<b>REQUEST:</b>			<b>ANSWER:</b>			
Reference: C-5000 and attached sketch			Reference: C-5000 and attached sketch			
<p>During the Fremont Shoring/301 Mission Wall Coordination Meeting on 12-7-10, it was proposed that a plywood barrier wall be erected in lieu of the triton barrier shown on sheet C-5000 of the 301 Mission Street Interim Screen Wall drawings. This plywood barrier will block the view of the 301 Mission tenants and will allow for the early demolition of the existing screen wall (prior to the construction of the new "interim" screen wall). By doing this it will enable the demolition contractor to start the removal of the deep footings earlier than currently scheduled.</p> <p>In addition, the deletion of the triton barrier will provide approximately 2' of additional driveway width for 301 Mission. Please review the attached preliminary sketch of the above mentioned plywood barrier and provide engineering/architectural comments and mark ups.</p>			<p>During the Fremont Shoring/301 Mission Wall Coordination Meeting on 12-7-10, it was proposed that a plywood barrier wall be erected in lieu of the triton barrier shown on sheet C-5000 of the 301 Mission Street Interim Screen Wall drawings. 	<b>REQUEST:</b> In Transworld's review of the existing planter box condition at the 301 Mission Screen Wall, Transworld's viewpoint after close inspection of the site is that the planter boxes were originally installed with the intent of being permanent fixtures. There are connection points for these planter boxes that appear to be initial anchor points for original placement of these fixtures and there is concern that these planter boxes were never intended to be reinstalled/relocated after the initial installation. With all do skill and care, Transworld intends to relocate these planter boxes with minimal damage. As a point of advisement, since these boxes do not appear to be designed for relocation, Transworld is concerned that such action will render these boxes unuseful. Please confirm that the design is to relocate these boxes in lieu of replacing them with new ones.					<b>ANSWER:</b> In Transworld's review of the existing planter box condition at the 301 Mission Screen Wall, Transworld's viewpoint after close inspection of the site is that the planter boxes were originally installed with the intent of being permanent fixtures. There are connection points for these planter boxes that appear to be initial anchor points for original placement of these fixtures and there is concern that these planter boxes were never intended to be reinstalled/relocated after the initial installation. With all do skill and care, Transworld intends to relocate these planter boxes with minimal damage. As a point of advisement, since these boxes do not appear to be designed for relocation, Transworld is concerned that such action will render these boxes unuseful. Please confirm that the design is to relocate these boxes in lieu of replacing them with new ones.

T-0016	BSE - Current Trainbox Structural Drawings	Closed	01	01/14/2011	01/24/2011	01/18/2011
<p><b>From:</b> Webcor/Obayashi Joint Venture Masashi Kojima</p> <p><b>REQUEST:</b></p> <p>In order to accurately design and locate elements of the bracing, trestle and bridges, please provide the most up-to-date and reliable architectural and structural drawings (including cad files). Also, drawings (including CAD files) of the train box and any other component of the transit center that has the potential to conflict with the BSE scope of work.</p>		<p><b>ANSWER:</b></p> <p>Transworld has been informed by their concrete supplier that ASTM C260 requires a mix of 6% air entrainment and such amounts of air entrainment are specified only in freeze/thaw areas for durability. The Bay Area is generally not considered a freeze/thaw area and therefore a mix with 6% air entrainment is not typically used. The concrete supplier, Bode Concrete, has provided a letter from BASF related to this specific issue.</p> <p>In order to accurately design and locate elements of the bracing, trestle and bridges, please provide the most up-to-date and reliable architectural and structural drawings (including cad files). Also, drawings (including CAD files) of the train box and any other component of the transit center that has the potential to conflict with the BSE scope of work.</p>				
T-0017	BSE - CDSM Wall Alignment	Closed	01	01/14/2011	01/24/2011	01/21/2011
<p><b>From:</b> Webcor/Obayashi Joint Venture Masashi Kojima</p> <p><b>REQUEST:</b></p> <p>The response to pre-bid RFI #177 indicated that the CDSM shoring line alignment is expected to change "prior to installation". We request the revised re-alignment be provided to us as soon as possible. We are currently designing and issuing steel mill orders based on the current alignment. If the revision comes after mill orders are finalized we risk missing our rolling schedule thereby losing our bid date pricing.</p>		<p><b>ANSWER:</b></p> <p>The response to pre-bid RFI #177 indicated that the CDSM shoring line alignment is expected to change "prior to installation". T-0018	<b>BSE - Waler to CDSM Wall spacing</b>	Closed	01	01/14/2011	01/24/2011	01/24/2011
<b>From:</b> Webcor/Obayashi Joint Venture                      Masashi Kojima						
<b>REQUEST:</b> There may be a potential conflict with the walers and the train box reinforcement. Spec 31-55-00 allows 6" minimum spacing from CDSM Wall to face of waler, but based upon Balfour Beatty past experience with a very similar situation, it is felt that the 6" space is not sufficient because of the following:  1. There does not appear to be enough room between the bottom of the waler and the CJ for a lap splice of the vertical reinforcing as depicted on sheet S -3201. Reference the attached drawing. 2. The 6" gap is difficult to snake reinforcement through without damaging the waterproofing attached to the wall.  BBI recommends making the space between the face of the CDSM wall and the waler equal to the wall thickness. This would eliminate conflicts with the rebar and walers, reduce reinforcement splicing and reinforcing congestion.  Additionally attached is an example where the space behind the waler was equal to the wall thickness.  Please advise whether to continue the design with the current 6" minimum space or advise if the space increases.		<b>ANSWER:</b> There may be a potential conflict with the walers and the train box reinforcement. <b>T-0019</b>	<b>301 Mission Wall - Stone Panel Anchorage to 301 Mission's Screen Wall</b>	<b>Closed</b>	<b>CR</b>	<b>01/18/2011</b>	<b>01/28/2011</b>	<b>01/31/2011</b>
<b>From:</b> Webcor Construction LP      David Hungerford						
<b>REQUEST:</b>			<b>ANSWER:</b>			
<p>Reference: Attached pages from the 2008 Building Code</p> <p>After removing stone panels in the demolition of the original 301 Mission Wall, the existing system of the stone panels does not utilize an anchoring system for mounting the stone panels to the wall. In addition, section 6.2.2.4 of the 2008 Building code does not specify mechanical fasteners for masonry less than 2-5/8" thick. The stone thickness used on the new wall will match the thickness of the existing, which is approx 10mm thick. Therefore, according to section 6.3 of the 2008 Building Code, the stone panel system for the Transbay Interim Screen Wall that should be used is the adhesion application.</p> <p>Please confirm that Transworld can use the adhered method for the stone panels in lieu of mechanical fasteners.</p>			<p>Reference: Attached pages from the 2008 Building Code</p> <p>After removing stone panels in the demolition of the original 301 Mission Wall, the existing system of the stone panels does not utilize an anchoring system for mounting the stone panels to the wall. T-0024	Re-bracing for Revised SW Corner Alignment	Closed	CR	02/02/2011	02/11/2011	02/11/2011
From: Webcor Construction LP      Nhi Tran						
<b>REQUEST:</b> Reference Sheet GT-1112 and Specification Section 31 55 00  The response to RFI T-0017 showed a revised CDSM wall alignment at the SW corner of zone 1 and the addition of the structural shear walls on wall X1-1. The RFI response implied that BBII's cross-lot bracing needed to be re-designed so there are no conflicts with the concrete columns and shear walls. In order to minimize the cost and impacts as a result of this change, BBII suggests using rakers for the re-bracing in this corner.  The cross lot bracing would be installed as specified for the initial excavation (ref stage 10 on GT-1112) similar to the layout shown on the attached sketch #1.  Then for the re-bracing stage 12 and stage 15 rakers could be used in locations shown in attachment sketch #2.  Would a design based on this concept be acceptable?  If not, BBII is available and willing to brainstorm additional ideas.						<b>ANSWER:</b> Reference Sheet GT-1112 and Specification Section 31 55 00  The response to RFI T-0017 showed a revised CDSM wall alignment at the SW corner of zone 1 and the addition of the structural shear walls on wall X1-1. <p>Please confirm that per site walk on 03/22/11 with Danny Lo and Erik Liu of Transworld, David Hungerford with Webcor-Obayashi, and David Fyfe and Christine Baudier of URS, that the layout of the core holes for the #8 dowels in the concrete wall are acceptable.</p> <p>RFI T-0027 included a response sketch directing dowels to be in line and set 6" from the south face of the existing wall below. Due to the existing condition of the wall below, which was poured against a shoring wall and therefore not exactly straight, the dowels are laid out to be in line with each other and therefore vary in dimension measured off of the south face of the existing basement wall below. Please confirm, as it is understood, that the existing layout is acceptable. Dowels are being set in epoxy today, so an immediate response is requested.</p>			<p>Please confirm that per site walk on 03/22/11 with Danny Lo and Erik Liu of Transworld, David Hungerford with Webcor-Obayashi, and David Fyfe and Christine Baudier of URS, that the layout of the core holes for the #8 dowels in the concrete wall are acceptable.</p> <p>RFI T-0027 included a response sketch directing dowels to be in line and set 6" from the south face of the existing wall below. T-0029	<b>301 Mission Screen Wall - Sub Surface Structure Conflict with New Wall Location</b>	Closed	CR	02/09/2011	02/19/2011	02/18/2011
<b>From:</b> Webcor Construction LP                      David Hungerford						
<b>REQUEST:</b> Reference: Photograph attachments 1-8  In laying out the location of the new concrete wall, Transworld has determined that the new concrete wall will extend over existing sub-surface structures, which is not per the contract documents. Please reference attached photos.  First, there are two manhole covers that are incorporated in concrete rings. These rings conflict with the location of the new wall and are included in photographed attachments. Due to the size of these concrete rings, a portion of the ring will be buried by the new wall. Second, the steel frame of the existing electrical vault doors is of similar condition as the manhole covers; this condition can also be seen in the photographed attachments.  Please confirm that Transworld is to proceed with the plan location of the new concrete wall which will cover and bury a portin of these existing sub-surface structures.			<b>ANSWER:</b> Reference: Photograph attachments 1-8  In laying out the location of the new concrete wall, Transworld has determined that the new concrete wall will extend over existing sub-surface structures, which is not per the contract documents. T-0030	<b>301 Mission Screen Wall - Detail required for concrete sleeve installation</b>	Closed	CR	02/09/2011	02/19/2011	02/18/2011
<b>From:</b> Webcor Construction LP                      David Hungerford						
<b>REQUEST:</b> Reference: Attached 1/C-5001 and photo  The existing condition of the manhole covers are not consistent with the contract documents. Detail 1/C - 5001 indicates that the existing manhole sits above an existing concrete slab, to which is to be drilled into with 1 inch embedment. However, please refer to the attached photograph in attachment 1 which shows the manhole cover is actually a part of a subsurface concrete ring assembly, and wrapped with waterproofing. Please provide a new detail and instructions for the installation of the required concrete sleeve and a detail for penetrating the existing waterproofing.			<b>ANSWER:</b> Reference: Attached 1/C-5001 and photo  The existing condition of the manhole covers are not consistent with the contract documents. T-0031	<b>301 Mission Screen Wall - In-ground lighting</b>	Closed	CR	02/09/2011	02/19/2011	02/21/2011
<b>From:</b> Webcor Construction LP                      David Hungerford						
<b>REQUEST:</b> Reference: Note 10 on C-2000  The new in-ground lighting as anticipated in plans and note 10 on page C - 2000 must be substituted because the contract design cannot be accommodated in the new construction. The contract design requires: 1) that the new lighting match the existing with the same model and size. The issue here is that the existing light fixtures are larger than can be accommodated within the thickness of the new construction.  2) that the existing electrical lines servicing the existing lights be disconnected so that it is reconnected to the new lights. The issue here is that the electrical lines for the existing light fixtures are embedded in the concrete curb that is to be removed. Upon removal of the existing concrete curb, there will be no existing electrical lines to reconnect for the new lighting power.  Please provide a new detail and instructions for the in-ground lighting.			<b>ANSWER:</b> Reference: Note 10 on C-2000  The new in-ground lighting as anticipated in plans and note 10 on page C - 2000 must be substituted because the contract design cannot be accommodated in the new construction. T-0034	<b>301 Mission Screen Wall - Change of walkway from original logistics</b>	Closed	CR	02/14/2011	02/24/2011	02/22/2011
From: Webcor Construction LP                      David Hungerford						
<b>REQUEST:</b> The conditions of the worksite have changed significantly from what Transworld originally bid and have changed the entire logistical plan for the execution of this contract work. The original logistics plan, as well as the contract documents, show a walkway along the South side of the original existing screen wall. Now, the entire walkway has been removed and nothing exists except an open pit. Please see all four pages of Exhibit A that is attached to this RFI. This change of condition affects Transworld's ability to execute the contract work. There is no longer available workspace to erect the structural steel and the South side finishes. This condition now requires a modification to our contract such that Transworld may use the parking/driveway on the North side of current barricaded area. The exact impact is not yet fully developed because there are ongoing discussions related to further demolition and removal of concrete structures that currently exist for our construction work. If the current and remaining working areas are further deteriorated by additional demolition, even greater challenges will arise. Transworld Construction requests reasonable accommodations for access to the worksite from the parking/driveway that is North of the currently erected temporary barricade wall.			<b>ANSWER:</b> The conditions of the worksite have changed significantly from what Transworld originally bid and have changed the entire logistical plan for the execution of this contract work. T-0042	301 Mission Screen Wall - Elevation of concrete wall	Closed	CR	02/24/2011	03/06/2011	03/10/2011

From: Webcor Construction LP                      David Hungerford

**REQUEST:**

Please clarify the following information regarding the field elevation of the new concrete wall. Detail A/S-4000 indicates that the concrete foundation wall height shall be +/- 2'- 2" to 2'- 8". Based on this reference the tallest part of the concrete wall will be the East point of the wall. The height of the wall will then decrease as the wall moves west towards Fremont St. (the west side). If we use a wall height of 2'- 8" at its tallest point (the east side), that would result in a wall height of 20.5 inches at Fremont Street (the west end). This is less than 2'-2" as indicated in the contract drawings; therefore please confirm that Transworld will be building a concrete wall height between 20.5 inches to 2'- 8". As a point of comparison, the original existing screen wall had this exact same dimension of 20.5 inches at the low and 2'- 8" at the high.

T-0043	301 Mission Screen Wall - Temporary Vault Plug at Utility Vault Opening	Closed	CR	02/25/2011	03/07/2011	03/23/2011
From: Webcor Construction LP      David Hungerford						

**REQUEST:**

Regarding the transformer vault plug as shown on page C-5000; Transworld has been asked to submit some proposals as to how a plug should be installed. The original existing ventilation for the vault was open to the air at the original planters. This original ventilation was completely open and secured only by a metal grate to prevent access, but not water or air. As located on page C-5000, Transworld construction proposes to install 2 x 4 backing studs attached to the left and right vertical walls of the existing opening. These 2 x 4 backing studs will be adhered with powder actuated nails. Spanning across the backing studs Transworld construction proposes to install two 2 x 4 crossmembers which will be nailed to the 2 x 4 backing studs. This assembly can be seen in the attached pictures pages 1 and 2.

- The assembly noted above is option 1.
- Option 2- Added additional 2x4 crossmembers which would further restrict air flow to the (e) vault.
- Option 3- Nail on a plywood sheet that would enclose the entire vault vent opening.
- Option 4 - Nail on a plywood sheet and waterproof the plywood to prevent water intrusion as well.

Note: Transworld Construction is concerned about restricting airflow into a vault that originally was designed to have this open vent. We are not familiar with any impact sealing this vent will have on the existing equipment.

T-0045	<b>301 Mission Screen Wall - Void Below Existing Embed</b>	Closed	CR	03/02/2011	03/12/2011	03/17/2011
<b>From:</b> Webcor Construction LP                      David Hungerford						
<b>REQUEST:</b> Reference: Attached pictures  The new 301 Mission screen wall location is to be laid out over an existing embed plate. At that plate #8 rebars are to be epoxied per RFI T-0027. Currently in the field the embed has been cut where the dowels are to be installed and holes are being drilled to the required 30" depth. It has been discovered that there are voids below the existing embed plate of up to 1.5". See attached pictures for some locations where this condition occurs. Please advise if this void is to be filled.			<b>ANSWER:</b> Reference: Attached pictures  The new 301 Mission screen wall location is to be laid out over an existing embed plate. T-0061	BSE - Concerns About Pile To Mat Slab Connection	Closed	01	03/15/2011	03/25/2011	03/23/2011
<p><b>From:</b> Webcor Construction LP                      Nhi Tran</p> <p><b>REQUEST:</b></p> <p>Reference Sheet S-3003 and attached detail</p> <p>BBII has concerns that the trestle pile to mat slab slip connection as shown in detail 2 on S-3003 will not work as intended. Based on BBII's understanding that this joint is intended to allow the mat slab to deflect upward and our limited knowledge of the permanent structure design, BBII has listed some concerns with this connection below:</p> <ol style="list-style-type: none"> <li>1. BBII does not think the sleeve will be able to slide with the bolts and slotted holes completely encased in concrete. (see attached)</li> <li>2. If the slab does deflect upwards and the lower section of pile is no longer in contact with the bearing plate, then the mat slab is carrying the entire load on the pile.</li> <li>3. Any upward movements of the slab will affect the trestle supper structure framing. Differential upward deflections could cause damage depending on severity.</li> </ol> <p>BBII does wish to bear the risk of re-designing this joint due to the interaction with the permanent structure, however BBII has attached a suggestion that they feel would eliminate some of their concerns listed above.</p> <p>Please provide a revised detail or rebut BBII concerns if you still believe the detailed connection is the best suited for this application.</p>		<p><b>ANSWER:</b></p> <p>Reference Sheet S-3003 and attached detail</p> <p>BBII has concerns that the trestle pile to mat slab slip connection as shown in detail 2 on S-3003 will not work as intended. T-0093	<b>BSE - CDSM Wall Segment 35-1 Spacing Confirmation</b>  From: Webcor Construction LP                      Nhi Tran	Closed	01	04/07/2011	04/17/2011	04/08/2011
	<b>REQUEST:</b>  Reference Sheets GT-2103, GT-5101 and Specification Section 31 56 13  In drawing GT-5101, the spacing of all shoring wall beams is specified as 4'-0". This is reflected in the drawings for all sections of the CDSM shoring wall except the east wall (Wall Segment 35-1). The beam spacing of this Segment (measured in AutoCad) is 3.94728'. This creates a dimension bust of approximately 2.4' over the length of the wall and significant problems based on the auger spacing. Please verify the spacing of beams in Wall Segment 35-1.

BBII will chase the obstruction as deep as it goes in order to remove all debris necessary for a clean location to construct the CDSM Wall. Due to the unknown depth of the obstruction, at BBII discretion Sheet Piles or trench boxes may be used to support trench walls. All OSHA approved, safe practices will be used by BBII employees during the Demolition.</p> <p>Additional Details: As noted in the RFI response, the Archeologist has already examined the site. BBII (W/O) will notify the TJPA if additional structures or items are encountered.</p>				
T-0101	BSE - Pile Extraction Procedure Modification	Closed	01	04/14/2011	04/24/2011	04/15/2011

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Choice Required</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>
	<p><b>From:</b> Webcor Construction LP Masashi Kojima</p> <p><b>REQUEST:</b></p> <p>Reference Specification Section 02 41 19 and attached response for TG0300-310 Production Extraction Plan</p> <p>BBII proposes to eliminate the "stroking" of the steel casing right before the CLSM is placed. Upon removal of the steel casing, BBII proposes to "stroke" the steel casing after the CLSM is placed. BBII believes the same effect of filling the void will be achieved, and this procedure will help to expedite the Project schedule. Please kindly review our proposal. Your prompt response is appreciated.</p>					
						<p><b>ANSWER:</b></p> <p>Reference Specification Section 02 41 19 and attached response for TG0300-310 Production Extraction Plan</p> <p>BBII proposes to eliminate the "stroking" of the steel casing right before the CLSM is placed. 	Reference: E & C/S-5000  Please see E & C/S-5000. Transworld has attempted in their shop to set #10 SMS through the structural tube steel, as per plan. The attempt was unsuccessful, therefore Transworld tried the use of a Hilti X-U fastener into the structural steel. Attached are Hilti spec sheets for the X-U Universal Knurled Shank Fastener as well as a photo showing the X-U fastener through the structural steel. Welding is another option for connection to the tube steel. Please advise how Transworld is to fasten the metal stud to the structural tube steel.

<b>REQUEST:</b>	Reference RFI#T-0057, Sheet GT-5202, Specification Section 31 63 29, and attached documents CPM Activity Impacted - Buttress Wall					
	Below are three cases (A, B, and C) in which formally testing for verticality on CSL tubes, BBII argues would prove to be highly unusual and counter-productive:  A. Specification Section 31.63.29.1.3 states "The contractor shall perform a test to determine verticality of the steel tubes, or drilled holes, that are going to be used for the sonic tests." Balfour Beatty has been advised by a number of testing firms that verticality tests cannot be performed on steel access tubes as well as piles reinforced with steel. Magnetic interference from steel reinforcement and steel tubes will cause the instrument to not function properly. BBII has also been advised by Terracon (please see attached email from Dextra), a reputable CSL testing firm that there are currently no known cases in the US where verticality of CSL tubes in steel reinforced piles have been formally tested.  B. Attached is a case study that details the investigation of debonding that occurs when using PVC as CSL access tubes. The results of this study clearly show the use of

<b>REQUEST:</b> Reference RFI #T-0112.1 and attached drawing  Last month Webcor/Obayashi was requested to mark an alleged property line @ 199 Fremont between Beale and Fremont streets per the 12-10-2008 CAD file data provided by the Bruce Storrs of DPW. Chaudhary & Associates completed the task and the results were forwarded for TJPA review on June 20, 2011 via Transmittal # 140-01864. In that transmittal it was recommended that alleged Property Line (PL) data points as indicated within the attached (coordinates added) be presented to Bruce Storrs of DPW for verification of PL data accuracy. Has this been accomplished and, if so, what was the outcome?  Be advised that as previously confirmed in RFI #T- 112.1 Webcor/Obayashi is ONLY using Grid Control for construction reference, layout and staking.		<b>ANSWER:</b> Reference RFI #T-0112.1 and attached drawing  Last month Webcor/Obayashi was requested to mark an alleged property line @ 199 Fremont between Beale and Fremont streets per the 12-10-2008 CAD file data provided by the Bruce Storrs of DPW. <b>REQUEST:</b>			<b>ANSWER:</b>			
Reference: RFI T-0098, Sheet A-6000			Reference: RFI T-0098, Sheet A-6000			
Per response to RFI T-0098, the 10" x 10" tube steel columns are to be set in the center of the 14" concrete wall. The architectural drawings (sheet A-6000 dated 11/04/10) show 10" metal studs aligning with the 10" tube steel, however, per response to RFI T-0098, the tube steel is to shift in the architectural drawings 1/2" and align in the center of the concrete wall. Please confirm that the metal studs will remain per plan, and not shift as the steel tube has. T-0123.1	<b>301 Mission Wall - SASM and Insulation Tape Materials</b>	Closed	CR	05/06/2011	05/16/2011	05/09/2011
<b>From:</b> Webcor Construction LP                      David Hungerford						
<b>REQUEST:</b> Reference: RFI T-0123, A-6000, S-0002  The response provided to RFI T-0123 is in conflict with the contract documents. The response requires the contractor to create a waterproofing barrier for the entire length of the wall; however, the contract documents do not indicate a complete waterproofing barrier. References to SASM on page A-6000 instructs the application of SASM at all points where pressure-treated or moisture resistant wood comes in contact with metal. This application instruction, therefore, would not result in a waterproof barrier along the entire length of the wall. Please clarify if on the details "SASM" was intended to read "insulation tape", because the application locations of the SASM, as per A-6000, are called out and described to be at all locations of the insulation tape defined on S-0002.  In the alternative, is it the intention of the design team to apply additional waterproofing not shown on the contract documents?			<b>ANSWER:</b> Reference: RFI T-0123, A-6000, S-0002  The response provided to RFI T-0123 is in conflict with the contract documents. T-0125	BSE - CDSM Corner Overlap  From: Webcor Construction LP                      Nhi Tran	Closed	01	05/02/2011	05/12/2011	05/06/2011
	<p>panel. Please confirm the method of two-piece panel attachment to the existing wall is the same as that indicated in RFI # T-0124.</p> <p><b>REQUEST:</b>                      Reference Sheets GT-2101-2103, GT-5101 and Specification Section 31 56 13</p> <p>In the Owner's preferred method of soil mixing, the triple auger method, a continuous wall is formed by drilling adjacent sets of columns with a 100% overlap of the outer columns (see 2/GT-5101). A CDSM wall's strength, permeability, and homogeneity is largely contingent upon this remixing action. This overlap also helps ensure the verticality and alignment, as the augers in the secondary panels tend to follow the path of the outer columns of the primary panels. Based upon the beam and column layout shown in GT-2101-2013, the corners formed by Wall Segment A/33.5-35 &amp; 35-1 and R2-1 &amp; X1-1 do not receive the complete remixing obtained by the typical 100% outer column overlap. These corner details are atypical compared to industry standards, and will lead to permeability issues. Is it acceptable to move a small number of beams slightly closer together (~0.1') near those corners, such that the panel layout is shifted enough to have a 100% column overlap at the corners?</p>					<p>panel detail is now being revised to a two-piece, glued enclosure panel. T-0137	BSE - Unforeseen Obstruction - Concrete Lip Off 301 Mission St Garage Footing	Closed	01	05/10/2011	05/20/2011	05/11/2011

From: Webcor Construction LP                      Nhi Tran

**REQUEST:**

Reference Specification Section 02 41 01 and attached photo

During Pre-Trench, BBII found an existing concrete lip/shelf footing along the low-rise 301 Mission St. garage wall. The footing consists of reinforced concrete, and is a part of the 301 Mission St. garage structure. It is not a separate structure, and it protrudes into the CDSM wall location in multiple places and does not allow enough room for the drill rig to construct the CDSM wall. The lip/shelf protrudes out at the western corner of the 301 Mission St. garage and goes to the east 81-feet. The footing is then flush with the 301 Mission St garage wall for 67-feet.

This is a potential delay in pre-trenching and the installation of the CDSM wall. It is a part of the 301 Mission St garage, and will need to be removed flush with the 301 Mission St. wall.

Please see photo attached.

Please advise BBII as to how to proceed.

