mission, and Beale and Howard will be provided following gate valve inspection.

U-0122 **M Squared Submittals for TG04 Bid Packages** **Closed** **04/01/2011** **04/11/2011** **04/11/2011** **Potentially** ☐

Co-Author:

REQUEST: **SUGGESTION:** **ANSWER:** **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please confirm the following:

Per previous discussions it has been agreed between the TJPA, AECOM, Turner Webcor/Obayashi and M Squared that material submittals approved for use by M Squared in individual bid packages will be considered acceptable for all bid packages M Squared is working on (TG04.1, TG04.3, TG04.4, & TG04.6).

These submittal include:

TG0434-002 - Excavation & Backfill Samples
TG0434-003 - Excavation & Backfill Test Reports
TG0434-004 - Excavation & Backfill Compaction & Warning Tape
TG0434-005 - Shoring Plan
TG0434-006 - Backfill Material
TG0434-007 - Water Utilities Distribution Piping & Valves
TG0434-010 - Asphalt Mix Design
TG0434-013 - Noise Mitigation Plan
TG0434-015 - CQC Plan
TG0434-016 - Health and Safety Plan and MSDS
TG0434-017 - SWPPP
TG0434-018 - Debris Management Plan
TG0434-025 - Cast in Place Concrete
TG0434-030 - Labor Rates
TG0404-001 - Sewer Package
TG0404-002 - Filter Fabric
TG0404-003 - Concrete Forming
TG0404-004 - Precast Concrete
TG0404-005 - Precast Concrete Catch Basin Base

Eric Zagol, 4/4/2011: AECOM suggests that the Construction Manager Oversight (Turner) confirms this RFI.

Guy Hollins, 4/5/2011: Confirmed for all submittals listed with the understanding that no deviations from the previously-approved submittal are allowed without the submission and approval of a separate and new submittal request.

Michelle Smith, 4/11/2011: TJPA has no objection to subcontractors using submittals that were submitted by their OWN company and approved for a previous TG04 Utilities Relocation trade package, as long as the application is the same as the application in the previous trade package.

REQUEST:

Please note that on RFI #U-0123 the location of the fire service was incorrectly drawn. The fire service is actually located around Sta 2+35.

M Squared potholed at Sta 2+35 and discovered a 4¿ ductile iron pipe which is believe to be the active fire service for 85 Natoma Street.

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 4/15/2011: Per response to RFI U-0123, coordinate with SFWD Inspector to confirm the 4" DIP is the active fire water service to 85 Natoma Street.

Once confirmed, provide and install 8"x8"x4" tee and 4" gate valve.

Connection to existing 4" DIP fire service by SFWD. Excavate and shore for connection in accordance with the contract documents. Coordinate with SFWD Inspector for connection by SFWD.

U-0124 **Conflict Between New 24" Sewer and existing AWSS Line on Beale** **Closed** **04/07/2011** **04/17/2011** **04/28/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Michelle Smith **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

M Squared has confirmed that the 14" AWSS Line shown on sheet U-3024 is in conflict with the proposed 24" VCP on Beale Street. The AWSS line is shown on the plan view but not on the elevation view on sheet U-3024.
M Squared also shot the elevation of the existing sewer manhole. The elevation is 4.60, and not 4.70 as shown on the plans. The invert of the 14" AWSS is 6.2. (See attached)
Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 4/26/2011: Construct temporary 2-10" VCP and new SMH as shown on revised U-3024 (rev 2 4/26/11) and SK-U-0018. Construct SMH #701 to allow for future 24" VCP connection as indicated.

Relocate AWSS line in Howard St., not included in package. Design forthcoming potentially to be included in TG04.2R.

Following relocation of the AWSS line, construct 24" VCP sewer per contract documents.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

---

U-0124.1 **Conflict Between 24" Sewer and AWSS Line on Beale** **Closed** **07/07/2011** **07/17/2011** **03/27/2012** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

Per the response to RFI#U-0124 a design to relocate the AWSS line @ Howard and Beale is forthcoming. Please advise the status of this design.

SUGGESTION:

Eric Zagol 7/20/2011 Design is being performed by SFDPW BOE and will be tracked and issued via a forthcoming ASI. Schedule will be discussed with SFDPW BOE on 7/22/11. An update will be provided in the RUP OAC on 7/26/11.

ANSWER: **Accept Suggestion:** ☐

RFIs U-128.2 and U-124.1 were responded to in July of 2011 and provided temporary solutions to utility conflicts with a full resolution planned to come via future ASI. ASI 21, which addresses these issues, was uploaded to Constructware on 3/21/12 by Eric Zagol for design approval. A CR for this work will be issued in the near future.

U-0125 **Precast Catch Basin Bases** **Closed** **04/08/2011** **04/18/2011** **04/13/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

In lieu of a cast in place base per CCSF DPW Standards, M Squared would like to propose the use of a precast catch basin. The catch basin barrel is attached to the precast base and it comes as one single unit. Before installing the precast catch basin base with barrel, M Squared will place a minimum 6" compacted level layer of crushed rock as the sub base. The proposed material specifications are attached.
Please confirm if this method is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 4/12/2011 Precast catchbasin base is approved with conditions specified.
The 5 foot catchbasin barrel shall be attached to the base section to form a monolith structure with the same dimensions, compressive strength and reinforcement as the CCSF DPW Standard cast in place base.
Provide a minimum 6" level layer of uniform compacted crushed rock as the sub base.

U-0126 **Existing Brick Man Hole @ Second and Natoma In Conflict With Joint Trench** **Closed** **04/11/2011** **04/11/2011** **04/13/2011** **Potentially** ☐

REQUEST:

While potholing the Second St. Joint Trench crossing

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 4/12/2011: Confirm existing abandoned

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Trinet encountered an existing brick sewer man hole which is in conflict with the joint trench alignment. The manhole is not shown on the plans and had been paved over. The manhole also appears to have been previously abandoned. See the attached sketch and photograph detailing the location of the manhole.

Please advise on how to proceed.

sewer manhole is filled with slurry grout to 4 feet below rim elevation.
Demolish and remove existing abandoned sewer manhole as required to construct the Joint Trench to an elevation 1-foot below bottom of Joint Trench.
Backfill and restore in accordance with contract documents.

U-0127 **Minna Street Sewer Manhole #201 in Crosswalk** **Closed** **04/11/2011** **04/21/2011** **04/13/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Michelle Smith **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

Plan Sheet U-3007 shows MH#201 to be installed in the center of the crosswalk @ Minna and Second Street. The City of San Francisco typically avoids locating manholes in crosswalks, whenever possible, for ADA considerations. Please advise if MH#201 should be installed outside of the crosswalk.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 4/13/2011: Sewer manhole location can not be adjusted due to an existing 8-inch Water and 4-inch HP Gas main. Construct manhole at the location per Plans.
In lieu of CCSF DPW Standard MH cover, provide an ADA complainant cover that meets the following specifications:
1. MATERIAL - The cast iron shall be in accordance with ASTM "Standard Specifications for Gray Cast Iron Castings" Designation A 48, Class 30. The tinsel strength shall be considered the primary test for qualification.
2. FINISH- STANDARD FINISH SHALL BE RAW, AS CAST, AND YIELD A MINIMUM COEFFICIENT FOR FRICTION OF .6 OR BETTER IN WET OR DRY CONDITIONS.
3. CASTINGS - SHALL BE FREE OF BLOW HOLES, FLASHING, GRIND MARKS, AND OTHER SURFACE BLEMISHES.
4. Cover shall incorporate a "pic-hole" for lifting purposes.
5. ADA COMPLIANCY- CASTINGS SHALL HAVE HOLES NO GREATER THAN ½" IN THE DOMINANT DIRECTION OF MOTION, NO VERTICAL RISE OF GREATER THAN ¼", IF THE RISE IS GREATER THAN ¼" THE RISE/RUN RATIO NEEDS TO BE 1;2 AND THE MAXIMUM HEIGHT SHALL BE 1/2".
6. Cover shall BE MADE TO FIT EXISTNG FRAMES

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

OR be MACHINED to FIT EXITING FRAMES PER SFDPW STANDARD PLAN 87,190.
7. Cover should be MADE of quality EQUAL TO OR GREATER then THE PRODUCTS MADE BY D&L Foundry or Equal, see attached product data sheet.

U-0128 **AWSS Conflict with Sewer on Fremont** **Closed** **04/11/2011** **04/21/2011** **04/19/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Michelle Smith **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

A pothole at Sta 0+52 has confirmed that the existing AWSS line is in direct conflict with the proposed sewer on Fremont Street. The drawings show a 4" HPW line at invert elevation 13.0. Measurements taken in the pothole reveal a 14" HPW line at invert elevation 8.4. At this elevation the HPW line is in direct conflict with the proposed VCP sewer.
Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 4/19/2011 A temporary connection between MH #601 and (E) MH in Howard Street is being considered as an option. Please confirm the invert elevation of the (E) MH at Howard St. (Fremont St. STA 0+29.5) is EL 6.4 as shown on U-3022.

U-0128.1 **AWSS Conflict with Sewer on Fremont** **Closed** **04/11/2011** **04/21/2011** **04/26/2011** **Potentially** ☐

Co-Author:

REQUEST:

Per response to RFI#U-0129 Webcor/Obayashi, M Squared and AECOM met on 4/29/2011 and discussed why the sewer line between MH#301 and the existing manhole at Sta 0+45 could not be installed with normal

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 6/2/2011 Revised contract documents will be provided via ASI 011 to address conflicts between MH#301 and STA 0+45.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

means and methods. M Squared remove the plates from their investigative pot hole trench on 5/2/2011 for AECOM to further review and understand the existing conflicts.

Please provide AECOM's findings from these meetings and provide direction on how to proceed with the sewer installation in this location.

Between MH #301 and MH #302:

1. Continue to perform subsurface investigations and submit location and elevation information for existing sewer laterals at the proposed connection to new sewer in accordance with Key Note 1 prior to construction.
2. Verify via pre construction TV inspection in accordance with Specification Section 33 31 10 that all active sewer laterals are shown on U-3010 and have been located in the field.

U-0130 **Sewer Removal On First Street** **Closed** **04/15/2011** **04/25/2011** **04/21/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Michelle Smith **Answered By:** Turner Construction Comp Kevin Chiu

Co-Author:

REQUEST:

During the weekly Utility Relocation OAC meeting on 04/12/2011 Eric Zagol with AECOM informed Webcor/Obayashi that new drawings for the removal of the existing sewer on First street had been issued on 04/08/2011. To date Webcor/Obayashi has not received these drawings.

Please advise the status of these drawings.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Kevin Chiu 4/21/2011: See CR U-022 transmitted on 4/18/2011 to W/O's document control email for ASI No. U-006 which contains the requested information.

U-0131 **Minna St PG&E Duct Bank Termination Points** **Closed** **04/19/2011** **04/29/2011** **04/22/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Michelle Smith **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

PG&E has confirmed Trinet is to terminate the PG&E duct back 3' outside the east and west walls of manhole 1319. Please confirm that the termination points of the PG&E duct bank as described will fulfill Trinet's scope of work and the future completion of the duct bank will be performed by PG&E.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 4/21/201:1 Joint Trench termination points at EMH 1319 and 1318 are as follows:

1319 East wall; PG&E would like the conduit capped and left 3 feet short of the vault with concrete encasement 15 feet short of the vault.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please note terminating the duct bank 3' outside the west wall of MH 1319 will leave the end of the ducts directly under the 24" high pressure water main. This may create an issue with future access for complete the duct bank by PG&E.

Please advise.

1319 West wall; PG&E would like the conduit capped and left 6 feet short (or 1-foot clear of existing 24-inch water, whichever is greater) of the vault with concrete encasement 15 feet short of the vault.

1318 North wall; PG&E would like the conduit capped and left 3 feet short of the vault with concrete encasement 15 feet short of the vault.

The new termination points shall be considered as the limit of new conduit installation at EMH 1319 and 1318.

U-0132 **Minna St Sewer Pressure Test** **Closed** **04/20/2011** **04/30/2011** **04/27/2011** **Potentially** ☐

U-0132.1	Sewer Main Pressure Test	Closed	05/07/2011	05/17/2011	05/11/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Trinet has been advised by Mission Clay (the VCP manufacture) that the hydrostatic test described in the SF Standard Specification Section 319.02 is primarily for cast iron or ductile iron pipe and is not recommended for clay pipe. The National Institute of Clay Pipe and Mission Clay recommend a low pressure air test in accordance with ASTM C 828. See attached copy of ASTM C 828. Trinet proposes using this low pressure air test in lieu of the 10psi hydrostatic test called for in the standard specifications. The low pressure air test will allow test on pipe runs with no service laterals ie: MH501-502, 206-207, 203-204, 202-201. Please advise if this is acceptable.

With regards to the three remaining pipe runs that have lateral connections, please provide direction of how to plug the laterals if required to test the main lines.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

=======UPDATE 5/23/2011========

Kevin Chiu 5/23/2011 Below are links to devices for testing newly installed sewer pipes, specifically for main lines with active lateral connections that have been suggested within conversations between SFDPW, SFPUC and AECOM

http://newsite.cherneind.com/pneumatic/Long_Test_Ball_MS2_Test_Ball/

http://www.munipipe.com/chemical_grouting.html

http://veoliaes-is.com/Services/Environmental-and-Waste-Management/Total-Sewer-Management/Chemical-Grouting

Whether or not the contractors decide to utilize these devices is still up to them, as these are suggestions, not specifically required devices to be used for testing. It is the contractor's responsibility to perform testing on newly installed main lines, laterals, and manholes with their own means and methods while still protecting new and existing utilities.

==========

Eric Zagol 5/10/2011 ASTM C828 air test is an acceptable method to test sewer pipe in lieu of hydrostatic testing.

Co-Author:

REQUEST:

In response to RFI #U-0135, see attached piping plan, as requested in RFI response.

Once approved M Squared will coordinate with SFWD to perform the work.

An expedited response is required as this is holding up all other water work on Natoma Street

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/10/2011 With the understanding that the 12" main, 12" GV, 6" service and 1" service are already installed, furnish and install 4" GV and DIP service and connect to 12" main per piping plan.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
U-0136	Existing Water Bypass @ Howard and Fremont	Closed	05/03/2011	05/13/2011	05/05/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

While planning for the water tie in at Howard and Beale the Water Department discovered that there is an existing bypass line that will connect the existing water system (which is to be abandoned) to the new water system. This bypass is not shown on the plans. The Water department has requested that the existing bypass be excavated and plated so it can be cut and capped while they have the line shut down for the tie in on the new system at Howard and Beale the night of 05/04/2011.

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/4/2011 RFI is not accruate and locations are incorrect.

Based on a field meeting with W/O ,SFWD Inspector and AECOM on 5/3/11, SFWD identified an unforeseen existing bypass pipe and gate valve that connects the existing 8-inch main in Fremont Street (to remain) to the existing 8-inch main in Howard Street (to be abandoned). The existing 8-inch main in Howard Street will be abandoned once the new 12-inch main is Howard is active.

Once the new 12-inch main in Howard Street is placed into service and the existing main is abandoned, the existing bypass and gate valve from the existing 8-inch active Fremont main will be connected to the abandoned Howard Street main. To mitigate the situation the SFWD proposes to cut and cap the existing bypass such that the existing Fremont main is not connected the abandoned main in Howard Street.

Coordinate with SFWD to locate existing bypass and define the limits of excavation required to cap the existing bypass.

Excavate to expose bypass. Shore and plate per specifications. Restore per specifications.

Cutting and capping of the existing bypass will be by SFWD.

Kevin Chiu 5/4/2011 Pending approval by the TJPA, a CR will be issued.

U-0137	Verizon Ductbank conflict w/MH 701	Closed	05/03/2011	05/13/2011	05/10/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

M Squared's sewer potholing on Beale (Sta 0+30) has indicated a conflict between an existing Verizon duct bank and MH# 701 on Howard Street. See attached drawing. The ductbank is approximately 18" wide x 18" deep. It is 2'4" to the top and it is slurry encased.
Verizon underground locators have confirmed that this is live and serves Charles Schwabb building south of Howard on Beale Street.
Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/10/2011 Unforeseen condition, Verizon utility not shown in existing utility survey.

As suggested by Noel of (M Squared) during a site visit on 5/3/11 with W/O and AECOM, based on Noel's discussions with Mike Roybal (Verizon Field Engineer) and confirmed by AECOM based on follow up discussions with Mike Roybal (Verizon) and Pam Brown (Verizon), coordinate with Verizon and remove existing concrete encasement from existing duct to expose conduit in area of conflict. As directed in the field by Verizon, remove concrete encasement around duct from area in conflict to adjacent Verizon manhole. Move and support exposed Verizon conduit as required and directed by Verizon to construct manhole.

Coordinate with Mike Roybal (Verizon) at (415) 716-6736 such that a Verizon representative is present during the Verizon duct concrete encasement removal, moving and support install.

Restore Verizon duct to match existing concrete encasement following completion of sewer manhole.

U-0139	Existing Water Line on Beale in Conflict with New Sewer	Closed	05/09/2011	05/09/2011	05/10/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

Today while trying to execute the USAR for the existing 12" water line on Beale Dan Helminiak with SFWD informed Webcor/Obayashi and M Squared that the existing water line will remain active until the water tie in at First and Natoma is completed and the existing 8" is capped at First and Howard as shown on sheet U-3116.

The water tie in and capping of the existing line on First Street is currently being delayed by separate issues and it is unclear when this work will be completed.

Dan Helminiak suggested that the existing 8" water line running down Howard could be capped by the water department at one of the existing tees which would allow the decommissioning of the existing line on Beale.

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/10/2011 Please clarify the question(s).

Subject states "Existing Water Line on Beale in Conflict with New Sewer". Per U-1124 Demolition and Construction Sequence order, Beale Street sewer is to commence after existing water main in Beale Street is abandoned. Please clarify where and what the conflict is.

Also, please confirm the following:

1. Is the new 12" main along Howard Street between First and Main streets active?
2. Is the new 12" main along Beale Street north of Howard Street active?
3. Is the new 12" main along Beale Street south of Mission Street active?

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
U-0139.1	Cap (E) Water on Howard @ Beale	Closed	05/16/2011	05/26/2011	05/24/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

-New 12" water main along Howard between First and Main is active.
-New 12" water main along Beale Street North of Howard is active.
-New 12" water main along Beale Street South of Mission is active.

Per U-1124 Demolition and Construction Sequence order, Beale Street sewer is to commence after existing water main on Beale is abandoned.
- The old water line on Howard Streets and Beale Streets is currently not active because the valves on the line at First and Howard are currently shutdown. Dan from the water department has expressed his concern that anyone can just open these valves and fill the old line along Howard Street. He is also concerned that the valve is not 100% closed and that the SFWD cannot get a complete shutdown on the old line. This means when M Squared

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/23/2011 Coordinate construction of the cap on the old Howard St. main at the intersection of Main St. with SFWD as shown on U-3119.

Coordinate construction of the cap on the old Howard St. main at the intersection of First St. with SFWD as shown on U-3116 (latest rev per SK-U-0003 1/28/11).

Per discussions with SFWD inspector, the old Howard St. main has been capped at Main St, Beale St. (south of the cross) and at the Fremont St. by-pass connection by SFWD. Additionally, the two line gates at First and Fremont streets are closed and have been filled with concrete.

The caps at Main, Beale, Fremont in combination with the closed line gates at First St. will allow sewer installation on Beale St. to proceed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

removes the old water line on Beale Street in order to install the new sewer, it is possible that there will be a constant flow of water in the old line.

The suggestion from Dan is to cap the old water line on Howard Street so that When M Squared removes the old line on Beale Street there will be no possibility of water flow. A cap on the line at Howard would also confirm for definite that the old line on Howard and Beale Street is "abandoned".

Please provide direction for capping the existing water line on Howard so the sewer installation on Beale can proceed.

U-0140 **Proposed Changes by BLHP to S/L Conduit Run @ 2nd & Minna** **Closed** **05/11/2011** **05/21/2011** **05/20/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

During a field meeting on 5/10/2011 with Eric Zagol, AECOM and Robert Kawano, BLHP to discuss the alignment of the conduit run from 2nd St to the relocated S/L pole @ Stn 2+89, Robert Kawano asked that a splice box be installed in the sidewalk downstream from the connection point to PG&E¿s manhole. The box would serve as the connection point for BLHP to PG&E¿s power supply from 2nd St for the street light. Because of an existing sidewalk basement, which is located along the north side of Minna, east of 2nd St., it was agreed in the field that the splice box should be placed in the sidewalk just west of the new fire hydrant located @ Stn 0+93. There is already a pocket constructed in the sidewalk basement to accommodate the fire hydrant and Trinet will locate the splice box within this pocket structure. A sketch is attached depicting the proposed alignment of the conduit run and the additional splice box as discussed in the field. Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/19/2011 Per BLHP's request, furnish and install a CCSF DPW precast pullbox, cover, and lid per CCSF DPW Standard Plans and Specifications between the PG&E supply point and the relocated street light pullbox along Minna Street east of Second Street.

Location; confirm that a sidewalk pullbox will fit in the knock out space above the 121-123 Second St. sidewalk basement adjacent to the newly installed fire hydrant prior to construction.

Maintain minimum bends in conduit run per Specification 33 71 00.

U-0141 **Street Light Connection Point at Second and Minna** **Closed** **05/16/2011** **05/26/2011** **05/20/2011** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

In the response to our RFI # U-0016, Trinet was directed to connect the street lighting conduit on the west end of Minna into PG&E MH #1319 on 2nd St. At a field meeting on 5/10/1 with Eric Zagol and Robert Kawano, to discuss the alignment of the street lighting run for the relocated light on the west end of Minna, Eric advised that PG&E was contemplating a change in the connection point for this conduit run from MH 1319 to MH 1320. MH #1320 is located to the south of 1319 and further west towards the middle of 2nd St. Please confirm the connection point on 2nd St for the street lighting conduit.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

5/26/11 UPDATE

Supply point has been confirmed as PG&E EMH 1320. Coordinate connection location with PG&E Field Engineer.

Eric Zagol 5/19/2011 Related to Joint Trench changes and PG&E's de-energization of Minna Street after the response to RFI U-0016 was provided, PG&E has revised their electrical plans with respect to EMH 1319 and has indicated that the preferred location for new street light power would be EMH 1320.

In accordance with U-3201 Note 7, AECOM considers this RFI as the request to coordinate connections with BLHP and PG&E through the TJPA representative for new street light circuit connections. AECOM and the TJPA Representative are in the process of coordinating Street Light Service Orders with BLHP and PG&E. Once the Service Order is processed the final connection point will be provided.

U-0142 **Concrete Specifications for Sidewalk Replacement @ 555 Mission** **Closed** **05/16/2011** **05/26/2011** **05/18/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Kevin Chiu

Co-Author:

REQUEST:

The sidewalk concrete @ 555 Mission (on Minna) is not the typical San Francisco sidewalk mix design. It is a colored concrete with what appears to be a sandblasted finish. Please provide the concrete specifications for repair and/or replacement of the sidewalk in this area.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Kevin Chiu 5/18/2011 Sidewalks shall be constructed of a dark gray, Hi-con @ 5 lbs. per cubic yard carbon black based concrete finish, with 25 to 30 lbs. per 100 square feet of silicon carbide sparkle grains. The surface of the concrete shall be washed and rinsed using a stiff brush, and if necessary shall be sandblasted to remove the concrete surrounding the aggregate to minimum depth of 1/8 inch.

U-0143 **Demolition of PG&E Duct Bank Alongside (N) 18" Sewer Main on Minna** **Closed** **05/16/2011** **05/26/2011** **05/20/2011** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

During excavation and shoring for installation of the 18" Sewer main along Minna St., between the (E) electrical vault @ Stn 1+80 (demolished) and (N) manhole # 201, Trinet was unable to save the entire length of the existing PG&E duct bank (currently abandoned), which runs along the south side of the sewer trench. Between stations Stn 0+95 and 1+25 (approx.) the duct bank had veered into the sewer trench and had to be demolished - see attached sketch. Please review and advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/19/2011 U-1107 (rev 2 3/16/11) indicates that the existing 6-4" PG&E duct is to be protected in place.