Please advise.</p>					<p><b>ANSWER:</b></p> <p>Reference Sheet D-2230 and attached sketch</p> <p>During BBII potholing work on the Fremont street hammer head, BBII exposed the existing live PG&amp;E concrete duct bank. The duct bank is located under BBII Buttress drill pad (see attached sketch), the drill pad is scheduled to be poured 5-26-2011/5-27-2011. BBII has concerns that the duct bank will not be able to support the load for the drilling equipment. The concrete duct bank will need to be removed prior to drill pad installation. Please advise.</p>

T-0145	<b>BSE - Existing Concrete Footing Gridline J between Gridline 26.5-30 along 181 Fre Closed</b>		01	05/18/2011	05/28/2011	05/20/2011
<b>From:</b> Webcor Construction LP                      Masashi Kojima						
<b>REQUEST:</b> Reference Specification Section 02 41 00  BBII followed the method approved to remove a section of the unforeseen structure in RFI #74 & 74.1, and found a separate concrete footing bellow that. It is believed to be a footing that extends below the 177/181 Fremont St. building. The top of this footing is approximately 8 feet below the original grade, and it is approximately 3 feet wide, and 3 feet deep. BBII is concerned with the removal of this footing and the extensive rubble that was exposed below it. When a bucket of dirt was removed along the footing, a large amount of water gushed out, from below the 177/181 Fremont St. building, and through the large amount of stone rubble that was exposed. At this point the bottom of the footing was found, and the soil was quickly replaced. This footing is within the CDSM wall extents, and will have to be removed. Due to the fragile nature, and the age of the 177/181 Fremont St. building; please clearly describe and advise. Please See Attached Pictures.			<b>ANSWER:</b> Reference Specification Section 02 41 00  BBII followed the method approved to remove a section of the unforeseen structure in RFI #74 & 74.1, and found a separate concrete footing bellow that. T-0146.2	<b>BSE - Additional Timber Piles Adjacent 177/181 Fremont Building South Zone 4</b>	Closed	01	05/23/2011	06/02/2011	05/24/2011
<b>From:</b> Webcor Construction LP                      Nhi Tran						
<b>REQUEST:</b> Reference RFI#T-0146.1  Based on the joint meeting between W/O, BBII and the TJPA on 5/23/2011, BBII would like to confirm the following:  181 Fremont Street Pile Extraction: 1. BBII will install additional survey control to establish the back of the shoring wall limit. 2. BBII will contact DND Construction to confirm the allowable distance between an existing pile and the back of the shoring wall. 3. BBII will expose, in the presence of the engineer, 3 piles at one time. 4. BBII and the Engineer will jointly determine the piles that can be left in place with reasonable assurance that they will not impact the shoring wall. 5. BBII will install flat sheet piles between the building and the wood piles to prevent caving of soils under the building. 6. BBII will extract the wood piles with vibratory hammer, with the same stroking procedure without steel casing. BBII will perform dewatering enough to be able to connect the hammer to the pile. 7. BBII will backfill the void with low strength material Central Concrete Mix FOA100CX (RFI #T-0138.1). 8. BBII will backfill the piles. 9. BBII will remove the sheet piles and start over with Step 3. 10. All of this work will be tracked and compensated on force account under CR T-010. 11. Similar to the extraction in front of the 301 Mission garage wall, BBII will take every precaution to avoid damaging the adjacent wall; however, due to the proximity of the hammer to the wall, BBII will not guarantee not damaging the wall. If damage to the adjacent wall occurs in any phase of the pile extraction operation described above, BBII will be compensated for repairs under CR T-010 as well.  Please confirm the above as soon as possible. In addition, BBII requests immediate confirmation of allowable work hours for the work described above.			<b>ANSWER:</b> Reference RFI#T-0146.1  Based on the joint meeting between W/O, BBII and the TJPA on 5/23/2011, BBII would like to confirm the following:  181 Fremont Street Pile Extraction: 1. T-0146.4	BSE - Additional Timber Piles Adjacent 177/181 Fremont Building South Zone 4	Closed	01	05/27/2011	06/06/2011	05/31/2011
<p>From: Webcor Construction LP                      Nhi Tran</p> <p><b>REQUEST:</b></p> <p>Per Turner's request on 5/27/2011 this RFI is being asked, to modify the 177/181 Fremont pile extraction procedure as desired by ARUP:</p> <p>Based on the revised proposal for unforeseen pile extraction work along 181 Fremont St. from ARUP, BBII (W/O) can agree with revisions as the follows:                      - Item 6 should read, "BBII will extract the piles with vibratory hammer only as necessary. BBII will use as little vibration as possible to remove the piles from the ground. BBII will perform dewatering enough to be able to connect the hammer to the pile."                      - Item 8 should read, "BBII will back fill the pile voids using a tremie pipe of minimum length 20ft attached to the concrete bucket. The tremie shall be inserted as far into the pile hole as possible prior to pouring the concrete, and the concrete shall be placed using normal tremie techniques. BBII will make efforts to pour the material into the void as possible, but BBII is not responsible to eliminate void completely."                      Other items shall remain the same.</p> <p>Please also clarify that the response from RFI#T-0146.3 stating "Since this work has previously been classified as an "unknown obstruction" paid on force account; if there is damage to the 199 Masonry wall that the cost of repair is considered part of the force account work. BBII is to exert efforts to avoid damage and use the method of pulling the piles that gives least amount of risk for damage to the masonry wall." is this instead, meant to address the property and work related to 177/181 Fremont? If not, please address the question regarding 177/181 address.</p>		<p>operation described above, BBII will be compensated for repairs under CR T-010 as well.</p> <p>Please confirm the above as soon as possible. <p>Becho will be utilizing a 2200mm OD temporary casing for the Buttress Pile Installation. Becho requests that the spacing between tangent piles remain at 4" minimum and the secant piles overlap remain 1'-6". This will approximately increase the Buttress footprint by approximately 4'-4" to the east and 1'-9" to the south.</p> <p>Please confirm this is acceptable.</p>			<p>Becho will be utilizing a 2200mm OD temporary casing for the Buttress Pile Installation. <b>Number</b>	<b>Subject</b>	<b>Status</b>	<b>Choice Required</b>	<b>Date Created</b>	<b>Date Required</b>	<b>Date Answered</b>
	Reference Specification Section 03 30 01, 1.5.F					
	BBII, Becho, Central Concrete, W/O, ARUP and Adamson Associates met on Tuesday 5/24/2011 to discuss the results of Buttress Primary Concrete Mix Trial Batches. During this meeting, Central Concrete expressed concern about variability in the Buttress Primary Concrete mix due to slight variations in material and batching. The Buttress Primary Concrete Mix is a very high performance mix and even small variations in the mix constituents can result in significant changes in strength. Please advise how much of a working tolerance is acceptable for the primary buttress concrete mix.					
	Reference Specification Section 03 30 01, 1.5.F

T-0156.1	<b>BSE - 120 Day Acceptability of Buttress Primary Shaft Concrete</b>	Closed	01	04/16/2012	04/26/2012	04/19/2012
<b>From:</b> Balfour Beatty Infrastructure, Inc. Ural Yal						
<b>REQUEST:</b> Reference: 4/12/12 Central Letter  BBII requests that in the event that the Buttress Primary Mix test specimens do not meet the 2,000 psi specified strength of 2,000 psi at 90 days (reference Response to previous RFIs #T-0157.2, and #T-0156), additional cylinders are to be taken and tested at 120 days. During this cooler climate, initial temperature may be impeding overall strength at the required time. Although only a few specimens are suspect of low strengths, Central Concrete is confident that at 120 days, the specimens in question will reach the required strength. If this criteria can be accepted for all test specimens at 120 days, this can mitigate any future concerns of suspect low strength.		<b>ANSWER:</b> Reference: 4/12/12 Central Letter  BBII requests that in the event that the Buttress Primary Mix test specimens do not meet the 2,000 psi specified strength of 2,000 psi at 90 days (reference Response to previous RFIs #T-0157.2, and #T-0156), additional cylinders are to be taken and tested at 120 days. T-0157	<b>BSE - Primary Concrete Mix 500 PSI At 7-Days</b>	Closed	01	05/31/2011	06/10/2011	06/03/2011
<b>From:</b> Webcor Construction LP Nhi Tran						
<b>REQUEST:</b> Reference Specification Section 03 30 01, 2.2.E  BBII, Becho, Central Concrete, W/O, ARUP and Adamson Associates met on Tuesday 5/24/2011 to discuss the results of Buttress Primary Concrete Mix Trial Batches. One of the concerns for the Buttress Primary Concrete is to provide a mix that is able to consistently achieve both 500 psi at 7 days and 2,000 psi at 28 days. The Buttress Primary Concrete Mix is a very high performance mix and even small variations in the mix constituents can result in significant changes in strength. Please advise if it acceptable to allow a working tolerance for the 500 psi requirement at 7 days.		<b>ANSWER:</b> Reference Specification Section 03 30 01, 2.2.E  BBII, Becho, Central Concrete, W/O, ARUP and Adamson Associates met on Tuesday 5/24/2011 to discuss the results of Buttress Primary Concrete Mix Trial Batches. <b>REQUEST:</b>		<b>ANSWER:</b>				
<p>Reference CR T-010 and attached summary and sketch</p> <p>BBII continues to remove unforeseen timber piles along 199 Fremont Street in Zone 4 and soon will commence extraction along 181 Fremont Street.</p> <p>As of May 31, 2011, BBII has left 7 piles in place as they were estimated to be more than 12" away from the limits of the CDSM shoring wall. In addition, 5 piles were broken during extraction a portion of which were left in place due to their proximity to the adjacent building walls. While these piles also appear to be more than 12" outside the limits of the CDSM shoring wall, due to possible undulations and alignment changes underground, the possibility of these piles encroaching into the CDSM shoring wall area exist.</p> <p>These piles are not shown on the contract plans and are extracted with extreme caution under the TJPA's direction and prescribed methods, taking the integrity of the adjacent buildings in consideration. Please confirm that it is the TJPA's intention to leave these piles in place.</p>		<p>Reference CR T-010 and attached summary and sketch</p> <p>BBII continues to remove unforeseen timber piles along 199 Fremont Street in Zone 4 and soon will commence extraction along 181 Fremont Street.</p> <p>As of May 31, 2011, BBII has left 7 piles in place as they were estimated to be more than 12" away from the limits of the CDSM shoring wall. Reference Specification Section 03 30 01 and attached summary of test results

BBII, Becho, Central Concrete, W/O, ARUP and Adamson Associates met on Tuesday 5/24/2011 to discuss the results of Buttress Primary Concrete Mix Trial Batches (please refer to the attachment for a summary of the test results). The 28-day test results for the 4x8 test cylinders were on average 57% of the core 4" diameter core test results. The 28-day test results for the 6x12 test cylinders were on average 88% of the 4" diameter core test results. The test samples were extracted from the same concrete batches, at the same time and cured in the same manner. BBII believes the difference in compressive strength between the test results may be attributed to the sample size & the resultant heat of hydration which drives the concrete cure rate. BBII also believes that the concrete cores may be more indicative of the actual in-situ concrete strength than the concrete test cylinders.

The Specification Section 03 30 01 - 1.5 F Trial Batches references "concrete cylinders", however it does not specify 4x8 or 6x12 test cylinders.

During the course of the meeting, it was generally agreed upon that 6x12 test cylinders appeared to be a more representative and consistent measure of the Primary Buttress Concrete strength relative to the core samples. BBII has confirmed through CTS that there should be no additional cost in sampling and testing a 4x8 cylinder relative to a 6x12 cylinder.

Therefore, BBII proposes that the 6x12 test cylinders should be used as the basis of acceptance testing both for the Trial Batches and also for future Field Quality Control and Testing for the Primary Buttress Concrete; 4x8 test cylinders should only be used for informational purposes only. Please confirm.

**ANSWER:**

Reference Specification Section 03 30 01 and attached summary of test results

BBII, Becho, Central Concrete, W/O, ARUP and Adamson Associates met on Tuesday 5/24/2011 to discuss the results of Buttress Primary Concrete Mix Trial Batches (please refer to the attachment for a summary of the test results). The 28-day test results for the 4x8 test cylinders were on average 57% of the core 4" diameter core test results. The 28-day test results for the 6x12 test cylinders were on average 88% of the 4" diameter core test results. ---------------	----------------	---------------	------------------------	---------------------	----------------------	----------------------

**REQUEST:**

Reference Specification Section 01 13 50

BBII is concerned of the close proximity of the differently classified layers within the Buttress Area of Zone 4. The concern is during Drilling & Shaft Excavation, cross contamination of the material could potentially lead to Class 1 Material inadvertently going to a Class 2 Disposal site, or even a clean waist site. The class 1, the class 2, and the clean material layers are described below:

- Surface to GL-11 ft --- Land fill (clean material except for Equipment Pad Concrete)
- GL-11 ft to GL-13 ft --- Class II (based on Spec 01 13 50/APA)
- GL-13 ft to GL-16 ft --- Class I (based on Spec 01 13 50/APA )
- GL-16 ft to bottom ---Clean Material

BBII is concerned that due to the process of excavating the soil out of the Buttress Shaft with large amount of water and the use of a clam shell digging attachment, that the soil layers have a high opportunity of mixing within the casing. Presumably the mixed the soil layers will make it difficult to distinguish between the class 1, the class 2, and the clean materials.

BBII requests the engineer to provide a revised stratum classification that is better for the actual shaft excavation methods being used, that will prevent cross contamination.

Please Advise.

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Choice Required</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>
	<p>D-5103 along with the response to Pre-Bid RFI #TG0300-014 describe the finish grades and subsequent quantities of crushed 3" minus concrete to be left on site for the BSE package. In summary, Zone 4 was to be left with a depression as shown on GT-1303 and Zone 1-3 were to be left no higher than existing ground elevations.</p> <p>Previous discussions between BBII, W/O, EBI and TJPA were made to accommodate BBII's early access into Zones 1-3 for pre-trenching. At the time of these discussions EBI indicated they were short approximately 7000 cy of balancing the site and that they would not be able to get that remaining 7000 cy until the existing ramps were demolished. As a result of the short term shortage and in exchange for access to zone 1-3 BBII agreed to:</p> <ul style="list-style-type: none"> <li>- Allow EBI to leave Zone 3 low of the Existing elevations</li> <li>- Allow EBI to set up Crusher in Zone 2 for ramp demolition</li> <li>- Allow EBI to leave the 7000 cy shortage in a stockpile in Zone 2, for our later use.</li> </ul> <p>BBII appreciated the partnering agreement however the current size of the stockpile is far greater than BBII ever expected. BBII surveyed the stockpile and the Zone 3 depression on 6/7/11 after they completed their export to zone 4 and BBII estimates the size of the concrete stockpile to be in excess of 11,000 cy (this does not include the asphalt stockpile that was created after the survey).</p> <p>Based on BBII's calculations (see attached topo) Zone 3 was left approximately 2000 cy short of existing grade and 5000 cy were taken from the stockpile to Zone 4. As a result BBII requests the current stockpile be removed in its entirety from the site, as it is in excess of the contractual amount to be removed by the BSE contract.</p> <p>However, If acceptable to TJPA, BBII would be interested in taking 2000 cy of the crushed concrete if it could be delivered and stockpiled in an mutually agreeable staging area. BBII suggests Lot S. This material would then be used as need for excavation stabilization throughout the BSE contract.</p>

T-0173	<b>BSE - Enhanced Trial Batch Testing</b>	Closed	01	06/13/2011	06/23/2011	06/15/2011
<p><b>From:</b> Webcor Construction LP                      Nhi Tran</p> <p><b>REQUEST:</b></p> <p>Reference Specification Section 03 30 01, 2.2.E and attached mix designs</p> <p>BBII, Becho, Central Concrete, W/O, ARUP and Adamson Associates met on Tuesday 5/24/2011 to discuss the results of Buttress Primary Concrete Mix Trial Batches. Based upon the preliminary results of the 2nd Trial Batch, BBII proposes to submit the following three mixes for approval for use on the Buttress Primary Shaft Concrete:</p> <ol style="list-style-type: none"> <li>1. Mix 1: 85AEC3B6</li> <li>2. Mix 5: 86AEC3A6</li> <li>3. Mix 7: 87AEC3A6</li> </ol> <p>BBII believes that having additional mixes available for use as the Buttress Primary Concrete would be of great benefit to the Project. BBII proposes "enhanced testing" of these three mixes as well as three additional hybrids of each mix for a total of nine mixes (please see attached for mix designs). The intent of the enhanced testing is to further refine the information we currently have on all three of the above three mixes, as well develop additional mixes for future use as Primary Shaft Concrete.</p> <p>One of the concerns of 1st and 2nd Trial Batches was potentially accelerated curing due to the Styrofoam insulated boxes in which the trial batch "cubes" were cast. BBII proposes a 3rd trial batch using all of the same methodology of the approved trial batch method placing, the only exception being that the concrete will be cast into +/- 5'x5'x4' deep excavations in lieu of the Styrofoam insulated forms. Each mix would be placed in an individual excavation, lined with plastic to retain moisture. All other aspects of the proposed trial batch methodology would be as previously submitted &amp; approved.</p> <p>The results of the "enhanced testing" would be evaluated and possibly submitted for approval as additional Buttress Primary Shaft Concrete Mixes.</p> <p>Please confirm that this is acceptable.</p>		<p><b>ANSWER:</b></p> <p>Reference Specification Section 03 30 01, 2.2.E and attached mix designs</p> <p>BBII, Becho, Central Concrete, W/O, ARUP and Adamson Associates met on Tuesday 5/24/2011 to discuss the results of Buttress Primary Concrete Mix Trial Batches. Mix 7: 87AEC3A6</li> </ol> <p>BBII believes that having additional mixes available for use as the Buttress Primary Concrete would be of great benefit to the Project. BBII proposes "enhanced testing" of these three mixes as well as three additional hybrids of each mix for a total of nine mixes (please see attached for mix designs). The intent of the enhanced testing is to further refine the information we currently have on all three of the above three mixes, as well develop additional mixes for future use as Primary Shaft Concrete.</p> <p>One of the concerns of 1st and 2nd Trial Batches was potentially accelerated curing due to the Styrofoam insulated boxes in which the trial batch "cubes" were cast. BBII proposes a 3rd trial batch using all of the same methodology of the approved trial batch method placing, the only exception being that the concrete will be cast into +/- 5'x5'x4' deep excavations in lieu of the Styrofoam insulated forms. Each mix would be placed in an individual excavation, lined with plastic to retain moisture. All other aspects of the proposed trial batch methodology would be as previously submitted &amp; approved.</p> <p>The results of the "enhanced testing" would be evaluated and possibly submitted for approval as additional Buttress Primary Shaft Concrete Mixes.</p> <p>Please confirm that this is acceptable.</p>

	<p><b>ANSWER:</b></p> <p>Reference RFI#T-0151 and Sheets GT-2103 and GT-2201</p> <p>Per the Engineer's response to RFI#T-0151, it is acceptable to expand the overall Buttress 4'-4" to the east. Please advise if the CDSM connector columns can still be installed per contract drawings GT-2103 and GT-2201.</p>					

During the extraction of unforeseen piles along 181 Fremont, two piles located inside the proposed CDSM wall broke and are now too deep to extract under using the current extraction method. During the attempted extraction of pile 151, the pile continued to break. The top of this pile is approximately 9' below the base of the foundation wall. Considering the length of the adjacent removed piles, there is approximately 6' left to be removed. Pile 105 is approximately 6' below the base of the foundation wall leaving approximately 12'-14' to be removed. Further excavation to expose these piles is not reasonable. BBII proposes to drill the remainder of each pile out. See below the proposed procedure as per committee meeting and consultation with Viking Drillers Inc. on 6-15-11. It was agreed that this work will be charged to CR T-010. Also attached are photos and a drawing indicating the location of both broken piles (105 and 151).

T-0180	<b>BSE - CDSM Wall Tolerance</b>	Closed	01	06/22/2011	07/02/2011	06/22/2011
<b>From:</b> Webcor Construction LP                      Nhi Tran						
<b>REQUEST:</b> Reference Specification Section 31 56 13  As requested by the TJPA, DND submits this request to modify the horizontal tolerance for the CDSM shoring wall. The new goal is to set the wall 2" outside of the original planned centerline of shoring wall. This solution has been proposed by the TJPA in order to not encroach into the structure at the bottom of the train box.  DND respectfully requests the maximum soldier pile & CDSM wall tolerances be revised to 0 inches into the trainbox & up to 5 inches outside the trainbox.  There will be no additional excavation and/or bracing costs associated with this increase in tolerance from BBI. However; there may be future additional cost impacts to the Structural Concrete & Waterproofing that are to be handled in future trade packages.  Please confirm, if this is acceptable.			<b>ANSWER:</b> Reference Specification Section 31 56 13  As requested by the TJPA, DND submits this request to modify the horizontal tolerance for the CDSM shoring wall. <b>REQUEST:</b>			<b>ANSWER:</b>			
<p>Reference D-2211 and D-5101.            During the pre-trenching operation on Minna Street between Gridlines 9-17, BBII discovered unknown timber piles. The timber piles are not shown on the BSE drawings. See attached BSE drawing D-2211, D-5101. The attached pictures indicate timber piles to be approx 2ft from the centerline of the CDSM wall. These piles meet the general conditions set out in article 3.05A.2. The piles encountered were not outlined in the bid documents. Please confirm the removal of the "unforeseen" timber piles, tracking and paid under a Force account contract change order similarly as done for Zone 4 pre-trench obstructions.</p>			<p>Reference D-2211 and D-5101. <p>Reference RFI T-0188, Drawing D-2211 and D-5101.             Further to the TJP A response RFI # 188, this response did not address the mentioned timber pile removal method. Please see the attached cross section showing timber pile location in relationship to the existing utilities and structures. Due to the pile location, in relation to the shoring box BBII proposes direct extraction as done on A line in Zone 3. Please confirm this removal method is acceptable for the entire length of Minna Street.</p>			<p>Reference RFI T-0188, Drawing D-2211 and D-5101. <p>Per our meeting on 6-23-11 with the TJPA, PMPC, T&amp;R, TCCO and W/O, this RFI is to confirm the initial off haul of the CDSM spoils to be classified as Class 2 non-hazardous waste and will be paid under bid item #38 due to lack of soil testing data required by the landfill and risk of cross contamination.</p> <p>BBII is currently in talks with various local landfills and their Consultant with the advice of Treadwell Rollo for the acceptance of the spoil to be classified under "clean soil" (not Class 2). Please confirm.</p>			<p>Per our meeting on 6-23-11 with the TJPA, PMPC, T&amp;R, TCCO and W/O, this RFI is to confirm the initial off haul of the CDSM spoils to be classified as Class 2 non-hazardous waste and will be paid under bid item #38 due to lack of soil testing data required by the landfill and risk of cross contamination.</p> <p>BBII is currently in talks with various local landfills and their Consultant with the advice of Treadwell Rollo for the acceptance of the spoil to be classified under "clean soil" (not Class 2). T-0194	<b>BSE - Unforeseen Buried Obstructions at CDSM Connector Wall in Zone 4</b>	Closed	01	07/12/2011	07/22/2011	07/19/2011
<b>From:</b> Webcor Construction LP                      Nhi Tran						
<b>REQUEST:</b> Reference Specification Section 31 56 13, attached sketches, and photo  During the installation of the CDSM Connector Wall at Zone 4, DND's drill rig hit unidentified buried obstructions at approx. 14' - 15' below the original grade (El. 0 ~ -1). Please see DND's attached sketch for further details. The exact location and composition of the obstructions are yet to be determined but BBII's preliminary findings indicate that they are timber piles that were neither shown on the original contract plans nor found during buttress area pile extraction. Find attached the as-built drawing that depicts the locations and the top elevations of the timber piles that BBII extracted at that location. Please note that the top elevations of the extracted piles range between 2.40 to 3.11 feet.  BBII has just been informed by DND Construction that the other rows of the connector wall cannot be installed while these obstructions are being removed per the committee meeting on 07/11/2011, due to the proximity of the obstruction removal trench to the next two rows. The CDSM connector wall installation has currently ceased until further notice. BBII is currently seeking drill rigs capable of removing these obstructions also as discussed at the committee meeting.  Please direct BBII on how to proceed.			<b>ANSWER:</b> Reference Specification Section 31 56 13, attached sketches, and photo  During the installation of the CDSM Connector Wall at Zone 4, DND's drill rig hit unidentified buried obstructions at approx. 14' - 15' below the original grade (El. 0 ~ -1). **REQUEST:**

Reference GT-2102 & Detail 8 - GT-5103

BBII cannot locate the tie backs in the area of the vacant lot on Minna St. described in the Detail 8 on Contract Drawing GT-5103. The BBII crew went to a depth of 17 feet along the Pre-Trench and was unable to locate the tie backs. This was an additional foot more than the specified 15'-0" +/- 1'-0" depth. BBII believes the tie backs do not extend into the Pre-Trench limits and plans to move forward. Please advise if there is information to the contrary.

T-0225.2	BSE - CDSM Alignment Conflict GL 1-J - PG&E Vault Utility Conflict on Natoma	Closed	01	09/12/2011	09/22/2011	09/14/2011

From: Webcor Construction LP Nhi Tran

**REQUEST:**

Reference RFI #T-0017, #T-0225.1, Sheet U-1110, and Specification Section 31 56 13

Please refer to RFI No. T-0017, which revised the southwest corner of the CDSM shoring wall alignment. Your attention is also directed to the utility drawing U-1110, which depicts the utilities to be abandoned and the ones to be protected in place with respect to the old CDSM wall alignment. According to U-1110, the PG&E vault on Natoma Street shall be protected in place. However, based on the field layout, the PG&E vault on Natoma St. is in conflict with the southwest corner of the CDSM wall alignment, which was revised per RFI No. T-0017.

Based on BBII's field measurements, the clearance between the PG&E vault on Natoma St. and the centerline of the CDSM wall is 29", which is less than the 36" typical distance required by the contract plans as the minimum clearance between the demarcation lines and the CDSM wall alignment.

BBII requests the PG&E vault on Natoma St. to be relocated to a safe distance outside the work limits of the revised CDSM wall alignment.

**ANSWER:**

Reference RFI #T-0017, #T-0225.1, Sheet U-1110, and Specification Section 31 56 13

**REQUEST:**

Reference RFI #T-0233, T-0233.1, T-0233.2, Submittal TG0300-542 and TJPA Transmittal No.140-02321.

This RFI shall not be closed until the information / confirmation received from the Design team.

----- RFI #T-0233.2 Response -----  
 Thornton Tomasetti will be issuing comments to Transmittal #140-02321.

----- RFI #T-0233.2 Question -----  
 W/O is in receipt of TJPA Submittal Package #TG0300-542 for the internal bracing from which W/O is proceeding per specification section 01 13 00.  
 W/O is aware the design team did not review and comment on Transmittal #140-02321 (DBI's comments) to Submittal Package #TG0300-542.  
 Please confirm no design team changes or comments will be made to Submittal Package #TG0300-542 rather future trade packages.

----- RFI #T-0233.1 Response -----  
 TT is currently reviewing the Internal Bracing Design Documents, which was received by TT on 09/29/2011.  
 TT's comments to this document will be marked up on the Internal Bracing Design Document.

----- RFI #T-0233.1 Question -----  
 The SFDBI-approved Internal Bracing drawings and related calculations was sent to W/O on 9/22/2011 as TJPA Transmittal No. 140-02321 - Approved Internal Bracing for Shoring Wall Permit Drawings, and available in Constructware.

----- RFI #T-0233 Response -----  
 Thornton Tomasetti's response is pending receipt and review of revised internal bracing submittal.

----- RFI #T-0233 Question -----  
 The BSE submittal TG0300-542.1 Internal Bracing Design was approved by TJPA and the fabrication will start as soon as permission is issued by the City.  
 Please confirm the design was acceptable to permanent structural designer (Thornton Tomasetti) and incorporated into their design for future trade packages.

**ANSWER:**

Reference RFI #T-0233, T-0233.1, T-0233.2, Submittal TG0300-542 and TJPA Transmittal No.140-02321.

This RFI shall not be closed until the information / confirmation received from the Design team.

----- RFI #T-0233.2 Response -----  
 Thornton Tomasetti will be issuing comments to Transmittal #140-02321.