2 of the 6 existing 4" conduits will be utilized by PG&E to provide temporary construction power to W/O Skids 1 and 2 along Minna Street.

Mandrel existing conduits east of STA 1+25 to STA 1+70 (where new conduit caps were to be installed per contract) to confirm that the existing conduits that were to be protected in place have no blockages.

Coordinate with PG&E as STA 0+95 is exposed to determine which 2 of existing 4" conduits will be utilized for temporary construction power.

Furnish and install 2-4" conduits concrete encased to replace those that were removed during sewer construction. Connect new conduits to existing that will remain to provide temporary construction power.

U-0143.1 **(E) PG&E Duct Bank from EMH #1320 to Demolished EMH #1355** **Closed** **06/14/2011** **06/24/2011** **06/14/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

After further investigation of the existing PG&E duct bank between EMH #1320 and demolished EMH # 1355 (@ Anchor & Hope), Trinet found that there is only one unobstructed conduit between the two manholes. The unobstructed conduit is the one that already had a pull rope in place. Trinet had demolished a section of this conduit during excavation for sewer MH # 201 because it was in conflict with the shoring. Trinet replaced the damaged section (approx. 8 LF) on Saturday 6/1, and reconnected the pull rope in the conduit run. A sketch of the conduit run, depicting the section replaced, is attached. Please review and advise if one 4" conduit will be adequate from EMH #1320 to the west end of

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 6/14/2011 PG&E plans to use the existing conduit package to provide temp power to Skids 1 and 2. Mike Balmy of PG&E was notified and has confirmed that only 1-4" unobstructed conduit is required between EMH1320 and the cap at demolished EMH1355 for future temp power service.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

demolished EMH #1355.

U-0144 **PGE Vault conflict with 24" VCP on Beale** **Closed** **05/17/2011** **05/27/2011** **05/20/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

PG&E confirmed the location of the inside of the east wall of PG&E manhole 1702 at Howard and Beale Street. Allowing for a 12" thick wall, the vault will be in conflict with the proposed alignment of the future 24" VCP, even with moving the alignment 1' further east as directed in RFI U-0124. The conflict could be avoided by moving the alignment another 6" further east. However this will cause a conflict between manhole #701 and the existing 14" AWSS. Additionally the Verizon duct bank conflict increases(RFI#U-0137).
Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/19/2011 As discussed in the field on 5/18/11 with Jason Dunne (W/O) and Noel McCarthy (MSquared) the exact location of the existing PG&E MH outside wall and the existing AWSS is currently unknown.

Adjust locations of MH#701, MH#702, MH#704 and sewer alignment east as required (~6" as mentioned) for the 24" VCP installation (new and future) to avoid the existing PG&E MH however not in conflict in conflict with the existing 14" AWSS line.

Note, the existing AWSS line will be abandoned North of Beale Street STA 1+10.

Confirm alignment (2-10" VCP and future 24" VCP) will clear existing AWSS valve at STA 0+70.

U-0144.1 **PG&E Vault conflict with 24" VCP on Beale** **Closed** **06/30/2011** **07/10/2011** **07/01/2011** **Potentially** ☐

*** 5/31/11 Revision ***

Restore entire width of Minna street using concrete road base and ACWS curb to curb in accordance with Contract drawings and DPW Order No. 176,707 (and latest revision 178,940) Section 11.

5/27/11 Response:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please provide BBIIs traffic control plan and construction logistics plan for Minna St. during pre-trenching and CDSM shoring wall construction.

AECOM's specific questions are as follows:

1. What portion of Minna St. will be maintained for vehicular traffic during pre-trenching and CDSM wall construction? Please provide dimensions from face of north curb along Minna St.
2. Is a traffic barrier (k-rail or other) planned to be installed along Minna St. during pre-trenching and CDSM wall construction? Provide location, dimension from face of north cur along Minna St.
3. If a traffic barrier is planned, what is the schedule for the installation?
4. Once pre-trenching is complete will any of the pretrenching trench area be restored and used for vehicular traffic?
5. Once the CDSM shoring wall is constructed will the traffic barrier move south and the vehicular area be widened? If so by how much? Please provide a dimension from the face of north curb along Minna St.

This information is critical in order to provide a responses to this RFI as well as RFI U-147 and U-148 in an effort to determine how RUP will restore Minna St.; crowned or sloped, and how the Minna St. restoration conforms to the future Transit Center Minna St. design.

U-0146.2 **Pavement Reconstruction Plan for Minna Rev 2** **Closed** **06/02/2011** **06/12/2011** **06/07/2011** **Potentially** ☐

confirm pavement reconstruction can proceed per the attached detail..

ACWS between STA 2+30 and First Street shall be based on U-5101 Detail 6 and the limit of excavation required to do perform the Demolition and New utilities work in Minna Street. Conform to final saw cut lines as indicated in Detail 6.

U-0147 **Existing Top-Of-Curb Grades @ Minna Driveways for 575 Mission Building** **Closed** **05/27/2011** **06/06/2011** **06/01/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

The existing driveways entering the 575 Mission St building, are depressed between 2 ½" to 3" below the adjacent top-of-curb and sidewalk grades - see attached drawing depicting the driveways. This condition seems to be a consequence of repeated overlaying of Minna street, which has resulted in a curb height in many areas far less than the City standard of 6 inches. The street grade along the north side of Minna along the 575 Mission building ranges from 3 ½ to 4 ½ inches below top-of-curb grade.

Trinet has been directed in the field by Jason Chin, and by the Engineer in RFI #U-0146, to construct the new roadway with finish grade at curb line 6" below top-of-curb grade. This is consistent with City standard plan # 87,169. The new roadway grades will result in 3" to 3 ½" of exposed curb height at the driveways to 575 Mission, which is considerably deeper than the 1" called for in the San Francisco standard plans for driveway construction (plan # 87,171). It will also not be possible to raise the street grade at the driveways without impeding road runoff drainage and causing ponding.

Please review and advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/31/2011 Restore pavement along existing curbs and driveways along the north side of Minna St. in accordance with Contract drawings and DPW Order No. 176,707 (and latest revision 178,940) Section 12 to match existing flow line elevations at curbs and driveways shown on U-1001. 6-inch curb and driveways along Minna St. will be reconstructed at a later date as part of the Transit Center Project.

U-0148 **Pavement Reconstruction Plan for West End of Minna Street - Stn 2+15 to 2nd St** **Closed** **05/27/2011** **06/06/2011** **06/07/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author:

REQUEST:

Please provide a pavement reconstruction drawing, or typical cross section detail, for the west end of Minna St from Stn 2+15 to 2nd St. Trinet had planned to reconstruct the street in this area from curb to curb. We find however, that there is a grade difference of approximately 6 inches between top-of-curb on the north side of the street and the south side, with the south side being at the higher grade. The construction detail approved in RFI #U-0146 (Trinet #094) cannot be utilized in this area, because the street already has a cross slope of approx. 2% from south to north.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 6/7/2011 See response to RFI 146.2

U-0151	Additional Sewer Lateral Connection for 100 1st Street	Closed	06/02/2011	06/12/2011	06/08/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

Trinet has discovered an additional sewer lateral for the 100 1st Street building which was not connected to the new 24" sewer main - see attached sketch. The lateral is located at sta. 7+09 and services a single toilet and the rear of the building. This lateral was not shown on the plans and there was no vent in the sidewalk to indicate the existence of a lateral. Trient potholed the lateral in the sidewalk and a 4" cast iron lateral, a 4" cast iron trap and a 4" cast iron vent pipe capped 2' below grade. Please confirm Trinet is to tie the lateral into the new 24" sewer main on Minna. Also, please advise what is to be done with existing cast iron trap and vent pipe assembly which are not up to current DPW standards.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 6/8/2011 In accordance with U-3000 General Note 12, contractor was to verify that there are no active sewer lateral connections to the existing sewer prior to sewer demolition.

Please provide the elevation of the existing sewer lateral and the location of existing 4" cast iron vent pipe for review.

Renewal of this lateral will be discussed with TJPA and 100 First St. property owner, final direction forthcoming.

U-0151.1	Additional Sewer Lateral Connection	Closed	06/29/2011	07/09/2011	07/05/2011	Potentially	☐

From: Webcor Construction LP Jonathan Flaming **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

This is a follow-up to the request by the Engineer in his response to W/O RFI #U-0151 (Trinet RFI #097) for

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 7/5/2011 In reference to RFI-151 and 151.1:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

additional information relating to the 2nd sewer lateral connection for the 100 1st St building. Trinet also clarifies the issue of the existing 4" trap on the line, which was raised in the original RFI.

The sewer lateral is located @ Stn. 7+09 and the invert elevation of the 4" cast iron sewer lateral pipe at face-of-curb is 14.6'. The elevation for the top of the new concrete encased ductbank @ Stn 7+09 is 13.85'. The sewer lateral was therefore not in conflict with the new joint trench utilities.

With regards to the existing 4" trap on the line, Trinet checked with the SF Plumbing department which adviced that a 4" cast iron trap was adequate for a 4" sewer lateral. The existing trap was therefore in compliance with the SF plumbing code. Trinet advised Jason Chin of this in the field and he agreed that the trap did not need to be replaced.

The 4" cast iron vent pipe for the trap did not extend to street level but was capped-off approximately 18" below grade. Per field discussions with Jason Chin, Trinet extended the trap vent piping to grade and installed a street vent frame & cover in the sidewalk.

1. Reconnect existing lateral to new 24" Minna St. sewer in accordance with SFDPW Standard Plan 87,196.
2. Extend fresh air inlet and air inlet cover to existing sidewalk grade.

U-0152 **Alternate Manhole Testing Method** **Closed** **06/02/2011** **06/12/2011** **06/07/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

Spec section 03 40 10 3.1 E directs the contractor to test all manholes hydraulically by exfiltration testing.
M Squared proposes the use of the vacuum method of testing manhole sections instead of the above method (See attached)
This vacuum method is in accordance with ASTM C1244.

Please advise if this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 6/7/2011 Vacuum method in accordance with ASTM C1244 is acceptable for testing of sewer manholes.

U-0153	**Concrete Slab and Rail Ties Conflict with Sludge Line on Howard**	**Closed**	**06/03/2011**	**06/13/2011**	**06/21/2011**	**Potentially**	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

While potholing for the sludge line alignment along Howard Street between Beale and Main at Sta 18+00 and Sta 19+42 M Squared discovered the presence of wooden rail ties and concrete slab (see attached photos).
These are possibly the same ties and slab that M Squared encountered while installing the water line on TG04.3.
They are in direct conflict with the proposed location of the new sludge line along Howard Street.
Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 6/21/2011

*** 6/21/11 Update ***

Based on follow up discussions with W/O and M2, and further understanding of the extents of the concrete slab and wooden rails ties found further West (Howard and Fremont streets TG04.3), remove and dispose of concrete and wooden rail ties as required to construct 12" sludge line.

Eric Zagol 6/8/2011 Pothole at STA 18+00 to determine the extents (southern and northern) of the concrete slab and wooden rail ties. Submit pothole data for review.

U-0154	**Electrical Service for Street Lights on Natoma**	**Closed**	**06/08/2011**	**06/18/2011**	**09/01/2011**	**Potentially**	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor Construction LP Chris Lotti

Co-Author:

REQUEST:

Per Sheet U-1120 the electrical service feeding the street lights on Natoma is to be demolished, see attached. This conduit has been exposed through the investigative trenching process on First, confirmed dead and remove. As a result the existing street lights on Natoma are without power. There are no details provided in the plans for reestablishing power to these street lights now that the demo is complete.

Please advise.

SUGGESTION:

Eric Zagol 6/20/2011 Natoma Street street light power renewal to be addressed via ASI 014 forthcoming.

ANSWER: **Accept Suggestion:** ☐

Change Request No. U-043R1 -Renew Natoma Street Light Power Supply (ASI No. 014) [30100.03] - Force Account issued 9/13/2011.

U-0155	**AWSS Cast In Place Concrete Testing**	**Closed**	**06/20/2011**	**06/30/2011**	**06/28/2011**	**Potentially**	☐

From: Webcor Construction LP Jonathan Flaming **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Kevin Chiu

Co-Author:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

The AWSS Specification section 03300-2, Cast-In-Place Concrete 1.5 C (Quality Assurance) states that the concrete testing will be performed by an agency employed by the TJPA.

However, 03300-10, 3.9 B (Field Quality Control) states that the concrete testing will be performed by the City Testing and Inspection Agency.

Please advise who will be preforming the cast in pace concrete testing.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Kevin Chiu 6/28/2011 The TJPA employed testing agency will provide concrete testing per 03300-2, 1.5C.

Michael Smith's (SFDPW) response, "TJPA can have testing performed or set funding in place for testing by SFDPW's testing lab," dated and signed on 6/27/11 (see attached).

U-0156 **Sink Hole under road base at MH#701** **Closed** **06/21/2011** **07/01/2011** **06/22/2011** **Potentially** ☐

From: Webcor Construction LP Jonathan Flaming **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

While excavating for MH#701 M Squared discovered what appears to be a large void under the street base adjacent to the west wall of the MH#701. We estimate the void to be approximately 3' wide and 12' long. This may be a hazard as the street base may collapse at some point in the future.

Please advise how you would like to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 6/22/2011 Unforeseen existing condition not clear if directly related to the Relocation of Utilities Project work.

AECOM suggests that the existing pavement be removed over the area of the sink hole and conditions be evaluated.

Once existing utilities are determined to be secure, backfill with a sand cement slurry and restore pavement in accordance with SFDPW Standard Plans and Specifications.

Kevin Chiu 6/22/2011 Coordinate repair of sink hole with TJPA representative. Repair work to be paid under CR U-039

U-0157 **Pressure Testing for Sewer Manhole #'s 501 & 502 on 1st St.** **Closed** **06/28/2011** **07/08/2011** **07/08/2011** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Jonathan Flaming **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

This RFI is a follow-up to discussions in the field with AECOM and the SFDPW Inspector and Trinet, regarding Trinet's inability to perform a pressure test on sewer manholes 501 & 502 on 1st St. due to field conditions. MH #502 is constructed around the existing 3x5 brick sewer on one side (per SF Standard Plan #87,184) and Trinet has no means of plugging the brick sewer effectively to withstand a pressure test.

In the case of sewer MH #501, the original design was similar to MH #502 and a pressure test would not have been possible. The revised design (see attached drawing) includes a temporary 24" corrugated PVC pipe stub extending south from the manhole and connecting to the existing 3x5 brick sewer. The inside of the temporary 24" pipe stub is also corrugated, and therefore cannot be sealed with an inflatable pipe plug, as would be required to perform a pressure test of the manhole structure.

Please confirm that a pressure test will not be required for sewer manholes 501 & 502 on 1st St.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 7/8/2011 Confirmed. Pressure tests for sewer manholes #501 and #502 are not required due to the restrictive conditions.

U-0158 **MH #301 Location** **Closed** **07/15/2011** **07/25/2011** **07/20/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

During our sewer work at 2nd and Natoma M Squared discovered that the Telecom Vault shown on the drawings is in fact significantly larger in the field than is shown on the plans. In order to be able to shore for MH#301 construction M Squared has had to move the location of MH four (4) feet east along Natoma. As a result the jack and bore alignment is now a few inches south of what is shown on the plans.

Please confirm that these adjustments are acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 7/20/2011 Adjustments proposed are acceptable.

Since the adjustment pushes the MH and cover into the crosswalk path of travel, in lieu of CCSF DPW Standard MH cover, provide an ADA complainant cover that meets the following specifications:

1. MATERIAL - The cast iron shall be in accordance with ASTM "Standard Specifications for Gray Cast Iron Castings" Designation A 48, Class 30. The tinsel strength shall be considered the primary test for qualification.
2. FINISH- STANDARD FINISH SHALL BE RAW, AS

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

CAST, AND YIELD A MINIMUM COEFFICIENT FOR FRICTION OF .6 OR BETTER IN WET OR DRY CONDITIONS.
3. CASTINGS - SHALL BE FREE OF BLOW HOLES, FLASHING, GRIND MARKS, AND OTHER SURFACE BLEMISHES.
4. Cover shall incorporate a "pic-hole" for lifting purposes.
5. ADA COMPLIANCY- CASTINGS SHALL HAVE HOLES NO GREATER THAN ½" IN THE DOMINANT DIRECTION OF MOTION, NO VERTICAL RISE OF GREATER THAN ¼", IF THE RISE IS GREATER THAN ¼" THE RISE/RUN RATIO NEEDS TO BE 1;2 AND THE MAXIMUM HEIGHT SHALL BE 1/2".
6. Cover shall BE MADE TO FIT EXISTNG FRAMES OR be MACHINED to FIT EXITING FRAMES PER SFDPW STANDARD PLAN 87,190.
7. Cover should be MADE of quality EQUAL TO OR GREATER then THE PRODUCTS MADE BY D&L Foundry or Equal, see attached product data sheet.

U-0159 **Unknown Concrete Structure In Conflict with Sludge Line on Mission** **Closed** **07/28/2011** **08/07/2011** **08/16/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

While potholing at the locations shown on the attached drawing M Squared discovered what appears to be a concrete wall under the parking strip. M Squared excavated both potholes 7' deep and at that depth the wall appeared to be continuing deeper. This concrete structure is in direct conflict with the proposed location of the new sludge main on Mission Street. The concrete curb on the north side of Mission St also extends 7' deep.

See attached pothole findings.

Please advise on how you would like to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 8/16/2011 In accordance with specification sections 000810 and 020630, please submit for review locations and findings for all potholes performed along Mission Street associated with the Sludge FM.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
U-0159.1	Conflict with Sludge Line Conflict on Mission	Closed	08/26/2011	09/05/2011	09/13/2011	Potentially	☐

REQUEST:

M Squared potholed the location of the existing FM to the limits in the drawing provided in the response to RFI U-0160.1. M Squared located the FM within this pothole.

See attached pothole findings.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Unforeseen condition, location of existing Sludge FM in the field varied from that shown on the drawings. Refer to SK-U-0021 and SK-U-0022 attached showing the revised horizontal and vertical alignment to accommodate connection to Sludge FM as located in the field.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please direct M Squared how to proceed.

U-0161 **Unknown Concrete Structure in Investigative Trench** **Closed** **07/29/2011** **08/08/2011** **08/01/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

M Squared discovered an obstruction in the Beale Street investigative trench on station 2+55 approximately 25' west of centerline. The obstruction appears to be a 2'-3' thick concrete wall starting directly below the street base and extending down to an unknown depth. M Squared began demoing the obstruction yesterday believing it was part of a concrete encased PG&E trench. It is now known it is not part of any duct package.
Please advise on how you would like to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 8/1/2011 Unknown non utility structure. A similar structure was found in AECOM's subsurface investigation trench at Beale Street Station 2+80.52 as shown in Specification Section 020630 Appendix A.

Protect in place. Non utility structures (i.e. walls) within zone of CDSM shoring wall and Transit Center footprint are to be removed by Buttress/Shoring/Excavation (BSE) contractor.

U-0162 **Manhole #602 Orientation** **Closed** **08/03/2011** **08/13/2011** **08/09/2011** **Potentially** ☐

From: Webcor Construction LP Jonathan Flaming **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

The PG&E manhole at Station 2+55 is actually further south than is shown on the drawings. As a result of this the new water main on Natoma Street was installed in a different alignment than shown on the drawings. In order to excavate and shore for the new Manhole #602, without damaging the new water main M Squared will have to install the manhole at a different alignment than what is shown on the plans. M Squared will maintain the correct internal manhole dimensions per DPW standard drawings.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 8/9/2011 Construct sewer MH #602 to avoid existing water main as shown in the sketch provided. Maintain internal manhole dimensions, wall thickness, and steel reinforcement per DPW Standard Plans #87,182.

U-0163 **Utilities Demolition Plan** **Closed** **08/04/2011** **08/14/2011** **08/24/2011** **Potentially** ☐

From: Webcor Construction LP Jonathan Flaming **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author:

REQUEST:

The submittal TG04.4 - UG1020-024100B01 Utilities Demolition Plan was returned to M Squared marked "Revise & Resubmit".
The review note was: Please provide demo and sequencing plan per specification 02 41 00 Part 1.3A.

M Squared is unable to acquire the necessary utility abandonment schedules from the utility companies concerned.
Please provide us with a schedule showing when each of the utilities is to be abandoned by the relevant agencies. Once this has been provided M Squared will be able to provide the sequencing plan per the specifications.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The intent of the submittal comment was to reference specification section 024100 1.3A requiring the contractor to submit a utilities demolition and construction sequencing plan showing commencement, order, sequence and completion dates for approval prior to commencing with the demolition of existing utilities. The schedule submitted didn't include sequencing of the new work.

U-0164 **Beale Investigative Trench Limits** **Closed** **08/09/2011** **08/19/2011** **08/10/2011** **Potentially** ☐

From: Webcor Construction LP Jonathan Flaming **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor Construction LP Jonathan Flaming

Co-Author:

REQUEST:

Sheet U-1008 shows the limits of the investigative trench on Beale Street (south of Mission St) to be 56' in total. 41.1' from center going west and 14.9' from center going east.
By going 14.9' from center with the eastern portion of the investigative trench M Squared will not encompass the existing water line and the existing AWSS line as they are outside the limits of the 14.9'.

Please direct M Squared how to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 8/9/2011 Excavate investigative trench in accordance with contract documents as shown on U-1008. Demolish, cap and plug existing 12-inch water and 10-inch HPW (AWSS) as shown on Sheet U-1125.

U-0165 **Sewer Lateral to 92 Natoma** **Closed** **08/09/2011** **08/19/2011** **08/10/2011** **Potentially** ☐

From: Webcor Construction LP Jonathan Flaming **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

While installing the new sewer on Natoma Street from 2nd to the shoring wall M Squared noticed that the sewer lateral to 92 Natoma is a new VCP lateral and has been installed in the last 12 months.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 8/10/2011 It is acceptable to protect existing lateral and provide a permanent connection to the new 24-inch VCP main in lieu of replacing the lateral as shown on Plans.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

The contract drawings show M Squared replacing all sewer laterals on Natoma from 2nd to the shoring wall, however this lateral appears like it does not require replacing.
Jason Chin (BCM) has been made aware of this issue.

Please confirm it is acceptable to leave this lateral in place and perform permanent connection to the new 24'' VCP main.

Notes
Please provide credit for contract work not completed.

U-0166 **Broken Culvert Pipe Encountered in Utility Demolition Trench on Fremont St.** **Closed** **08/19/2011** **08/29/2011** **08/24/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

During trenching for demolition of the electrical ductbank along the east side of Fremont St Trinet crossed a 10" culvert pipe (@ Stn 5+05) from the existing catch basin on the east side of the street at Stn 5+05. The section of clay pipe exposed is cracked in several places and half the bell of an exposed joint is missing. Please advise if the owner will need the broken pipe section replaced before the trench is backfilled.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Replace damaged pipe section per direction of SFPUC inspector prior to trench backfill.

U-0167 **Culvert Run to MH#306** **Closed** **08/22/2011** **09/01/2011** **08/24/2011** **Potentially** ☐

From: Webcor Construction LP Jacob Giannandrea **To:** Turner Construction Compan Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

See attached sketch.

Please confirm that it is acceptable to tie the 10" culvert run into the new MH#306 instead of running the culvert to the existing MH.

If this change is acceptable please advise if it is necessary to connect the existing 3'X5' sewer to MH 306 or if the existing sewer should be abandoned.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Connect new 10" SD culvert from CB#306 to SMH#306.

It is no longer necessary to connect existing 3'x5' brick sewer to SMH#306 as shown on U-5001 Detail 6. Abandon in place existing 3'x5' sewer and existing sewer MH at STA ~2+40 in accordance with CCSF DPW Standards.