----- RFI #T-0233.2 Question -----  
 W/O is in receipt of TJPA Submittal Package #TG0300-542 for the internal bracing from which W/O is proceeding per specification section 01 13 00.  
 W/O is aware the design team did not review and comment on Transmittal #140-02321 (DBI's comments) to Submittal Package #TG0300-542.  
 Please confirm no design team changes or comments will be made to Submittal Package #TG0300-542 rather future trade packages.

----- RFI #T-0233.1 Response -----  
 TT is currently reviewing the Internal Bracing Design Documents, which was received by TT on 09/29/2011.  
 TT's comments to this document will be marked up on the Internal Bracing Design Document.

----- RFI #T-0233.1 Question -----  
 The SFDBI-approved Internal Bracing drawings and related calculations was sent to W/O on 9/22/2011 as TJPA Transmittal No. 140-02321 - Approved Internal Bracing for Shoring Wall Permit Drawings, and available in Constructware.

----- RFI #T-0233 Response -----  
 Thornton Tomasetti's response is pending receipt and review of revised internal bracing submittal.

----- RFI #T-0233 Question -----  
 The BSE submittal TG0300-542.1 Internal Bracing Design was approved by TJPA and the fabrication will start as soon as permission is issued by the City.  
 Please confirm the design was acceptable to permanent structural designer (Thornton Tomasetti) and incorporated into their design for future trade

**REQUEST:**

Reference Specification 01 53 30

Temporary Bridge Specification 01 53 13 (1.6H) requires the welding qualifications for the bridges to be in accordance with AWS D1.5 "Bridge Welding Code", however BBII's design was based on AWS D1.1 "Structural Welding Code" as specified in General note 3.2-A4.2 of Sheet SH-0100. BBII and their designer felt AWS D1.1 is more applicable for the temporary bridge structure for the following reasons:

- The members that make up BBII's temporary bridge consists of readily available standard grade mill rolled shapes, comprised of a variety of base metals (A36, A53, A572, A992, A500, and A252) which are joined by simple prequalified joints (fillets). D1.1 provides the flexibility to weld all of these base metals in any combination utilizing prequalified procedures, since they are all in the same base metal group. D1.5 only allows prequalified welding of A709 plate material only.
- BBII's temporary bridge structure contains structural tubing (piers and rails), which D1.5 does not cover tubing
- The bridge as designed has short spans and very simple welded connections. All welds shown are fillet welds (mostly single pass). Additionally there are no complete penetration welds as are typically seen on steel plate girder bridges.
- The life span of these temporary bridges are less than 5 years
- The temporary bridge's intended use and the site specific geometry restraints led to a steel framing design much more similar to a structural steel building than to a typical Highway bridge. The steel columns with angle cross-bracing, and the girders and cap beams as detailed are similar to building with columns and floor beams.

The submittal review did not take exception to the general note specifying D1.1. therefore please confirm it is acceptable to submit weld procedures and welder qualifications per AWS D1.1 as specified by the bridge's Engineer of Record.

T-0238	BSE - Zone 1 CDSM Crossing Over Existing Wall	Closed	01	09/26/2011	10/06/2011	09/29/2011
<p><b>From:</b> Webcor Construction LP                      Nhi Tran</p> <p><b>REQUEST:</b></p> <p>Reference Sheet GT-5101, Specification Section 31 56 13, attached photos and sketch</p> <p>Please address the following information request from BBII's sub contractor DND:</p> <p>"The new CDSM shoring wall crosses an existing CDSM wall at 2 locations. Following CR T-005B, both of these crossings are perpendicular to the existing CDSM wall, as shown in Note 1 on GT-5101. Note 1 shows the new wall making a jog to avoid hitting the beams of the existing CDSM wall. The detail shown on contract plan GT-5101 is constructible only if the existing CDSM wall was built exactly as shown, without any room for construction tolerances for both the new and existing wall. Instead of trying to install this section of the CDSM wall according to the detail shown on GT-5101, which would potentially cause damage to the CDSM equipment, DND proposes to remove the existing CDSM beams that are in conflict. The contract plan GT-5101 shows two CDSM panels to jog around the existing beam and one offset panel parallel to the new wall.</p> <p>DND's proposed solution would eliminate the 2 panels in the jog but still maintain the additional offset panel parallel to the wall line. This additional offset panel would act as insurance so a seal is maintained through any deflection caused by the hard in-situ soil mix. This would present a potential cost savings to the project (due to 2 less panels being installed), providing the conflicting beams can be successfully removed.</p> <p>DND has mobilized a drill rig with an auger to this area to pre-drill the wall prior to the removal of beams. This will substantially reduce the amount of vibration that will be required to remove the beams. DND proposes to utilize the same method at the other wall crossing near Natoma Street. Is this proposed method of removing the existing beams and soil mixing through the existing CDSM wall acceptable?"</p>		<p><b>ANSWER:</b></p> <p>Reference Sheet GT-5101, Specification Section 31 56 13, attached photos and sketch</p> <p>Please address the following information request from BBII's sub contractor DND:</p> <p>"The new CDSM shoring wall crosses an existing CDSM wall at 2 locations. 	<p><b>From:</b> Webcor Construction LP                      Nhi Tran</p> <p><b>REQUEST:</b></p> <p>Reference Sheet GT-2201, Specification Section 31 63 29, and attached letter from Becho</p> <p>Please find attached BBII's sub-contractor Becho's letter that requests the following information:</p> <p>"... during the drilling of buttress shaft M4 rock socket, at a depth of approximately 250 feet below ground level, Becho encountered rock formations of unmeasured hardness. At a depth of 250 feet, Becho's steel grab, used for rock drilling, fractured under the increased stress. Please see attached photos. The incident occurred between the hours of 9.30 am and 10.00 am on Wednesday, 09.28.11. BBII immediately notified W/O and called for an emergency meeting to discuss the hardness of the rock formation and the status of drilling. During the meeting, Arup confirmed and accepted the 250 foot depth to be adequate and sufficient to stop the rock socket drilling. Immediately, following Arup's confirmation at 11.09 am, Becho proceeded to clean the remaining rock debris from the bottom of the shaft and prep for air lifting operation. The total down time recorded as a result of the incident is 68 minutes, not including adjustments of airlift, tremie pipe and repair of grab.</p>

<b>REQUEST:</b>						
Reference Specification Section 01 53 13						
Attached is an as-built sketch of Verizon utilities potholed and located along First St. on 10/4/10. These utilities were originally scheduled to be relocated during phase two to allow for CDSM installation and subsequently temporary bridge construction. BBII has learned that in an effort to save time, the TJPA is considering leaving the utilities in their current locations and working around them. As shown on the attached section of the First St. temporary bridge, the Verizon utilities will be in direct conflict with the temporary bridge structure. Please confirm these utilities will be relocated as planned to allow for installation of the CDSM shoring wall and temporary bridge.

T-0253.1	BSE - Trestle Design Criteria Follow-Up	Closed	01	11/21/2011	12/01/2011	12/02/2011

From: Webcor/Obayashi Joint Venture Nhi Tran

**REQUEST:**

Reference RFI#T-0253, Attachment 3 of Exhibit A of the TG03 BSE Bid Package, Specification Section 01 53 13, and attached memo from PB&A

Follow up to RFI T-0253 and the meeting held 11/16/11

As noted in the 11/16/11 meeting, the cross lot bracing "struts" are supported by the Trestle substructure and analysis requires limiting trestle deformations to be compatible with the allowable strut deflections (approximately 2"). As a result the "push over" analysis as required by the AASHTO Seismic Design Criteria "SDC" (requirement of bridge spec 01 53 13) is not applicable. This was discussed in detail during the 11/16 meeting and it was concurred that due to unique structural configuration and deflection requirements, an alternate analysis method other than the SDC would be required. Discussions were had that a site specific elastic analysis using the 475 year seismic loads that is controlled by the deflection limits of the cross lot bracing would be necessary. Please confirm that a "push over" type analysis of SDC will not be required for the trestle and that the attached detailed Design Criteria (and analysis method) is acceptable.

(W/O added clarification)

BBII believes the site specific analysis would demonstrate the trestle substructure will not deform greater than 2" however the trestle superstructure will deform greater than 2".

T-0260	BSE - D.I. Installation at Natoma Street and First Street	Closed	01	11/01/2011	11/11/2011	11/08/2011

From: Webcor Construction LP Nhi Tran

**REQUEST:**

Reference Sheet U-3012 and attached sketch

BBII carried out an investigation of the active catch basin around the perimeter of the BSE project; and has a concern regarding the street elevation relative to the flow line on Natoma Street between GL 10-17.

The flow line directs surface water in a North East direction towards First Street. The only active catch basin at the intersection of Natoma and First Street is CB #305, which is approximately +8.5" higher than the currently decommissioned CB located at the intersection of Natoma St and First St (see sketch attached).

Noted during the last rain fall, surface water was directed to the decommissioned catch basin at the North East corner of Natoma Street and First Street intersection, BBII recorded approximately 6" of standing rain water accumulating at First Street and Natoma intersection. Please note that existing catch basin was decommissioned during the new sewer installation on First Street (see attached mark up drawing).

BBII recommends 2 options to control rain water from outside the BSE work area:

- A) modify the flow line on Natoma Street to direct the flow toward CB # 305,
- B) Install a new catch basin and connect it to the existing lateral connection CB # 305 to the combine sewer system, or connect directly to the existing MH.

Please advise on TJPA method to prevent water collecting on First Street.

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Choice Required</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>
	<p>On 8/22/12 Beale St. bridge submittal #TG0300-206 was returned to W/O marked not reviewed (Exhibit-A). Upon W/O's review of BBII's Beale St. bridge design W/O encountered the following inquiries relative to the CDSM wall:</p> <p>1. BBII's bridge design relies on ARUP's RFI response #T-0209.3 (Exhibit-B). Please confirm ARUP's RFI response #T-0209.3 (Exhibit-C) is applicable as the basis of the design for the Beale St. bridge, given unlike First and Fremont Streets, the length of the Beale St. bridge is resting atop the East CDSM wall.</p> <p>2. The decision to allow the North and South bridge abutments to be located atop the CDSM wall was predicated on the CR #T-025 load testing reference RFI #T-0209.4 (Exhibit-D). Given the testing was performed on different soldier piles (by others) and differing soil conditions between Zone-1 and Zone-4, is the load capacity derived from the CR #T-025 testing applicable given the different bridge location and configuration?</p> <p>3. BBII's Beale St. bridge design relies on resting the length of the Beale St. bridge atop the East CDSM wall. As the designer of the CDSM wall, does ARUP endorse further loading of the East CDSM wall with the forces imposed by the Beale St. bridge?</p>

<b>T-0266</b>	<b>BSE - Moratorium Conflict With Phase 2 Utilities In 1st Street</b>	<b>Closed</b>	<b>01</b>	<b>11/23/2011</b>	<b>11/23/2011</b>	<b>12/06/2011</b>
	<b>From:</b> Webcor Construction LP                      Manuel Saldana					
	<b>REQUEST:</b>					
	BBII is in receipt of the moratorium waiver expire date of 12-09-2011. BBII/PEC will not be able to complete the Phase II utility work by 12/9/11 without accelerating the schedule. Our original request for extension was December 19, 2011. A 12/9/11 completion date may be achievable if PEC is allowed to work 10 hr shifts during the day beginning 11/28 through 12/2 as well as working on 12/3 and 12/4. In addition, we propose to have a separate night crew to work near / around the Minna Street intersection to alleviate impacts to heavy demand of day traffic. The majority, if not all, of the demolition can occur during the dday to mitigate noise at night. The night work would need to begin on 11/28 and run through 12/2. Please keep in mind that implenting an accelerated schedule may also impact PG&E. We have no control over their work and the completion of the utlity tie-ins and Mandral testing is contingent on PG&E's availability per the new adjusted completion date.					
	In summary we are requesting direction for the following items to meet the 12/9/11 moratorium deadline: 1) W/O to permit BBII / PEC to work the extended hours, and night shift i.e. 10 Hours Days and Night work operations, 2) Permit from MTA to extend working hours (closure times) during the day 3) Permit from MTA and DPW to work at night within lane closures 4) Permit from TJPA to work in Zones 1 & 2 at night 5) Agreement / Approval for compensation of additional cost (premium time and or shift rate) BBII will have magnitude of cost for the Monday morning discussion

T-0269.1	BSE - Zone 2 Free Pull Pile Extraction Test Section	Closed	01	01/25/2012	02/04/2012	02/07/2012

From: Balfour Beatty Infrastructure, Inc. Shad Gardner

**REQUEST:**

BBII are proposing to perform "free pull" pile extraction on a 'test section' in Zone 2. The proposed piles will be extracted near GL14, close to CDSM wall on the south side using a 'non ground deformation control method' by free pulling each pile without using steel casing. Any movement that may occur in the CDSM wall will be monitored by the inclinometer located close to GL 14. This test section will give us give us the information we need to determine:

- 1) If free pulling the piles using a non ground deformation control method affects the CDSM wall by causing movement.

Reference: DD-2211

W/O Note: W/O understands this RFI is the result of ongoing conversations between BBII, ARUP, & PMPC. W/O remains concerned that should the CDSM wall experience movement, the use of the 'Free Pull' method beneath or outside the trestle area, would significantly increase the difficulty in determining the cause of the CDSM wall movement.

- 2) If it is a suitable method to adopt for removing the remainder of the piles in Zone 2 located outside the trestle area.

The attached drawing (D-2211) conveys the test section in red.

Please advise on the suitability of this test to determine if free pulling can be used outside the trestle zone.

**ANSWER:**

<b>REQUEST:</b> Reference: 31-23-29 and Attached Document  As discussed during the meeting on 12/22/11, to help obtain an accurate dewatering model, BBII is requesting the recent piezometer data for Zones 1 and 2. In addition, BBII has reviewed the data for piezometers 1182, 1229 and 1255 located adjacent to 301 Mission St (see attachment) and would like to clarify the initial ground water level to use in the model for Zone 4. Based on our review, the existing natural groundwater condition fluctuates between 1.6 E.L and -8.1 E.L in this area. BBII would like to agree upon a starting groundwater elevation of -5.0 E.L for Zone 4. Also, BBII would like clarification as to the base groundwater level to use for Zones 1, 2 and 3 based on the project data.		<b>ANSWER:</b> Reference: 31-23-29 and Attached Document  As discussed during the meeting on 12/22/11, to help obtain an accurate dewatering model, BBII is requesting the recent piezometer data for Zones 1 and 2. From: Webcor Construction LP      David Fields

**REQUEST:**

Reference: Attached BII Sketch  
Due to the deletion of the "Natoma Finger" portion of the access trestle BBII is proposing to install additional "bump outs" (per the attached sketch). For coordination purposes, please provide "no fly" zone information for these locations.

**ANSWER:**

Reference: Attached BII Sketch  
Due to the deletion of the "Natoma Finger" portion of the access trestle BBII is proposing to install additional "bump outs" (per the attached sketch). For coordination purposes, please provide "no fly" zone information for these locations.

T-0279	BSE - Trestle Welding Code Compatibility	Closed	01	02/27/2012	03/08/2012	03/20/2012
<p><b>From:</b> Balfour Beatty Infrastructure, Inc.      Shad Gardner</p> <p><b>REQUEST:</b></p> <p>Reference:                      ASHTO/AWSS D1.5M/D1.5:2008                      SH-0200</p> <p>The Temporary Access Trestle Design submitted in December specified AWS 01.1 as the required welding code. During the review process the reviewers requested that the welding code be changed to AWS 01.5- Bridge Welding Code. This request was complied with by revising general note A5.2 on the conformed trestle drawings.</p> <p>Since issuing these documents, BBII has been informed by both our shop and field welding inspectors that a compatibility discrepancy exists between the 01.5 welding code and base metals/ member shapes originally specified in the trestle design.</p> <p>D1.5 is specifically intended for use on bridges and it is not intended for use on "structures composed of structural tubing" as noted in section 1.1.1 attached. This causes a discrepancy because unlike most bridges, our trestle contains a substructure completely comprised of structural steel tubing. (ie Pipe pile, lateral and longitudinal X-bracing).</p> <p>In addition to the pipe incompatibility, there is also an incompatibility between the specified base metals. 01.5 requires base metals to be ASTM A709 and the trestle design specified a variety of different base metals depending on their structural shape as shown in general note 2.28 also attached. Since Article 1.1.1 of 01.5 permits the Engineer to choose to reference an alternate applicable welding standard when fabrication or structure components are not specifically addressed within its sections, BBII proposes keeping AWS 01.1 as the specified welding code because of its base metal compatibility, but adding a supplemental trestle specific welding specification written by the EOR that increases the quality control to a level equal to that of 01.5. This supplemental specification will include applicable portions of 01.5 section 3 "Workmanship" and section 3 "Inspection" when the requirements are greater than that of 01.1. (ie: fit-up tolerances, NOT frequency, etc).</p>		<p><b>ANSWER:</b></p> <p>Reference:                      ASHTO/AWSS D1.5M/D1.5:2008                      SH-0200</p> <p>The Temporary Access Trestle Design submitted in December specified AWS 01.1 as the required welding code. T-0285	<b>BSE - Buttress Rebar Cage Length Adjustment</b>	Closed	01	03/21/2012	03/31/2012	03/26/2012

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Choice Required</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>
---------------	----------------	---------------	------------------------	---------------------	----------------------	----------------------

**From:** Balfour Beatty Infrastructure, Inc. Ural Yal

**REQUEST:**

Please refer to RFI T-0252, where the Engineer accepted BBII's proposal of fabricating the buttress rebar cages to a pre-extended length of 260' in order to accommodate the buttress shafts that are deeper than 241'. In RFI T-0252, BBII had suggested to extend the overall length of all rebar cage assemblies to 260' by increasing the length of the top "setting cage" 19 feet more. In this proposal, the lengths of structural cage segments were to remain unchanged.

BBII's proposal of extending the length of the setting cage by 19' got accepted with the added requirement of splicing vertical rebar extensions on the job site. BBII takes exception to the added requirement of splicing vertical rebar extensions on the job site, which would lead to an increase in durations of the rebar cage installations.

In order to eliminate splicing, BBII now proposes to fabricate the setting cage segments up to 9 feet longer than shown on the plans. The structural rebar cage segment lengths will remain unchanged. The top of the structural cage sections will be within up to 9 feet proximity from the top of concrete. This proposal will accommodate the rebar cages with a maximum total length of 250' (241 '+9'=250').

If the rebar cage assembly needs to be longer than 250 feet, BBII will direct the rebar cage manufacturer to also extend the bottom structural cage segment by an added distance equal to the required total length of the rebar cage assembly less 250 feet.

T-0290.1	BSE - Relevance of Unimproved Soil Pockets in CDSM Wall as it Relates to Waterp	Closed	01	05/28/2012	06/07/2012	06/05/2012

From: Webcor Construction LP Kirk Nielsen

**REQUEST:**

Neither section 31 00 003.8.L or 07 12 10.3.2.C anticipated +1" cavities in the surface of the CDSM wall. However there are +6" cavities in the surface of the CDSM wall the result of unimproved soil pockets although BBII would contend the CDSM wall was installed in accordance with section 31 56 13.3.7.C. On 5/25/12 W/O spoke with Jonathan Lawrence President of Laurencos Systems (888) 321-3338 specified per section 07 12 10.2.1. Sections 31 00 00.3.8.L and 07 12 10.3.2.C speak of "buckling" due to cavities of the face of the CDSM wall. Mr. Lawrence was not concerned over the cavities in the face of this project's CDSM wall for two reasons:

1. Subsequent to his review of the bid documents the substrate for the waterproofing is the INS-1, depicted on 4/A1-8710, rather than the CDSM wall.
2. Due to the thickness of the substrate system:
  - a. ¼" Protection board
  - b. 3/16" (2) plys #15 felt
  - c. ¼" Drainage composite panel.
  - d. ½" INS-2

1-3/16" thick in total Mr. Lawrence was not concerned over a CDSM cavity less than 1'- 0" x 1'-0" x ½" deep.

When asked why he thought section 07 12 10.3.2.C was included in the below grade waterproofing section, if in fact the CDSM was not the substrate for the waterproofing, Mr. Lawrence responded that section 07 12 10.3.2.C was part of the Laurencos template boiler plate specification really inapplicable to this application.

Please confirm that given the CDSM wall is not the waterproofing substrate system, rather items a-d above, and in light of the frequency of unimproved soil pockets, the project needn't infill the unimproved soil pockets less than 1'- 0" x 1'-0" x ½" deep.

**ANSWER:**

2. Due to the thickness of the substrate system:
  - a. ¼" Protection board
  - b. 3/16" (2) plys #15 felt
  - c. ¼" Drainage composite panel.
  - d. ½" INS-2

1-3/16" thick in total Mr. Lawrence was not concerned over a CDSM cavity less than 1'- 0" x 1'-0" x ½" deep.

When asked why he thought section 07 12 10.3.2.C was included in the below grade waterproofing section, if in fact the CDSM was not the substrate for the waterproofing, Mr. Lawrence responded that section 07 12 10.3.2.C was part of the Laurencos template boiler plate specification really inapplicable to this application.

Please confirm that given the CDSM wall is not the waterproofing substrate system, rather items a-d above, and in light of the frequency of unimproved soil pockets, the project needn't infill the unimproved soil pockets less than 1'- 0" x 1'-0" x ½" deep.

Regarding the temporary first street bridge. Contract specification section 01 53 13-1.3.A.4 requires us to provide a "8' -high solid barrier system" consisting of 1" plywood which does not allow viewing through the barrier. This is creating a blind turn hazard for traffic entering First street from Natoma street on the south side of First street. Please advise on how you would like to mitigate/fix this		Regarding the temporary first street bridge. T-0296	BSE - Clarification of Soil Segregation and Disposal per spec. section 01 13 50/SM	Closed	01	06/27/2012	07/07/2012	06/29/2012

From: Webcor Construction LP                      Kirk Nielsen

**REQUEST:**

On 6/26/12 BBII clarified their desired method / location of disposing of the Zone-3 concrete rubble was to deliver it to Brisbane.

Section 01 13 50 / 5.2.1 of the SMP states:

"TJPA shall be provided documentation from the excavation contractor that the accepting landfill for the soil from Transbay Terminal project has been provided with and has reviewed all analytical data collected from the Site."

Brisbane has refused to provide the aforementioned documentation.

In order to facilitate BBII's desired method / location of disposing of the Zone-3 concrete rubble W/O requests that the TJPA clarify, exclusively for the subject Zone-3 rubble, that the documentation required by the TJPA consists only of standard shipping tags and invoices.

**ANSWER:**

On 6/26/12 BBII clarified their desired method / location of disposing of the Zone-3 concrete rubble was to deliver it to Brisbane.

Section 01 13 50 / 5.2.1 of the SMP states:

"TJPA shall be provided documentation from the excavation contractor that the accepting landfill for the soil from Transbay Terminal project has been provided with and has reviewed all analytical data collected from the Site."

T-0301	<b>Trestle Piles in Exclusion Zones (Zone 4)</b>	Closed	01	07/23/2012	08/02/2012	07/30/2012
<b>From:</b> Webcor Construction LP      Robert Kjome						
<b>REQUEST:</b> Review comments on submittal package TG0300-284 directed BBII to shift two trestle piles (#69 & #72) out of pile exclusion zones (provided by Thornton Tomasetti in response to RFI T-0251.1). BBII worked to avoid these zones to the extent possible. However, in zone 4 the additional buttress shafts created further limitations on trestle pile locations and it was infeasible to completely avoid both the permanent structure and buttress. BBII is aware of the possibility of eliminating some of these additional buttress shafts but this will not resolve these specific conflicts. Due to the congestion in Zone 4 with both the pile exclusion zones and added buttress shafts, BBII requests an exception for trestle piles #69 and #72.			<b>ANSWER:</b> Review comments on submittal package TG0300-284 directed BBII to shift two trestle piles (#69 & #72) out of pile exclusion zones (provided by Thornton Tomasetti in response to RFI T-0251.1). **From:** Webcor Construction LP                      Kirk Nielsen

**REQUEST:**

On 8/22/12 Beale St. bridge submittal #TG0300-206 was returned to W/O marked not reviewed (Exhibit-A). Upon W/O's review of BBII's Beale St. bridge design W/O encountered the following inquiries relative to the CDSM wall:

1. BBII's bridge design relies on ARUP's RFI response #T-0209.3 (Exhibit-B). Please confirm ARUP's RFI response #T-0209.3 (Exhibit-C) is applicable as the basis of the design for the Beale St. bridge, given unlike First and Fremont Streets, the length of the Beale St. bridge is resting atop the East CDSM wall.
2. The decision to allow the North and South bridge abutments to be located atop the CDSM wall was predicated on the CR #T-025 load testing reference RFI #T-0209.4 (Exhibit-D). Given the testing was performed on different soldier piles (by others) and differing soil conditions between Zone-1 and Zone-4, is the load capacity derived from the CR #T-025 testing applicable given the different bridge location and configuration?
3. BBII's Beale St. bridge design relies on resting the length of the Beale St. bridge atop the East CDSM wall. As the

T-0305	BSE - Inquiries Regarding Proposed Beale St Bridge Relative to Below Grade Stru	Closed	01	08/23/2012	09/02/2012	08/27/2012

From: Webcor Construction LP                      David Fields

**REQUEST:**

Reference: TG0300-206 Beale St. Bridge Structural Design

On 8/22/12 Beale St. Bridge submittal TG0300-206 was returned to W/O marked not reviewed. In lieu of piers the proposed bridge relies on the eastern shoring wall for structural support along the bridge. As a result, the design utilizes the additional capacity of the internal bracing to restrain lateral loads imposed by the bridge.

Upon W/O's review of BBII's Beale St. bridge design W/O encountered the following inquiries relative to below grade structure:

-Do the below grade foundation walls as designed have the additional capacity required to support the lateral loads imposed by the proposed Beale St. bridge?

-Will the below grade foundation walls be required to achieve additional strength prior to removal of re-bracing as a result of the additional laterals loads in which they are subjected by the proposed Beale Street bridge?

**ANSWER:**

T-0313	Micropile Layout	Closed	01	09/13/2012	09/23/2012	09/20/2012
<p><b>From:</b> Webcor Construction LP                      Robert Kjome</p>						
<p><b>REQUEST:</b></p> <p>Reference Documents                      Specification Section: 31 63 33                      Drawings: ASI #0097</p> <p>Per 9/12/12 Turner BSE Progress Meeting, Adamsons Associates(AA) requested BBII to submit a RFI requesting distance tolerances for the proposed micropile layout relocations. Please see BBII's verbage below in response.</p> <p>The response comments provided to submittal TA1020-316333A12.2 (TG0300-622.2) for micropile stated that the submitted micropile layout was unacceptable, but that the micropile locations shown in the TG0600 (ASI 0097) documents are acceptable. The attached marked up coordination drawings show the locations of the TG0600 documents micropile locations compared to various overhead horizontal and vertical obstructions. The obstructions considered in this comparison include trestle pile and bracing; internal bracing struts, supports, and pin piles; bridge piles; and the buttress walls. The submitted micropile locations are also shown.</p> <p>The equipment that will be used to install the micropiles require 2.5 feet clearance from the center of the micropile hole to surrounding obstructions. The circles and arrows on the attached drawing indicate which micropiles do not have the required clearance and which direction of shift is preferred. The maximum shift is 4 feet, which occurs when a micropile is located directly below an internal bracing strut.</p> <p>Please confirm that the micropile locations shown on the TG0600 documents are to be used for the micropile layout, and that a shift of up to 4 feet in the directions shown on the attached drawings is acceptable.</p> <p>As an alternative, BBII would prefer to use the submitted layout which has fewer conflicts. Micropiles would be eliminated or added per notes 2 and 3 respectively on sheet ML-1 of the returned submittal. The submitted micropile layout contains 1858 each micropiles. The TG0600 documents contain 1860 each micropiles. By eliminating piles per comments 2 and adding piles per comment 3, the total quantity would be approximately the quantity in the TG0600 documents.</p>		<p><b>ANSWER:</b></p> <p>Reference Documents                      Specification Section: 31 63 33                      Drawings: ASI #0097</p> <p>Per 9/12/12 Turner BSE Progress Meeting, Adamsons Associates(AA) requested BBII to submit a RFI requesting distance tolerances for the proposed micropile layout relocations. T-0321.1R	Additional Excavation and Bracing Constraints at A Line and 301 Mission REVISIO Closed		01	10/26/2012	11/05/2012	10/26/2012

From: Balfour Beatty Infrastructure, Inc.      Dean Wallahan

**REQUEST:**

BBII would like to confirm the following direction received at TCCO's weekly meeting on October 10, 2012 in regards to the limits of the berm and sequence of work referenced in the response to RFI T-0321.