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

See attached photo showing conflict with location of new CB#703 and unknown underground concrete structures. They appear to be the same structures discovered in the investigative trenches on Beale Street.

Please confirm that it is acceptable to put the new CB in the same location as the existing CB which has been removed.

It is acceptable to construct CB#703 in the same location as existing.

Please coordinate the depth of the sewer culvert with proposed PG&E Phase II work as shown on U-2037. Submit proposed culvert profile with elevations of the existing PG&E electrical ducts as pot holed that are to be capped in Phase I (U-1125) and connected to in Phase II (U-2037).

U-0169.1 **CB#703 Location** **Closed** **11/15/2011** **11/25/2011** **11/23/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Steve Cunningham **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

- CB#703 was constructed in the location of the existing catch basin.
- See attached profile with culvert elevations. Culvert was installed deeper as several utilities were lower than shown on the drawings.
- Per M Squared¡¦s response to comments made in the RFI #U-0181, one of the duct banks shown on the drawings could not be located and was not as shown on the drawings. The alignment of the other duct bank is also different than what is shown on the drawings. (See attached) The depth of this duct bank at the point where M Squared capped it (3' south of the unknown concrete structure) was 6' 8" to the top. Its location/alignment beyond that point are unknown.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Please provide the invert elevation of constructed 10" culvert at CB#703. Based on the sketch provided in the RFI169.1, the 10" culvert was reversed slope. A culvert with reversed slope is not acceptable.

Co-Author:

REQUEST:

Per the response to RFI #U-0176 a field meeting was attended by Michael Smith and M Squared.
M Squared received direction to perform additional potholes further west of First St on Howard St.
Please see attached pothole findings.
Please advise how you would like to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Michael Smith's (SFDPW) response,
"Please refer to commnets on attached sheet.
SFDPW Response:
This conflict between the existing AWSS line and utilities at the original
design location are unforeseen field conditions due to incorrect information
being furnished to the City. Thus the motorized gate valve vault is being
relocated west of the original location. The contractor shall pothole 10-feet
west of Pothole No. 1B and 10-feet east of Pothole No. 1A to verify that there
is adequate clearance for installing a horizontal offset and motorized gate
valve vault the approximate location of Pothole No. 1A. Please notify the
engineer of the potholing schedule in order that we can request the majorutilities toattempt to identify the 4-inch steel pipe running parallel on Howard Street."
Signed and Dated 11/18/11 (see attached)

U-0176.2 **AWSS Conflicts @ Location 7** **Closed** **01/18/2012** **01/28/2012** **02/16/2012** **Potentially** ☐

U-0177	Ductbank Demo on Fremont St	Closed	10/04/2011	10/14/2011	10/10/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo

To: Turner Construction Compan Steve Cunningham

Answered By: AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

See attached sketch.
The duct bank shown on Fremont Street to be demolished is in fact underneath the curb and gutter and portion of the sidewalk on Fremont St.
In order for M Squared to remove this duct bank it will require us to close the west sidewalk on Fremont St, demo and remove the sidewalk, remove the ductbank and then replace the sidewalk.
Currently the east sidewalk is closed also due to BBI activity.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 10/6/2011 Coordinate with PG&E to confirm the duct indicated in the M2 sketch is PG&E's 6-6" duct from PG&E's EMH 7605.

Demolish and remove the 6-6" duct segment between STA ~2+40 (at the gutter) and the demarcation line south of shoring wall. The intent is to remove the segment within Natoma Street. The segment south of STA 2+40 (STA 2+40 to STA 1+85) can be abandoned in place.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please advise how you would like to proceed.

Provide cap at STA 2+40 instead of STA 1+85 shown in the plans.

PG&E will break in and connect to the existing 6-6" duct at STA 1+85 as part of PG&E's Phase II relocations.

U-0178 **Sludge line layout on Mission between Beale and Main** **Closed** **10/04/2011** **10/04/2011** **11/08/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Steve Cunningham **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

Continued potholing on Mission Street between Beale and Main has revealed additional grade conflicts on the proposed alignment for the new 12" steel sludge line. Some of the utilities are not as shown on the drawings nor marked in the field by USAN. See attached sketches.

Please advise if M Sqaured is to continue potholing on Mission Street as it may be necessary to excavate the entire length of the trench between Beale and Main to locate and map all conflicts.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 11/7/2011 Modifications to the 12" Sludge FM are currently being evaluated under ASI-018. Revised plans and specifications forthcoming following redesign and execution of ASI-018.

U-0179 **AWSS Main line conflicts at Location 7** **Closed** **10/05/2011** **10/15/2011** **11/21/2011** **Potentially** ☐

Co-Author:

REQUEST:

Some of the existing utilities are not shown on the drawings and have been installed on top of the existing 12" AWSS line. Due to the proximity and volume of these utilities it is not possible to even hand excavate down to the existing AWSS line to verify its location and depth. Please see attached pothole information.
Please adivse.

SUGGESTION:

the following response received 10-17-2011 does provide direction in this matter:
It shall be the contractor's responsibility per the Contract Documents to perform the required potholing in order to identify the existing AWSS facilitieis prior to actual excavation.
Background utility information was provided by

ANSWER: **Accept Suggestion:** ☐

UPDATED RESPONSE (11/18/11)
Michael Smith's (SFDPW) response,
Refer to comments on attached sheet. These comments supercede
response provided on 10/17/11.
SFDPW Response:
This conflict between the existing AWSS line and

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

TJPA/consultatns and shall be verified in the field by contacting Underground Service Alert (USA). Direct conflicts oted during potholing shall be directed to the utility owner(s) for relocation/removal as required to perform the contract work.
NOTE: email from Rick Buellesbach 10-18-2011 requests an answer to the question.

utilities are unforeseen field conditions due to incorrect information being furnished to the City.
There are no design alternates at this location due to the necessity of removing the existing cross that was capped on the First Street side outlet to accommodate the utility relocation work for the proposed transit center.
The engineer will contact the owners of the utilities in conflict with the AWSS facility for resolution." Dated 11/18/11 (see attached)

U-0180 **Conflict with CB 305** **Closed** **10/10/2011** **10/20/2011** **10/17/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Steve Cunningham **Answered By:** Webcor Construction LP Richard Buellesbach

Co-Author:

REQUEST:

While excavating to install CB305 M Squared encountered a large unknown concrete structure. The concrete structure is in conflict with CB305. CB305 cannot be installed as planned. See attached photo.

Tsu-Ling with AECOM and Alberto with SFDPW reviewed the situation in the field and agreed the solution was to salvage the existing CB where CB 305 was to be installed. This work was performed on 10/7/2011 under the inspection of SFDPW.

Please confirm.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

As determined during a site visit on 10/7/11 with M Squared, AECOM, SFDPW and W/O; the existing unforeseen condition, a large concrete structure, is in conflict with CB 305 and the installation of a new catch basin would require an extensive amount of unforeseen demotion.

In lieu of installing a new catch basin barrel to replace existing, modify the existing catch basin as follows:

1. Clean interior walls and bottom.
2. Apply 1/2" think uniform layer of mortar on interior walls and bottom.
3. Install cast iron trap.
4. Install pipe culvert and connect to MH#305 as shown in Plans.

New culvert size and invert shall match existing culvert at catch basin. Use ductile iron pipe if depth of cover is less than 3 feet.

Co-Author:

REQUEST:

The sketch provided in response to RFI U-0182 does not provide adequate information to perform additional potholing. Please provide additional information.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 3/29/2012 Michael Smith's (SFDPW) response,

"Please refer to the attached sketch dated 3/16/12 for potholing the location shown in order to verify the existing AWSS main and that there there are no utility conflicts in the proposed vault location. The original loaction for the vault is impacted by utilites."

Signed and Dated (3/29/12)

U-0182.2 **AWSS - Conflict with AT&T Vault at Location 2** **Closed** **07/31/2012** **07/31/2012** **08/14/2012** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Per the response to U-0182.1, M Squared potholed the locations shown. See attached pothole data.
- The pothole 24' north of Mission appears to have a substructure underneath PGE duct banks.
- The pothole 12' north of Mission St had several utilities in them that have since been confirmed abandoned.

SUGGESTION:

Relocate the street light/ traffic signal conduits and shift the vault location 3 feet north away from the 12inch gas main. In doing so, this could potentially be the location for a cast in place concrete valve vault.

ANSWER: **Accept Suggestion:** ☐

Michael Smith's (SFDPW) response,

- Proceed as per Contractor's recommendation for locating motorized gate valve vault.

- Contractor shall field verify alignment of pipe North/South of proposed vault location for connection

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

into (E) lines.

Signed and dated 8/9/12. (See attached)

Per discussions between TCCo/PMPC/SFDPW, Contractor to trench the Second Street AWSS alignment per the attached sketch. Upon completion of trenching advise TJPA if there will need to be a change in material/fittings required to complete the AWSS installation work.

U-0182.3 **AWSS - Design Route at 2nd Street Intersection** **Closed** **02/06/2013** **02/16/2013** **02/28/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Per the response to RFI U-0182.2, M Squared has field verified a new alignment for the 16" AWSS at 2nd & Mission St. (See attached drawing).

Due to several PG&E conflicts this is the only available route capable of accepting a 16" pipe; M Squared is unable to locate an alignment per the sketch attached to the response to RFI U-0182.2. By proceeding with this alignment M Squared will again return the AWSS pipe through the structure of an AT&T vault and a PG&E Vault. It does not appear from our field work that there are other options for a workaround.

Based on information M Squared currently have attained from the trenching; restraining each joint, per the original contract will require the following:
- 4 additional 16-inch 45deg bends
- 2 additional 16-inch 90deg bends
- 1 additional 16-inch bell collar
- 15 additional stop collars
- 4 additional kickers/thrust blocks.

Please confirm the proposed route and additional fittings

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 2/12/2013 Response per Michael Smith, (SFDPW)
"Proceed as stated above due to existing conflicting utilities impacting original vault location."
Signed and dated 2/8/13 (See Attached). Contractor to verify material quantities required for the revised alignment once the proposed route is fully exposed. Pending TJPA approval, a CR will be issued for this work.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

and restraints are acceptable.

U-0182.4 **AWSS - Final Design Route and Additional Fittings List at 2nd Street Intersection** **Closed** **03/14/2013** **03/24/2013** **03/21/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Webcor/Obayashi Joint Ve Jackson Tukuafu

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Refer to drawing MA-3 and MA-13

Please refer to previous RFI 182 series for history.

As M Squared must connect to an existing 16" line at 2nd & Mission Street, M Squared performed additional trenching which has now opened up the possibility of a different and more straight forward alignment for 2nd Street piping.

This new alignment shall replace the alignment sent in the previous RFI-0182.3.

1. Please confirm the new alignment shown in the attached M Squared sketch SK-008.3 is acceptable.
2. Please confirm where the 16" to 12" reducer is to be located. The location of this reducer will decide whether M Squared will need to purchase two (2) more 16" 45-deg elbows or 12" 45-deg elbows.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Michael Smith's (SFDPW) Response,

"The suggested pipe layout based on recent excavations is acceptable.

-Locate the 16" x 12" reducer North of the 16" tee and as close as possible to the tee."

Signed and Dated 3/18/13. (See Attached)

U-0183 **AWSS Valve Vault Conflict at Location 1** **Closed** **10/24/2011** **11/03/2011** **10/26/2011** **Potentially** ☐

Co-Author:

REQUEST:

Per the response to RFI#U-0183 a site visit was held with SFDPW and SFWD on 11/2/2011 to review the conflicts at location 1. Please provide direction based on this meeting.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Michael Smith's (SFDPW) response,

"Refer to comments on attached sheets. These comments supercede comments provided on 10/26/11 for RFI U-0183.

SFDPW Response:

Motorized gate valve vault: Per the preliminary excavation at Pothole No. 2 and the provided information, verify 2 1/2-inch steel for ownership and request owner should there not be adequate space to install vault due to the existing electrical duct bank shown in Pothole No. 3 drawing. Notify engineer to provide revised drawing(s) for AWSS fittings should vault need to be moved west. Notify engineer should vault interior dimensions need to be reduced after providing a minimum of 3-inches clearance with other utilities and the vault constructed with 12-inch thick walls.

Controller cabinet: Per the preliminary excavation at Pothole No. 7 and the provided information, install the controller cabinet concrete foundation at this site.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Notify MCI that either their conduit can remain with the controller foundation installed over the conduit with 4-inches clearance or that they can relocate their conduit as required. Modify bottom of controller foundation to accommodate a clearance of 4-inches should the conduit not be relocated.

Battery vault: Per the preliminary excavation at Pothole No.6 and the provided information, field verify the installation of the battery vault by locating the northern edge of the vault 2-feet towards the curb."

Signed and Dated 11/15/11 (see attached)

U-0190 **Fire Hydrant Location on Mission @ First** **Closed** **01/10/2012** **01/20/2012** **01/19/2012** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Steve Cunningham **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

While potholing for the new Hydrant and associated piping in the sidewalk on Mission Street (see attached), M Squared's crews damaged the roof of the basement to Portico Restaurant, 88 First Street (see attached photos). This basement structure was not noted on the plans and is a differing site condition.

The roof of the basement will now need to be repaired. Please provide direction and repair details for this work.

It is not possible to locate the fire hydrant in this area due to the presence of the basement. The existing hydrant has a column poured into the structure of the basement (see attached).

Please advise on how you would like to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Michael Smith's (SFDPW) response,

-Repair of sidewalk at pothole location: Refer to attached directions from William Liang- SFPDW/EST for repair method.

-New Hydrant lateral shall be located in the (E) hydrant alignment. (E) Hydrant is located in an areaway. Refer to AWSS standard drawings for details. SFDPW will provide revised drawing for (N) lateral prior to construction.

Signed and Dated 01/18/12

Response for Concrete Repair per William Liang (SFDPW) .

Chip out concrete inside of saw-cut area; do not damage (E) rebars.
If (E) rebars are found to have been cut during the saw-cutting process, chip out enough concrete around the cut rebars for installation of Lenton Quick-Wedge Splicing system at both ends; splice new rebars with size to match (E). If (E) rebars are found to be intact, proceed to Step 3.
Install keyway around perimeter of opening (keyway shall be a minimum 1.5 (below top of slab), install swellable water stop (Greenstreak Hydrotite CJ -0725) in keyway.
Form and pour with Emaco S66 CI by BASF. Perform surface preparation and provide curing in accordance with manufacturers recommendations. Note:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

continuous special inspection shall be provided for the concrete pour."

U-0190.1 **Fire Hydrant Location on Mission @ First** **Closed** **01/25/2012** **02/04/2012** **01/26/2012** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Steve Cunningham **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

On 1/24/2012 M Squared began repairing the basement roof per the response to RFI U-0190. SFDPW engineer William Liang came out and review the progress that day and provided alternate direction in the field. Please provide this direction in writing so work may resume.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

No alternate direction was given at 1/24/12 site visit by SFDPW engineer. SFDPW provided information and direction to supplement the direction given in response to RFI U-0190 based on his observations in the field. Existing rebar was found to be uncut but lacking sufficient concrete cover. Please see supplementary instruction below.

Per William Liang of SFDPW,

1. Chip out concrete inside of saw-cut area; do not damage (E) rebars,

2. (E) main rebars are found to be intact but have insufficient bottom concrete cover; (E) wire-mesh above the main rebars are found to have been cut during the sawcut process. Install 3-#4 dowels @ 12"o.c. max set in epoxy along three sides w/ 6" embedment into (E) concrete (see attached photo), maintain 6" max from corners, epoxy shall be SIMPSON SET-XP or HILTI HIT-RE500-SD.

3. Install swellable waterstop (Greenstreak Hydrotite CJ-0725) above installed dowels, provide min 1.5" concrete cover.

4. Form and pour w/ Emaco S66 CI by BASF (see attached cut sheets). Perform surface preparation and provide curing in accordance w/ manufacturer's recommendations.
Note continuous special inspection shall be provided

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

for the dowel installation and concrete pour.

ORIGINAL RFI U-0190 RESPONSE FOR REFERENCE

1. Chip out concrete inside of saw-cut area; do not damage (E) rebars.
2. If (E) rebars are found to have been cut during the saw-cutting process, chip out enough concrete around the cut rebars for installation of Lenton Quick-Wedge Splicing system at both ends; splice new rebars with size to match (E). If (E) rebars are found to be intact, proceed to Step 3.
3. Install keyway around perimeter of opening (keyway shall be a minimum 1.5" below top of slab), install swellable water stop (Greenstreak Hydrotite CJ -0725) in keyway.
4. Form and pour with Emaco S66 CI by BASF. Perform surface preparation and provide curing in accordance with manufacturers recommendations. Note: continuous special inspection shall be provided for the concrete pour."

U-0190.2 **AWSS - High Pressure Fire Hydrant Location on Mission @ First Street** **Closed** **11/21/2012** **12/01/2012** **11/26/2012** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

Please refer to drawing MA-15 and response to RFI U-0190.

As a result of differing site conditions between Sta 8+50 and 9+00, the new location of the HP fire hydrant shown on drawing MA-15 is to remain in the existing location per response to RFI U-0190.

Please provide a detail drawing showing the new hydrant

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 11/21/2012 Response per Michael Smith (SFDPW),

"Please find attached a sketch for changing the design for replacing the existing HP hydrant at the above location.

The existing hydrant is in an "areaway" since the property at this location has a basement that extends

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

lateral with all SFDPW requirements for HP hydrants in an areaway.

under the sidewalk.

The proposed new hydrant off the proposed 16" DI main will be replaced in this "areaway" structure. Please see attached sketch. The originally proposed hydrant lateral that bends 90-degrees as shown in the contract documents drawing MA-15 will be deleted from the work scope. There is no change in work for drawing MA-5. The attached drawing HPL-5142.1 is also shown on the AWSS standard drawings which are part of the contract work.

The contractor is cautioned to use extreme care in this area due to the basement below and to prevent issues with water leakage from the street/sidewalk."

See attached.

U-0191 **Power Source at Location #1, #2 & #7** **Closed** **01/16/2012** **01/26/2012** **02/27/2012** **Potentially** ☐

Co-Author:

REQUEST:

Recent meeting on the AWSS project resulted in the response to RFI#U-0191 being revised to include a procedure to be followed once the controller cabinets were ready to accept power. However, what was sent in the revised response was a new scope of work followed by the mentioned procedure.

The contract drawings show M Squared's work beginning at pull boxes and going to the controllers. M Squared's interpretation of the drawings sent in the revised response

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Cory Traylor 5/1/2012 In accordance with PG&E Greenbook standards and practices, power connections for motorized gate valve equipment shall be installed at the referenced locations per the attached PG&E sketches, directions and requested equipment requirements. Work not outlined in the attached documents shall take place per contract drawings.

Final coordination for connections shall take place in

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

to RFI#U-0191 is the scope of work that goes from the pull boxes to PG&E manholes. This is unclear because the PG&E drawings are not comparable with the contract drawings.

Please clarify the intent and scope of the PG&E drawings. Please clarify how the PG&E drawings correlate with the contract drawings.

the field per note 7 on drawings MA-29 and MA-31.

Connecting for power per the attached PG&E sketches/direction has been approved by SFDPW-Bureau of Engineering.

U-0191.2 **Amperes Interrupting Capacity (AIC) at AWSS Location #1 (Market St.)** **Closed** **05/23/2012** **06/02/2012** **06/21/2012** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Steve Cunningham **Answered By:** Transbay PMPC Cory Traylor

Co-Author:

REQUEST:

Please refer to RFI U0191.1 and the attached drawings MA-1, MA-29 and MA-31.

1. As per response to RFI U-0191.1, the SFDPW-Bureau of Engineering sketches and letter for the AIC only addresses the motorized gate valve number 21 at Location #7. As new power service will be required at gate valve number 2, Location 1, please provide an AIC letter for this location.

2. Please provide a conformed drawing of the the PG&E clarification sketches provided in RFI U-0191.1 by revising the drawing sheet MA-29 and MA-31, respectively. It is unclear from the PG&E sketches whether the scope from the original contract drawings (MA-29 and MA-31) have changed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Request 1. - Please see attached file for Location 1 labeled "555 Market St. AIC.pdf" letter.
Request 2. - Please see attached PDF file "comments_transbay.pdf" containing comments from Matt Herron of PG&E clarifiying the scope of work for the PG&E power connection points at locations #1 and #7.
Also, please see information on location of manhole #5414 below per PG&E Matt Herron below;"The Vault 5414 is in the South Side, sidewalk of Market St. about 10' East of the West Property of 555 Market St. There are large vaults IFO 555 Market St. identified as 7300-P/7301-P/7302-P, Vault 5414 is roughly 30' West of those vaults."

Please contact Matt Herron of PG&E when sub-contractor is ready for a PG&E crew to mark the location for the core. Also, Please give Matt Herron two weeks notice when sub-contractor would like to core drill into the vault. This two weeks notice is to allow PG&E to set up and schedule a crew to standby for the core.

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

The response to RFI #U-0191.2 does not answer the question posed in the RFI.

As mentioned in the previous RFI there appears to be a difference in the PG&E drawings provided in the original response and the contract drawings.

See attached M Squared's interpretation of these PG&E drawings. Please confirm if this interpretation is correct.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

7/16/2012 Kenny Chin's (SFDPW) response,

"The interpretation of MA-31 is correct. The contractor shall route the conduit from the meter enclosure to vault 1813. The interpretation of MA-29 is correct. The contractor shall route the conduit from meter enclosure to vault 5414 but the contractor shall find out with PG&E which one is the exact vault 5414."

U-0192 **AWSS Strong Backs** **Closed** **01/18/2012** **01/28/2012** **02/08/2012** **Potentially** ☐

Co-Author:

REQUEST:

Current project drawings show that this project requires two (2) 14¿ Strong Backs and two (2) 10¿ Strong Backs to be used at different locations.
Olympic Foundry does not produce strong backs and were unable to include them in the order to M Squared. M Squared has contacted several sources trying to locate the strong backs but have yet to find a supplier.
Please advise if it is possible to purchase these from the City stock.
If this is not possible M Squared will have no other option but to have them manufactured at a steel mill and this may take a considerably long time due to the lead time in the specialized steel.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 2/3/2012 Response per Michael Smith (SFDPW),

-"We have been advised that the SFWD does not have the requested strong backs in their inventory.

-Typically strong backs were torch cut at local machine shops that handle larger fittings. Suggest contacting other contractors who have performed AWSS work for sources."

REQUEST:

On the detail for the strong backs on the San Francisco Standard AWSS Plans M Squared has discovered an error in the dimensions for the 14" strong back. Dimension C (outside diameter) is smaller than dimension B (inside diameter). See attached.

M Squared believes the OD should be 27.37". Please confirm.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 3/14/2012 Michael Smith's (SFDPW) response,

"M Squared is correct. Thank you for pointing this out. We will update our drawing."

Signed and dated 3/14/12. (See Attached)

U-0195 **Parking Sensors on Mission** **Closed** **03/13/2012** **03/23/2012** **04/16/2012** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Steve Cunningham **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

M Squared has discovered that either SF Park or MUNI have installed what appear to be sensors in the street surface along Mission Street. See photo attached.

They existing between Fremont and Beale in particular.

As the AWSS line is installed along Mission St from 2nd to Main these sensors will be in conflict. Please confirm these sensors will be removed prior to trenching.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 4/12/2012 Per email conversation with Alex Demisch of the SFpark Project (SFMTA), any parking sensors found on Mission Street from 2nd Street to Main Street are inactive. SFPark's vendor plans to remove these parking sensors late April or early May of this year 2012. SFPark realizes TJPA plans to conduct AWSS construction work in the upcoming months and has asked if it was possible to for the TJPA sub-contractor, once AWSS construction begins, to separate the parking sensor equipment

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

from other construction debris so that SFPark may dispose electronic waste properly if there are any parking sensors still remaining. However, if the parking sensors cannot be separated then SFPark understands they will end up being demolished from TJPA AWSS construction work.