The following work will take place between CDSM beams 251 and 276 along the A-Line and the southern edge of Zone 3's trestle.

Demolition: Upon completion of the demolition and removal of the basement walls and footings BBII is to place an earth berm to elevation +10.00, extending 25 feet from the face of the CDSM wall into the excavation and having a 3:1 slope at the southern hinge point of the berm.

Bracing: Walers 24 and 48 as well as Struts 49 and 50 will be installed within a 6 working day window to address ARUP's concern of overexposure from the Millennium's Building's foundation pressure on the CDSM wall. During the installation of these walers and struts the berm as described in the demolition section above will remain between CDSM beams 260 and 271 until completion of the bracing of walers 24 and 48 and struts 49-50. The sequence will be repeated for installation of walers 25 and 49 as well as struts 51 and 52 with the exception of the earth berm easterly limit will be CDSM beam 276 (centerline of buttress A line pile).

**ANSWER:**

BBII would like to confirm the following direction received at TCCO's weekly meeting on October 10, 2012 in regards to the limits of the berm and sequence of work referenced in the response to RFI T-0321.

The following work will take place between CDSM beams 251 and 276 along the A-Line and the southern edge of Zone 3's trestle.

Demolition: Upon completion of the demolition and removal of the basement walls and footings BBII is to place an earth berm to elevation +10.00, extending 25 feet from the face of the CDSM wall into the excavation and having a 3:1 slope at the southern hinge point of the berm.

Bracing: Walers 24 and 48 as well as Struts 49 and 50 will be installed within a 6 working day window to address ARUP's concern of overexposure from the Millennium's Building's foundation pressure on the CDSM wall. During the installation of these walers and struts the berm as described in the demolition section above will remain between CDSM beams 260 and 271 until completion of the bracing of walers 24 and 48 and struts 49-50. The sequence will be repeated for installation of walers 25 and 49 as well as struts 51 and 52 with the exception of the earth berm easterly limit will be CDSM beam 276 (centerline of buttress A line pile).

T-0324	BSE - Field Order T-00010R2 - Clouded Revisions	Closed	01	10/04/2012	10/14/2012	10/15/2012

From: Webcor Construction LP                      Joanne Filipas

**REQUEST:**

Reference: Field Order T-00010R2, TJPA CADD Standards Manual dated 15Nov10 and Sheet A1-8711 attached.

Field Order T-00010R2 included the TG06 Below Grade IFC drawings and specifications. It is unclear what revisions are to be incorporated by the TG03 contractor as the revised drawings do not include revision blocks and clouds consistent with the TJPA CADD Standards. For example, sheet A1-8711 (attached) was Issued For Construction with the TG03 BSE package. The revisions to this drawing through the design development and issuance with the TG06 bid/construction set are not clouded and the revision block does not include all previous revision descriptions. The revision block on the final Issued for Construction drawing should read as follows and all changes from the Rev 0 IFC issuance should be clouded in accordance with the TJPA CADD Standards:

No	Date	Description
Ä0	12/10/2010	Issued For Construction - Buttress/Shoring/Excavation
ÄA	4/18/2012	Issued for Bid - Below Grade Package
ÄB	8/17/2012	Issued for Bid - Below Grade Package - Addendum #2
Ä1	8/30/2012	Issued for Construction- Below Grade Package

Please confirm any previously issued IFC drawings that have since been revised will be re-issued consistent with the TJPA CADD standards. Also, please confirm all packages going forward will be in accordance with the TJPA CADD standards revision provisions.

**ANSWER:**

Reference: Field Order T-00010R2, TJPA CADD Standards Manual dated 15Nov10 and Sheet A1-8711 attached.

<b>REQUEST:</b>			<b>ANSWER:</b>			
<p>In an effort to expedite the installation of struts 10 &amp; 11 at level D to help reduce eastward movement of the A-line wall, BBII proposes the following:</p> <p>Excavate to level D for struts STD-10 and STD-11, and notch along the wall so that waler WD-05 may be installed, leaving the berm present beyond the notch. Excavate on the south side to the end of waler WD-67. Excavation to install strut STD-12 will proceed once enough struts have been installed at level C to advance the level D excavation to strut STD-12 per the specifications.</p> <p>A sketch has been attached for reference. Please confirm this is acceptable.</p>			<p>In an effort to expedite the installation of struts 10 &amp; 11 at level D to help reduce eastward movement of the A-line wall, BBII proposes the following:</p> <p>Excavate to level D for struts STD-10 and STD-11, and notch along the wall so that waler WD-05 may be installed, leaving the berm present beyond the notch. <b>REQUEST:</b>			<b>ANSWER:</b>			
Drawing GT-1112 stage 13 shows a maximum of 16' or 17' between level B struts and the lower level of rebracing. For Case West, level B supports are at elevation -3', resulting in the lower level of rebracing supports at elevation -20'. Internal bracing drawing sheet SH-4000 shows W21 strut support members on the underside of level C bracing. In order to install the lower level rebracing and accommodate the existing level C bracing, the lower level bracing will need to be installed at elevation -22'.  Similarly, the top level of rebracing is called out in stage 15 to be 3' below level A bracing. Top level rebracing will need to be 5' below level A bracing in order for struts to be clear of the overhead strut supports.  Please confirm that the 17' and 16' maximum dimensions in stage 13 and 3' maximum dimension in stage 15 will not be required if the rebracing design calculations show that it is acceptable. These ties are made by an automatic bender that bends a column or boundary element tie from one continuous piece of rebar. The end result is the same perimeter and cross tie configuration as the design in the contract documents. Please confirm if this procedure is acceptable.
T-0341.1	<b>BGP - Type D8 Column Serpentine Ties</b> From: Webcor Construction LP Jackson Tukuafu	Closed	CR	12/04/2013	12/11/2013	12/10/2013
	<b>REQUEST:</b> Please refer to drawing S1-3305 and RFI T-0341.  The response to RFI T-0341 accepted the use of one-piece/serpentine ties for the columns as proposed by Gerdau. Gerdau has found that the fabrication of a single piece serpentine tie for the type D8 column could pose safety risks. Therefore, Gerdau is proposing to fabricate the type D8 column ties with two pieces of serpentine ties. See the attached Gerdau sketch SK- T-0341.1 for details.  Please confirm the alternate serpentine ties as shown in the attached sketch is acceptable.					
						<b>ANSWER:</b> Please refer to drawing S1-3305 and RFI T-0341.  The response to RFI T-0341 accepted the use of one-piece/serpentine ties for the columns as proposed by Gerdau. Gerdau has found that the fabrication of a single piece serpentine tie for the type D8 column could pose safety risks. Therefore, Gerdau is proposing to fabricate the type D8 column ties with two pieces of serpentine ties. See the attached Gerdau sketch SK- T-0341.1 for details.  Please confirm the alternate serpentine ties as shown in the attached sketch is acceptable.

	<p>already designed, permitted, and constructed First and Fremont St. Bridges. In an ARUP memo dated October 5th, 2012 bullet #2 states:</p> <p>"The Contractor has verbally attested that they designed the diagonal corner braces using an interpretation of Note 11 on sheet GT-1111 which yielded a key assumption which is that the CDSM wall is infinitely strong and infinitely stiff. This assumption is an inaccurate and unreasonable interpretation of this note and in no way does the note infer this".</p> <p>Although this comment is in reference to the internal bracing design, it also relates to the temporary bridge design. As noted on page 156 of the First and Fremont St Bridge structural calculations (attached), this same interpretation of note 11 on GT-1111 was used for the abutment shear key design. The Bridges have been designed, reviewed and approved by DPW under with the assumption that no additional deformation occurs at the base of the abutments. If in fact the CDSM wall is truly NOT infinitely strong or infinitely stiff parallel to the wall, BBII requests a value from the CDSM engineer of record that can used in our re-evaluation of the First and Fremont Bridges to ensure the existing design remains in compliance with the design criteria. Additionally this value would be used in the re-design of the Beale St. Bridge.</p>

	<p><b>REQUEST:</b></p> <p>Specification Section: 03 20 01</p> <p>Regarding the concrete reinforcement within the mud slab, BBII would like the option of using Deformed Welded Wire Reinforcement (DWR) in lieu of rebar reinforcement. DWR strictly conforms to ACI 318 and offers multiple advantages to rebar reinforcement. Particularly, DWR will help reduce the risk of inclement weather damage to the subgrade, due to a quicker installation which will leave the subgrade exposed for a shorter period of time. Please see attached supporting documentation.</p> <p>Please confirm this is acceptable.</p>

The ICRI defines the levels of CSP as 1 (nearly flat) to CSP Level 9 (very rough). The Laurencio waterproofing system requires "a good wood screed or broom finish...often referred to as a 'sidewalk' finish..Do not use a steel trowel finish." See attached excerpt of the manufacturer specification.</p> <ol style="list-style-type: none"> <li>Please confirm the ICRI CSP requirements as it relates to surface finish, flatness and levelness are to supersede the varying ASTM F-value requirements setforth in specification section 033000-3.6, B1 or provide a revised specification section 033000 incorporating the ICRI requirement.</li> <li>Please confirm a wood screed or broom finish is accpetable for the mud slab.</li> </ol>

T-0371	<b>BSE - Micropile W154 &amp; W236 Bent After Install</b>	Closed	01	01/22/2013	02/01/2013	01/29/2013
<b>From:</b> Webcor Construction LP                      Robert Kjome						
<b>REQUEST:</b> Reference Specification: 31 63 33 Reference Drawings: Sheet ML-1 (Approved Micropile Layout submittal.)  The top 5ft of micropile W154 is out of plumb by approximately 8% and micropile W236 is out of plumb 2.5%. It appears that the piles have been hit by a piece of equipment and bent near subgrade. BBII recommends the piles should be left as-is. Please confirm this is acceptable.  BBII will take steps to ensure this does not happened again. The importance of taking special care to avoid damaging permanent work will be an emphasized topic in tool-box talks for crews running equipment near micropiles.  In the event that a micropile becomes bent in the future, please provide the design teams percentage of tolerance that the micropile can be out of plumb.		<b>ANSWER:</b> Reference Specification: 31 63 33 Reference Drawings: Sheet ML-1 (Approved Micropile Layout submittal.) T-0389	<b>BGP - Cast-in-place Concrete Shrinkage</b>	Closed	01	02/11/2013	02/21/2013	02/22/2013
<p><b>From:</b> Webcor Construction LP                      Lynn Kowallis</p> <p><b>REQUEST:</b></p> <p>Ref: Specification Section 03 30 20 1.7.F.3.i</p> <p>Please reference attached ACTM C 157, pages from SEONC San Francisco Bay Area Concrete Aggregate Report 2008, and Specification Section 03 30 20- 1.7.F.3.i. ASTM 157 section 4.3 states that if the condition of mixing, curing sampling and storage other than specified in the test method are required, they shall be reported but are not to be considered as standard conditions of this test method. In section 6. Sampling, it requires samples from batches made in the laboratory and the Note 2 states that field cast specimens can show up to twice as much drying shrinkage as laboratory cast specimens from the same materials and proportions. Furthermore, SEONC 2008 states that "actual shrinkage of the concrete in service and in field-cured tests will not necessarily correlate closely with the trial batch test results." For these reasons SCCI believes that shrinkage tests from samples at the job site can not verify the specified shrinkage limit and can not be compared with the laboratory tests.</p> <p>Please confirm that shrinkage results from the samples taken in the field will not be directly compared to laboratory tests, and consequently used as basis for rejection of material.</p>		<p><b>ANSWER:</b></p> <p>Ref: Specification Section 03 30 20 1.7.F.3.i</p> <p>Please reference attached ACTM C 157, pages from SEONC San Francisco Bay Area Concrete Aggregate Report 2008, and Specification Section 03 30 20- 1.7.F.3.i. <b>T-0404</b>	<b>BGP - Replacement of Lap Splice with Mechanical Couplers</b>	<b>Closed</b>	<b>01</b>	<b>02/22/2013</b>	<b>03/04/2013</b>	<b>03/06/2013</b>
	<b>From:</b> Webcor Construction LP Lynn Kowallis					
	<b>REQUEST:</b> Ref: S1/3201  Please verify that it is acceptable to replace a lap splice with an approved mechanical coupler (500 series coupler) as needed to support the means and methods of construction. The current location being considered is the outside face wall vertical lap splice between the dowel extending from the mat slab and the typical wall vertical reinforcing at the bottom of the wall. See attached plan sheet S1-3201 to reference the proposed location. Should this be acceptable please verify:  1. The mechanical coupler can infringe upon the 2" clearance as the diameter of the coupler is greater than that of the actual reinforcing. 2. Also verify that the couplers can be installed at one typical elevation similar to that of the other couplers depicted on the inside face wall curtain.					<b>ANSWER:</b> Ref: S1/3201  Please verify that it is acceptable to replace a lap splice with an approved mechanical coupler (500 series coupler) as needed to support the means and methods of construction. <b>REQUEST:</b> Reference Specification: 05 50 10 Reference Submittal No: TG0600-036  Per the Submittal TG0600-036 comments, the intermediate ring, 3" horizontal weld must have a removable backer bar. Is it acceptable to have a double beveled groove weld replace the single bevel groove with a back bar? Eliminating the backer bar in this weld and having a double beveled groove instead is more efficient.  Secondly, the Submittal TG0600-036 comments address the field welding of the penetration sleeve collars to be conducted after the trestle pile is to be removed. Is it acceptable to weld a full collar with cap in the shop? The assembly would arrive onsite to be welded in place as originally intended by the designer.  Please advise.			<b>ANSWER:</b> Reference Specification: 05 50 10 Reference Submittal No: TG0600-036  Per the Submittal TG0600-036 comments, the intermediate ring, 3" horizontal weld must have a removable backer bar. <b>REQUEST:</b>						<b>ANSWER:</b>
Ref: RFI T-0414 7/P1-6001						Ref: RFI T-0414 7/P1-6001
Per the response to RFI T-0414 (SCCI RFI #55), the EOR states the following: "Penetrating through the protection slab is not acceptable. Contractor shall submit information to TJPA Representative describing how the installation will occur to ensure the attachment system and work method will not penetrate the protection slab and impact the waterproofing system."						Per the response to RFI T-0414 (SCCI RFI #55), the EOR states the following: "Penetrating through the protection slab is not acceptable. Contractor shall submit information to TJPA Representative describing how the installation will occur to ensure the attachment system and work method will not penetrate the protection slab and impact the waterproofing system."
SCCI proposes the following: The pipe support assembly will be anchored to the Protection Slab with the use of 2 ea- 1/2" diameter Hilti KWIK Bolt TZ or Hilti KWIK Bolt 3 expansion anchors. Holes will be drilled to the manufacturer specified minimum required hole-depths of 2-5/8". In order to prevent over-drilling through the 4" Protection Slab and damaging the waterproofing membrane, SCCI will use roto-hammers equipped with depth-gauges (see attached information for Hilti TE-50 manual). The depth-gauges will be set prior to drilling and checked periodically during drilling operations. Reference: RFI T-0414 and T-0414.1			Reference: RFI T-0414 and T-0414.1			
<p>Per the response to RFI T-0414.1, the Designer states that the protection slab will be sloped with a 4" maximum slab thickness. SCCI does not plan to pour the protection slab with a slope. SCCI plans to pour the protection slab level and keep the protection slab consistently 4" thick.</p> <p>The Designer suggests using a pipe support with a grouted plate for scenarios where the drilled holes may get too close to the membrane. It would appear that grouted plate would still require some type of embedded anchor. By adding the grout, the manufacturer's embedment depth for the anchor is shortened and the tensile (pull-out) strength will be reduced.</p> <p>An alternative method to anchoring the pipe supports would be the use of 1/2" short drop-in anchors (see attached Red Head Multi-Set II information) which requires 1" of embedment into concrete. The holes would be drilled using a Depth Charge drill bit which is a 1" long bit with a shoulder to prevent over drilling.</p> <p>Confirm if this is acceptable.</p>			<p>Per the response to RFI T-0414.1, the Designer states that the protection slab will be sloped with a 4" maximum slab thickness. T-0423	BSE -Subgrade pit dimensions per comments to TG0300-340.1	Closed	01	03/07/2013	03/17/2013	03/20/2013
<p><b>From:</b> Webcor Construction LP                      Robert Kjome</p> <p><b>REQUEST:</b></p> <p>Reference Drawings: S1-2024,S1-2027, 7/S1-3010, A1-2817                      Reference Specificaiton: 31 00 00                      Reference Submittal: TG0300-340.1</p> <p>The response to Mud Slab Rebar Shop Drawings Submittal TG0300-340.1/TA1020-32001A06.1 provided new dimensions for depressions in the trainbox subgrade. Per 00 07 00 Part 6.02.A, BBII would like to clarify which dimensions are to be used for construction.</p> <ol style="list-style-type: none"> <li>1. Sheet MS-4 of submittal shows subgrade depression between Grid lines 18 &amp; 19 between Gridlines B &amp; C having dimension of 20'-0" x 40'-4". This is consistent with the dimensions provided on sheet S1-2024 Revision 2 dated 11/27/2013. The review comment by TT revises the 20'-0" dimension to 20'-3". Please confirm which dimension is to be used.</li> <li>2. Sheet MS-7 of submittal shows subgrade depression at Gridline 35 between Gridlines B &amp; C as having dimensions of 22'-1 3/4" x 18'-6 3/4". This geometry is base on the size of the pit shown on A1-2817 Revision 1 dated 11/27/2012 and 7/S1-3010 Revision 0 dated 08/30/2012. The Submittal response comments provided show a new overall dimension of 19' -9" and a specific offset to Gridline 35. Please confirm which dimensions are to be used.</li> <li>3. Sheet MS-7 of submittal shows subgrade depression between Gridlines 34 &amp; 35 at Gridline E. TT comment calls out 3'-0" from eastern limit of depression to Gridline 35. This dimension was not provided on sheet S1-2027 Revision 2 dated 11/27/2012. Please confirm this dimension is to be used.</li> <li>4. BBII understands that dimensions provided on this submittal are to bottom of Mat Slab concrete, and that each dimension should be increased to account for thickness of protection slab and waterproofing. Please confirm that an additional 0'-7" is the correct dimension for this adjustment.</li> </ol>		<p><b>ANSWER:</b></p> <p>Reference Drawings: S1-2024,S1-2027, 7/S1-3010, A1-2817                      Reference Specificaiton: 31 00 00                      Reference Submittal: TG0300-340.1</p> <p>The response to Mud Slab Rebar Shop Drawings Submittal TG0300-340.1/TA1020-32001A06.1 provided new dimensions for depressions in the trainbox subgrade. <p>Per plan sheet A1-8711 , Detail 3 &amp; 6, the dewatering well and monitoring instrument pipes are plumb coming out of the mud slab. Additionally, these details do not show couplers or varying diameters on the dewatering wells or monitoring instruments. Currently almost all of dewatering wells have varying diameters with couplers and are almost all out of plumb. The monitoring instruments also seem to be out of plumb. To avoid the plumbness and varying dewatering well pipe diameter issues, is it acceptable to cut the dewatering well pvc pipe at or close to the mud slab elevation to avoid conflict with the dewatering sleeves? How should SCCI handle the sleeves for the monitoring instruments that are out of plumb? Please advise.</p>		<p>Per plan sheet A1-8711 , Detail 3 &amp; 6, the dewatering well and monitoring instrument pipes are plumb coming out of the mud slab. <p>Per Coordination Meeting March 6, 2013, S3H Inc. is looking to install the geothermal loop at a depth of 2' below the Mat slab. After the loop installation, the trenches will be back filled with 8" of loose native soil to protect the pipe. This 8" lift will be watered to settle the loose soil around the pipe. Upon watering and settling of the loose 8" lift, the remainder of the trench will be backfilled with native soil and compacted to the relative density of the surrounding soil per specification.</p> <p>Please confirm.</p>		<p>Per Coordination Meeting March 6, 2013, S3H Inc. is looking to install the geothermal loop at a depth of 2' below the Mat slab. <b>REQUEST:</b>			<b>ANSWER:</b>			
<p>Reference Drawings: 7/S1-3410, S1-2202-2207, S1-2210, S1-2211</p> <p>Please reference attached drawings of Concourse Level glass guardrail embeds and openings. Detail 7 on drawing S1-3410 is the typical PL 3/8x7 glass guardrail embeds for escalator and stair openings. The detail states that the guardrail embeds are continuous. It is unclear what the boundaries of the guardrail embeds are. SCCI has determined that no guardrail embeds are necessary at the opening locations where future CMU or concrete walls shall be constructed flush with the opening. Also, the guardrail embeds can be terminated at the escalator openings where the opening is reduced. Attached drawings SI-2202 through SI-2207, SI -2210 and S1 -2211 show the limits SCCI has determined the glass guardrail embeds shall be installed. Please advise if these locations are accurate and the only locations the guardrail embeds shall be installed.</p>			<p>Reference Drawings: 7/S1-3410, S1-2202-2207, S1-2210, S1-2211</p> <p>Please reference attached drawings of Concourse Level glass guardrail embeds and openings. **REQUEST:**

Ref: T-0448, SH-2001, SH-2000

Previous RFI response #T-0448 (Exhibit-A) only addressed the impact of the encroaching CDSM soldier piles (SPs) on the first or bottom wall segments. This RFI address the encroaching SPs in mat slab areas 1&2 (Exhibit-B) at all levels of wall. This RFI shall supersede previous RFI response #T-0448.

Marked up sheet SH-2001 (Exhibit-C) depicts the location of the encroaching SPs and the degree in which they are encroaching.

1. SP #753 in mat area #2 encroaches 1-1/4" at elevation -34.12.

WOJV is proposing to decrease the specified 36" wall thickness to 34-3/4" to clear the encroaching SP. WOJV would reduce the wall thickness while compensating by supplementing the base contract #11 bars @ 8" o.c. with intermediate #7 bars (Option #3 Exhibit-D) exclusively at the level of encroachment.

2. SP #761 in mat area #1 encroaches 7/8" at elevation -34.12.

WOJV is proposing to decrease the specified 36" wall thickness to 35-1/8" to clear the encroaching SP. WOJV would reduce the wall thickness while compensating by supplementing the base contract #11 bars @ 8" o.c. with intermediate #7 bars (Option #3 Exhibit-D) exclusively at the level of encroachment.

3. SPs #765-770, vary in the degree of encroachment the worst of which is SP #765 in mat area #1 which encroaches 1-7/8" at elevation 25.10.

WOJV is proposing to decrease the specified 36" wall thickness to 34-1/8" to clear the encroaching SPs. WOJV would reduce the wall thickness while compensating by supplementing the base contract #11 bars @ 8" o.c. with intermediate #7 bars (Option #3 Exhibit-D) exclusively at the level of encroachment.

4. SP #787 in mat area #1 encroaches 7/8" at elevation -34.42.

WOJV is proposing to decrease the specified 36" wall thickness to 35-1/8" to clear the encroaching SP. WOJV would reduce the wall thickness while compensating by

the level of encroachment.

2. SP #761 in mat area #1 encroaches 7/8" at elevation -34.12.

WOJV is proposing to decrease the specified 36" wall thickness to 35-1/8" to clear the encroaching SP. WOJV would reduce the wall thickness while compensating by supplementing the base contract #11 bars @ 8" o.c. with intermediate #7 bars (Option #3 Exhibit-D) exclusively at the level of encroachment.

3. SPs #765-770, vary in the degree of encroachment the worst of which is SP #765 in mat area #1 which encroaches 1-7/8" at elevation 25.10.

WOJV is proposing to decrease the specified 36" wall thickness to 34-1/8" to clear the encroaching SPs. WOJV would reduce the wall thickness while compensating by supplementing the base contract #11 bars @ 8" o.c. with intermediate #7 bars (Option #3 Exhibit-D) exclusively at the level of encroachment.

4. SP #787 in mat area #1 encroaches 7/8" at elevation -34.42.

WOJV is proposing to decrease the specified 36" wall thickness to 35-1/8" to clear the encroaching SP. WOJV would reduce the wall thickness while compensating by supplementing the base contract #11 bars @ 8" o.c. with intermediate #7 bars (Option #3 Exhibit-D) exclusively at the level of encroachment.

Marked up sheet SH-2000 (Exhibit-E) depicts the location of the encroaching SPs and the degree in which they are encroaching.

1. SP #819 in mat area #1 encroaches 2-3/16" at elevation -34.24.

WOJV is proposing to decrease the specified 36" wall thickness to 33-13/16" to clear the encroaching SP. WOJV would reduce the wall thickness while compensating by supplementing the base contract #11 bars @ 8" o.c. with intermediate #7 bars (Option #3 Exhibit-D) exclusively at the level of encroachment.

Please confirm that WOJV's proposed solutions are acceptable.

#11 bars @ 8" o.c. with intermediate #7 bars (Option #3 Exhibit-D) exclusively at the level of encroachment.

2. SP #761 in mat area #1 encroaches 7/8" at elevation -34.12.

WOJV is proposing to decrease the specified 36" wall thickness to 35-1/8" to clear the encroaching SP. WOJV would reduce the wall thickness while compensating by supplementing the base contract #11 bars @ 8" o.c. with intermediate #7 bars (Option #3 Exhibit-D) exclusively at the level of encroachment.

T-0448.5	CDSM Soldier Pile Encroachment	Closed	01	06/04/2013	06/14/2013	06/13/2013

From: Webcor Construction LP                      Robert Kjome

**REQUEST:**

Reference Documents: Exhibits A - G

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the South wall in slab area 1 & 2 as well as all levels of the encroachment into the foundation wall between CDSM piles 733 and 772. (Exhibit A)

Exhibit B & Exhibit C depict the location and degree in which the SPs are encroaching.

WOJV proposal: Between SPs 733 and 772 (which is the intersection of the South and West wall) WOJV is proposing to decrease the specified 36" wall thickness to 33 1/8" to clear all the encroaching SPs. WOJV would reduce the thickness while reducing the rebar spacing to compensating for the reduced wall thickness predicated on SE stamped Detail A/SLC.1 (Exhibit D) this modification would clear all the encroaching SP/steel plate issues between 733 & 772, See Exhibit E, F, & G.

This modification, if approved, would be incorporated into the TG06 shop drawings.

Please confirm if this is acceptable.

**ANSWER:**

Reference Documents: Exhibits A - G

<b>From:</b> Webcor Construction LP                      Lynn Kowallis						
<b>REQUEST:</b> Ref: RFI T-0453, AI-7401, SK-115  Please reference attached drawings. RFI T-0453 stated that the L8x8x1 1/8" shall be bent to match the angle at which the Vehicle/Bike ramp beams meet the wall. At the western most beam the acute angle at which the beam meets the wall is 56 degrees and the obtuse angle is 124 degrees. See attached marked up Contract Drawing AI-7401 for angle measurements. Bending the 1 1/8" thick legs of the L8x8 is not feasible and would structually stress the member. SCCI proposes to weld two 1 1/8" plates together to fabricate the angles. See attached drawing SK-115 for details. The additional two beam members shall be fabricated per the measured angles.  Please advise if this is acceptable.		<b>ANSWER:</b> Ref: RFI T-0453, AI-7401, SK-115  Please reference attached drawings. T-0455.1	<b>BGP - Dewatering Well Above Grade PVC Pipe</b>	Closed	01	03/29/2013	04/08/2013	04/02/2013
<b>From:</b> Webcor Construction LP                      Robert Kjome						
<b>REQUEST:</b> Reference Drawings: A1-8711  Per discussion in the pre-installation and preparatory DFOW meetings for the metal fabrication penetration sleeves, the PVC dewatering casing above the mud slab can be cut just above or at top of mud slab elevation to avoid varying diameter issues. Without the dewatering casing present above mud slab grade, the varying casing diameter issues and plumbness issues are solved. The to avoid debris entering the dewatering casing, the casing would not be cut until the penetration sleeve is to be installed. Please confirm per the discussions in the meeting that cutting the casing is acceptable. Please note that the grouting back of the dewatering casing shortly after the decommissioning of the dewatering pump will be uniform (without segregation) for both below mudslab elevation and above.		<b>ANSWER:</b> Reference Drawings: A1-8711  Per discussion in the pre-installation and preparatory DFOW meetings for the metal fabrication penetration sleeves, the PVC dewatering casing above the mud slab can be cut just above or at top of mud slab elevation to avoid varying diameter issues. T-0459	BGP - Waterproofing and CJ Concourse Slab Layout Conflict	Closed	CR	03/27/2013	04/06/2013	04/01/2013
<p><b>From:</b> Webcor Construction LP                      Lynn Kowallis</p> <p><b>REQUEST:</b></p> <p>Reference Specification: 07 12 10                      Reference Drawings: A1-2203 and S1-3201</p> <p>Please reference AI-2203 and SI-3201 of the Contract Plans and the attached drawings. The current elevation at the bottom of the 2nd level bracing lookouts is at approximately -5.13, WEST of Grid 9 (see concourse slab drawing). The proposed top of concourse slab elevation is to be -5.42, WEST of Grid 9. Per the WPM-1 waterproofing system, the minimum overall tie-in dimension needed for the succeeding lift is approximately 1'-11" (see attached waterproofing drawing).</p> <p>The current elevation at the bottom of the 2nd level bracing lookouts is at approximately -6.15, EAST of Grid 9 (see concourse slab drawing). The proposed top of concourse slab elevation CJ is to be -7.67, EAST of Grid 9. Per the WPM-1 waterproofing system, the minimum overall tie-in dimension needed for the succeeding lift is approximately 1'-11" (see attached waterproofing drawing).</p> <p>In both locations, the minimum required dimension (1'-11") to tie-in to the next lift of waterproofing can not be reached with the current location of the 2nd level bracing lookouts and the proposed concourse slab elevations. SCCI is restricted in location for the CJ due to the absolute concourse slab location and elevation.</p> <p>Furthermore, a similar conflict exists in the 1st foundation wall lift and the 3rd level of bracing lookouts (see 1st wall lift drawing). With SCCI's current location of the CJ, there is virtually no room to allow for the waterproofing overlap to occur. SCCI fully understands its freedom to manipulate the location of the CJ's by lowering it approximately 2'. This will potentially change BBII's rebracing plans.</p> <p>Please advise.</p>		<p><b>ANSWER:</b></p> <p>Reference Specification: 07 12 10                      Reference Drawings: A1-2203 and S1-3201</p> <p>Please reference AI-2203 and SI-3201 of the Contract Plans and the attached drawings. <p>In SCCI's experience unanticipated modifications and adjustments to the plumbing system are inevitable. Because of this SCCI requests not installing vertical block out sleeves in the concourse level for plumbing prior to slab placement. SCCI shall core penetrations after the slab is placed. The slab shall be scanned for rebar prior to coring to avoid unnecessary rebar strikes. This will allow for any unforeseen modifications or adjustments and ensure there are no unnecessary or extra penetrations in the concourse slab. Please advise if this is acceptable.</p>			<p>In SCCI's experience unanticipated modifications and adjustments to the plumbing system are inevitable. Reference Specification:05 50 10- 2.5.C.2		Reference Specification:05 50 10- 2.5.C.2				
<p>Per the discussions held at the Metal Fabrications Preparatory DFWO meeting, SCCI is requesting a variance from Spec Section 05 50 10 - 2.5.C.2. This Spec. is feasible in a shop environment prior to galvanization and an effective means to dry and remove water upon completion of testing. These sleeves will be continuously welded in the field both before and after the horizontal waterproofing is installed (depending on the type of sleeve), therefore making it very difficult to seal and handle the water upon completion of the test. Discussions were held regarding leaving the water between the sleeve and pile and evaporating over time. SCCI sees this as a concern due to the backside of the weld and the heat-affected zone will not be galvanized and will potentially become a point of corrosion. SCCI requests 100% visual inspection on both the root and cover passes in lieu of filling the sleeve gap with water. Is this request and variance acceptable?</p>		<p>Per the discussions held at the Metal Fabrications Preparatory DFWO meeting, SCCI is requesting a variance from Spec Section 05 50 10 - 2.5.C.2. Ref: Specification Section 03 30 20 1.7 F 3 j 2 ASTM C 31			Ref: Specification Section 03 30 20 1.7 F 3 j 2 ASTM C 31			
ASTM C 31 Identifies that concrete cylinders should not be transported until at least 8 hours after final set. Per ASTM C 31, Allowable field curing is 48 hours maximum. Typically test cylinders are transported within 24 to 48 hours after casting. Some of the mix designs approved for this project include High volume of Flyash (HVFA) and high dose of Shrinkage Reducing Admixture (SRA). This combination provides a concrete mix with retarded set and slow strength gain. In the interest of providing reliable test results, SCCI and CEMEX requests that transporting of			ASTM C 31 Identifies that concrete cylinders should not be transported until at least 8 hours after final set. T-0495	BGP - Foundation Wall Concrete Inserts	Closed	CR	04/12/2013	04/22/2013	04/24/2013

From: Webcor Construction LP                      Lynn Kowallis

**REQUEST:**

Ref: A1-2812, A1-2821 A1-2842, A1-2843, A1-6231

Please reference the attached drawings regarding foundation wall concrete inserts. SCCI is requesting details clarifying the locations and scope of the horizontal concrete inserts on the mat slab level foundation walls and vertical concrete inserts on the lower concourse level foundation walls. The following issues have been discovered in the drawings:

1. A1-2843 has specified two contradicting lengths for the continuous vertical wall inserts as shown in the clouded sections.
2. A1-2812 and A1-2842 appear to indicate inserts along the West wall however there is no information declaring lengths and scope.
3. A1-2821 references detail 3 / A1-6231 which is not a detail that is shown on A1-6231.

**ANSWER:**

T-0504	BGP - Radius Foundation Walls - R=637.63'	Closed	01	04/19/2013	04/29/2013	05/02/2013
<p>From: Webcor Construction LP                      Lynn Kowallis</p> <p><b>REQUEST:</b>                      Ref: Submittal Package T0600-030</p> <p>SCCI's plan is to construct the R=637.63' foundation walls in 16' chords. Layout of the construction joints shall be per approved as noted CJ layout submittal. R=637.63' foundation wall runs along the Southwest portion of the project, from GL 3 thru GL 16, or SCCI's wall pours W160 thru W174A. See attached sketch of the wall detail for clarification.                      Is this acceptable?</p>		<p>bending or "bulbing" the end of the pipe loop.</p> <p>S3H Inc. is proposing to overlap half of a loop onto another such that the spacing between pipes remains at a 4' minimum (per RFI T-0493). This would create a 8' minimum distance between the supply side of a loop and the return side of a loop. In doing so, a portion of the two overlapping loops would be crossing. Is this acceptable? Please find attached drawing #1 as a reference of the proposed layout. Please note that this proposed method would change the reverse return self balancing configuration of piping. This proposed method also has the possibility of being impacted by various micropile conflicts.</p> <p>S3H Inc. is also proposing as a fix to field one to install 2 fused - 90 degree elbows at the end of each loop in a U-shape configuration using the current, as installed dimensions between the loops. Please find attached Drawing #2 depicting the 90 degree elbows on the loops This would eliminate the required 83" bend diameter. This is least impact proposal to rectify the already installed field 1, but would be an additional cost.</p> <p>Please advise as to how to proceed with Field 1 as well as the remaining 14 Fields.</p>

<b>REQUEST:</b>	<p>Please reference attached marked up sheet S1-2202.</p> <p>The location of internal bracing pin pile #8 conflicts with moment beam BMATV. General Note GR-9 on sheet S-0005 precludes blocking out moment frames. Upon submitting for the internal bracing system the TG03 BSE subcontractor was not aware of the location of beam BMATV to coordinate around. On 4/23/13 WOJV submitted RFI #T-0510 requesting a variance from note GR-9 and is requesting to block out beam BMATV around pin pile #8. During the 4/25/13 "WOJV SE Assist Meeting," when the issue was brought up, a PMPC employee suggested prematurely removing strut STA09 because it has diminished load. On 4/30/13 WOJV received RFI response #T-0510 stating pin pile #8 was going to be removed hence WOJV should close the RFI #T-0510. In addition to strut STA09 pin pile #8 supports strut #STB09 which is carrying a load, not that the internal bracing EOR would allow the premature removal of two strut levels. WOJV again requests a variance from note GR-9 and is requesting to block out beam BMATV around pin pile #8.</p> <p>Please advise.</p>

<b>From:</b> Webcor Construction LP                      Kirk Nielsen						
<b>REQUEST:</b> As depicted in attached SK-0153.1, the encroachment of the steel plate is primarily in the mat slab pour. WOJV is proposing to locally adjust the reinforcement in the mat slab pour to achieve the required cover. There will be no change to the reinforcement on the wall width.  As a means of chamfering the offset the result of steel plates edges to the face of CDSM wall: WOJV is proposing to mechanically fasten expanded metal lath to the CDSM beams using powder activated fasteners. Rapid set mortar is then applied to the required depth ensuring all edges of the plates have a gradual slope back to match the existing face of the CDSM wall.  Please confirm this is acceptable.			<b>ANSWER:</b> As depicted in attached SK-0153.1, the encroachment of the steel plate is primarily in the mat slab pour. WOJV is proposing to locally adjust the reinforcement in the mat slab pour to achieve the required cover. There will be no change to the reinforcement on the wall width.  As a means of chamfering the offset the result of steel plates edges to the face of CDSM wall: WOJV is proposing to mechanically fasten expanded metal lath to the CDSM beams using powder activated fasteners. Rapid set mortar is then applied to the required depth ensuring all edges of the plates have a gradual slope back to match the existing face of the CDSM wall.  Please confirm this is acceptable.			
T-0514	<b>BGP - Mech Room Slab Finish Elevation and Grate Clarification</b>	Closed	01	04/24/2013	05/04/2013	04/30/2013

T-0522.1	<b>BSE - Micropile Relocation- Performance Test Pile Zone 2 &amp; 3 (Sequencing)</b>	Closed	01	05/02/2013	05/12/2013	05/03/2013
<p><b>From:</b> Webcor Construction LP                      Lynn Kowallis</p> <p><b>REQUEST:</b></p> <p>Ref: Specification Section 31 63 33 1.1B</p> <p>This RFI supersedes RFI T-0522.                      DTDS proposes to reduce the design length of the Micropiles East of Gridline 17 (EG17) from 80 feet to 70 feet. DTDS has shown through testing and reduced post-grouting that a higher soil-grout bond than originally assumed in the design can be achieved in the field. DTDS will install two (2) performance test piles to verify the capacity of a 70 foot micropile EG17. One performance test pile will be installed in Zone 2 at gridline 17 between piles E005 and E008. The second performance test pile will be installed in Zone 3 at gridline 20 between piles E136 and E137. DTDS believes that 70 foot micropiles EG17 will still achieve the maximum required load capacity of 2.4 times Design Load (560 kip). The performance test piles will be installed with one (1) round of post-grout. Based on the results of the testing, additional post-grouting can be provided as necessary.</p> <p>Upon completion of the testing DTDS will submit revised micropile working drawings and calculation supplement.</p> <p>All production micropiles will continue to be proof tested per the Specifications. The performance test locations provided would supplant the performance test locations shown in the Contract plans for Zones 2 and 3.</p> <p>Please confirm this is acceptable.</p>		<p><b>ANSWER:</b></p> <p>Ref: Specification Section 31 63 33 1.1B</p> <p>This RFI supersedes RFI T-0522. T-0527.1	BSE -Revision to Zone 4 Bracing Elevations Level A-D	Closed	01	05/10/2013	05/20/2013	05/14/2013

From: Webcor Construction LP                      Ian Corcorran

**REQUEST:**

As installed and or planned the current elevation of the A-level internal bracing walers conflicts with the TG06 wall termination elevations relative to the waterproofing overlap which was unspecified when the internal bracing was submitted. Please find attached RFI SK-527.1-1, WOJV proposes to:

1. Reduce the TG06 top of wall elevation 2'-0" to an elevation of +7.50' between approx. GL(s) 1 to 16-17.
2. Reduce the TG06 top of wall elevation 1'-0" to an elevation of +3.50' between GL(s) approx. GL(s) 16-17 to 25-26.
3. Reduce the TG06 top of wall elevation .75' to an elevation of +1.50' between GL(s) approx.. GL(s) 25-26 to 35.

This scope reallocation would exchange concrete rebar and waterproofing from TG06 to TG07 package, which assuming a prompt response, there is still time to do.

T-0543	BGP - Galvanizing Varying Material Category Variance	Closed	01	05/09/2013	05/23/2013	05/21/2013
<p><b>From:</b> Webcor Construction LP                      Ian Corcorran</p>						
<p><b>REQUEST:</b></p> <p>Ref. Spec. 05 05 15- 3.3.B.2</p> <p>Reference is made to Specification Section 05 05 15- 3.3.B.2 and the attached 'Ask Dr. Galv' galvanizing article. Section 3.3.B.2 states "When galvanizing assemblies of components of varying material category and material thickness, provide minimum coating thickness grade for all members equal to or exceeding the maximum highest material category coating grade."</p> <p>For the dewatering and piezometer mat slab penetration sleeves, A513 tube is being used, which has a Grade 75 designation per ASTM A123. Based on the above specification, Grade 100 must be followed because these sleeves have plate components. The reason Grade 75 is specified in ASTM A123 is that it is the minimum consistent attainable galvanizing coating for the thickness and chemistry of the material being coated. As an aluminum killed steel product, it is not a natural catalyst to galvanizing as silicon is per the attached article. To specify Grade 100 goes beyond A123 specifications. Therefore, SCCI requests Grade 75 be used, with a minimum coating thickness of 3.0 mils, for the dewatering wells and piezometer mat slab penetration sleeves. Please be advised if Grade 100 (3.9 mils) is required, the galvanizing process to attain the thicker coating can lead to embrittlement and delamination of the coating. Is Grade 75, with a minimum 3.0 mil coating thickness on the dewatering well and piezometer mat slab sleeve penetrations, acceptable?</p>			<p><b>ANSWER:</b></p> <p>Ref. Spec. 05 05 15- 3.3.B.2</p> <p>Reference is made to Specification Section 05 05 15- 3.3.B.2 and the attached 'Ask Dr. Galv' galvanizing article. Section 3.3.B.2 states "When galvanizing assemblies of components of varying material category and material thickness, provide minimum coating thickness grade for all members equal to or exceeding the maximum highest material category coating grade."</p> <p>For the dewatering and piezometer mat slab penetration sleeves, A513 tube is being used, which has a Grade 75 designation per ASTM A123. Based on the above specification, Grade 100 must be followed because these sleeves have plate components. The reason Grade 75 is specified in ASTM A123 is that it is the minimum consistent attainable galvanizing coating for the thickness and chemistry of the material being coated. As an aluminum killed steel product, it is not a natural catalyst to galvanizing as silicon is per the attached article. To specify Grade 100 goes beyond A123 specifications. Therefore, SCCI requests Grade 75 be used, with a minimum coating thickness of 3.0 mils, for the dewatering wells and piezometer mat slab penetration sleeves. Please be advised if Grade 100 (3.9 mils) is required, the galvanizing process to attain the thicker coating can lead to embrittlement and delamination of the coating. Is Grade 75, with a minimum 3.0 mil coating thickness on the dewatering well and piezometer mat slab sleeve penetrations, acceptable?</p>

<b>REQUEST:</b>						
	Ref Dwg. 3/S1-3204					
	Reference detail 3 on the contract drawing S1-3204, and the attached sketches. From the noted detail, it is unclear whether the designer's intent was to construct the foundation wall to North-most shear wall interface monolithic. Please confirm.  If the intent of the Designer is to pour shear wall and foundation wall monolithic, it will be difficult to properly secure formwork in the acute corner of the walls interface. Due to the constructability issues of this foundation area SCCI suggest to add vertical construction joint to the North shear wall. See attached sketches for reference. Is this acceptable?

T-0550	<b>BGP - Request to Revise Lower Concourse Elevation</b>	Closed	01	05/14/2013	05/24/2013	05/24/2013
	From: Webcor Construction LP                      Robert Kjome					
	<b>REQUEST:</b>					
	Reference Exhibits: A - G					
	The BSE IFC drawing S1-3201 (Exhibit-A) depicted the Lower Concourse slab at an elevation of -8'-8" between grid lines 9-3 and West of grid 3 & North of grid E.6.					
	Although specification section 01 13 00.1.3.H.3 precludes the TJPA from making scope changes in submittals, on 3/29/11 the TJPA returned submittal package ID TG0300-541/submittal ID TA2010-315500A10 (Exhibit-B) which included a note stating the Lower Concourse level slab varies as follows:					
	T/Lower Concourse slab East of gridline 9 = -8'-2" T/Lower Concourse slab West of gridline 9 = -5'-5"					
	Although specification section 00 07 00.1.01.37 stipulates a Field Order is not to involve a change in Contract Sum or Time, on 9/7/12 after the zone-1 level-B bracing and trestle was installed (Exhibit-C), the TJPA issued Field Order #T-00008 / ASI #0097 (Exhibit-D) which revised the top of the Lower Concourse slab elevation between grid lines 1-5.5 from -8'-8" to -5'-5" a difference of -3'-3" reference sheets S1-3201 (Exhibit-E) and S1-2202 (Exhibit-F).					
	The latent elevation change of the Lower Concourse slab has created proximity conflicts with the previously installed internal bracing and trestle steel depicted on the attached marked-up drawings (Exhibit-G).					
	WOJV has surveyed the internal bracing and trestle steel conflicting with the Lower Concourse slab and believes the most cost and schedule efficient solution would be to again revise the elevation of the Lower Concourse slab to -6'-6".					
	Please advise if the proposed elevation revision is acceptable.

	<p><b>REQUEST:</b></p> <p>Ref Dwg. 4/A1-8712</p> <p>SCCI is in receipt of CR T-069 regarding the below grade modifications. On Plan Sheet A1-8712, Detail 4 was modified to relocate the second link seal to opposite end of the penetration sleeve. Originally, both link seals were located in series at the surface of the concrete wall. This relocation is not constructible in that the link seal cannot be installed or tightened properly when located 3ft into an embedded sleeve. In addition, this link seal cannot be installed prior to placing concrete due to access issues adjacent to the CDSM wall. Is it acceptable to return the relocated link seal to it's original location near the surface of the concrete wall? This would be per the original design shown on A1-8712, Detail 4.</p>

	Reference Drawing: A1-2122					
	Per the note on A1-2122, walls called out as "RCW" are reference drawings and not in TG06's scope of work. "RCW" walls are generally illustrated with dotted lines; however, when referencing the walls for the elevator pit and stairs near gridline 2E, the walls are called out as "RCW" but also illustrated with solid lines. Please confirm which walls are part of the TG06 package and which are RCW. Also, please confirm if the entire South wall of the fuel tank room is supposed to be "RCW" or if it is just the wall section as shown.

<b>REQUEST:</b> Specifications Section 071210  We are in receipt of Laurencio Waterproofing Products, Inc.'s Installation Instructions revision dated 5/15/13 and have found several discrepancies with what is called out in Specifications Section 071210. Section 8, f, iv, 4, (d), vi calls for an additional layer of adhesive on walls prior to concrete. It calls for a coat of Laurencio Adhesive over COMPLETED membrane and cold joint reinforcement applied after wall ply adhesive has cured at least (3) days and (1) to (3) days in advance of reinforcement steel application for walls. This is added scope as this additional layer is to be applied over the completed membrane and is not called out in the Specifications.  Please confirm that SCCI is to use the manufacturers installation instructions		<b>ANSWER:</b> Specifications Section 071210  We are in receipt of Laurencio Waterproofing Products, Inc.'s Installation Instructions revision dated 5/15/13 and have found several discrepancies with what is called out in Specifications Section 071210. <p><b>From:</b> Webcor Construction LP                      Robert Kjome</p> <p><b>REQUEST:</b></p> <p>Webcor is proposing to change the alignment of the Concrete Foundation wall on the west elevation along gridlines 1 &amp; X1-1.</p> <p>The Concrete wall which runs along gridline 1 would be offset into the structure by 0.2656' (3-1/8") (proposed Face of concrete Foundation wall would now be 15-1/8" of gridline 1). Similarly along gridline X1-1 the wall would also be offset into the structure by 0.1575' (1 7/8") these offsets would enable the contract reinforcement to be installed without the need for further modifications to the reinforcement due to encroachment of the CDSM piles.</p> <p>See sketch SK-1 showing Cross section of concrete Foundation wall between CDSM piles 818 - 822 GL 1 in proposed revised location.</p> <p>Please confirm if this is acceptable.</p>		<p><b>ANSWER:</b></p> <p>Webcor is proposing to change the alignment of the Concrete Foundation wall on the west elevation along gridlines 1 &amp; X1-1.</p> <p>The Concrete wall which runs along gridline 1 would be offset into the structure by 0.2656' (3-1/8") (proposed Face of concrete Foundation wall would now be 15-1/8" of gridline 1). Similarly along gridline X1-1 the wall would also be offset into the structure by 0.1575' (1 7/8") these offsets would enable the contract reinforcement to be installed without the need for further modifications to the reinforcement due to encroachment of the CDSM piles.</p> <p>See sketch SK-1 showing Cross section of concrete Foundation wall between CDSM piles 818 - 822 GL 1 in proposed revised location.</p> <p>Please confirm if this is acceptable.</p>

T-0579	BGP - Cross-tie Wall Reinforcing, Grade Conversion and Spacing Change	Closed	01	06/04/2013	06/14/2013	06/10/2013
<p><b>From:</b> Webcor Construction LP                      Robert Kjome</p> <p><b>REQUEST:</b></p> <p>Reference Drawings: S1-3201                      Reference Specification: 03 30 20</p> <p>Based on a recently constructed mock-up of the 1st lift of typical wall reinforcing a potential problem with congestion has been identified. The contract drawings on sheet S1-3201 depict the typical wall reinforcing details include #8 horizontal wall reinforcing at 8" O.C. E.F. typical. Additionally, the #4 cross-tie spacing has been designed at either 6" O.C. or 12" O.C depending on the location (elevation) within the wall. With the non-uniform spacing of the cross-ties and horizontal bars, the cross-ties are secured only to the vertical bars and have the potential during concrete placement to shift or slide down the vertical bars until resting on the next adjacent horizontal bar. The inconsistent spacing of the cross-ties and horizontal bars congests the reinforcing configuration which may lead to potential problems when interfacing the concourse level reinforcing with the walls. In order to eliminate these potential problems Gerdau proposes to perform a grade 80 conversion of the cross-ties such that the size of the cross-tie remains as a #4 bar but the spacing of the cross-ties are installed with uniform spacing to the horizontal reinforcing at 8" O.C. within the designed 6" O.C. ranges or 16" O.C. within the designed 12" O.C. ranges.</p> <p>Please advise if this grade and spacing change is acceptable.</p>		<p><b>ANSWER:</b></p> <p>Reference Drawings: S1-3201                      Reference Specification: 03 30 20</p> <p>Based on a recently constructed mock-up of the 1st lift of typical wall reinforcing a potential problem with congestion has been identified. <b>REQUEST:</b>						
Reference Drawings: 6/A1-8711, 3/A1-8711						
Per coordination discussions with WOJV (email attached), SCCI is to install BBII Piezometer sleeves per Detail 6 of A 1-8711. In this detail, the sleeve is to be blocked out of the Mat Slab and poured back at a later date contrary to the piezometer/monitoring instrument detail 3 on A1-8711. Is it acceptable to eliminate the blockout portion of detail 3/ A 1-8711 and pour the BBII piezometers into the mat slab? The ARUP piezometers will remain operational (per Detail 3/ A1-8711 ) after the mat slab has been poured to monitor the water table levels.