U-0196 **AWSS Pipe Bedding Material** **Closed** **04/02/2012** **04/12/2012** **04/09/2012** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Steve Cunningham **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

Section 02225-2 2.2 specifies that the bedding material for the new AWSS piping shall be crushed rock, however section 02723-18 2.12 contradicts this by specifying the bedding shall be pea gravel.
Please clarify.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 4/9/2012 Refer to submittal package TG0402-029 - Pipe Bedding Pea Gravel for approved AWSS pipe bedding material.

U-0197 **AWSS/PG&E Phase 2 Duct Conflict** **Closed** **04/05/2012** **04/16/2012** **04/16/2012** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Steve Cunningham **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

See attached photo. M Squared discovered a conflict on 4/4/12 at 11.10am while excavating to remove the existing AWSS Main at Howard and First.

PGE's new Phase 2 duct package is sitting directly on top of the existing AWSS main at First and Howard intersection. The top and sides of the duct bank are encased in concrete however the PVC conduits are not encased on the bottom and the PVC Conduits are currently touching the AWSS Main at this location.

As a result M Squared is unable to remove the existing AWSS main from this point east.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 4/12/2012

Please confirm that the Phase 2 PG&E duct package that is in conflict with the AWSS main was installed at the correct elevation per the approved Phase 2 Utility plans.

Number	*Subject*	*Status*	*Date Created*	*Date Required*	*Date Answered*	*Cost Impact*	*Proceed*

U-0197.1 **AWSS/PG&E Phase 2 Duct Conflict Location 7** **Closed** **04/16/2012** **04/26/2012** **04/17/2012** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Steve Cunningham **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

The Phase 2 PG&E plans only provide minimum depths and clearances. It appears the Phase 2 ducts were installed in accordance with the minimum depth requirement but not the minimum clearance requirement. Please confirm this with PG&E.

Regardless, the AWSS main can not be reinstalled per plan and maintain minimum clearance required in the AWSS specification. Please advise how M Squared is to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Michael Smith's (SFDPW) response,

"Per a site inspection this morning with SFWD, M2, Turner, and Webcor/Obayashi, the clearance conflict between the recently installed PG&E duct bank and the existing 12-inch cast iron AWSS main was confirmed. The duct bank conduits are in direct contact with the existing AWSS pipe.

The two options to rectify this situation include:

1.) Request that PG&E or their contractor vertically relocate the recently installed duct bank in order that there is the required 12-inch clearance between the two utilities.

2.) Realign the proposed replacement AWSS main either over or under the PG&E duct bank by the installation of a vertical offset.

Should option No. 2 be selected, please advise as soon as possible since revision drawing(s) for the vertical offset will need to be prepared prior to the installation of the vertical offset."

Signed and Dated 4/11/12.

The phase two duct bank was not installed per PG&E Green Book requirements for minimum clearance between utility services, and the contractor failed to

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

properly coordinate utility installation.

Work related to this RFI response shall be performed at no additional cost to the owner.

U-0197.2 **AWSS-PG&E Phase 2 Duct Conflict** **Closed** **04/23/2012** **05/03/2012** **05/02/2012** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Compan Steve Cunningham **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

Through detailed analysis and discussions with PG&E during the weekly AWSS coordination meetings it has been determined that it would be infeasible to relocate the PG&E duct bank as requested in option one in the response to RFI#U-0197.1.

Please provide details for realigning the AWSS main referenced in option two in the response to RFI#U-0197.1.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 4/23/2012 Michael Smith¿s (SFDPW) response,

"The contractor shall install a vertical offset under the PG&E duct bank using four (4) 22 ½ - degree elbows as required to maintain a minimum 16-inches vertical clearance between the new 12-inch ductile iron AWSS main and the recently installed PG&E duct bank. Please refer to the attached sketch."

Signed and dated 4/16/12

This work shall be performed at no additional cost to the TJPA.

U-0201 **AWSS - Countersunk Bolts in 14-Inch Ductile Iron Pipe Strong Back Plate** **Closed** **05/04/2012** **05/14/2012** **05/08/2012** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Steve Cunningham **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Please reference attached excerpt from the AWSS STANDARD DRAWING III, drawing No. AWSS 3.

The sizing chart for 14" diameter pipe require the use of Strong Back Type B. The Type B Strong Back configuration requires the use of a countersunk bolt and nut to adjoin connecting DI pipe. The countersunk bolts are a special order product and will have to be fabricated specifically for each piece.

Please confirm it is acceptable to use the typical 316 Stainless Steel bolt and nut without the countersink, similar to what is used and shown in Type A for all 14" diameter DI pipe.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 5/7/2012 Michael Smith's (SFDPW) response,

"-The proposed change is acceptable.
-The Contractor shall field verify the actual pipe outside diameter at each location prior to having strong back fabricated due to differing pipe diameters in use."

Signed and date 5/7/12 (See Attached)

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Steve Cunningham **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Please refer to attached detail 3/U-5001.

Detail 3 on sheet U-5001 which shows the connection detail for 12" HDPE to existing 10" steel, uses a 10" steel to 12" sleet reducer and then using a 12" steel to 12" HDPE Coupling in order to connect new sludge main to existing sludge main.

Our preference is to use a 10" steel to 10" HDPE coupling and then install a 10" HDPE to 12" HDPE Reducer. As the O.D of the existing sludge is unknown it will cause significant delay in the ordering of the 10" steel to 12" steel

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Proposed modification is acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

reducer as we will have to get the OD at the connection point and then order the material. Even with this piece of material, it will be extremely difficult to get a welder into the trench to weld the reducer on to the exiting pipe as a result of the amount of utilities which were discovered in potholing.

The use of the 12" HDPE to 10" HDPE reducer eliminates the need for a welder in the trench.

U-0203 **AWSS - Compaction Method for Trade Package TG04.2** **Closed** **06/08/2012** **06/18/2012** **06/11/2012** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Steve Cunningham **Answered By:** City and County of San Fr Michael Smith

Co-Author:

REQUEST:

Specification section 02225 Section 3.7 C forbids the use of flooding or jetting in order to gain the necessary levels of compaction in the AWSS pipe trench.

However due to the amount of utilities and duct packages in the trenches it will not be possible to gain the necessary levels of compaction under and around these utilities by utilizing the methods referenced in the specifications. By not gaining the necessary compaction around utilities it is possible that voids will occur over time causing the utility to be come unsupported and the street surface to sink.

We are requesting the use of jetting (as described in Section 703.08 of the City and County of San Francisco Standard Specifications) as a method to gain the necessary levels of compaction for the AWSS trenches. Jetting has previously been utilized as a successful method of gaining compaction levels on several other Transit Center Utility Relocation packages.

Please confirm that this proposed method is acceptable for use on this trade package. If not, please provide an alternative method for gaining the necessary compaction.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

6/11/2012 Michael Smith's (SFDPW) response:

"Water jetting to compact soil will be approved for locations where there are adjacent utilities that prevent compaction by vibratory methods. Use vibratory compaction once the backfill is clear of utilities and up to finish grade under road base/paving."

U-0204 **SLUDGE LINE - Compaction Method for Trade Package TG04.66** **Closed** **06/22/2012** **07/02/2012** **06/22/2012** **Potentially** ☐

U-0205	SLUDGE LINE - HDPE Hydrostatic Testing	Closed	06/22/2012	07/02/2012	07/05/2012	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

Please refer to spec section 33 34 10-3.1 H

The method of HDPE pipe testing listed in the contract documents differ from the testing methods provided by the pipe manufacturer: The specifications call for the pipe to be filled 24hrs in advance and then the pipe pressurized to 115psi for a duration of 4hrs, The manufacturer's method involved filling the line with pressure for 3 hrs to allow expansion etc. in the pipe and then adding additional water, per Table 2 of the attached document. Once this additional water has been added the pressure can hold for the duration listed. Or alternatively allowing a 5%fluctuation in the pressure target for the test over 1

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 7/3/2012 It is acceptable to perform HDPE Hydrostatic Testing per HDPE pipe manufacturer's recommendations. The test phase shall be performed based on the specified "Test Phase - Alternate 2" in manufacturer's data sheet for 3-hour test.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

hour.

Please see attached pipe manufacturer's data attached and provide direction. M Squared believe that the testing method in the specifications is not suitable for HDPE due to its flexibility and would be more suited to steel pipe.

U-0206 **SLUDGE LINE - Compaction Method for Trade Package TG04.6** **Closed** **06/22/2012** **07/02/2012** **07/05/2012** **Potentially** ☐

REQUEST:

While excavating west of the gate valve vault location on Market Street M Squard's crew discovered an 8-inch cast iron water line sitting on top of the existing AWSS main to be removed. This 8-inch line also appears to be leaking slightly.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

7/11/2012 Michael Smith's (SFDPW) response,

"-The Contractor shall request the SFPUC SFWD relocate their (E) 8" low pressure water piping in order to maintain a 12" clearance between their own two

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

1. As a result of this line M Squared is unable to install the new AWSS with the necessary clearances. Aside from the clearance issues M Squared can no longer install the 14-inch reducer where it is required. M Squared will be able to relocate the reducer which will then require a longer spool piece.

Please advise how M Squared is to proceed.

2. This 8-inch line also has three concrete kickers on the pipe that make it impossible to install the pipe and fittings at this vault location. Please confirm that it is acceptable to remove these kickers temporarily, as they are already restrained with tie rods, for construction purposes. The kickers can be reinstalled once the work in this location has been completed.

utilities.

-Please coordinate with SFWD prior to removing the (E) concrete thrust blocks on the SFWD line. Support SFWD line as required to prevent movement."

Signed and Dated 7/11/12 (See Attached)

Pending TJPA approval, a CR for additional cost is forthcoming.

U-0208.01 **AWSS - Clearance Issues with Domestic Water Line on Market Street** **Closed** **07/24/2012** **08/03/2012** **08/03/2012** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Per the response to RFI # U-]0208, M Squared met with SFWD engineers on site to discuss the relocation of the domestic 8-inch line.

As a result of this coordination, SFWD agreed that relocating the 8-inch line was the best possible resolution to this issue. M Squared has excavated and shored for SFWD crews to perform the repairs.

As of 7/23/12 no relocation work has been performed by SFWD.

Please provide M Squared with a schedule for this relocation.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 8/2/2012 Per Dan Helminiak of the SFWD, the SFWD is scheduled to relocate the 8" water line on the morning of Monday 8/6/12.

U-0209 **AWSS - Misison and Anthony Valve Vault** **Closed** **07/26/2012** **08/05/2012** **08/07/2012** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

See attached documents and photos.

M Squared has potholed this location for the AWSS valve vault. It has been confirmed that the gas line is abandoned and can be removed and that the 12" water is also abandoned.

In order for the vault to be constructed here M Squared will need to remove the abandoned 12" line; however, removing the 12" line will significantly weaken the live 8" line that runs on Anthony as the 90 degree bend on the 8" line is supported by a redwood block resting against the abandoned line.

Please advise on how M Squared is to proceed.

SUGGESTION:

Have SFWD restrain the existing 90 degree bend so that the abandoned lines and redwood plug can be removed. UPon completion of the valve vault M Squared can our a new concrete kicker if required by SFWD.

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 7/30/2012 Response per Chi Yu of SFWD,

" The redwood plug is for the abandoned line to stop any residual water in the pipe and does not serve as a kicker. The live 8" main was built quite recently using a field-lok gasket restraint joint. No kicker is required. Remove the 12" and 8" abandoned lines together with the redwood plug. Provide adequate vertical support for the live 8" main."

See attached email from Chi Yu dated 7/30/12.

U-0210 **AWSS - 12" Water Conflict at 1st and Mission Street** **Closed** **07/26/2012** **08/05/2012** **08/10/2012** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

While performing the preliminary excavation across 1st and Mission street Intersection, M Squared's crew exposed a 12" water line that is running on top of the AWSS line for approx half of the intersection. Due to other utilities being present we are unable to excavate down to the AWSS main.

M Squared met with SFWD crews on site and they have confirmed that the line is active, despite them agreeing with M Squared that the line sounded very hollow (an indication that it may be dead)

M Squared believes that despite the presence of many unknown utilities they will still be able to remove and replace the existing AWSS main if this 12" water line can be abandoned or relocated.

Please advise on how M Squared is to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 8/10/2012 Chi Yu's (SFWD) response,

"SFWD will cut and cap both ends of the 12" line that is on top of the AWSS Main and restore the 12" main at the same location after the new AWSS line is in place."

SFWD will require two weeks advance notice prior to starting this work.

U-0211	AWSS - Valve Vault at Sta 9+05	Closed	08/06/2012	08/16/2012	08/14/2012	Potentially	☐

From: Webcor Construction LP — Jackson Tukuafu
To: Turner Construction Compan — Gary Krutsch
Answered By: Turner Construction Comp — Jeff Thiel
Co-Author: M Squared Construction, Inc. — Aidan Foley

REQUEST:

Please refer to that attached photo and schematic of current condition.

M Squared has identified the space at Sta 9+05 as the only viable location for the gate valve in that area. However several utilities remain in conflict with this location:

- The MCI lines are plastic and the correspondence has already began with MCI to move these lines 2' south during AWSS Main installation
- The 3 x 2" Steel Electrical lines have been confirmed active by PGE representatives
- All remaining lines are unknown.

Please advise on how you would like M Squared to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Request known utilities to relocate as required to install AWSS valve vault and piping.

Request site to be remarked for assistance in determining remaining unknown lines.

Answered By: Turner Construction Comp — Jeff Thiel
Co-Author: M Squared Construction, Inc. — Aidan Foley

REQUEST:

While performing preliminary trenching across 1st & Mission Street Intersection, M Squared's crew discovered many unknown and unmarked utilities. See attached photos.

The presence of these unknown utilities will greatly impact the ability to install shoring and install full pieces of pipe. Please Identify the utilities in this section and determine which can be removed in order for M Squared to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The TJPA Representatives do not have any further information on the unidentified utilities not shown on the Contract Drawings. Please proceed as follows in order to identify these utilities:

Request the list of contacts registered with USA and compare those who marked with those that didn't mark and conduct follow up calls to the utilities and agencies that didn't mark. Also, contact SFPUC BLHP to mark street lights and DTIS comm and SFMTA to mark traffic signals.

In accordance with specification 00 08 10 section 1.3 EXISTING UTILITIES NOT INDICATED and specification 020630 section 4.1 POTHOLING AND TRENCHING OPERATIONS paragraph C, please proceed with the following in order to identify all interfering utilities that are unknown after all specified procedures or other non destructive methods

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

proposed by the contractor have been exhausted

Pipe: If conductive material, perform subsurface investigation via electromagnetic detection (or other nondestructive methods) to trace utility back to nearest vault, pull box, manhole or valve to identify owner and content. If nonconductive, excavate along pipe alignment to expose coating and a joint. Inspect and provide information on coating and joint type. If content is still unknown, tap each line in order to identify contents and operating status of utility (i.e. abandoned or operational.)

Conduit and duct bank: Determine if utility is a charged electric utility utilizing a contractor that performs NETA type work. Determine if telecommunication cables are operational.

Once the utility has been identified including owner and contents, and determined inactive or de-energized, cut and cap utility at the demolition demarcation line shown in the drawings

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

The contract drawings show M Squared replacing the existing 10" gate valve on Mission at 2nd St with a new 16" gate valve. Due to a PG&E conflict M Squared will have to now move the valve location north onto 2nd Street.

In moving the vault M Squared will now have to relocate the existing electrical service to the new vault location. M Squared will need the service disconnected so that all existing electrical cable and conduits can be removed.

Once the new vault has been constructed M Squared can reestablish the service to the new vault location.
These were previously thought to be street lighting conduits as mentioned in RFI U-182.2 and will need to be removed for the construction of the new vault anyway.

The service is currently the responsibility of the SFPUC and PG&E have indicated that any impact to the service needs to be handled by the SFPUC and not M Squared.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 5/20/2013 Existing PG&E service has been disconnected and removed. See attached drawing for new routing of PG&E power service connection from existing PG&E connection point to a new PG&E meter enclosure.

Please provide pricing proposal for work associated with installing a new connection from PG&E connection point to new meter enclosure as show on the attached drawing. Do not proceed with this work until pricing has been agreed to.

Reconnection for service at this location has been acknowledged from SFPUC (via PG&E) to be about 5 to 6 weeks out.

U-0223.1 **AWSS - Electrical Service at 2nd Street** **Closed** **07/17/2013** **07/27/2013** **07/19/2013** **Potentially** ☐

From: M Squared Construction, Inc. Aidan Foley **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

Reference: Attached Drawing

Per the response to RFI U-0223 a new electrical service, a new PGE meter pedestal, and a new drain line was to be installed at 2nd and Mission.
However the drawing provided in the response showed the old AWSS vault location. See attached drawing prepared by M Squared showing the new vault location.

We have established conduit routes for both the new electrical service to PGE vault #1316 and also the drain line to the catch basin.

Please confrim that this acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Response per Michael Smith (SFDPW),

"The proposed drain line routing is acceptable provided that the line slopes to the catch basin per the specs. The proposed electrical conduit shall be acceptable provided that it's installation shall conform to PG&Es guidelines."

Signed and Dated (see attached)

U-0224 **AWSS - Pipe Alignment between Fremont to Beale** **Closed** **02/06/2013** **02/16/2013** **02/11/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

The existing AWSS main on Mission Street between Fremont St & Beale St is running through three (3) PGE vaults.

By upsizing the AWSS main to 16" there is a possibility that the pipe will not fit back through the structures.
By having PGE move/alter their facilities M Squared believes there will be significant project delays. M Squared will also inevitably have to install the new main within PGE structures, something the SFPUC prefers to avoid.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 2/8/2013 Response per Michael Smith, (SFDPW)

"Shifting the proposed AWSS alignment North is acceptable provided that there are no utility conflicts and the gate valve frames/covers do not end up directly in the gutter due to potential flooding of the vaults."

Signed and Dated 2/8/13. (See Attached

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

M Squared believes it is possible to shift the alignment of the new 16" main further north to avoid all of these PGE vaults. See attached potholing results from potholing further north than the existing main. M Squared does not know yet if additional fittings will be needed to shift the alignment north, and then realign it back south at Beale Street. This will not be known until the trench has been excavated.

Please confirm it is acceptable for the AWSS alignment to shift north as currently coordinated to avoid the delay impacts and vault conflicts.

U-0225 **AWSS - Lead Joint Clearances at Sta 6+30** **Closed** **02/08/2013** **02/18/2013** **02/13/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu
Co-Author: M Squared Construction, Inc. Stewart Mitchell
To: Turner Construction Compan Gary Krutsch
Answered By: Turner Construction Comp Jeff Thiel

REQUEST:

Please refer to attached W/O Sketch SK-U-0225 and drawing MA-4.

The newly installed fire hydrant lateral at station 6+30 is to connect to the existing AWSS main; however, the existing main pipe is "oval" shaped and the new pipe is circular. As a result of the differing pipe shapes, the minimum clearances for inserting the "hokum" to draw the lead in when heated are not achieved. The minimum clearance around the pipe required is 1/4".

The existing fitting is part of a series of fittings needed to raise the fire hydrant lateral up in elevation to avoid a conflict with an existing sewer line. Moreover, there is a duct bank over the sewer and it was poured over the next fitting only compounding the conflict.

Please advise.

SUGGESTION:

Field condtions appear to indicate that where the existing laterals clears over the sewer, at the next joint there is a possibility of a full length pipe (12'-0") which takes you closer to the curb. There is a possibility to switch out the entire lateral to the fire hydrant.

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 2/13/2013 Response per Michael Smith (SFDPW),

"Due to the unforeseen conflict between the existing AT&T duct bank which was poured directly onto the AWSS Hydrant lateral pipe, blocking access to the next two downstream lead joints, the contractor shall locate a lead joint South of the conflicting duct bank that is readily accessible for their plumber to melt the existing lead joint. The contractor shall then furnish and install ductile iron pipe and fittings to this accessible location in order to connect to the existing cast iron line. The alternate is for AT&T to relocate their duct bank in order that there is a minimum 12" clearance between the duct bank and the existing AWSS pipe.

Should the duct bank not be relocated, and due to the fact that there will be a minimum amount of cast iron pipe remaining in the hydrant lateral run, the contractor shall provide a cost for removing the remainder of the cast iron hydrant lateral and for replacing with ductile iron pipe and fittings.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Replacing this remaining section of cast iron pipe and hydrant will be an improvement to the SFWD's facilities."

Signed and Dated (See Attached)

U-0225.1 **AWSS - Lead Joint Clearances at Sta 6+30: SFWD Decision to Replace Full Lateral** **Closed** **03/11/2013** **03/21/2013** **03/28/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

As a result of several coordination efforts to discuss potential options, AT&T has chosen not to relocate their duct bank that is in conflict with the hydrant lateral at Sta 6+30. Instead they have agreed to compensate M Squared for the costs to connect to the next most southern joint.

1. Please confirm that this is acceptable, as the response to the previous RFI U-0225 mentioned the possibility of replacing the full lateral including the hydrant.
2. Please advise whether the SFWD want to replace the full lateral. M Squared need to know so an agreement can be reached on materials etc.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 3/26/2013
Response per Michael Smith (SFDPW),

"CCSF SFWD (Dan Helminiak 420-4521) will coordinate with contractor to provide funding / materials to replace the remaining cast iron portion of the hydrant lateral."

Signed and Dated 3/19/13. (See Attached)

REQUEST:

Refer to drawing U-1002, U-2003, MA-15.

M Squared is unable to trench to the connection point as shown on the attached M Squared sketch SK-047.1 and SK-047.2 on First Street due to the presence of two (2) PG&E duct banks in the trench. One duct bank is deeper than the other and is sitting directly on top of the AWSS Pipe that is required to be removed.

SUGGESTION:

Suggestion #1 - Remove existing gate valve and connect to the existing pipe (see attached SK-047.1). Install an IBeam behind the 16" Tee on Mission Street as an alternative restraint system. Please note: In order to perform Suggestion #1 an AT&T duct bank will need to be moved west 2' so M Squared can drill for the I-Beam.

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 3/12/2013 Response per Michael Smith (SFDPW)

" 1.) Proceed with suggestion No. 1.

2.) Should AT&T not be able to relocate their duct bank, proceed with suggestion No. 2. Replace 22.5 degree elbows with 11.25 degree elbows if fittings are

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please provide direction to how M Squared will proceed.

Suggestion #2 - If the AT&T duct bank cannot be moved install an offset from the 16" tee using 22deg bends to get back to original alignment. (see attached sketch SK-047.2)

available."

Signed and Dated 3/12/13. (See attached)

After further investigation while this RFI was being reviewed, it was found that the duct bank previously thought to be AT&T is owned by TCG. Do not proceed with either option until TCG has been notified of potential costs and has reviewed the proposed solutions.

U-0226.1 **AWSS - TCG Duct Bank at 1st Street Intersection** **Closed** **06/25/2013** **07/05/2013** **07/08/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Please refer to response for RFI U-0226.

As per response to RFI U-0226, M Squared is directed to "Remove the existing gate valve and connect to the existing pipe. Install an I-beam behind the 16" Tee...as an alternative restraint system" in order to avoid two PG&E duct banks in conflict with the AWSS. As a result of the I-Beam being installed at this location, a TCG duct bank would need to be moved 2-feet west.

TCG has determined that the duct bank would take several months to re-locate their duct bank. Therefore, TCG has opted to avoid the conflict by pursuing the suggested 22deg bends as an offset from the 16" tee in RFI U-0226.

Please confirm additional restraints are not required at the 22deg bends or provide all necessary restraints required to for the 10" line at this location.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Response per Michael Smith (SFDPW),

"The thrust blocks for the two (2) 10" 22.5 degree elbows shall conform to the thrust blocks for 16" pipe as shown on the AWSS standard drawings. Include "crossed" rebar with J-hook ends over the elbows.