<b>REQUEST:</b>			<b>ANSWER:</b>			
<p>Contract drawing S1-2052 depicts 12" Partition Walls and 12" Future Partition Walls. Contract drawing S 1-9050 provides the reinforcing details for the Partition Walls which depict #7 @ 12" OC reinforcing dowels for a 12" wall. Per S 1-3205 Future 12" Walls receive #6 @8" OC reinforcing dowels. Please confirm the proper bar size for the Future Partition Wall dowels.</p>			<p>Contract drawing S1-2052 depicts 12" Partition Walls and 12" Future Partition Walls. Reference: 6/S1-3001, Attached Letter			Reference: 6/S1-3001, Attached Letter			
<p>The response to RFI T 0515 confirmed to coat the form saver couplers for future construction as specified in ASTM A 775. Per ASTM A 775, the standard coating thickness specifies a required thickness range by which different size bars are to be coated 7 to 12 mills for bar sizes 3 to 5 and 7 to 16 mills for bar sizes 6 to 18; however, detail 6 on S1-3001 indicates a 12 mill minimum coating thickness over the couplers. Per the attached letter from Stanley Johnson the Regional Manager for Erico (Lenton) the epoxy coated form-saver couplers specified for use cannot be procured with a guaranteed 12 mill coating but rather an epoxy coating that meets the requirements of the ASTM A 775 standard. Please confirm that supplying an epoxy coated form-saver coupler that meets the ASTM A 775 standard but may contain a mill thickness less than 12 is acceptable.</p>			<p>The response to RFI T 0515 confirmed to coat the form saver couplers for future construction as specified in ASTM A 775. <b>From:</b> Webcor Construction LP      Robert Kjome						
<b>REQUEST:</b>			<b>ANSWER:</b>			
<p>Reference: Attached Documents, E1-5201</p> <p>After consulting with Siemens on the fire management system a clarification is needed. The riser diagram on sheet EI-5201 shows Class A conduit routing for the train platform level and the lower concourse level. Using a Class A wiring layout limits the system to 3 or 4 strobe devices per circuit. Under the NFPA 130 6.3.3.2.8 specification, the embedded (note (1) of the specification) fire management conduit protects against the ASTM E119 fire conditions and Class A isn't required per NFP A specification. Is it acceptable to design the fire management conduit system to meet the NFP A 130 specification under Class B requirements and impliment 6 or 7 strobe devices per circuit instead of the 3 or 4 stobe devices per Class A. By implimenting a Class B system, the future fire management system (installed under a future contract) will be less costly all while meeting the the NFP A 130 requirements. Please advise.</p>			<p>Reference: Attached Documents, E1-5201</p> <p>After consulting with Siemens on the fire management system a clarification is needed. <b>T-0604</b>	<b>#2 CPH Platform through Mat Slab in Zone 2</b>	<b>Closed</b>	<b>01</b>	<b>06/20/2013</b>	<b>06/30/2013</b>	<b>07/28/2013</b>
	<p><b>From:</b> Webcor Construction LP                      Robert Kjome</p> <p><b>REQUEST:</b></p> <p>Please see the attached shop drawings and layout of the construction personnel hoist (CPH) to be installed in Zone 2. The CPH elevated steel PLATFORM to be installed and later removed and poured back such as the trestle pile penetrations.</p> <p>All work dimensions have been coordinated with structure overhead into future bid packages as well as as-built information of internal bracing in the field.</p> <p>We propose to :</p> <ol style="list-style-type: none"> <li>1) Lower the geothermal piping an additional 12" to maintain the same 15" deep trench under all concrete. This will be performed the same way they install the piping in the sump pits with correct bend radius.</li> <li>2) Install at 19'-6" x 13'-0" x 16" thickened slab incorporated with the current 4" reinforced mudslab. The thickened slab will contain #5 bars 12" OC EW T&amp;B and we have confirmed that the total load of thickened slab, CPH, and platform will not exceed 500 PSF.</li> <li>3) Install CPH elevated steel platform through the mat slab with 3'-0" of clearance between top of mat slab and bottom of platform deck and beams.</li> <li>4) Waterproof platform legs per detail 5/A1-8711 04/29/13 per ASI 0102 Issued for Construction, Below Grade Package, including galvanized penetration sleeves and waterproofing. Penetration sleeve will be 30" diameter.</li> <li>5) Reinforcing details will be the same as all other reinforcing at pin/trestle pile blockouts.</li> </ol>					
			<b>ANSWER:</b>			
			Please see the attached shop drawings and layout of the construction personnel hoist (CPH) to be installed in Zone 2. The CPH elevated steel PLATFORM to be installed and later removed and poured back such as the trestle pile penetrations.			
			All work dimensions have been coordinated with structure overhead into future bid packages as well as as-built information of internal bracing in the field.			
			We propose to :			
			<ol style="list-style-type: none"> <li>1) Lower the geothermal piping an additional 12" to maintain the same 15" deep trench under all concrete. This will be performed the same way they install the piping in the sump pits with correct bend radius.</li> <li>2) Install at 19'-6" x 13'-0" x 16" thickened slab incorporated with the current 4" reinforced mudslab. The thickened slab will contain #5 bars 12" OC EW T&amp;B and we have confirmed that the total load of thickened slab, CPH, and platform will not exceed 500 PSF.</li> <li>3) Install CPH elevated steel platform through the mat slab with 3'-0" of clearance between top of mat slab and bottom of platform deck and beams.</li> <li>4) Waterproof platform legs per detail 5/A1-8711 04/29/13 per ASI 0102 Issued for Construction, Below Grade Package, including galvanized penetration sleeves and waterproofing. Penetration sleeve will be 30" diameter.</li> <li>5) Reinforcing details will be the same as all other reinforcing at pin/trestle pile blockouts.</li> </ol>

T-0606	BGP - Mat Slab Pour and Bracing Removal- Area 1 to 4	Closed	01	06/21/2013	07/01/2013	06/28/2013

From: Webcor Construction LP Jackson Tukuafu

**REQUEST:**

Reference: Spec Section 01 13 00

The latest Webcor's weekly update schedule received by SCCI (Data date 06.17.2013), shows that Balfour Beatty (BBII)'s activity "Bracing Removal- Level D- BBII- Z1 A1", in Zone 1, area 1 cannot commence until the completion of Webcor's activity "Mat Slab Cure- Z1A1 ".The same relationship exists between the two activities for Area 1 to Area 4. Preliminary rough analysis done by SCCI suggests that there is not sufficient sliding resistance to permit the slab in each area to act as effective support for the base of the shoring wall when the lowest level of bracing is removed in that area. The preliminary analysis also suggests that bracing removal level D in Area 1-4 should not commence until the entire mat slab in Area 1-4 are in place.

Please confirm that :

1. Webcor has performed a detailed analysis that the relationship as shown in the schedule between the Bracing Removal- Level D and Mat Slab Cure can be performed in each area, independent of any other areas.
2. SW Comer bracing level D could be removed if only Areas 1 &2 are poured and cured
3. NW Comer bracing at Level 2 could be removed if only Areas 3&4 are poured and cured

**ANSWER:**

T-0610	<b>BGP - Micropiles at CPH #2 Thickened Slab</b>	Closed	01	06/24/2013	07/04/2013	07/01/2013
<b>From:</b> Webcor Construction LP                      Robert Kjome						
<b>REQUEST:</b> Reference Sketch: SK-001  There are 4 micropiles within the perimeter of the thickened slab at CPH #2. Hand excavation will occur around these micropiles to keep from damaging the grout columns. The grout columns will be considered penetrations, in the structural design of the thickened mudslab and trim steel will be installed accordingly at each micropile. We will be installing butyl tape around the exposed grout column and onto the micropile, to top of thickened mudslab as a bond breaker. Please confirm this is acceptable.		<b>ANSWER:</b> Reference Sketch: SK-001  There are 4 micropiles within the perimeter of the thickened slab at CPH #2. ---------------	----------------	---------------	------------------------	---------------------	----------------------	----------------------

Option A  
 Webcor is proposing to change the alignment of the Concrete Foundation wall on the north elevation along gridlines A between gridlines 1 and 5 - 6 (CDSM piles 1 to 50)  
 The Concrete foundation wall which runs along gridline A between gridlines 1 and 5-6 would be offset into the structure by 0.1979' (2-3/8") the proposed Face of concrete Foundation wall would then be 2-3/8" off gridline A, this offset would enable the contract reinforcement to be installed without the need for further modifications to the reinforcement due to encroachment of the CDSM piles in concrete pour Areas 3 & 4. See Exhibit - H

Option B  
 WOJV proposal: (See Exhibit - B) Between CDSM piles 1 to 20-21 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear all the encroaching SP. This foundation wall area was originally a WR1 reinforcement area (#11@8"oc EF vertically) and would change to #11@6"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 see Exhibit - D.  
 Between CDSM piles 20-21 to 22 WOJV is proposing to decrease the specified 36" wall thickness again to 33 5/8" to clear all the encroaching SP, originally this was a WR2 reinforcement area #11@6"oc vertically and would change to #11@5"OC the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit - E)  
 Between CDSM piles 22 to 31 the reinforcement would remain unchanged as per the Contract Reinforcement. See Exhibit-G showing a detail of transition between modified reinforcement to contract reinforcement with a non-contact reinforcement lap detail.  
 Either of these options if approved would be incorporated into the TG06 shop drawings  
 Please confirm if either of these options would be acceptable

Option A  
 Webcor is proposing to change the alignment of the Concrete Foundation wall on the north elevation along gridlines A between gridlines 1 and 5 - 6 (CDSM piles 1 to 50)  
 The Concrete foundation wall which runs along gridline A between gridlines 1 and 5-6 would be offset into the structure by 0.1979' (2-3/8") the proposed Face of concrete Foundation wall would then be 2-3/8" off gridline A, this offset would enable the contract reinforcement to be installed without the need for further modifications to the reinforcement due to encroachment of the CDSM piles in concrete pour Areas 3 & 4. See Exhibit - H

Option B  
 WOJV proposal: (See Exhibit - B) Between CDSM piles 1 to 20-21 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear all the encroaching SP. This foundation wall area was originally a WR1 reinforcement area (#11@8"oc EF vertically) and would change to #11@6"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 see Exhibit - D.  
 Between CDSM piles 20-21 to 22 WOJV is proposing to decrease the specified 36" wall thickness again to 33 5/8" to clear all the encroaching SP, originally this was a WR2 reinforcement area #11@6"oc vertically and would change to #11@5"OC the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit -E)  
 Between CDSM piles 22 to 31 the reinforcement would remain unchanged as per the Contract Reinforcement. See Exhibit-G showing a detail of transition between modified reinforcement to contract reinforcement with a non-contact reinforcement lap detail.  
 Either of these options if approved would be incorporated into the TG06 shop drawings

T-0621.1	CDSM Soldier Pile Encroachment Area 3	Closed	01	07/12/2013	07/22/2013	07/23/2013

From: Webcor Construction LP Michael Spillane

**REQUEST:**

Reference Documents: Exhibits A - C

This RFI is an additional request based on the response to RFI T- 621 option A (see exhibit - A) The original RFI T-621 option A addressed the impact of the encroaching CDSM soldier piles on the north wall in slab in areas 3 and 4 by proposing to offset the face of concrete foundation wall by 0.1979' (2-3/8") into the structure. WOJV note the original response where it was acceptable to offset the foundation wall between B2 and B1 elevations but would have to transition back to design alignment between B1 and ground elevation however this transition back would not be possible as there are CDSM piles encroaching the full high of the foundation wall, with that WOJV is proposing the following possible solution, to continue the revised offset alignment between B1 and ground elevation however limiting it to an area between GL 1 and 2-3 (CDSM piles 1 to 21)full wall height , WOJV acknowledge the fact the PG&E transformer room need to remain at its current size but feel there may be some scope to slightly change the dimensions of the main switchgear room or the service corridor or both see exhibit B and exhibit C.

This proposal if acceptable to offset the foundation wall would enable the contract reinforcement to be installed without the need for further modifications due to encroachment.

Please confirm if this option would be acceptable

<b>REQUEST:</b>		<b>ANSWER:</b>				
<p>Please refer to RFI T-0621 Response Option B Responses #2 &amp; #3.</p> <p>The RFI response states that it is acceptable to move vertical wall rebar a maximum of 3/4" as needed to avoid clashes with horizontal mat reinforcing. As the vertical reinforcing is #11 bar (1 3/8") and the mat reinforcing is #10 (1 1/2"), in the worst case a mat reinforcing bar will clash with the vertical bar when the layout ends up with both bars installed on the same centerline. Please confirm that in this case, the reinforcing can be moved the 1 3/8" to avoid the clash.</p>		<p>Please refer to RFI T-0621 Response Option B Responses #2 &amp; #3.</p> <p>The RFI response states that it is acceptable to move vertical wall rebar a maximum of 3/4" as needed to avoid clashes with horizontal mat reinforcing. <b>T-0621.3</b>	<b>BGP - Area 3 North Wall Verts Clearance Near GL 2</b>	<b>Closed</b>	<b>CR</b>	<b>01/27/2014</b>	<b>02/06/2014</b>	<b>01/31/2014</b>
<b>From:</b> Webcor Construction LP                      Jackson Tukuafu						
<b>REQUEST:</b>		<b>ANSWER:</b>				
<p>Reference: RFI T-0621.1 and drawing S1-3201.</p> <p>Due to the CDSM soldier pile encroachment, the area 3 North foundation wall reinforcement was moved 2-3/8" towards the center of the structure per RFI T-0621.1. During placement of a 4'-6" section (8 vertical bars) of the first lift of the foundation wall exterior vertical steel approximately 2'-0" west of GL 2, it was discovered that there was 1/4" to 1" of clearance between the waterproofing and vertical bars. The concern is once the cross-ties are placed between the vertical bar and waterproofing, there would not be enough concrete coverage.</p> <p>Please confirm if it is acceptable to omit the first 3 rows of cross-ties (24 total) in the area as described.</p>		<p>Reference: RFI T-0621.1 and drawing S1-3201.</p> <p>Due to the CDSM soldier pile encroachment, the area 3 North foundation wall reinforcement was moved 2-3/8" towards the center of the structure per RFI T-0621.1. <b>ANSWER:</b>	Reference: RFI T-0622 and RFI T-0622.1.  The Area 4 wall vertical reinforcement has been installed different from the layout in RFI T-0622.1.  Please confirm the revised vertical wall reinforcement spacing as shown in the attached sketch is acceptable.  Note that the wall thicknesses remain the same as approved in RFI T-0622.1.

to change, this may increase or decrease the number of encroaching piles depending on the thickness of the system used.

WOJV proposal North elevation on gridline A: (See Exhibit - B) Between CDSM piles 60 to 62 and 69 to 71 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 61 & 70, originally these were WR1 reinforcement area's #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit - D). Between CDSM piles 76 to 78-42, WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 77. This foundation wall area was originally a WR2 reinforcement area (#11@6"oc EF vertically) and would change to #11@5"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit - E).

WOJV proposal on the South elevation: (See Exhibit - B & F) Between CDSM piles 704 to 706, WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 705, originally this was a WR1 reinforcement area #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit - D).

In all other areas without CDSM encroachment issues the reinforcement will remain unchanged as per the Contract drawings. See Exhibit-G, H, I & J showing details of transition between modified reinforcement to contract reinforcement. These solutions if approved would be incorporated into the TG06 shop drawings. Please confirm if these solutions would be acceptable.

subject to change, this may increase or decrease the number of encroaching piles depending on the thickness of the system used.

WOJV proposal North elevation on gridline A: (See Exhibit - B) Between CDSM piles 60 to 62 and 69 to 71 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 61 & 70, originally these were WR1 reinforcement area's #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit - D). Between CDSM piles 76 to 78-42, WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 77. This foundation wall area was originally a WR2 reinforcement area (#11@6"oc EF vertically) and would change to #11@5"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit -E).

WOJV proposal on the South elevation: (See Exhibit - B & F) Between CDSM piles 704 to 706, WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 705, originally this was a WR1 reinforcement area #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit - D).

In all other areas without CDSM encroachment issues the reinforcement will remain unchanged as per the Contract drawings. <b>T-0629</b>	<b>BGP - Clear Cover on Concourse Slab</b>	<b>Closed</b>	<b>01</b>	<b>06/28/2013</b>	<b>07/08/2013</b>	<b>07/01/2013</b>
<b>From:</b> Webcor Construction LP                      Jackson Tukuafu						
<b>REQUEST:</b> Reference: Drawing S1-3500, Spec Section 03 30 20, 03 20 00  Detail 1 on S 1-3500 calls out for 3/4" clear cover on top and bottom of the lower concourse slab. ACI codes 301 and 318 specify 3/4" minimum cover for #11 bars and smaller, in slabs that are not exposed to extreme environment. Even though lower concourse is designed to eventually be enclosed with the rest of the superstructure, it will be exposed to the weather elements during the construction of the project. With that said, inadequate cover over rebar can cause plastic settlement cracking. SCCI is concerned that the 3/4" clear cover in the concourse slab could cause this plastic settlement cracking. Please confirm that the clear cover on the lower concourse slab is 3/4" minimum? Please specify what is the maximum clear coverage of the lower concourse reinforcement?			<b>ANSWER:</b> Reference: Drawing S1-3500, Spec Section 03 30 20, 03 20 00  Detail 1 on S 1-3500 calls out for 3/4" clear cover on top and bottom of the lower concourse slab. ACI codes 301 and 318 specify 3/4" minimum cover for #11 bars and smaller, in slabs that are not exposed to extreme environment. Even though lower concourse is designed to eventually be enclosed with the rest of the superstructure, it will be exposed to the weather elements during the construction of the project. With that said, inadequate cover over rebar can cause plastic settlement cracking. SCCI is concerned that the 3/4" clear cover in the concourse slab could cause this plastic settlement cracking. Please confirm that the clear cover on the lower concourse slab is 3/4" minimum? Please specify what is the maximum clear coverage of the lower concourse reinforcement?			
<b>T-0630</b>	<b>BGP - Mat Slab Key Way Waterstops Installation</b>	<b>Closed</b>	<b>01</b>	<b>06/28/2013</b>	<b>07/08/2013</b>	<b>07/04/2013</b>
<b>From:</b> Webcor Construction LP                      Jackson Tukuafu						
<b>REQUEST:</b> Reference: Attached Photos, Spec Section 03 30 20  SCCI is proposing to leave the formed key surface in the mat slab as a formed finish to aid in the bonding of the hydrophilic waterstops to the concrete. With a specified 1/4" amplitude on the concrete surface, the bond between the concrete and the waterstop system decreases. The remainder of the construction joint will have stayform in place which generates a roughened surface. Please see attached photos that high light the area which will be formed finish. Please advise if this is acceptable?			<b>ANSWER:</b> Reference: Attached Photos, Spec Section 03 30 20  SCCI is proposing to leave the formed key surface in the mat slab as a formed finish to aid in the bonding of the hydrophilic waterstops to the concrete. T-0635	BGP - REBAR - Clarification to Maximum Allowable Rebar Clear Cover	Closed	01	07/09/2013	07/19/2013	07/17/2013

From: Webcor/Obayashi Joint Venture Jackson Tukuafu

**REQUEST:**

Reference: Drawing S1-3201, Spec Section 03 30 20

RFI T-0608 shows detail of transition between modified reinforcement to contract reinforcement and shows that the internal wall face location of the concrete wall remains as shown in the contract drawing.

RFI T-0448.5 proposes to decrease the rebar configuration to accomodate the thinnest wall section to be 33-1/8" to clear all the encroaching SPs.

At some locations, the rebar cover on the vertical wall rebar will exceed 2" Typ as shown in detail 1/S 1- 3201.

The worst case scenario in Area 1 & 2 will be at SP 737(lower), where the beam is 3.6" Too Far from the allowable horizontal alignment per TG03's contract Spec 31 56 13-3.3A.

In this case, the rebar cover will be: 2-7/8" (from the difference between 36" and 33-1/8") +2" (allowable rebar cover) +5-3/8" (0.64' offset - 0.1875' allowable waterproofing thickness) = Total cover of 10-1/4"

Please confirm that the maximum rebar clear cover (unreinforced concrete) of up to 10-1/4" between the CDSM wall and the Vertical Outside Face rebar in Area 1 & 2 is acceptable

<b>T-0642</b>	<b>BSE - Steel Plates at CDSM Piles 167-168</b>	<b>Open</b>	<b>01</b>	<b>07/17/2013</b>	<b>07/27/2013</b>	<b>07/18/2013</b>
<b>From:</b> Webcor Construction LP      Robert Kjome						
<b>REQUEST:</b>			<b>ANSWER:</b>			
Reference: Spec Section 31 56 13			Reference: Spec Section 31 56 13			
<p>During leak grouting at level 5 excavation, a section of the CDSM wall panel between soldier piles 167-168 became dislodged, resulting in a high volume leak. In an effort to stabilize the damaged CDSM panel and stop the leak, BBII installed a steel road plate between soldier piles 167-168 and injected grout behind it.</p> <p>BBII is concerned that removing the plate will likely cause the panel to become destabilized and could reopen the flow of water. BBII surveyed the face of the plate and found that at pile #167, the face of plate is 1/2" out from the theoretical face of pile, and at pile #168 the plate is 1-1/2" out from the theoretical face of pile. BBII proposes leaving the steel plate in place to maintain integrity of the CDSM panel. The edges of the plate may be grouted to provide a smooth transition to the CDSM wall for waterproofing.</p> <p>Please confirm this is acceptable.</p>			<p>During leak grouting at level 5 excavation, a section of the CDSM wall panel between soldier piles 167-168 became dislodged, resulting in a high volume leak. In an effort to stabilize the damaged CDSM panel and stop the leak, BBII installed a steel road plate between soldier piles 167-168 and injected grout behind it.</p> <p>BBII is concerned that removing the plate will likely cause the panel to become destabilized and could reopen the flow of water. BBII surveyed the face of the plate and found that at pile #167, the face of plate is 1/2" out from the theoretical face of pile, and at pile #168 the plate is 1-1/2" out from the theoretical face of pile. BBII proposes leaving the steel plate in place to maintain integrity of the CDSM panel. The edges of the plate may be grouted to provide a smooth transition to the CDSM wall for waterproofing.</p> <p>Please confirm this is acceptable.</p>

T-0647	BGP - Area 3 Clear Cover to the Vertical Reinforcement on the Foundation Wall	Closed	01	07/19/2013	07/29/2013	07/26/2013

From: Webcor Construction LP Michael Spillane

**REQUEST:**

Reference Documents: Exhibits A - G

Further to response to RFI T-609 (see exhibit - F) this RFI shows the areas of foundation wall in pour area 3, north and west walls which will have greater than 6" of clear cover to the vertical reinforcement for location plan see exhibit - A & C

Exhibit - B & C depict the amount and location of the foundation walls which will have greater than 6" of clear cover to the vertical reinforcement

Area of concern is the west wall along gridline 1 where the alignment of the foundation wall was moved by 3-1/8" per RFI T-576 see exhibit - E due to encroachment issues on CDSM piles see exhibit - G for information on the encroaching piles in this area as a result of this move there are large areas which will have greater than 6" of clear cover.

This RFI assumes that the solution to encroachment on the north wall Area 3 RFI T-621.1 (see exhibit D) is to move the wall 2-3/8" to offset the encroachment is acceptable.

Please confirm that the clear cover between the waterproofing system and the vertical reinforcement outlined at these locations is acceptable

**ANSWER:**

T-0648	BGP - Area 1 Clear Cover to the Vertical Reinforcement on the Foundation Wall	Closed	01	07/19/2013	07/29/2013	07/26/2013

From: Webcor Construction LP Michael Spillane

**REQUEST:**

Reference Documents: Exhibits A - G

Further to response to RFI T-609 (see exhibit - F) this RFI shows the areas of foundation wall in pour area 1, south and west walls which will have greater than 6" of clear cover to the vertical reinforcement for location plan see exhibit - A & C

Exhibit - B & C depict the amount and location of the foundation walls which the will have greater than 6" of clear cover to the vertical reinforcement

Areas of concern are the west wall along where the alignment of the foundation wall was moved to per RFI T-576 see exhibit - E due to encroachment issues on CDSM piles, however this has resulted in large areas which will have greater than 6" of clear cover. On the south elevation see Exhibit - D (RFI T - 448.5) which shows the thinning of the wall with the revised reinforcement spacing due to CDSM pile encroachment.

Exhibit - G shows the information on encroaching CDSM pile in this area for your review.

Please confirm that the clear cover between the waterproofing system and the vertical reinforcement outlined at these locations is acceptable

<b>T-0662</b>	<b>BGP - Clarification for the Response to RFI T-0631 Micropile Conflict</b>	<b>Closed</b>	<b>01</b>	<b>08/01/2013</b>	<b>08/11/2013</b>	<b>08/05/2013</b>
	<p><b>From:</b> Webcor Construction LP                      Jackson Tukuafu</p> <p><b>REQUEST:</b></p> <p>Reference: Spec Section 03 30 20, Attached sketches</p> <p>Per discussions on 7/31/13 between members of TT, Webcor, Shimmick and Gerdau please confirm the following clarifications and intent of method "B" as it relates to the response issued for RFI 631 reviewed via teleconference.</p> <p>1. The clear cover of 1 1 /2" as described in the response to RFI 631 has been eliminated. The reinforcing bars may come into contact with the micropile and the waterproofing wrapped around the lower portion of the micropile.</p> <p>2. At the contractor's discretion, he/she may displace the typical contract bar +/- 4" from the called out spacing as required to avoid clashes with the installed micropile. The displacement of the typical reinforcing may be either for the full length of the bar or weaved around the clashes depending on the specific condition. If this solution is incorporated and results in the typical reinforcing being displaced such that the end of the bar is not in the typical alignment a non-contact lap splice with the next adjacent designed/detailed bar is acceptable. Should the displacement of the typical contract bar to resolve the clash with the micropile result in another clash with another element of the reinforcing design this condition will be addressed through the RFI process upon recognition. See attached sketch #1 for reference.</p>

T-0666.1	BGP - Mat Slab Clarification to Elevator Pit and Slab Opening Dimensions	Closed	CR	08/21/2013	09/03/2013	08/28/2013

From: Webcor Construction LP Jackson Tukuafu

**REQUEST:**

Webcor/Obayashi (W/O) is in receipt of attached Adamson Associates, Inc. (AAI) response to RFI T-0666 - BSE - Elevator Pit Dimensions Between GL1.4 and GL 2.

This response is unacceptable. The Architect has sole responsibility for confirming that the pit dimensions of all elevators and escalators will accommodate the Architect's proposed elevator and escalator systems.

Until a 100% IFC set is completed by the Architect, W/O has no definite knowledge of the Architect's proposed elevator and escalator systems. This issue has been discussed verbally for over 2 years, during which the Architect has maintained that they have full responsibility for designing all pits and openings to fit their proposed elevator and escalator systems. W/O is unable to even start the RFQ/Bidding process for hiring sub-contractors until the 100% IFC Contract Drawings are finalized by the Architect and approved by the owner; therefore, it is impossible for W/O to hire/coordinate sub-contractors prior to pouring of the elevator pit in the mat slab.

The same applies to all pits and openings throughout the design documents, only the Architect is capable of confirming that these dimensions are acceptable for all of the Architect's proposed elevator/escalator systems.

Please confirm all elevator pits and slab openings are acceptable as currently shown on the contract documents.

<p>Reference: Spec Section 033020, Attached Drawings</p> <p>See attached sketch of the vertical foundation wall CJ.</p> <p>During construction of the high congestion mockup SCCI has discovered a constructibility issue with the construction of the foundation walls, more particularly, the vertical construction joints. Vertical construction joints are to be constructed as prescribed on Detail 2 of the S 1-3001 CD.</p> <p>The designed vertical reinforcement consists of the following:</p> <ul style="list-style-type: none"> <li>a. WR-1 with #11 vertical bars 8" OC, haunch #10 bars 8" OC, and #4 cross ties 6" or 12" OC.</li> <li>b. WR-2 with #11 vertical bars 8" OC, haunch #10 bars 8" OC, and #4 cross ties 6" or 12" OC.</li> <li>c. WR-2MOD (CDSM Encroachments) with #11 vertical bars 5" OC, haunch #10 bars 8" OC, and #4 cross ties 5".</li> </ul> <p>When rebar configurations noted above are implemented, even with ACI allowed tolerances included, it will conflict with construction of the waterstops, hydrophilic hoses and forming of the vertical CJ.</p> <p>As a possible solution to this issue SCCI suggests the following:</p> <ol style="list-style-type: none"> <li>1. Eliminate a column of cross ties at the construction joints to allow construction of the vertical CJs per Det. 2 on SI-3001</li> <li>2. Reduce the depth of the vertical construction joint to 1.5" (similar to horizontal CJ).</li> </ol> <p>Please advise.</p>	<p>Reference: Spec Section 033020, Attached Drawings</p> <p>See attached sketch of the vertical foundation wall CJ.</p> <p>During construction of the high congestion mockup SCCI has discovered a constructibility issue with the construction of the foundation walls, more particularly, the vertical construction joints. T-0672	<b>BGP - Fire Management Device Layout</b> From: Webcor Construction LP Jackson Tukuafu	Closed	01	08/08/2013	08/18/2013	08/14/2013
	<b>REQUEST:</b> As discussed in the fire management coordination meeting on Monday 8/5, the contract plan device layout does not meet code for current draw. The stub ups from the mat slab to the devices shown on the contract plans at every other column will not be sufficient enough to meet code requirements for the future fully occupied space. If stubbed up at every other column, the consequences are having circuit runs that will end up doubling when the devices are added in the future. Siemens recommends that the stub ups are made at every column which will reduce the total current draw when devices are added in the future.  Please advise.					<b>ANSWER:</b> As discussed in the fire management coordination meeting on Monday 8/5, the contract plan device layout does not meet code for current draw. The stub ups from the mat slab to the devices shown on the contract plans at every other column will not be sufficient enough to meet code requirements for the future fully occupied space. T-0690	SSS - Stainless steel welded to cast iron	Closed	01	08/23/2013	09/02/2013	09/05/2013

From: Webcor Construction LP                      Robert Kjome

**REQUEST:**

Reference Drawing: 1/S1-6056

A number of details throughout structural steel drawings indicate stainless steel welded to cast iron or mild steel, see detail 1, 2/S1-6056 as one example. If two metals are fused, cast iron welded to stainless steel results in carbon migration. The chromium in the stainless and carbon in the steel have affinity for each other at elevated temperatures that results in carbon and chromium combining to form chromium carbide. This turns the welded area into hard and brittle material with a potential for rust that overtime has a high possibility to crack and fail.