Schedule site visit to verify lack of access to (E) line north of proposed 10" connection location."

Signed and Dated, see attached.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Response per Michael Smith (SFDPW),

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

at 2nd Street will not be under the surface of the street. Previous AWSS valve vaults have 2" AC/8" concrete street base on top of the roof of the vault.

If M Squared installs the vault roof and then covers it with 2" AC then there is a danger that future contractors will saw cut through the roof of the vault while cutting out their trenches.

Our suggestion is to pour the vault roof to the same grade as the current street surface on 2nd Street. There does not appear to be any room for adjustment here and we are unaware of any other options in this case.

Please confirm it is acceptable to construct the vault roof in this manner, with a concrete broom finish.

"M Squared shall proceed with constructing the valve box cover in a manner such that the portion to be located in the parking strip shall be flush with the surrounding concrete. For the portion of the cover to be located in the paved traffic lane, reduce top surface by 2". Place a sheet of 10 gauge galvanized sheet steel on recessed area of concrete cover. When repaving street, extend A/C paving over vault to provide paving flush with concrete portion of cover/manhole lid.

Signed and dated. (see attached)

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Per our recent AWSS meetings M Squared had been directed by the owners' representative to complete the AWSS install at 1st & Mission intersection and then mobilize to Main Street intersection to begin work down there.

IF M Squared is to begin work at Main St then there will be no connection made on the east side of 1st and Mission. The new 16" line will be installed up to the 16"X10" tee and the 10" connection will be done heading North on 1st.

We can see 3 options that would allow us to proceed to Main Street.

1. Cap the new 16" Tee on the east side of the tee. This would allow the AWSS system to be in service from 2nd Street all the way to the east side of 1st Street, including 1st Street heading towards Market.

2. Perform a connection from the new 16" Tee to the existing 12" AWSS main on Mission east of 1st Street. This would allow the AWSS system to be fully operational from 2nd all the way to Main. This would be temporary as M Squared would presumably return to complete the 16" install here.

3. Leave the new and existing pipe as is. The AWSS main would be operational from 2nd Street all the way to the gate valve on Mission west of 1st Street. The main would remain shut off on the 1st and Mission intersection, and also 1st Street heading towares Market as the new 16" AWSS line would be open at the tee (not capped/connected) and the exisiting 12" would not be connected to anything.

Please provide an option to M Squared to allow us to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Response per Michael Smith, (SFDPW)

"Please proceed with Option No. 1 - Capping of the East end of the (N) 16"x16"x12" tee installed at Mission and First Streets. The concrete thrust block to be installed behind the 16" cap shall be poured with 3x the concrete as a typical thrust block for a 16" AWSS fitting. Pour thrust blocks against 12" CI pipe and 16"x16"x1" Steel plate.

Option No. 2 is not approved due to unavailability of fittings for 4-6 months and the vertical/horizontal alignments between (N) and (E) pipes.

Bill Gunn of SFWD approved option No. 1 based on the above issues for implementing option No. 2"

Signed and Dated. (See attached)

REQUEST:

Please refer to drawing MA-17.

Due to the high number of utility duct banks on Main Street & Mission Street Intersection M Squared's crews effectively tunneled under sections of the street in order to install the new AWSS main. Where possible M Squared removed the street base and excavated as much as we could. The remainder of the trench was tunneled under duct banks and under the street, with the street base remaining in place.

Now that all the AWSS main has been installed M Squared will shortly be faced with backfilling this intersection. There is currently only a small portion of trench that can be backfilled using conventional methods i.e ram compactor etc. The remainder of the trench will also not be suitable for backfilling using the jetting method as there will be no way to compact the area directly underneath the street base.

M Squared is requesting permission to create several small holes (approx. 6" dia) in the street base, between some of the utilities and backfill the AWSS trench using a sand cement slurry backfill. See attached submittal sheets. This mix design is effectively sand and water, with just a minor amount of cement included to allow the sand to reach 95% compaction.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is acceptable provided that the dried sand/cement mixture has a minimum density of 120 lb/ft3. Please provide test verification of this density with site test as continued from previous sheet: "witnessed by SFWD Inspector". Test can be performed at contractor's yard.

U-0240 **AWSS - Concrete Mix and Slump at Parking Strip Placement** **Closed** **01/16/2014** **01/26/2014** **03/05/2014** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Turner Construction Comp Judith Long

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Prior to replacing the 6ft wide parking strip on Mission Street at 1st Street it became apparent to us that the articulated semi trucks, buses and other larger vehicles would be unable to a make the turn from southbound 1st Street onto Mission Street if the 6ft wide parking strip was barricaded in order to let the concrete set.

City standards call for the concrete to be poured with a 4inch slump, and that no traffic drive on the concrete for a period of 10 days. M Squared made the decision to add 2% calcium to the concrete mix to speed up the concrete setting process. M Squared used the same mix design as is used for the street base:
- Bode Concrete Mix Design 604 - sidewalk, curb and gutter and parking strip.
- Bode Concrete Mix Design 604CC - Street base

The only difference between the 2 concrete designs is the added 2% calcium.

The concrete was poured with an 8inch slump in order to allow the crew enough time to satisfactorily finish the concrete to the required surface. M Squared acknowledge that this is out of spec, however the concrete still reached over 4000psi, when specs required only 3000psi. M Squared believes that this will be required in the future on other portions of Mission Street on account of Mission St. being MUNI¡¦s busiest route. SFMTA have asked that M Squared minimize lane closures where possible.

Please confirm that this 8inch slump is acceptable on Bode Mix 604CC (attached).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Michael Smith
3/3/2014
RESPONSE:
The 8" slump for the Bode Mix 604cc is acceptable.

U-0241	AWSS - Proposed Fire Hydrant Re-Location on Mission and Fremont Street	Closed	01/21/2014	01/31/2014	02/13/2014	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** Turner Construction Comp Judith Long

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

As per AWSS Coordination Meeting on 01/17/2014, the location of this fire hydrant near the intersection of Fremont and Mission is potentially going to need to be moved to accommodate the new sidewalk expansion. The purpose of the RFI is for Michael Smith with SFWD to analyze, consider and direct the feasibility of relocating the fire hydrant further north.

If the hydrant is to be located somewhere other than is shown on the drawing please provide a detail for this work as additional fittings may need to be ordered.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per our site visit with M2 on 02/11/14, the proposed hydrant lateral shall be relocated to the west side of Fremont Street, north of Mission Street, barring any conlficting utilities. The hydrant shall be lcoated immediately north of the replacement 10" gate valve. M2 shall verify the availability of a 10" hydrant tee with SFWD.

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Sheet MA-16 shows that the hydrant tee is to be rolled down 45-degrees in order to tie in to the lateral piping. However, when M Squared excavated this section, they discovered that the hydrant lateral piping is shallow and the main is approx. 2-feet deeper.

In order to install the piping, the hydrant tee will need to be rolled UP 45 degrees. In additon to this M Squared will need to order a customized 8-inch DIP flanged spool to join the tee to the flanged 45-degree elbow.

Please confirm it is acceptable to proceed with the customized flange or provide direction.

SUGGESTION:

Roll the tee upward 45-degrees as requried to suit field conditions.
F/J pipe spool betweenTEE and flanged 45-degre elbow. Spool length shall be determine dint he field to suit existing pipe alignments

U-0244 **AWSS - Gate Valve Vault at Sta 16+40 (West of Beale Street)** **Closed** **02/07/2014** **02/17/2014** **02/10/2014** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Compan PHIL MILITELLO **Answered By:** City and County of San Fr Michael Smith

Co-Author: M Squared Construction, Inc. Chris Wallace

REQUEST:

See attached photos of conflicts with gate valve vault at Sta 16+40.

Due to the unforseen utilities in place, M Squared cannot install the concrete vault around the gate valve at STA 16+40. In order to avoid delays to the project M Squared reached out to the engineer of record to bring this issue to his attention. See attached email chain.

As it appears M Squared is directed to return to 1st Street and work east again; M Squared will be unable to build any structure around the gate valve at Sta 16+40. Due to the flip flop of the schedule we will not be able to tie in at this point for several months so we suggest the following:
- Install the gate valve at Sta 16+40 and direct bury the valve, leaving access to the gates with ductile risers and valve caps. FYI - these gates should not be opened anyway as the line will be out of commission during construction.
- Re-excavate this gate valve when M Squared installs the pipe from Fremont St heading east and tie in the pipe to it then. In the interim M Squared will drive a sheet pile behind the gate valve and support it with a 1.5ton concrete block. This will prevent any gate valve movement.
- As M Squared will be working their way from 1st St towards Beale Street, they should have several weeks in which to design some sort of modified manhole, custom sized vault in which to encase the valve.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is Acceptable.

Please coordinate site visit with Engineer and Bill Gunn CF SFWD to review valve installation for providing design for modified valave box and gate valve support.

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Please refer to drawing MA-15 and attached M Squared sketch SK-TG04.2-069.

According to the plans the tee is to be rolled down, however the existing tee is rolled out flat and there are 2 x 45 degree elbows installed to raise the line over the existing brick sewer.

1. Due to existing utilities, the area is congested and has very minimal access. M Squared will need SFWD to determine which water line is live and allow M Squared to remove the abandoned water main to provide more space here.

M Squared is also unable to find a lead joint to connect the new pipe. M Squared has found, what appears to be some form of a repair coupling or sleeve on the existing line. There is one either side of the existing brick sewer main.

2. Please advise how you would like M Squared to proceed. M Squared has already trenched 7-feet further south than is shown on the drawings.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Please coordinate with the SFWD inspector to identify if the (e) SFWD line is abandoned. If abandoned, cut line as required.

2. Furnish/Install 45 degree elbows as required to match (e) horizontal alignment.

3. Proceed as required following lateral South to identify usable lead joint to connect to (e) line. We have forwarded RFI to SFWD for possible cost sharing to replace remaining lateral and hydrant. Will advise ASAP.

First Street:

1. M Squared is able to install the gate valve and gate valve vault at the west side of 1st Street on Mission Street without impacting the new sidewalk expansion. The valve vault will be in the street and outside any sidewalk limits. The vault can be constructed once the street light conduit has been relocated. This work has already been coordinated with the City Street Lighting Division. Please advise on when the City will remove the conflict to install the gate valve/vault.

Fremont Street (east side):

2. See attached sketch. Due to the amount and location of existing utilities M Squared will be unable to install a gate valve vault of any kind at this location. It is also looking highly unlikely that M Squared will be able to install any gate valve at this location due to the utilities in the area. Please advise as to how M Squared will proceed.

Response by Judy Long 3/28/2014

The contractor shall fiels investigate installing the 16" gate valve and reducers directly east of the tee serving Fremont Street. Install riser and 23 1/2" square AWSS manhole cover above gate valve operating nuts similar to 10" AWSS gate valve. Notify engineer of any conflicts to performing the above work, and for direction for riser and manhole support.

Michael B. Smith SFDPW/IDC/EME 03/28/14
Judy Long
3/28/2014

REVISED 4/1/2014:

Per Yesterday's coordination meeting with PG&E and Last night's site investigation by M2, there currently is no space to install a gate valve east of the main line tee at Fremont Street. In order to maintain water supply for SFFD, the contractor shall temporarily cap 16" tee on the east side until PG&E relocates conflicting duct banks. The contractor shall install 16" diam. nipple, 16" DI AWSS MJB flat cap and tie rods. Use steel spacers up against (e) 12" CI AWSS line. Have SFWD test completed line and place back into service.

Per Michael B. Smith SFDPW/IDC/EME on 04/01/2014

There are 3 duct banks exiting out of PG&E Vault #1669:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Judy Long
4/1/2014

PG&E shall remove/relocate conflicting duct bank(s) as identified by the contractor in order to obtain the

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

1. PG&E Duct bank #1 runs from 1st Street down Mission to Fremont Street and has been in our trench all that time. It has not encroached on the AWSS Main alignment and there is enough clearance from AWSS main most of that time. It has impacted excavation but should not pose too much of a problem for pipe installation.
2. PG&E Duct bank #2 sits on top of the existing 12" AWSS Main and runs directly on top of the AWSS Main for a large portion of the intersection. Due to this duct bank we are unable to excavate down to the AWSS Main, unable to remove pipe and will be unable to install new 16-inch AWSS.
3. PG&E Duct bank #3 runs underneath the existing 12" AWSS main, it is concrete encased and part of the concrete encasement encroaches onto the existing 12" AWSS Main. This duct bank appears to leave our trench after 10ft or so.

Where duct bank #2 and duct bank #3 cross each other there is only 11-inch between the two duct banks. Not enough space to install a 16inch pipe with tie rods and stop collars. The AWSS is pinched between these 2 duct banks for approx. 10ft with one duct bank on top of the 12-inch main and one touching the main from underneath. While all duct banks impede us it seems there is a higher chance of making this work with the removal of duct bank #2.

Please provide direction on how to proceed or advise when PG&E will begin to remove their duct banks.

necessary working space and clearance as required to remove the (e) AWSS pipe and install the (n) pipe. PG&E shall demo portions of their electrical vaults that were constructed on the (e) AWSS pipe.

Currently should the (e) CI AWSS be comprimised, the SFWD would not be able to even access the fire fighting line due to the three conflicting PG&E duct banks surrounding the AWSS pipe. City Standards call for a minimum 12" seraration for utilities being installed in the proximity of the AWSS line.

Michael Smith 4/1/2014

Question #1 - Does every joint between the new GV west of Fremont Street, and the new 16"x10" tee in Fremont

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Street intersection need to be restrained with bell & stop collars? This distance is approx. 50ft.
Question #2 - Currently there does not appear to be enough space to install the new 16" pipe WITH bell & stop collars through the utilities in the Fremont St intersection. There does appear to be space to install 16" pipe without the stop/bell collars on.

- Our suggestion would be to install the 16"x10" tee and restrain that tee on one joint heading east. Install piping across the Fremont St intersection without stop/bell collars, delete the 16" GV at that location (we believe we will not be able to fit one anyway), and tie off the last piece of pipe coming into the hydrant tee east of Fremont Street.

Please clarify if this is acceptable.

U-0249 **AWSS - Hydrant Location at Fremont St.** **Closed** **06/23/2014** **07/03/2014** **07/10/2014** **Potentially** ☐

Transbay Transit Center – San Francisco, CA

Noise and Vibration Mitigation Management Plan

Webcor/Obayashi

September 07, 2012

GENERAL:

The Webcor/Obayashi (W/O or CM/GC) Noise and Vibration Mitigation Management policy that will be implemented on the Transbay Transportation Center Project will be an overall project policy, with each Trade Subcontractor contributing their specific plan as they come on board to the project. The primary function of this plan is to comply with Specification Section 00 08 13, 00 08 13/APB, the San Francisco Noise Control Ordinance, regulations and requirements and section 01 35 65, Specific Project mitigation measures and monitoring requirements as applicable to the various phases of work.

When required by the specifications, W/O will ensure its Trade Subcontractors comply with this plan as well as the San Francisco Noise Control Ordinance.

To expedite the project or minimize impacts, W/O will ensure that its Trade Subcontractors apply for written waivers of some of the noise requirements by application to the TJPA in accordance with Section 00 08 13 Specific Project Requirements when required by the specifications or contract. Written waivers shall be uploaded to Constructware by CM/GC. It is anticipated that some Work may require multiple shifts or for other reasons need to be performed outside of typical weekday daytime construction hours. Trade Subcontractors shall minimize construction activities during evening, nighttime, weekend, and holiday periods and shall obtain specific permits before performing construction in noise sensitive areas during these periods.

Night noise permits requests shall be submitted to the TJPA at least 7 days in advance of work. Noise permit request shall include:

1. Name of person in charge of work and phone number
2. Hours to be worked
3. Narrative of scope of work including necessity of doing work at night, maps, and truck routes
4. List of noise/vibration/light making equipment including make and model
5. Mitigation and monitoring methods being used

W/O will ensure that its Trade Subcontractors provide noise inspections and testing of equipment to ensure that all equipment onsite is in good condition and effectively muffled per manufacturer's recommendation. If inspection or testing documents are requested by the TJPA, or any of its representatives, W/O will require its Trade Subcontractors to provide requested documentation in a timely manner. Trade Subcontractors shall provide inspection and testing documents to CM/GC prior to start of work and as the equipment is replaced. CM/GC shall upload documents to a file location within Constructware.

W/O will ensure that its Trade Subcontractors minimize use of vehicle backup alarms and demonstrate how backup alarms will be minimized by using mitigation measures such as designing the construction site with a circular flow pattern that minimizes backing up of trucks and other heavy equipment. Trade Subcontractors shall submit quarterly reports of measures to reduce back up alarms. W/O shall upload these reports to a specific location within Constructware.

W/O will ensure that all its Trade Subcontractors' equipment onsite is equipped with broadband back-up alarms that will automatically adjust based on the ambient noise during nighttime hours (between 8 p.m. and 7 a.m.) when ambient noise is low. If safety considerations and applicable regulations will not allow use of broadband back-up alarms, Contractor shall request an exemption in writing to the TJPA

Representive including the applicable safety regulations (Cal/OSHA, OSHA). Trade Subcontractors shall comply with the TJPA's request for broadband back-up alarms for all work between 8 p.m. and 7 a.m. If requested by the TJPA or its representative, Trade Subcontractors shall provide W/O with equipment specifications showing broadband back-up alarms for submission via Constructware.

Through W/O's requirement of the submittals outlined in this noise and vibration plan, W/O will verify Trade Subcontractors' construction operations are performed in such a manner to minimize noise.

W/O will verify that its Trade Subcontractors perform noise monitoring to demonstrate compliance with noise limits and endeavor to minimize construction activities during off hours except for those required and deemed acceptable per the Contract Documents. Trade Subcontractors shall submit monthly monitoring reports to W/O for submission via Constructware.

W/O will verify Trade Subcontractors haul routes to ensure that they minimize noise intrusion into residential areas, and control noise during nighttime hours.

W/O will require all Trade Subcontractors to use procedures and equipment, when it would be effective, that produce lower noise levels than normal when required by the specifications or contract. W/O will require the Trade Subcontractor to submit manufacturer special noise control kit information. If none is available, then the Trade Subcontractor needs to submit a statement of this. Upon receipt and review of the information, W/O and the Trade Subcontractor will identify the events when the noise control measures should be used based on the specifications.

W/O will require all Trade Subcontractors plans to include use of temporary barriers near noisy activities as required by the specifications or contract. Such barriers shall be located close enough to the noise source to achieve noise attenuation. As necessary and when it is shown it would be effective, Trade Subcontractors shall construct shed-like structures or complete buildings to contain the noise from nighttime activities.

W/O shall require haul route map, plan and storage location to be part of Trade Subcontractor's plan and included within its submittal.

VIBRATION CONTROL

Vibration limits are based upon the Federal Transit Administration's Planning and Environment Transit Noise and Vibration Impact Assessment guidelines. W/O will require all Trade Subcontractors' to limit or prohibit use of construction techniques that create high vibration levels when it affects adjacent properties.

If construction techniques that create high vibration levels are used, W/O will require all Trade Subcontractors' to comply with the following additional restrictions:

1. Provide advance notice to TJPA of any vibration intensive activities. Perform vibration intensive activities only during daytime hours between 7 a.m. and 8 p.m. unless otherwise allowed by special permit or variance, as required by the specifications or contract. Perform vibration monitoring during vibration intensive activities during daytime hours between 7 a.m. and 8 p.m. unless otherwise allowed by special permit or variance, as required by the specifications or contract. Recorded data should be part of the Trade Subcontractor Daily report. A summary shall be submitted monthly and uploaded to Constructware.

2. Investigate alternative construction methods and practices to reduce the impacts if present and implement alternative methods and practices as reasonable.
3. Provide a plan to measure vibration levels including but not limited to measurement locations, times and metrics. Plan shall also include contingency plan if operations exceed the limits. This plan shall be uploaded into Constructware by W/O.
4. Limit or prohibit use of construction techniques that create high vibration levels.

Trade Subcontractors shall be responsible for providing technical information, as required by the specifications, in their plan. Trade Subcontractor's plan shall be submitted via Constructware for Record Only.

Transbay Transit Center – San Francisco, CA

Air Quality Plan
Webcor/Obayashi
January 16, 2012

GENERAL PLAN:

The Webcor/Obayashi (W/O) Air Quality Plan that will be implemented on the Transbay Transit Center Project will be an overall policy with each subcontractor contributing their specific plan as they come on board to the project. The primary function of this plan is to comply with the Bay Area Air Quality Management District regulations and requirements.

W/O will require its Trade Subcontractors to establish a plan that complies with all requirements set for in specification sections 00 08 13, and 01 35 65 prior to starting Work onsite. W/O shall check and verify trade subcontractor's compliance with air quality requirements on a daily basis. Any non-compliant trade subcontractors will receive both verbal and written notice through Safe Site One (W/O internal program). Additional, W/O will require trade subcontractors to demonstrate they are actively monitoring air quality by providing checklists or documentation on each Trade Subcontractors daily report. W/O shall verify its Trade Subcontractors Air Quality plan includes the following but not necessary limited to:

1. Specific measures to minimize impacts to sensitive receptors associated with exposure to respirable nuisance dust (PM10) and achieve a goal of No Visible Emissions.
2. W/O shall verify Trade Subcontractors comply with City Dust Control Order (DPW Order No. 171,378. Water active construction areas at least twice daily to control dust using non-potable water in accordance with San Francisco Ordinance 175-91
3. Identify specific measures to minimize dust generation; to reduce health risks to workers and the public.
4. Mist the immediate excavation area with a water spray to prevent airborne dust particles. Perform continuous water spraying during dust-generating activities. Mist or spray in such a way as to prevent puddling or generation of runoff, which could potentially reach storm drains or catch basins.
5. Minimize the amount of excavated material or demolished debris stored at the Site. Remove excavated material and demolished debris, with the exception of hazardous materials or suspected hazardous materials, from the Site no later than the end of each workday. If hazardous materials or suspected hazardous materials are stored on site, store such materials in accordance with all applicable California Environmental Protection Agency regulations, including providing storage in proper containers and protection from exposure to the elements. Remove such materials from the Site as soon as possible for disposal or recycling in accordance with applicable laws and regulations.
6. Wet all exposed soil surfaces at least 3 times daily during dry weather or more frequently if dust is blowing or if required by the TJPA. Immediately wet sweep serpentine residuals from the street.
7. Keep the Site and adjacent areas clean and perform wet sweeping at the end of each shift. Sweep daily (with water sweepers) all paved access roads, parking areas and staging areas at construction sites. Sweep streets daily (with water sweepers) if visible soil material is carried onto adjacent public streets.
8. Load haul trucks carrying excavated material so that the material does not extend above the walls or back of the truck bed. Wet before covering and tightly cover the surface of each load before the haul truck leaves the loading area. Cover trucks hauling soil, sand, and other loose materials or require trucks to maintain at least 2 feet of freeboard
9. Clean up spillage on City streets, whether directly or indirectly caused by Contractor's operations.

10. Minimize use of on-site diesel construction equipment, particularly unnecessary idling. Shut off construction equipment to reduce idling when not in direct use. Where feasible, replace diesel equipment with electrically powered machinery.
11. Retain receipts of ultra-low sulphur fuel (ULSF) purchase and equipment tuning and repair and make these available to the TJPA Representative or to the Federal Transit Administration (FTA) designee upon request.
12. Locate diesel engines, motors, or equipment as far away as possible from existing residential areas.
13. Properly tune and maintain diesel power equipment. To manufacturer's specification and frequency.
14. Suspend grading operations during first and second stage smog alerts, and during high winds (i.e., winds greater than 25 miles per hour).
15. Upon completion of the construction phase, buildings with visible signs of dirt and debris from the construction site shall be power-washed and/or painted (provided that permission is obtained from the property owner to access and wash the property with no fee charged by the (owner). Trade Contractor shall request CMGC to contact Singer and Associates to notify property owners for access. If permission from property owners for access is not granted, Trade Contractor is not responsible for power-washing or painting.
16. Pave, apply water three times daily, or apply (non-toxic) soil stabilizers on all unpaved access roads, parking areas, and staging areas at construction sites.
17. If applicable, replant vegetation in disturbed areas as quickly as possible.

W/O will verify Trade Subcontractors comply with the requirements of the Bay Area Air Quality Management District (BAAQMD) Regulation 6 (for particulate matter and visible emissions), Regulation 7 "Odorous Substances," Regulation 11 "Hazardous Pollutants," and the California Health and Safety Code Division 26 "Air Resource", Chapter 3 "Emission Limitations," Section 41700 "Prohibited Conduct," and related regulations. Trade Subcontractors shall notify the BAAQMD 10 working days prior to commencing demolition or hazardous materials abatement work.

1. Such notification shall include the names and addresses of operations and persons responsible; description and location of the structure to be demolished or altered including size, age and prior use, and the approximate amount of friable asbestos; scheduled starting and completion dates of demolition or abatement; nature of planned work and methods to be employed; procedures to be employed to meet BAAQMD requirements; and the name and location of the disposal site.
2. The BAAQMD randomly inspects removal operations and will respond to any complaints received. Contractor shall cooperate with and facilitate all BAAQMD authorized inspections.\
3. Notifications shall be documented and provided to CM/GC for submission to the TJPA via ConstructWare.

Trade Subcontractors shall be responsible for providing technical information, as required by the specifications, in their plan. All trade subcontractors plans shall be submitted for Record Only via ConstructWare.

Transbay Transit Center – San Francisco, CA

Waste Management and Construction Debris Plan Revision 6

Webcor/Obayashi
November 7, 2013

Exhibit P

GENERAL PLAN:

Webcor/Obayashi Joint Venture (Webcor/Obayashi) understands that the building contractor plays a critical role in the management of jobsite produced construction waste. Webcor /Obayashi has adopted a waste reduction and recycling policy that will be implemented on the Transbay Transportation Center Project. This policy will be an overall policy with each subcontractor contributing their specific plan as they come on board to the project.

The primary goal of the plan is to divert as much construction generated debris & unused material from landfills as possible. At a minimum, Webcor/Obayashi and its trade subcontractors will divert 75% of the waste generated on the construction project from landfills. Trade subcontractors Construction Waste Management Plan shall be prepared and submitted in compliance with the Owner's LEED project requirements and the requirements of the City and County of San Francisco.

The Trade Subcontractors are required to comply with Specification Sections 00 08 15, 01 74
00, and 01 81 13 as well as any or all of the procedures listed below. If a conflict in percentages exists between this section and Section 01 81 13, General LEED Building Design and Construction Requirements, the most stringent section shall govern.

- Use of approved debris haulers with documented recycling levels.
- Source separated debris boxes will be provided onsite for mixed debris and recyclable items such as lumber and wood related products, dirt, concrete and asphalt, cardboard & metals.
- Trade Subcontractors are required to handle and dispose of any generated hazardous waste.
- Requesting Trade Subcontractors and vendors to utilize reusable packaging when possible.
- Trade Subcontractor shall provide a Construction Waste Management Plan.

All Trade Subcontractors shall develop their own Waste Management and Construction Debris Plan that complies with the Contract Documents and this plan. Trade Subcontractors shall submit this plan in accordance with the specifications and it shall become part of Webcor/Obayashi's overall project plan. All technical requirements defined in the contract documents shall be fulfilled by Trade Subcontractors and submitted to the Construction Management Oversight (CMO) For Record Only through ConstructWare

Webcor/Obayashi will ensure the Trade Subcontractors are effectively implementing the procedures and are in compliance with Specifications.
Webcor/Obayashi will verify that after Award of Contract and before commencement of the Work at the site, the Trade Subcontractor conducts a Reuse/Recycle Assessment as part of their Solid Waste Management Plan (SWMP): Trade Subcontractor's assessment shall

estimate the types and quantities of materials for the Project that are anticipated to be feasible for source separation for recycling or reuse, either onsite or offsite, and note the procedures intended for a recycling, reuse, and salvage program. Documentation of the trade subcontractor's plan shall consist of the following:

- Trade subcontractor and vendor waste management strategies.
- Trade subcontractor required to provide a monthly summary of the total waste material with backup documentation (weight tickets) if processed offsite.
- The amount recycled (in tons), material types, recycling procedures, and processing facility locations to which materials were diverted if processed offsite.

Trade Subcontractor's Construction Waste Management Plan shall also include estimated wastes, disposal, and handling with the following:

A. List of materials that comprise source separated materials include, but are not limited to:

- Concrete, Wood, Mud, Mixed Aggregates, Yard waste, Metals, and Cardboard.
- Yard waste is not included in our overall diversion rate calculation on the template or corresponding spreadsheet per the requirements from the LEED BD&C v3.0 Reference Guide.

B. List of materials that comprise Miscellaneous Construction Debris include, but are not limited to:

- Wood, Scrap Metal, Drywall, Plastics, Film Plastics, Wire, Cable, Glass.
- The total quantity estimated, inception to completion Disposal.
- Total Project Generation, Diversion + Disposal.
- Project Diversion Rate.

Webcor/Obayashi will verify that Construction and Demolition Waste; Non- hazardous solid resources resulting from Trade Subcontractor's construction, remodeling, repair, and demolition operations for the Project are properly transferred to a C&D Recycling Facility. The C&D Recycling Facility shall be a facility that receives only C&D (construction and demolition) material. Trade Subcontractors shall provide Webcor/Obayashi a summary sheet, including all receipts for transport materials each month with the progress billing if any materials are processed offsite.

Webcor/Obayashi will verify that of the inevitable waste generated, Trade Subcontractor's reuse, salvage, or recycle as many of the waste materials as economically feasible.

Webcor/Obayashi will participate/attend a meeting with Trade Subcontractor, the TJPA Representative and representatives of the City's Solid Waste Management and recycling programs prior to commencement of work. Webcor/Obayashi will

ensure all Trade Subcontractors are made aware of the LEED requirements for C&D diversion before being allowed to work on the site.

Webcor/Obayashi will verify that Trade Subcontractors submit a Monthly Disposal and Recycling Summary Report; quantifying the construction and demolition waste generated and recycled, reused or disposed of at Class 3 Landfill. Contractor shall also send a copy of this report to the TJPA Representative and the SWMP to the City Government Recycling Coordinator. The Comprehensive Disposal and Recycling Summary Report shall be submitted quantifying the construction and demolition waste generated and recycled, reused or disposed of at Class 3 Landfill, on a monthly basis. This report is a condition of progress payment and failure to submit this information shall render the Applications for Payment incomplete. The Trade Subcontractors/trades are also responsible for contracting with a regional facility to haul any hazardous materials from the site. The Trade Subcontractor shall calculate the C&D diversion rate for both LEED requirements (excluding yard waste) and the requirements set by the City (including yard waste) for all materials processed offsite. The W/O LEED representative will screen every C&D Submittal and review Trade Subcontractor and lower-tier subcontractors C&D Plans for clarity, completeness, and compliance with City/LEED requirements.

Webcor/Obayashi will verify that Trade Subcontractors develop and implement procedures for source separation to the greatest extent feasible.

Webcor/Obayashi will verify the Trade Subcontractors plans develop and implement procedures for transporting commingled (mixed) construction and demolition waste that cannot be feasibly source-separated if the intent is to process it offsite instead of using debris boxes provided onsite.

Webcor/Obayashi will verify the Trade Subcontractors plans develop and implement procedures for Salvage and Reuse.

Webcor/Obayashi will verify the Trade Subcontractors plans develop and implement practices for this project that will reduce waste at the source.

Webcor/Obayashi will verify the Trade Subcontractors plans develop and implement procedures for materials that are recycled and/or reused onsite

Webcor/Obayashi will verify that Trade Subcontractors participate in reuse programs by reviewing each Trade Subcontractors Monthly Disposal report for any material processed offsite. For such reuse programs, Trade Subcontractor shall refer to the City's construction and demolition recycling program.

Webcor/Obayashi shall review the environmental goals of this Project with all Trade Subcontractors during the preconstruction meeting. Webcor/Obayashi shall make a proactive effort to increase awareness of these goals among the job site workers. Webcor/Obayashi will make a proactive effort to increase awareness of these goals among the site workers by requiring that each Subcontractor take Click Safety training prior to stepping on the jobsite. As part of this Click Safety training, there is a module dedicated to teaching and reviewing the

LEED requirements of the project during construction activity.

Webcor/Obayashi will verify that Trade Subcontractors are using registered transporters and registered facilities. Only registered transporters can remove mixed construction and demolition debris from the construction site, and they must take this material to a registered facility. NOTE: A Registered facility: is any facility that accepts mixed construction and demolition debris for processing and recycling must be registered with the City and County of San Francisco and must demonstrate an overall minimum recycling rate of 65% for mixed construction and demolition debris. A registered facility must have applied for and received a registration from the San Francisco Department of the Environment. Webcor/Obayashi will ensure that Waste Management Companies that service San Francisco and retained by the Trade Subcontractors are registered transporters and meet the City/LEED requirements. Trade Subcontractors shall refer to SFEnvironment.org for the City's most current list of registered transporters.

Webcor/Obayashi will verify that Trade Subcontractors are implementing the following:
1. Eliminate the procurement of unneeded supplies.
2. Reduce waste by printing and copying double-sided.
3. Submit all submittals, reports, and forms in electronic format (PDF) unless otherwise noted.
4. Fully participate in available and required recycling and composting programs.
5. Purchase products made with recycled content such as paper and recycled aggregate.

Webcor/Obayashi will verify that Trade Subcontractors shall submit:
1. Construction and Demolition Debris Management Plan.
2. Construction and Demolition Debris Recovery Monthly Summary Report and supporting documentation for any materials processed offsite.
3. Construction and Demolition Debris Recovery Final Report for all materials processed offsite.

Trade Subcontractor's plan shall comply with specification section 02 41 00. All Trade Subcontractors will remove and dispose of all waste materials from the site for off-site disposal in compliance with all applicable laws, ordinances, rules, and regulations. Webcor/Obayashi and all Trade Subcontractors will work with the TJPA representative so that the representative may characterize the waste materials as required by law to the extent required by Webcor/Obayashi's selected disposal facilities.

Trade Subcontractor's plan shall comply with specification section 01 15 00. Trade Subcontractor's shall perform work in a manner to minimize generation of dust, dirt, rubbish, and other debris, to prevent dust and debris from interfering with the progress of the work, and to keep dust and debris from accumulating at the work site or adjacent areas. Trade Subcontractor's shall remove debris and rubbish from the site on a daily basis.

Trade Subcontractor's plan shall comply with specification section 01 13 50, by preventing the mixing of hazardous and non-hazardous materials.

Trade Subcontractor's shall be required to provide technical information, as required by the specifications including compliance with the City and County of San Francisco Ordinance 27-

06, in their plan which will be submitted For Record Only to the CMO.

Mr. Rick Buellesbach
Senior Project Manager - Transbay Transit Center
Webcor/Obayashi Joint Venture
175 Beale Street
San Francisco, CA 94105

Re: Transbay Transit Center Quality Control Surveys
Subject: December 2011 Control Verification Survey Results

Dear Mr. Buellesbach:

The field work for subject surveys was conducted by Chaudhary & Associates December 5 - 8, 2011. The surveys included verification of Chaudhary & Associates control (as shown on the Survey Control Plan dated 11-10-2011), with the exception of control point 217 which was destroyed sometime between the November 2011 and December 2011 control verification surveys.

Horizontal control values for point numbers 54, 208, 209, 213, 101, 105, 215, and 227 were constrained in this control network horizontal adjustment. The elevation values remain unchanged from the November 2011 surveys. The table below shows both the 11-10-2011 and the 12-21-2011 values for the remaining control points. Because data values can be impacted by environmental factors (temperature and humidity), seismic activity, and the various combinations of back sight and foresight data available on any given day, only the values which differ by 0.01' or more are adjusted and shown on the following table (and updated on the 12/2011 control map to be sent to you tomorrow). Field note copies and Star Net Reports have been mailed to you.

Horizontal Values

Point #	November 10, 2011		December 2011		Description
	Northing	Easting	Northing	Easting

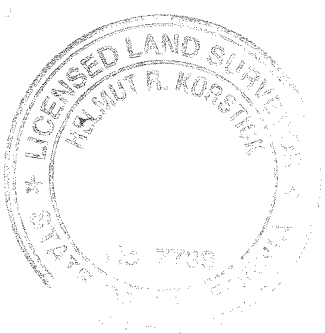
Please feel free to call me at (707) 255-2729 any questions or comments.



Sincerely,
CHAUDHARY & ASSOCIATES, INC.
A California Corporation

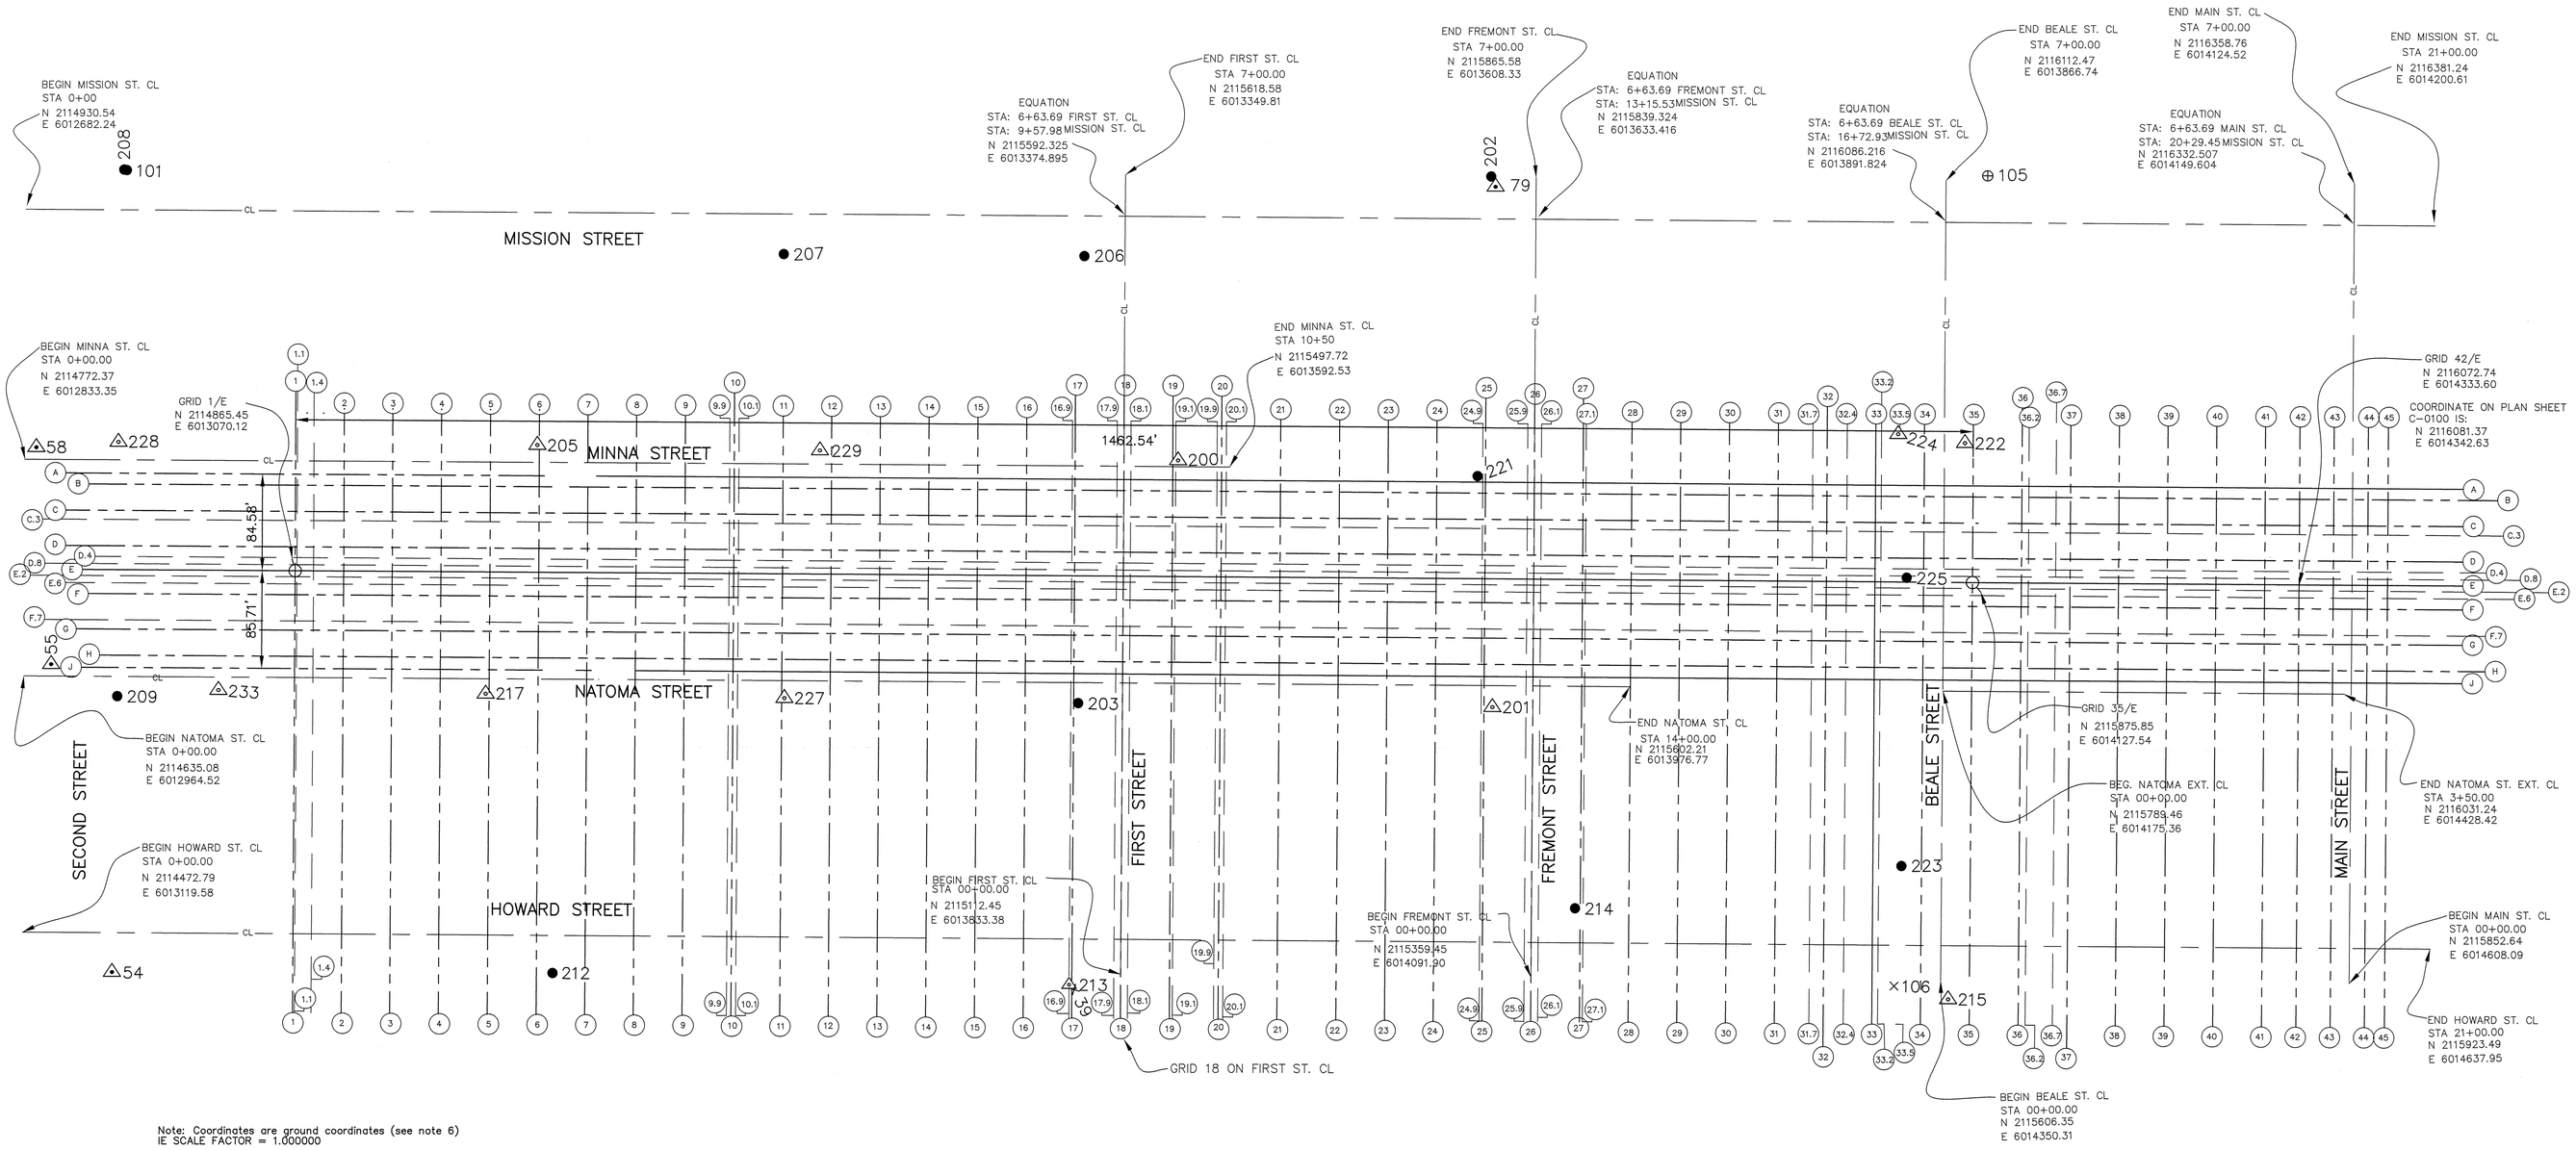
Helmut R. Korstick, PLS 7739
Project Surveyor

SURVEY PROCEDURES

1) CHAUDHARY AND ASSOCIATES FIELD CREW LOCATED AND TIED OUT CONTROL BETWEEN APRIL 22–MAY 13, 2011. DIGITAL LEVELS WERE UTILIZED FOR THE VERTICAL COMPONENT, AND A TRIMBLE S6 WAS USED FOR THE HORIZONTAL COMPONENT. CONTROL WAS ADJUSTED UTILIZING STAR–NET SOFTWARE. OF THE 4 MAIN CONTROL POINTS SHOWN ON SHEET GT–0100 OF PLANS (BEING PTS. 54, 101, 105, AND 106), PTS. 54, 101, AND 105 REMAIN AS OF THE DATES OF THIS SURVEY. CONSEQUENTLY, PTS. 54, 101, AND 105 WERE HELD IN THE STAR NET ADJUSTMENT. A TOPCON DL–102 DIGITAL LEVEL WAS UTILIZED FOR THE VERTICAL COMPONENT. NOTE: CONTROL POINTS 220–226 WERE FIELD SURVEYED BETWEEN SEPTEMBER 9–14, 2011.

2) CENTERLINES AS SHOWN ON PLAN SHEET C–0100 TO BE FIELD VERIFIED.

3) GRID LINES TO BE SET BY PLACING A CUT X OR OTHER APPROPRIATE SURVEY MARKER ON THE EXTENSION OF SAID GRID LINES WHERE PRACTICAL OR PER WEBCOR AUTHORIZATION.