For Det. 1 and 2 on S1-6056 the added tension from cables may contribute to failure. The proposed solutions include:

1. Use stainless steel instead of mild steel for the bottom connection plate thus welding stainless steel to stainless steel. Where the bottom plate has to connect to structural steel use bolted connection with thin dielectric isolator between two surfaces.
2. Replace welded connection to bolted connection with an isolator.
3. Use galvanized and painted plate instead of stainless steel plate.

Please advise.

<b>T-0691</b>	<b>BGP - FF&amp;FL Values for Mat Slab and Concourse Slab</b>	<b>Closed</b>	<b>01</b>	<b>08/23/2013</b>	<b>09/03/2013</b>	<b>09/03/2013</b>
<b>From:</b> Webcor Construction LP      Jackson Tukuafu						
<b>REQUEST:</b>		<b>ANSWER:</b>				
<p>1. Please confirm the contract documetns (TG06.0) do not specify a FF value for the Mat Slab.</p> <p>2. Also, please reference ACI 302.1R and contract specification 033020.3.6.B. ACI 302.1R does not provide any recommendations on F-numbers for broomed surfaces. Furthermore, table 8.15.3.b of ACI 302.1R (page 46) demonstrates to achieve FF value of 20 for a slab on grade, it must be a smooth, floated surface.</p> <p>Please clarify if the designer intends to have a rough broom/rake finish, or intends to have the concourse slab finished to a value of 20.</p> <p>3. Please confirm the concrete finish within the train box.</p>		<p>1. Please confirm the contract documetns (TG06.0) do not specify a FF value for the Mat Slab.</p> <p>2. Also, please reference ACI 302.1R and contract specification 033020.3.6.B. ACI 302.1R does not provide any recommendations on F-numbers for broomed surfaces. T-0694	<b>Additional Rebar Conflict for Plumbing Trim at GL2/D.4</b>	Closed	01	08/26/2013	09/03/2013	08/27/2013
<p><b>From:</b> Webcor Construction LP                      Jackson Tukuafu</p>						
<p><b>REQUEST:</b></p> <p>Please refer to drawings 1/A1-2122, 1/S1-3501 and attached Gerdau sketch SKS-1</p> <p>Due to the density or the typical N-S top mat bars (#10) and additional bars (#11) near the elevator pit at Gridlines 2 and D.4, the additional trim rebar per 1/S1-3501 for interrupting the bars over the plumbing opening cannot be installed to the East of the plumbing opening within 3" of the opening. The alternative solution would be to install the additional steel in a new layer below the top mat; however, due to proximity of the piping to the steel the bars cannot be placed below the top mat. Gerdau proposes the following options:</p> <p>A. Omit the additional trim bars to the East of the trimmed opening.                      B. Relocate the additional trim bars approximately 3'-0" East of the opening where the rebar spacing would allow for additional steel.</p> <p>Please advise if proposed options are acceptable. (see attached SKS-1)</p>			<p><b>ANSWER:</b></p> <p>Please refer to drawings 1/A1-2122, 1/S1-3501 and attached Gerdau sketch SKS-1</p> <p>Due to the density or the typical N-S top mat bars (#10) and additional bars (#11) near the elevator pit at Gridlines 2 and D.4, the additional trim rebar per 1/S1-3501 for interrupting the bars over the plumbing opening cannot be installed to the East of the plumbing opening within 3" of the opening. T-0695	BGP - Additional Rebar Conflict for Floor Sink Trim GL B.7/2.7	Closed	01	08/26/2013	09/02/2013	08/27/2013

From: Webcor Construction LP Jackson Tukuafu

**REQUEST:**

See attached Gerdau's RFI #72, 1/S1-3501, A1-2122, attached Gerdau sketch SKS-1

Due to the density of the typical N-S top mat bars (#10), additional N-S top mat bars (#11) and pin pile trim steel (#11 with lap splices directly over floor sink) near the floor sink at Gridlines 2.7 and B.7, the additional trim rebar per 1/S1-3501 for interrupting the bars over the plumbing opening cannot be installed on either side of the plumbing opening. The alternative solution would be to install the additional steel in a new layer below the top mat; however, due to the proximity of the plumbing piping to the steel the additional bars cannot be placed below the top mat. Also, the additional bar to the East of the opening would conflict with the pin pile. Gerdau proposes to cut top mat bars to allow for the floor sink installation and omit the additional trim bars.

Please advise if the proposed solution is acceptable.

**ANSWER:**

See attached Gerdau's RFI #72, 1/S1-3501, A1-2122, attached Gerdau sketch SKS-1

Due to the density of the typical N-S top mat bars (#10), additional N-S top mat bars (#11) and pin pile trim steel (#11 with lap splices directly over floor sink) near the floor sink at Gridlines 2.7 and B.7, the additional trim rebar per 1/S1-3501 for interrupting the bars over the plumbing opening cannot be installed on either side of the plumbing opening. The alternative solution would be to install the additional steel in a new layer below the top mat; however, due to the proximity of the plumbing piping to the steel the additional bars cannot be placed below the top mat. Also, the additional bar to the East of the opening would conflict with the pin pile. Gerdau proposes to cut top mat bars to allow for the floor sink installation and omit the additional trim bars.

T-0711	SSS - Radius Change Request for LC301	Closed	01	09/03/2013	09/13/2013	09/04/2013
<p><b>From:</b> Webcor Construction LP                      Robert Kjome</p>						
<p><b>REQUEST:</b></p> <p>A design change on the light column critical type LC301 (CN0058) node has changed the radius between the body and the lifting bracket from the original two inches to one inch. We would like to formally request a change to a minimum of a two inch radius in this location. A one inch radius on the 301 bracket creates the following manufacturing challenges:</p> <p>A. The sand in the 1 inch radius in the mold will superheat and cause burn in/on sand adherence to the casting causing additional grinding and work in the finishing department to meet visual acceptance criteria.</p> <p>B. The sharper radius will create a hot spot and solidification challenges - liquid metal contracts % inch per foot and silica sand expands 1.2% during solidification and as cast hot tear potential in the radius may occur causing welding, grinding and blending. This again will be to meet the visual acceptance criteria.</p> <p>C. With a 2 inch radius the appendage (lifting bracket) will be much closer to thermally neutral reducing solidification stresses and potential shrinkage in the section radius.</p> <p>D. Cosmetically a 2 inch radius will look much more presentable in the as cast state.</p> <p>E. The 1 inch radius will require either chill sand in the radius, a metal chill made in the mold, or solidification cracking brackets as heat sinks to equalize the solidification temperatures and add strength to prevent hot tearing during solidification. Additional grinding of these areas will be necessary to meet visual acceptance criteria.</p> <p>F. Items A, B, and E will add costs to the manufacturing process of the casting.</p> <p>Our purpose is to point out the effects of the 1 inch radius design request and make sure that the designers are aware of the potential impact of having the smaller radius versus the 2 inch radius in the original designs that were reviewed. Bradken Atchison can certainly produce the 1 inch radius and manage the effects the 1 inch radius causes, but producing that design will have cost impacts to the casting process.</p>		<p><b>ANSWER:</b></p> <p>A design change on the light column critical type LC301 (CN0058) node has changed the radius between the body and the lifting bracket from the original two inches to one inch. T-0714	<b>BGP - Area 3- Partition Wall Pier Rebar Conflict With Plumbing Near GL3/C.3</b>	Closed	01	09/03/2013	09/13/2013	09/04/2013
<b>From:</b> Webcor Construction LP                      Jackson Tukuafu						
<b>REQUEST:</b> See attached Gerdau's RFI #078.  Near Gridlines 3/C.3, there is a conflict between the partition wall pier dowels and the installed 6" plumbing pipe (8" with insulation). The wall pier currently overlaps with the plumbing pipe by approximately 6". Gerdau proposes to move the wall pier to the East, or West to allow the dowels to clear the pipe.  Please provide the acceptable direction (East or West) to shift the wall pier.  Please note that there are conduits stub up on the East side that would need to be moved, should the opening is shifted towards the East.		<b>ANSWER:</b> See attached Gerdau's RFI #078. <p>See attached Gerdau's RFI #79.</p> <p>The RFI Response to RFI T -0702 stated that the 180 degree hook chamfer bars are acceptable where the bars conflict with the double shoring walers. The intent of the RFI was to request the use of the 180- degree hook for the chamfer bars throughout the structure regardless of whether or not the bars were below a double or single walers.</p> <p>Please confirm that this is acceptable.</p>			<p>See attached Gerdau's RFI #79.</p> <p>The RFI Response to RFI T -0702 stated that the 180 degree hook chamfer bars are acceptable where the bars conflict with the double shoring walers. ---------------	----------------	---------------	------------------------	---------------------	----------------------	----------------------

See Exhibit- G, H & I shows details of transition between modified reinforcement to contract reinforcement.

These solutions if approved would be incorporated into the TG06 shop drawings.

Please confirm if these solutions would be acceptable.

In all other areas without CDSM pile encroachment issues the reinforcement will remain unchanged as per the Contract drawings.

See Exhibit- G, H & I shows details of transition between modified reinforcement to contract reinforcement.

These solutions if approved would be incorporated into the TG06 shop drawings.

Please confirm if these solutions would be acceptable.

T-0726	BGP- Trestle pile No 6 in conflict with beam at Lower Concourse Level	Open	CR	09/09/2013	09/19/2013	09/20/2013
From: Webcor Construction LP		Jackson Tukuafu				

**REQUEST:**

Following a review and discussion on the trestle pile location, it has been noted that trestle pile number 6 (see sketch attached) is in conflict with a beam (B45) at the lower concourse slab elevation between gridline 5-6, E-F. The contractor is proposing to blockout a section of slab as shown on the sketch, this blockout section would then be infilled once the trestle pile has been removed.

The contractor is to insure that the appropriate reinforcement lap splices are present between these concrete pours.

Please confirm if this option would be acceptable

T-0738.1	<b>SSS - Nominal Gap Dimensions for Cast Node Drag Connections</b>	Closed	CR	01/14/2014	01/24/2014	01/24/2014
<b>From:</b> Webcor Construction LP                      Stephanie Azzolino						
<b>REQUEST:</b> WOJV RFI T-0738 (SK RFI 004.1) was submitted to the EOR proposing a 1/2" gap for Type 1 and Type 2M drag connections at the Bus Deck Level Cast Nodes. These 1/2" gaps were not explicitly called out, but were indicated on the supporting documents attached for your reference.  Subsequent conversations with Thornton Tomasetti and Webcor/Obayashi have revealed that a 1/8" nominal gap is preferred in lieu of the noted 1/2" gap.  Please advise if a 1/2" or 1/8" nominal gap is required for the Type 1 drag connection on 1/S1-5016 and Type 2M drag connection on 1/S1-5017.		<b>ANSWER:</b> WOJV RFI T-0738 (SK RFI 004.1) was submitted to the EOR proposing a 1/2" gap for Type 1 and Type 2M drag connections at the Bus Deck Level Cast Nodes. T-0739	<b>BGP - Column C16 and Knock-Out Corbel at West Throat</b>	Closed	CR	09/17/2013	09/27/2013	09/18/2013
<b>From:</b> Webcor Construction LP                      Jackson Tukuafu						
<b>REQUEST:</b> Please refer to attached drawing detail 1/S1-2022 and 4/S1-3260.  Per previous discussion with TT field engineer, in the West throat shearwalls which contain integrated C16 columns and vertical corbels to restrain the knock-out walls, only the C16 column ties are required to penetrate the mat at the designated spacing for a distance of at least 12" below the lowest top mat elevation. The ties associated with the corbel are not required to penetrate the mat slab.  This RFI confirms that the column and corbel ties, as placed, are acceptable based on the observation by the TT field engineer.		<b>ANSWER:</b> Please refer to attached drawing detail 1/S1-2022 and 4/S1-3260. **REQUEST:**

Reference Documents: Exhibits A - I

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north & south wall in mat slab pour Area 10 as well as all levels of the encroachment into the foundation wall between CDSM piles 164 to 188 on the north elevation and 571 to 595 on the south elevation for Location Plan see exhibit - A

Exhibit - B & C depict the location and degree in which the SP are encroaching

WOJV proposal North elevation on gridline A: (See Exhibit - B) between CDSM pile 200-201 to 206, WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 206. This foundation wall area was originally a WR2 reinforcement area (#11@6" OC EF vertically) and would change to #11@5" OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.3 option 2 (Exhibit -E).

WOJV proposal on the South elevation: (See Exhibit - B) Between CDSM piles 574 to 576 and 587 to 588 - 589 WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 575 &588, originally these were WR1 reinforcement areas #11@8" OC EF vertically and would change to #11@6" OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

Between CDSM piles 588-589 to 591, WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 589 & 590. This foundation wall area was originally a embedment column with reinforcement in this area was a double layer of #11@6"oc EF vertically and would change to #11@5" OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.4 option1 (Exhibit -F).

In all other areas without CDSM pile encroachment issues the reinforcement will remain unchanged as per the Contract drawings.

See Exhibit - G, H & I showing details of transition between modified reinforcement to contract reinforcement.

These solutions if approved would be incorporated into the TG06 shop drawings.

Please confirm if these solutions would be acceptable.

<b>T-0756</b>	<b>BGP - Structural Slurry Primer in Mat Slab</b>	<b>Closed</b>	<b>CR</b>	<b>09/24/2013</b>	<b>10/04/2013</b>	<b>09/25/2013</b>
<b>From:</b> Webcor Construction LP                      Jackson Tukuafu						
<b>REQUEST:</b>			<b>ANSWER:</b>			
<p>Please refer to the attached letter, authored by Rober Foley (CEMEX QC), dated September 17, 2013.</p> <p>With limited site access, many Mat Slab pours will require a larger than normal amount of slick-line. To ensure that no slick-line gets plugged, SCCI is proposing to prime the slick-line with a structural slurry that will reach and exceed the specified design strength for the Mat Slab. A miniscule percentage of this primer will be deposited into the mat slab. This percentage would amount to .01 to .02 percent by volume.</p> <p>Please confirm the proposed SCCI method of slick-line priming is acceptable.</p>			<p>Please refer to the attached letter, authored by Rober Foley (CEMEX QC), dated September 17, 2013.</p> <p>With limited site access, many Mat Slab pours will require a larger than normal amount of slick-line. T-0775	<b>BGP-Concrete strength requirement for bracing Removal</b>	Closed	01	09/30/2013	10/10/2013	10/10/2013
<b>From:</b> Webcor Construction LP                      Michael Spillane						
<b>REQUEST:</b> In accordance with Spec section 31-55-00 1.4 J the contractor is to submit concrete strength results to the design team prior to the removal of internal bracing. In order to fulfill this requirement the contractor has asked the following questions.  1. What is the criteria for bracing removal for instant if the average strength of the concrete cylinders tested is calculated to be above the design strength can the internal bracing be removed?  2. Is there any tolerance on the design strength requirement for bracing removal, for example if the concrete has reached 90% of design strength could the bracing be removed? Obviously this could have a positive effect on the construction schedule.			<b>ANSWER:</b> In accordance with Spec section 31-55-00 1.4 J the contractor is to submit concrete strength results to the design team prior to the removal of internal bracing. T-0784	BGP- CDSM Soldier Pile Encroachment Area 12	Closed	CR	10/18/2013	10/18/2013	10/24/2013

From: Webcor Construction LP Michael Spillane

**REQUEST:**

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north elevation in mat slab pour Area 12 for location Plan see exhibit - A. This RFI is subject to revision as the current survey data available does not recorded positioning of the CDSM beams at the lowest mat slab elevation. Exhibit - B, & C depict the location and degree in which the SP are encroaching

WOJV proposal North elevation on gridline A: (See Exhibit - B) between CDSM pile254 to 257, WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 255 & 256. Originally this was a WR1 reinforcement areas #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

The South elevation has no encroaching piles and therefore the reinforcement would remain unchanged per the contract drawings

In all other areas without CDSM pile encroachment issues the reinforcement will remain unchanged as per the Contract drawings.

See Exhibit - E which shows a detail of transition between modified reinforcement to contract reinforcement.

This solution if approved would be incorporated into the TG06 shop drawings.

Please confirm if these solutions would be acceptable.

**ANSWER:**

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north elevation in mat slab pour Area 12 for location Plan see exhibit - A. This RFI is subject to revision as the current survey data available does not recorded positioning of the CDSM beams at the lowest mat slab elevation. T-0787	SSS - Charpy V-Notch Impact Testing Requirements	Closed	01	10/04/2013	10/14/2013	10/10/2013

From: Webcor Construction LP      Robert Kjome

**REQUEST:**

Please confirm the following regarding the Charpy V-Notch (CVN) testing requirements for the project:

- The members identified on the attached sketches (SFRS - SK) are the only members that are part of the Seismic Force Resisting System (SFRS/SLRS/MF/BF) and are CVN tested in accordance with AISC 341-10 "Heavy Section" definition.
  - o Except from AISC 341-10: "For structural steel in the SFRS, hot rolled shapes with flanges 1-1/2" thick and thicker shall have a minimum CVN toughness of 20 ft-lb at 70°F, tested in the alternate core location as described in ASTM A6 Supplementary Requirement S30. Plates 2" thick and thicker shall have a minimum CVN toughness of 20 ft-lb at 70°F, measured at any location permitted by ASTM A673, Frequency P, where the plates is used for the following:"
    - Members built up form plate
    - The steel core of buckling restrained braces
- SFRS/SLRS/MF material will use the "Heavy Section" definition from AISC 341-10: hot rolled shapes with flanges 1-1/2" thick and thicker and plate 2" thick and thicker.
- Non SFRS/SLRS/MF material will use the project specification, Section 05 10 00, Part 1, 1.2, C.6, "Heavy Section" definition: hot rolled shapes with flanges exceeding 1-1/2" thick and plates exceeding 2" thick.
- Non SFRS/SLRS/MF material will be CVN tested in accordance with note SS-9 on drawing S-0007. These testing requirements apply only to steel using complete joint penetration groove welds that fuse through the thickness of a flange or web. Members or plates that meet this criteria shall be CVN tested as follows:
  - o ASTMA6/A6M hot rolled shapes with a flange thickness exceeding 2" and built-up heavy shapes with plates exceeding 2" in thickness shall have a minimum CVN toughness of 20 ft-lb at 70°F.
  - o ASTM A709 hot rolled shapes with a flange thickness exceeding 2" and plates exceeding 2" in thickness shall have a minimum CVN toughness of 30 ft-lb at 70°F.
  - o ASTM A709 hot rolled shapes with a flange

**ANSWER:**

Please confirm the following regarding the Charpy V-Notch (CVN) testing requirements for the project:

<b>REQUEST:</b> Please refer to attached photos, excerpt drawing CJ-05 from submittal package TG0600-030.3 and SCCI sketch SK-0341.  The east side of the mat slab construction joint of Area 8 (S108) has several constructability issues with the mat keyway and other project structure elements. The following are identified conflicts and SCCI proposed remediation:  1. The current east construction joint layout in Area 8 falls within the row of micropiles as shown in attached Photo-1 and Photo-2. SCCI intends to jog the joint an addition 12" +/- to the East of GL 16.6 to clear the micropile conflict 2. The east construction joint of area 8 currently jogs thru the thickened slab section at GL 16.6/G.3. SCCI intends to shift the joint Eastward to capture the thickened section within the Area 8 pour.  Please confirm the revised construction joint layout shown the attached SCCI sketch SK-341 is acceptable.		<b>ANSWER:</b> Please refer to attached photos, excerpt drawing CJ-05 from submittal package TG0600-030.3 and SCCI sketch SK-0341. <b>T-0805</b>	<b>BGP-Area 7 level D bracing removal</b>	<b>Closed</b>	<b>01</b>	<b>10/08/2013</b>	<b>10/18/2013</b>	<b>10/21/2013</b>
<b>From:</b> Webcor Construction LP                      Michael Spillane						
<b>REQUEST:</b>			<b>ANSWER:</b>			
<p>Further to response to RFI T-0641 please find attached supporting information from the internal bracing designer (PB&amp;A) see exhibits B this information is a three dimensional structural analysis of the CDSM wall and bracing system. WOJV is proposing the removal of the level D bracing in area 7 and also the bracing which spans across the Construction joints between Areas 6 &amp; 7 and Areas 7 &amp; 8 waler (WD-09 to WD-12, &amp; WD-60 to WD-63 as well as struts 20-25 level D See SK-1 2 &amp; 3 in exhibit A) The removal of this bracing will allow all the first lift of wall to be completed in area 7 and mitigate any possible delays to the construction schedule.</p> <p>As part of this bracing removal process, WOJV will also put a monitoring plan in place to monitor the CDSM beams which will be unsupported by either the concrete of the mat slab or the level D walers and struts see exhibit C</p> <p>Please confirm if this would be acceptable</p>			<p>Further to response to RFI T-0641 please find attached supporting information from the internal bracing designer (PB&amp;A) see exhibits B this information is a three dimensional structural analysis of the CDSM wall and bracing system. <b>From:</b> Webcor Construction LP                      Stephanie Azzolino						
<b>REQUEST:</b> In reference to W/O RFI T-0842, in which permission was given to eliminate field splices in the built-up columns, please see the following:  At certain column locations (see S1-4102 at GL4, for example) the thickness of the flange is constant throughout the height of the column. The fabricator will seek to provide single piece flanges when material availability permits. In instances where the availability of certain plate sizes does not permit the fabricator to provide a single piece / full height flange plate, a shop splice will need to be introduced.  Please identify any locations or areas along the height of the column flange that a shop splice is not permissible so that these limitations may be considered while finalizing our shop details and plate purchases.		<b>ANSWER:</b> In reference to W/O RFI T-0842, in which permission was given to eliminate field splices in the built-up columns, please see the following:  At certain column locations (see S1-4102 at GL4, for example) the thickness of the flange is constant throughout the height of the column. T-0843	<b>SSS - PJP Welds at Roof Node to Brace Beam</b>	Closed	01	10/18/2013	10/28/2013	10/25/2013
<b>From:</b> Webcor Construction LP                      Robert Kjome						
<b>REQUEST:</b> Reference is made to sheet S1-4205, Detail 2 "Brace Detail" which specifies a 1 3/4" effective weld from roof node to brace beam. Sheet S1-5131, Detail 1, Side View F specifies a bevel of 2 3/8" x 45 degrees for the weld joint area in question.  Sheet S-0007, General Note SC-4 states that weld sizes shown are considered effective weld sizes. Prequalified weld joint BTC-P4-GF (attached for reference) states that the effective weld size shall equal the bevel size for flat and horizontal weld positions.  These welds are intended to be performed in the horizontal or flat position. Please confirm that a bevel size of 1 3/4" to equal the specified weld size of 1 3/4" is acceptable and conforms to the requirements of note SC-4 and AWS 2010 D1.1 Detail BTC-P4-GF attached.		<b>ANSWER:</b> Reference is made to sheet S1-4205, Detail 2 "Brace Detail" which specifies a 1 3/4" effective weld from roof node to brace beam. <b>REQUEST:</b>		<b>ANSWER:</b>				
Please refer to drawing S1-2052.		Please refer to drawing S1-2052.				
Due to limited access between the waterproofing and access trestle, Gerdau proposes to shorten the mat slab typical layer three (North-South) 67'-0" bars at Areas 11 through 16. This requires the lap splice location to be moved from the center of column line, as specified on Note 1 of the Mat Top Bar Notes in S1-2052, to the location shown in the attached Gerdau sketch SK-99. This requires the lap splice location to be moved from the center of column line, as specified on Note 1 of the Mat Top Bar Notes in S1-2052, to the location shown in the attached Gerdau sketch SK-99.				
Please confirm the revised lap splice detail shown in Gerdau sketch SK-99 is acceptable.		Please confirm the revised lap splice detail shown in Gerdau sketch SK-99 is acceptable.				
<b>T-0850</b>	<b>BGP - Request for 14 day Concrete Compressive Strength test on future mat slab</b>	<b>Closed</b>	<b>CR</b>	<b>10/22/2013</b>	<b>11/01/2013</b>	<b>10/25/2013</b>
<b>From:</b> Webcor Construction LP Michael Spillane						
<b>REQUEST:</b>		<b>ANSWER:</b>				
Per discussion with TT field Engineer and TJPA representatives, WOJV is asking for all future mat slab pours that one of the two concrete test cylinders allotted for the 28 day compressive strength test could be tested at 14 days instead, This information will be used to assess the concrete strength for the level D bracing removal.		Per discussion with TT field Engineer and TJPA representatives, WOJV is asking for all future mat slab pours that one of the two concrete test cylinders allotted for the 28 day compressive strength test could be tested at 14 days instead, This information will be used to assess the concrete strength for the level D bracing removal.				
Please confirm if this would be acceptable.		Please confirm if this would be acceptable.				
<b>T-0852</b>	<b>SSS - Weld Returns at EBF Link Beams</b>	<b>Closed</b>	<b>01</b>	<b>10/24/2013</b>	<b>11/03/2013</b>	<b>10/25/2013</b>
<b>From:</b> Webcor Construction LP Robert Kjome						
<b>REQUEST:</b>		<b>ANSWER:</b>				
Detail 3 on sheet S1-4205 indicates the weld requirements from the underside of the EBF link beam (28" W) to the roof node (24" W). Detail 3 requires a 3 ½" reinforcing weld to be returned (boxing) 6" at each interior corner of the welded roof node. The distance from the roof node to the edge of the girder flange is only 2" on each side based on the dimensions noted above (reference drawings attached). <b>T-0860</b>	<b>BGP - Area 3 Drill and Epoxy Walls</b>	<b>Closed</b>	<b>01</b>	<b>10/25/2013</b>	<b>11/04/2013</b>	<b>11/07/2013</b>
<p><b>From:</b> Webcor Construction LP Robert Kjome</p> <p><b>REQUEST:</b></p> <p>Reference: Contract Dwg. A1-2122 to A1-2123, and attached sketch</p> <p>Rebar dowels were installed for future partition walls at gridlines A-F/1-6 during Area 3 mat slab pour on September 7, 2013. Due to conflicts with equipment access for the removal of Level C and D shoring struts and walers, selected rebar areas as shown on the attached drawing will need to be cut at and removed. Any additional walls that are found to be blocking access once operations have begun will be analyzed on an as needed basis. Please confirm it is acceptable to cut rebar dowels in the partition walls as shown on the attached sketch and on an as needed basis, with exception to columns and wall pilasters, then return to drill and bond after bracing procedures are complete. Scanning will be included.</p>		<p><b>ANSWER:</b></p> <p>Reference: Contract Dwg. A1-2122 to A1-2123, and attached sketch</p> <p>Rebar dowels were installed for future partition walls at gridlines A-F/1-6 during Area 3 mat slab pour on September 7, 2013. Due to conflicts with equipment access for the removal of Level C and D shoring struts and walers, selected rebar areas as shown on the attached drawing will need to be cut at and removed. Any additional walls that are found to be blocking access once operations have begun will be analyzed on an as needed basis. Please confirm it is acceptable to cut rebar dowels in the partition walls as shown on the attached sketch and on an as needed basis, with exception to columns and wall pilasters, then return to drill and bond after bracing procedures are complete. Scanning will be included.</p>

<b>REQUEST:</b>			<b>ANSWER:</b>			
<p>Following a review and discussion with Thornton Tomasetti on the trestle pile locations, it was noted that trestle pile numbers 10, 12 and 14 (see sketches attached) are in conflict with a step in the slab on the lower concourse elevation between gridline 06-08, E-F. Thornton Tomasetti noted it may be possible to move this step clear of the trestle pile blockout locations.</p> <p>Please confirm if this option on moving the step location is still possible.</p>			<p>Following a review and discussion with Thornton Tomasetti on the trestle pile locations, it was noted that trestle pile numbers 10, 12 and 14 (see sketches attached) are in conflict with a step in the slab on the lower concourse elevation between gridline 06-08, E-F. <b>REQUEST:</b> Please review sketch CD RFI 059 SK1 and details 1/S1-5016 and 1/S1-5018 for type 1 - drag connection details on brace beams at the Bus Deck Level framing plan.  1). Please verify the bottom flange of brace beams noted in detail 1/S1-5016 can be cut flush to the beam web on both sides of web allowing beam to be erected between the shop welded connection plates on the cast node.  2). Verify the diagonal bracing beam web connection plate noted in detail 1/S1-5018 can be shifted to the acute angle side of the connection as indicated in the attached sketch and bottom flange cut flush to the web to allow beam to be dropped into location in the field.  3). Please provide welding details for the relocated web connection plate to the supporting grid beam as connection plates will overlap at these locations.  4). Please verify if additional bolts are required connecting the flange plate where the dimension to the plate edge and the last row of connection bolts exceeds limitations noted in the 13th Edition (AISC) manual section 16.1-J3, Item 5a.			<b>ANSWER:</b> Please review sketch CD RFI 059 SK1 and details 1/S1-5016 and 1/S1-5018 for type 1 - drag connection details on brace beams at the Bus Deck Level framing plan.  1). ---------------	----------------	---------------	------------------------	---------------------	----------------------	----------------------

**REQUEST:**

During level D bracing removal at area 7, a column rebar dowel was bent, as shown in the attached photograph.