Note: Coordinates are ground coordinates (see note 6)
IE SCALE FACTOR = 1.000000

POINT TABLE

Traffic Control Plan
Webcor/Obayashi
WO-TCP0001
REVISION 2
8/22/2012

GENERAL

The Webcor/Obayashi Joint Venture (W/O) Traffic Control Plan that will be implemented on the Transbay Transportation Center Project is an overall project policy, with each trade subcontractor contributing their specific plan as they come on board to the project. The primary function of this plan is to provide a framework to insure compliance with Specification Section 01 15 70. To assist in this effort, W/O has enlisted the services of a traffic control consultant (TCC) – Sandis Engineering. Award of this contract between Sandis Engineering and W/O was based on a competitive request for proposal (RFP) process referred to as TG05.4.

TCC is responsible for participating in all aspects of traffic control planning and implementation including, but not limited to:

- Traffic control design oversight;
- Coordination between trade subcontractor traffic control designs;
- Interface with City of San Francisco and other agencies as necessary;
- Participate in coordination efforts of the TJPA Representative;
- Oversight of implementation of approved traffic plans;
- Provide daily reports regarding status of traffic control measures;
- On call traffic control services as requested.

TRAFFIC PLAN REVIEW AND COORDINATION

TCC shall prepare a detailed "as built" traffic plan for approximately four blocks in all directions from the jobsite. This map will be based on SFMTA maps and will be augmented as appropriate per field review of existing conditions. This map will include all striping, signage, curb lines, curb cuts, curb painting, buildings and any other feature of the street layout and traffic control. Beyond the four block distance, the map will include street layout and striping configuration.

Once a trade subcontractor is under contract, W/O shall provide the trade subcontractor with the as-built plan in CADD format. The trade subcontractor will then be required to use this base map for preparation of all their traffic control plans. A summary of the below criteria can be found in the attached Traffic Control Plan Preparation Packet.

The trade subcontractor is required to prepare and submit a complete traffic plan consistent with requirements of the project specification and all requirements per the City of San Francisco. The submittal must be made in a timely fashion to allow for the review timeframe prescribed in the specifications plus an additional four weeks for review by the TCC.

Upon receipt of the submittal from trade subcontractor, W/O will forward it to the TCC for review. The plan will be reviewed for adherence to specifications and for compatibility with previously submitted plans. Comments will be returned to the trade subcontractor who will make modifications as is appropriate.

When the trade subcontractor's traffic control plan is reviewed and coordinated with the TCC, it will be submitted to the TJPA Representative for approval. Submittal will be in compliance with Specification Section 01 15 70, paragraph 1.4B.

Upon approval by the TJPA Representative and SFMTA, the TCC will update the baseline traffic

control plan as appropriate. The baseline plan will be updated only when a change to the traffic pattern will be in place for three or more months. If the traffic control plan will be in place for less than three months, the plan will be superimposed over the base map for coordination but the baseline drawing will not be modified.

FIELD IMPLEMENTATION

It is intended that the TCC will maintain a regular, but not full time, presence on site. Similar to the traffic control design review, their scope of work is to review the trade subcontractor's adherence to city standards, project specifications and approved traffic control plans.

TCC review and assistance in in field coordination includes but is not necessarily limited to:

- Perform site review of traffic control;
- Note traffic control deficiencies;
- Coordinate correction of site deficiencies with W/O and trade subcontractor;
- Provide daily report of traffic control observations and corrective measures;
- Attend site meetings as necessary to review short term Special Traffic Permit and coordinate between subcontractors and SFMTA;
- Miscellaneous coordination with SFMTA as necessary;
- Review of pedestrian protection as it relates to vehicle traffic;
- Provide traffic control devices and personnel as required to augment traffic control efforts;
- Confirm proper training of subcontractor flagging personnel;
- Provide continuous oversight of traffic control for major construction operations as determined by CM/GC.

TASKS NOT CURRENTLY ANTICIPATED BY TCC

Training of flaggers for the trade subcontractors although it is an option should it become apparent that subcontractor employees need additional training.

Coordination of the 10b police officers between subcontractors will be the responsibility of the CMO.

Pedestrian control unless it is specifically impacted by vehicle traffic.

TRANSBAY TRANSIT CENTER – TRAFFIC CONTROL PLAN PREPARATION PACKET

Overview

The purpose of this packet is to provide the contractor with the information necessary to prepare a Traffic Control Plan (TCP) for their work in accordance with the requirements of the Project Specifications and the City and County of San Francisco (CCSF). It includes procedures, timing, a base map, plan sheet template and examples for use when preparing and submitting Traffic Control Plans (TCPs) for review and approval. The documents included in the TCP Packet are described below.

Flow Diagram

The flow diagram included within the TCP packet identifies the specific components and required time intervals for TCP submittal, review and approval. Please note time requirements for Plan review and approval. No work will be allowed without an approved plan. It is the contractor's responsibility to anticipate and allow for required lead times.

Base Map File

The AutoCAD drawing of the Base Map file included in this packet represents the City of San Francisco street layout as of the date indicated on the Base Map file title block. ALL proposed TCPs shall be created using this Base Map file as a starting point. It is crucial that proposed TCPs be provided on the same coordinate system as the Base Map file so multiple approved TCPs can be overlain in a composite exhibit. TCPs prepared using a different base or plan template will be rejected.

TCP Standards

Design Standards

The Traffic Control Plans shall be prepared and submitted in accordance with the following documents:

1. Transbay Transit Center Project Specification Section 011570 – Traffic Routing Work, dated September 23, 2010. A copy of this specification is included in the TCP Packet.

2. City and County of San Francisco Regulations for Working in San Francisco Streets (Bluebook), 7th Edition dated October 2006. Refer to the following link for a copy of this document: http://www.sfmta.com/bluebook

CAD Standards

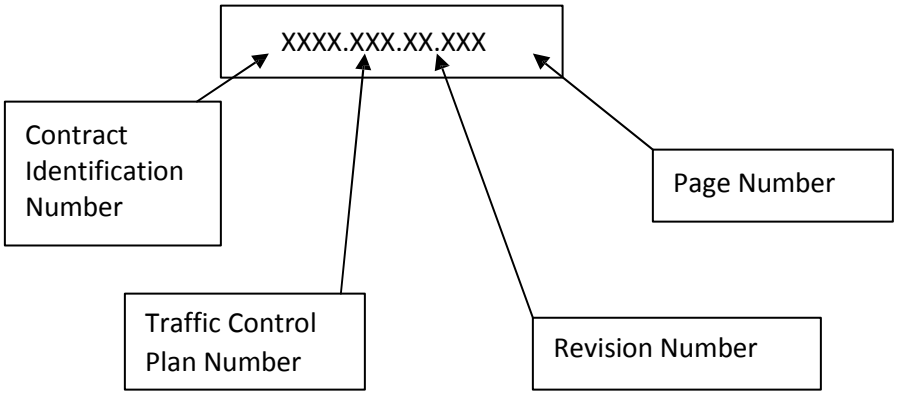
The sheet TCP-001 provides a template with title block, symbols, and specific details pertaining to the presentation and setup of drawings to be used when preparing a TCP. The CAD standards identified under the Vendor Submittal Instructions, including layering configuration, title block, and symbols, shall be referenced and followed when creating all TCP AutoCAD drawings. The contractor shall include additional signs in the form of blocks, notes, and details as needed.

TCP Samples

There are three sample Traffic Control Plans included in this packet. These samples provide an example of how the TCPs shall be set up and configured.

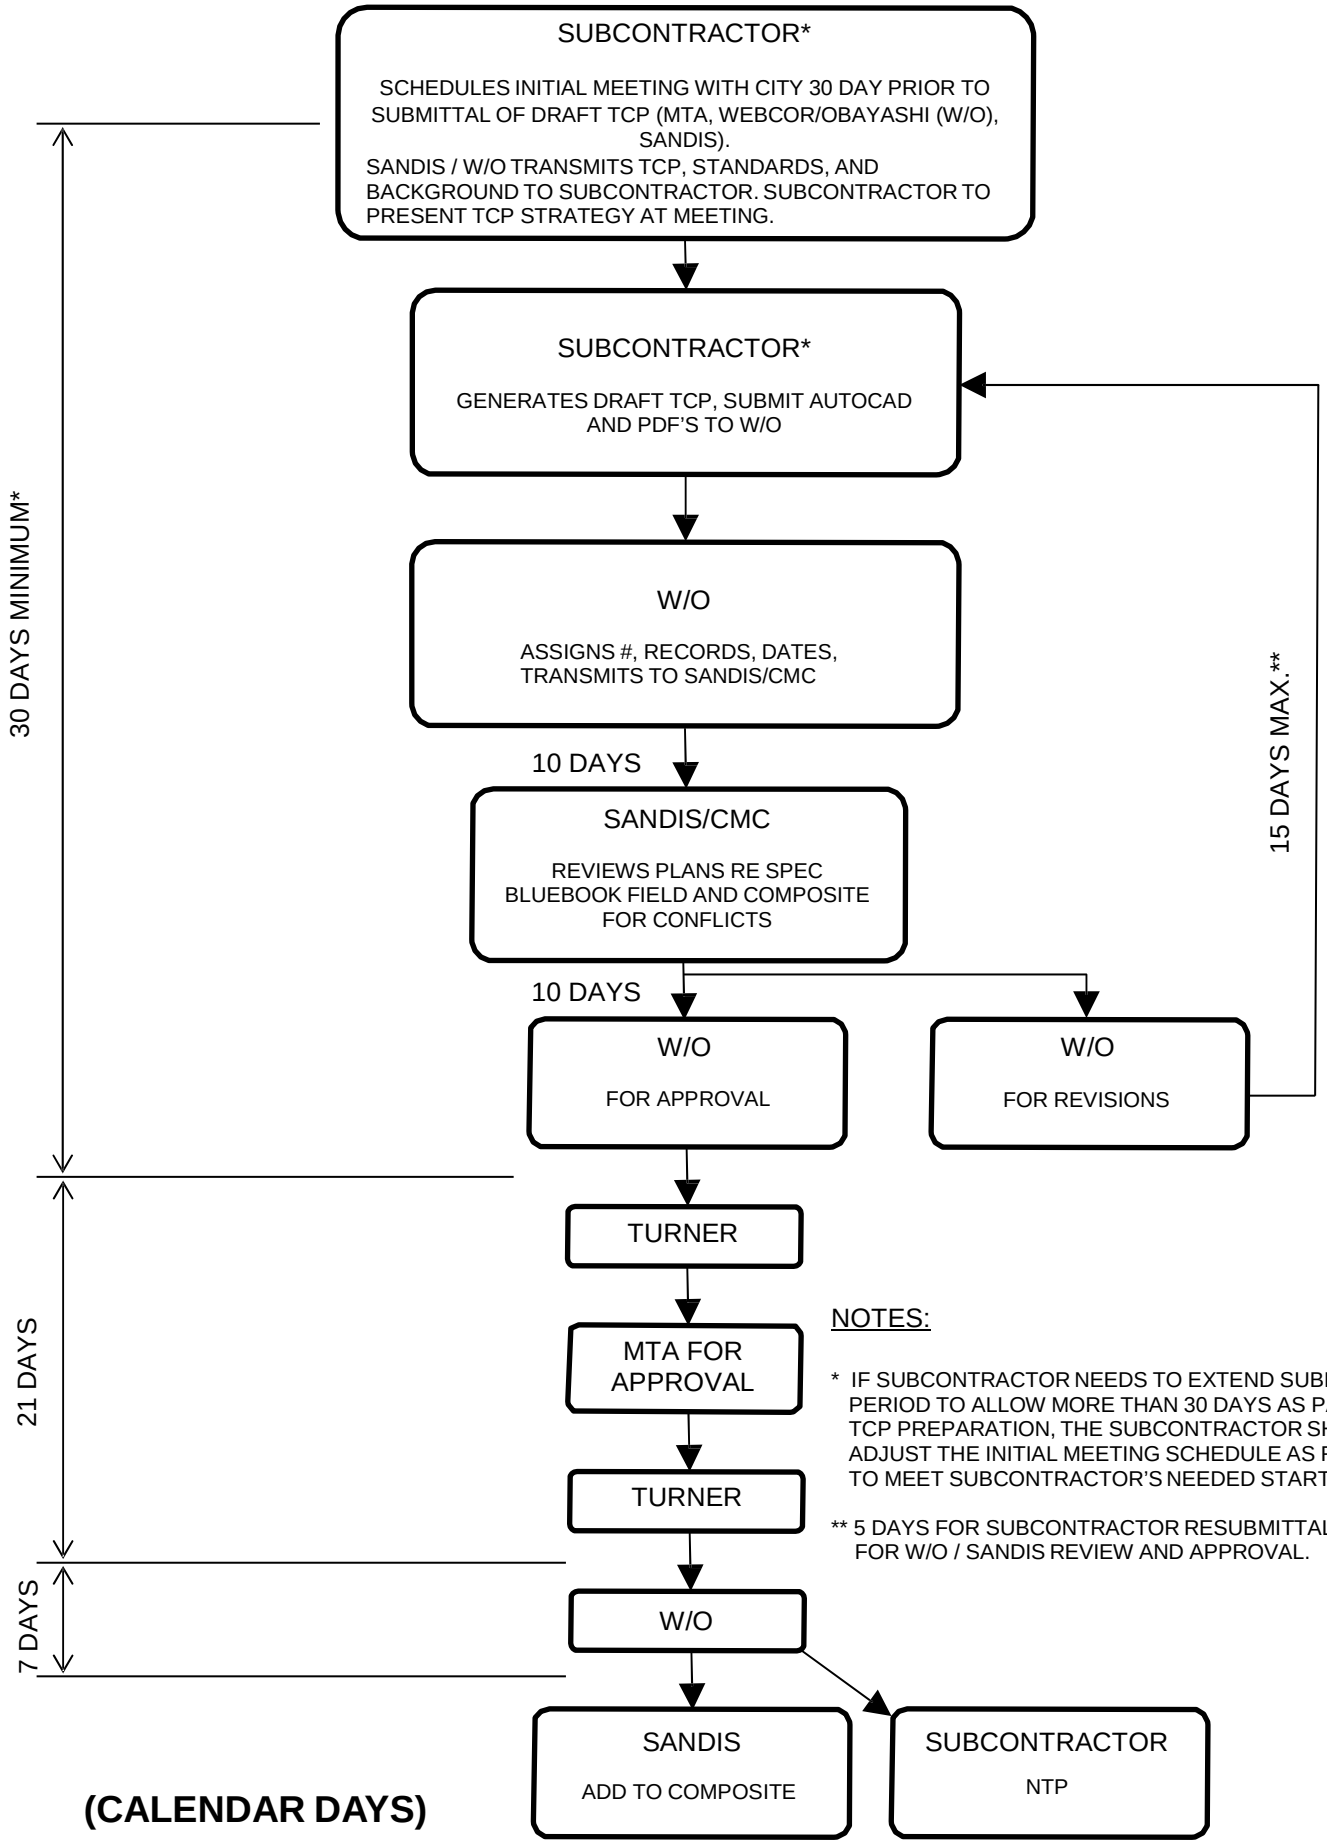
TCP Submittals

All proposed Traffic Control Plans shall be submitted at 1"=80' scale on 22"x34" sheet size in both pdf and AutoCAD 2007 formats. They are to be submitted electronically to Webcor-Obayashi's trade package project manager. An important item to be included on all TCP sheets is the submittal tracking number. The tracking number consists of four segments separated by a period. The first segment is the 4-digit contract identification number, the second segment the 3-digit TCP number (provided by Webcor), the third segment is the 2-digit revision number, and the fourth the 3-digit page number. Refer to the Submittal Tracking Number Diagram below for additional direction.



Submittal Tracking Number Diagram

TRAFFIC CONTROL PLAN SUBMITTAL REVIEW AND APPROVAL PROCESS



NOTES:

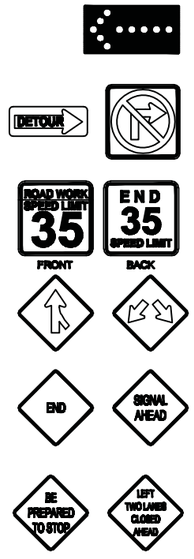
* IF SUBCONTRACTOR NEEDS TO EXTEND SUBMITTAL PERIOD TO ALLOW MORE THAN 30 DAYS AS PART OF TCP PREPARATION, THE SUBCONTRACTOR SHALL ADJUST THE INITIAL MEETING SCHEDULE AS REQUIRED TO MEET SUBCONTRACTOR'S NEEDED START DATE.

** 5 DAYS FOR SUBCONTRACTOR RESUBMITTAL. 10 DAYS FOR W/O / SANDIS REVIEW AND APPROVAL.

VENDOR SUBMITTAL INSTRUCTIONS

TRAFFIC CONTROL PLANS SHALL BE SUBMITTED AS FOLLOWS:

1) FIVE (5) HARD COPIES
2) ELECTRONIC COPY IN PDF AND AUTOCAD 2007 FORMATS
3) 11"x17" SHEET SIZE
4) 1"=80' SCALE
5) SHEET NUMBERING "TCP-###"
6) ELECTRONIC FORMAT PER TEMPLATE PROVIDED: SINGLE CAD FILE CONTAINING MULTIPLE LAYOUT TABS WITH A SINGLE TCP PER TAB. THE TCP SHALL BE DRAFTED IN MODEL SPACE ON TOP OF THE STREET BASE FILE WITH NOTES/LEGEND IN PAPER SPACE. MODEL SPACE SHALL BE DRAFTED AS FOLLOWS:
   a) EACH TCP PAGE SHALL CONSIST OF FIVE LAYERS WITH A PREFIX FOR THAT PAGE NUMBER. FOR EXAMPLE, PAGE 001 WOULD CONTAIN THE FOLLOWING LAYERS:
      001-TC-DIM
      001-TC-NOTES
      001-TC-SIGN
      001-TC-SIGNTEXT
      001-TC-STRIPELINE
      001-TC-WORKAREA
   b) ALL SYMBOLS, BLOCKS AND DIMENSIONS SHALL MATCH THOSE ON THIS SHEET IN SIZE, COLOR, AND LAYER. CREATE NEW BLOCKS USING SIMILAR COLOR AND SIZE FOR SIGNS/DEVICES NOT SHOWN HERE.
   c) INSERT STANDARD TITLE BLOCK PER SHEET. USE ATTRIBUTE EDITOR TO FILL IN TITLE BLOCK WITH APPLICABLE INFORMATION.
   d) TABLES, NOTES, AND LEGENDS SHALL BE IN PAPER SPACE PER SHEET ON LAYER XXX-TC-GENERAL, WHERE XXX IS THE PAGE NUMBER
   e) STANDARD TEXT STYLES, SIZES, DIM STYLES PER TEMPLATE
   f) STANDARD LAYER COLORS AND NAMES; AND CTB/PEN SETTINGS PER TEMPLATE
   g) FREEZE LAYERS IN VIEWPORTS AS NECESSARY TO ONLY SHOW THOSE NEEDED FOR THAT INDIVIDUAL SHEET.
7) REFER TO PROVIDED SAMPLE TCP PLAN FOR AN EXAMPLE OF THE FORMAT BEING IMPLEMENTED.



NOTE:
SAMPLE TEXT FOR FREESTANDING NOTES.

SHEET

SAMPLE

Exhibit U Submittal Schedule

Trade Subcontractor's Schedule submission shall include a full submittal schedule per Specification Section 01 13 00 1.4 – Submittal Schedule.

1. All submittals are to be submitted to Webcor/Obayashi Joint Venture within 60 days of Award.
2. The Submittal Schedule shall contain additional data fields to indicate: 1) the duration in work days for procurement of the item starting from the date that the submittal is approved until the item is available for construction, and 2) the Activity ID of the earliest construction activity for which the item will be required (the submittal/procurement item's successor).
3. The Trade Subcontractor should use the attached data format, Submittal Schedule Excel Template, for the submission of Submittal Schedule as Microsoft Excel File. Contact Webcor/Obayashi Joint Venture to obtain the blank excel file of the Submittal Schedule.
4. The Trade Subcontractor shall show critical submittals in the Exhibit I Construction Schedule in addition to providing the comprehensive submittal schedule required herein. Critical submittals are those submittals considered vital to the timely progression of the project schedule. These items may include, but are not limited to, engineering submissions; long lead items; items required within the first 25% of Subcontractor's performance period; and items that are required for construction or installation of a task with less than 20 working days of total float in the overall project schedule. The last group of items may not be determined until after acceptance of the Trade Subcontractor Construction Schedule submission and its full incorporation into the project schedule. Therefore, the Subcontractor may be required to add items to its Primavera schedule file subsequent to approval of its Construction Schedule submission.

QUALITY COMMISSIONING PROCEDURES AND GUIDELINES
Exterior Skin and Waterproofing Systems

- ✓ **Roofs**
- ✓ **Decks**
- ✓ **Windows**
- ✓ **Curtain Walls**
- ✓ **Exterior Wall Systems (Precast, Stucco, EIFS, GFRC)**
- ✓ **Water Shedding Systems**
- ✓ **Flashings**
- ✓ **Expansion Joints**
- ✓ **Caulking, Sealants**
- ✓ **Primary and Secondary Water Barrier Systems**
- ✓ **Above & Below Grade Waterproofing**
- ✓ **General Waterproofing Systems**

1.0 Purpose

The purpose of this procedure and guideline is to set forth a commissioning process, which will ensure that the building's exterior envelop and waterproofing systems perform and function in conformity with design intent and to provide a means of verifying the implementation of these systems based on the project specifications, design and applicable industry standards.

2.0 Definition of Commissioning

The term "Commission" refers to a Quality Assurance process by which the building's exterior envelop and waterproofing systems (i.e., below and above-grade waterproofing, decks, roofs, caulking, plaster, precast concrete and GFRC, curtain-wall, flashing, expansion joints, etc.) are provided, installed and tested in order to verify the systems perform in accordance with the contract documents and the design intent.

Commissioning entails the development of a clear and complete process that verifies the systems design and operational intent. It also is to verify that the exterior envelop and waterproofing systems and its components are installed according to the contract documents, manufacturer's recommendations and published industry standards and that the system receives adequate installation and performance inspections by the installing contractor.

The process must include verifying and documenting the installation steps, phases, and system performance with respect to the design intent and the contract documents. Commissioning is a team effort that requires cooperation by all parties to succeed.

3.0 Description of the Commissioning Process

Commissioning is a **"systematic"** process for achieving, validating and documenting the performance of building systems as so that it meets the design intent and requirements.

The process extends through all phases from design to occupancy, and extending through the warranty period. Numerous checks and inspections shall be performed at each stage of the process to ensure that established procedures are followed. The process also includes training of facility operational personnel to ensure continued efficient use of the exterior envelop and waterproofing systems as originally designed and installed.

This guideline provides a uniform, integrated and consistent approach for the commissioning of all waterproofing systems as well as assisting in insuring product and design compatibility. Since many building waterproofing systems are integrated, a deficiency in one system or component may result in sub-optimal performance and failure among others.

4.0 Commissioning Plan

Commissioning is a **"Quality Process"** for validating the system and component design performance.

The reports from the commissioning process are not just test reports, but reports that document design, installation, inspections, and particular tests and or evaluation procedures. The commissioning plan is continually updated to reflect changes in program and design of the waterproofing system(s). Commissioning reports shall document and record the results of the commissioning process.

Each Trade Subcontractor's specific commissioning plan must be neatly organized in a consistent manner that reflects the nature of the building systems and their performance. The commissioning plan shall include schedules, requirements and procedures.

Trade Subcontractor(s) shall be responsible for the timely and efficient completion of all commissioning in accordance with the Subcontract Agreement.

At no time shall any work be permitted to commence without a WEBCOR/OBAYASHI' approved Trade Subcontractor Waterproofing Commissioning Program.

Failure to do so may require Trade Subcontractor to assume all related costs and expenses in accordance with the Subcontract Agreement.

In addition, Trade Subcontractor may also be required to assume all related cost should WEBCOR/OBAYASHI find it necessary to develop, manage and or perform any Trade Subcontractor commissioning work.