Please see below repair options:

1. Abandon the bent rebar leave it in its current position projecting 5' above the mat slab, place and additional equal size bar alongside the damaged bar as a replacement with possibly a 90 degrees hook at the base
2. Leave the dowel as is, couple the upper section of the bar onto it and bring it back in line as the bar continues vertically
3. Drill and epoxy in a new same sized bar beside the damaged one, the slab would have to be scanned for rebar location and new location pick to avoid damaging the existing reinforcement.
4. Concrete around the rebar to be removed the bar would then be cut and a new bar welded to it.
5. Concrete around the rebar to be removed .The bar would be cut and a barlock would be used to couple the rebar this could be difficult to achieve due to congestion with the top mat reinforcement and the depth required for the bar lock to be fitted

Please advise on which option is acceptable.

**ANSWER:**

During level D bracing removal at area 7, a column rebar dowel was bent, as shown in the attached photograph.

Please see below repair options:

1. Abandon the bent rebar leave it in its current position projecting 5' above the mat slab, place and additional equal size bar alongside the damaged bar as a replacement with possibly a 90 degrees hook at the base
2. Leave the dowel as is, couple the upper section of the bar onto it and bring it back in line as the bar continues vertically
3. Drill and epoxy in a new same sized bar beside the damaged one, the slab would have to be scanned for rebar location and new location pick to avoid damaging the existing reinforcement.
4. Concrete around the rebar to be removed the bar would then be cut and a new bar welded to it.
5. Concrete around the rebar to be removed .The bar would be cut and a barlock would be used to couple the rebar this could be difficult to achieve due to congestion with the top mat reinforcement and the depth required for the bar lock to be fitted

T-0927	BGP - Injection Hose Testing Criteria	Closed	CR	11/21/2013	12/01/2013	12/04/2013

From: Webcor Construction LP Jackson Tukuafu

**REQUEST:**

Please reference attached Grace/DeNeef Technical Letter, Submittal TG0600-0025, and Spec Section 03 15 00, 3.4, A.

Spec Section 03 15 00, 3.4, A states, "After concrete has cured for a minimum of 30 days, test the integrity of the entire hose system by compressed air. Ensure that a positive pressure can be maintained for at least 5 minutes."

Page 14 of the "Applicator Manual" included in Submittal TG0600-0025 states that "each section of INJECTO should be pressure tested with water to a minimum pressure of 1 00 psi, to insure migration of water through the entire joint. If excessive water leakage out of joint is observed, this may indicate the presence of honeycombs or voids and should be noted on job report..."

In addition, the attached Grace/DeNeef Technical Letter also notes that the INJECTO should be tested with water (not air).

Please confirm that it is acceptable to test the integrity of the INJECTO hoses with water as required by the manufacturer.

<b>REQUEST:</b> Please reference attached Grace/Deneef Technical Letter and RFI #T-0927 response.  RFI T-0927 response states that "contractor shall use air to test hoses as specified," but the specifications call out several different types of injection hoses. Although, air testing may be suitable for other products specified, Grace/Deneef requires water testing for the INJECTO Tube system. The attached technical letter from Grace/Deneef states that "INJECTO is an open system, and any air pumped in will begin to flow immediately through the 35 micron filter and polypropylene mesh out into the concrete."  Please review and confirm that water testing is acceptable for the Deneef INJECTO Tube system on the TTC project.		<b>ANSWER:</b> Please reference attached Grace/Deneef Technical Letter and RFI #T-0927 response. **REQUEST:**

1. Please supply the material manufacture(s) for the "SEAL RING" a catalog cut or other information. Additionally, please supply the specifications for the material, size necessary to fit specified tube and other information necessary to install the seal rings.
2. Please provide weld size and weld process indicated on the attached sketch.
3. Please provide omitted dimensions for "CAVITY TUBE" requested on the attached sketch
4. Please confirm that welding the WELDED STEEL TUBE to the SOLID ROUND ANCHOR PLATE is acceptable and the alteration of the A722 plate by the welding process is acceptable.
5. Please confirm missing dimension for anchor bolt projection. Note on 4/S1-6008 states "END OF ANCHOR BAR LEFT AFTER TRIMMING MUST BE LONG ENOUGH TO ALLOW RE-TENSIONING LATER". Skanska will provide projection of ½ coupler length to attached stressing rod at future date. Please confirm compatibility with TJPA's stressing system used later may be different than Contractor's stressing system.

Table with 7 columns: Number, Subject, Status, Choice Required, Date Created, Date Required, Date Answered. Row 1: T-0949, SSS - Stair ST304 Framing and Connection Clarifications, Closed, 01, 11/25/2013, 12/05/2013, 12/19/2013

From: Webcor Construction LP Gregory Kemerer

REQUEST:

For Stair ST304 refer to sketches CD RFI 179 SK to SK6 for items 1 to 6:

1) The noted beam flange extends into the slab opening for ST304 by 1/2" as shown. Confirm this is acceptable or supply revised dimensions on 1/S1-7008 or A1-2863.

2) This stair post is currently located 1 1/2" from the edge of slab. This does not agree with typical connection detail 1/S1-7600 which shows the stair post extending past the edge of slab 1/2" max. Please confirm this is the intent and supply a new connection detail for the post to the slab or supply revised dimensions for the stair post locations in detail 1/S1-7008 or the slab opening location on drawing A1-2863 to conform to detail 1/S1-7600.

3) Similar to item 2 on SK3. Please clarify.

4) The noted beam extends into the slab opening for ST304 by 2 1/2" as shown. Confirm this is acceptable or supply revised dimensions.

5) Please supply a connection detail for the noted stair post as 1/S1-7600 does not apply and 10/S1-7600 will not work as the BU WT will only partially fit on the TR11 flange.

6) Confirm detail 10/S1-7600 may be applied at the noted location to connect the stair post to the supporting beam.

ANSWER:

For Stair ST304 refer to sketches CD RFI 179 SK to SK6 for items 1 to 6:

1) The noted beam flange extends into the slab opening for ST304 by 1/2" as shown. Confirm this is acceptable or supply revised dimensions on 1/S1-7008 or A1-2863.

2) This stair post is currently located 1 1/2" from the edge of slab. This does not agree with typical connection detail 1/S1-7600 which shows the stair post extending past the edge of slab 1/2" max. Please confirm this is the intent and supply a new connection detail for the post to the slab or supply revised dimensions for the stair post locations in detail 1/S1-7008 or the slab opening location on drawing A1-2863 to conform to detail 1/S1-7600.

3) Similar to item 2 on SK3. Please clarify.

4) The noted beam extends into the slab opening for ST304 by 2 1/2" as shown. Confirm this is acceptable or supply revised dimensions.

5) Please supply a connection detail for the noted stair post as 1/S1-7600 does not apply and 10/S1-7600 will not work as the BU WT will only partially fit on the TR11 flange.

6) Confirm detail 10/S1-7600 may be applied at the noted location to connect the stair post to the supporting beam.

T-0951	SSS - Knock-Out Slab Clarification	Closed	CR	11/25/2013	12/05/2013	12/26/2013
<p><b>From:</b> Webcor Construction LP                      Gregory Kemerer</p>						
<p><b>REQUEST:</b></p> <p>On S1-2303 there is a detail 7/S1-5004 shown near grids F/11 to supply bent plate to support the permanent slab. This is a general bent plate detail for the knock-out areas and does not provide enough detail at the stepped Transfer Girder. Please see the following questions below:</p> <p>1) Please verify if bent plate is required parallel to the Transfer Girder along grid 11 to support the permanent slab at the knockout areas? If yes, will new beams be needed to support the bent plate and slab? Please provide size and location if new beams are needed at these areas. See RFI 185 SK1 &amp; SK2.</p> <p>2) Please verify step in slab from grid D to F along grid line 11 will incase the Transfer Girder? Will headed studs be required at the transfer Girder web? If so, please provide size and spacing. See RFI 185 SK1 &amp; SK2.</p> <p>3) Please verify it is the designs intent to have the edge of the knock-out slab extend past the edge of the Transfer Girder flange at grid line 10.1? If yes, please provide details to support the edge of the permanent slab at these locations. See RFI 185 SK1.</p> <p>4) Please confirm only steel highlighted in yellow will require bent plate to support the permanent slab? See RFI 185 SK1.</p> <p>5). Please clarify if any slab support is required for the knock-out slab at the edge of the escalator pit as shown on detail 6/S17660, referenced from the escalator plan on 1/S1-7302? Should the knock-out slab be separated in some way from the curb/wall of the escalator pit? See RFI 185 SK1.</p>		<p><b>ANSWER:</b></p> <p>On S1-2303 there is a detail 7/S1-5004 shown near grids F/11 to supply bent plate to support the permanent slab. T-0967	Procedure for the removal of the level D bracing	Closed	01	12/05/2013	12/15/2013	12/09/2013
<b>From:</b> Webcor Construction LP                      Michael Spillane						
<b>REQUEST:</b> Procedure for the removal of the level D bracing:  Webcor-Obayashi will review the 14 day compressive strength reports issued by the independent test lab (ISI) for the applicable pour area. In the review WOJV is to ensure that the "lower-bound" concrete strength exceeds 3000psi at 14 days. "Lower-bound" will be understood as the mean minus one standard deviation. If the calculated lower-bound strength <3000 psi, the bracing removal would not continue until results are received satisfying the lower bound criteria. Further, If any single compressive strength test is < 2500 psi, the bracing removal would not continue until results are received satisfying the minimum strength criteria.  Please confirm if this would be acceptable		<b>ANSWER:</b> Procedure for the removal of the level D bracing:  Webcor-Obayashi will review the 14 day compressive strength reports issued by the independent test lab (ISI) for the applicable pour area. T-0969	SSS - Filler Metal Usage on Group IV Grade HPS70W Material	Closed	CR	12/06/2013	12/16/2013	12/20/2013
<p><b>From:</b> Webcor Construction LP Gregory Kemerer</p> <p><b>REQUEST:</b></p> <p>Observation: Job specifications and Code AWS D1.1, Table 3.1, matching strength filler metal combinations for Group IV material, specifies for use an E91XTX for FCAW and F9XX for SAW process(s).</p> <p>Concern: ASTM A709GR 70W material hardening during welding (alloying up) as each weld layer is deposited (in 2" to 4" material thickness). An increased hardness value is expected and the actual concern is that, in this instance, the E91XX specified will create an overmatching filler metal condition during the welding process.</p> <p>Review: The AWS D1.1 2008 edition in table 3.1 for ASTM A709 Grade HPS70W specified a minimum of 70 ksi Yield Point and 90-110 ksi Tensile Range. In comparison, the AWS D1.1 2010 edition, a revision was made on this same material and the Tensile Range was dropped to 85 ksi minimum and maximum to remain at 110 (85-110).</p> <p>Research: Currently for seismic application, the filler metal companies have seismic testing certificates for E81XX and F8XX electrodes. The Tensile test range for AWS D1.8 requirements is 80ksi minimum, but the manufacturers' test results consistently come in at 88 to 95 ksi, which would meet the 85-110 ksi range for the material. The two manufacturers contacted, ESAB and Lincoln, are willing to do seismic testing (test data) for the purpose of supplying AWS D1.8 seismic certificates to meet the E91XX requirements. However, when reviewing the current test data from the manufacturer, the test tensile range is 90-110 ksi, but the results are 97-110 ksi.</p> <p>Conclusion: TMF and their welding consultants believe that starting with a near Minimum Tension ksi (under match in classification/specification) that allows the use of E81TXX or F8XX electrodes with current seismic certificates would be best for the welding of the A709 HPS70W material due to the 2-4" thickness in this application.</p> <p>Please confirm this proposal is acceptable.</p>		<p><b>ANSWER:</b></p> <p>Observation: Job specifications and Code AWS D1.1, Table 3.1, matching strength filler metal combinations for Group IV material, specifies for use an E91XTX for FCAW and F9XX for SAW process(s).</p> <p>Concern: ASTM A709GR 70W material hardening during welding (alloying up) as each weld layer is deposited (in 2" to 4" material thickness). <b>REQUEST:</b> Following the response to RFI T-0970 and after further review of #3 & 10, we agree the rods can be pretensioned from the bottom. Candraft have run a sanity check at several locations to confirm there is adequate clearance for the tensioning device and will continue to do so as other locations are detailed. Any interference will be addressed in future RFIs.  Please confirm it is acceptable to use a standard flat washer in lieu of the plate washer as the holes are not oversized and this will also allow for easier workability during the pretensioning operation from the bottom (see Dyson catalog cut attached). If this is acceptable the 24" dimension indicated from bottom continuity plate to top of built up T & TT (on 3/S1-5050) and the 6x6x2" plate washer under the top nut will not require to be changed (as per #3, 10 & 14 RFI T-0970).  Please confirm this proposal is acceptable.		<b>ANSWER:</b> Following the response to RFI T-0970 and after further review of #3 & 10, we agree the rods can be pretensioned from the bottom. T-0979.1	SSS - Curved Connection Detail at Light Column	Closed	CR	01/17/2014	01/27/2014	02/03/2014

From: Webcor Construction LP                      Stephanie Azzolino

**REQUEST:**

The response to WOJV RFI T-0979 indicated that the curved W27x84 beams shown on S1-2305 at grid 23/E are to be connected together with a single shear plate connection per 1/S1-5011.

The referenced detail shows a beam to beam "T" connection, rather than two rolled shapes butting up to each other. Please clarify how the connection shown on 1/S1-5011 is to be applied to curved beam connections.

**ANSWER:**

The response to WOJV RFI T-0979 indicated that the curved W27x84 beams shown on S1-2305 at grid 23/E are to be connected together with a single shear plate connection per 1/S1-5011.

The referenced detail shows a beam to beam "T" connection, rather than two rolled shapes butting up to each other. Please clarify how the connection shown on 1/S1-5011 is to be applied to curved beam connections.

T-0980	SSS - BU Girders Connection Clarifications at Ground Level	Closed	01	12/09/2013	12/19/2013	12/16/2013
<p><b>From:</b> Webcor Construction LP                      Robert Kjome</p>						
<p><b>REQUEST:</b></p> <p>The W40x503 beams along grids C &amp; G on the Ground Level have been substituted with BU beams per RFI # T-0704.1. This changes the flange copes in details 3 &amp; 7/S1-4350. Please refer to attached CD RFI 162 SK1 &amp; SK2 for the following items:</p> <p>1) Please confirm it is acceptable to extend the web plate above the BU beam and cut the top flange plate flush to the web plate as shown. Confirm the CJP weld indicated is acceptable to weld the top flange to the web plate. The web to flange fillet welds per RFI T-0704.1 will be applied beyond the shown CJP welds.</p> <p>2) Confirm it is acceptable to stop the bottom flange plate of the BU WT short as shown, extend the web plate of the BU WT to the web plate of the BU beam and weld as shown. The web to flange fillet welds per RFI # T- 0704.1 will be applied beyond the shown CJP welds.</p> <p>3) Confirm it is acceptable to have a continuous 4" vertical bolt spacing in lieu of the pattern interruption as shown in detail 3/S1-4350 to avoid cutting the bottom flange of the BU beam. This may mean that the holes for the 1 1/2" dia. bolts near the WT to BU beam web weld will have to be drilled after the weld is made.</p> <p>4) Confirm it is acceptable to have a continuous 4" vertical bolt spacing in lieu of the pattern interruption as shown in detail 7/S1-4350 to avoid the bolts fouling the web to flange fillet welds. This may mean that the holes for the 1 1/2" dia. bolts near the WT to BU beam web weld will have to be drilled after the weld is made.</p>			<p><b>ANSWER:</b></p> <p>The W40x503 beams along grids C &amp; G on the Ground Level have been substituted with BU beams per RFI # T-0704.1. T-0982	<b>SSS - Elevator Rail Support Connection Clarifications</b>	Closed	01	12/09/2013	12/19/2013	01/10/2014
<b>From:</b> Webcor Construction LP                      Robert Kjome						
<b>REQUEST:</b> Please refer to Elevator Rail Support drawings S1-7130 through S1-7139 and provide clarification on the following: 1) At locations where the HSS members span two equally sized support beams, please confirm connection detail 1/S1-7630 typically applies and the HSS member is to be located direction under the beams. Refer to SK1, SK2, SK5, SK6, and SK7 for reference. 2) At locations where the lower HSS member spans two unequally sized beams, it is assumed that the HSS member will connect to the shallower beam per detail 1/S1-7630. Please confirm and provide a typical connection detail for the HSS member to the deeper beam. Reference SK1, SK2, SK5, SK6 for reference. 3) Confirm the HSS beams indicated on SK1, SK2, and SK7 are located flush with the top of slab per 1/S1-7630. 4) Confirm the plates indicated on SK3 & SK4 may be cut as shown on details 1&4/S1-7630 to achieve an effective weld along the full length. 5) Provide a connection detail for the HSS 12x6 to the W21, W24, and W36 beams at the locations indicated on SK7. 6) Provide the elevation of the lower HSS 12x6 indicated on SK RFI 239 SK2 and the connection details required at each end. 7) Confirm the elevation of the W21s indicated on SK5. 8) Provide a connection detail for upper and lower HSS12x6 to HSS12x6 at locations with no floor slab on SK5. 9) Provide a connection detail for upper and lower HSS12x6 to W16 at locations with no floor slab on SK5. 10) Provide a connection detail for HSS12x6 at the W21 indicated on SK5 where there is no edge plate as shown on detail 1//S1-7130.		<b>ANSWER:</b> Please refer to Elevator Rail Support drawings S1-7130 through S1-7139 and provide clarification on the following: 1) At locations where the HSS members span two equally sized support beams, please confirm connection detail 1/S1-7630 typically applies and the HSS member is to be located direction under the beams. <b>From:</b> Webcor Construction LP Robert Kjome						
<b>REQUEST:</b>			<b>ANSWER:</b>			
<p>Reference sketches CD RFI 193 SK1 &amp; SK2 indicating one specific location where the bolt spacing provided in detail 8/S1-5010 will not work as the bolts will foul each other. In the specific case shown on SK2, the "H1" dimension will need to be increased to 7 1/2" to avoid the fouling issue. Please confirm it is typically acceptable to increase the "H" or "H1" dimensions as required to allow sufficient clearance between the bolts for installation and tightening. If not, supply an alternate solution.</p> <p>NOTE: RFI #T-0976 item 4 requested permission to typically move the shear plate to the opposite side of the skewed beam from what is shown in 8/S1-5010 to allow erection access for the skewed beams.</p>			<p>Reference sketches CD RFI 193 SK1 &amp; SK2 indicating one specific location where the bolt spacing provided in detail 8/S1-5010 will not work as the bolts will foul each other. 	<b>REQUEST:</b> Please refer to drawing S1-3304 and S1-3301.  Detail 2/S1-3301 requires the couplers of adjacent column vertical bars to be staggered with a vertical distance of 24" or more; however, at gridlines 16.9/G there is a column dowel that should have been a shorter bar (L) but was installed as a longer bar (H) and casted in the mat foundation concrete. This does not allow for the stagger pattern as required. See the attached sketch SK-RFI-114 for more details. Gerdau proposes to leave the bar as-is.  Please confirm if this is acceptable.					<b>ANSWER:</b> Please refer to drawing S1-3304 and S1-3301.  Detail 2/S1-3301 requires the couplers of adjacent column vertical bars to be staggered with a vertical distance of 24" or more; however, at gridlines 16.9/G there is a column dowel that should have been a shorter bar (L) but was installed as a longer bar (H) and casted in the mat foundation concrete. This does not allow for the stagger pattern as required. See the attached sketch SK-RFI-114 for more details. Gerdau proposes to leave the bar as-is.  Please confirm if this is acceptable.

In recent meetings, Webcor/Obayashi has made it clear that the same Bus Deck Cast Node geometry will be used at multiple locations even though the angle of the lower Basket Columns changes at each Node. This adds a level of complexity and cost to the joint between the Cast Node and Basket Column Pipe due to the kink imposed on that joint as a result of the following:

- The Lower Pipe Columns will be required to be "miter cut" instead of a traditional square cut end. (Please note Spec Section OS 10 00, paragraph 3.2.M.1 states "Bearing ends of columns shall be milled or sawn square perpendicular to axis of the column.")
- Miter cut Pipe will have an ellipse cross section and will not match the circular Casting Node.
- Backing bars used to full pen weld the Pipe Column to the Cast Node would need to be custom machined to match the ellipse Pipe and circular Node to eliminate weld gaps. This significantly increases the complexity and risk for successfully welding the joint, and reduces the adjustability for fit up of these joints in the shop and the field.

This kink can be accommodated either by machining the nozzle of the Cast Node to be perpendicular to the pipe, or by machining the pipe end at a mitered angle to match the Cast Node.

Since this joint on the Cast Node is already being machined, Skanska/OIW believes that the more desirable and less expensive option is to machine the nozzle of the Cast Node perpendicular to the axis of the Basket Column Pipe . As the nozzles will each be custom machined regardless, machining them to match the pipe axis should be a relatively low cost change .

Skanska/OIW requests that the lower nozzle of each Bus Deck Cast Nodes to be machined perpendicular to the axis of the adjoining lower Basket Column Pipe. A negative response will result in a cost increase and a time increase.

T-1004.1	SSS - Pin Diameter	Closed	CR	01/29/2014	02/08/2014	02/10/2014
<p><b>From:</b> Webcor Construction LP                      Stephanie Azzolino</p> <p><b>REQUEST:</b></p> <p>We have identified a fit-up issue with the basket column pin connections at roof node and Type 2M drag connections. Spec section 05 10 00-13 3.2B states that the diameter of the pin hole shall not be more than 0.03125" greater than the diameter of the pin. The response to SK RFI 293 (T-1004) clarifies that the 0.03125" erection tolerance is for the pin after galvanizing.</p> <p>Therefore, to make this pin connection work, the pin must be machined below the 8" nominal dimension stated in the contract drawings (Ref S1-5133).</p> <p>We have determined the maximum allowable pin diameter as follows;</p> <p>Data:                      Min Bored Hole Diameter: 8.0313 - 0.01 = 8.0213"..... Source: Ref 1                      Max Roof Node Bored Holes Concentric Offset: 0.0156"..... Source: Ref 2                      Max Galvanizing Thickness: 0.010" (each side)..... Source: Ref 3                      Erection Tolerance: 0.03125"..... Source: Ref 4                      Maximum Allowable Pin Diameter: X (pin must be machined and so we have applied a reasonable industry standard machining tolerance of +0,-0.010")</p> <p>Calc (inches):                      (8.0213-0.0156) - (X+2(0.01)) = 0.03125</p>		<p>attempting to install in a horizontal position. Skanska/OIW suggests investigating alternate pin coatings; for example, a hardened chrome coating has tightly controlled thickness tolerance and will not gall.</p> <p><b>ANSWER:</b></p> <p>We have identified a fit-up issue with the basket column pin connections at roof node and Type 2M drag connections. Spec section 05 10 00-13 3.2B states that the diameter of the pin hole shall not be more than 0.03125" greater than the diameter of the pin. The response to SK RFI 293 (T-1004) clarifies that the 0.03125" erection tolerance is for the pin after galvanizing.</p> <p>Therefore, to make this pin connection work, the pin must be machined below the 8" nominal dimension stated in the contract drawings (Ref S1-5133).</p> <p>We have determined the maximum allowable pin diameter as follows;</p> <p>Data:                      Min Bored Hole Diameter: 8.0313 - 0.01 = 8.0213"..... Source: Ref 1                      Max Roof Node Bored Holes Concentric Offset: 0.0156"..... Source: Ref 2                      Max Galvanizing Thickness: 0.010" (each side)..... Source: Ref 3                      Erection Tolerance: 0.03125"..... Source: Ref 4                      Maximum Allowable Pin Diameter: X (pin must be machined and so we have applied a reasonable industry standard machining tolerance of +0,-0.010")</p>

	<p>X = 7.953" (+0,-0.010")                      Data used above is for 8" diameter pin. Similar for 7" pin (i.e 6.953").                      Please confirm it is acceptable to machine the pins to the diameters specified above.</p> <p>References;                      1 - CN-0126 and CN-0127                      2 - CN-0126 and CN-0127                      3 - The maximum galvanizing thickness was provided by the galvanizing shop that will be coating these pins. Based on their experience they estimate a minimum of 0.008" and a maximum of 0.02" on the diameter of the pin.                      4 - Section 05 10 00-13</p> <p>Please also note that A153 1.2 states that this specification is intended to be applicable to hardware items that are centrifuged or otherwise handled to remove excess galvanizing bath metal. This is not practical with an 8" diameter pin and should be taken into consideration.</p>