5.0 Objectives

The fundamental objectives of the commissioning process are:

5.1 Create a procedure to verify and provide documentation that the waterproofing performance of the facility meet the design requirements.

5.2 Enhance communication by documenting data and decisions throughout all phases of the project.

5.3 Validate and report that the performance of waterproofing systems meets design intent.

5.4 Provide a means of Quality Control and Quality Assurance (QA/QC) throughout all phases of the waterproofing system(s) installation, inspection, and testing process.

6.0 Contractors Normally Participating in the Commissioning Process

- ✓ Waterproofing Consultant
- ✓ Architect
- ✓ Structural Engineer
- ✓ Mechanical
- ✓ Plumbing
- ✓ Electrical
- ✓ Fire Sprinkler
- ✓ Glass Systems
- ✓ Caulking
- ✓ Brick, Tile, Precast, GFRC, and Stone
- ✓ Fountains and Ponds
- ✓ Swimming Pools & Spas
- ✓ Roofing
- ✓ Insulation
- ✓ Flashing & Sheetmetal
- ✓ Waterproofing Contractors
- ✓ Concrete (If waterproofing admixtures are included by design)
- ✓ Stucco, EIFS, DEFS systems
- ✓ Elastomeric Painting
- ✓ Rough Carpentry (Wood cladding)
- ✓ Architectural Metal Cladding
- ✓ Expansion Joint Systems
- ✓ Water Tanks
- ✓ Special Systems or Components

7.0 Commissioning Team

The commissioning team members may consist of the following:

- ✓ WEBCOR/OBAYASHI - Project Team as required

- ✓ Owner - Designated representative of the owner, building operator/engineer, and/or the owner's construction management firm
- ✓ Engineers - Architect and Designers
- ✓ Waterproofing Contractor
- ✓ Waterproofing Consultant
- ✓ Flashing / Sheet Metal Contractor
- ✓ Exterior Skin Contractor
- ✓ Roof Contractor
- ✓ Glass and Curtain Contractor
- ✓ Caulking and Sealants Contractor
- ✓ Commissioning Agent (CA)
- ✓ Mechanical Contractor
- ✓ Plumbing Contractor
- ✓ Fire Sprinkler Contractor
- ✓ Electrical Contractor
- ✓ Testing Contractor
- ✓ Other as necessary

8.0 Meetings

Regularly scheduled commissioning meetings of **the entire team** shall be conducted for site coordination, communicating issues of concern, resolving conflicts, reporting on system process and status, identifying urgent work and all deficiencies.

Commissioning meetings are critical to the **Quality** of the commissioning process as well as timely completion of the project.

9.0 Trade Subcontractor Performance Requirements

9.1 Designation of the primary person who will be responsible, accountable, and act as the main contact person for all commissioning communications. Provide organizational chart indicating personnel who will be involved in the project. The chart should indicate factory, office, and on-site field personnel.

9.2 Review of drawings and specifications for completeness, appropriateness of details, and acceptance by Trade Subcontractor thereof.

9.3 Review WEBCOR/OBAYASHI standard details.

9.4 Preparing and submitting documentation of Trade Subcontractor's respective materials and systems to be integrated into the overall Commissioning Plan.

9.5 Submitting information on the intended commissioning protocol used on materials, and the integration into the system as a whole.

9.6 Provide a presentation of the commissioning process to WEBCOR/OBAYASHI, the Owner and or the owner's representatives. Demonstration shall indicate compliance with the Trade Subcontractor Commissioning requirements as outlined in this document.

9.7 Submitting shop drawings detailing waterproofing system layout as outlined in the contract documents. Shop drawings shall reflect all conditions present in the building, including but not limited to the following:

a. Conditions where different materials meet (i.e. windows to plaster or stone to plaster).

b. Corner conditions.

c. Conditions where vertical planes meet horizontal planes (i.e. soffits and sills).

d. Expansion joints and control joints.

e. Flashing.

f. Penetrations (i.e. Z-ducts, electrical outlets, louvers).

g. Conditions typically utilized by Trade Subcontractor's common practices.

Shop drawings shall include installation drawings indicating the planned sequence of installation of all components.

9.8 Providing means and method for preliminary testing of the exterior envelop and waterproofing systems with manufacturer's representative present as required:

a. Caulking: Include complete coordination with the caulking manufacturer's representative to assure compatibility of the caulking system with the

surrounding substrate and finishes. Trade Subcontractor shall submit caulking samples including manufacturer's specifications for materials, color, cleaning procedure, required primers, proper backer rod, installation procedures, testing requirements and results. Testing of caulking samples between all combinations of materials shall be performed by qualified testing agencies in direct accordance with A.S.T.M. Standard Test Method C794 (75), including seven (7) day immersion. A letter from the Caulking Manufacturer shall be submitted approving all testing procedures, the installation procedure and the use of the specified materials for the intended application. Any materials installed without such approval that may be in conflict with the approved procedures or of unacceptable color and appearance will be removed and replaced at the Trade Subcontractor's expense.

b. Windows and Sliding Glass Doors: Assemblies shall be field tested in accordance with American Architectural Manufacturers Association (AAMA) 502-02 Voluntary Specification for Field Testing of Windows and Sliding Glass Doors using Test Methods A and B, testing a minimum of 1% of the products for air leakage resistance and water penetration resistance as specified for various stages of the product installation.

9.9 Reviewing all required testing under the witnessing of WEBCOR/OBAYASHI, Building Owner, and or the Owners representatives.

9.10 Correcting all system deficiencies at Trade Subcontractor expense.

9.11 Obtaining all required permits, code required inspections and final certifications.

9.12 Preparing complete as-built record drawings made from an original set that has been marked up throughout the duration of the project. Drawings must indicate all work as it was actually installed showing change order revisions, field changes required to meet the working conditions, and any other items that will affect or reflected in the operation and maintenance of the facility.

9.13 Obtaining all manufacturer’s warranties and guarantees.

9.14 Organizing the O&M manuals, if any, from suppliers and manufacturers.

9.15 Performing any specified training for the facility’s operational staff.

10.0 Information Management

The management and continued organization of the commissioning information shall be the sole responsibility of the Trade Subcontractor.

WEBCOR/OBAYASHI and the Trade Subcontractor shall mutually agree on the location were all the commissioning information and documentation shall be stored.

The Trade Subcontractor shall make every effort to continually update and manage the information throughout the commissioning process. WEBCOR/OBAYASHI and the Building Owner may review the commissioning information provided by the Trade Subcontractor at any time for updates, accuracy and completeness.

WEBCOR/OBAYASHI may elect to withhold or make appropriate adjustments to the Trade Subcontractor's monthly progress billing in the event the commissioning information or performance requirements as described in the Waterproofing Quality Commissioning Procedures & Guidelines are not being performed, managed and updated by the Trade Subcontractor.

11.0 Trade Subcontractor Commissioning Submittal Requirement

Each Trade Subcontractor has a responsibility to WEBCOR/OBAYASHI and the Building Owner to comply with the terms of the contract and to verify that the design intent of the waterproofing systems for the project is achieved.

Each Trade Subcontractor is required to provide two completed commissioning manuals containing the information outlined in Section 19 - Commissioning Binder Tab Index of this guideline. Each proposed formatted “3-ring” binder containing all information, including blank forms shall be provided to WEBCOR/OBAYASHI and the Owner for **“review and comment”** before the commissioning process begins, or by an agreed upon date.

WEBCOR/OBAYASHI, the Owner and the owner representative shall review the information and return it to the Trade Subcontractor within **two-week** time with all comments.

Each Trade Subcontractor shall make all required changes as agreed, to the commissioning manuals and resubmit them to WEBCOR/OBAYASHI within **two-weeks**.

Each Trade Subcontractor shall schedule and provide a formal demonstration of their commissioning process to WEBCOR/OBAYASHI, the Owner and the Owners representative after all required changes to the manuals have been satisfactory completed. Demonstration shall indicate compliance with the Trade Subcontractor Waterproofing Commissioning requirements as outlined in this document.

Each Commissioning Manual **shall be neatly organized** using appropriate tabs, dividers, table of content, index, etc. as required for easy referencing. Refer to Section 19 Commissioning Binder Tab Index for a standard binder organization. All Commissioning Manual(s) **must be user friendly**.

12.0 Commissioning Binder Tab Index

Tab 1. **Project design criteria specifications –** Provide information that describes the overall design criteria and performance requirements for the waterproofing system(s).

Tab 2. **Manufacture products and components** – Provide complete submittal list of all components that shall be contractually provided and installed.

Tab 3. **Manufacture installation instructions –** Provide manufacture documentation insuring that the system and components installation complies with all Manufacture requirements to maintain performance and guarantee obligations.

Tab 4. **Manufacture details –** Provide manufacture details or published industry standards for penetrations and terminations interfacing with other installed systems.

Tab 5. **Design transition review –** Provide design review comments and concerns on transition interfaces to other s or other compatibility issues.

Tab 6. **Quality Assurance / Quality Control Program –** Provide QAQC program with complete field inspections and checklists.

Tab 7. **Documentation –** Trade Subcontractor shall maintain a separate field binder documenting the QAQC inspections and field-testing for all installed work.

Tab 8. **Field mock-up and testing –** Provide information on mock-up or field performance tests that shall be preformed for all installed system(s). Provide manufacture recommendations or published testing standards used. If no performance testing is preformed, Trade Subcontractor shall provide documentation on how each system is performing in accordance to the documented design intent and contract warranty requirements.

Tab 9. **Schedule –** Provide schedule for, shop drawing devolvement, submittals fabrication, delivery and installation.

Tab 10. **Agency and factory test reports –** Provide all factory, agency, and field performance-testing reports on installed systems.

Tab 11. **Factory and Trade Subcontractor guarantee information –** Provide warranty responsibilities and durations for all systems and components installed.

Tab 12. **Owner Training –** Provide (O&M) and training for all required service and maintenance requirements as it extends throughout each system to maintain warranty. Include owner sign-off sheets verifying training.

Tab 13. **Attic Stock –** Provide list of spare material that shall be supplied by Trade Subcontractor to owner – Paint, applied materials, gaskets, handles, glazing, or patching products.

Tab 14. **As-Built Drawings –** Provide completed set of drawing and details accurately reflecting all installed and completed work.

Tab 15. **Material Safety Data Sheets –** Provide all Material and Data Safety Sheets (MSDS).

13.0 Identifying the Defects

It is the intent of the commissioning process to avoid defects in waterproofing systems. A standard of care exhibited during the commissioning process should anticipate potential defects and determine appropriate solutions prior to the installation of these systems. In the event that defects do occur, proper defect identification will help determine the repair needed and assist in selecting the appropriate method and materials.

It is important to acknowledge which factors have caused deficiencies in the waterproofing system and its components, and how a deficiency in one system may influence or amplify another. Careful and thorough defect identification is critical to obtain long-lasting, quality repairs. It is critical and necessary to eliminate the cause of the defect and not solely treat the symptom.

Each Trade Subcontractor shall be responsible for determining the cause and origin of various problems as it pertains to their contractual scope of work. Failure to do so may require Trade Subcontractor to assume all related costs and expenses for damages, repairs performed by others, testing, special inspections, and consultant fees.

14.0 Applicable Industry Standards

Unless the Contract Documents include more stringent requirements, applicable published construction industry standards shall be utilized. Where compliance with two or more standards is specified for quality or quantity levels, comply with the most stringent requirement.
Where sections of the specifications require that a product, material, installation, or test complies with a specified industry standard, the Trade Subcontractor shall obtain copies directly from the publication(s) source and include the information in the submitted commissioning information.

Each Trade Subcontractor engaged in construction on the project must be familiar with published industry standards applicable to their construction activity.

15.0 Schedules

An initial schedule shall be developed by the Trade Subcontractor identifying dates, times, and durations for shop drawings, approval of submittals, material fabrication, product delivery, acceptance, installation, testing and completion.

The schedule shall also include any commissioning task that shall be performed on waterproofing systems that may involve or affect other related building systems.

Each Trade Subcontractor shall update schedules, daily, weekly, monthly, or as required to keep WEBCOR/OBAYASHI and the Owner informed of the activities performed. This schedule will indicate appropriate milestones during the installation to allow WEBCOR/OBAYASHI and or the Owner the ability to observer and witness system installations prior to being cover up by subsequent s. The schedule will indicate milestone dates for Trade Subcontractor inspection and testing.

16.0 Execution of Inspections and Checklists

Trade Subcontractor and or vendors shall schedule initial inspections and checklist review with the commissioning team. The inspections and reviews shall be directed, executed, and documented by the Trade Subcontractor or vendor.

To document the process, the Trade Subcontractor performing the task shall provide and complete all documentation forms and checklists. (See attached sample checklist)

17.0 Field Inspections

One of the most important commissioning activities for waterproofing systems is field inspections. The field inspection process shall serve as a method and means of documenting the installation process as well as indicate variations between contractual design and construction.

Each Trade Subcontractor shall identify in detail the scope of their field inspections, and the types of field procedures that will be required to obtain the necessary information to provide a complete waterproofing quality control evaluation at the completion of the job.

18.0 Field Witnessing of Trade Subcontractor's Quality Control

WEBCOR/OBAYASHI, the Owner, consultants and the Architect reserve the right to witness the waterproofing system installation at any time. Spot checks shall be conducted on a random basis. If inconsistencies are discovered in quality, performance, or if commissioning information differs from those submitted, the Trade Subcontractor may be required to completely remove and remedy all conditions where the inconsistencies occurred at no additional cost or impact to the schedule.

Witnessing shall include all or part of, but not limited to the following:

14.1 Mock ups

14.2 Waterproofing component and system installation

14.3 System inspection and checks

14.4 Performance tests

14.5 Special Inspections

19.0 Documentation

Trade Subcontractor shall maintain a separate field binder documenting quality control inspections and field-testing for all installed work. Documentation shall include dates, quality control field checklist, reports with inspected locations defined by grid lines and elevations. Provide a dated photo log, documenting inspected areas and general sequence of installed work for the duration of the project.

20.0 Testing and Methods

The objective of field-testing is to correlate paths of moisture infiltration and to observe the source of damages. Moisture entering a building during extreme weather may be obvious, but the most reliable method to discover the infiltrating path is to recreate the leakage condition in a controlled manner. Testing also allows verification of the theory for the cause of leakage.

As all system and component tests are unique to some degree, there may not be one standard or method for testing that can be applied to all. There are several methods, standards, governing requirements, and manufacture recommendations, etc., which should be applied.

There are three types of acceptable testing methods that can be used during the investigation. All of which must be approved by WEBCOR/OBAYASHI. These testing categories include:

- ✓ Non-Destructive Testing
- ✓ Destructive Testing
- ✓ Laboratory Testing

20.1 Non-Destructive Testing

Non-destructive testing uses a variety of non-invasive tools. This type of testing causes little or no damage or interference to the building envelope. The various methods of non-destructive testing include:

a. *Rilem Tube* - This calibrated device is adhered to exterior masonry walls to determine the porosity and condition of brick masonry units, mortar joints, head joints, and embedment joints.

b. *Water Spray Rack (ASTM E1105)* - This test simulates a wind-driven rain condition on a facility. It can assist in determining the specific cause and origin of moisture infiltration when it is used to test independent components of the envelope. Spraying water over a large area in an uncontrolled fashion will not reveal specific causes of water infiltration.

c. *Hose Spray Test (AAMA 501.2)* - This test method also simulates wind-driven rain in small segmented areas using a standard garden hose in which a calibrated nozzle is attached with a pressure gauge. The spray is

directed at a specific joint, crack, or defect to reveal potential moisture intrusion.

d. *Differential Pressure Test (ASTM E1105)* - A pressure chamber is constructed on the interior of the facility at a specific location to test moisture driven through an assembly or component. The assembly or component is subjected to a negative force while simultaneously a spray rack is directed at the assembly to draw the moisture into the facility to simulate a negative pressure under a wind-driven rain condition.

e. *Infra-Red Thermography* - Infra-red Thermography photographs the building exterior to determine the locations of wet components. Components, such as insulation and sheathing, etc., will act as heat sinks if they contain high levels of moisture. During the day, moist and dry components absorb heat. At night, the moist areas release the heat much slower than the dry areas. By reading the heat signature, Infrared Thermography will help expose the problem areas. Small test cuts may be required to verify moisture areas.

f. *Soundings (ASTM D4580)* - There are different ways to perform sounding tests including the hammer tap test. In this test, a 16 oz. hammer is tapped against concrete for sound. A hollow sound indicates areas where the concrete has separated from the reinforcing steel, typically due to exfoliation or corrosion of the steel. Another method of sounding is to chain drag a heavy 15 ft. link chain along a concrete surface to listen for hollow sounds, indicating defective concrete. This method can cover larger areas effectively and is commonly used on parking garages and loading docks.

g. *Pachometer Survey* - This test uses a magnetic device used to locate embedded steel reinforcement and help determine the concrete cover over the reinforcement. Generally, the Pachometer is fairly accurate when measuring ¼ inch to 3-inch thick concrete cover and when reinforcing placement is not too congested.

h. *Poly-sheet Tape-down* - This test determines the presence of moisture coming through a concrete surface, typically a slab-on-grade type of assembly where the typical problem is tile or membrane separation from the floor. A 2’ x 2’ section of polyethylene is sealed to the concrete with duct tape and removed 24 hours later. If there is moisture beneath the polyethylene, it is a good indication that there is a vapor drive through the concrete section.

i. *Glass-Slide Epoxy or Crack-o-meter* - This device is sealed in place over a crack and periodically checked to determine if any movement has occurred. If movement has occurred, the glass will crack or the meter will record movement.

j. *Optical Illuminated Boroscope* - A boroscope is inserted into a 5/8-in. diameter pilot hole through an exterior wall system and allows the cavity walls of brick veneer, stud wall backup of exterior insulated finish systems (EIFS), or other types of constructions to be observed without large-scale destructive testing.

k. *Smoke/Dust Tracer* - The smoke/dust tracer helps to find air infiltration. It is moved across the interior face of a window to observe the smoke and dust particles coming through the assembly.

l. *Moisture Meter* - A Delmhorst meter is a digital device that detects the presence of moisture in various building components. This test is typically accompanied by a gravimetric analysis (oven drying of samples), which is used to confirm the results of the Delmhorst meter.

m. *Flashlight and mirror* - These simple tools can be very useful to detect problem areas. Placing the mirror into the plenum or behind difficult-to-access areas with the flashlight will allow observation of concealed conditions.

20.2 Destructive Testing

When the main objective is to determine the existing composition and configuration of concealed assembly conditions, destructive testing may be warranted. The most common methods of destructive testing are test cuts and borings.

Any type of destructive testing must be reviewed and approved by WEBCOR/OBAYASHI.

a. *Roof Testing* - Test cuts in the roof assembly may be necessary to determine the condition of the underlying insulation and substrate. Cutting into the system may help verify whether roofing problems are causing corrosion of the steel deck, or a spalled and cracked concrete deck, etc. Test cuts may also expose the as-built configurations of the flashing components at roof-to-wall locations, curb locations, etc. This information is critical to the appropriate remedial design and/or repairs.

b. *Exterior Wall/Skin Testing* - Test cuts on exterior walls may be required to identify the origin of moisture infiltration. For masonry walls, it is most effective to make test cuts at window heads and sills, and at any through-wall flashing locations that may be suspected of allowing moisture intrusion. Masonry test cuts may expose defective through-wall flashing that is allowing moisture intrusion. Test cuts may also help determine the underlying conditions of the steel components in wall systems, including wall ties, reinforcing steel, sub-steel columns, etc.

20.3 Laboratory Testing

Destructive testing is also used to obtain samples for lab analysis. Samples of sealants, coatings, painted finishes, roofing materials, etc. can be sent to a laboratory to determine the presence of lead or asbestos. Samples of masonry or concrete can also be tested to help identify causes of moisture/air infiltration (descriptions of these analyses follow).

Laboratory testing may help obtain a better understanding of existing material types, presence of contaminants, and the possibility of hazardous components.

This type of testing can also provide valuable information concerning proper surface preparation, material selection, and implementation of repairs.
The following laboratory tests are some of the more useful when performing building envelope evaluations:

a. *Gravimetric Analysis* - This test will determine moisture content. After weighing and recording the in-situ existing sample, completely dry the sample in an oven and re-weigh it. The weight difference indicates moisture content and is particularly useful for insulating materials. Testing moisture contents of samples is critical to verify results from non-destructive moisture scans.

b. *Petrography* - Petrography determines the "make-up" of concrete. This test will indicate the size and type of aggregate, air/void ratio, type of cement, and general mix design data of the concrete. Most materials testing lab can perform this test.

c. *Air Entrainment* - Provides an indication of the existing concrete's durability and freeze-thaw resistance. Air entrainment is generally indicated by petrography.

d. *Presence of Carbonization* - Accomplished by spraying a solution of phenothelene on the concrete substrate and recording the depth of the solution's color change. This will indicate to what depth carbon dioxide has progressed into the concrete. Carbon dioxide will degrade the cement matrix of the concrete and lower the pH level of it. The layer surrounding the reinforcement is then destroyed, allowing corrosion of the reinforcing steel. Corrosion by carbonization usually occurs over a broad area.

e. *Chloride Ion Content* - Chlorides from marine atmospheres or mists from road salts entering the concrete substrate, and salts originally introduced to the concrete via admixtures or aggregates can promote accelerated corrosion of reinforcing steel, usually at concentrated or specific locations. The chlorides are not consumed in the corrosion process but rather act as catalysts in the process. The corrosion will progress along the reinforcing bars causing concrete de-bonding, cracking, and spalling.

f. *Reinforcement Placement, Depth, Quantity, and Type* - This information may be established with the use of a Pachometer or similar electronic metal detector. It is useful in determining required steel replacement and structural capacities during engineering analysis phases.

21.0 Engineering Analysis

Using information obtained from the field, laboratory results, and collected data, a comprehensive engineering analysis may be required. The engineering analysis should include an assessment of field and laboratory data, structural analysis as well as the following:

- ✓ Thermal Analysis
- ✓ Drainage Analysis

- ✓ Vapor Drive Analysis
- ✓ Fire Rating Requirements
- ✓ Cost Estimations

22.0 Deficiencies and Non-Conformance

The Trade Subcontractor shall identify and list any outstanding deficiencies or procedures that were not completed successfully during any final testing. Documented deficiencies shall be submitted to WEBCOR/OBAYASHI within 48 hours of each test completion.

The Trade Subcontractor shall also provide in writing, the corrective action for each deficiency as required within 48 hours. The installing Trade Subcontractor and or vendor shall correct all outstanding issues or deficiencies in the materials or the installation of the materials and provide the commissioning team with dates and times for the required corrections and any re-testing.

23.0 Remedial Work

General considerations for the repair of defects and replacement of components should include the following:

23.1 Determine the effect, if any; the repairs have on the structure, surroundings, and operations of the building.

23.2 Ensure proper preparation of surfaces to be repaired and provide chemical and mechanical bonds for new materials.

23.3 Material selection should include an understanding of performance limitations and should rely on the products past acceptable performance. Material selections should include consideration of the following:

- ✓ Compatibility
- ✓ Maintenance
- ✓ Life cycle

24.0 Project Commissioning Closeout

WEBCOR/OBAYASHI, the Owner, and/or the Owner's representative shall determine when the Trade Subcontractor commissioning process has been satisfactorily completed and when to submit the final report information and all other documentation to Webcor.

As part of the project turnover, the quality of all work will be reviewed to determine whether it is within specific and manufacturers' guidelines, industry standards, and code compliance.

WEBCOR/OBAYASHI, the Owner, and/or the Owner's representative consultant must be completely satisfied that the commissioning procedures have been performed accurately and professionally.

In the event the commissioning information or performance requirements outlined in the Waterproofing Quality Commissioning Procedure & Guidelines have not been met, WEBCOR/OBAYASHI may elect to withhold or make appropriate adjustments to the Trade Subcontractor's final billing.
